Dokumentvorlage, Version vom 16.12.2021

Dossier zur Nutzenbewertung gemäß § 35a SGB V

Quizartinib (VANFLYTA)

Daiichi Sankyo Europe GmbH

Modul 4 A – Anhang 4-H

Erwachsene Patienten mit neu diagnostizierter akuter myeloischer Leukämie (AML) mit FLT3-ITD-Mutation

Medizinischer Nutzen und
medizinischer Zusatznutzen,
Patientengruppen mit therapeutisch
bedeutsamem Zusatznutzen

Stand: 30.01.2024

Inhaltsverzeichnis

Seite

Anhang 4-H: Ergebnisse der Subgruppenanalysen der Studie QuANTUM-First

Anhang 4-H1: Gesamtüberleben

Daiichi Sankyo | Data Intelligence – Evidence Generation | Final | AC220-A-U302 QUANTUM-First (DCO 13 Aug 2021) | Statistical analyses for AMNOG (HTA Germany)
Table 1.1.1 Overall survival - Time-to-event analysis - subgroup analysis - DCO 13-Aug-2021 - Intent to Treat Analysis Set

	Quizartinib (N=268)				Placebo (N=271)				Quizartinib vs Placebo		Interaction
Subgroup	n	No. of subjects with events (%)	No. of subjects censored (%)	Median (95 % CI) (months) [a]	n	No. of subjects with events (%)	No. of subjects censored (%)	Median (95 % CI) (months) [a]	Hazard Ratio (95 % CI) [b]	Unstratified log-rank p-value [c]	P-value [d]
Pooled Age Group 2											0.4677
<60	161	63 (39.1)	98 (60.9)	NE (NE, NE)	162	83 (51.2)	79 (48.8)	23.0 (13.0, NE)	0.684 (0.493, 0.949)	0.0224	
≥60 - <65	37	22 (59.5)	15 (40.5)	25.5 (15.3, NE)	44	26 (59.1)	18 (40.9)	21.9 (9.7, NE)	0.941 (0.533, 1.661)	0.8352	
≥65	70	48 (68.6)	22 (31.4)	14.5 (10.6. 21.0)	65	49 (75.4)	16 (24.6)	13.1 (8.0, 14.7)	0.868 (0.583, 1.294)	0.4884	

N: number of subjects in analysis set; n: number of subjects in subgroup category; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category; %: proportion of number of subjects in subgroup category.
[a] Exact confidence interval based on Clopper-Pearson method for single proportion.
[b] Confidence interval is the Wald asymptotic confidence interval. In case of zero cells a correction value of 0.5 is added to each cell frequency of the corresponding 2x2 table.
[c] Absolute risk reduction is presented on percentage point scale. Confidence interval is the continuity corrected Wald asymptotic confidence interval for the risk differences
[d] Two-sided p-value based on the Cochran-Mantel-Haenszel test adjusted for randomization stratification factors.[e] Two-sided p-value from Cochrane's Q test for heterogeneity of relative risk.

N: number of subjects in analysis set; n: number of subjects in subgroup category with Complete Remission with a 42-day window; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category with Complete Remission; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

Geographic Region 1: Asia/Other Regions			
	Quizartinib (N=268)	Placebo (N=271)	Quizartinib vs Placebo
Number of subjects in subgroup category, n	89	90	
Number of subjects with events, n (%)	63 (70.8)	59 (65.6)	
95 % CI [a]	(60.2, 79.9)	(54.8, 75.3)	
Odds ratio (95 % CI) [b]			1.27 (0.68, 2.39)
Relative risk (95 % CI) [b]			1.08 (0.88, 1.32)
Absolute risk reduction (95 % CI) [c]			5.23 (-9.51, 19.97)
p-value [d]			0.4487
Subgroup Interaction p-value [e]			0.0605

N: number of subjects in analysis set; n: number of subjects in subgroup category; %: proportion of number of subjects in subgroup category.
[a] Exact confidence interval based on Clopper-Pearson method for single proportion.
[b] Confidence interval is the Wald asymptotic confidence interval. In case of zero cells a correction value of 0.5 is added to each cell frequency of the corresponding 2x2 table.
[c] Absolute risk reduction is presented on percentage point scale. Confidence interval is the continuity corrected Wald asymptotic confidence interval for the risk differences
[d] Two-sided p-value based on the Cochran-Mantel-Haenszel test adjusted for randomization stratification factors.[e] Two-sided p-value from Cochrane's Q test for heterogeneity of relative risk.

[a] Exact confidence interval based on Clopper-Pearson method for single proportion.
[b] Confidence interval is the Wald asymptotic confidence interval. In case of zero cells a correction value of 0.5 is added to each cell frequency of the corresponding 2x2 table.
[c] Absolute risk reduction is presented on percentage point scale. Confidence interval is the continuity corrected Wald asymptotic confidence interval for the risk differences
[d] Two-sided p-value based on the Cochran-Mantel-Haenszel test adjusted for randomization stratification factors.[e] Two-sided p-value from Cochrane's Q test for heterogeneity of relative risk.

Table 4.28.1 Duration of Composite Complete Remission - subgroup analysis - DCO 13-Aug-2021 - Intent to Treat Analysis Set

	Quizartinib (N=268)				Placebo (N=271)				Quizartinib vs Placebo		Interaction
Subgroup	n	No. of subjects with events (%)	No. of subjects censored (%)	Median (95 % CI) (months) [a]	n	No. of subjects with events (%)	No. of subjects censored (%)	Median (95 % CI) (months) [a]	Hazard Ratio (95 % CI) [b]	Unstratified log-rank p-value [c]	P-value [d]
Choice of Anthracycline											0.8854
Daunorubicin	86	45 (52.3)	41 (47.7)	22.7 (15.3, NE)	62	37 (59.7)	25 (40.3)	9.4 (5.3, 26.5)	0.711 (0.459, 1.100)	0.1228	
Idarubicin	106	50 (47.2)	56 (52.8)	27.9 (15.9, NE)	113	65 (57.5)	48 (42.5)	13.7 (8.7, 30.9)	0.739 (0.511, 1.069)	0.1072	

N: number of subjects in analysis set; n: number of subjects in subgroup category with Composite Complete Remission; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 15 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category with complete PRO baseline; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable. PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 15 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category with complete PRO baseline; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable. PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category with complete PRO baseline; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable. PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category with complete PRO baseline; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable. PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category with complete PRO baseline; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable. PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

	Quizartinib (N=254)				Placebo (N=255)				Quizartinib vs Placebo		Interaction
Subgroup	n	No. of subjects with events (%)	No. of subjects censored (%)	Median (95 % CI) [a]	n	No. of subjects with events (%)	No. of subjects censored (%)	Median (95 % CI) [a]	Hazard Ratio (95 % CI) [b]	Unstratified log-rank p-value [c]	P-value [d]
FLT3-ITD category at Baseline											0.4228
≥3 to ≤25%	88	27 (30.7)	61 (69.3)	26.4 (6.3, NE)	92	23 (25.0)	69 (75.0)	NE (12.6, NE)	1.420 (0.813, 2.480)	0.2208	
>25% to ≤50%	135	39 (28.9)	96 (71.1)	30.6 (10.2, NE)	128	36 (28.1)	92 (71.9)	NE (3.7, NE)	0.913 (0.579, 1.438)	0.6930	
>50%	28	7 (25.0)	21 (75.0)	NE (2.9, NE)	33	7 (21.2)	26 (78.8)	NE (5.3, NE)	1.004 (0.351, 2.875)	0.9986	

N: number of subjects in analysis set; n: number of subjects in subgroup category with complete PRO baseline; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable. PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category with complete PRO baseline; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable. PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category with complete PRO baseline; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable. PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

Table 2.20.3 EORTC QLQ-C30 - Definitive deterioration - Time-to-event analysis - subgroup analysis - DCO 13-Aug-2021 - PRO Intent to Treat Analysis Set

Common Symptoms - Financial Difficulties

	Quizartinib (N=254)				Placebo (N=255)				Quizartinib vs Placebo		Interaction
Subgroup	n	No. of subjects with events (%)	No. of subjects censored (%)	Median (95 % CI) [a]	n	No. of subjects with events (%)	No. of subjects censored (%)	Median (95 % CI) [a]	Hazard Ratio (95 % CI) [b]	Unstratified log-rank p-value [c]	P-value [d]
Age by 2 categories											0.3418
≤60	154	46 (29.9)	108 (70.1)	NE (7.4, NE)	154	49 (31.8)	105 (68.2)	13.3 (6.7, NE)	0.813 (0.543, 1.217)	0.3135	
>60	94	25 (26.6)	69 (73.4)	24.4 (4.4, NE)	98	24 (24.5)	74 (75.5)	NE (5.6, NE)	1.152 (0.657, 2.018)	0.6256	

N: number of subjects in analysis set; n: number of subjects in subgroup category with complete PRO baseline; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable. PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category with complete PRO baseline; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable. PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category with complete PRO baseline; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable. PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

PRO: Patient Reported Outcome. A Minimal Clinically Important Difference of 10 is considered in this table.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

Subgroup	n	No. of subjects with events (%)	No. of subjects censored (%)	Median (95 % CI) (weeks) [a]	n	No. of subjects with events (%)	No. of subjects censored (%)	Median (95 % CI) (weeks) [a]	Hazard Ratio (95 % CI) [b]	Unstratified log-rank p-value [c]	P-value [d]
WBC at initial diagnosis											0.9355
< 40x10^9/L	132	132 (100)	0	0.4 (0.3, 0.4)	133	132 (99.2)	1 (0.8)	0.3 (0.3, 0.4)	1.028 (0.807, 1.309)	0.7898	
≥ 40x10^9/L	133	132 (99.2)	1 (0.8)	0.3 (0.1, 0.3)	135	133 (98.5)	2 (1.5)	0.3 (0.1, 0.3)	1.008 (0.791, 1.283)	0.9781	

N: number of subjects in analysis set; n: number of subjects in subgroup category; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

N: number of subjects in analysis set; n: number of subjects in subgroup category; %: proportion of number of subjects in n; CI: confidence interval; NE: not estimable. Only treatment-emergent adverse events of special interest are considered.
[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.

[a] Median time to first event is from Kaplan-Meier estimate. Confidence Interval for median was computed using the Brookmeyer-Crowley method.
[b] Hazard ratio is from unstratified Cox proportional hazards model with treatment as the only categorical variable in the model. Confidence limits are based on the Wald test.
[c] Two-sided p-value from unstratified log-rank test.
[d] Two-sided interaction p-value is for the interaction term from unstratified Cox proportional hazards model with treatment, subgroup, and treatment-by-subgroup interaction as categorical variables in the model. The p-value is based on the Wald test.
