Resolution

of the Federal Joint Committee on an Amendment of the Pharmaceuticals Directive (AM-RL):

Annex XII – Benefit Assessment of Medicinal Products with New Active Ingredients According to Section 35a SGB V Ivacaftor (Exceeding the € 50 Million Limit: Cystic Fibrosis, Combination Regimen with Tezacaftor/Ivacaftor in Patients over 12 Years of Age (Heterozygous with Respect to F508del))

of 20 February 2020

At its session on 20 February 2020, the Federal Joint Committee (G-BA) resolved to amend the Directive on the Prescription of Medicinal Products in SHI-accredited Medical Care (Pharmaceuticals Directive, AM-RL) in the version dated 18 December 2008 / 22 January 2009 (Federal Gazette, BAnz. No. 49a of 31 March 2009), as last amended on DD Month YYYY (Federal Gazette, BAnz AT DD MM YYYY BX), as follows:

I. Annex XII shall be amended in alphabetical order to include the active ingredient ivacaftor as follows:

Ivacaftor

Resolution of: 20 February 2020

Entry into force on: 20 February 2020 Federal Gazette, BAnz AT DD MM YYYY Bx

Therapeutic indication (according to the marketing authorisation of 10 October 2018):

Kalydeco tablets are also indicated in a combination regimen with tezacaftor 100 mg/ivacaftor 150 mg tablets for the treatment of adults and adolescents aged 12 years and older with cystic fibrosis (CF) who are heterozygous for the F508del mutation and have one of the following mutations in the CFTR gene: P67L, R117C, L206W, R352Q, A455E, D579G, 711+3A \rightarrow G, S945L, S977F, R1070W, D1152H, 2789+5G \rightarrow A, 3272-26A \rightarrow G and 3849+10kbC \rightarrow T.

1. Additional benefit of the medicinal product in relation to the appropriate comparator therapy

Patients 12 years of age and older with cystic fibrosis who are heterozygous for the F508del mutation and who display one of the following mutations in the CFTR gene: P67L, R117C, L206W, R352Q, A455E, D579G, 711+3A→G, S945L, S977F, R1070W, D1152H, 2789+5G→A, 3272-26A→G and 3849+10kbC→T.

Appropriate comparator therapy:

- Best supportive care.

Best supportive care (BSC) is defined as the therapy that ensures the best possible, patient-individual optimised, supportive treatment to alleviate symptoms and improve the quality of life (especially antibiotics for pulmonary infections, mucolytics, pancreatic enzymes for pancreatic insufficiency, physiotherapy (in the sense of the HeilmittelRichtlinie (Remedies Directive)), making full use of all possible dietary measures).

Extent and probability of the additional benefit of ivacaftor in combination with tezacaftor/ivacaftor compared with best supportive care:

An additional benefit is not proven.

Study results according to endpoints:1

Patients 12 years of age and older with cystic fibrosis who are heterozygous for the F508del mutation and who display one of the following mutations in the CFTR gene: P67L, R117C, L206W, R352Q, A455E, D579G, 711+3A→G, S945L, S977F, R1070W, D1152H, 2789+5G→A, 3272-26A→G and 3849+10kbC→T.

- a) Number of patients included in the evaluation to calculate the effect estimation. Values at the start of study may be based on different patient numbers. Patients from all 6 treatment sequences are included in the evaluation with the value from the respective treatment period.
- b) MMRM: Effect represents the difference between the treatment groups in the changes averaged over the course of the study between the respective measurement time and the start of study.
- c) Primary endpoint of the Study VX14-661-108
- d) Negative binomial model in a generalised linear mixed model. Fixed effects are treatment, period, and FEV₁ at baseline, patient as random effect; log(study time) as offset.
- e) Event rate (nE/patient years) is calculated by dividing the total number of events by the total number of years (sum of the observation time of all patients included in the analysis)
- f) Higher values mean a better health-related quality of life or symptomatology
- g) Domains on symptomatology, children [12 to 13 years] and adolescents or adults pooled
- h) Domain for adolescents or adults; not intended for children [12 to 13 years].
- Higher values mean a better quality of life or symptomatology; a positive group difference corresponds to an advantage for ivacaftor

6

³ Data from the addendum (A20-06) of the IQWiG

- Data are available for two of the eight sub-scales. Because data is not available for all subscales, the two existing sub-scales are not displayed.
- Without surveying the PT "infectious pulmonary exacerbations"
- Not reasonably calculable

Abbreviations

BSC: best supportive care; CFQ-R: Cystic Fibrosis Questionnaire-Revised; FEV1: forced expiratory volume in 1 second; IVA: Ivacaftor; CI: confidence interval; MD: Mean difference; MMRM: mixed model with repeated measurements; MV: mean value; n: number of patients with (at least 1) event; n_E: number of events; N: number of patients evaluated; PT: preferred term RCT: randomised controlled trial; RR: relative risk; SD: standard deviation; SF-12-v2: 12-Item Short Form Health Survey Version 2; SAE: serious adverse event; TEZ: tezacaftor; AE: adverse event; vs: versus

Summary of results for relevant clinical endpoints

Endpoint category	Direction of effect/	Summary
	Risk of bias	
Mortality	Ø	No suitable data were submitted for the benefit assessment.
Morbidity	Ø	No suitable data were submitted for the benefit assessment.
Health-related quality of life	Ø	No suitable data were submitted for the benefit assessment.
Side effects	Ø	No suitable data were submitted for the benefit assessment.

Explanations:

- ↑, ↓: statistically significant and relevant positive or negative effect with high or unclear risk of bias
- ↑↑, ↓↓: statistically significant and relevant positive or negative effect with low risk of bias
- ∅: no data available
- n.a.: not assessable

2. Number of patients or demarcation of patient groups eligible for treatment

Patients 12 years of age and older with cystic fibrosis who are heterozygous for the F508del mutation and who display one of the following mutations in the CFTR gene: P67L, R117C, L206W, R352Q, A455E, D579G, 711+3A→G, S945L, 2789+5G→A, 3272-26A→G and 3849+10kbC \rightarrow T.

approx. 200-300 patients

3. Requirements for a quality-assured application

The requirements in the product information are to be taken into account. The European Medicines Agency (EMA) provides the contents of the product information (summary of product characteristics, SmPC) for Kalydeco[®] (active ingredient: ivacaftor) at the following publicly accessible link (last access: 5 February 2020):

https://www.ema.europa.eu/documents/product-information/kalydeco-epar-product-information de.pdf

Treatment with ivacaftor should only be initiated and monitored by specialists who are experienced in the treatment of patients with cystic fibrosis.

4. Treatment costs

Annual treatment costs:

Patients 12 years of age and older with cystic fibrosis who are heterozygous for the F508del mutation and who display one of the following mutations in the CFTR gene: P67L, R117C, L206W, R352Q, A455E, D579G, 711+3A→G, S945L, S977F, R1070W, D1152H, 2789+5G→A, 3272-26A→G and 3849+10kbC→T.

Designation of the therapy	Annual treatment costs/patient					
Medicinal product to be assessed:						
Ivacaftor	€100,977.84					
Tezacaftor/ivacaftor	€78,708.73					
Total	€179,686.57					
Best supportive care	different for each individual patient					
Appropriate comparator therapy:						
Best supportive care	different for each individual patient					

Costs after deduction of statutory rebates (LAUER-TAXE®) as last revised: 1 February 2020

Costs for additionally required SHI services: not applicable

II. The resolution will enter into force on the day of its publication on the internet on the website of the G-BA on 20 February 2020.

The justification to this resolution will be published on the website of the G-BA at www.g-ba.de.

Federal Joint Committee in accordance with Section 91 SGB V The Chair

Prof. Hecken
