

Erenumab

Resolution of: 2 May 2019 / 19 September 2019 Valid until: unlimited
Entry into force on: 2 May 2019 / 19 September 2019
Federal Gazette, BAnz AT 11 06 2019 B2 / BAnz AT 15 10 2019 B3

Therapeutic indication (according to the marketing authorisation of 26 July 2018):

Aimovig is indicated for prophylaxis of migraine in adults who have at least 4 migraine days per month.

1. Additional benefit of the medicinal product in relation to the appropriate comparator therapy

- a) Untreated adult patients and patients who have responded inadequately to at least one prophylactic medication or are unable to tolerate or are unsuitable for at least one prophylactic medication

Appropriate comparator therapy:

- Metoprolol or propranolol or flunarizine or topiramate or amitriptyline, taking into account marketing authorisation and the previous therapy

Extent and probability of the additional benefit of erenumab compared with the appropriate comparator therapy:

Additional benefit not proven.

- b) Adult patients who are not responsive to or are unsuitable for or do not tolerate the medicinal therapies/active ingredient classes metoprolol, propranolol, flunarizine, topiramate, and amitriptyline

Appropriate comparator therapy:

- Valproic acid¹ or Clostridium botulinum toxin type A²

Extent and probability of the additional benefit of erenumab compared with the appropriate comparator therapy:

Additional benefit not proven.

- c) Adult patients who are not responsive to or are unsuitable for or do not tolerate any of the aforementioned medicinal therapies/active ingredient classes (metoprolol,

1 According to Annex VI to Section K of the Pharmaceuticals Directive: if treatment with any other authorised medicinal product has not been successful or is contraindicated.

2 According to the marketing authorisation for chronic migraines.

propranolol, flunarizine, topiramate, amitriptyline, valproic acid or Clostridium botulinum toxin type A)

Appropriate comparator therapy:

Best supportive care

Extent and probability of the additional benefit of erenumab compared with best supportive care:

Hint for a considerable additional benefit

Study results according to endpoints³:

- a) Untreated adult patients and patients who have responded inadequately to at least one prophylactic medication or are unable to tolerate or are unsuitable for at least one prophylactic medication

No relevant data were submitted.

- b) Adult patients who are not responsive to or are unsuitable for or do not tolerate the medicinal therapies/active ingredient classes metoprolol, propranolol, flunarizine, topiramate, and amitriptyline

No relevant data were submitted.

- c) Adult patients who are not responsive to or are unsuitable for or do not tolerate any of the aforementioned medicinal therapies/active ingredient classes (metoprolol, propranolol, flunarizine, topiramate, amitriptyline, valproic acid or Clostridium botulinum toxin type A)

Results of the LIBERTY study: RCT erenumab + BSC vs placebo + BSC at week 12

<p>a: Own calculation by the IQWiG, exact unconditional test (CSZ method according to Martin Andrés et al., 1994). b: Number of patients who were taken into account in the evaluation for the calculation of the estimation of the effect; the values at the start of study (at other times, if necessary) can be based on other patient figures. c: Unless indicated otherwise, MMRM evaluation of the ITT population d: Effect, confidence interval, and p value Mixed model with repeated measurements (MMRM) adjusted for baseline value, severity of disease, round, and interaction of treatment and round e: Higher values mean a better health status; a positive group difference corresponds to an advantage for erenumab f: Higher values mean a greater impairment; a negative group difference corresponds to an advantage</p> <p>for erenumab g: Own calculation of the IQWiG h: Evaluation only includes patients in an employment relationship i: Absence from work because of impairment because of headache, hours absent in%. j: Impairment because of headache at work, working hours with impairment in%. k: In % l: Deviating from the procedure of the pharmaceutical company, the endpoints of morbidity collected via HIT-6, MPFID, and EQ-5D VAS are assigned. m: no representation of effect estimation and CI because not informative</p> <p>BSC: Best supportive care; CI: confidence interval; N Number of patients evaluated; RCT: randomised controlled study; BSC: Best supportive care; EQ-5D: European Quality of Life Group 5 Dimensions; HIT-6: Headache Impact Test-6; ITT: Intention to Treat; CI: Confidence Interval; MD: mean difference; MMRM: mixed model with repeated measurements; MPFID: Migraine Physical Function Impact Diary; MV: mean value; n: number of patients with (at least 1) event; N: Number of patients evaluated; RCT: Randomised Controlled Study; RR: Relative Risk; SD: standard deviation; SE: standard error; SAE: serious adverse event; AE: adverse event; VAS: visual analogue scale; vs: versus; WPAI: Work Productivity and Activity Impairment</p>					

2. Number of patients or demarcation of *patient groups* eligible for treatment

- a) Untreated adult patients and patients who have responded inadequately to at least one prophylactic medication, or are unable to tolerate or are unsuitable for at least one prophylactic medication
approx. 1,428,000–1,445,000 patients
- b) Adult patients who are not responsive to or are unsuitable for or do not tolerate the medicinal therapies/active ingredient classes metoprolol, propranolol, flunarizine, topiramate, and amitriptyline
approx. 1,400–11,000 patients
- c) Adult patients who are not responsive to or are unsuitable for or do not tolerate any of the aforementioned medicinal therapies/active ingredient classes (metoprolol, propranolol, flunarizine, topiramate, amitriptyline, valproic acid or Clostridium botulinum toxin type A)
approx. 14,000–15,000 patients

3. Requirements for a quality-assured application

The requirements in the product information are to be taken into account. The European Medicines Agency (EMA) provides the contents of the product information (summary of product characteristics, SmPC) for Aimovig® (active ingredient: Erenumab) at the following publicly accessible link (last access: 28 February 2019):

https://www.ema.europa.eu/documents/product-information/aimovig-epar-product-information_de.pdf

Treatment with erenumab may only be initiated and monitored by specialists who are experienced in the diagnosis and treatment of patients with migraine.

4. Treatment costs

Annual treatment costs:

- a) Untreated adult patients and patients who have responded inadequately to at least one prophylactic medication, or are unable to tolerate or are unsuitable for at least one prophylactic medication:

Designation of the therapy	Annual treatment costs/patient
Medicinal product to be assessed:	
Erenumab	€ 8,290.01–16,580.03
Appropriate comparator therapy:	
Amitriptyline	€ 58.11–103.00
Flunarizine	€ 48.71–76.83 ⁴
Metoprolol	€ 43.00–61.14
Propranolol	€ 122.20–183.30
Topiramate	€ 276.85

Costs after deduction of statutory rebates (LAUER-TAXE®) as last revised: 15 April 2019)

- b) Adult patients who are not responsive to or or are unsuitable for do not tolerate the medicinal therapies/active ingredient classes metoprolol, propranolol, flunarizine, topiramate, and amitriptyline

Designation of the therapy	Annual treatment costs/patient
Medicinal product to be assessed:	
Erenumab	€ 8,290.01–16,580.03

⁴According to the information provided in the product information, flunarizine is administered for a limited period of six months. Nevertheless, the costs may be higher if a new treatment with flunarizine is started at a later date.

Designation of the therapy	Annual treatment costs/patient
Appropriate comparator therapy:	
Clostridium botulinum toxin type A ²	€ 3,326.15
Valproic acid ¹	€ 73.66–220.97

Costs after deduction of statutory rebates (LAUER-TAXE®) as last revised: 15 April 2019)

- c) Adult patients who are not responsive to or are unsuitable for or do not tolerate any of the aforementioned medicinal therapies/active ingredient classes (metoprolol, propranolol, flunarizine, topiramate, amitriptyline, valproic acid or Clostridium botulinum toxin type A)

Designation of the therapy	Annual treatment costs/patient
Medicinal product to be assessed:	
Erenumab	€ 8,290.01–16,580.03
Best supportive care	different for each individual patient
Appropriate comparator therapy:	
Best supportive care	different for each individual patient

Costs after deduction of statutory rebates (LAUER-TAXE®) as last revised: 15 April 2019)

Costs for additionally required SHI services: not applicable
