

## **Galcanezumab**

Resolution of: 19 September 2019  
Entry into force on: 19 September 2019  
Federal Gazette, BAnz AT 16 12 2019 B5

Valid until: unlimited

### **Therapeutic indication (according to the marketing authorisation of 14 November 2018):**

Emgality is indicated for the prophylaxis of migraine in adults who have at least 4 migraine days per month.

### **1. Additional benefit of the medicinal product in relation to the appropriate comparator therapy**

- a) Untreated adult patients and patients who have responded inadequately to at least one prophylactic medication, or are unable to tolerate or are unsuitable for at least one prophylactic medication.

#### **Appropriate comparator therapy:**

- Metoprolol or propranolol or flunarizine or topiramate or amitriptyline, taking into account marketing authorisation and the previous therapy

#### **Extent and probability of the additional benefit of galcanezumab compared with the appropriate comparator therapy:**

Additional benefit not proven.

- b) Adult patients who are not responsive to or are unsuitable to or do not tolerate the medicinal therapies/active ingredient classes metoprolol, propranolol, flunarizine, topiramate, and amitriptyline.

#### **Appropriate comparator therapy:**

- Valproic acid<sup>1</sup> or Clostridium botulinum toxin type A<sup>2</sup>

#### **Extent and probability of the additional benefit of galcanezumab compared with the appropriate comparator therapy:**

Additional benefit not proven.

1 According to Annex VI to Section K of the Pharmaceuticals Directive: if treatment with any other authorised medicinal product has not been successful or is contraindicated.

2 According to the marketing authorisation for chronic migraines.

- c) Adult patients who are not responsive to or are unsuitable to or do not tolerate any of the aforementioned medicinal therapies/active ingredient classes (metoprolol, propranolol, flunarizine, topiramate, amitriptyline, valproic acid or Clostridium botulinum toxin type A).

**Appropriate comparator therapy:**

- Best supportive care

**Extent and probability of the additional benefit of galcanezumab compared with best supportive care:**

Hint for a considerable additional benefit

**Study results according to endpoints<sup>3</sup>:**

- a) Untreated adult patients and patients who have responded inadequately to at least one prophylactic medication, or are unable to tolerate or are unsuitable for at least one prophylactic medication:

No relevant data were submitted.

- b) Adult patients who are not responsive to or are unsuitable to or do not tolerate the medicinal therapies/active ingredient classes metoprolol, propranolol, flunarizine, topiramate, and amitriptyline:

No relevant data were submitted.

- c) Adult patients who are not responsive to or are unsuitable to or do not tolerate any of the aforementioned medicinal therapies/active ingredient classes (metoprolol, propranolol, flunarizine, topiramate, amitriptyline, valproic acid or Clostridium botulinum toxin type A):

**Results from three double-blind RCT studies:** The EVOLVE-1 and EVOLVE-2 studies investigated patients with episodic migraine; the REGAIN study investigated patients with chronic migraine; intervention: Galcanezumab + BSC vs placebo + BSC.

---

<sup>3</sup> Data from the dossier evaluation of the IQWiG (A19-28) and the addendum of the IQWiG unless otherwise indicated.

## Mortality

| Endpoint                       | Galcanezumab + BSC |                           | Placebo + BSC |                           | Galcanezumab + BSC vs placebo + BSC |
|--------------------------------|--------------------|---------------------------|---------------|---------------------------|-------------------------------------|
|                                | N                  | Patients with event n (%) | N             | Patients with event n (%) | RR [95% CI]; p value <sup>a</sup>   |

| <p>a) RR, 95% CI, and p value: logistic regression with a term for treatment.</p> <p>b) IPD meta-analysis; logistic regression with terms for treatment and study.</p> <p>c) Mean proportion with 95% CI (per treatment group) and RR with 95% CI and p value (group comparison): grouped logit model for binomially distributed data with one term for treatment; replacement of missing values by LOCF.</p> <p>d) Months 1–6 (<i>EVOLVE-1/-2</i>) or Months 1–3 (<i>REGAIN</i>).</p> <p>e) IPD meta-analysis; grouped logit model for binomially distributed data with terms for treatment and study; replacement of missing values by LOCF.</p> <p>f) Calculation by the IQWiG, meta-analysis with fixed effect.</p> <p>g) No representation because not informative.</p> <p>h) In the placebo + BSC arm, no person had an event at any time.</p> <p>i) In the galcanezumab arm, no person had an event at any time; in the comparator arm, one patient had one event at one time-point (month 3).</p> <p>j) Number of patients included in the evaluation to calculate the effect estimate; values at the start of study may be based on other patient numbers.</p> <p>k) Migraine hours/month and PGI-I; averaged over Months 1–6 (<i>EVOLVE-1/-2</i>) or Months 1–3 (<i>REGAIN</i>); PGI-S and MSQ: averaged over Months 4–6 (<i>EVOLVE-1/-2</i>) or Month 3 (<i>REGAIN</i>).</p> <p>l) MMRM with terms for treatment, geographical region, value at baseline and time (month) as well as for interactions treatment × time and value at baseline × time. For <i>EVOLVE-1</i> and <i>EVOLVE-2</i>, beyond that (except for migraine hours/month) with a term for number of migraine days/month (&lt; 8 / ≥ 8). For <i>REGAIN</i>, beyond that with terms for medication overuse and migraine prophylaxis during studies.</p> <p>m) IPD meta-analysis; MMRM with terms for treatment, number of migraine days/month (&lt; 8 / ≥ 8; no term for migraine hours/month), geographic region, value at start of study, time (month) and study, and for treatment interactions × time and value at start of treatment × time.</p> <p>n) Migraine hours/month: Baseline phase; PGI-S and MSQ: value at start of treatment: PGI-I: no survey of the change at start of treatment.</p> <p>o) Lower values mean a better health status, negative group differences mean an advantage for galcanezumab.</p> <p>p) Calculation of the IQWiG</p> |                    |                           |               |                           |                                     |

- q) A higher score means a better health-related quality of life for the patient, positive group differences mean an advantage for galcanezumab.

Abbreviations used:

BSC: best supportive Care; IPD: individual patient data; CI: confidence interval; LOCF: Last Observation carried forward; MMRM: mixed model with repeated measurements; MD: mean difference; MSQ: Migraine-Specific Quality of Life Questionnaire; MV: mean value; n: Number of patients with (at least one) event; N: number of patients evaluated; n.c.: not calculable; PGI-I: Patient Global Impression of Improvement; PGI-S: Patient Global Impression of Severity; RCT: randomised controlled study; RR: relative risk; SD: standard deviation; SE: standard error; SAE: serious adverse event; AE: adverse event; vs: versus

## 2. Number of patients or demarcation of patient groups eligible for treatment

- a) Untreated adult patients and patients who have responded inadequately to at least one prophylactic medication, or are unable to tolerate or are unsuitable for at least one prophylactic medication:

approx. 1,428,000–1,445,000 patients

- b) Adult patients who are not responsive to or are unsuitable to or do not tolerate the medicinal therapies/active ingredient classes metoprolol, propranolol, flunarizine, topiramate, and amitriptyline:

approx. 1,400–11,000 patients

- c) Adult patients who are not responsive to or are unsuitable to or do not tolerate any of the aforementioned medicinal therapies/active ingredient classes (metoprolol, propranolol, flunarizine, topiramate, amitriptyline, valproic acid or Clostridium botulinum toxin type A):

approx. 14,000–15,000 patients

### 3. Requirements for a quality-assured application

The requirements in the product information are to be taken into account. The European Medicines Agency (EMA) provides the contents of the product information (summary of product characteristics, SmPC) for Emgality® (active ingredient: galcanezumab) at the following publicly accessible link (last access: 23 July 2019):

[https://www.ema.europa.eu/documents/product-information/emgality-epar-product-information\\_de.pdf](https://www.ema.europa.eu/documents/product-information/emgality-epar-product-information_de.pdf)

Treatment with galcanezumab may only be initiated and monitored by specialists who are experienced in the diagnosis and treatment of patients with migraine.

### 4. Treatment costs

#### Annual treatment costs:

- a) Untreated adult patients and patients who have responded inadequately to at least one prophylactic medication, or are unable to tolerate or are unsuitable for at least one prophylactic medication:

| Designation of the therapy        | Annual treatment costs/patient |
|-----------------------------------|--------------------------------|
| Medicinal product to be assessed: |                                |
| Galcanezumab                      | € 7,652.32                     |
| Appropriate comparator therapy:   |                                |
| Amitriptyline                     | € 58.11–103.00                 |
| Flunarizine                       | € 48.71–76.83 <sup>4</sup>     |
| Metoprolol                        | € 43.00–61.14                  |
| Propranolol                       | € 122.20–183.30                |
| Topiramate                        | € 276.85                       |

Costs after deduction of statutory rebates (LAUER-TAXE®) as last revised: 1 September 2019)

<sup>4</sup> According to the information provided in the product information, flunarizine is administered for a limited period of six months. Nevertheless, the costs may be higher if a new treatment with flunarizine is started at a later date.

- b) Adult patients who are not responsive to or are unsuitable to or do not tolerate the medicinal therapies/active ingredient classes metoprolol, propranolol, flunarizine, topiramate, and amitriptyline:

| Designation of the therapy                      | Annual treatment costs/patient |
|---|--------------------------------|
| Medicinal product to be assessed:               |                                |
| Galcanezumab                                    | € 7,652.32                     |
| Appropriate comparator therapy:                 |                                |
| Clostridium botulinum toxin type A <sup>2</sup> | € 3,326.15                     |
| Valproic acid <sup>1</sup>                      | € 73.66–220.97                 |

Costs after deduction of statutory rebates (LAUER-TAXE®) as last revised: 1 September 2019)

- c) Adult patients who are not responsive to or are unsuitable to or do not tolerate any of the aforementioned medicinal therapies/active ingredient classes (metoprolol, propranolol, flunarizine, topiramate, amitriptyline, valproic acid or Clostridium botulinum toxin type A):

| Designation of the therapy        | Annual treatment costs/patient        |
|-----------------------------------|---------------------------------------|
| Medicinal product to be assessed: |                                       |
| Galcanezumab                      | € 7,652.32                            |
| Best supportive care              | different for each individual patient |
| Appropriate comparator therapy:   |                                       |
| Best supportive care              | different for each individual patient |

Costs after deduction of statutory rebates (LAUER-TAXE®) as last revised: 1 September 2019)

Costs for additionally required SHI services: not applicable
