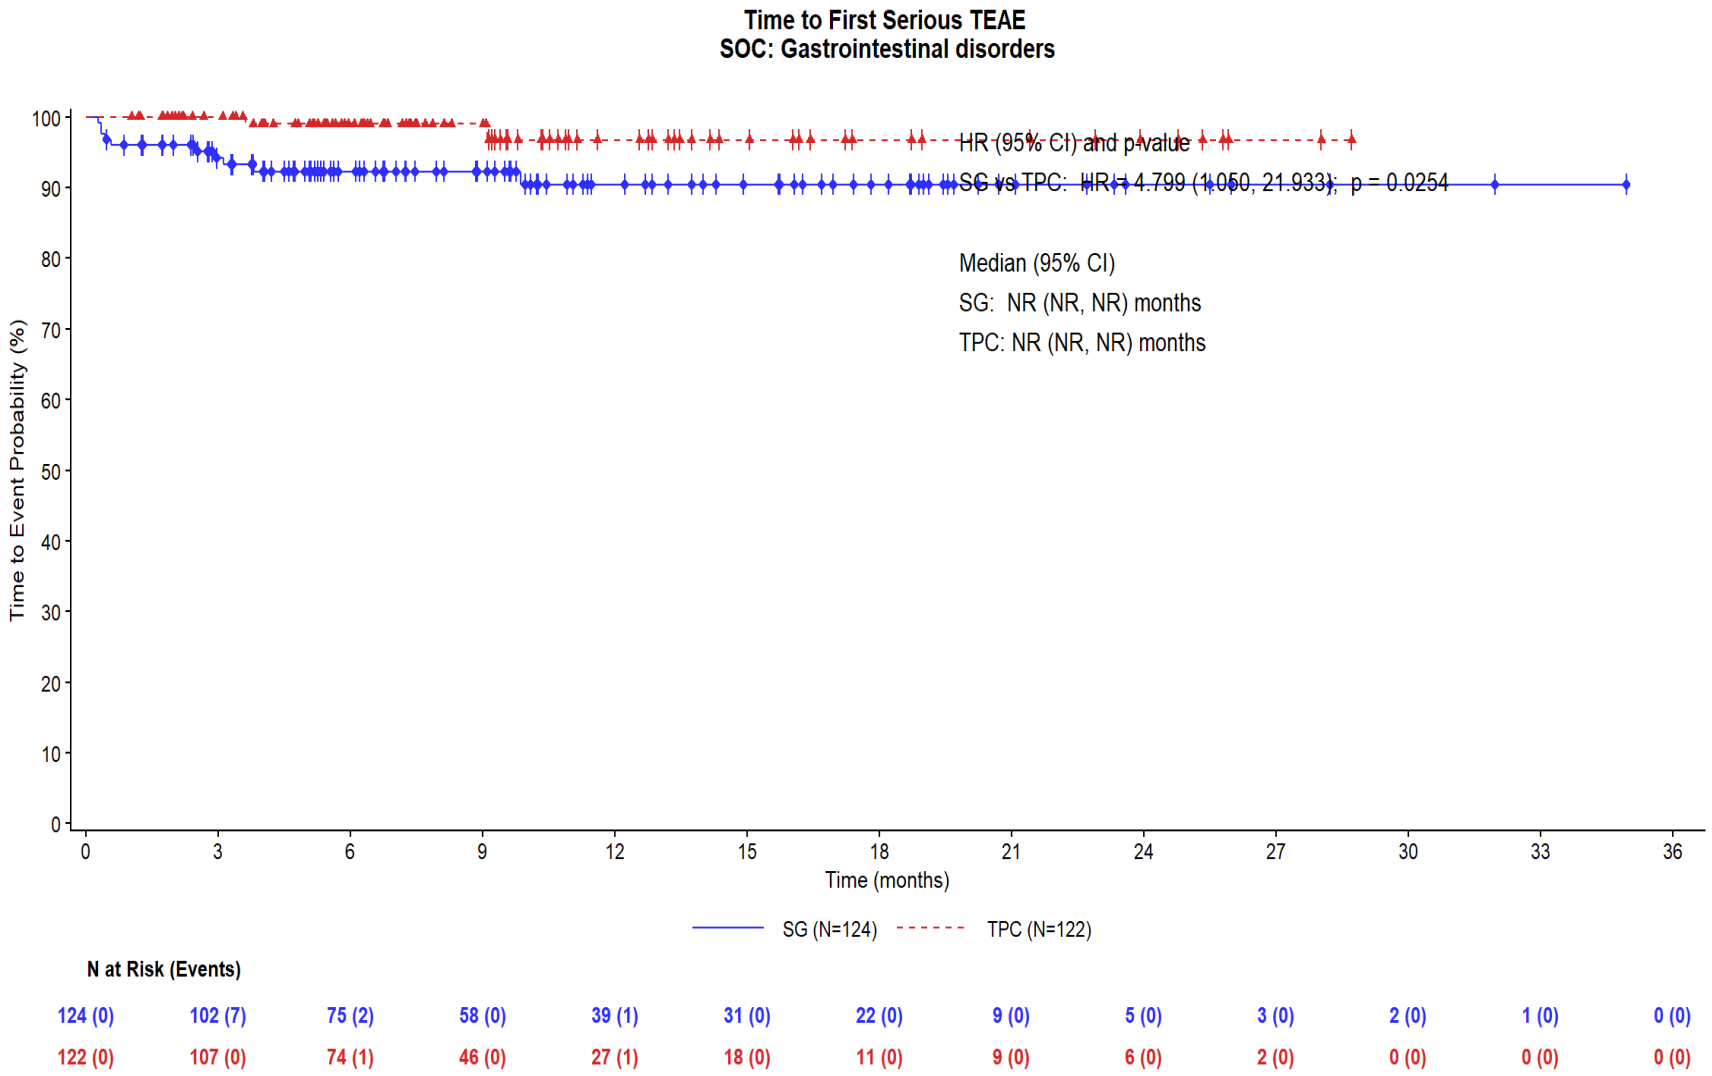
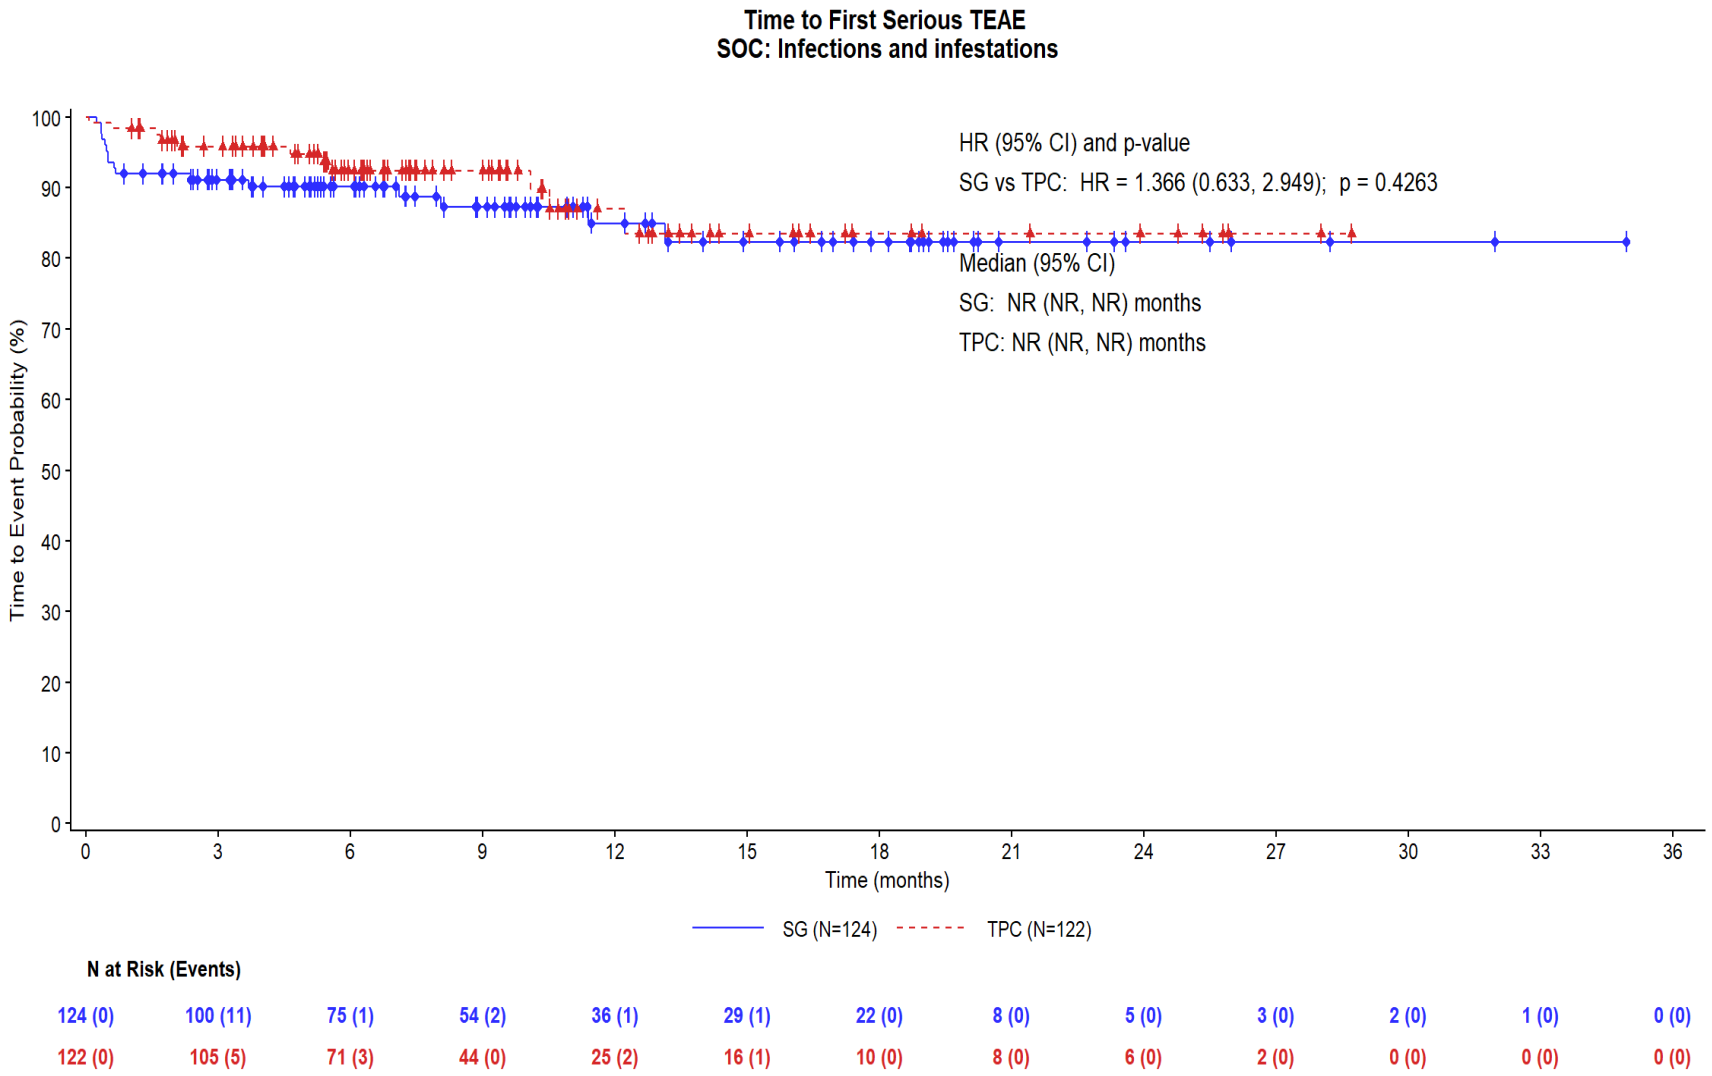
7.109. Figure 1.1.110: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Alanine aminotransferase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



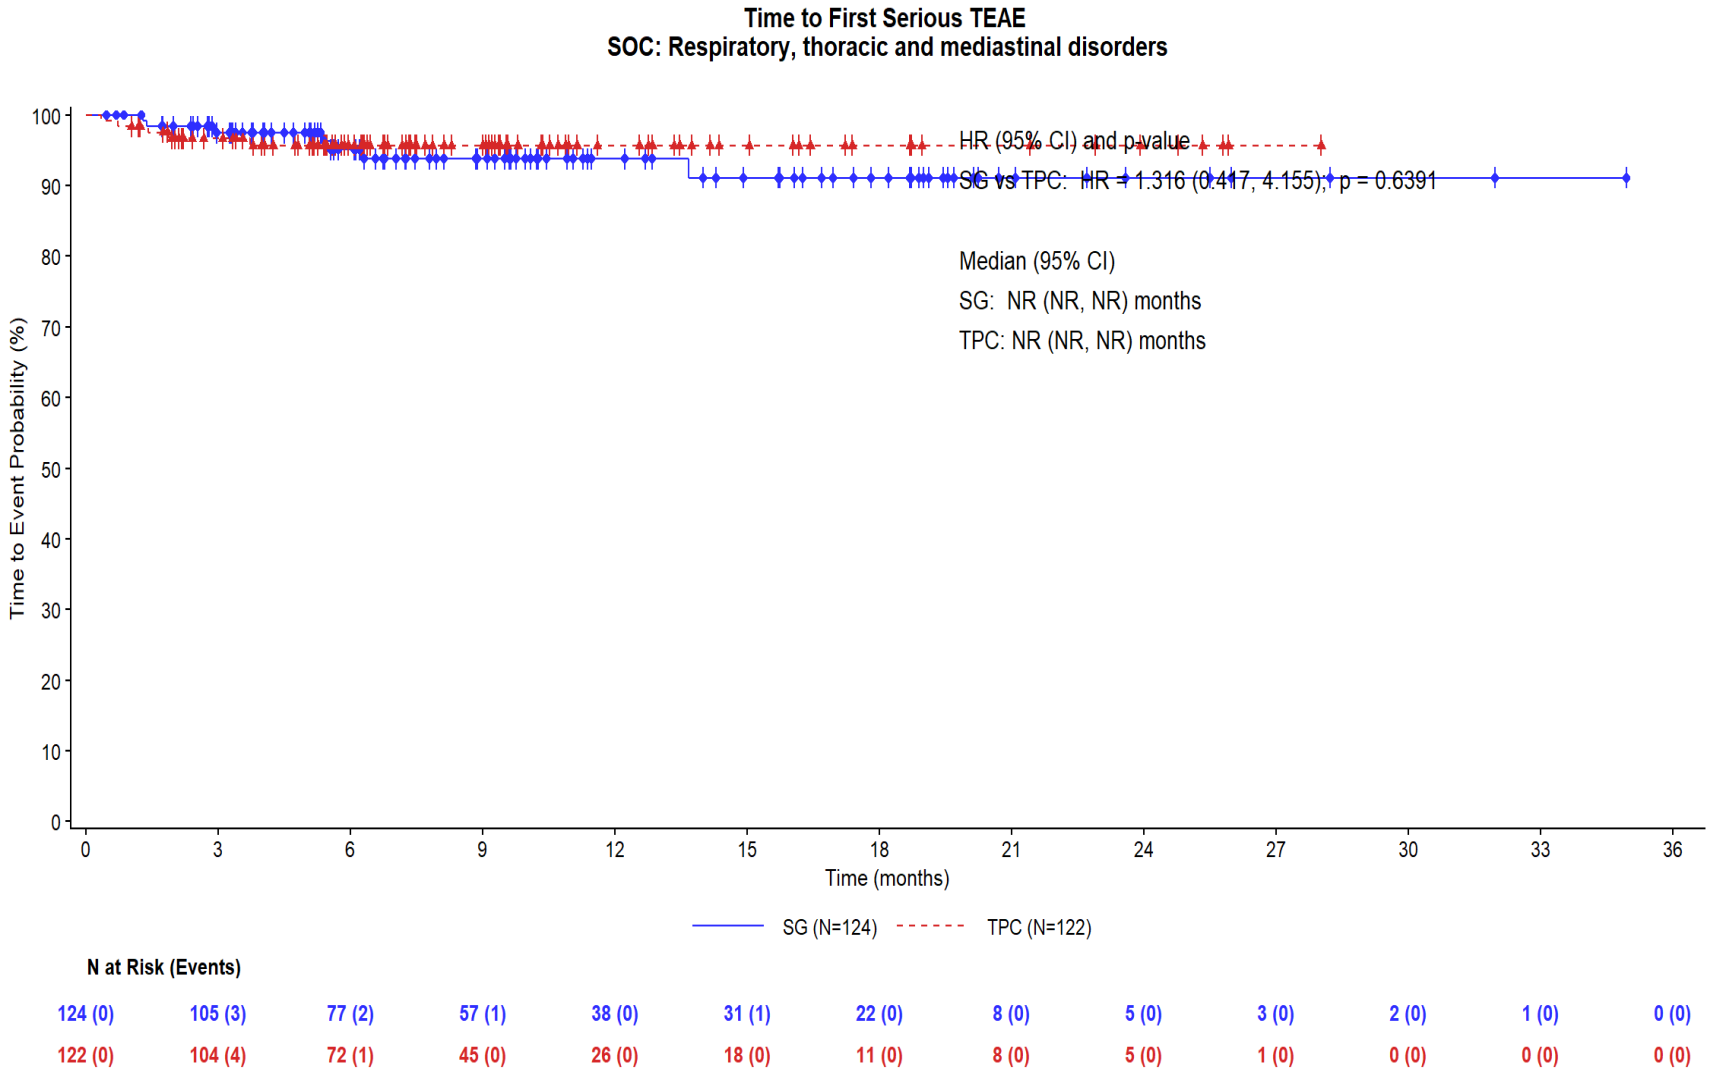
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.110. Figure 1.1.111: Kaplan Meier Plot of Time to First TEAE (SAE) by SOC Blood and lymphatic system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



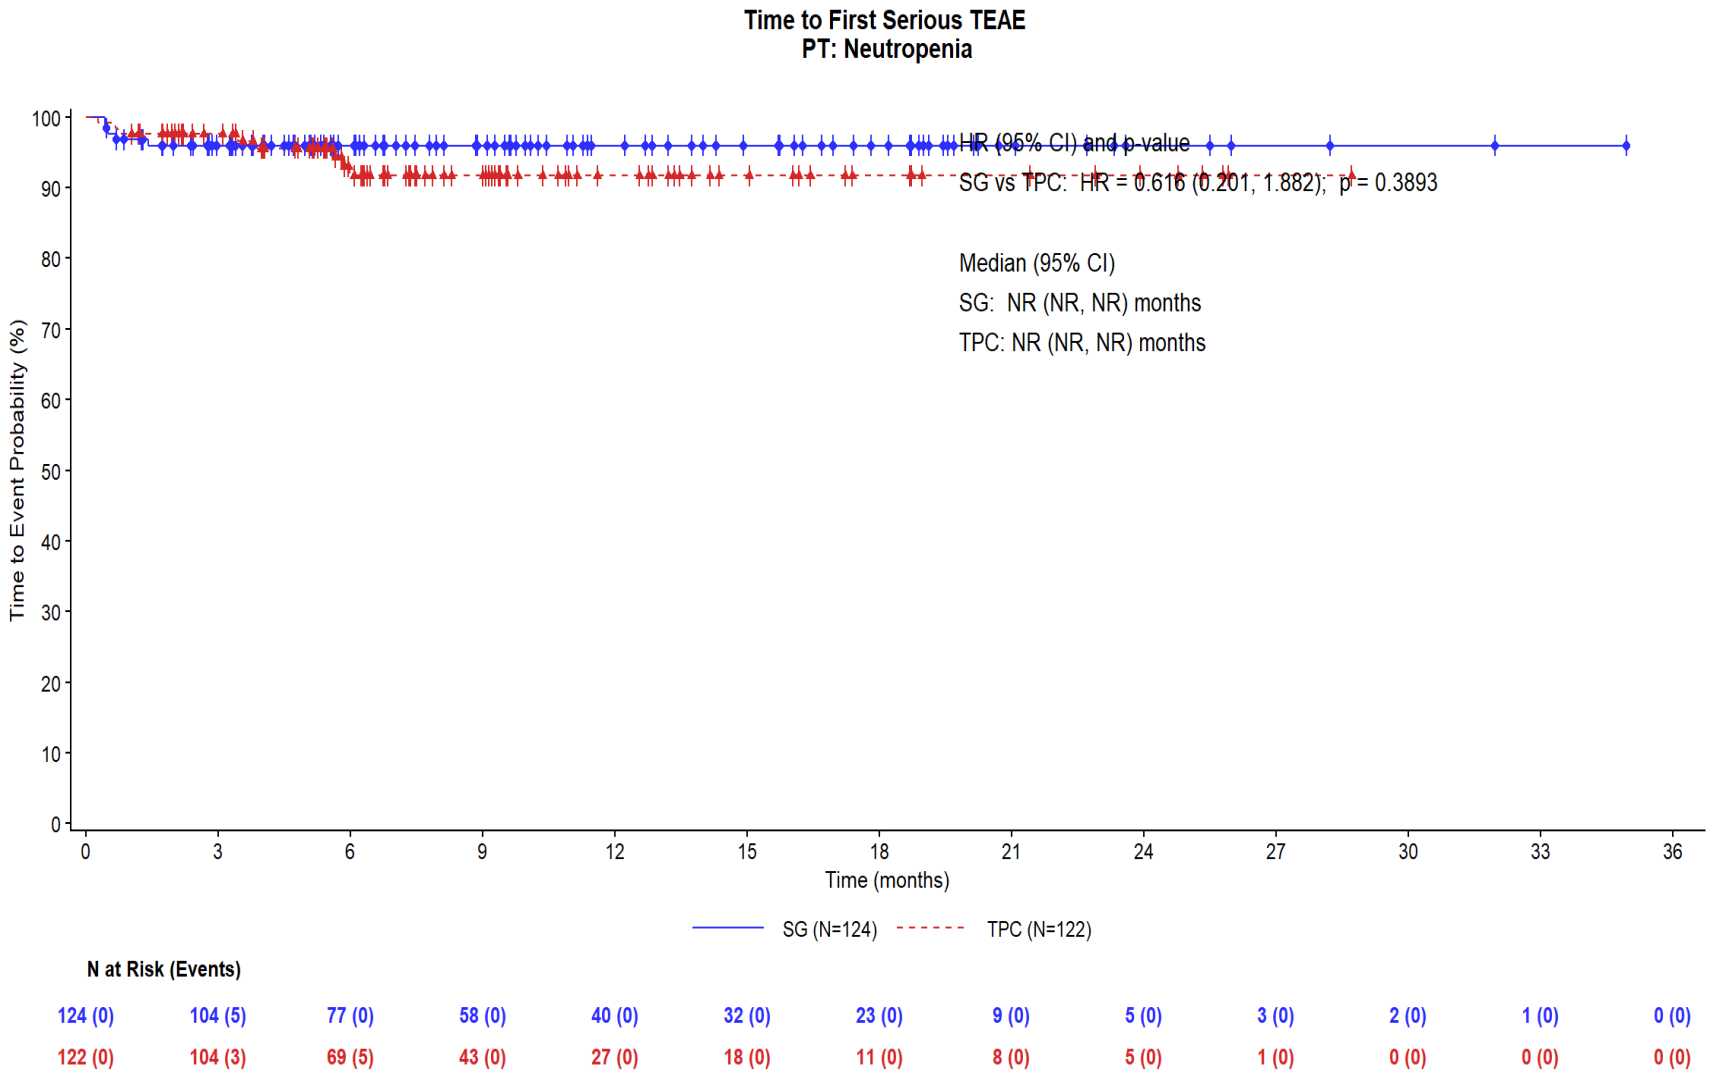
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.111. Figure 1.1.112: Kaplan Meier Plot of Time to First TEAE (SAE) by SOC Gastrointestinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



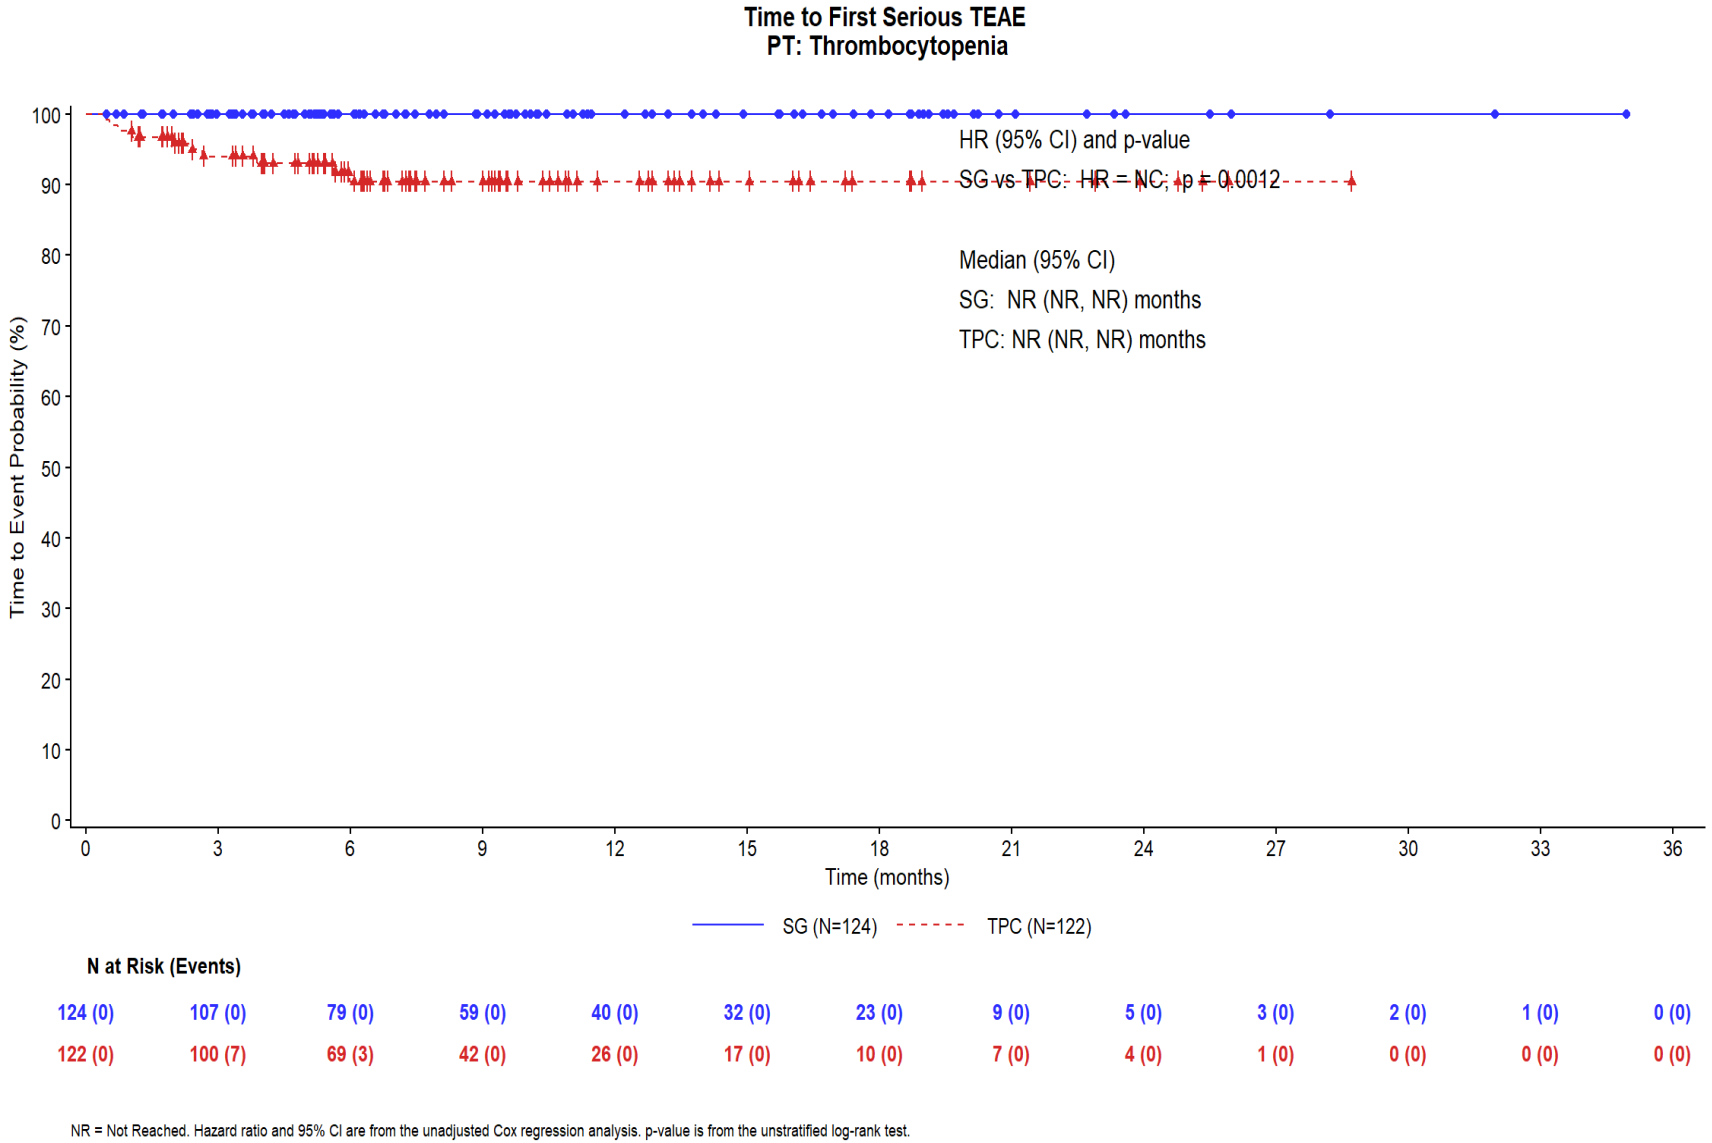
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.112. Figure 1.1.113: Kaplan Meier Plot of Time to First TEAE (SAE) by SOC Infections and infestations — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

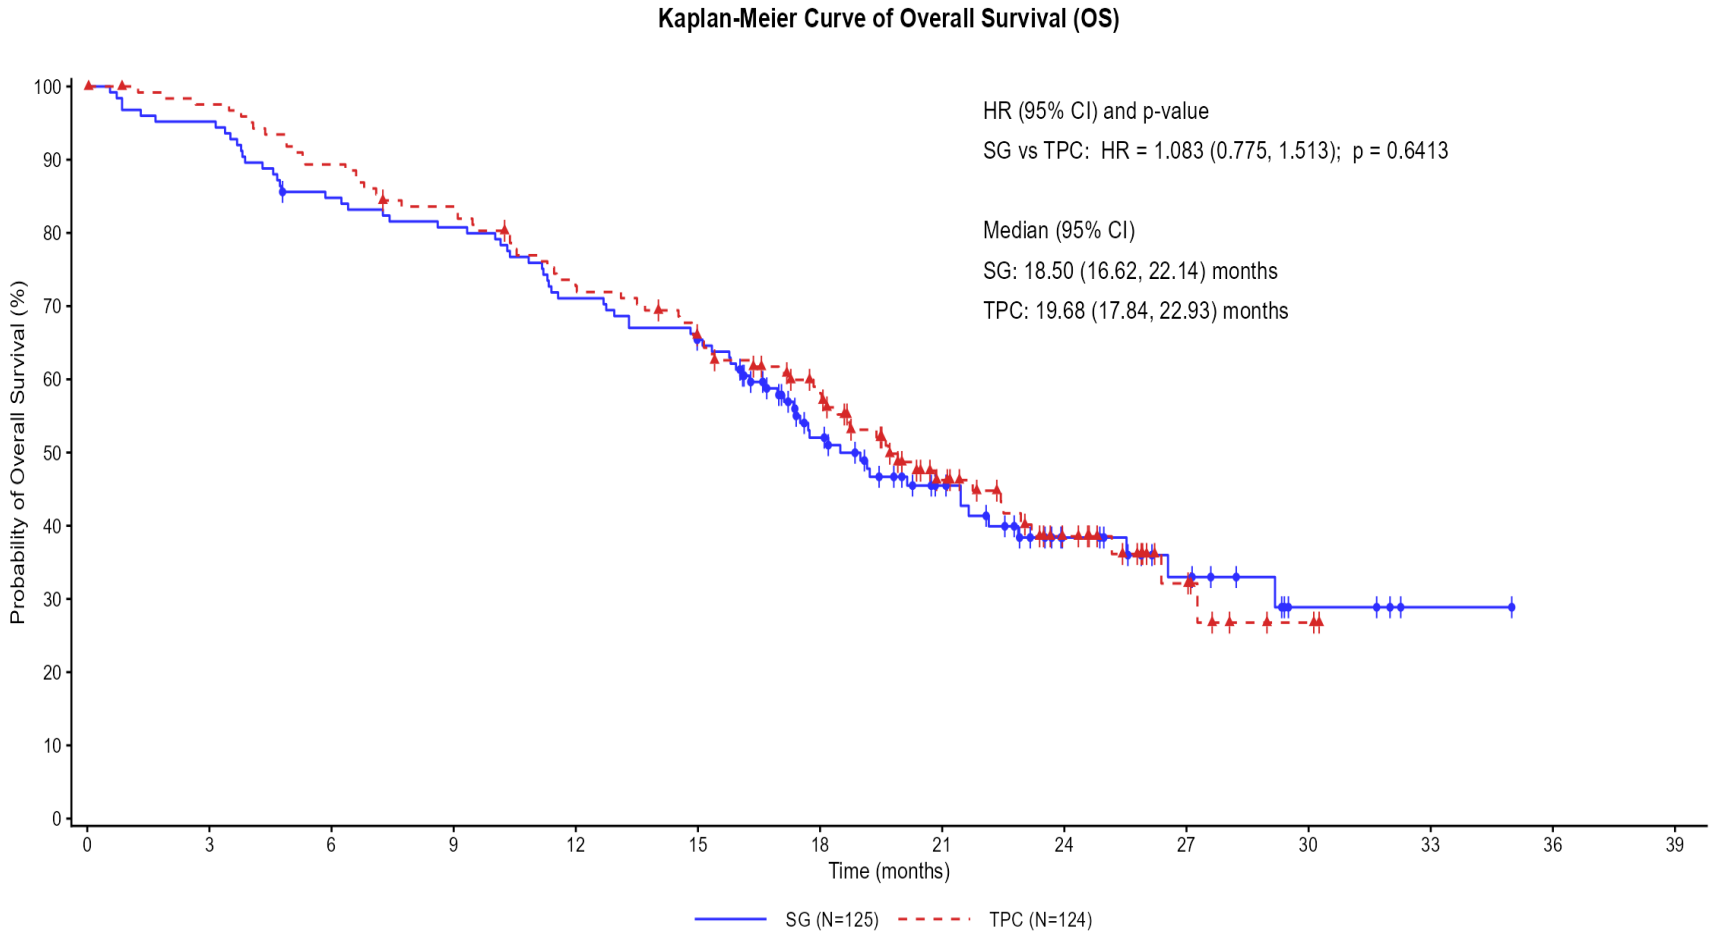
7.113. Figure 1.1.114: Kaplan Meier Plot of Time to First TEAE (SAE) by SOC Respiratory thoracic and mediastinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

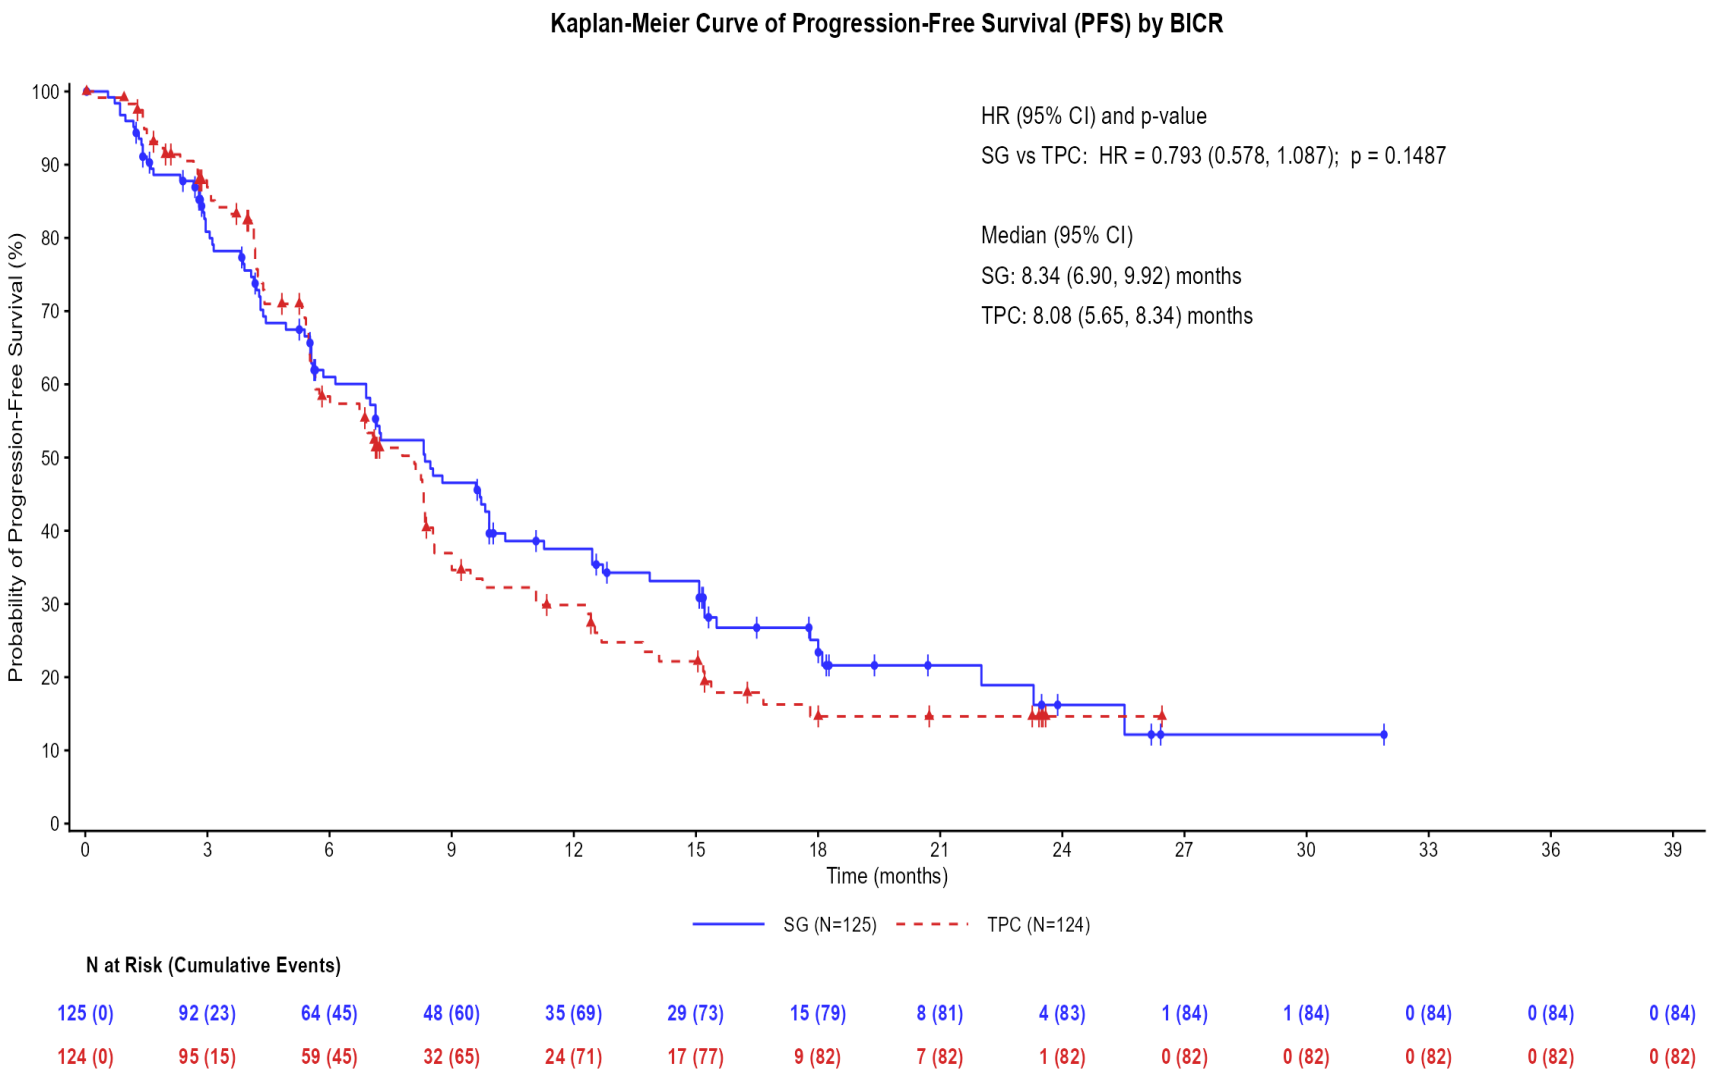
7.114. Figure 1.1.115: Kaplan Meier Plot of Time to First TEAE (SAE) by PT Neutropenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.



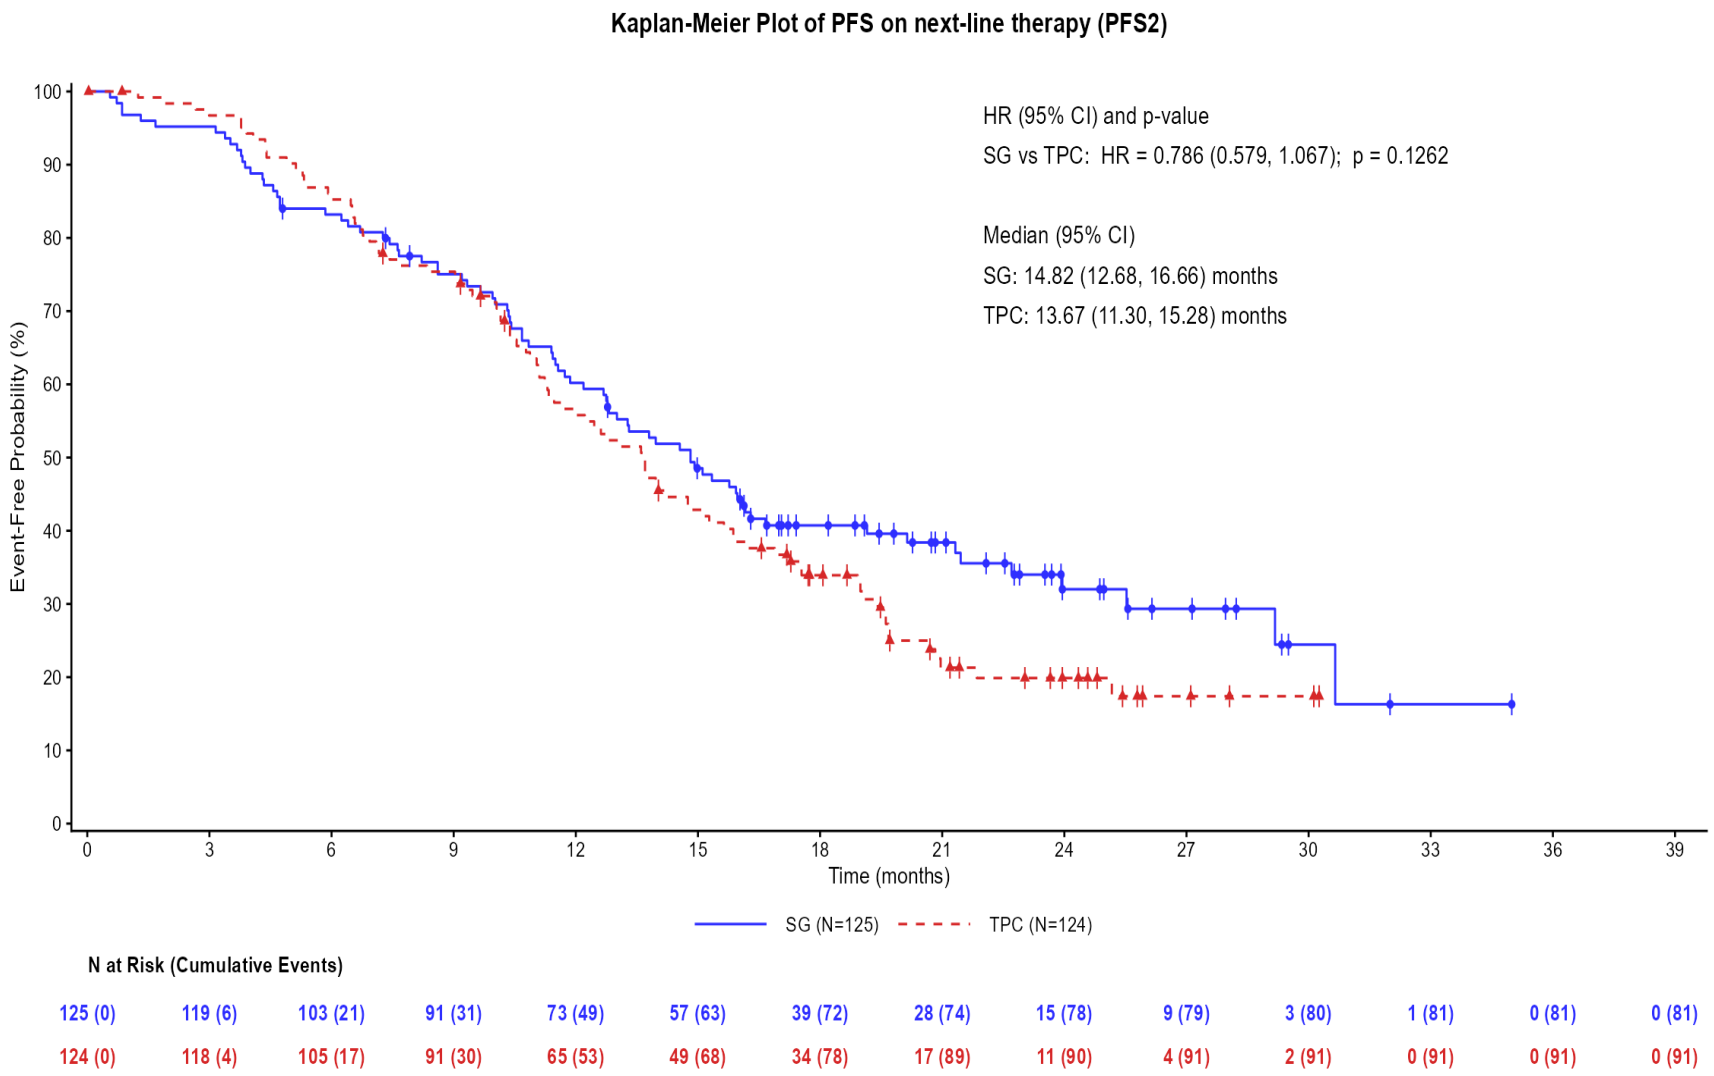
7.115. Figure 1.1.116: Kaplan Meier Plot of Time to First TEAE (SAE) by PT Thrombocytopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.



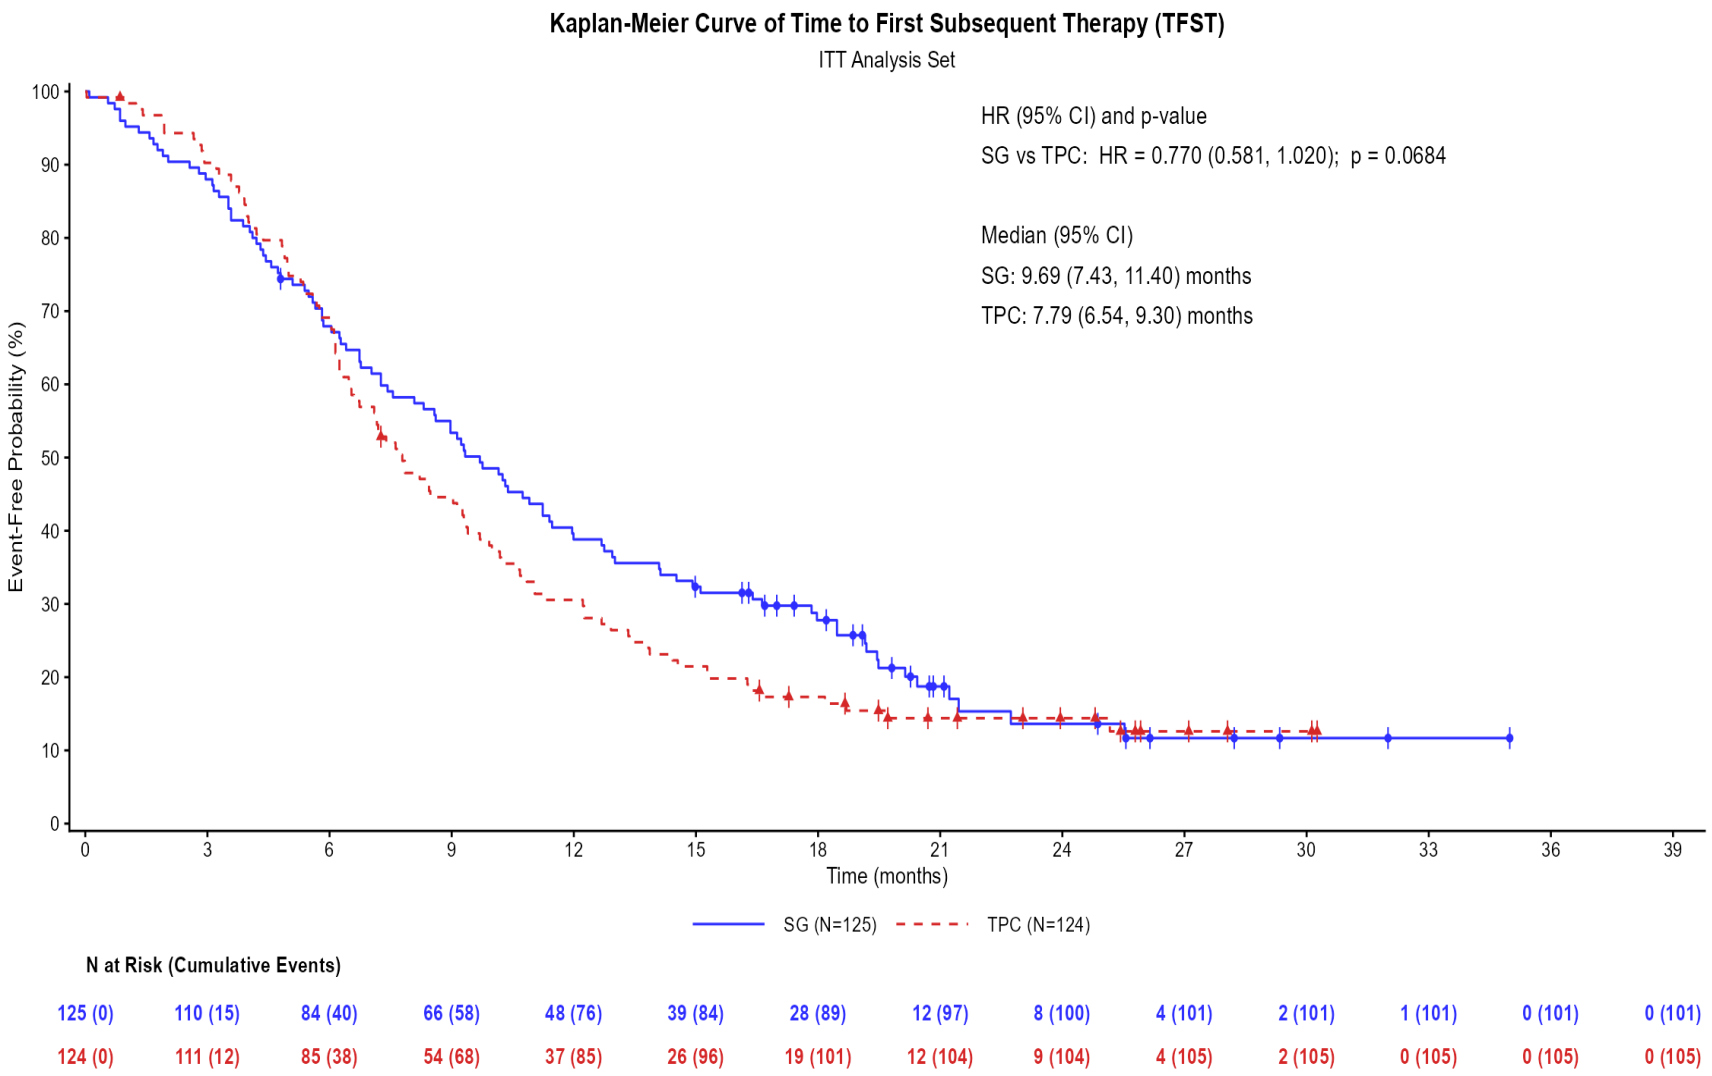
8. Efficacy - KM FIGURES — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

8.1. Figure 1.1.1: Kaplan-Meier Curve of Overall Survival (OS) — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



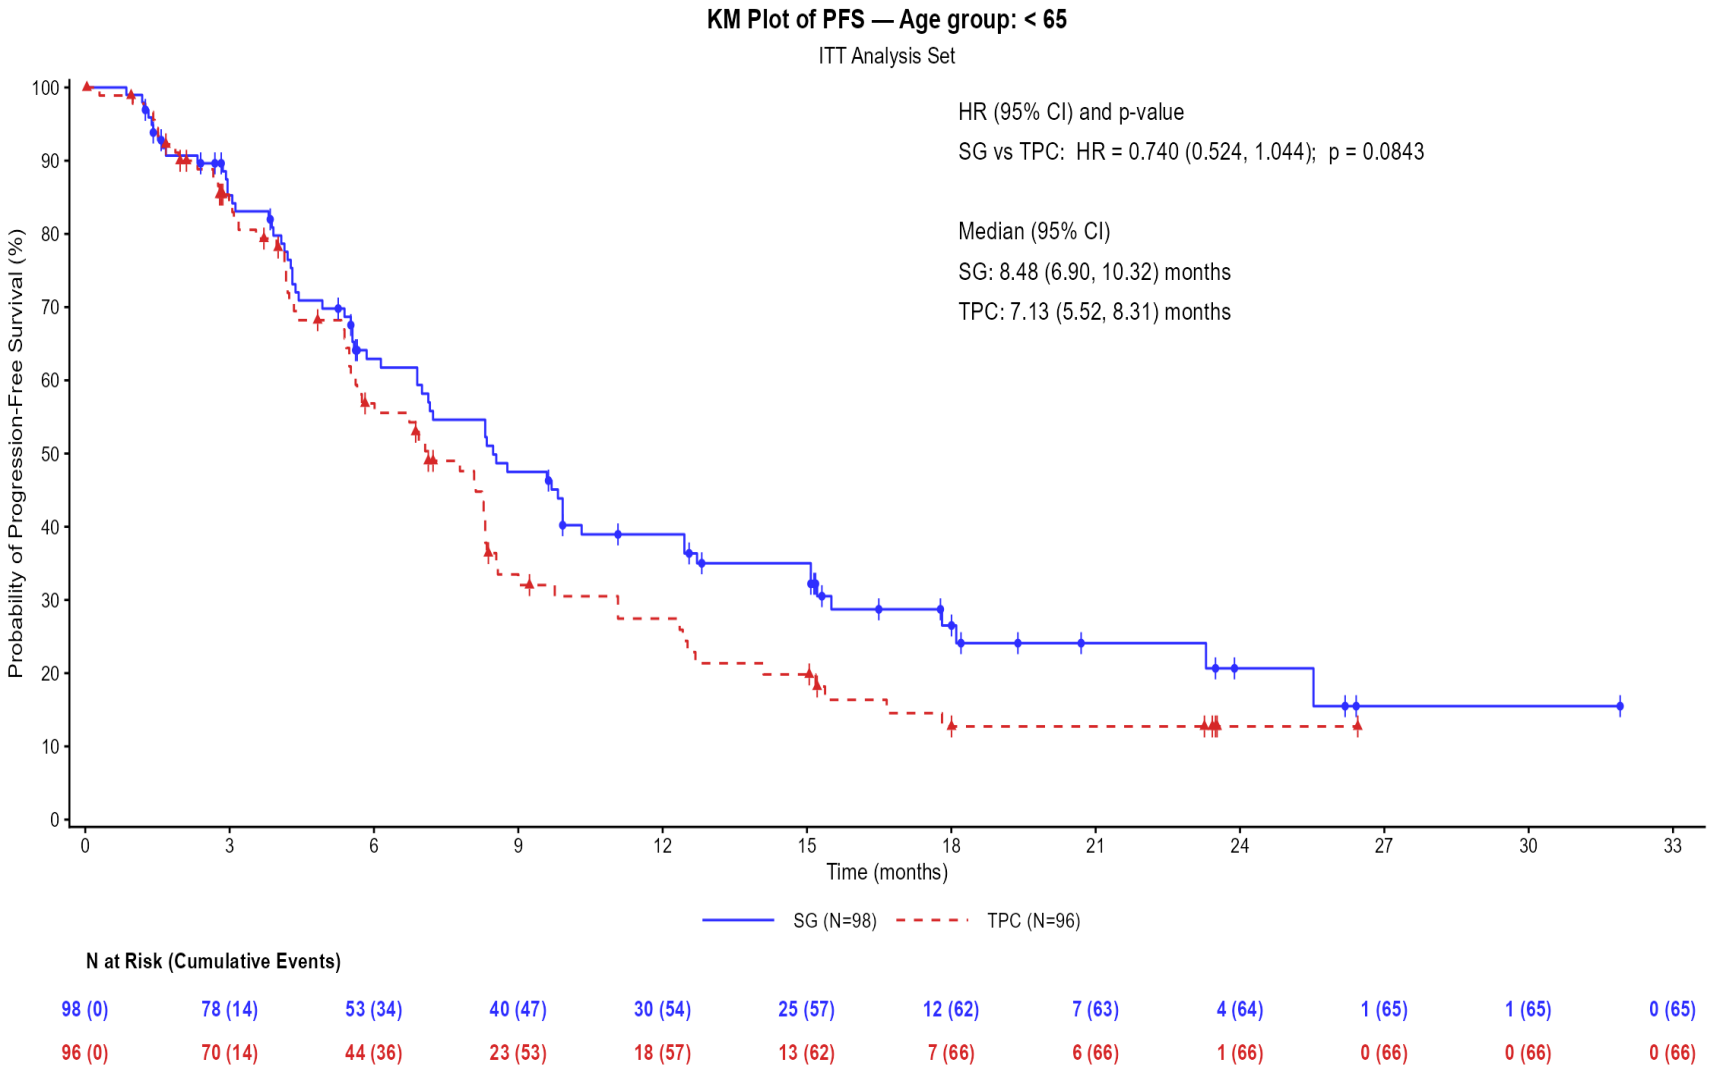
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, adjusted for randomization stratification factors (STRAT1, STRAT2) from IWRS. Efron method for ties. Reference arm = TPC.

8.2. Figure 1.1.2: Kaplan-Meier Curve of Progression-Free Survival (PFS) by BICR — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



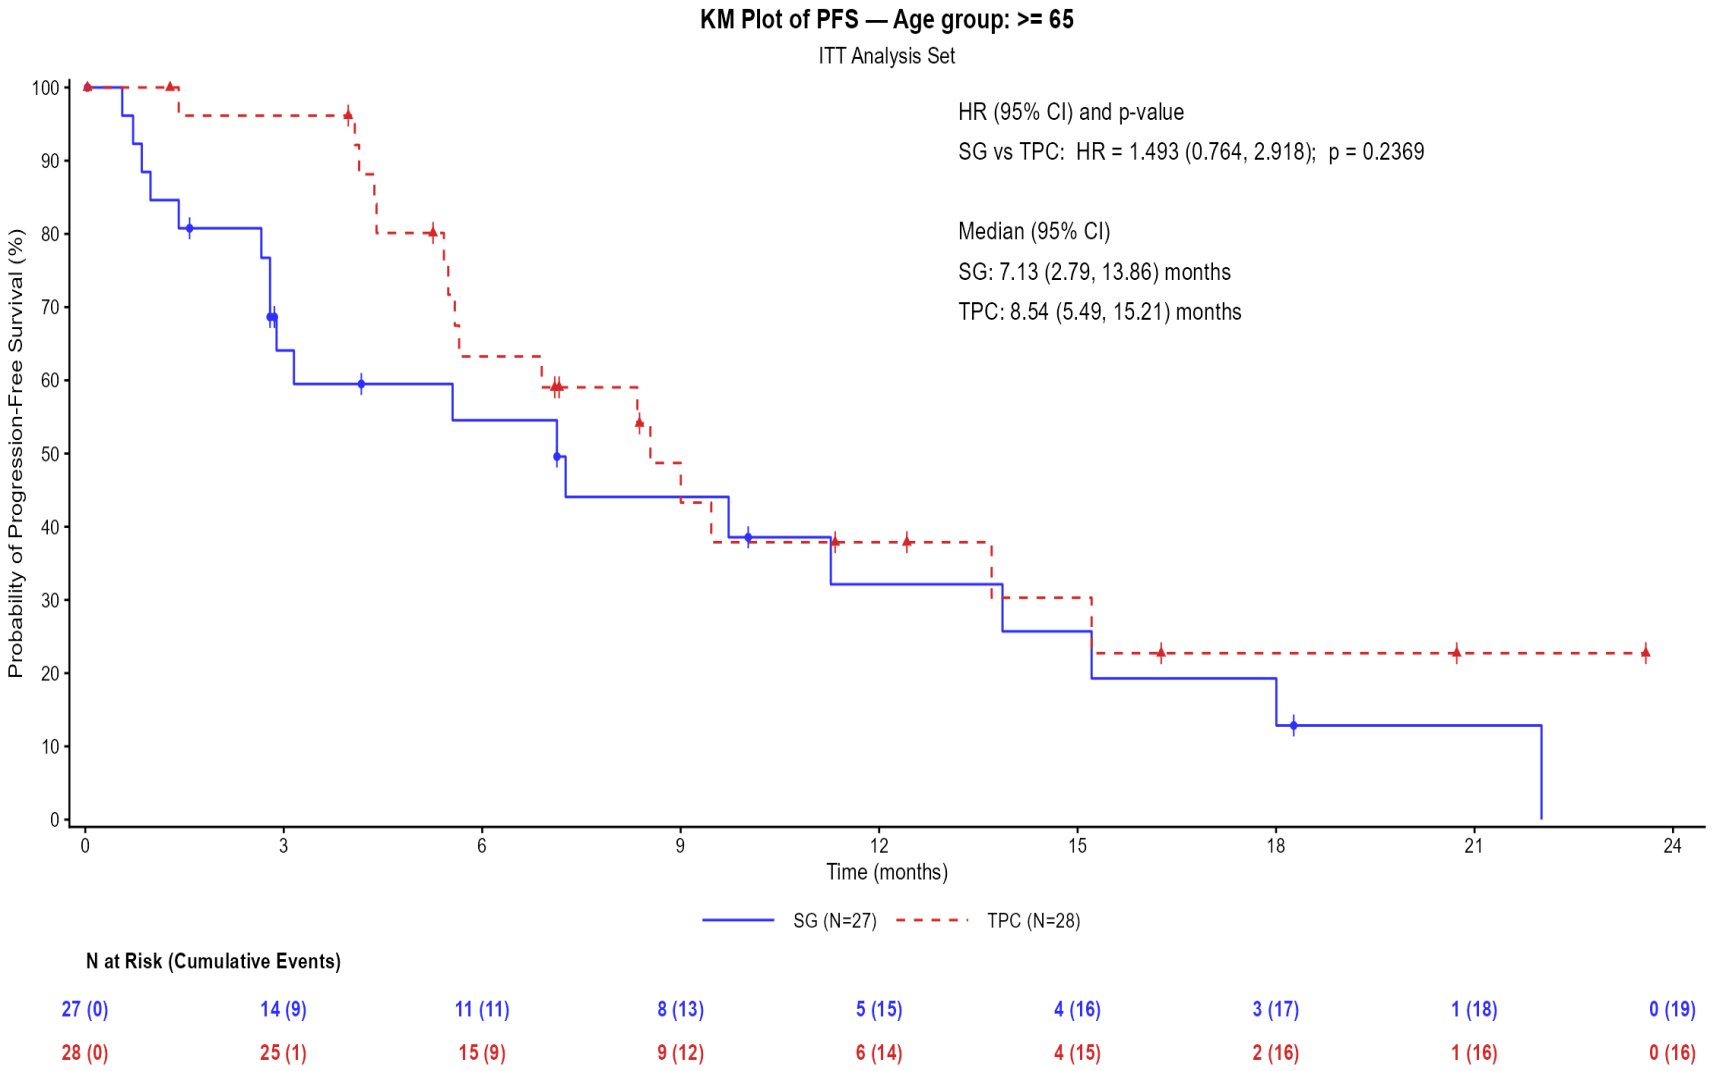
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, adjusted for randomization stratification factors (STRAT1, STRAT2) from IWRS. Efron method for ties. Reference arm = TPC.

8.3. Figure 1.1.3: Kaplan-Meier Plot of PFS on next-line therapy (PFS2) — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



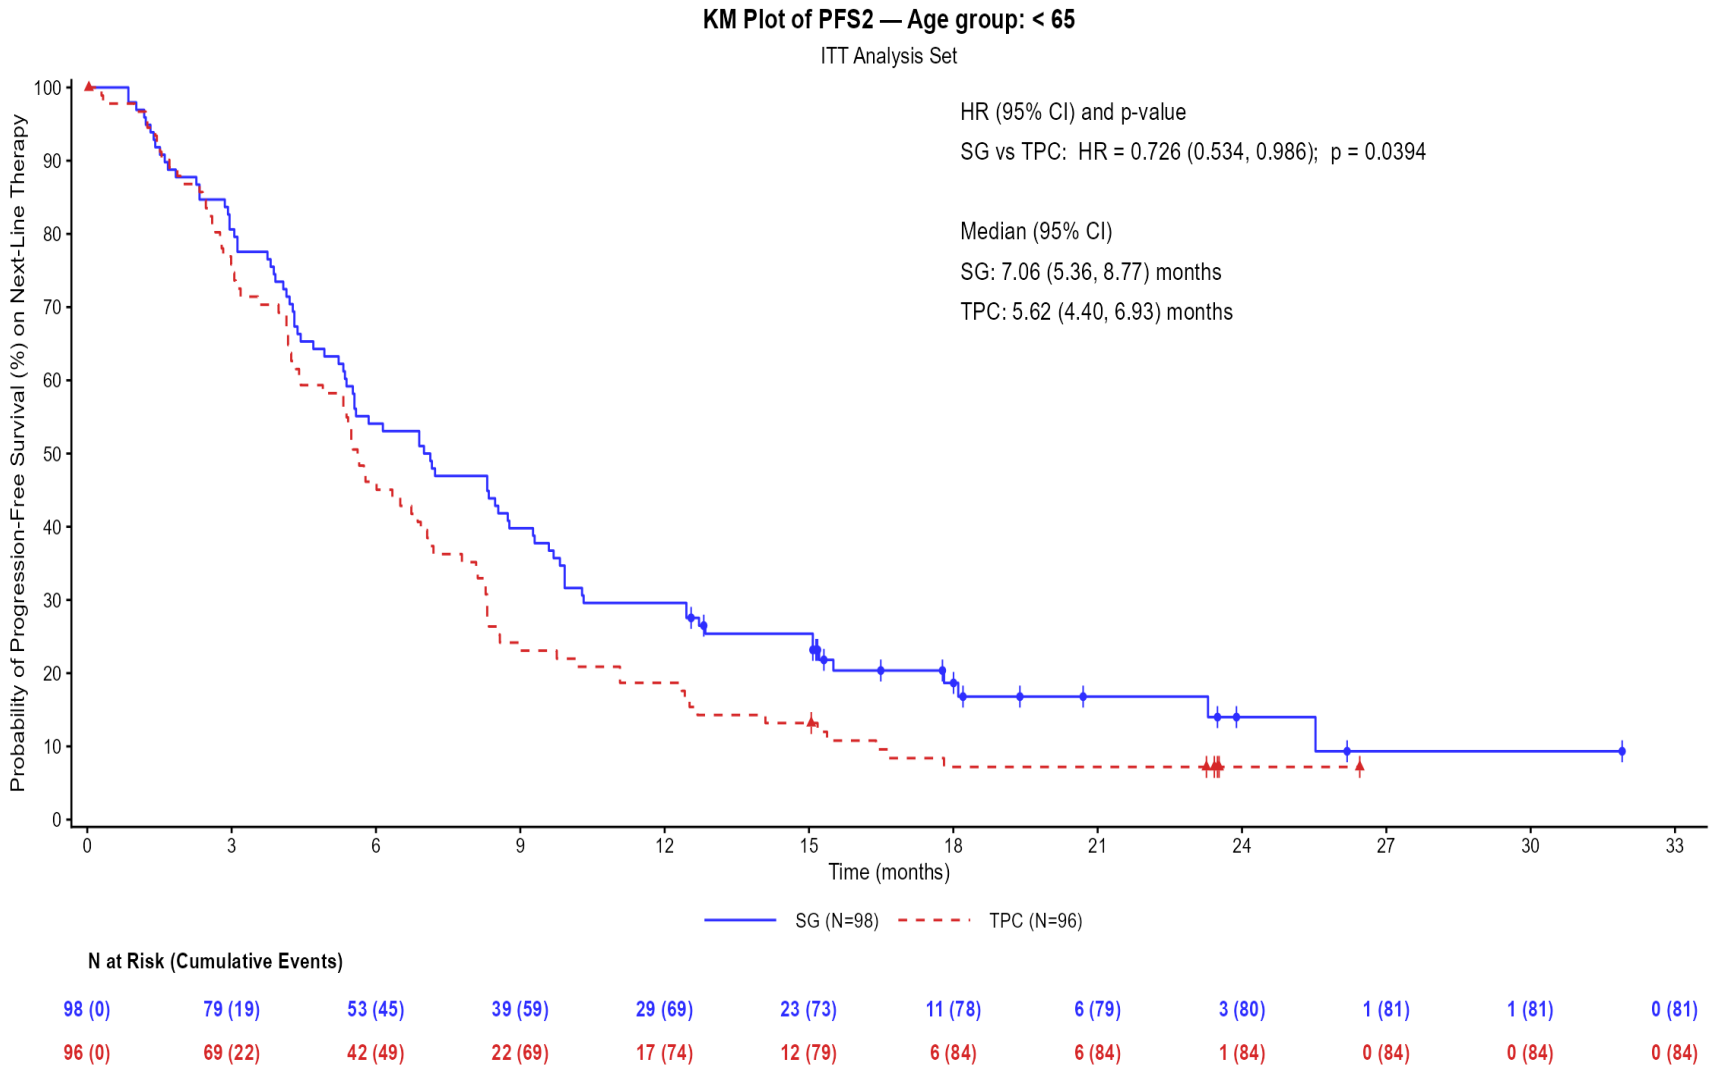
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, adjusted for randomization stratification factors (STRAT1, STRAT2) from IWRS. Efron method for ties. Reference arm = TPC.

8.4. Figure 1.1.4: Kaplan-Meier Curve of Time to First Subsequent Therapy (TFST) — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



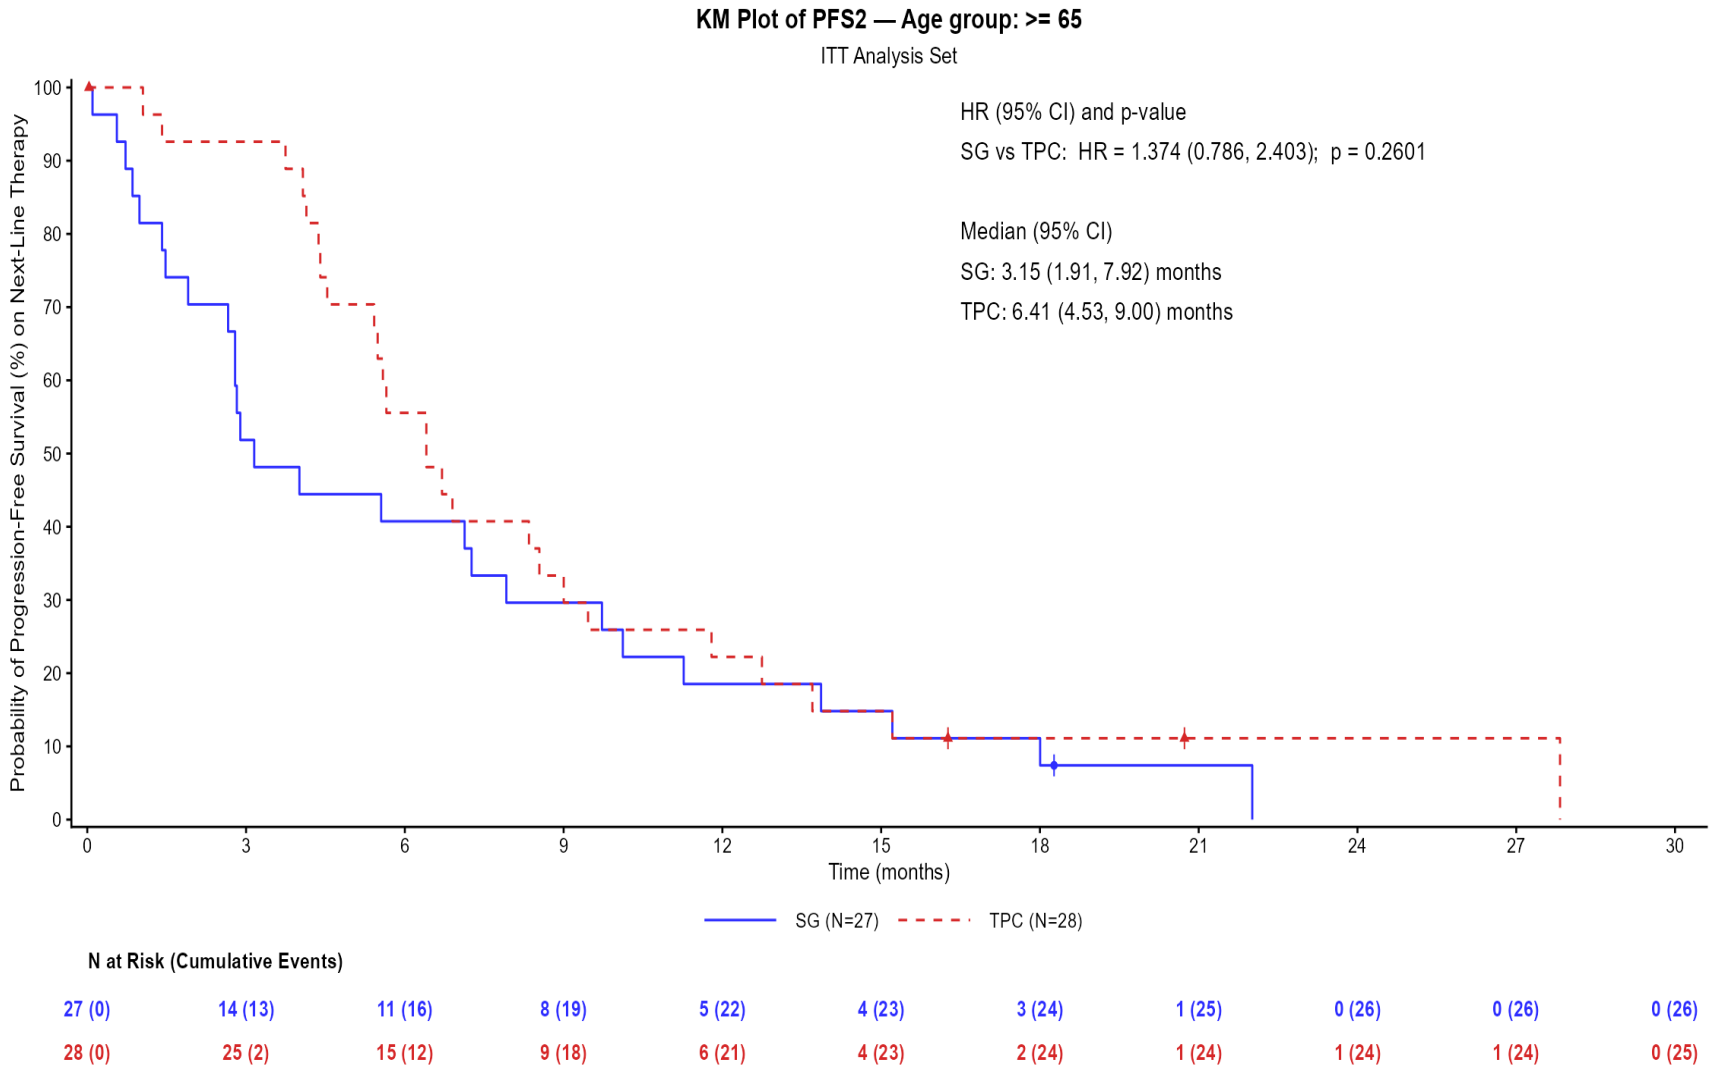
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, adjusted for randomization stratification factors (STRAT1, STRAT2) from IWRS. Efron method for ties. Reference arm = TPC.

8.5. Figure 1.1.5: KM Plot of PFS — Age group: < 65 — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



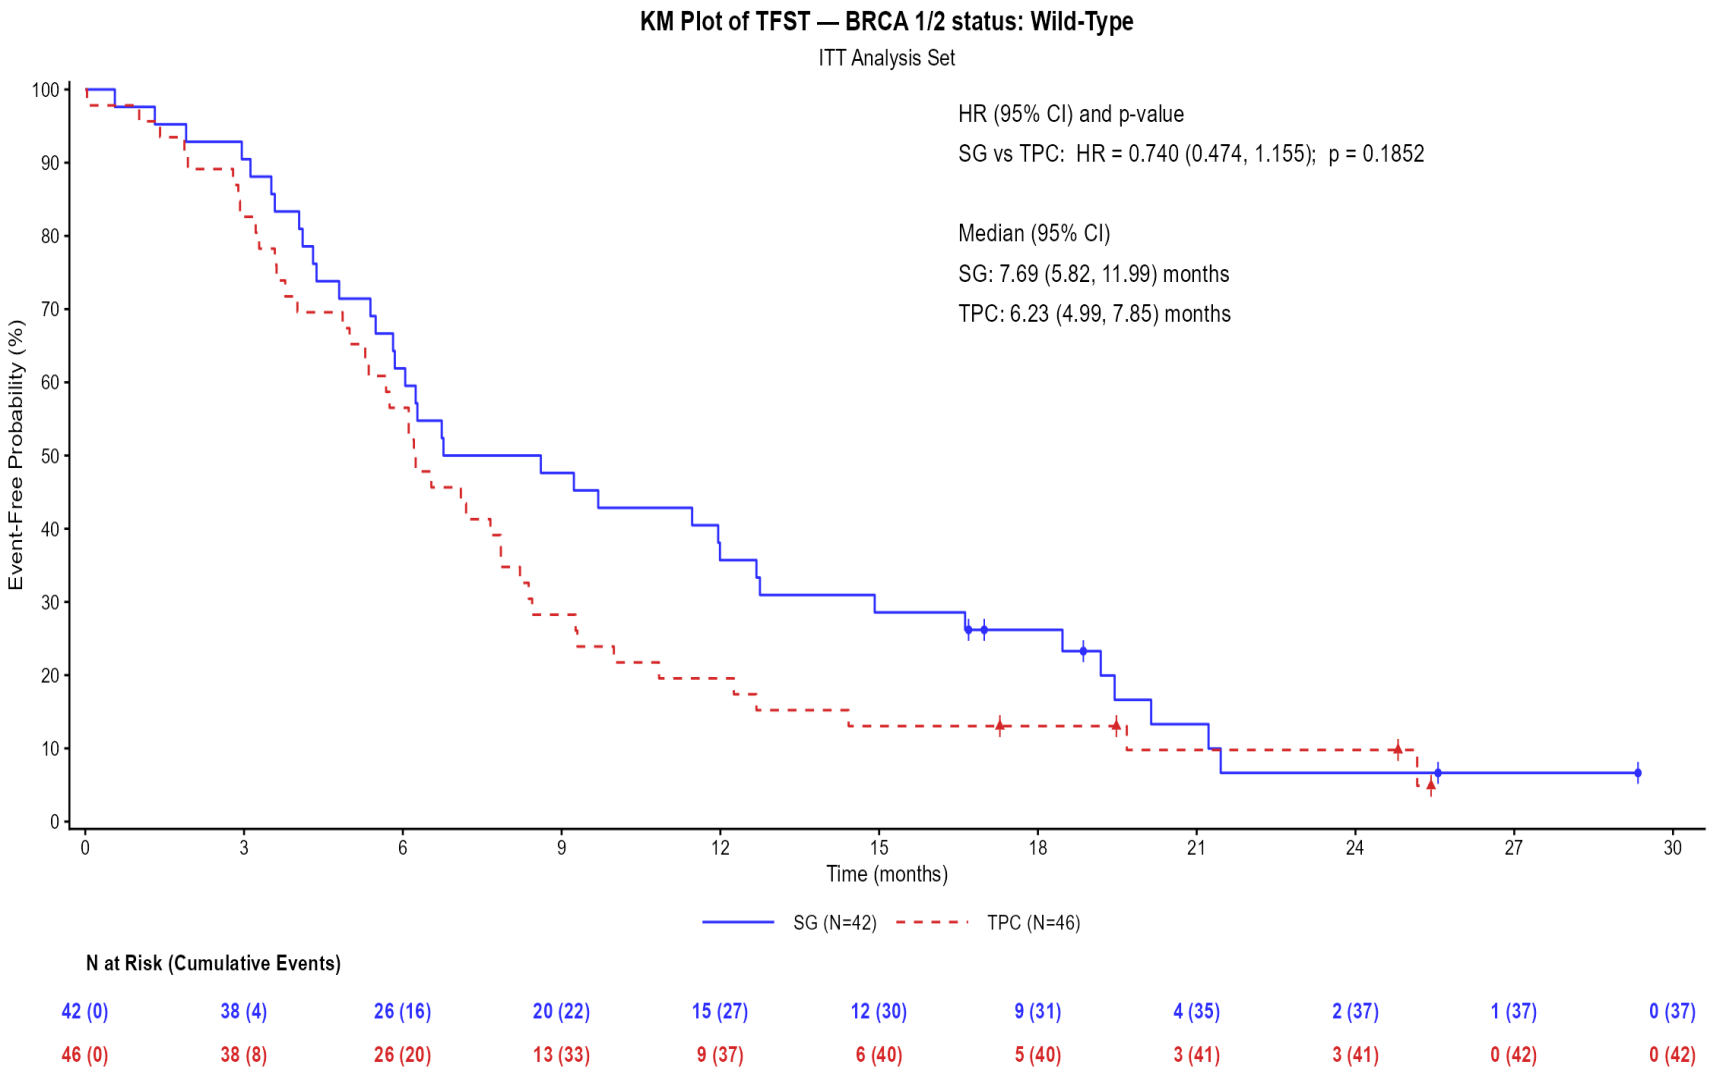
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, unstratified (subgroup analysis). Efron method for ties. Reference arm = TPC.

8.6. Figure 1.1.6: KM Plot of PFS — Age group: >= 65 — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



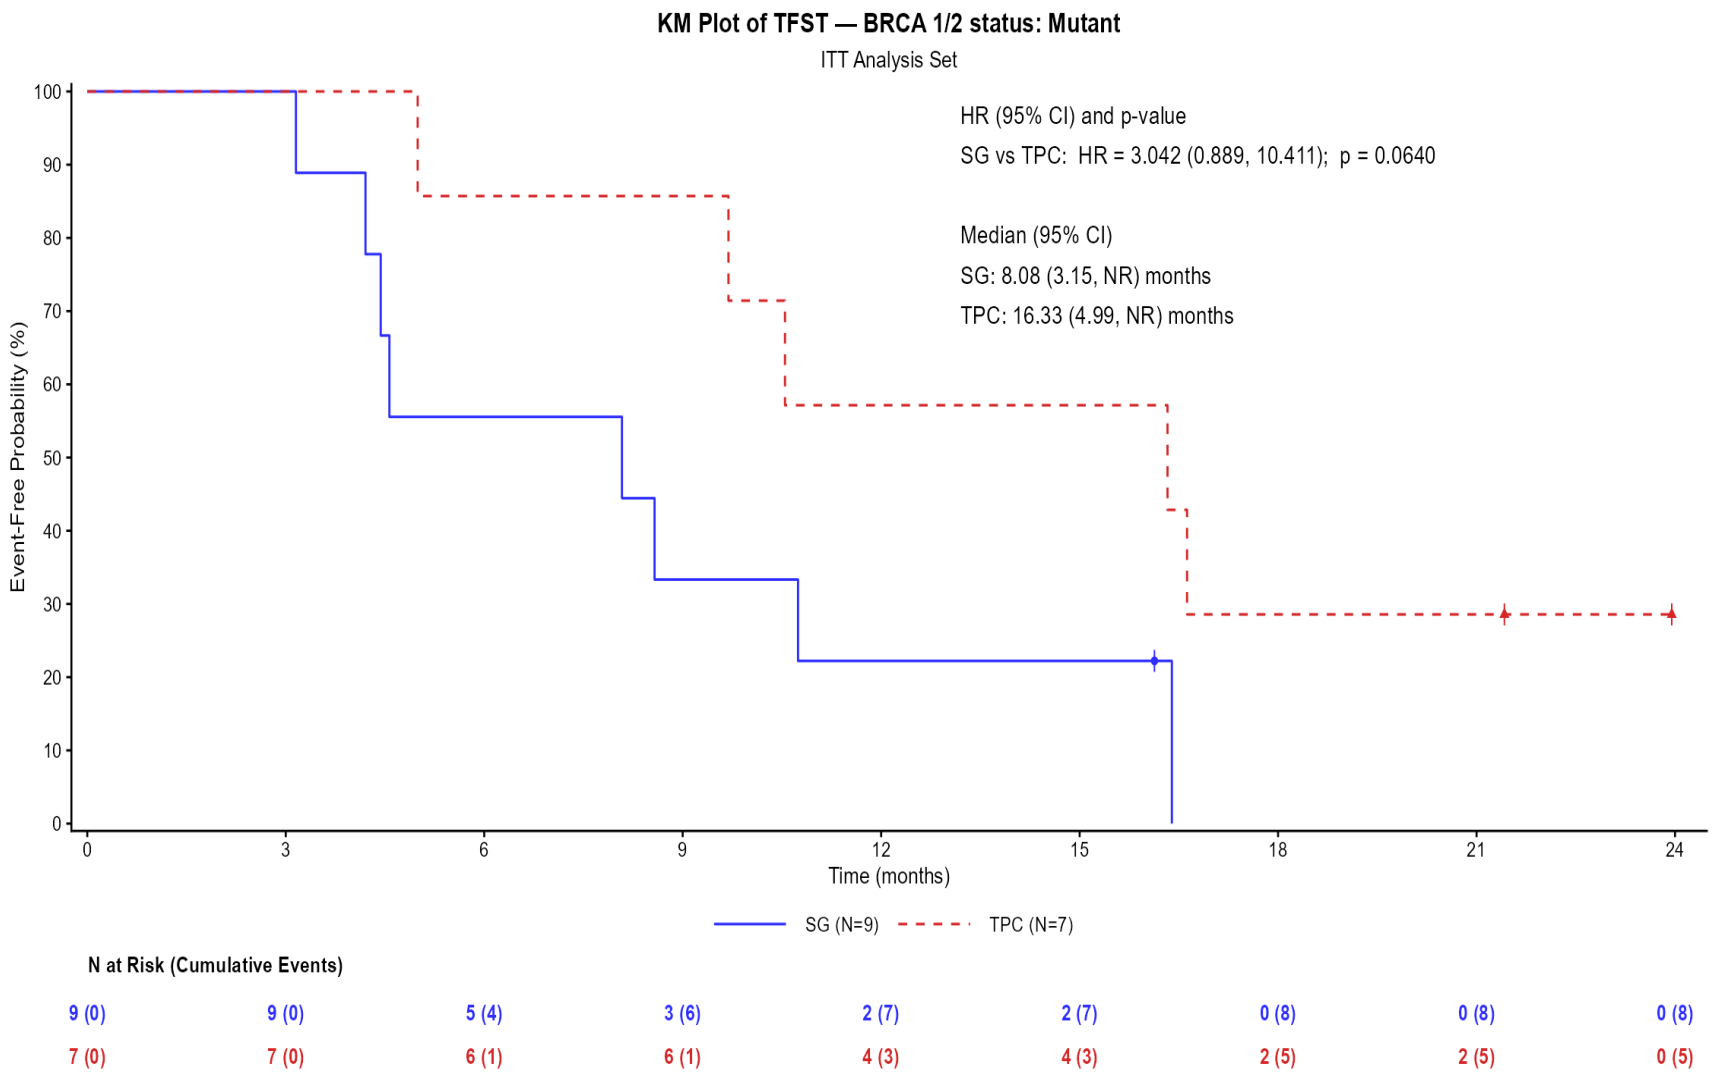
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, unstratified (subgroup analysis). Efron method for ties. Reference arm = TPC.

8.7. Figure 1.1.7: KM Plot of PFS2 — Age group: < 65 — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, unstratified (subgroup analysis). Efron method for ties. Reference arm = TPC.

8.8. Figure 1.1.8: KM Plot of PFS2 — Age group: >= 65 — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, unstratified (subgroup analysis). Efron method for ties. Reference arm = TPC.

8.9. Figure 1.1.9: KM Plot of TFST — BRCA 1/2 status: Wild-Type — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, unstratified (subgroup analysis). Efron method for ties. Reference arm = TPC.

8.10. Figure 1.1.10: KM Plot of TFST — BRCA 1/2 status: Mutant — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, unstratified (subgroup analysis). Efron method for ties. Reference arm = TPC.

Table. Recurrence of diarrhoea TEAE — mSAF: Excluding patients preselected to nab-paclitaxel or paclitaxel

	SG (N=124)			TPC (N=122)		
Incidence of diarrhoea TEAE	**1 event**	**2 events**	**>2 events**	**1 event**	**2 events**	**>2 events**
Grade 1	29 (23.4%)	11 (8.9%)	14 (11.3%)	20 (16.4%)	2 (1.6%)	2 (1.6%)
Grade 2	28 (22.6%)	7 (5.6%)	5 (4.0%)	8 (6.6%)	1 (0.8%)	0
Grade ≥3	14 (11.3%)	0	0	2 (1.6%)	0	0
Grade 3	14 (11.3%)	0	0	2 (1.6%)	0	0
Grade 4	0	0	0	0	0	0
Grade 5	0	0	0	0	0	0

n = number of events per patient;

Table 1.3.1
Summary of Observation Period (Months) for EORTC QLQ-C30
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Statistic	SG (N=125)	TPC (N=124)	Overall (N=249)
N	125	123	248
Mean (SD)	9.5 (7.39)	8.4 (6.34)	9.0 (6.90)
95% CI	8.2, 10.8	7.3, 9.6	8.1, 9.8
Median	7.4	6.8	6.9
Q1, Q3	4.2, 14.8	4.2, 10.6	4.2, 12.8
Min, Max	0.0, 34.5	0.0, 27.3	0.0, 34.5

Note: Observation period is defined as the time from the start of treatment to the final study visit and is truncated at the date of the last questionnaire completion if it occurs earlier. If the treatment start date is missing, the randomization date is used. The final study visit is defined as the maximum of Period 01 end date and Period 02 end date.

CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Parameter	SG (N=125)	TPC (N=124)
The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	125	124
The number (%) of patients with an event [a]	70 (56.0%)	73 (58.9%)
The number (%) of patients censored [a]	55 (44.0%)	51 (41.1%)
Not at risk at baseline n (%) [a]	2 (1.6%)	4 (3.2%)
Missing baseline only n (%) [a]	2 (1.6%)	2 (1.6%)
Having baseline but no postbaseline visit n (%) [a]	6 (4.8%)	3 (2.4%)
No baseline or any postbaseline n (%) [a]	0 (0.0%)	1 (0.8%)
Missing PRO for two consecutive visits n (%) [a]	9 (7.2%)	3 (2.4%)
Premature treatment discontinuation n (%) [a]	27 (21.6%)	36 (29.0%)
Others n (%) [a]	9 (7.2%)	2 (1.6%)
Median time to event (95% CI) [b]	4.1 (2.1, 6.3)	3.3 (2.1, 4.9)
Q1	0.8 (0.8, 1.5)	0.9 (0.8, 1.4)
Q3	NE (9.8, NE)	13.2 (6.9, NE)
Proportion of patients who are event-free		
by 3 Months, % (95% CI)	53.0% (43.2%, 61.8%)	53.3% (43.6%, 62.1%)
by 6 Months, % (95% CI)	45.3% (35.5%, 54.5%)	35.3% (25.8%, 44.8%)
by 12 Months, % (95% CI)	32.8% (23.2%, 42.8%)	30.9% (21.0%, 41.3%)
by 18 Months, % (95% CI)	27.8% (17.8%, 38.6%)	17.7% (7.2%, 31.9%)
by 24 Months, % (95% CI)	27.8% (17.8%, 38.6%)	17.7% (7.2%, 31.9%)
Nominal p-value for stratified log-rank test [c]	0.649	
HR (95% CI) [d]	0.89 (0.64, 1.24)	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[d] HR (95% CI) of SG vs. TPC was estimated using a Cox proportional hazards regression model adjusted for the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Time to First Meaningful Deterioration for EORTC QLQ-C30 Pain
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Parameter	SG (N=125)	TPC (N=124)
The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	125	124
The number (%) of patients with an event [a]	58 (46.4%)	76 (61.3%)
The number (%) of patients censored [a]	67 (53.6%)	48 (38.7%)
Not at risk at baseline n (%) [a]	8 (6.4%)	5 (4.0%)
Missing baseline only n (%) [a]	2 (1.6%)	2 (1.6%)
Having baseline but no postbaseline visit n (%) [a]	6 (4.8%)	3 (2.4%)
No baseline or any postbaseline n (%) [a]	0 (0.0%)	1 (0.8%)
Missing PRO for two consecutive visits n (%) [a]	9 (7.2%)	2 (1.6%)
Premature treatment discontinuation n (%) [a]	35 (28.0%)	34 (27.4%)
Others n (%) [a]	7 (5.6%)	1 (0.8%)
Median time to event (95% CI) [b]	7.7 (2.5, 11.8)	2.8 (2.1, 5.1)
Q1	1.4 (0.8, 1.6)	1.1 (0.8, 1.6)
Q3	NE (15.5, NE)	10.9 (6.5, NE)
Proportion of patients who are event-free		
by 3 Months, % (95% CI)	58.4% (48.2%, 67.3%)	48.0% (38.3%, 57.1%)
by 6 Months, % (95% CI)	53.6% (43.3%, 62.9%)	37.5% (28.2%, 46.8%)
by 12 Months, % (95% CI)	38.5% (27.1%, 49.8%)	22.7% (13.4%, 33.5%)
by 18 Months, % (95% CI)	28.3% (16.1%, 41.8%)	14.2% (5.2%, 27.5%)
by 24 Months, % (95% CI)	28.3% (16.1%, 41.8%)	NE (NE, NE)
Nominal p-value for stratified log-rank test [c]	0.166	
HR (95% CI) [d]	0.75 (0.53, 1.06)	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[d] HR (95% CI) of SG vs. TPC was estimated using a Cox proportional hazards regression model adjusted for the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 5.3.2.2
Time to First Meaningful Deterioration for EORTC QLQ-BR23 Sexual Function
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Parameter	SG (N=125)	TPC (N=124)
The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	125	124
The number (%) of patients with an event [a]	35 (28.0%)	37 (29.8%)
The number (%) of patients censored [a]	90 (72.0%)	87 (70.2%)
Not at risk at baseline n (%) [a]	0 (0.0%)	0 (0.0%)
Missing baseline only n (%) [a]	2 (1.6%)	2 (1.6%)
Having baseline but no postbaseline visit n (%) [a]	7 (5.6%)	3 (2.4%)
No baseline or any postbaseline n (%) [a]	1 (0.8%)	1 (0.8%)
Missing PRO for two consecutive visits n (%) [a]	13 (10.4%)	11 (8.9%)
Premature treatment discontinuation n (%) [a]	59 (47.2%)	69 (55.6%)
Others n (%) [a]	8 (6.4%)	1 (0.8%)
Median time to event (95% CI) [b]	NE (13.3, NE)	NE (8.7, NE)
Q1	4.5 (1.8, 11.7)	3.5 (1.5, 6.2)
Q3	NE (NE, NE)	NE (NE, NE)
Proportion of patients who are event-free		
by 3 Months, % (95% CI)	80.8% (72.1%, 87.1%)	79.0% (70.1%, 85.5%)
by 6 Months, % (95% CI)	72.8% (62.9%, 80.5%)	67.4% (57.1%, 75.8%)
by 12 Months, % (95% CI)	63.4% (51.3%, 73.2%)	60.1% (48.5%, 69.9%)
by 18 Months, % (95% CI)	60.1% (46.8%, 71.0%)	60.1% (48.5%, 69.9%)
by 24 Months, % (95% CI)	54.6% (38.5%, 68.1%)	60.1% (48.5%, 69.9%)
Nominal p-value for stratified log-rank test [c]	0.557	
HR (95% CI) [d]	0.86 (0.54, 1.38)	

Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[d] HR (95% CI) of SG vs. TPC was estimated using a Cox proportional hazards regression model adjusted for the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

The number (%) of patients with an event [a]	25 (20.0%)	29 (23.4%)
The number (%) of patients censored [a]	100 (80.0%)	95 (76.6%)
Not at risk at baseline n (%) [a]	0 (0.0%)	0 (0.0%)
Missing baseline only n (%) [a]	0 (0.0%)	0 (0.0%)
Having baseline but no postbaseline visit n (%) [a]	0 (0.0%)	0 (0.0%)
No baseline or any postbaseline n (%) [a]	30 (24.0%)	25 (20.2%)
Missing PRO for two consecutive visits n (%) [a]	3 (2.4%)	1 (0.8%)
Premature treatment discontinuation n (%) [a]	55 (44.0%)	65 (52.4%)
Others n (%) [a]	12 (9.6%)	4 (3.2%)
Median time to event (95% CI) [b]	NE (NE, NE)	6.5 (6.3, NE)
Q1	5.6 (3.7, NE)	5.6 (3.7, 6.4)
Q3	NE (NE, NE)	NE (NE, NE)
Proportion of patients who are event-free		
by 3 Months, % (95% CI)	92.6% (85.1%, 96.4%)	95.9% (89.6%, 98.5%)
by 6 Months, % (95% CI)	71.0% (59.1%, 80.0%)	68.3% (56.2%, 77.6%)
by 12 Months, % (95% CI)	NE (NE, NE)	NE (NE, NE)
by 18 Months, % (95% CI)	NE (NE, NE)	NE (NE, NE)
by 24 Months, % (95% CI)	NE (NE, NE)	NE (NE, NE)
Nominal p-value for stratified log-rank test [c]	0.852	
HR (95% CI) [d]	0.93 (0.54, 1.60)	

Note: 'Minimally worsened', 'much worsened', and 'very much worsened' are classified as responders.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[d] HR (95% CI) of SG vs. TPC was estimated using a Cox proportional hazards regression model adjusted for the randomization stratification factors.
CI = Confidence Interval; HR = hazard ratio; NE = Not Estimable; PGIC = Patient Global Impression of Change; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Recurrent Disease within 6 to 12 Months	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	31	31
	The number (%) of patients with an event [a]	22 (71.0%)	24 (77.4%)
	The number (%) of patients censored [a]	9 (29.0%)	7 (22.6%)
	Median time to event (95% CI) [b]	1.3 (0.8, 1.8)	1.2 (0.9, 3.2)
	Nominal p-value for unstratified log-rank test [c]	0.506	
	HR (95% CI) [d]	0.82 (0.46, 1.46)	
Recurrent Disease Occurring > 12 Months	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	65	67
	The number (%) of patients with an event [a]	45 (69.2%)	50 (74.6%)
	The number (%) of patients censored [a]	20 (30.8%)	17 (25.4%)
	Median time to event (95% CI) [b]	1.0 (0.8, 1.6)	1.6 (1.0, 3.5)
	Nominal p-value for unstratified log-rank test [c]	0.554	
	HR (95% CI) [d]	1.14 (0.76, 1.71)	
	P-value of subgroup*treatment interaction [e]	0.095	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.3.3.1.2
Time to First Meaningful Deterioration for EORTC QLQ-C30 Physical Functioning by Subgroup - Age Group
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
<65 Years	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	98	96
	The number (%) of patients with an event [a]	47 (48.0%)	54 (56.3%)
	The number (%) of patients censored [a]	51 (52.0%)	42 (43.8%)
	Median time to event (95% CI) [b]	8.8 (5.3, 21.5)	4.4 (2.6, 7.0)
	Nominal p-value for unstratified log-rank test [c]	0.111	
	HR (95% CI) [d]	0.73 (0.49, 1.08)	
≥65 Years	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	27	28
	The number (%) of patients with an event [a]	11 (40.7%)	15 (53.6%)
	The number (%) of patients censored [a]	16 (59.3%)	13 (46.4%)
	Median time to event (95% CI) [b]	4.3 (1.0, NE)	5.1 (1.5, NE)
	Nominal p-value for unstratified log-rank test [c]	0.718	
	HR (95% CI) [d]	1.15 (0.53, 2.52)	
	P-value of subgroup*treatment interaction [e]	0.383	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.3.3.1.3
Time to First Meaningful Deterioration for EORTC QLQ-C30 Role Functioning by Subgroup - Age Group
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
<65 Years	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	98	96
	The number (%) of patients with an event [a]	59 (60.2%)	65 (67.7%)
	The number (%) of patients censored [a]	39 (39.8%)	31 (32.3%)
	Median time to event (95% CI) [b]	1.7 (1.3, 5.1)	3.5 (1.7, 5.1)
	Nominal p-value for unstratified log-rank test [c]	0.576	
	HR (95% CI) [d]	0.91 (0.64, 1.30)	
≥65 Years	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	27	28
	The number (%) of patients with an event [a]	13 (48.1%)	19 (67.9%)
	The number (%) of patients censored [a]	14 (51.9%)	9 (32.1%)
	Median time to event (95% CI) [b]	1.4 (1.0, 2.4)	3.1 (0.9, 7.8)
	Nominal p-value for unstratified log-rank test [c]	0.664	
	HR (95% CI) [d]	1.16 (0.57, 2.39)	
	P-value of subgroup*treatment interaction [e]	0.592	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

	Median time to event (95% CI) [b]	6.8 (2.5, NE)	3.7 (1.0, 6.3)
	Nominal p-value for unstratified log-rank test [c]	0.530	
	HR (95% CI) [d]	0.77 (0.35, 1.71)	
	P-value of subgroup*treatment interaction [e]	0.920	

Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.3.5.1.6
Time to First Meaningful Deterioration for EORTC QLQ-C30 Social Functioning by Subgroup - Baseline ECOG
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
0	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	81	80
	The number (%) of patients with an event [a]	46 (56.8%)	49 (61.3%)
	The number (%) of patients censored [a]	35 (43.2%)	31 (38.8%)
	Median time to event (95% CI) [b]	2.5 (1.4, 12.2)	3.5 (1.4, 5.6)
	Nominal p-value for unstratified log-rank test [c]	0.693	
	HR (95% CI) [d]	0.92 (0.61, 1.38)	
1	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	44	44
	The number (%) of patients with an event [a]	22 (50.0%)	28 (63.6%)
	The number (%) of patients censored [a]	22 (50.0%)	16 (36.4%)
	Median time to event (95% CI) [b]	3.5 (1.0, 21.5)	3.6 (0.9, 5.8)
	Nominal p-value for unstratified log-rank test [c]	0.438	
	HR (95% CI) [d]	0.80 (0.45, 1.42)	
	P-value of subgroup*treatment interaction [e]	0.671	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Note: 'Very poor' and 'poor' are classified as responders.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; HR = hazard ratio; NE = Not Estimable; PGIS = Patient Global Impression of Severity; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.3.7.1.11
Time to First Meaningful Deterioration for EORTC QLQ-C30 Insomnia by Subgroup - Liver Metastasis
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
Yes	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	36	26
	The number (%) of patients with an event [a]	18 (50.0%)	12 (46.2%)
	The number (%) of patients censored [a]	18 (50.0%)	14 (53.8%)
	Median time to event (95% CI) [b]	5.3 (2.3, 10.8)	3.1 (1.2, NE)
	Nominal p-value for unstratified log-rank test [c]	0.595	
	HR (95% CI) [d]	0.82 (0.39, 1.70)	
No	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	89	98
	The number (%) of patients with an event [a]	41 (46.1%)	55 (56.1%)
	The number (%) of patients censored [a]	48 (53.9%)	43 (43.9%)
	Median time to event (95% CI) [b]	7.2 (3.2, 16.8)	4.4 (3.3, 6.0)
	Nominal p-value for unstratified log-rank test [c]	0.362	
	HR (95% CI) [d]	0.83 (0.55, 1.24)	
	P-value of subgroup*treatment interaction [e]	0.873	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Time to First Meaningful Deterioration for EORTC QLQ-C30 Social Functioning by Subgroup - Brain Metastasis
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
Yes	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	6	7
	The number (%) of patients with an event [a]	2 (33.3%)	5 (71.4%)
	The number (%) of patients censored [a]	4 (66.7%)	2 (28.6%)
	Median time to event (95% CI) [b]	NE (0.8, NE)	1.8 (0.7, NE)
	Nominal p-value for unstratified log-rank test [c]	0.428	
	HR (95% CI) [d]	0.58 (0.11, 2.99)	
No	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	119	117
	The number (%) of patients with an event [a]	66 (55.5%)	72 (61.5%)
	The number (%) of patients censored [a]	53 (44.5%)	45 (38.5%)
	Median time to event (95% CI) [b]	2.8 (1.4, 7.5)	3.6 (2.2, 5.3)
	Nominal p-value for unstratified log-rank test [c]	0.534	
	HR (95% CI) [d]	0.90 (0.64, 1.26)	
	P-value of subgroup*treatment interaction [e]	0.561	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.3.9.2.7
Time to First Meaningful Deterioration for EORTC QLQ-BR23 Arm Symptoms by Subgroup - BRCA1/2 Status
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
Wild-type	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	42	46
	The number (%) of patients with an event [a]	23 (54.8%)	28 (60.9%)
	The number (%) of patients censored [a]	19 (45.2%)	18 (39.1%)
	Median time to event (95% CI) [b]	5.0 (2.9, 9.6)	3.1 (1.4, 5.0)
	Nominal p-value for unstratified log-rank test [c]	0.227	
	HR (95% CI) [d]	0.71 (0.41, 1.24)	
Mutant	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	9	7
	The number (%) of patients with an event [a]	6 (66.7%)	4 (57.1%)
	The number (%) of patients censored [a]	3 (33.3%)	3 (42.9%)
	Median time to event (95% CI) [b]	2.8 (0.8, NE)	2.1 (0.8, NE)
	Nominal p-value for unstratified log-rank test [c]	0.615	
	HR (95% CI) [d]	0.71 (0.20, 2.53)	
	P-value of subgroup*treatment interaction [e]	0.753	

Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.3.9.2.8
Time to First Meaningful Deterioration for EORTC QLQ-BR23 Upset by Hair Loss by Subgroup - BRCA1/2 Status
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
Wild-type	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	42	46
	The number (%) of patients with an event [a]	6 (14.3%)	5 (10.9%)
	The number (%) of patients censored [a]	36 (85.7%)	41 (89.1%)
	Median time to event (95% CI) [b]	0.8 (0.7, NE)	1.4 (0.7, NE)
	Nominal p-value for unstratified log-rank test [c]	0.026	
	HR (95% CI) [d]	4.89 (1.11, 21.50)	
Mutant	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	9	7
	The number (%) of patients with an event [a]	1 (11.1%)	0 (0.0%)
	The number (%) of patients censored [a]	8 (88.9%)	7 (100.0%)
	Median time to event (95% CI) [b]	NE (1.2, NE)	NE (NE, NE)
	Nominal p-value for unstratified log-rank test [c]	NE	
	HR (95% CI) [d]	NE (NE, NE)	
	P-value of subgroup*treatment interaction [e]	NE	

Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.3.10.2.2
Time to First Meaningful Deterioration for EORTC QLQ-BR23 Sexual Function by Subgroup - Menopausal Status
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
Pre-menopausal	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	29	35
	The number (%) of patients with an event [a]	8 (27.6%)	14 (40.0%)
	The number (%) of patients censored [a]	21 (72.4%)	21 (60.0%)
	Median time to event (95% CI) [b]	NE (11.7, NE)	NE (1.5, NE)
	Nominal p-value for unstratified log-rank test [c]	0.197	
	HR (95% CI) [d]	0.57 (0.24, 1.36)	
Post-menopausal	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	96	88
	The number (%) of patients with an event [a]	27 (28.1%)	23 (26.1%)
	The number (%) of patients censored [a]	69 (71.9%)	65 (73.9%)
	Median time to event (95% CI) [b]	NE (18.5, NE)	NE (8.7, NE)
	Nominal p-value for unstratified log-rank test [c]	0.914	
	HR (95% CI) [d]	1.03 (0.59, 1.80)	
	P-value of subgroup*treatment interaction [e]	0.306	

Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

De novo	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	29	26
	The number (%) of patients with an event [a]	13 (44.8%)	17 (65.4%)
	The number (%) of patients censored [a]	16 (55.2%)	9 (34.6%)
	Median time to event (95% CI) [b]	12.4 (1.7, NE)	1.1 (0.8, 2.8)
	Nominal p-value for unstratified log-rank test [c]	0.011	
	HR (95% CI) [d]	0.39 (0.18, 0.83)	
Recurrent Disease within 6 to 12 Months	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	31	31
	The number (%) of patients with an event [a]	21 (67.7%)	14 (45.2%)
	The number (%) of patients censored [a]	10 (32.3%)	17 (54.8%)
	Median time to event (95% CI) [b]	2.2 (1.3, 3.7)	2.2 (0.9, NE)
	Nominal p-value for unstratified log-rank test [c]	0.599	
	HR (95% CI) [d]	1.19 (0.60, 2.35)	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.3.3.2.5
Time to First Meaningful Deterioration for EORTC QLQ-BR23 Systemic Therapy Side Effects by Subgroup - Age Group
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
	P-value of subgroup*treatment interaction [e]	0.998	

Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Time to First Meaningful Deterioration for EORTC QLQ-C30 Physical Functioning by Subgroup - Brain Metastasis
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
Yes	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	6	7
	The number (%) of patients with an event [a]	2 (33.3%)	4 (57.1%)
	The number (%) of patients censored [a]	4 (66.7%)	3 (42.9%)
	Median time to event (95% CI) [b]	NE (0.8, NE)	3.2 (0.8, NE)
	Nominal p-value for unstratified log-rank test [c]	0.562	
	HR (95% CI) [d]	0.65 (0.12, 3.58)	
No	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	119	117
	The number (%) of patients with an event [a]	56 (47.1%)	65 (55.6%)
	The number (%) of patients censored [a]	63 (52.9%)	52 (44.4%)
	Median time to event (95% CI) [b]	7.5 (3.6, 20.1)	4.9 (2.8, 8.3)
	Nominal p-value for unstratified log-rank test [c]	0.197	
	HR (95% CI) [d]	0.79 (0.55, 1.13)	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Time to First Meaningful Deterioration for EORTC QLQ-C30 Emotional Functioning by Subgroup - BRCA1/2 Status
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
Wild-type	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	42	46
	The number (%) of patients with an event [a]	24 (57.1%)	21 (45.7%)
	The number (%) of patients censored [a]	18 (42.9%)	25 (54.3%)
	Median time to event (95% CI) [b]	6.0 (3.2, 11.3)	9.1 (3.3, 12.3)
	Nominal p-value for unstratified log-rank test [c]	0.733	
	HR (95% CI) [d]	1.11 (0.61, 2.00)	
Mutant	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	9	7
	The number (%) of patients with an event [a]	4 (44.4%)	3 (42.9%)
	The number (%) of patients censored [a]	5 (55.6%)	4 (57.1%)
	Median time to event (95% CI) [b]	4.2 (0.8, NE)	8.3 (1.4, NE)
	Nominal p-value for unstratified log-rank test [c]	0.656	
	HR (95% CI) [d]	1.49 (0.27, 8.20)	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Time to First Meaningful Deterioration for FACT-GP5 by Subgroup - BRCA1/2 Status
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
	P-value of subgroup*treatment interaction [e]	0.019	

Note: 'Quite a bit' and 'very much' are classified as responders.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; FACT-GP5 = Functional Assessment of Cancer Therapy – General Population item 5; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.3.9.1.6
Time to First Meaningful Deterioration for EORTC QLQ-C30 Social Functioning by Subgroup - Menopausal Status
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
Pre-menopausal	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	29	35
	The number (%) of patients with an event [a]	15 (51.7%)	25 (71.4%)
	The number (%) of patients censored [a]	14 (48.3%)	10 (28.6%)
	Median time to event (95% CI) [b]	3.8 (1.5, NE)	3.1 (0.9, 5.8)
	Nominal p-value for unstratified log-rank test [c]	0.113	
	HR (95% CI) [d]	0.58 (0.30, 1.14)	
Post-menopausal	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	96	88
	The number (%) of patients with an event [a]	53 (55.2%)	51 (58.0%)
	The number (%) of patients censored [a]	43 (44.8%)	37 (42.0%)
	Median time to event (95% CI) [b]	2.2 (1.1, 4.8)	3.6 (1.4, 5.3)
	Nominal p-value for unstratified log-rank test [c]	0.953	
	HR (95% CI) [d]	0.99 (0.67, 1.45)	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.3.9.1.13
Time to First Meaningful Deterioration for EORTC QLQ-C30 Constipation by Subgroup - Menopausal Status
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
Pre-menopausal	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	29	35
	The number (%) of patients with an event [a]	10 (34.5%)	17 (48.6%)
	The number (%) of patients censored [a]	19 (65.5%)	18 (51.4%)
	Median time to event (95% CI) [b]	NE (1.4, NE)	6.9 (0.8, NE)
	Nominal p-value for unstratified log-rank test [c]	0.246	
	HR (95% CI) [d]	0.63 (0.29, 1.38)	
Post-menopausal	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	96	88
	The number (%) of patients with an event [a]	57 (59.4%)	54 (61.4%)
	The number (%) of patients censored [a]	39 (40.6%)	34 (38.6%)
	Median time to event (95% CI) [b]	2.3 (1.6, 3.7)	1.9 (1.4, 3.5)
	Nominal p-value for unstratified log-rank test [c]	0.463	
	HR (95% CI) [d]	0.86 (0.59, 1.25)	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.3.9.2.5
Time to First Meaningful Deterioration for EORTC QLQ-BR23 Systemic Therapy Side Effects by Subgroup - Menopausal Status
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
Pre-menopausal	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	29	35
	The number (%) of patients with an event [a]	23 (79.3%)	22 (62.9%)
	The number (%) of patients censored [a]	6 (20.7%)	13 (37.1%)
	Median time to event (95% CI) [b]	0.8 (0.7, 0.8)	1.7 (0.9, 5.6)
	Nominal p-value for unstratified log-rank test [c]	0.003	
	HR (95% CI) [d]	2.44 (1.34, 4.47)	
Post-menopausal	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel	96	88
	The number (%) of patients with an event [a]	68 (70.8%)	51 (58.0%)
	The number (%) of patients censored [a]	28 (29.2%)	37 (42.0%)
	Median time to event (95% CI) [b]	1.0 (0.8, 1.4)	3.3 (2.0, 5.1)
	Nominal p-value for unstratified log-rank test [c]	0.002	
	HR (95% CI) [d]	1.76 (1.22, 2.53)	

Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Run Date: 03JUN2026

Table 7.3.10.2.6
Time to First Meaningful Deterioration for EORTC QLQ-BR23 Breast Symptoms by Subgroup - PD-L1 Status
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)

Subgroup	Parameter	SG (N=125)	TPC (N=124)
	P-value of subgroup*treatment interaction [e]	0.807	

Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

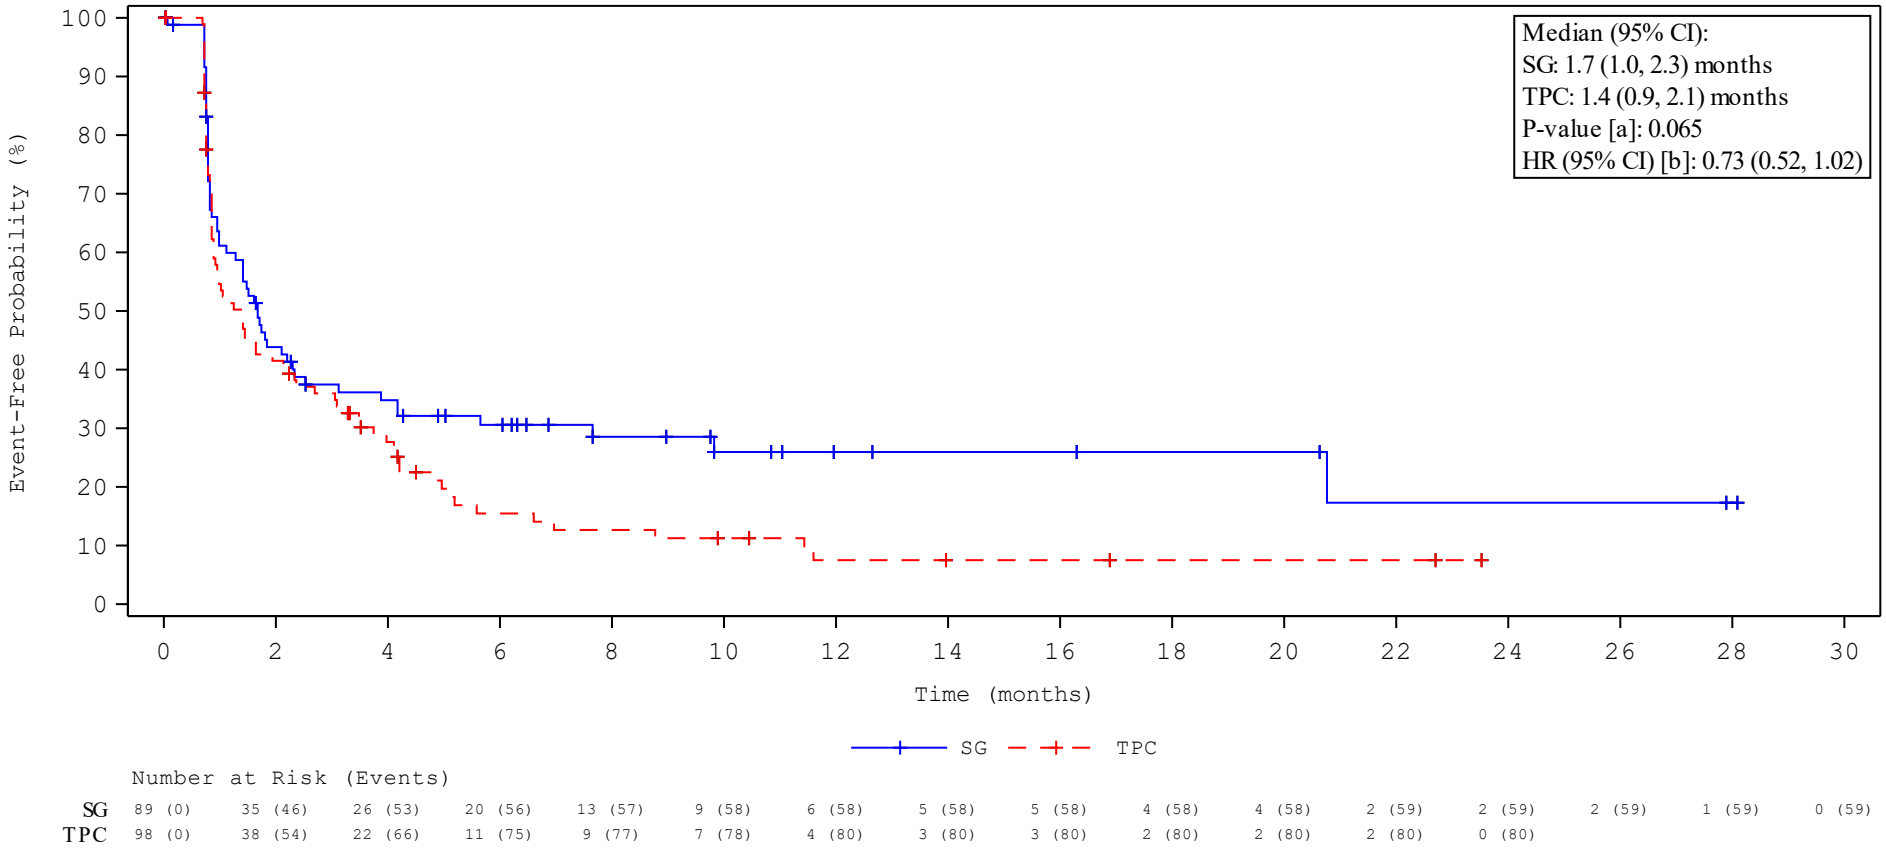
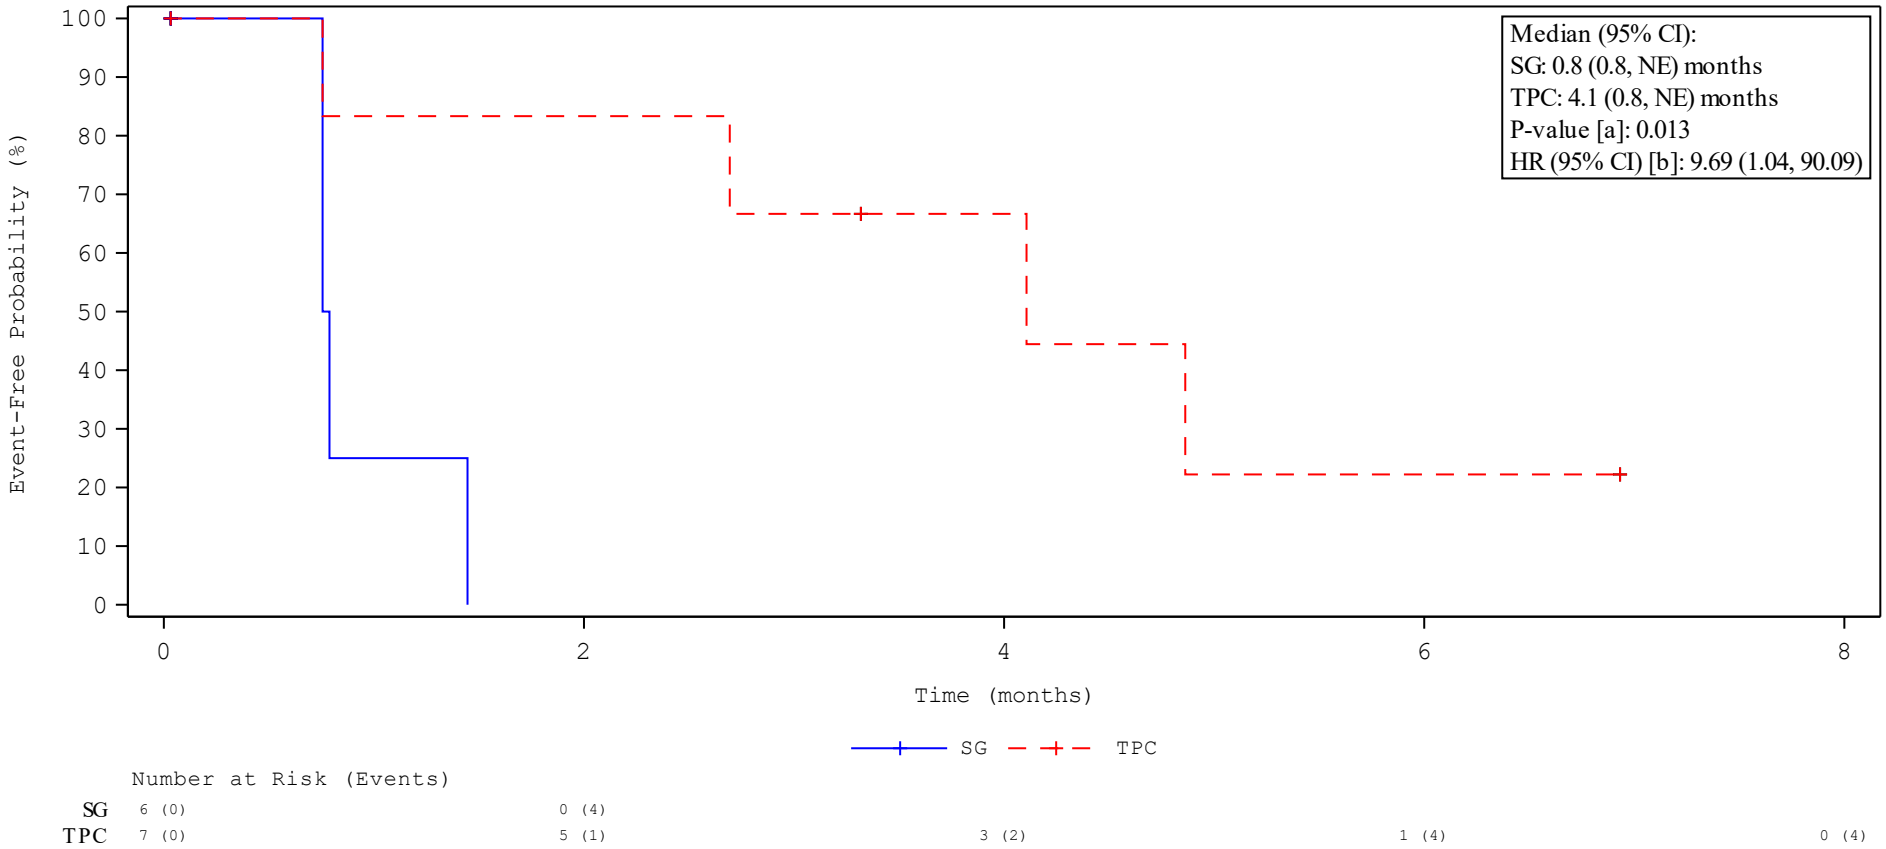
Figure 4.3.6.2
Kaplan-Meier Plot of Time to First Meaningful Deterioration in PGIC by Treatment Group (Baseline ECOG = 1)
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)



Note: 'Minimally worsened', 'much worsened', and 'very much worsened' are classified as responders.
[a] P-value was estimated from the unstratified log-rank test .
[b] HR (95% CI) of SG versus TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
CI = Confidence Interval; HR = hazard ratio; PGIC = Patient Global Impression of Change; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.
Program Path: ...06-Programing\A-Primary\Programs\Figures\f_km.sas

Figure 4.3.7.1
Kaplan-Meier Plot of Time to First Meaningful Deterioration in EORTC QLQ-C30 Fatigue by Treatment Group (Liver Metastasis = Yes)
(mITT excluding patients preselected to receive nab-paclitaxel or paclitaxel)



Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] P-value was estimated from the unstratified log-rank test .
[b] HR (95% CI) of SG versus TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Screened Population: Participants who have signed an informed consent and participated in the screening procedures at site to assess eligibility.
Safety Analysis Set includes randomized participants who have received at least one dose of any study drug.
Denominator of percentages is the number of participants in each treatment group.
Randomized Phase excludes crossover phase when participants in TPC arm started to receive SG.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Denominator of percentages is the number of participants in each treatment group.
Age (in years) was collected on the date of first study drug administration (Day 1) if dosed, or randomization if not dosed.
Not Permitted = local regulators did not allow collection of race or ethnicity information or participant refused to provide information.
*Body Mass Index (BMI) (kg/m^2) = [Weight (kg) / Height (cm)^2]*10,000*
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Denominator of percentages for other baseline characteristics is the number of participants in each treatment group.
[a] Mutant denotes participant is either BRCA1 or BRCA2 mutant, or both mutant. Wild type denotes participant is both BRCA1 and BRCA2 wild type. Unknown denotes participant is BRCA1 unknown and BRCA2 wild type or unknown, or participant is BRCA1 wild type or unknown and BRCA2 unknown.
PD-L1 CPS (combined positive score) and TNBC status were collected centrally.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Denominator of percentages is the number of participants in each treatment group.
Medical history was coded according to MedDRA Version 27.1.
Participants may report >=1 medical history per system organ class or preferred term. At each level of summarization, a participant was counted once if the participant reported 1 or more medical history.
SOCs were presented alphabetically and PTs within SOC were presented by descending order of the total frequencies.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice; NR = Not Reached; IWRS = Interactive Web Response System.
[a] Ongoing participants are those who have not discontinued participation in the study by the data cutoff date.
[b] OS (months) = (date of death or censoring − date of randomisation + 1) / 30.4375. Based on Kaplan-Meier estimates with 95% CI using the log-log transformation.
[c] The two-sided p-value is from stratified log-rank test, adjusted for randomization stratification factors (IWRS).
[d] Hazard ratio and 95% CIs are calculated using the Cox proportional hazards model, adjusted for randomization stratification factors (IWRS).
[e] Duration of OS follow-up (months) = (date of death or censoring - date of randomization + 1) / 30.4375.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
OS (months) = (date of death or censoring − date of randomisation + 1) / 30.4375. Median OS from Kaplan-Meier estimate. 95% CI based on log-log transformation.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
Log-rank test is unstratified.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Participants with unknown BRCA 1/2 status were excluded from that subgroup.
Disease stratification and geographic region are collected from IWRS.
Race subgroup Other - includes American Indian or Alaska Native, Black, Native Hawaiian or Pacific Islander and Other collected in clinical database.
Interaction p-value: likelihood ratio test from Cox model with treatment + subgroup + treatment×subgroup interaction terms; shown once per subgroup variable at first category level.
Data Cut Date: 22 APR 2026.

Kaplan-Meier Estimate of PFS Rate (95% CI) [c]		
At 3 Months	0.831 (0.765, 0.880)	0.824 (0.754, 0.876)
At 6 Months	0.637 (0.557, 0.707)	0.543 (0.458, 0.620)
At 9 Months	0.498 (0.416, 0.574)	0.322 (0.244, 0.402)
At 12 Months	0.411 (0.331, 0.489)	0.253 (0.181, 0.331)
At 18 Months	0.267 (0.195, 0.343)	0.107 (0.058, 0.174)
Treatment Comparison		
Stratified Log-rank p-value of SG vs TPC [d]	0.0022	
Stratified Hazard Ratio of SG vs TPC (95% CI) [e]	0.664 (0.510, 0.864)	

SG = sacituzumab govitecan; TPC = treatment of physician's choice; IWRS = Interactive Web Response System; NR = Not Reached.
[a] Censoring due to no baseline or no postbaseline evaluable assessment does not include death events before the second scheduled postbaseline visit.
[b] PFS (months) = (date of event or censoring − date of randomisation + 1) / 30.4375. The 95% CI is based on the log-log transformation.
[c] PFS rate is the proportion of participants alive without progressive disease (PD). The 95% CI is based on the log-log transformation.
[d] The two-sided p-value is from stratified log-rank test.
[e] Hazard ratio with 95% CIs are calculated using Cox proportional hazards model, stratified for randomization stratification factors (IWRS).
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
Intent-to-treat (ITT) Analysis Set includes all participants who were randomised in the study.
Denominator of percentages is the number of participants in each treatment group of each subgroup.
PFS (months) = (date of events or censoring − date of randomisation + 1) / 30.4375. 95% CI based on log-log transformation. Median PFS from Kaplan-Meier estimate.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
The two-sided p-value is from Unstratified log-rank test.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Disease stratification and geographic region are collected from IWRS (Interactive Web Response System).
Race subgroup Other - includes American Indian or Alaska Native, Black, Native Hawaiian or Pacific Islander and Other collected in clinical database.
Interaction p-value from a Cox model with treatment, subgroup factor, and treatment×subgroup interaction term; computed via likelihood ratio test (full vs. main-effects model). Displayed once per subgroup variable at first category level.
Data Cut Date: 22 APR 2026.

Stratified Hazard Ratio of SG vs TPC (95% CI) [d]	0.692 (0.540, 0.887)	

SG = sacituzumab govitecan; TPC = treatment of physician's choice; IWRS = Interactive Web Response System; NR = Not Reached.
PFS2 is defined as the time from date of randomization to the first documented progression on next-line therapy based on investigator assessment of PD or death due to any cause, whichever occurs first. Next line therapy is defined as the first new systemic anti-cancer therapy (including crossover treatment) initiated after discontinuation of study treatment regardless of end of treatment reason.
[a] Quantile of PFS2 is from Kaplan-Meier estimate. The 95% CI is based on log-log transformation.
[b] PFS2 rate is the proportion of participants alive without progression at the next line of therapy. The 95% CI is based on the log-log transformation.
[c] The two-sided p-value is from stratified log-rank test.
[d] Hazard ratio with 95% CIs are calculated using Cox proportional hazards model, stratified for randomization stratification factors (IWRS).
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
PFS2 is defined as the time from date of randomization to the first documented progression on next-line therapy based on investigator assessment of PD or death due to any cause, whichever occurs first.
Denominator of percentages is the number of participants in each treatment group of each subgroup.
PFS2 rate is the proportion of participants alive without progression at the next line of therapy. The 95% CI is based on the log-log transformation.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
The two-sided p-value is from an unstratified log-rank test.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Disease stratification and geographic region are collected from IWRS (Interactive Web Response System).
Interaction p-value: likelihood ratio test from Cox model with treatment + subgroup + treatment×subgroup interaction terms; shown once per subgroup variable at first category level.
Data Cut Date: 22 APR 2026.

Treatment Comparison		
Log-rank p-value of SG vs TPC [c]	0.0004	
Hazard Ratio of SG vs TPC (95% CI) [d]	0.661 (0.524, 0.833)	

SG = sacituzumab govitecan; TPC = treatment of physician's choice; IWRS = Interactive Web Response System; NR = Not Reached.
Time to first subsequent therapy is defined as the time from randomization to the start date of the first subsequent anti-cancer therapy after discontinuation of randomized treatment, or death due to any cause.
[a] Quantile of TFST is from Kaplan-Meier estimate. The 95% CI is based on log-log transformation.
[b] TFST rate is the proportion of participants alive without any subsequent therapy. The 95% CI is based on the log-log transformation.
[c] The two-sided p-value is from stratified log-rank test.
[d]Hazard ratio and 95% CIs are calculated using the Cox proportional hazards model, adjusted for randomization stratification factors (IWRS).
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
Time to first subsequent therapy is defined as the time from randomisation to the start date of the first subsequent anti-cancer therapy after discontinuation of randomised treatment, or death due to any cause.
TFST rate is the proportion of participants alive without any subsequent therapy.
Hazard ratio and 95% CIs calculated using unstratified Cox proportional hazards model. Efron method used to handle ties. Reference arm = TPC.
Log-rank p-value is from an unstratified log-rank test.
Interaction p-value: likelihood ratio test from Cox model with treatment + subgroup + treatment×subgroup interaction terms; shown once per subgroup variable at first category level.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, Gem = gemcitabine, Carbo = carboplatin.
Safety Analysis Set includes randomized participants who have received at least one dose of any study drug. Taxane includes participants who have received Paclitaxel. TPC column includes participants who have received any of Gem, Carbo or Paclitaxel.
Duration of exposure to study drug (months) = (last dosing date − first dosing date + 1)/30.4375.
Data Cut Date: 22 APR 2026.

6.2. Table 1.1.2: Observation Period (Months) for Safety — mSAF — Excluding patients preselected to receive nab-paclitaxel

Min, Max	0.46, 40.77	0.10, 33.84	0.10, 40.77

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
[a] Observation period is defined as the time from first dose until Data cutoff date, study treatment discontinuation +30 days for any AE and any serious AE, or death, whichever comes first and stops the collection of endpoint data.
Data Cut Date: 22 APR 2026.

6.3. Table 1.1.3: Analysis of Time to First Treatment-Emergent Adverse Event (TEAE) — mSAF — Excluding patients preselected to receive nab-paclitaxel

Analysis SG vs. TPC		
Hazard Ratio (95% CI)		1.246 (1.002, 1.548)
p-value		0.0424

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.

	SG (N=175)	TPC (N=166)

Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if all categories contain ≥10 patients across both arms combined.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
NC = Not Calculable: the hazard ratio and 95% CI are not estimable by the Cox model.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if all categories contain ≥10 patients across both arms combined.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if all categories contain ≥10 patients across both arms combined.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation

	SG (N=175)	TPC (N=166)	Interaction p-value[1]

of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. NC = Not Calculable (HR is NC when one treatment arm has zero events; log-rank p-value remains valid).
Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if all categories contain ≥10 patients across both arms combined.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.

	SG (N=175)	TPC (N=166)

NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
Data Cut Date: 22 APR 2026.

[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation

	SG (N=175)	TPC (N=166)	Interaction p-value[1]

of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥5% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
Data Cut Date: 22 APR 2026.

Analysis SG vs. TPC		
Hazard Ratio (95% CI)		1.006 (0.363, 2.786)
p-value		0.9907

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥5% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
Data Cut Date: 22 APR 2026.

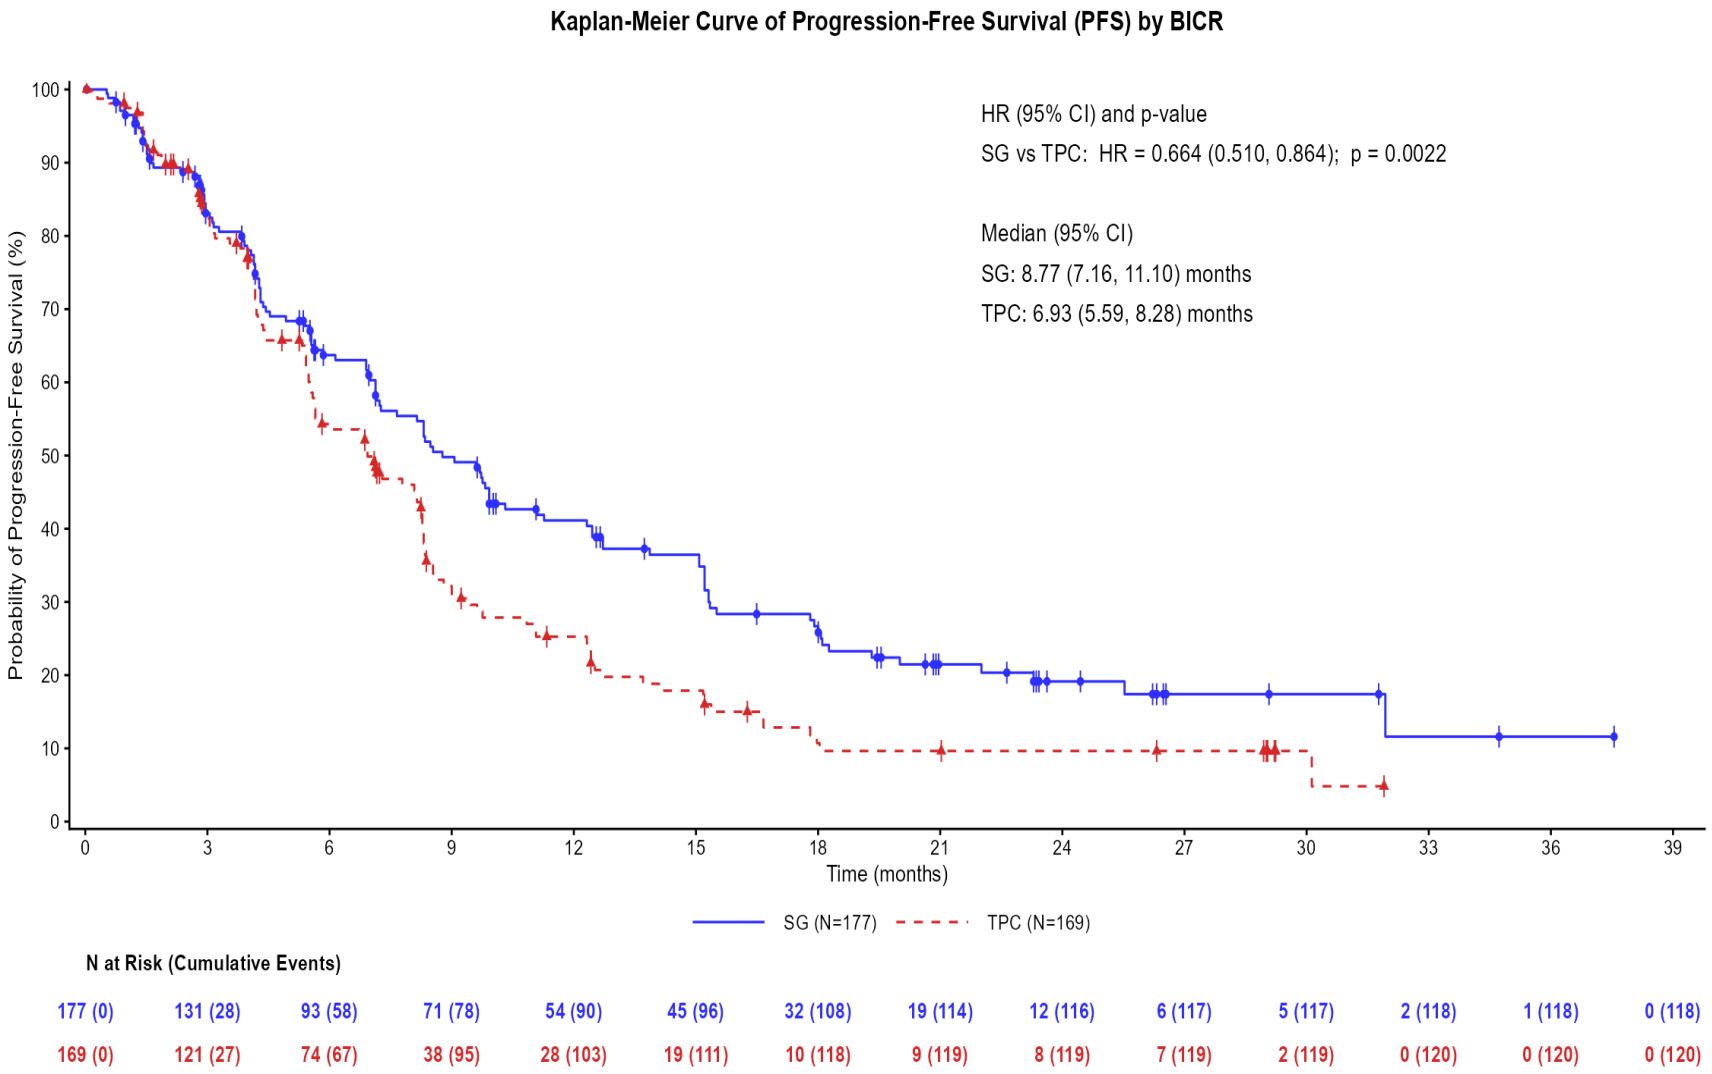
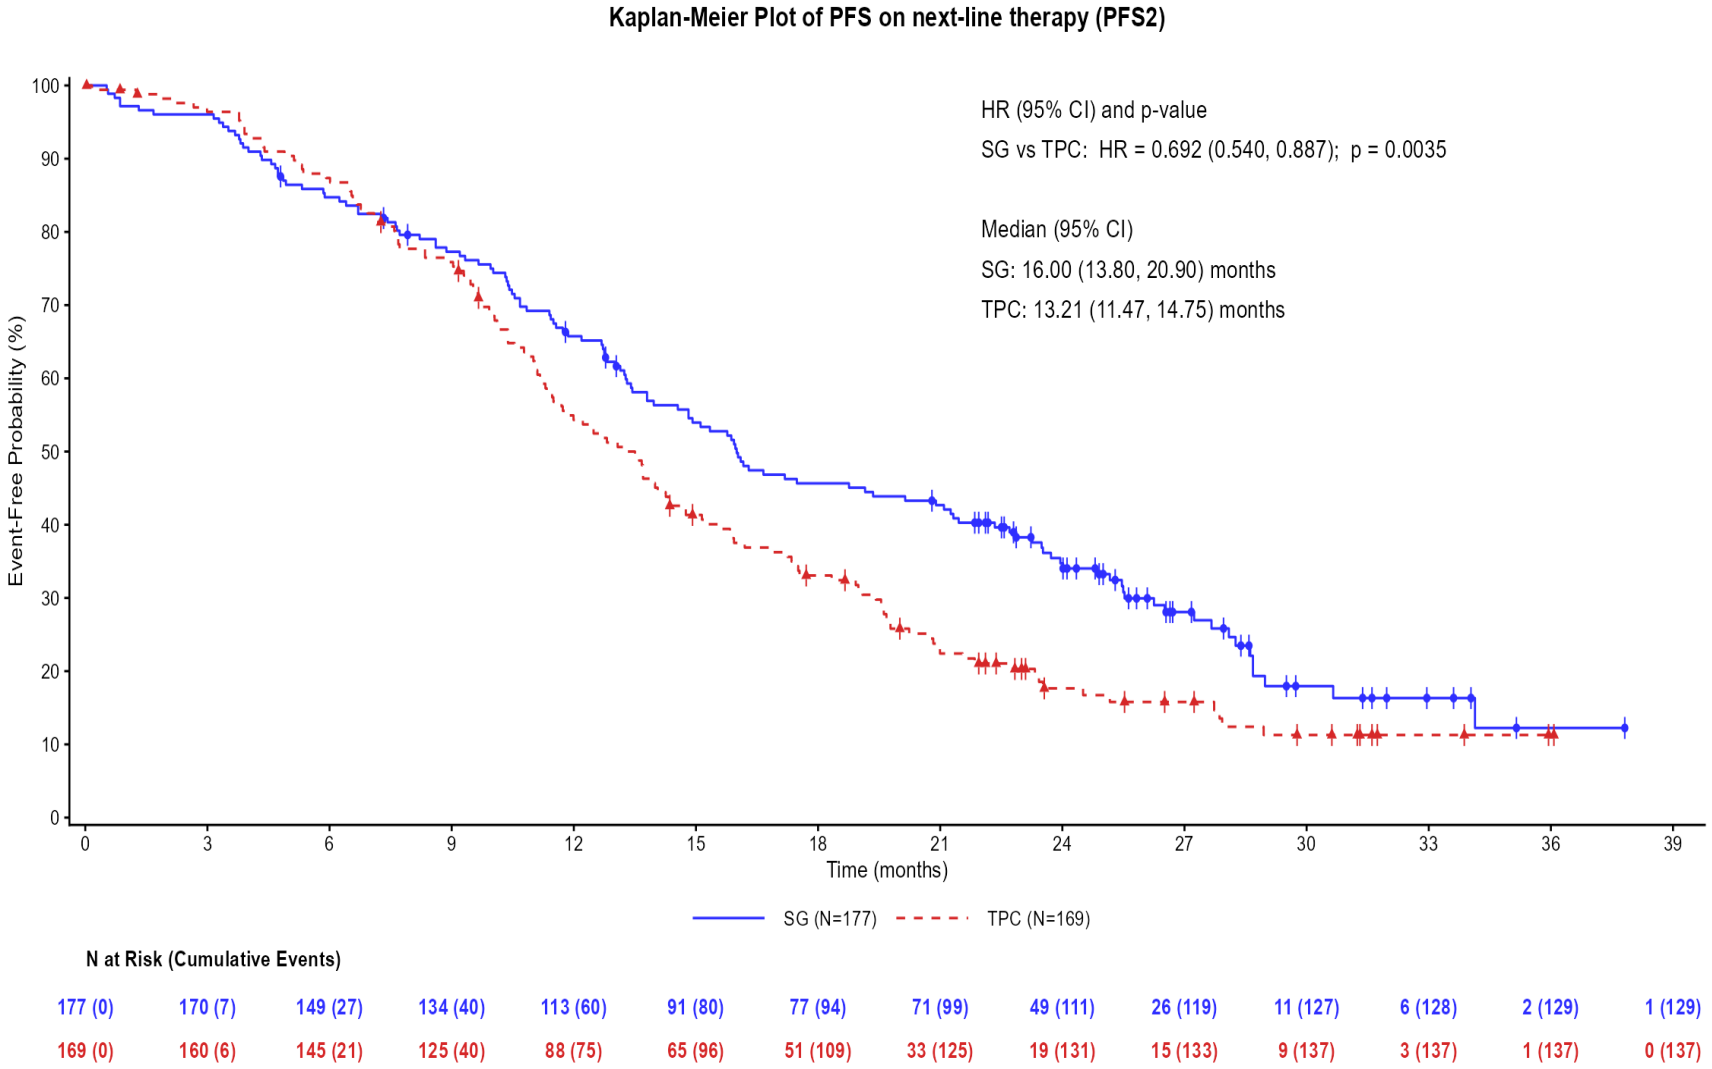
7. KM FIGURES — Efficacy



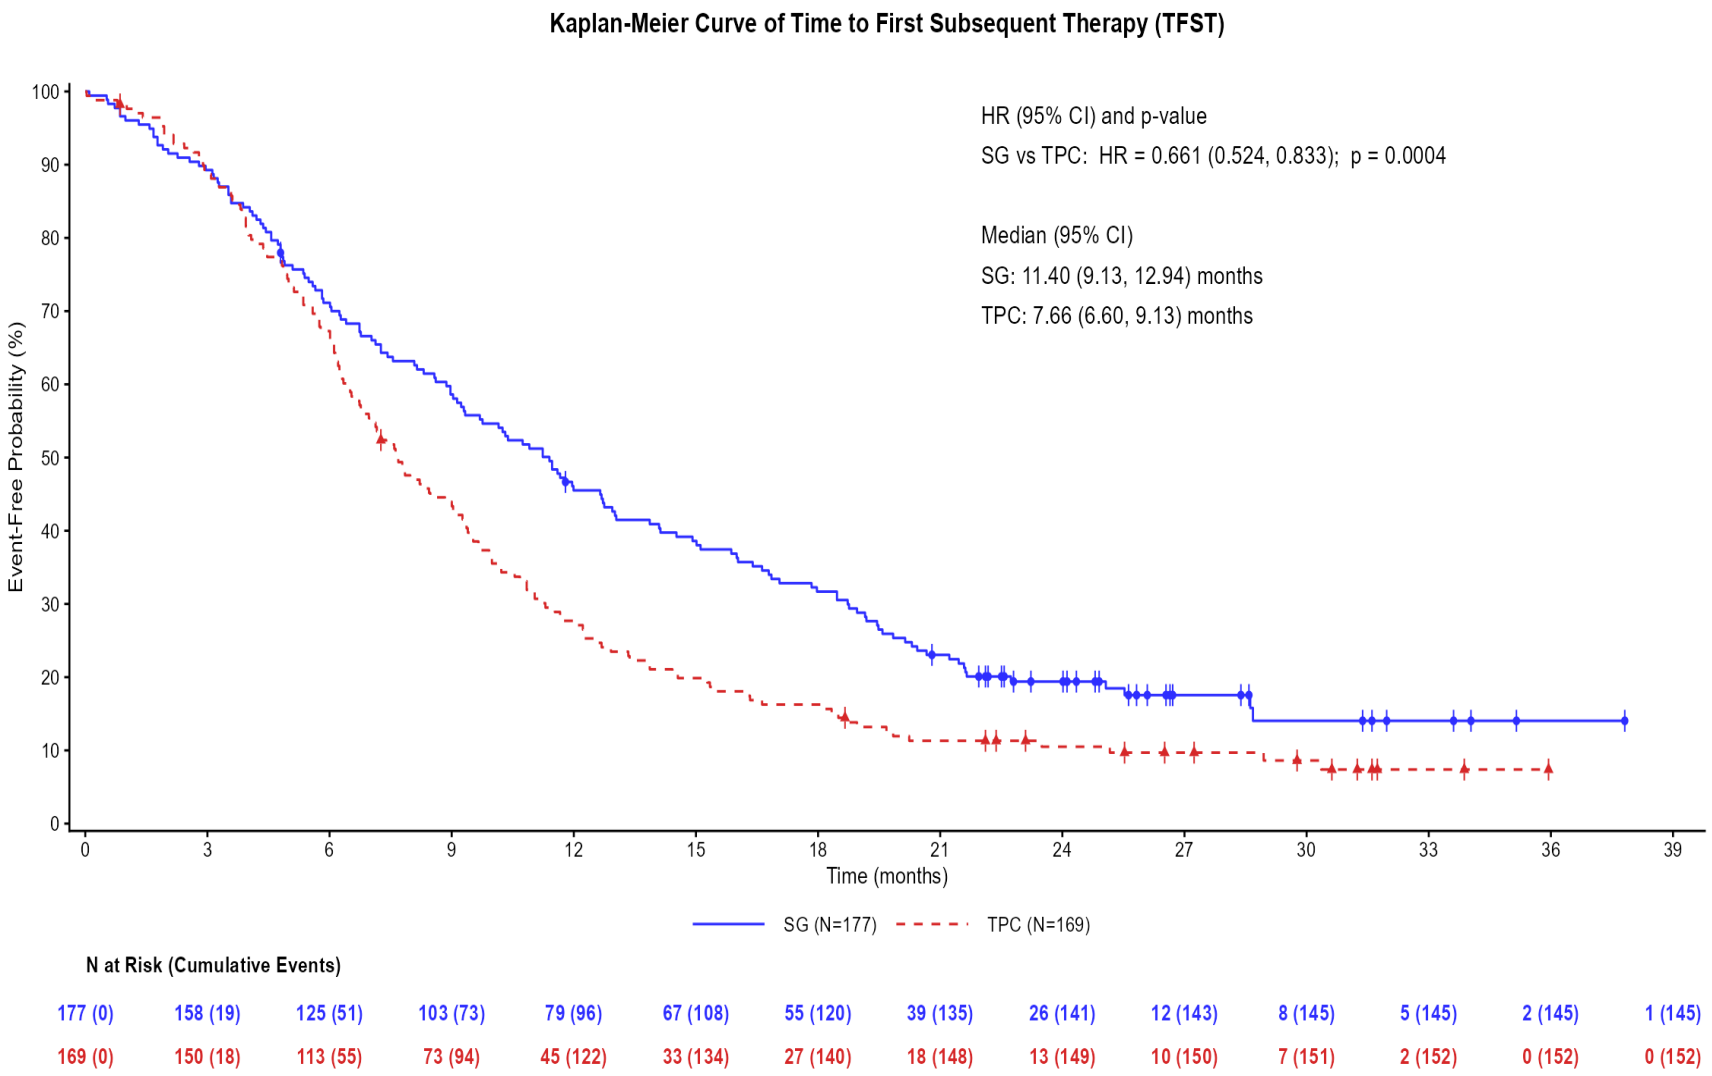
7.1. mITT — Excluding patients preselected to receive nab-paclitaxel

7.2. Figure 1.1.1: Kaplan-Meier Curve of Overall Survival (OS) — mITT — Excluding patients preselected to receive nab-paclitaxel



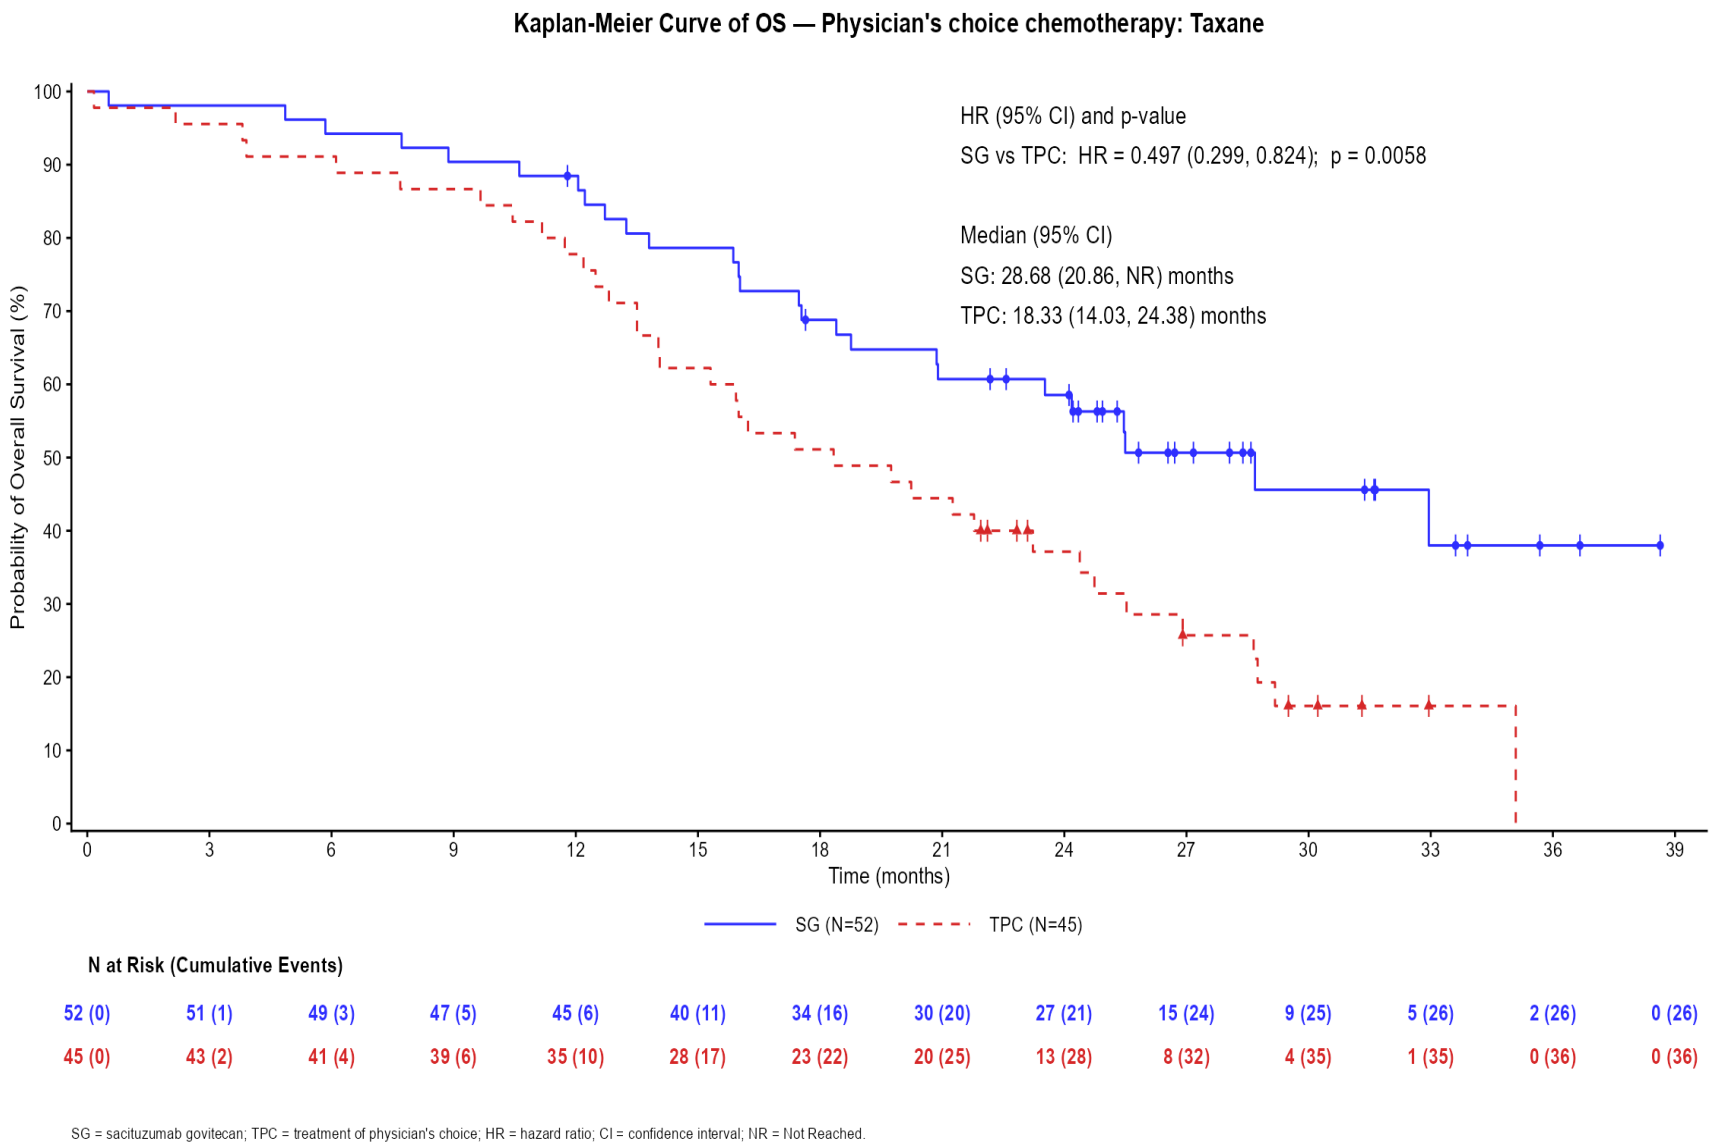
Two-sided p-value from the log-rank test stratified by the randomization stratification factors (STRAT1, STRAT2) from IWRS; hazard ratio from a Cox model adjusted for the same factors as covariates. SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.3. Figure 1.1.2: Kaplan-Meier Curve of Progression-Free Survival (PFS) by BICR — mITT — Excluding patients preselected to receive nab-paclitaxel



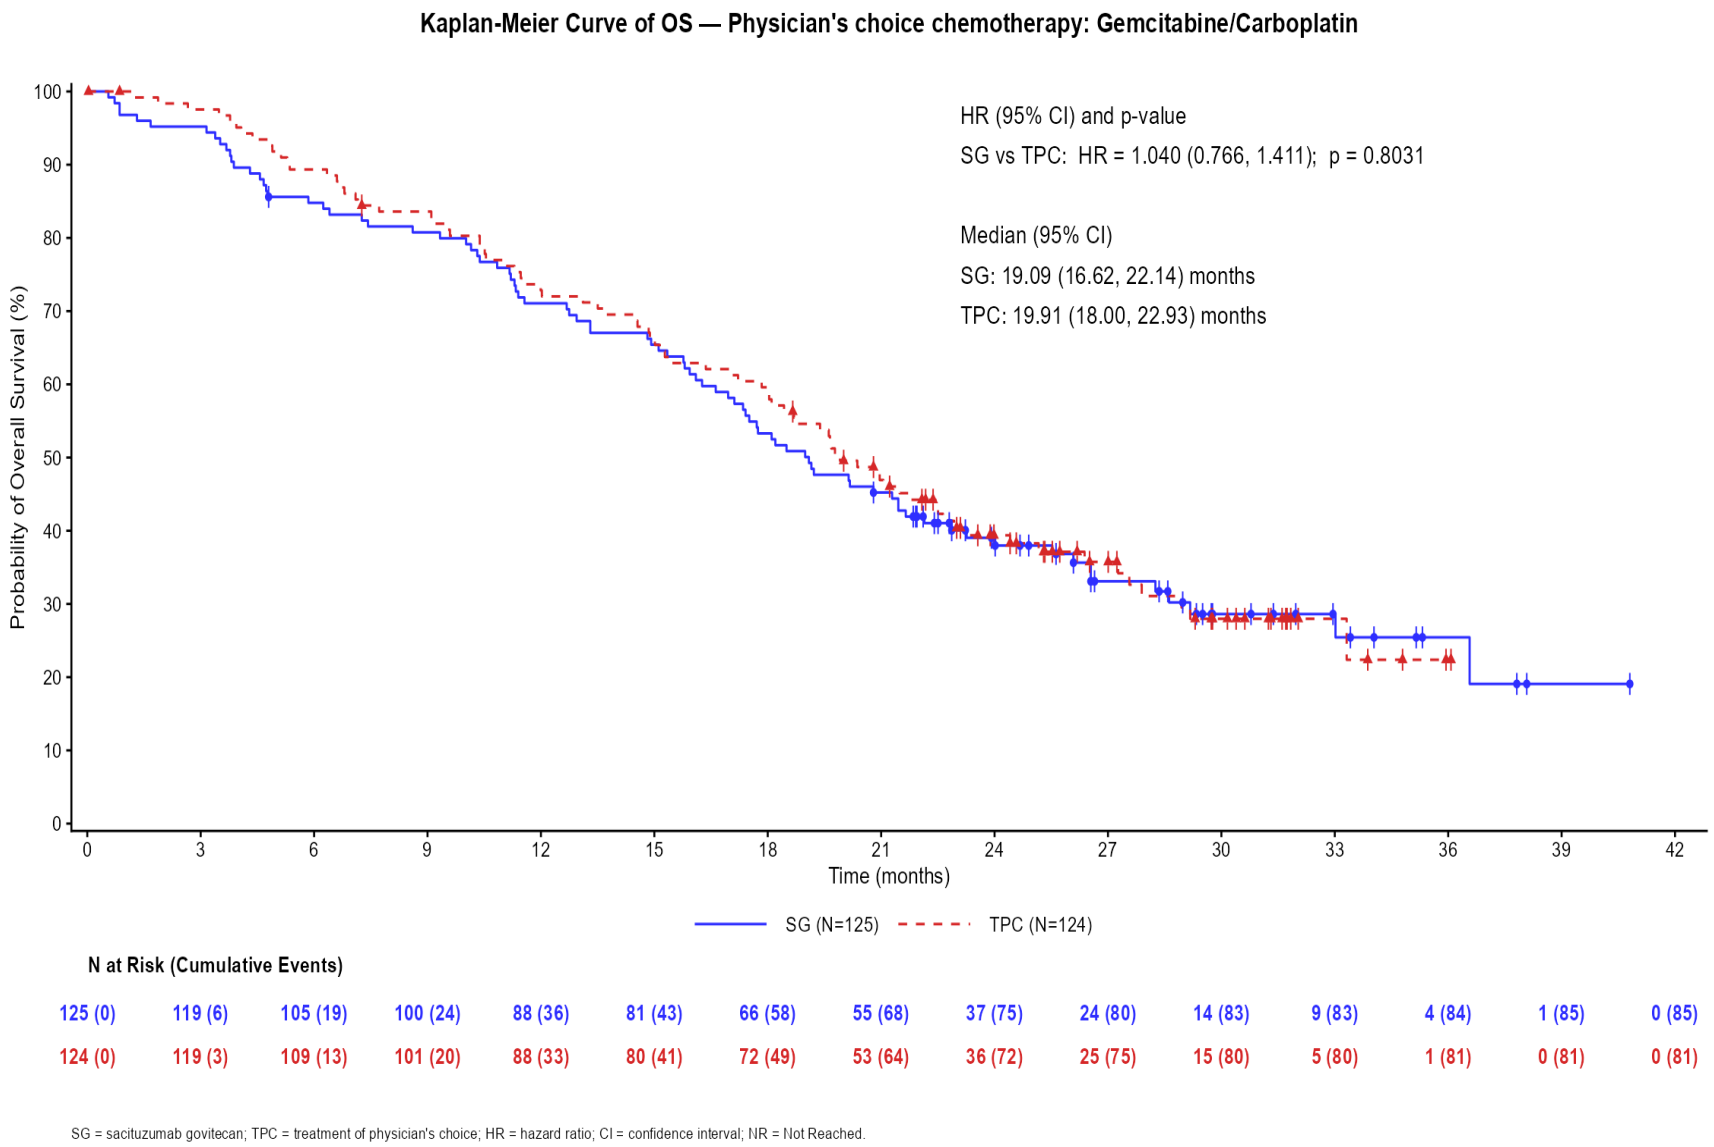
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.4. Figure 1.1.3: Kaplan-Meier Plot of PFS on next-line therapy (PFS2) — mITT — Excluding patients preselected to receive nab-paclitaxel



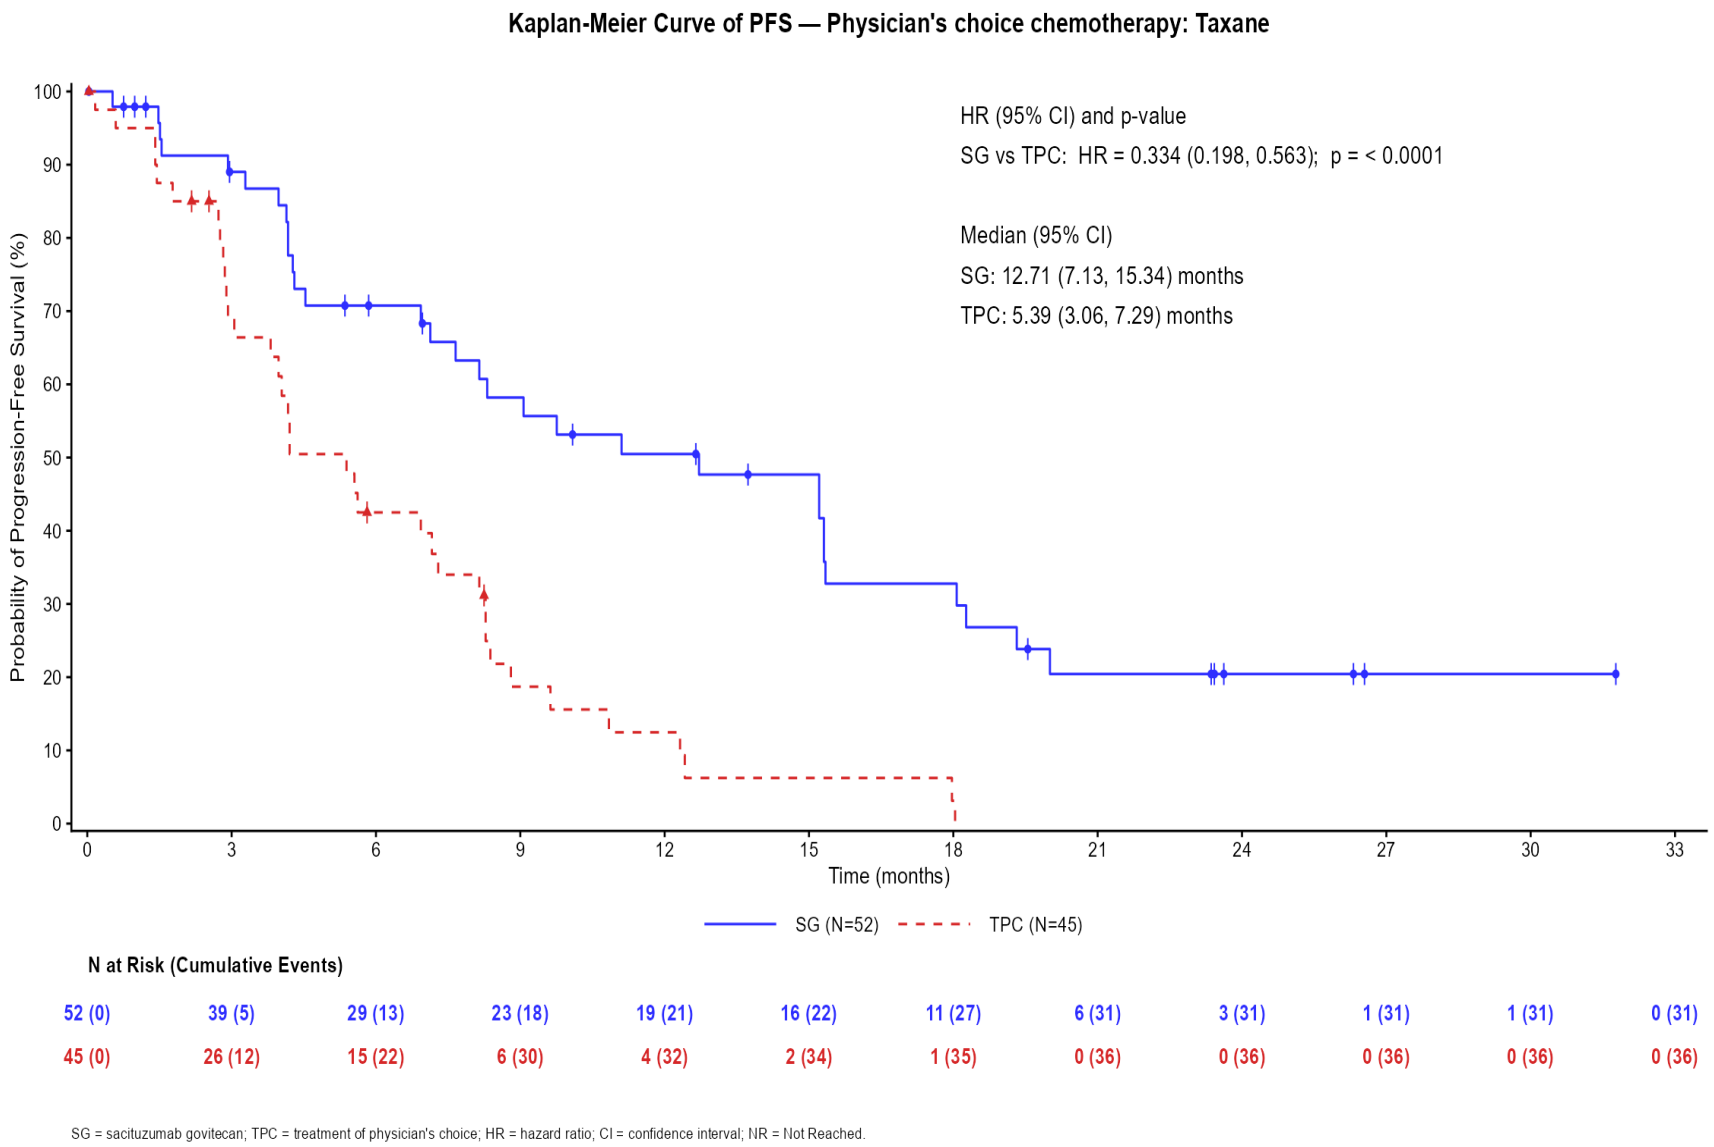
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.5. Figure 1.1.4: Kaplan-Meier Curve of Time to First Subsequent Therapy (TFST) — mITT — Excluding patients preselected to receive nab-paclitaxel



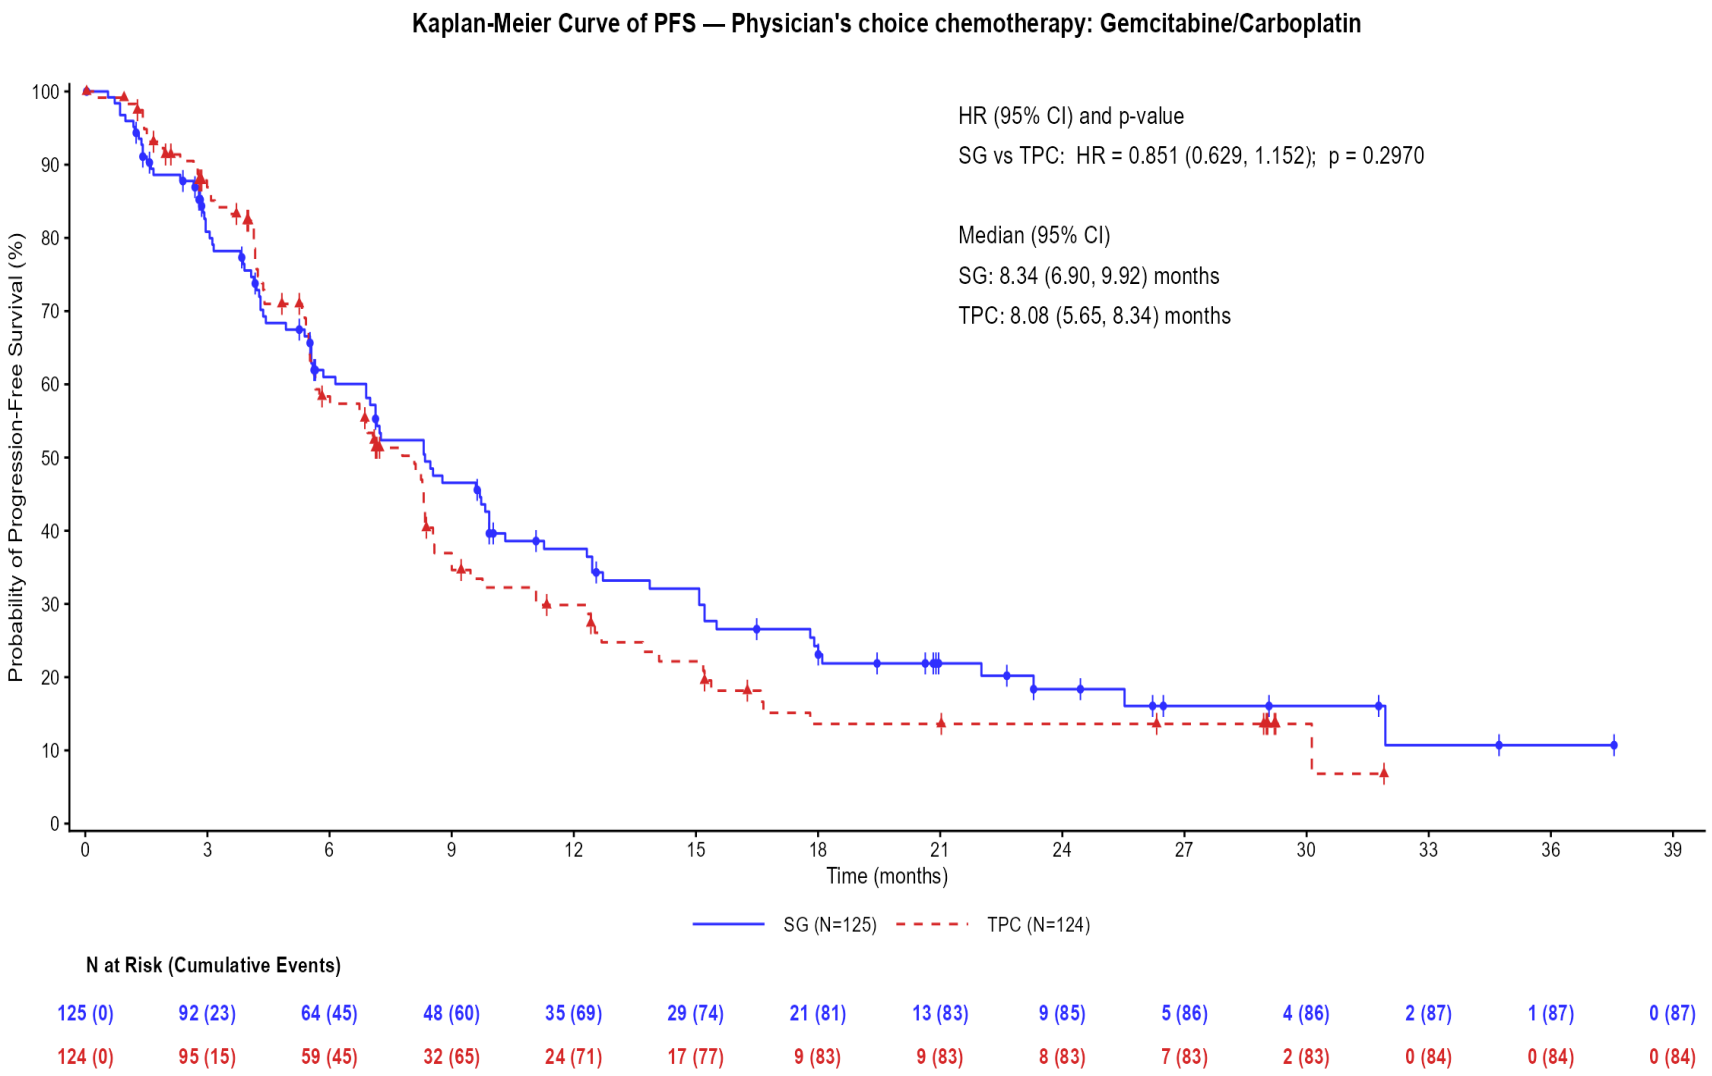
Two-sided p-value from the log-rank test stratified by the randomization stratification factors (STRAT1, STRAT2) from IWRS; hazard ratio from a Cox model adjusted for the same factors as covariates. SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.6. Figure 1.1.6: Kaplan-Meier Curve of OS — Physician's choice chemotherapy: Taxane — mITT — Excluding patients preselected to receive nab-paclitaxel



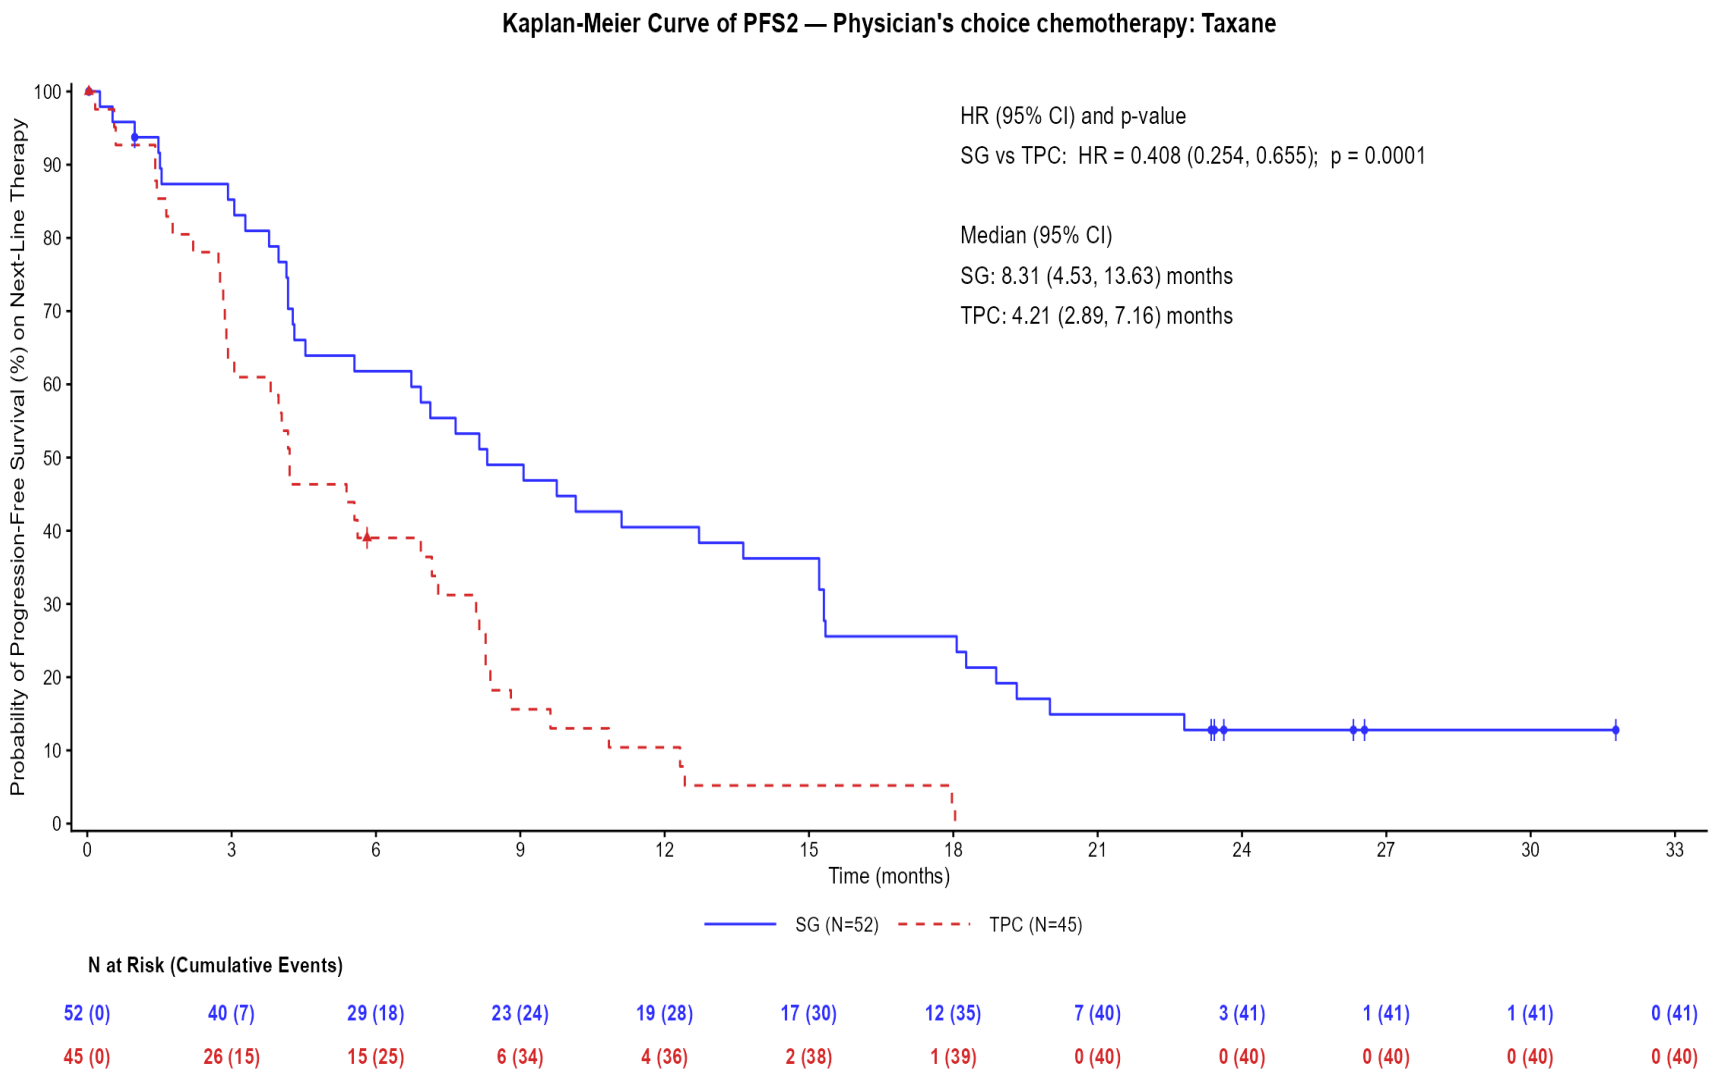
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.7. Figure 1.1.7: Kaplan-Meier Curve of OS — Physician's choice chemotherapy: Gemcitabine/Carboplatin — mITT — Excluding patients preselected to receive nab-paclitaxel



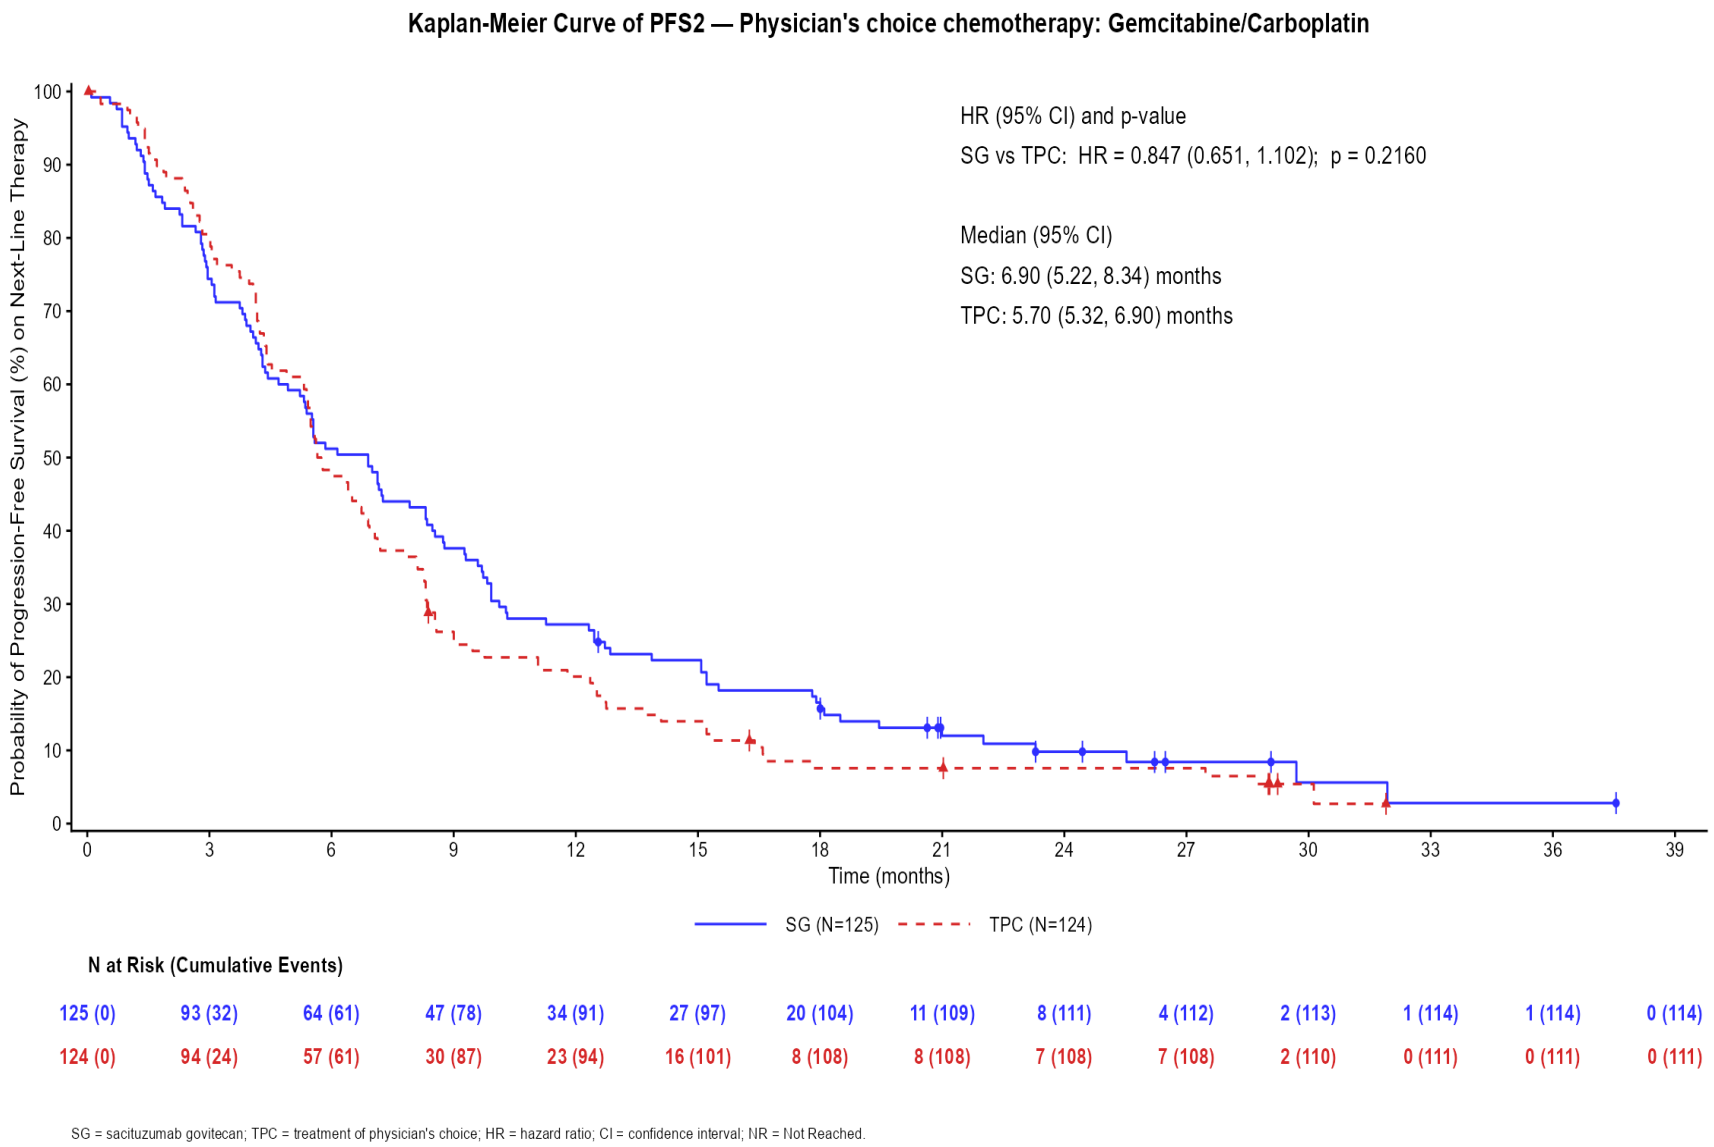
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.8. Figure 1.1.8: Kaplan-Meier Curve of PFS — Physician's choice chemotherapy: Taxane — mITT — Excluding patients preselected to receive nab-paclitaxel



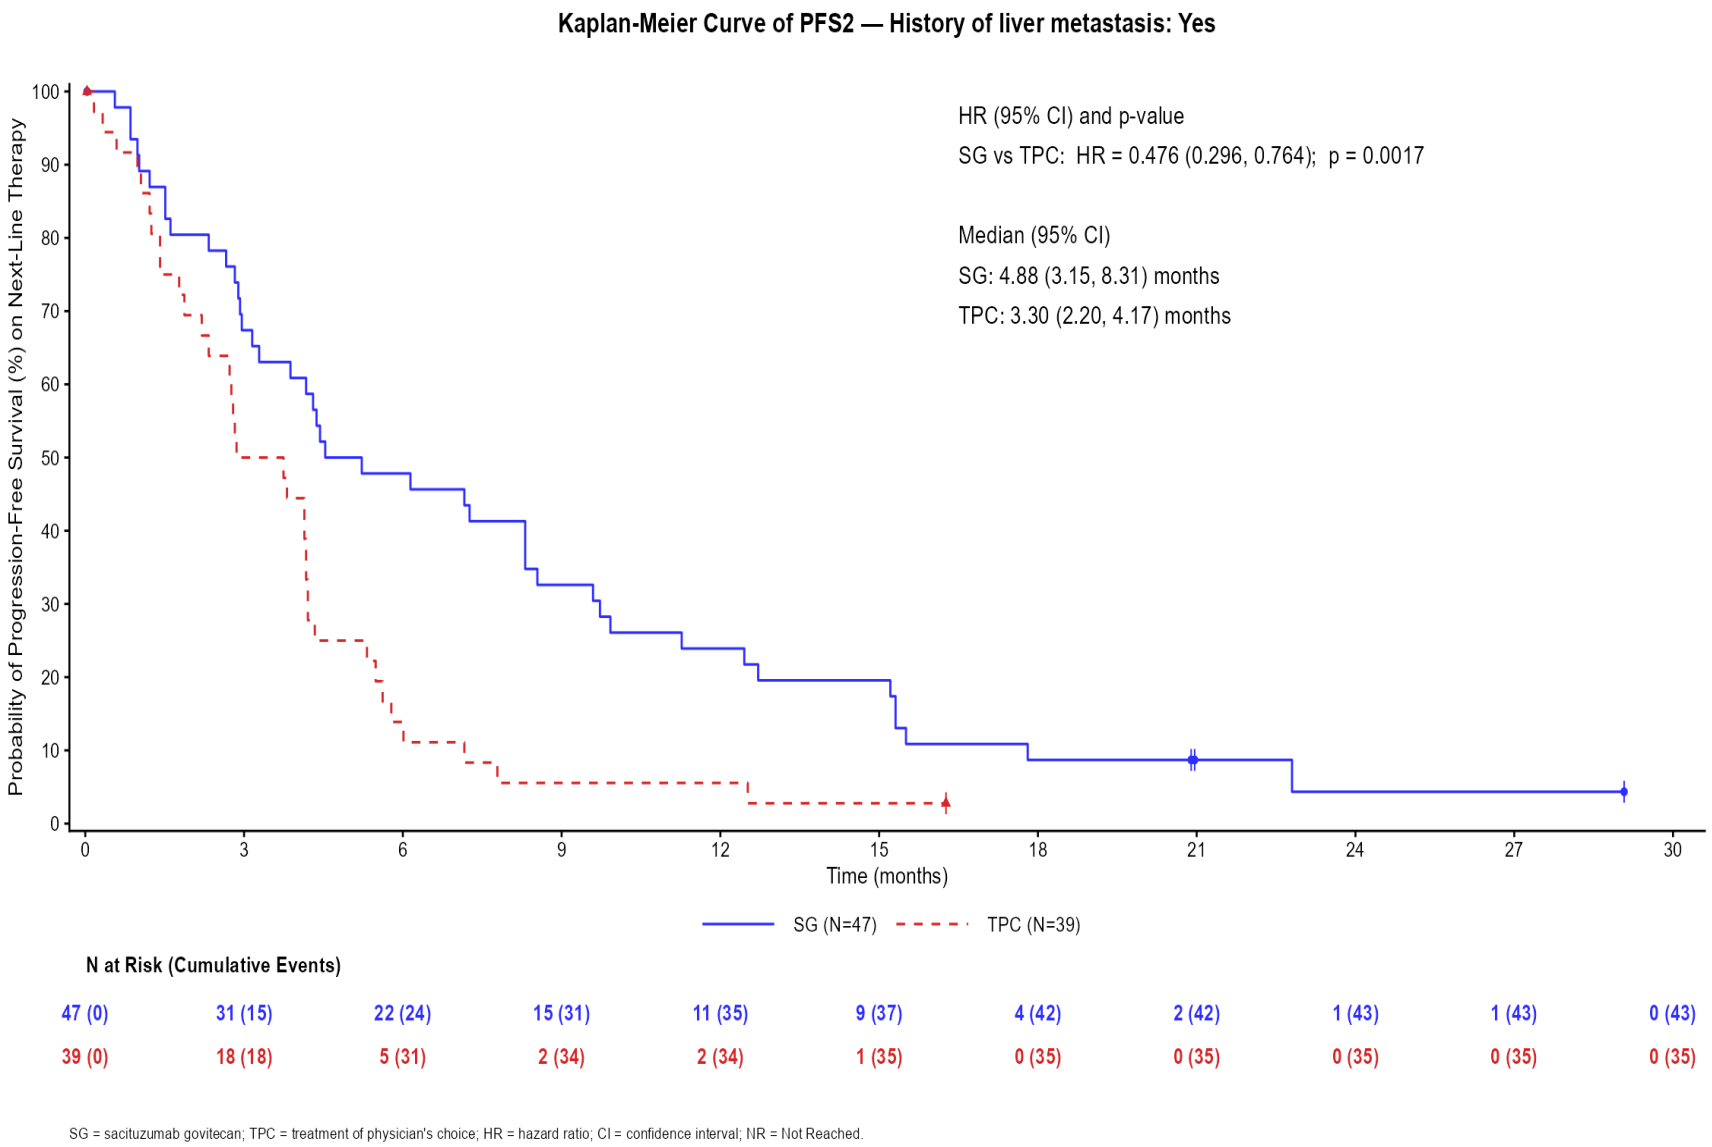
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.9. Figure 1.1.9: Kaplan-Meier Curve of PFS — Physician's choice chemotherapy: Gemcitabine/Carboplatin — mITT — Excluding patients preselected to receive nab-paclitaxel



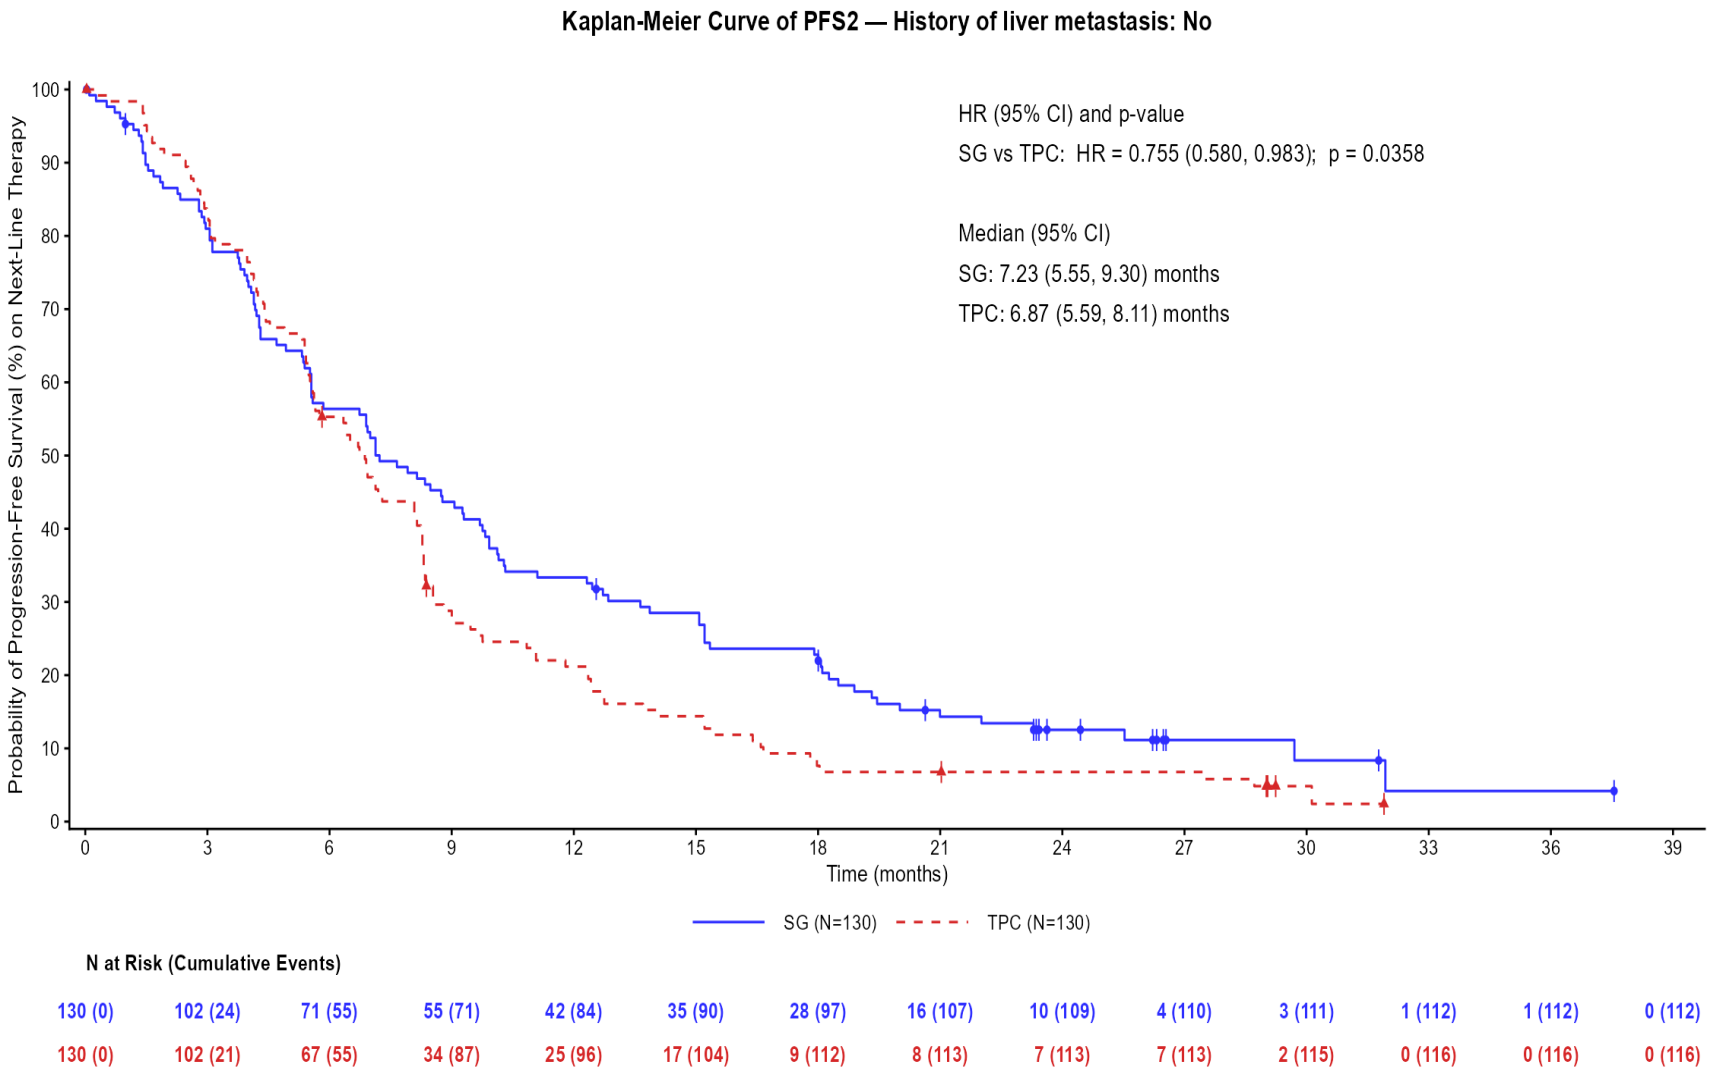
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.10. Figure 1.1.10: Kaplan-Meier Curve of PFS2 — Physician's choice chemotherapy: Taxane — mITT — Excluding patients preselected to receive nab-paclitaxel



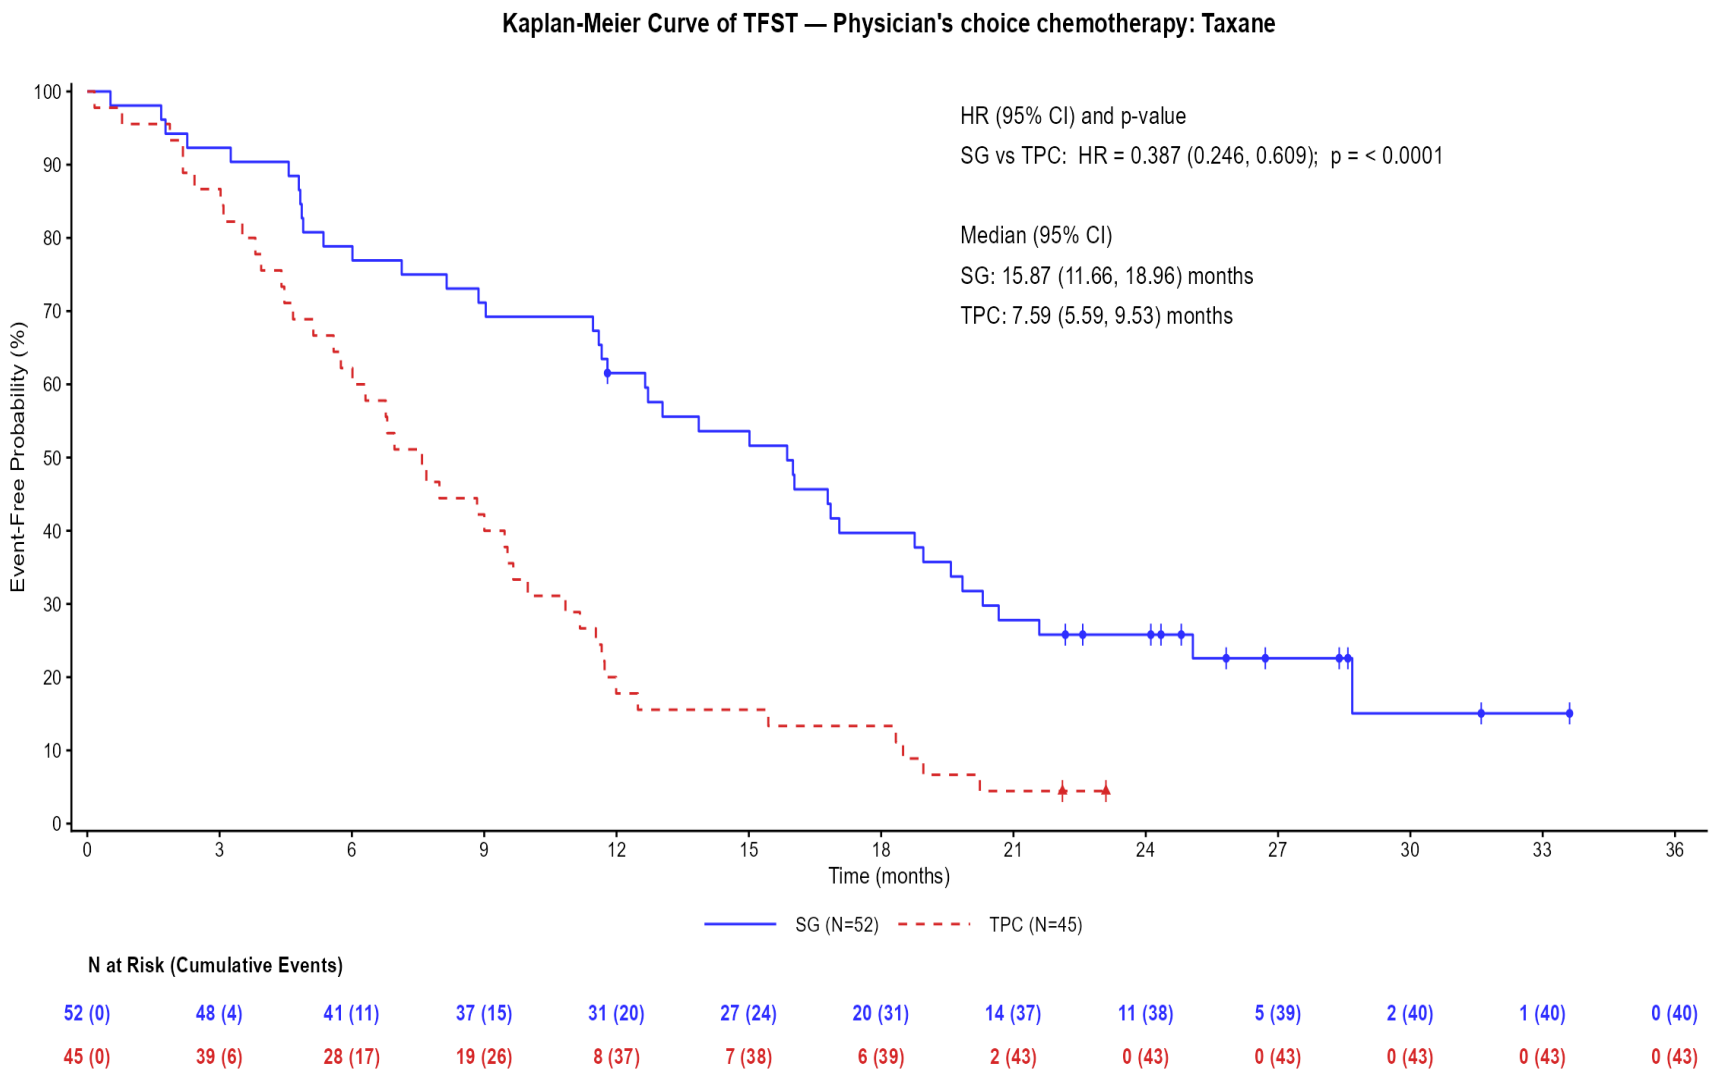
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.11. Figure 1.1.11: Kaplan-Meier Curve of PFS2 — Physician's choice chemotherapy: Gemcitabine/Carboplatin — mITT — Excluding patients preselected to receive nab-paclitaxel



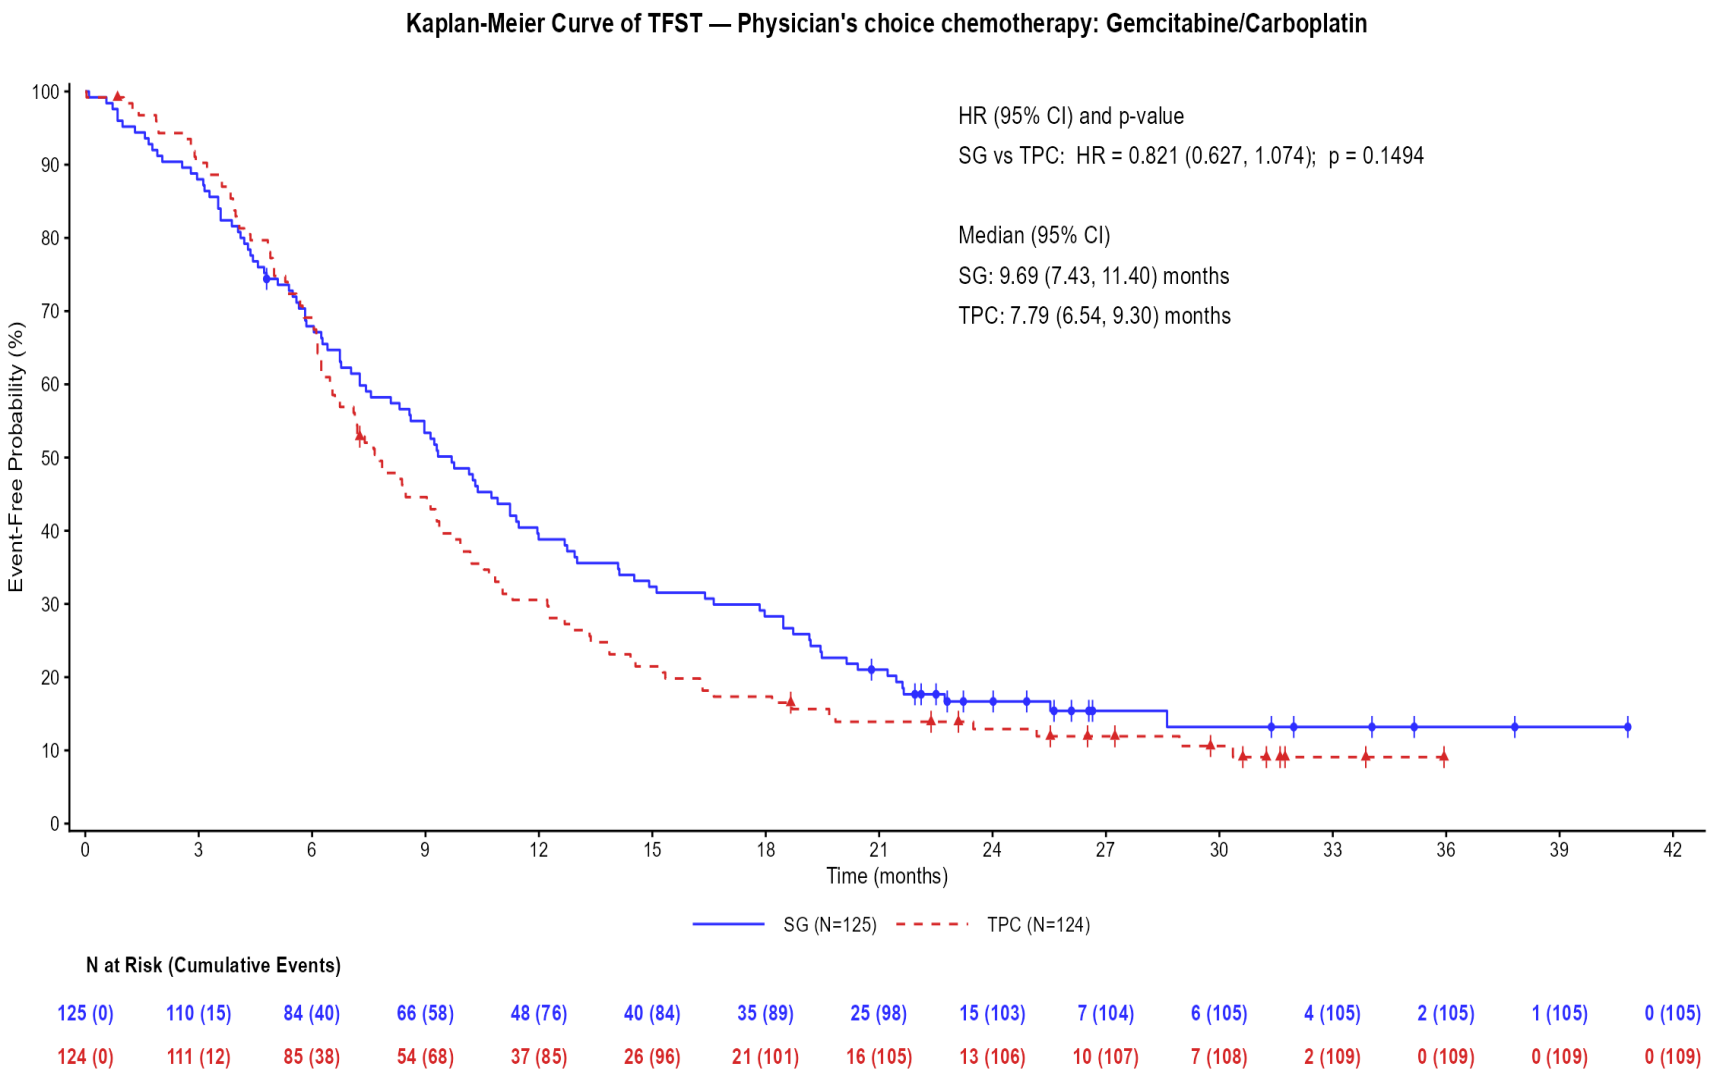
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.12. Figure 1.1.12: Kaplan-Meier Curve of PFS2 — History of liver metastasis: Yes — mITT — Excluding patients preselected to receive nab-paclitaxel



SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.13. Figure 1.1.13: Kaplan-Meier Curve of PFS2 — History of liver metastasis: No — mITT — Excluding patients preselected to receive nab-paclitaxel

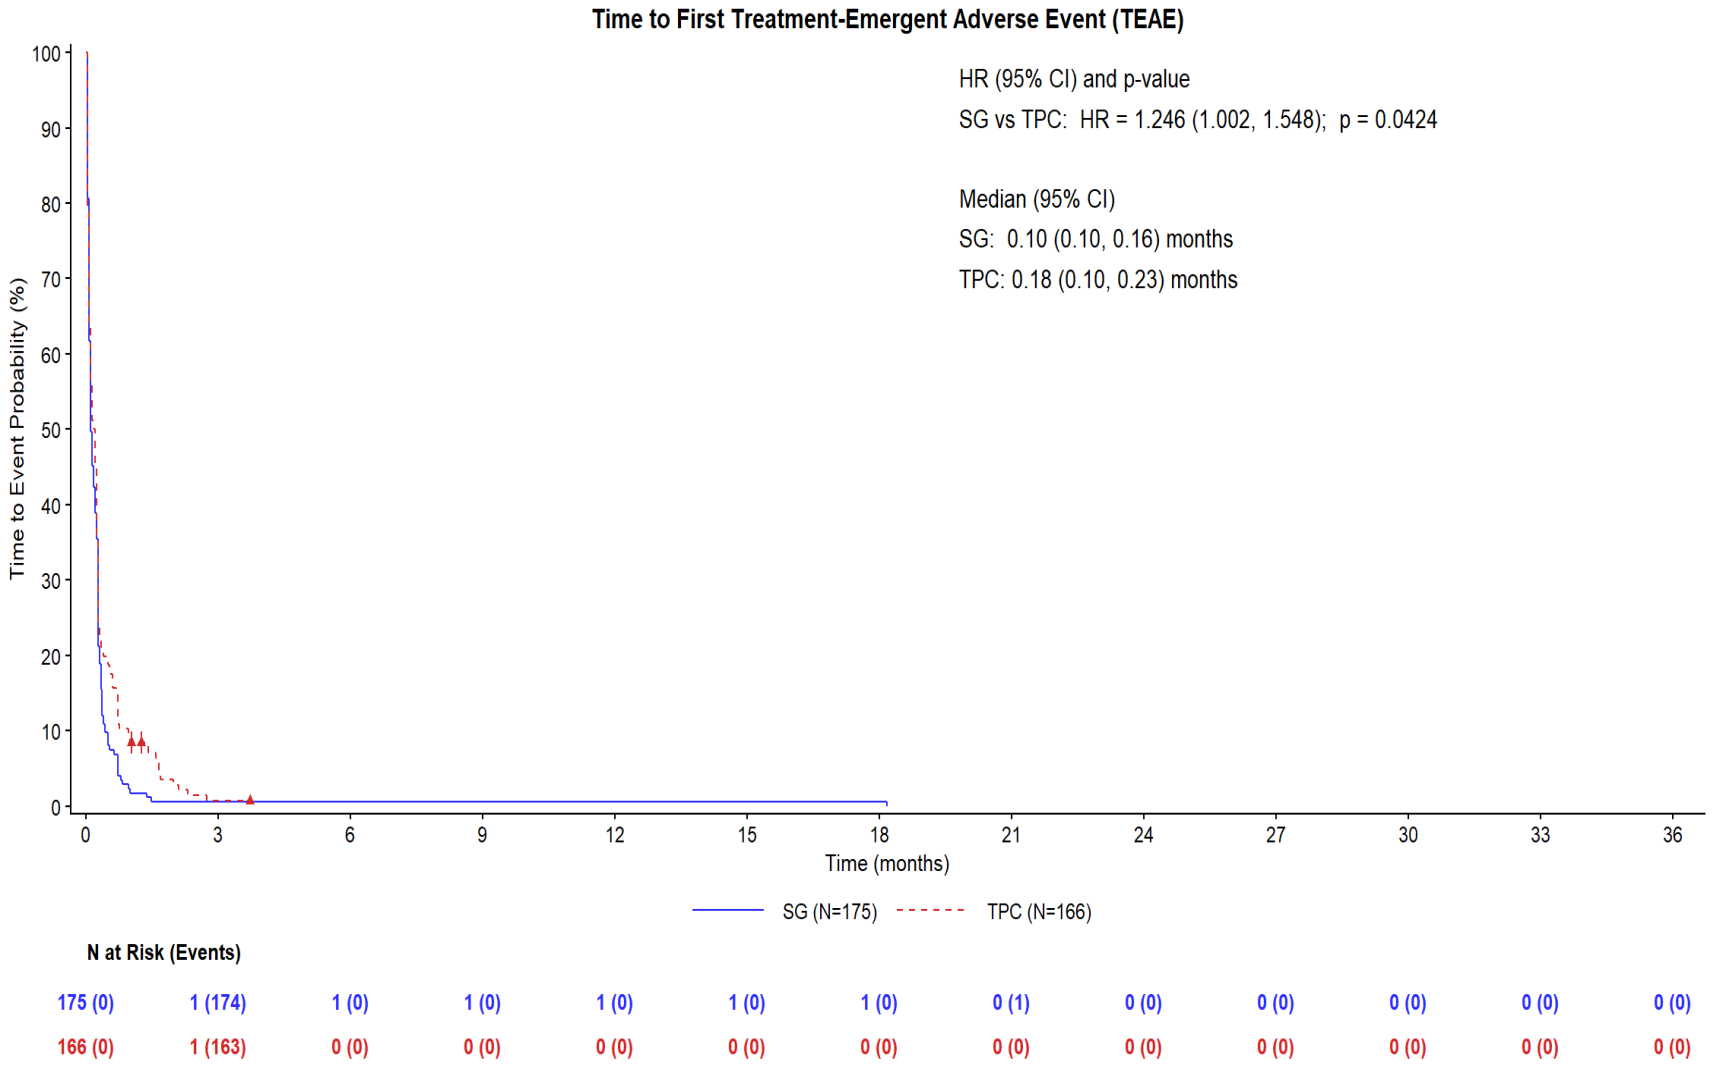


SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.14. Figure 1.1.14: Kaplan-Meier Curve of TFST — Physician's choice chemotherapy: Taxane — mITT — Excluding patients preselected to receive nab-paclitaxel

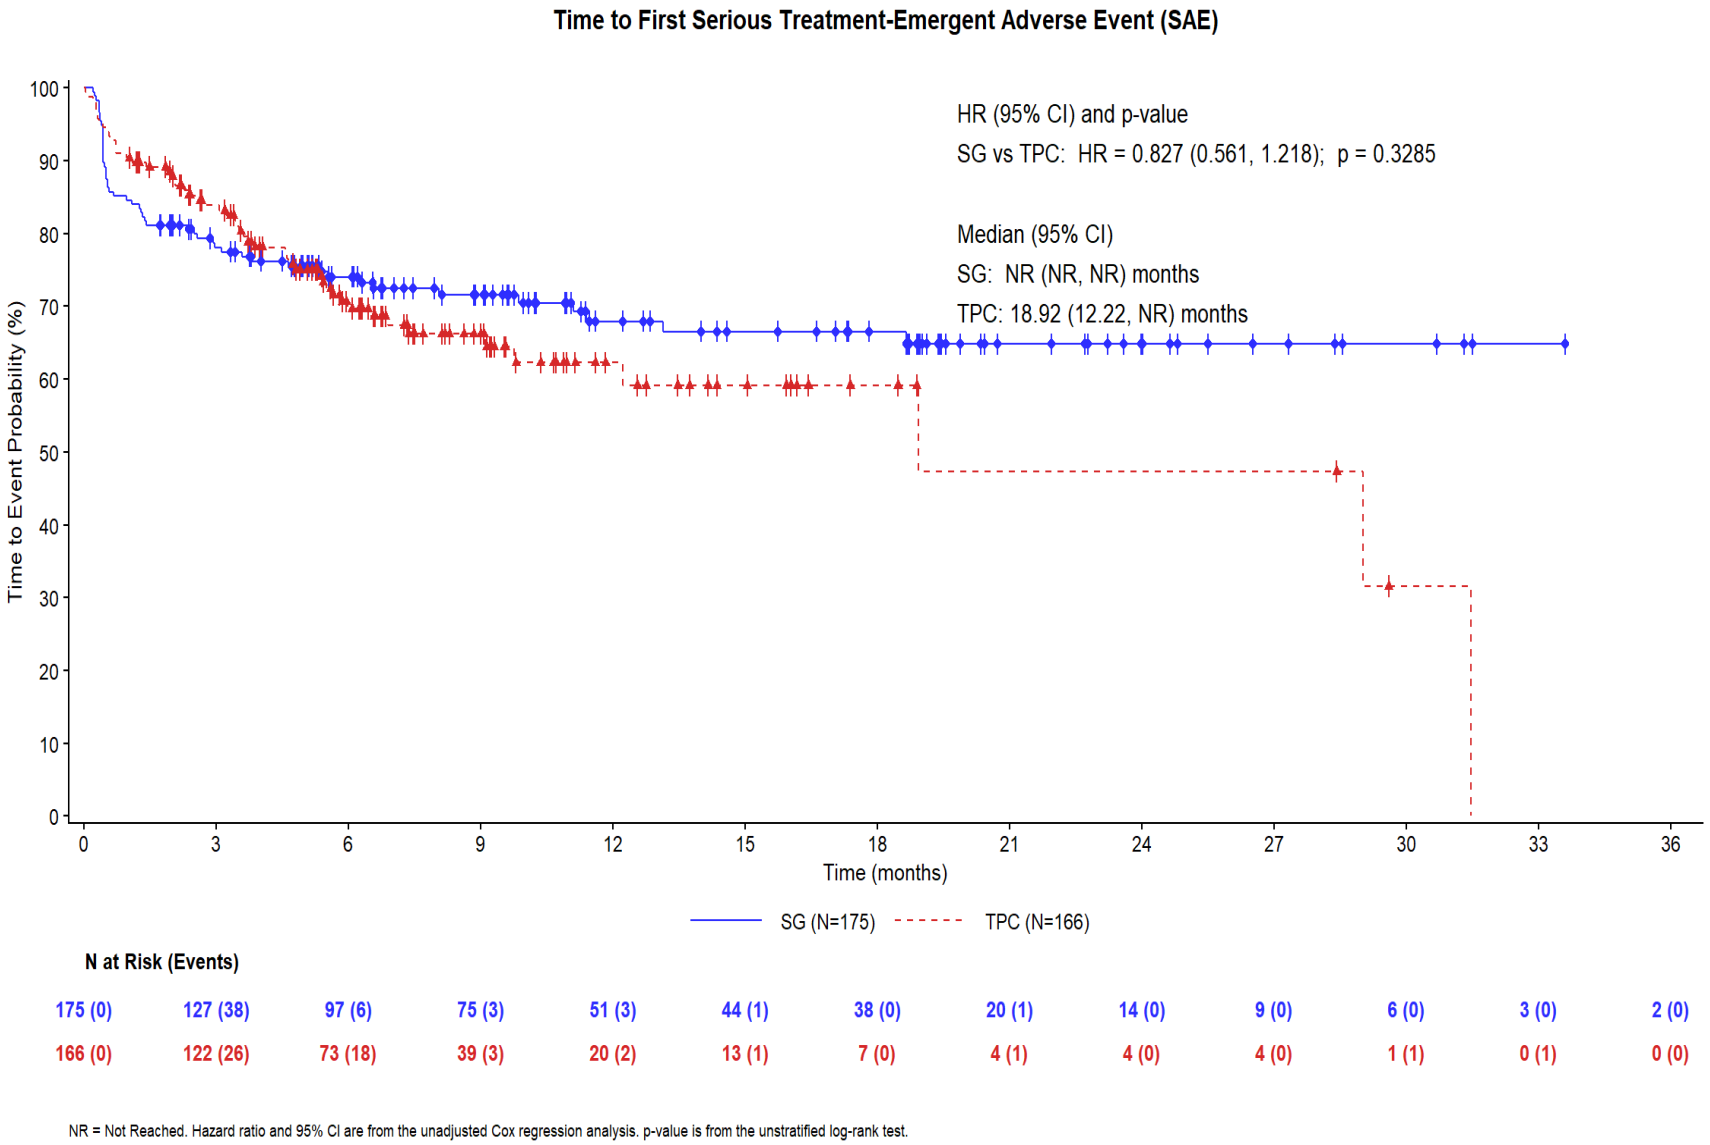
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.15. Figure 1.1.15: Kaplan-Meier Curve of TFST — Physician's choice chemotherapy: Gemcitabine/Carboplatin — mITT — Excluding patients preselected to receive nab-paclitaxel



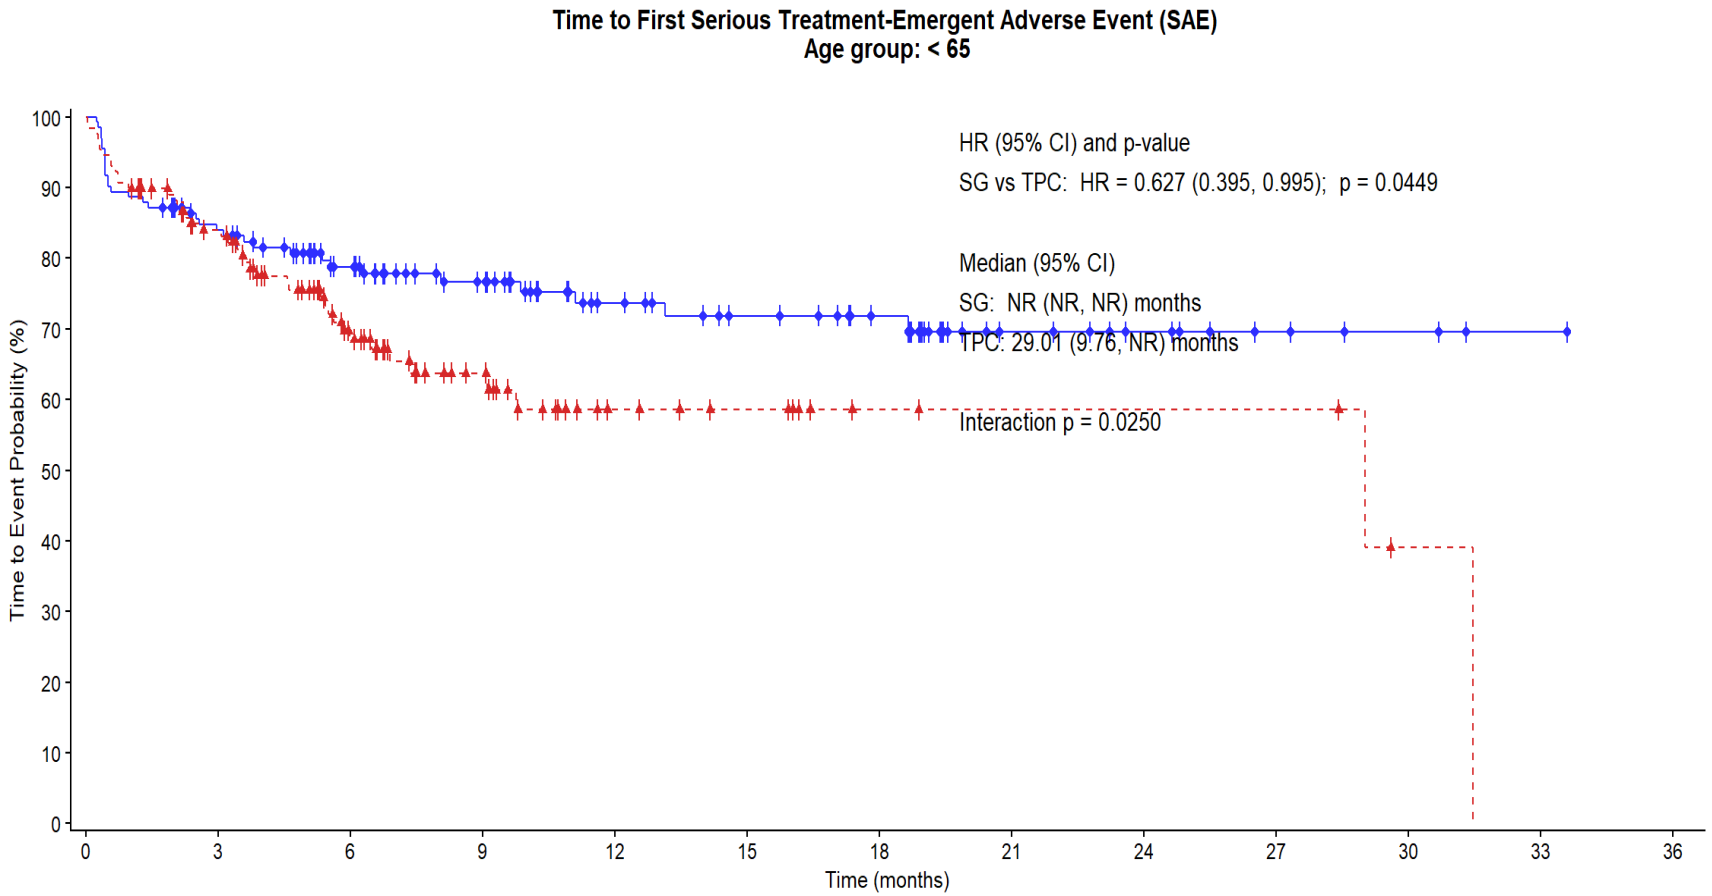
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

8. KM FIGURES — Safety



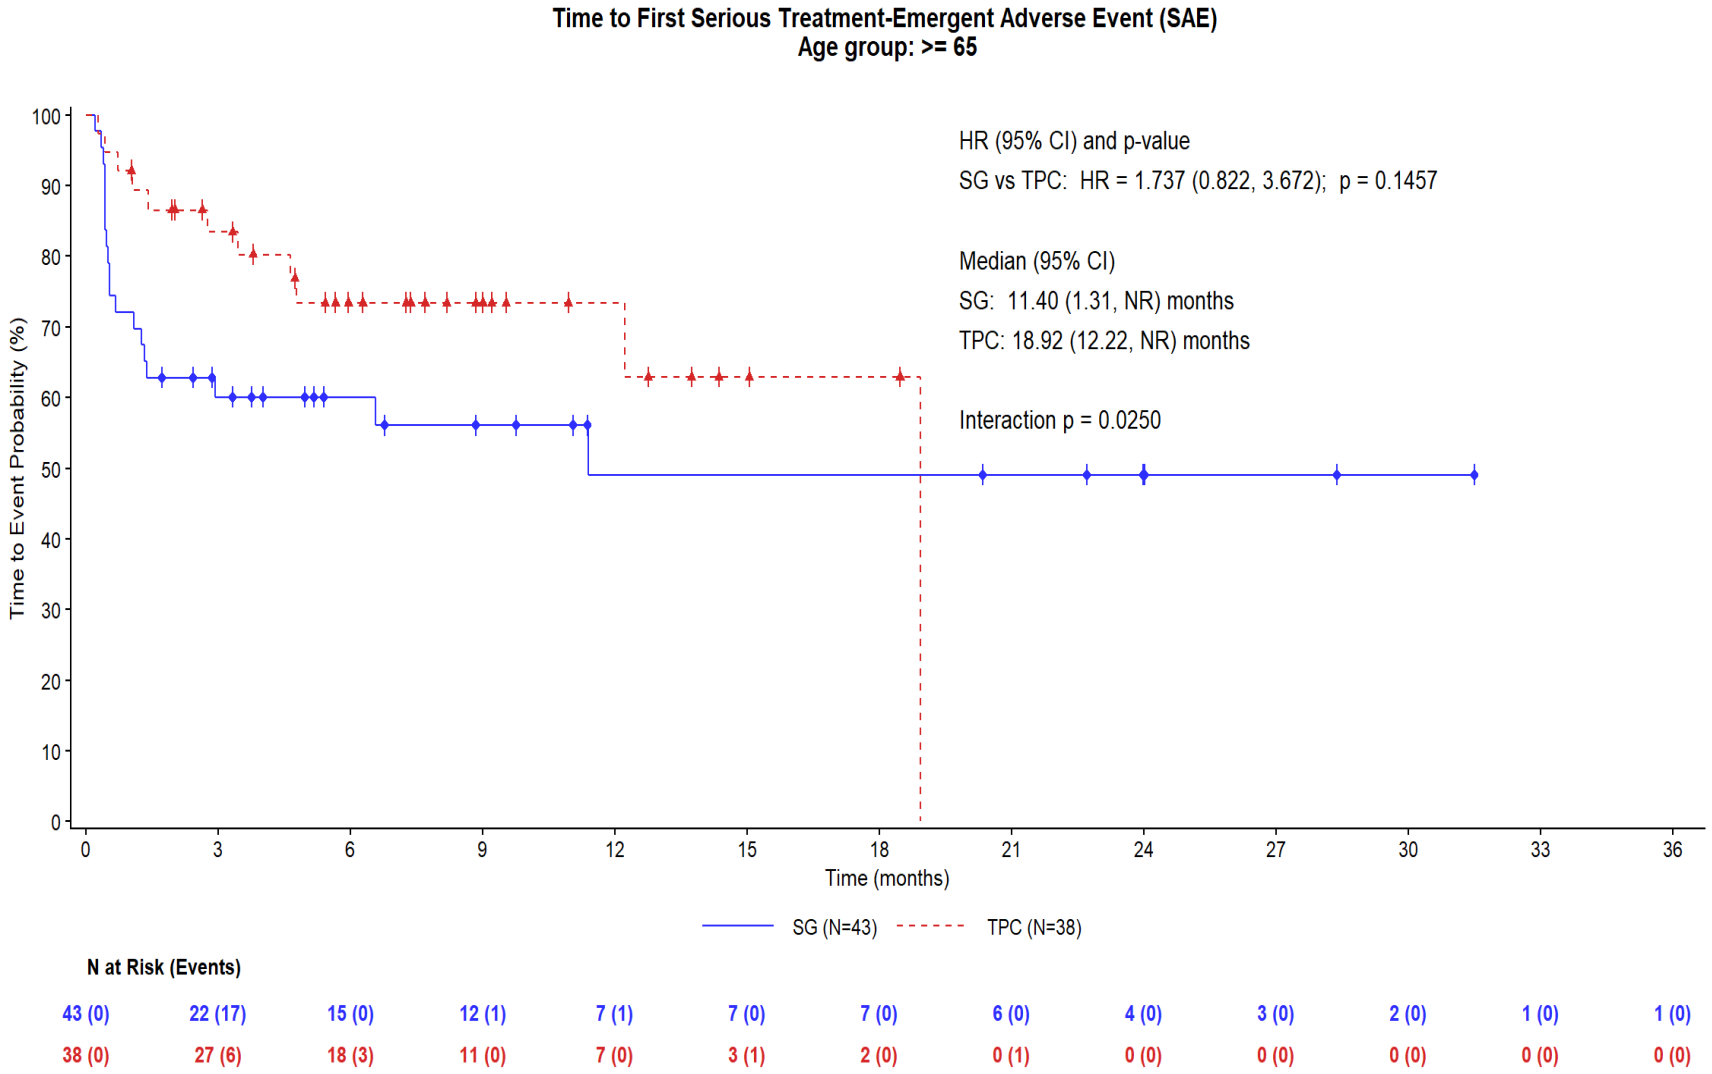
8.1. mSAF — Excluding patients preselected to receive nab-paclitaxel

8.2. Figure 1.1.1: Kaplan Meier Plot of Time to First TEAE — mSAF — Excluding patients preselected to receive nab-paclitaxel



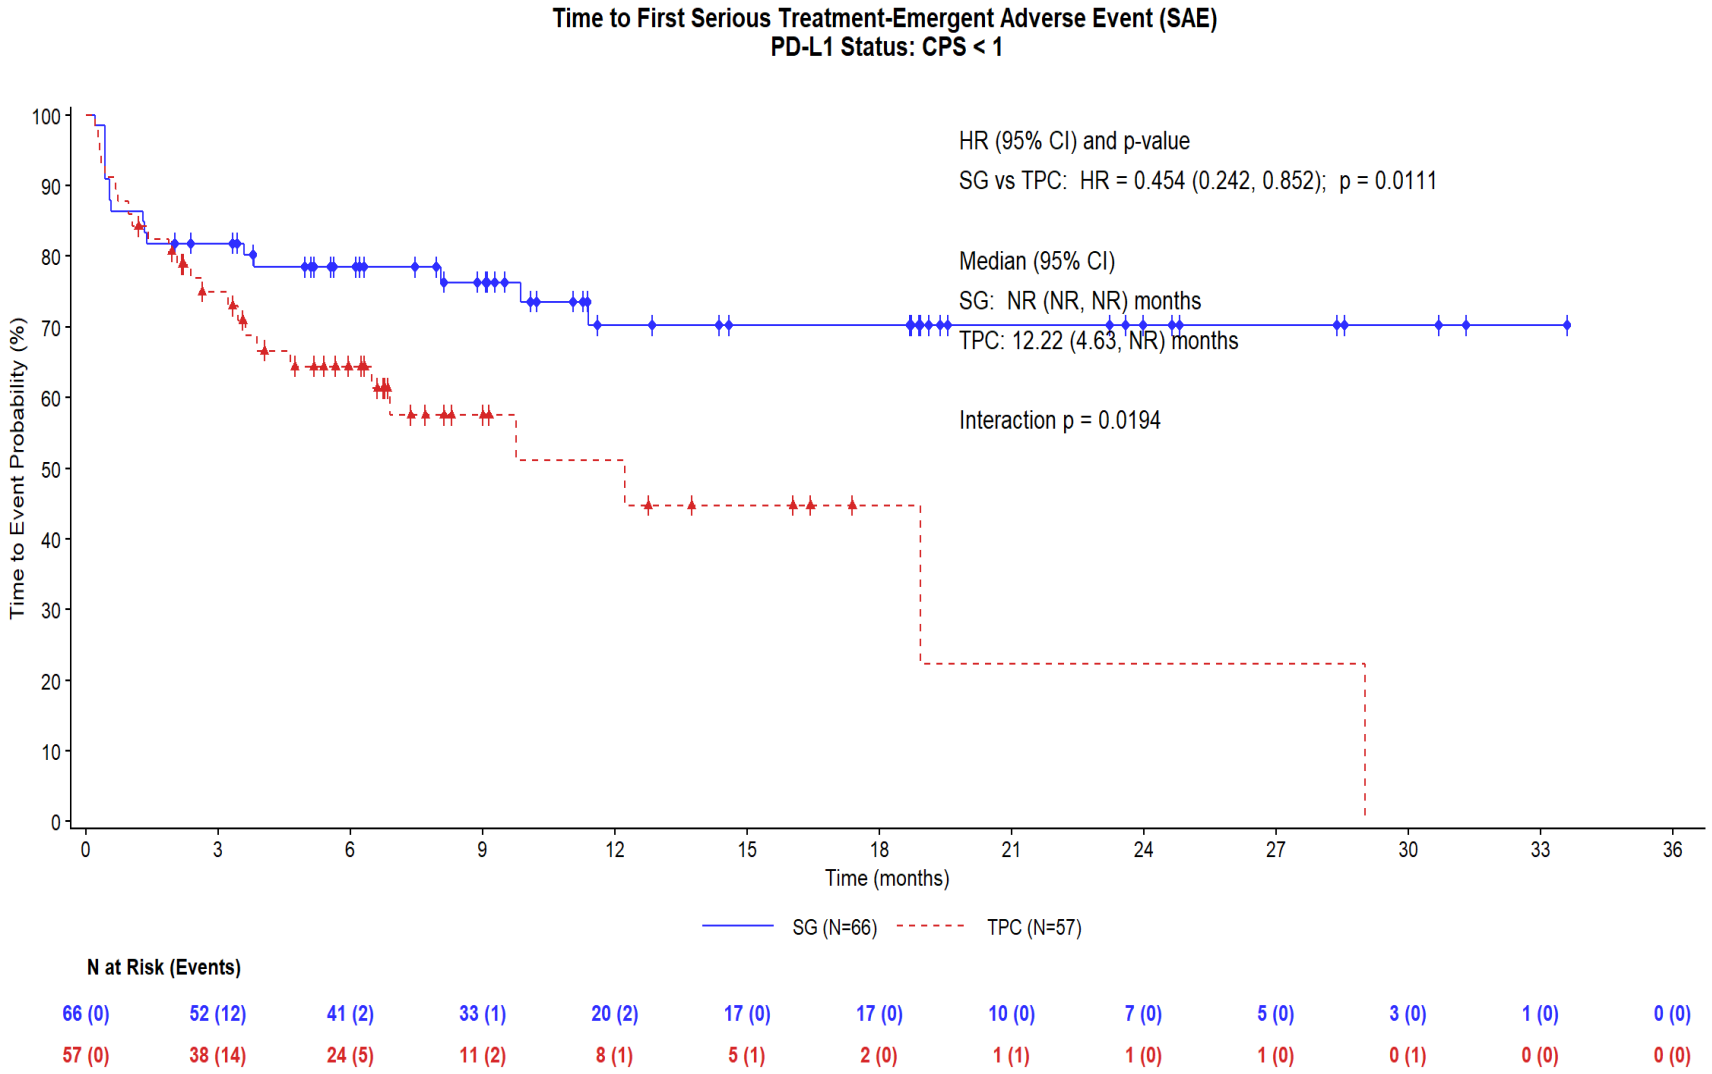
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.3. Figure 1.1.2: Kaplan Meier Plot of Time to First Serious TEAE (SAE) — mSAF — Excluding patients preselected to receive nab-paclitaxel



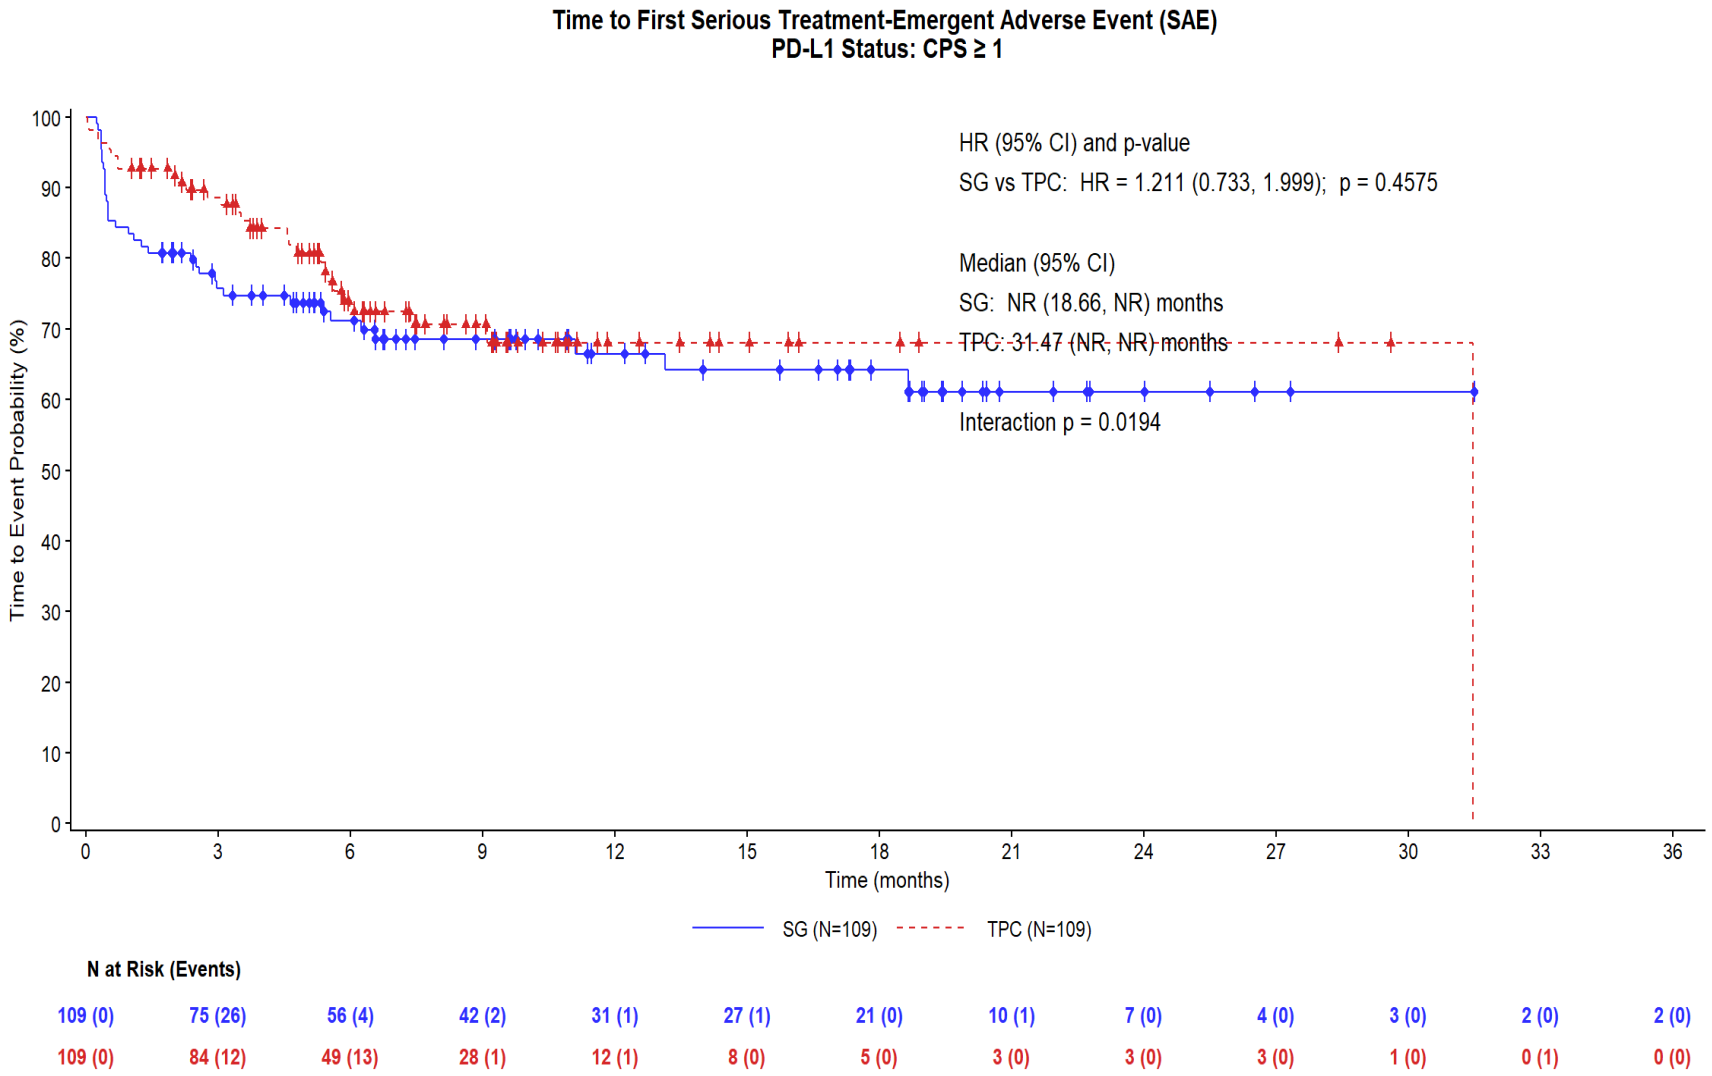
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.4. Figure 1.1.3: Kaplan Meier Plot of Time to First Serious TEAE (SAE) Age group less than 65 — mSAF — Excluding patients preselected to receive nab-paclitaxel



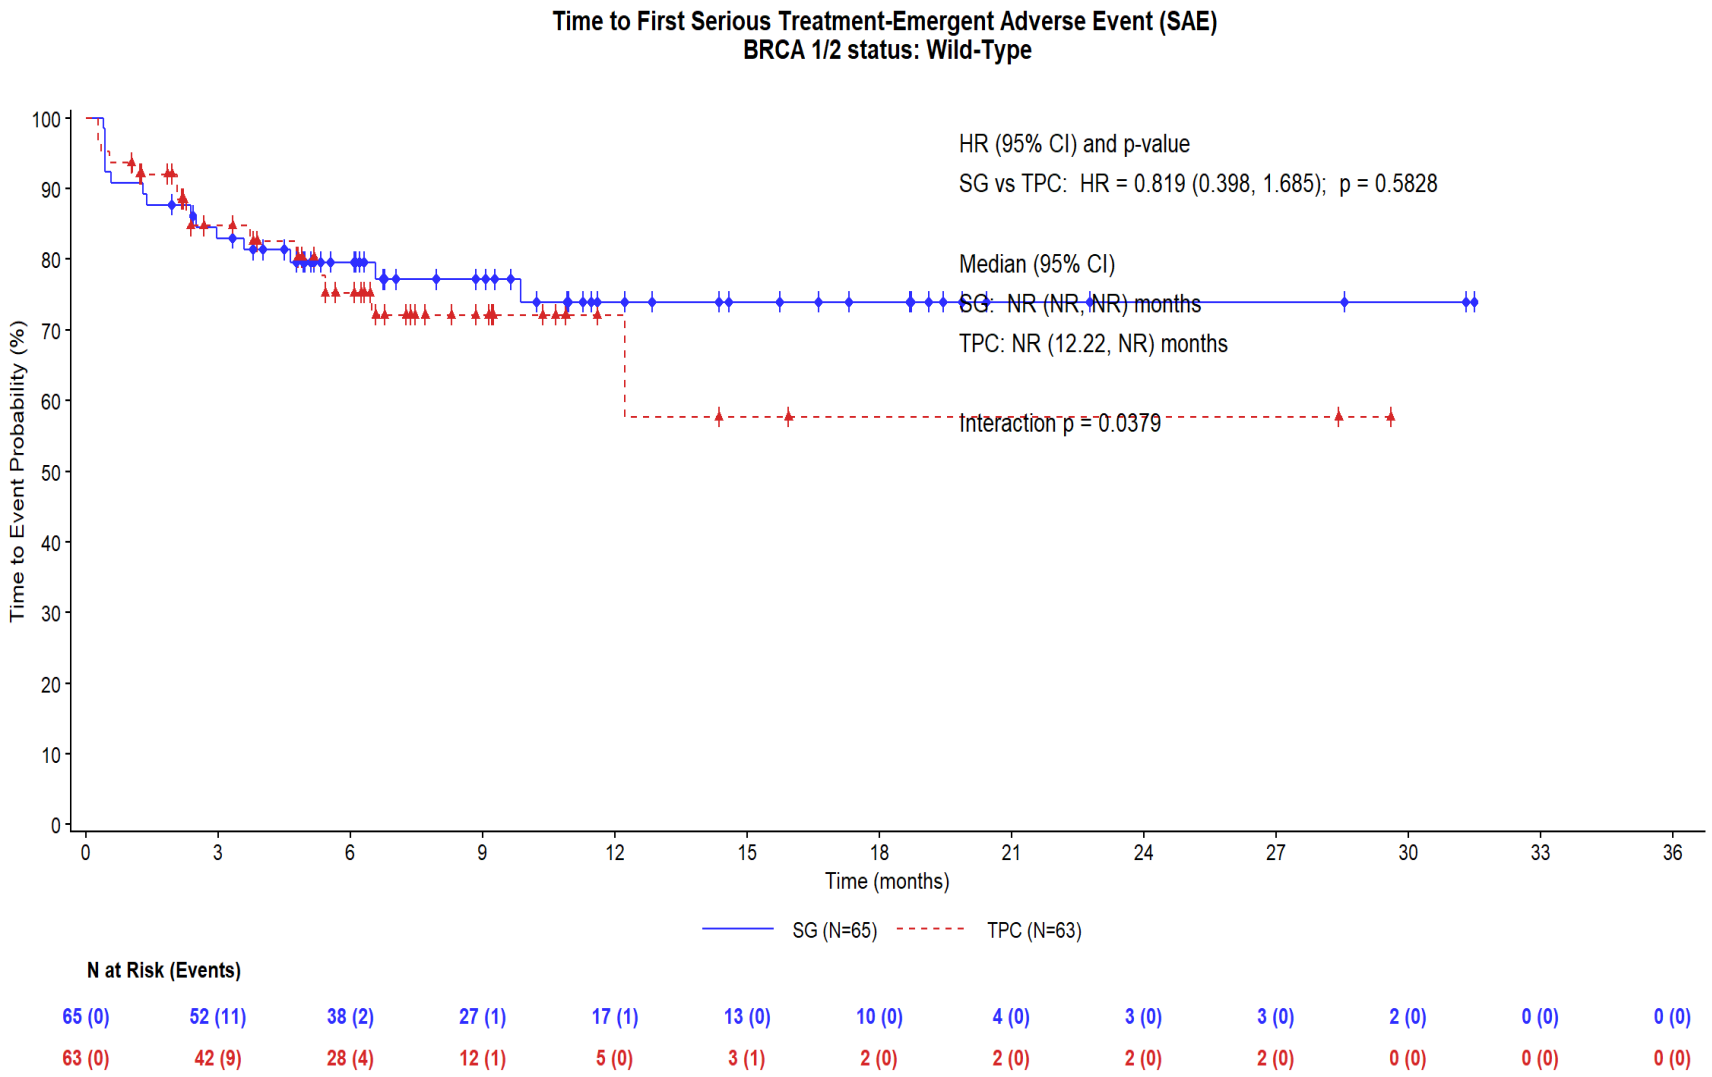
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.5. Figure 1.1.4: Kaplan Meier Plot of Time to First Serious TEAE (SAE) Age group greater than or equal to 65 — mSAF — Excluding patients preselected to receive nab-paclitaxel



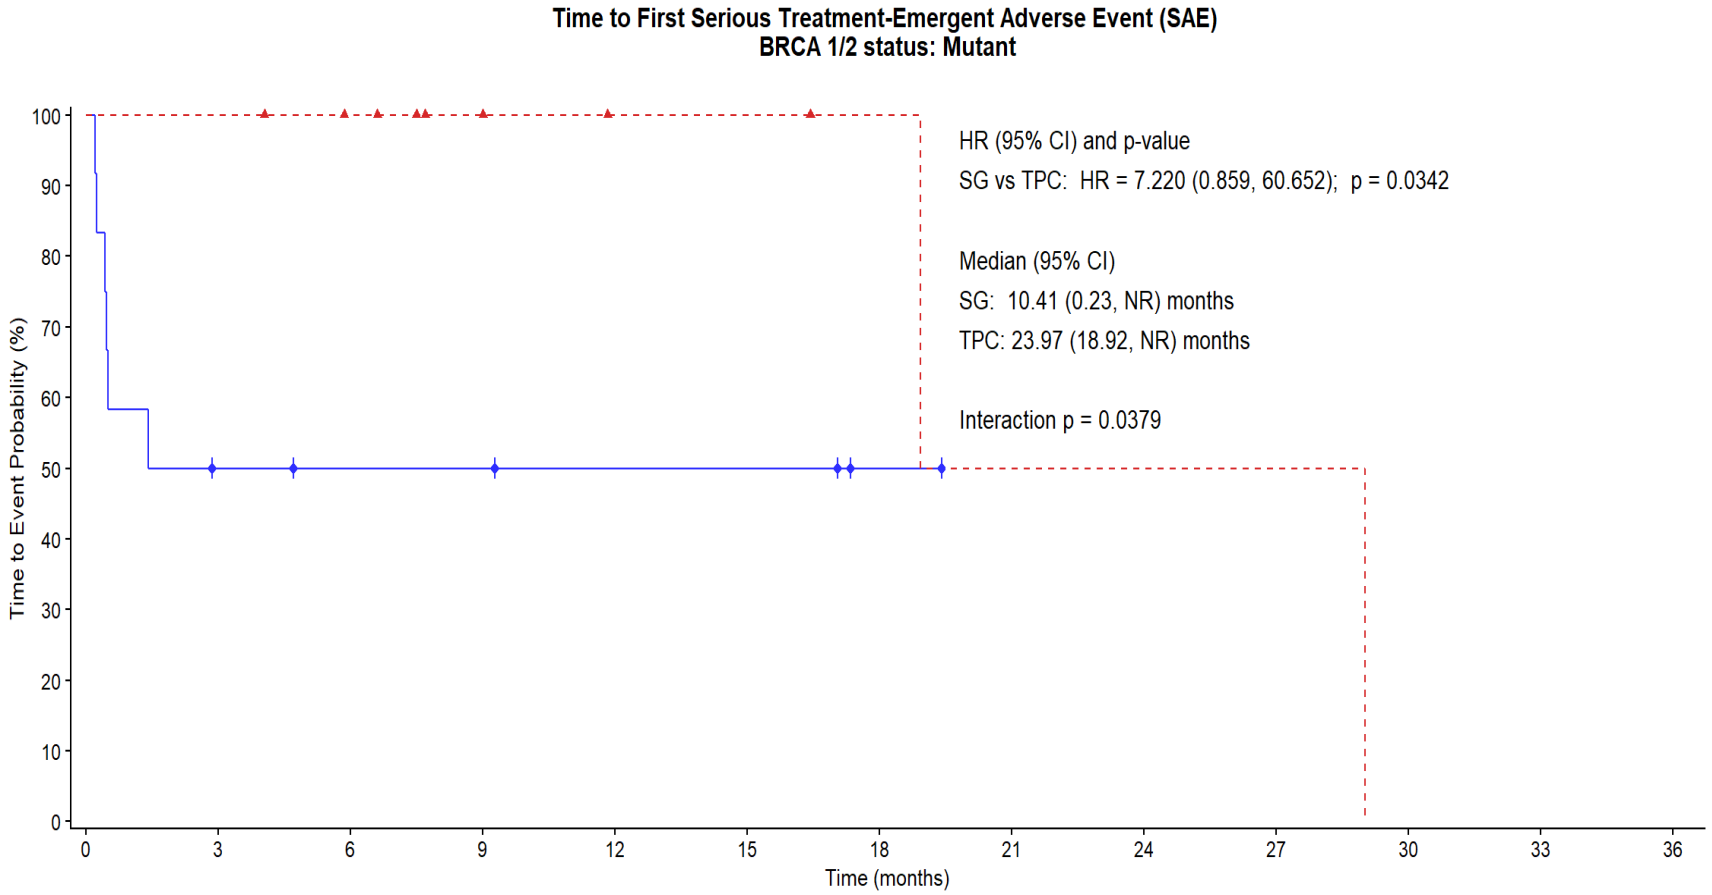
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.6. Figure 1.1.5: Kaplan Meier Plot of Time to First Serious TEAE (SAE) PD L1 Status CPS less than 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel



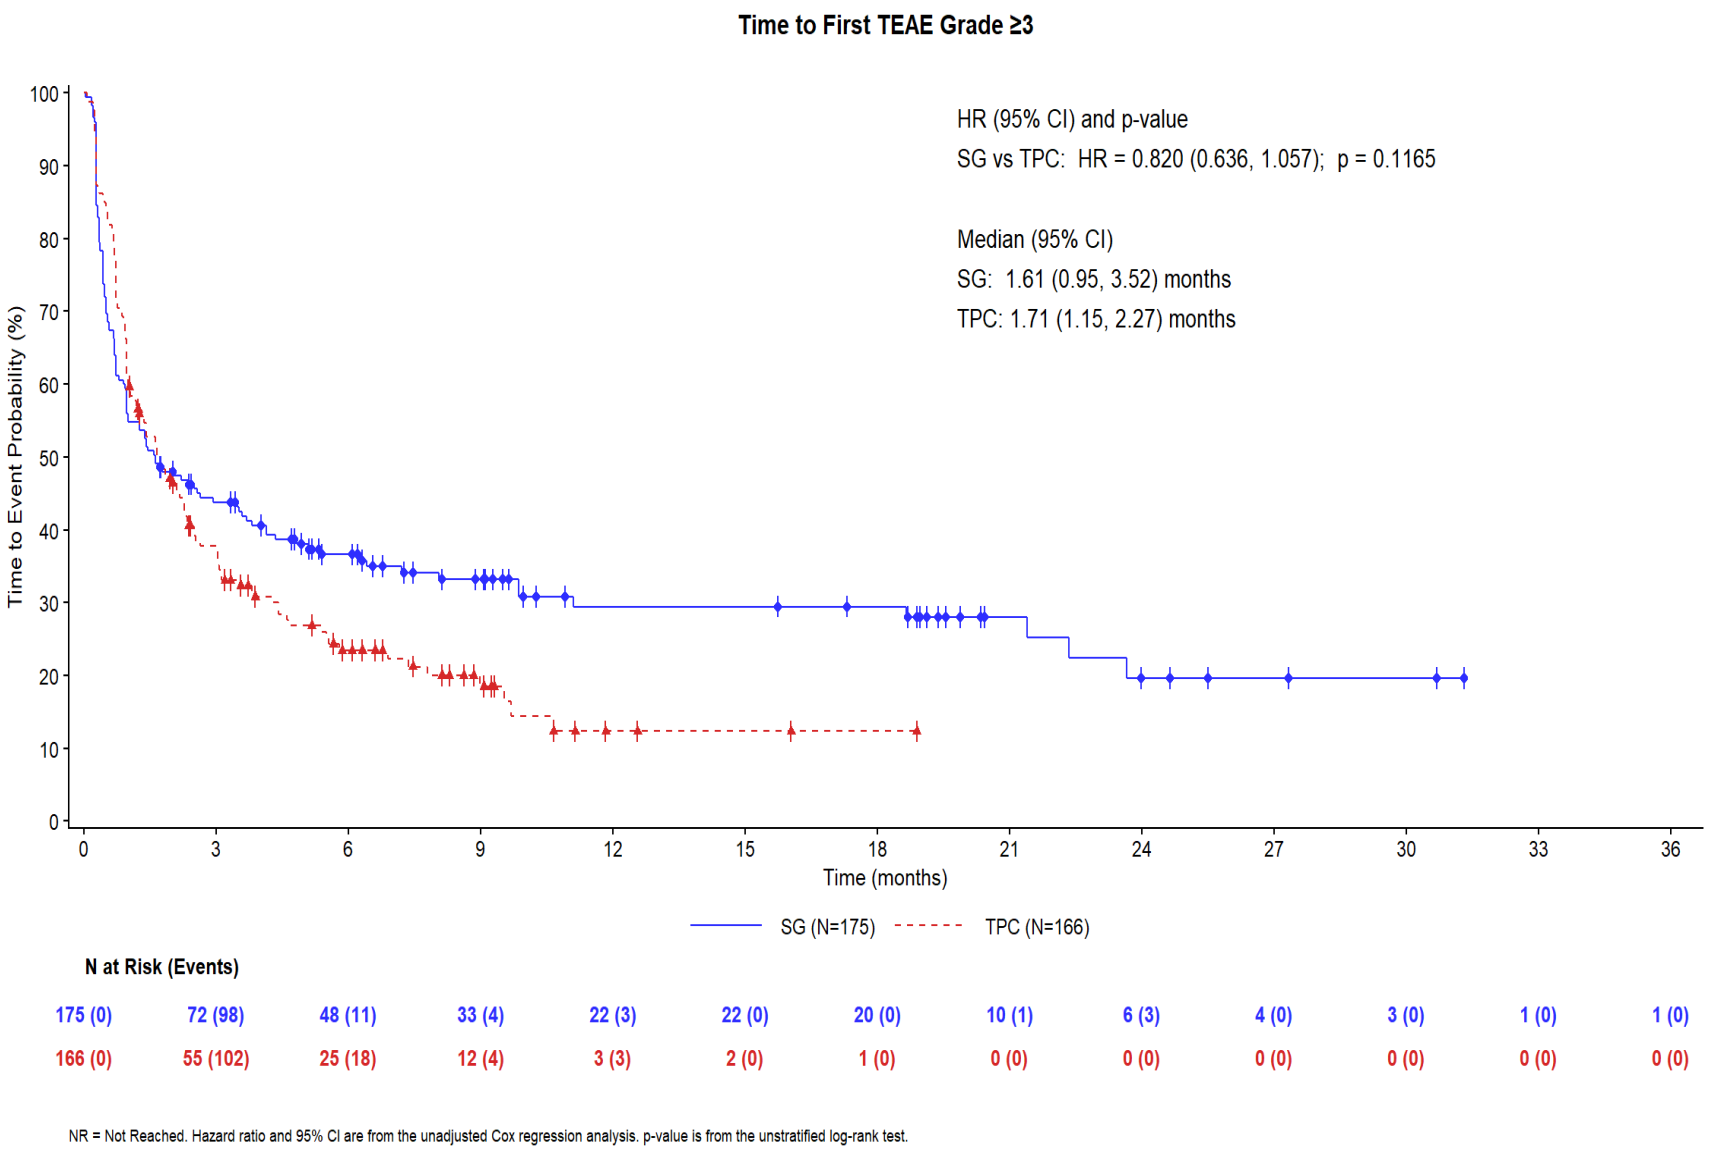
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.7. Figure 1.1.6: Kaplan Meier Plot of Time to First Serious TEAE (SAE) PD L1 Status CPS 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel



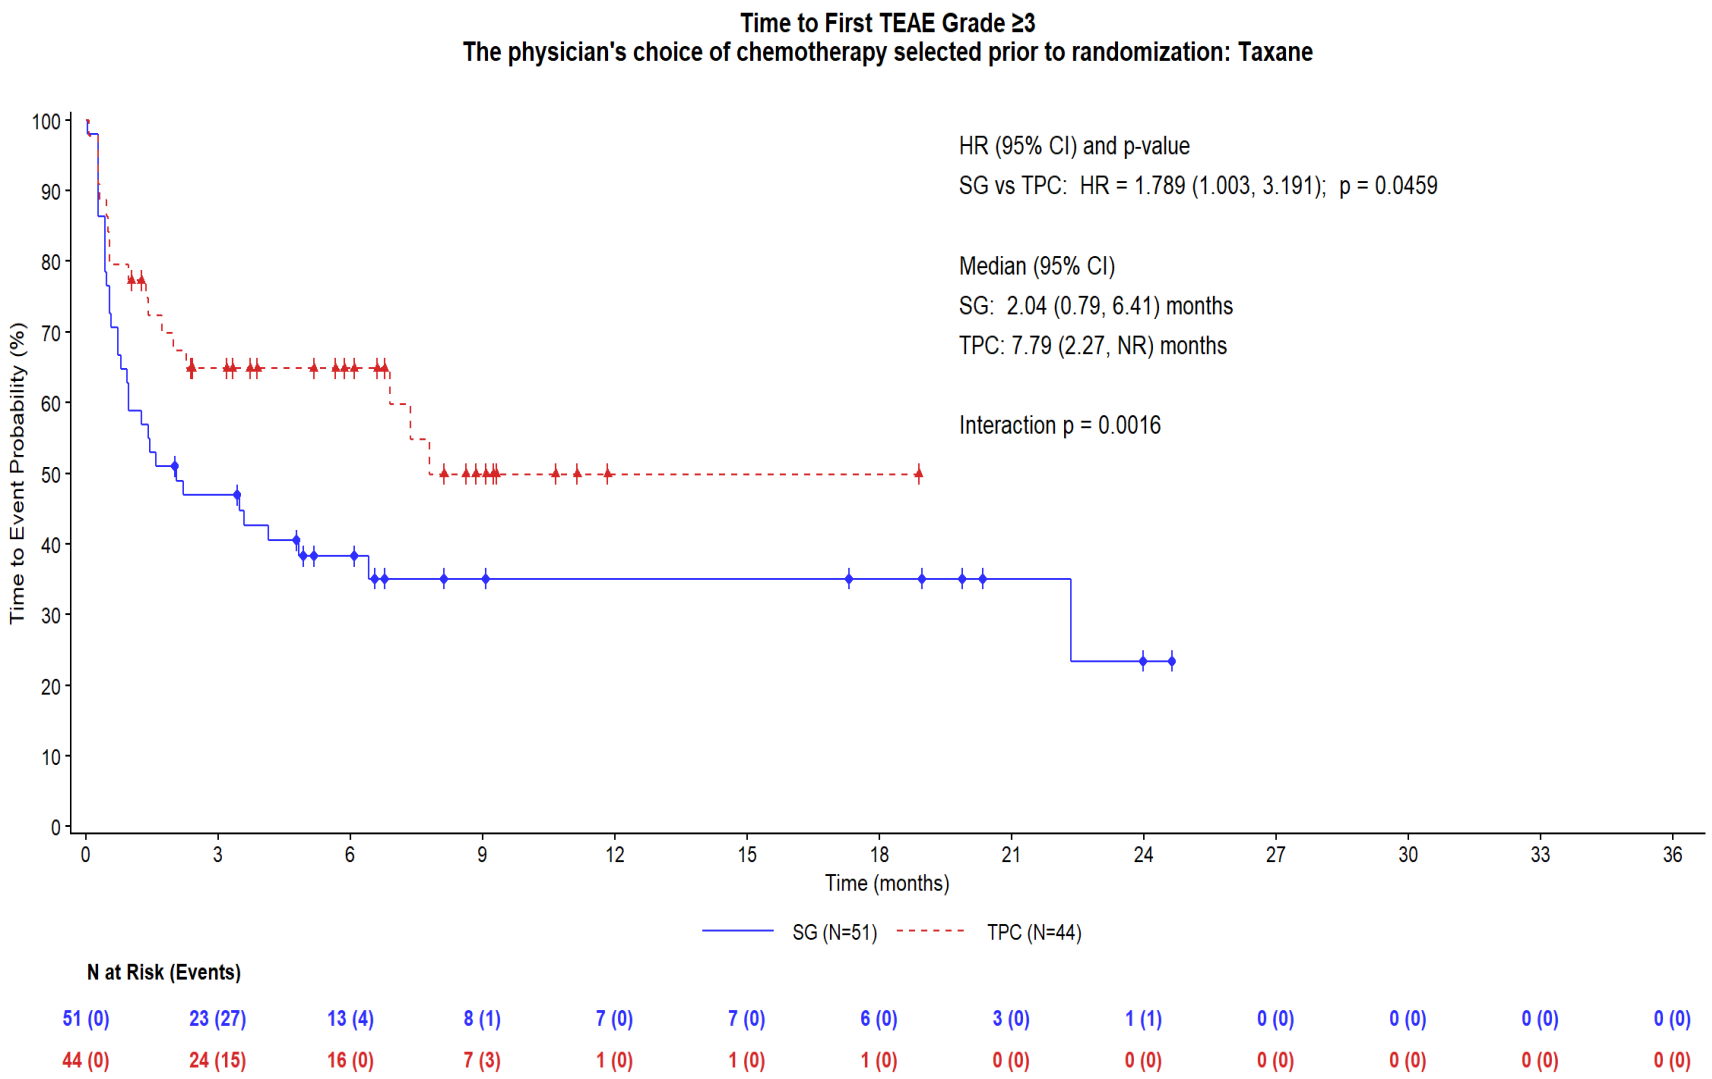
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.8. Figure 1.1.7: Kaplan Meier Plot of Time to First Serious TEAE (SAE) BRCA 1 2 status Wild Type — mSAF — Excluding patients preselected to receive nab-paclitaxel



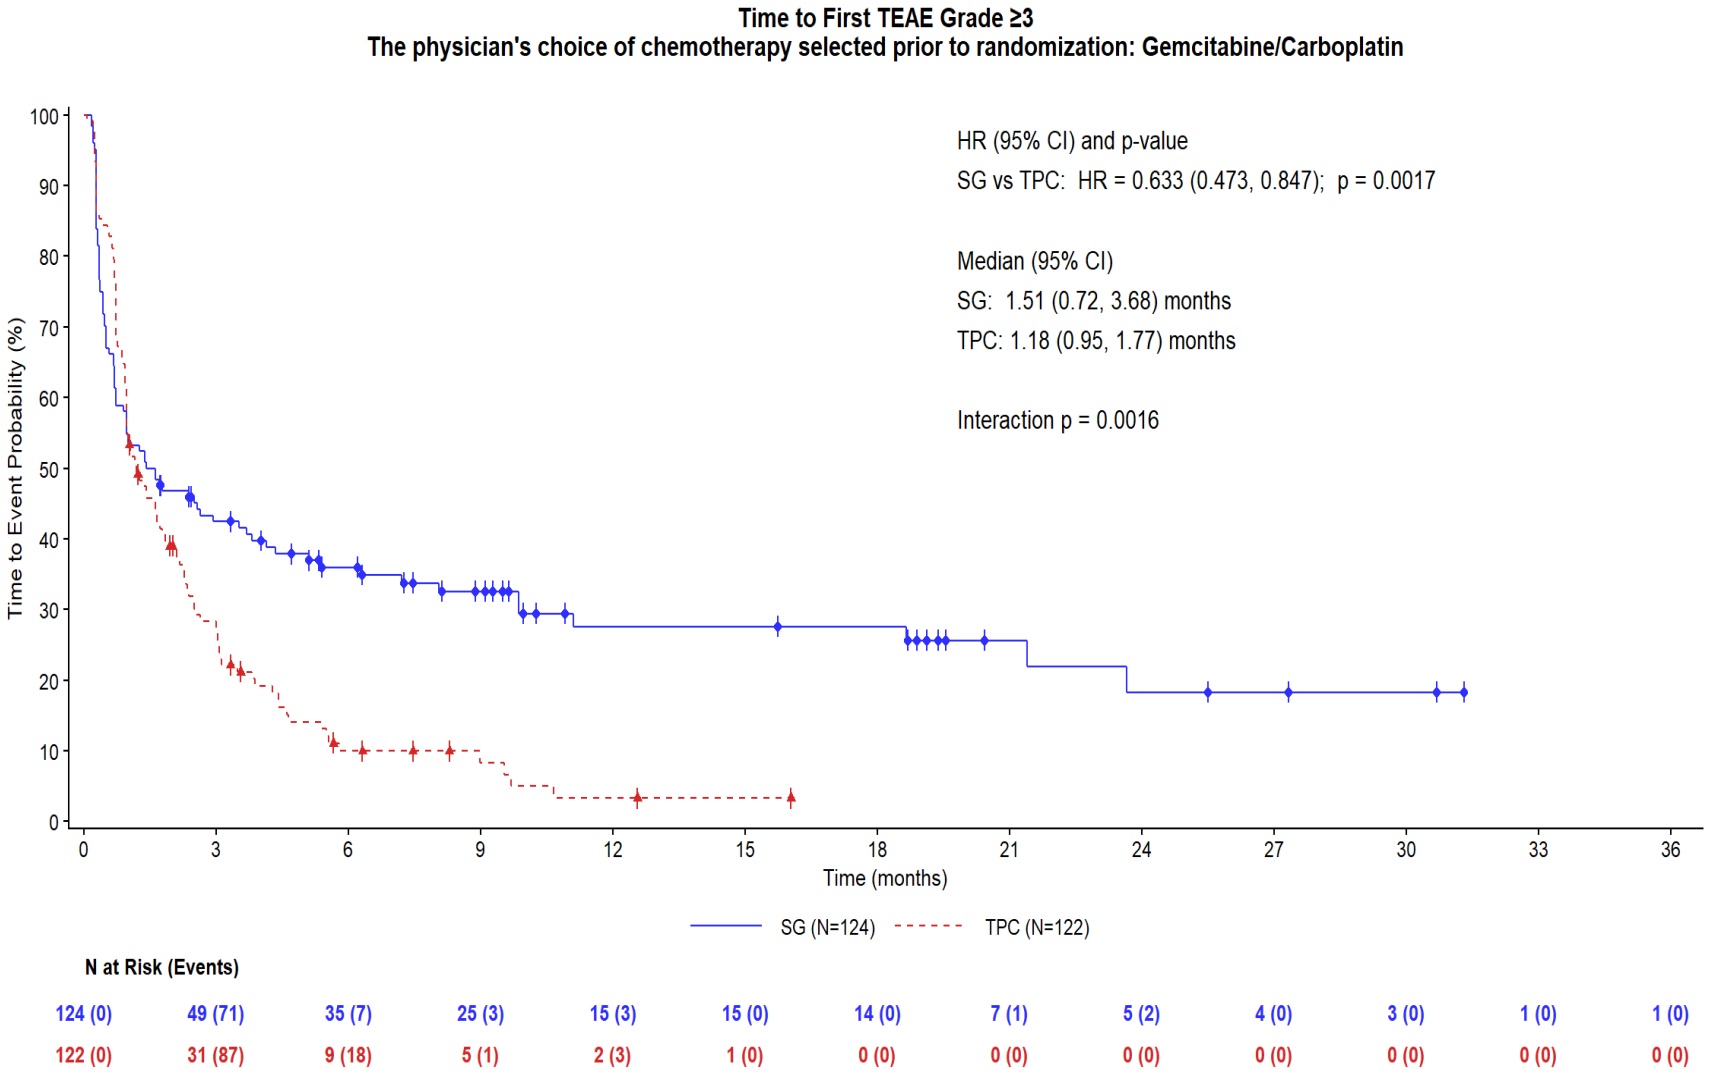
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.9. Figure 1.1.8: Kaplan Meier Plot of Time to First Serious TEAE (SAE) BRCA 1 2 status Mutant — mSAF — Excluding patients preselected to receive nab-paclitaxel



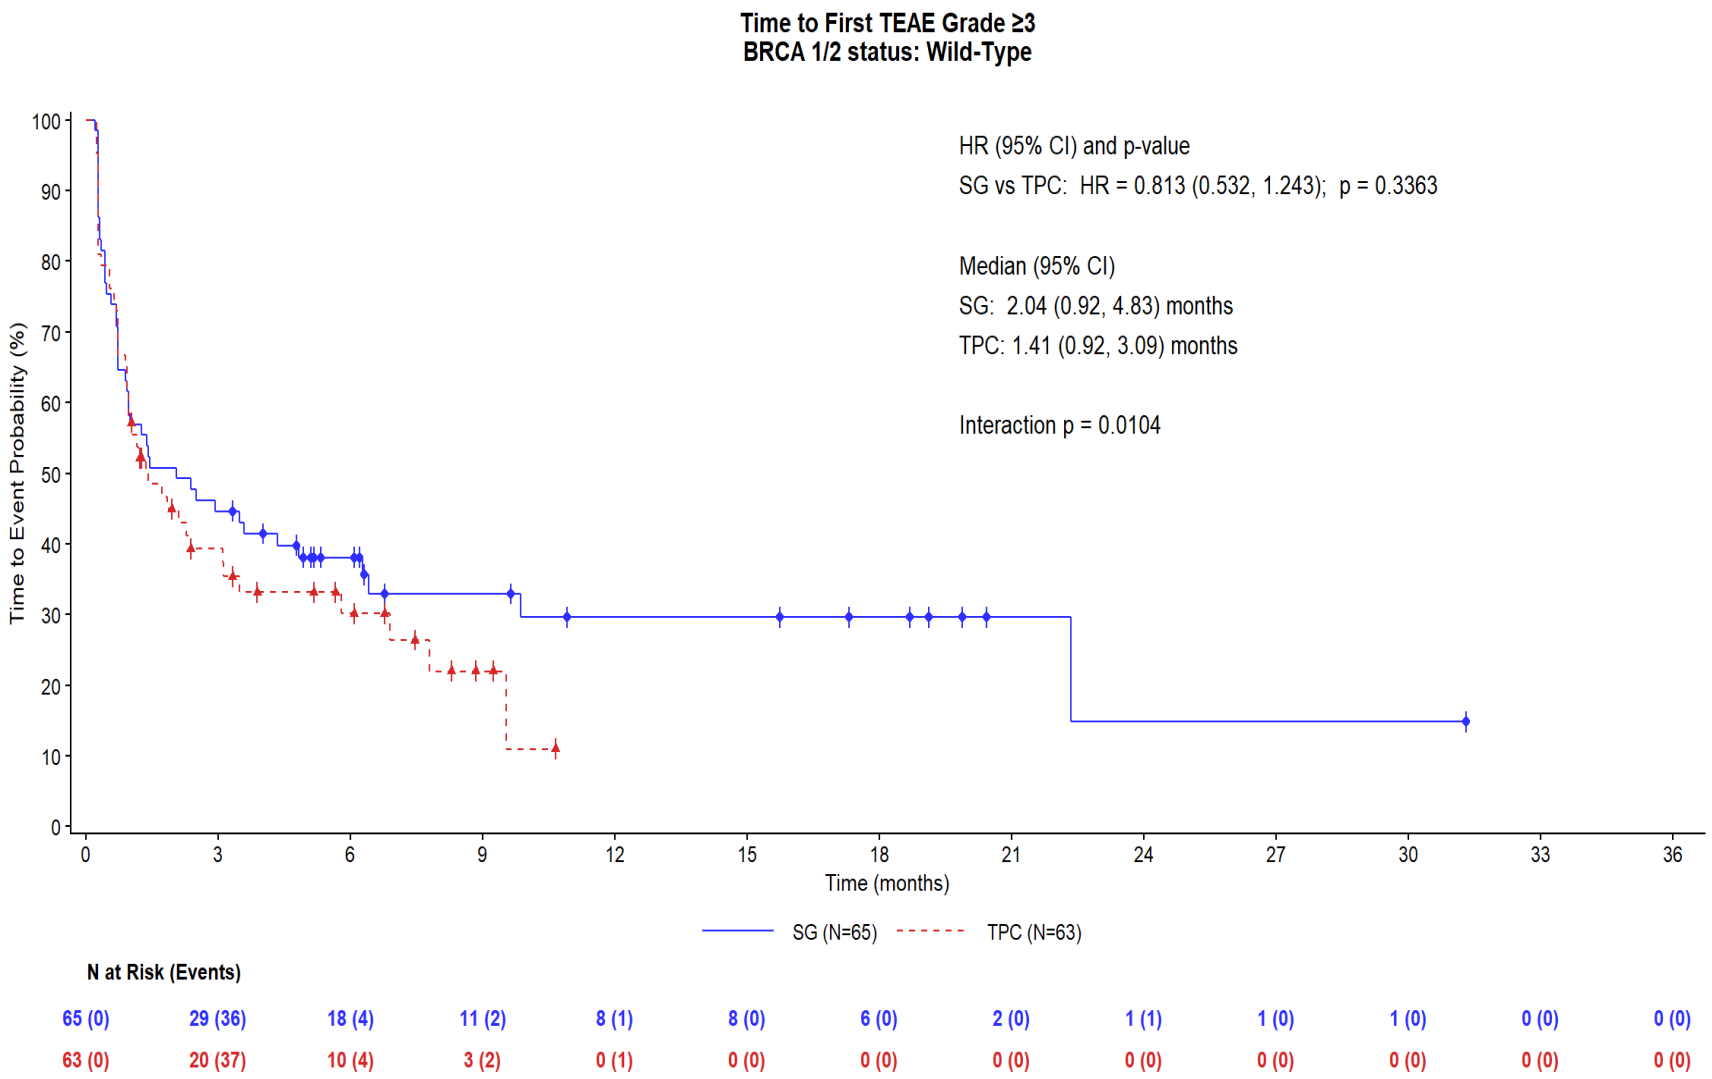
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.10. Figure 1.1.9: Kaplan Meier Plot of Time to First TEAE Grade 3 or higher — mSAF — Excluding patients preselected to receive nab-paclitaxel



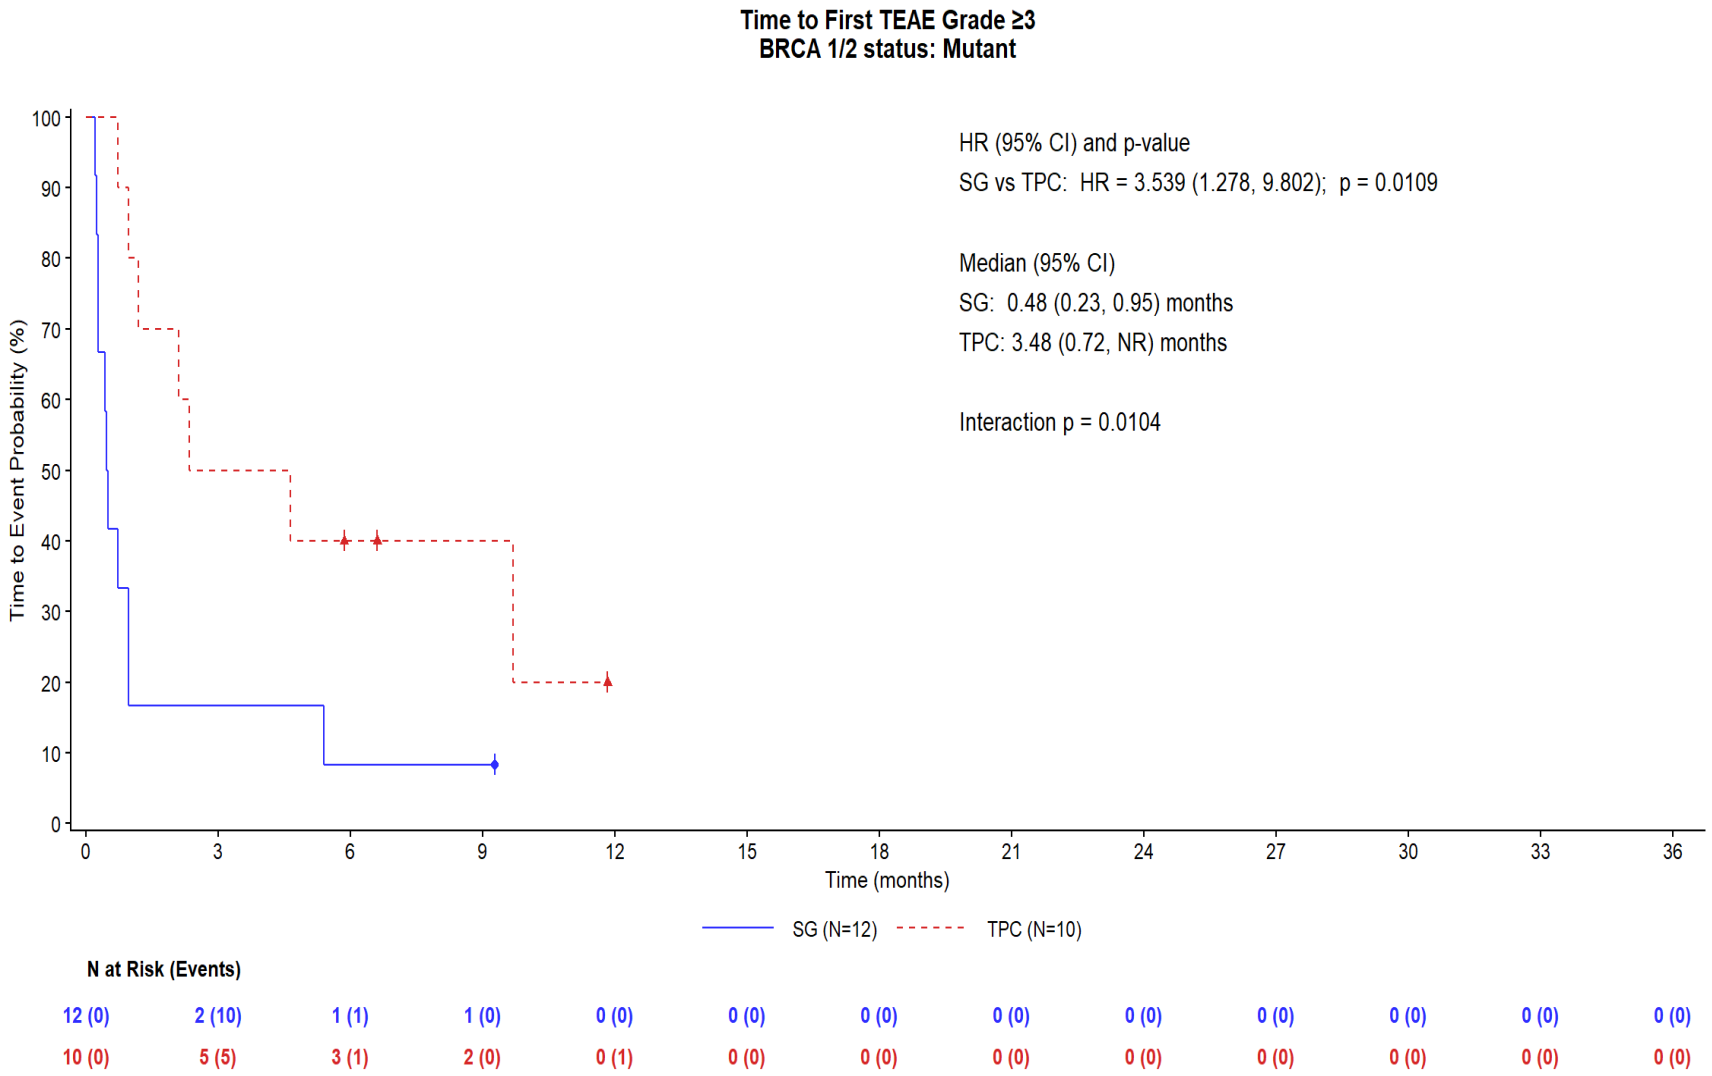
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.11. Figure 1.1.10: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) The physician s choice of chemotherapy selected prior to randomization Taxane — mSAF — Excluding patients preselected to receive nab-paclitaxel



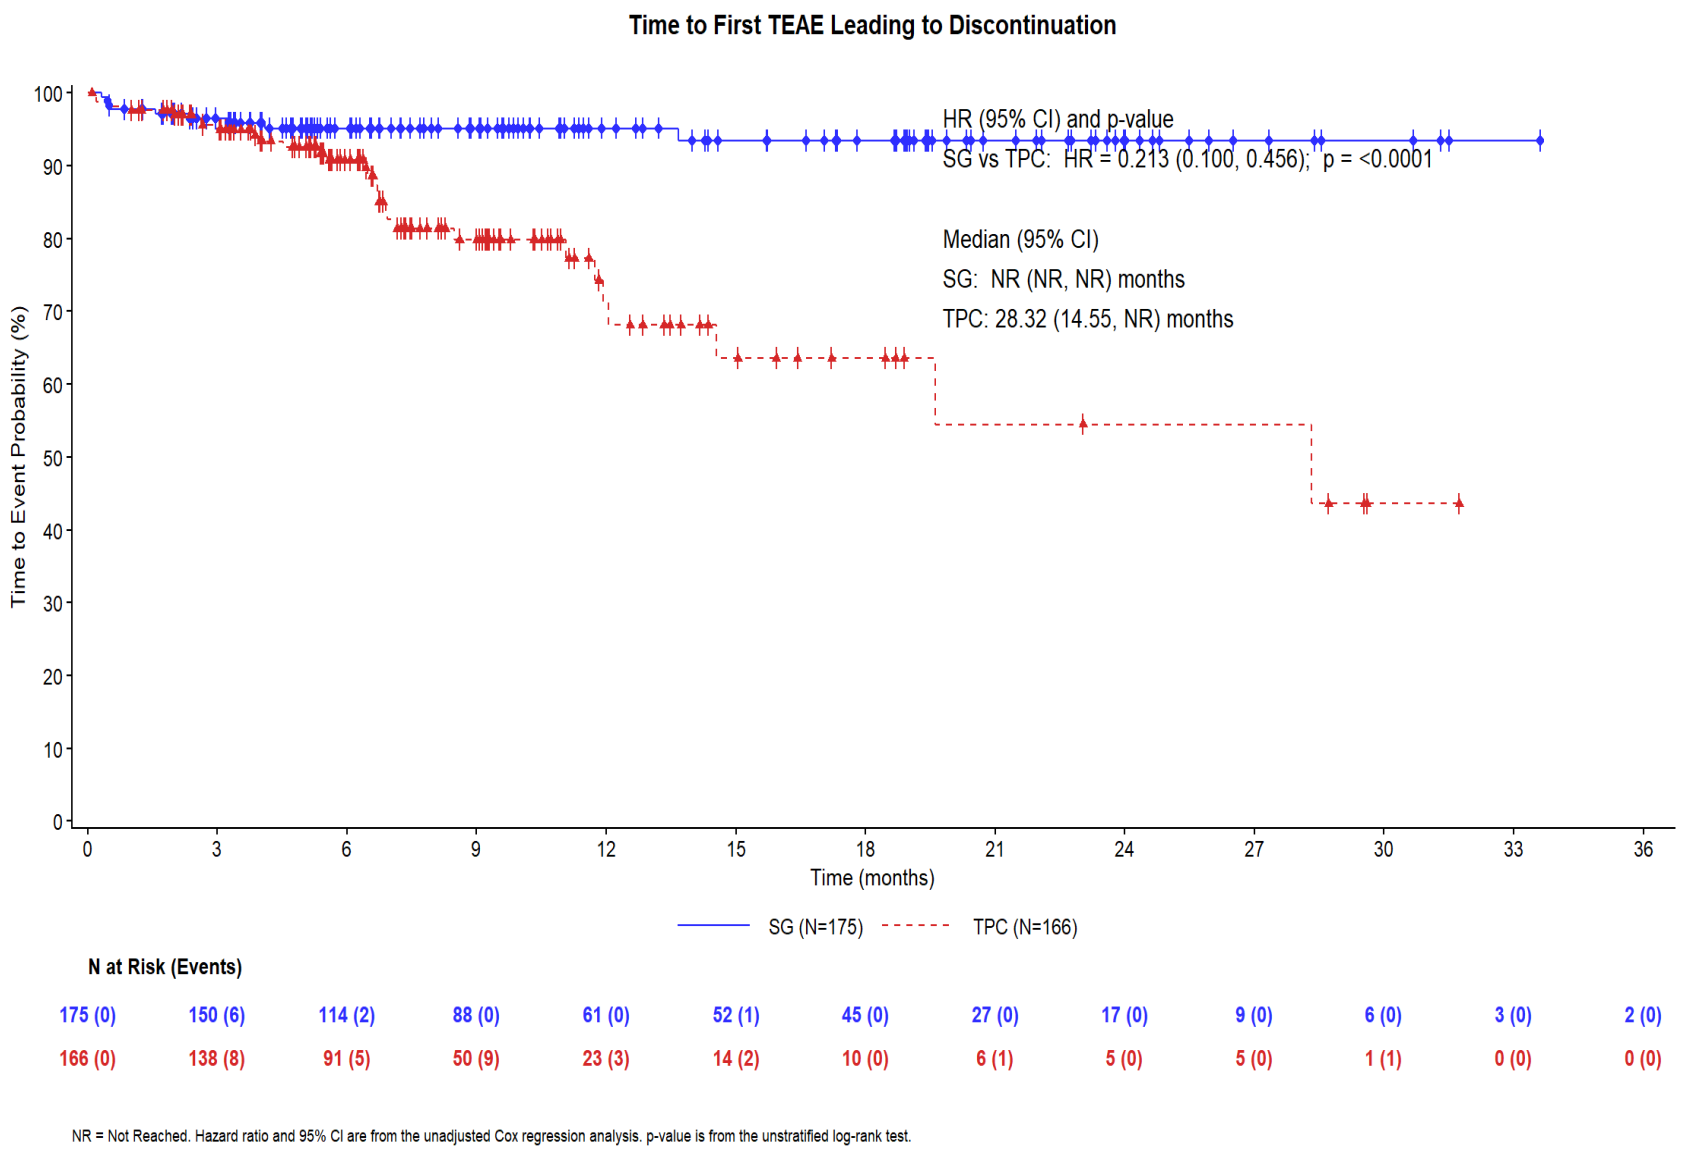
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.12. Figure 1.1.11: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) The physician s choice of chemotherapy selected prior to randomization Gemcitabine Carboplatin — mSAF — Excluding patients preselected to receive nab-paclitaxel



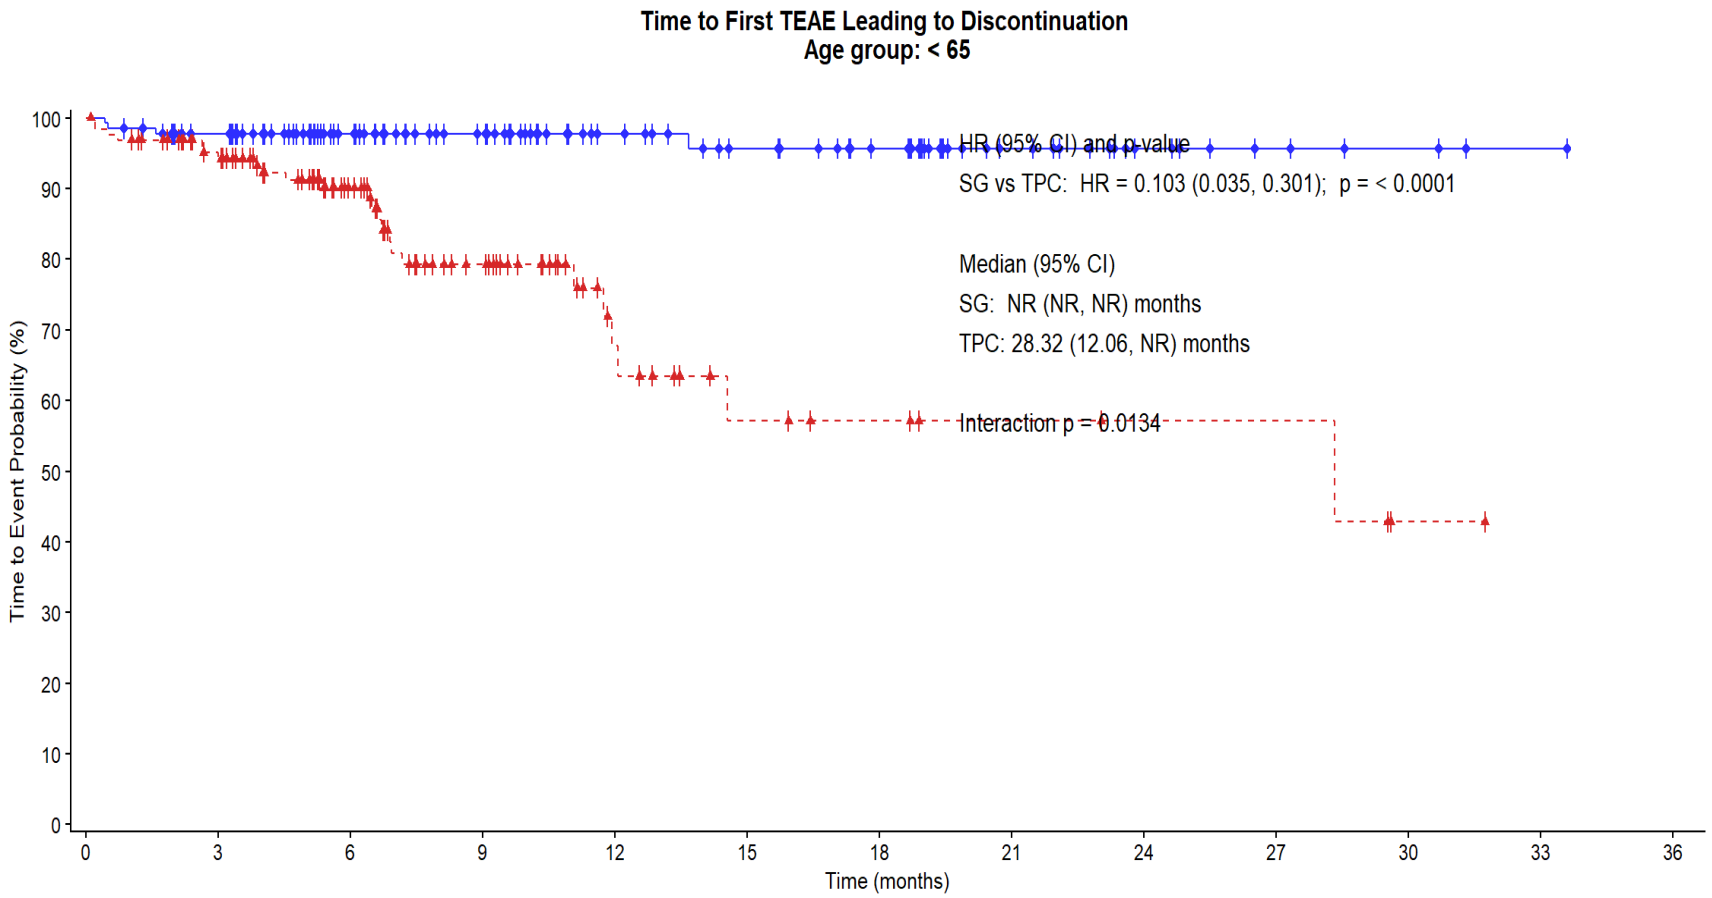
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.13. Figure 1.1.12: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) BRCA 1 2 status Wild Type — mSAF — Excluding patients preselected to receive nab-paclitaxel



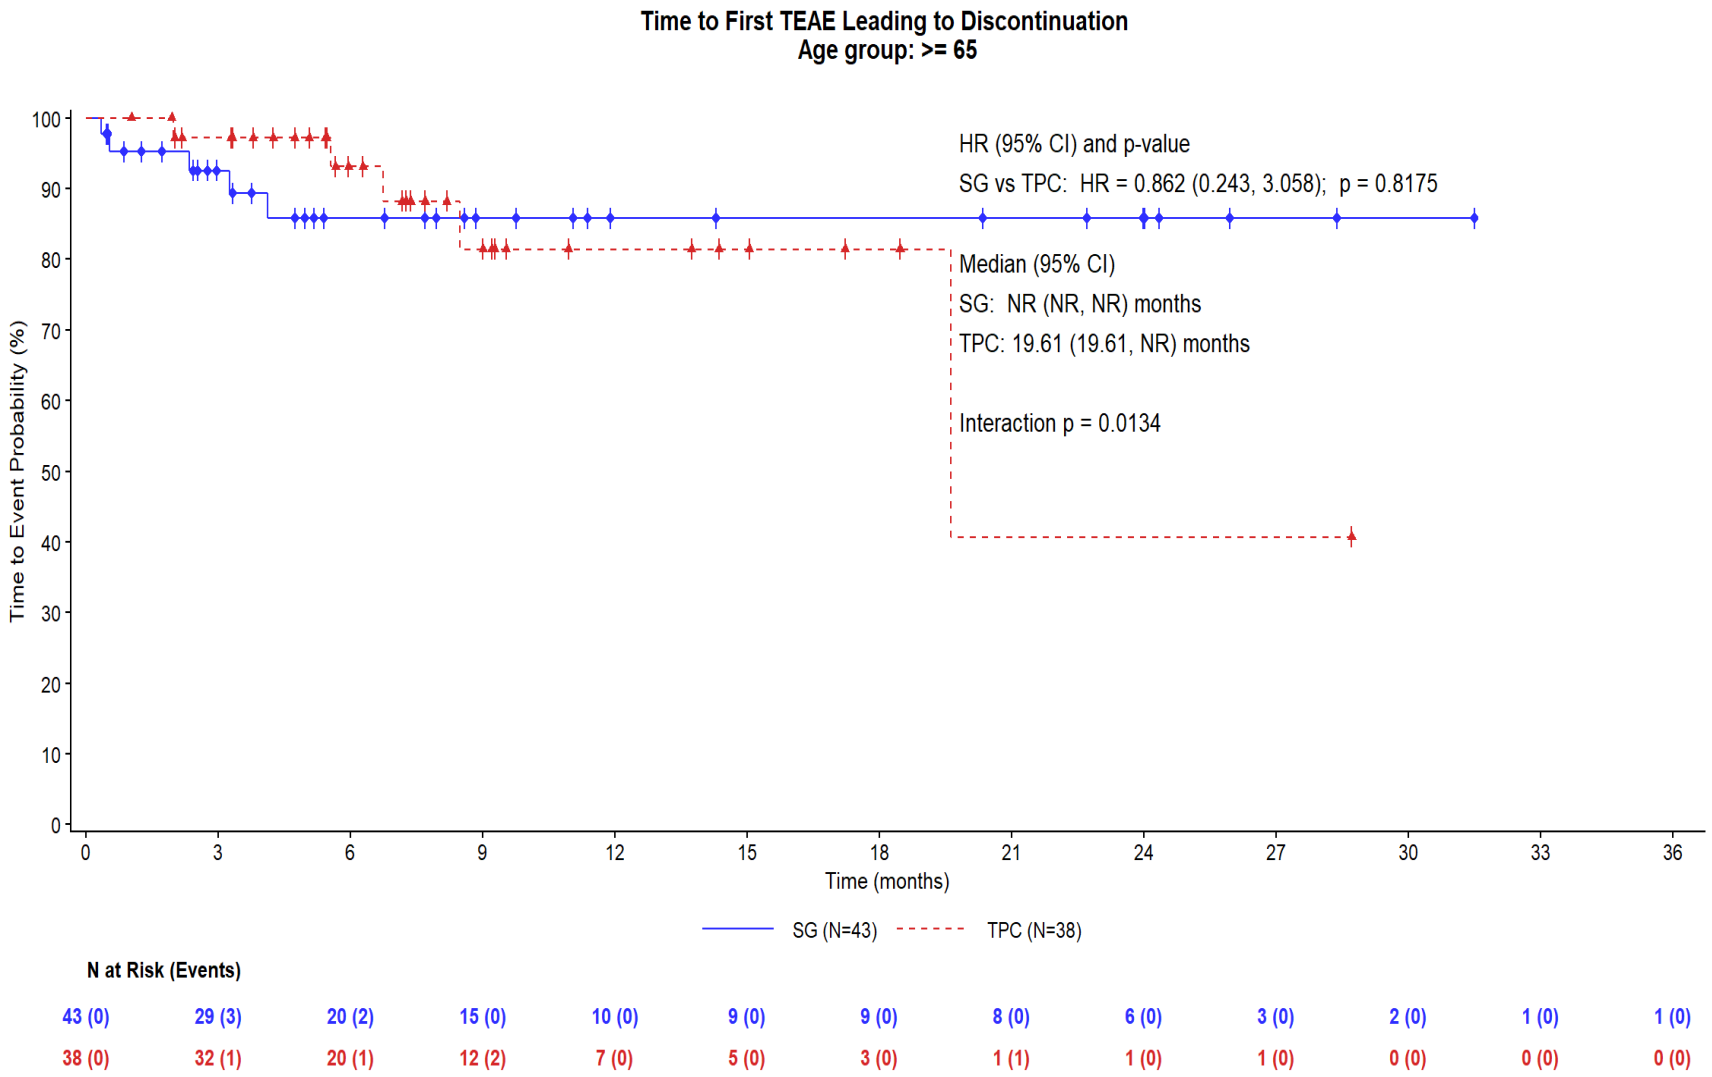
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.14. Figure 1.1.13: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) BRCA 1 2 status Mutant — mSAF — Excluding patients preselected to receive nab-paclitaxel



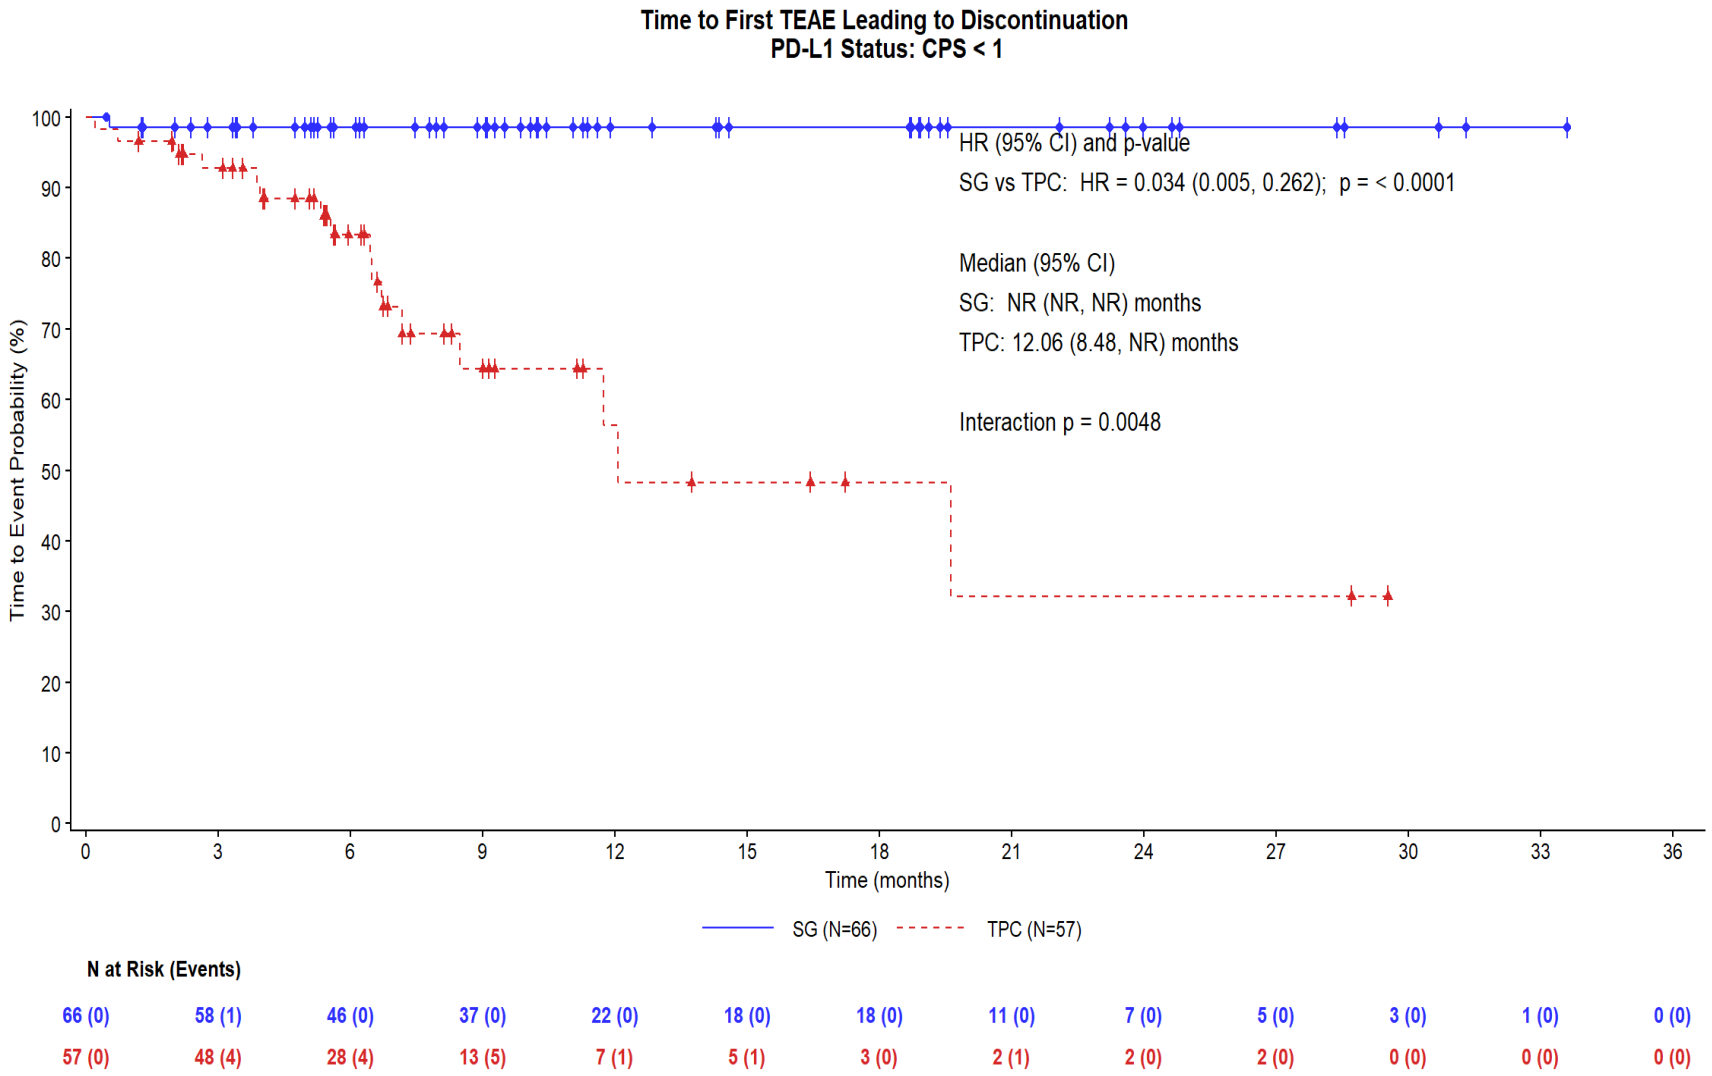
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.15. Figure 1.1.14: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation — mSAF — Excluding patients preselected to receive nab-paclitaxel



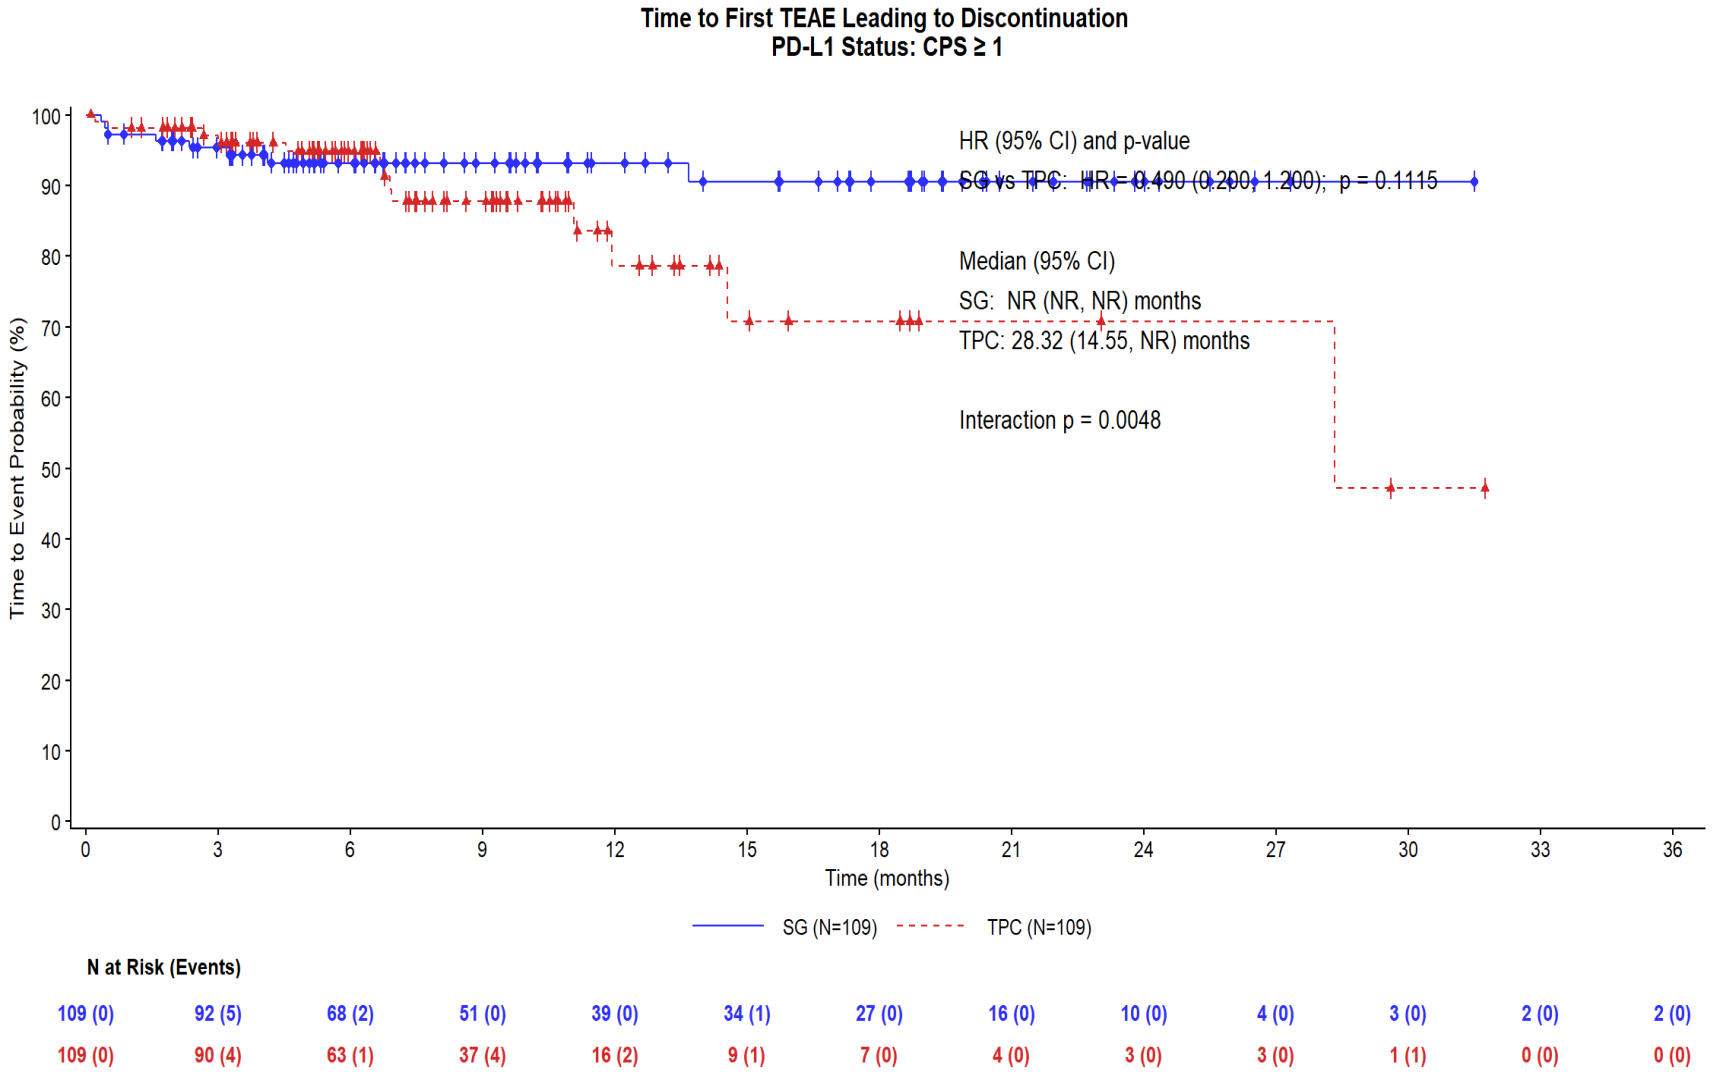
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.16. Figure 1.1.15: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation Age group less than 65 — mSAF — Excluding patients preselected to receive nab-paclitaxel



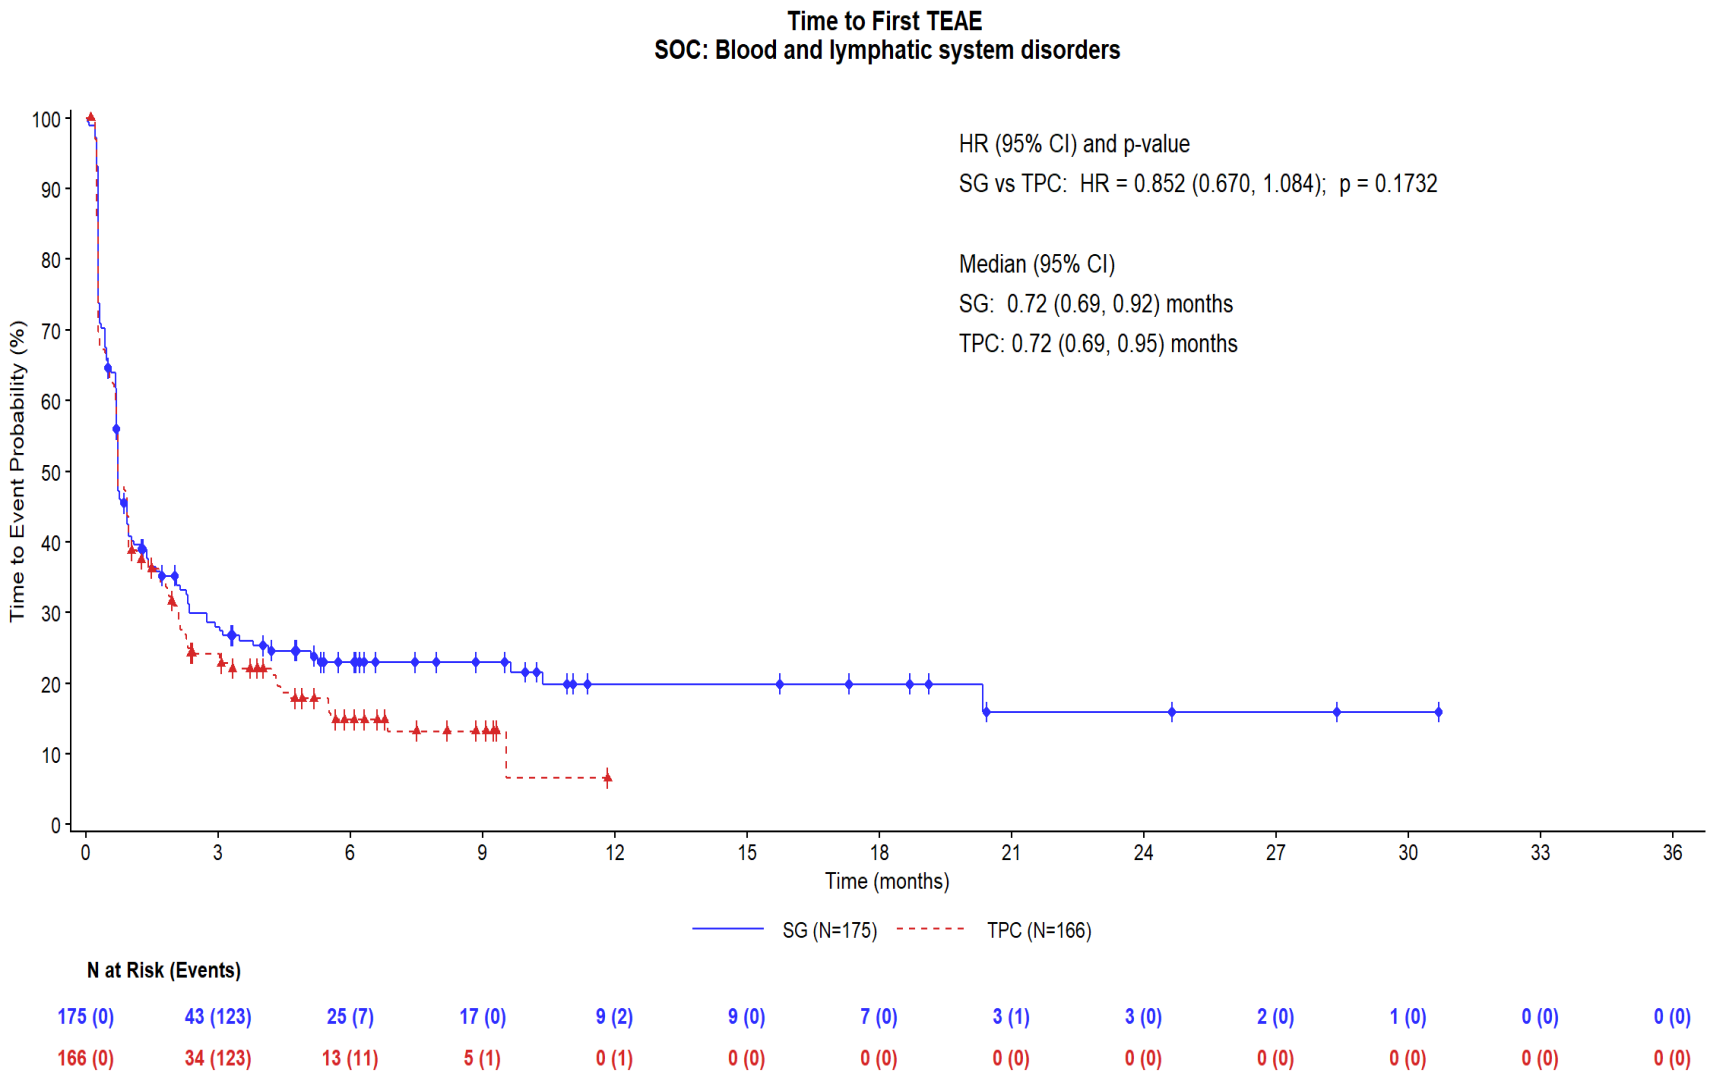
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.17. Figure 1.1.16: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation Age group greater than or equal to 65 — mSAF — Excluding patients preselected to receive nab-paclitaxel



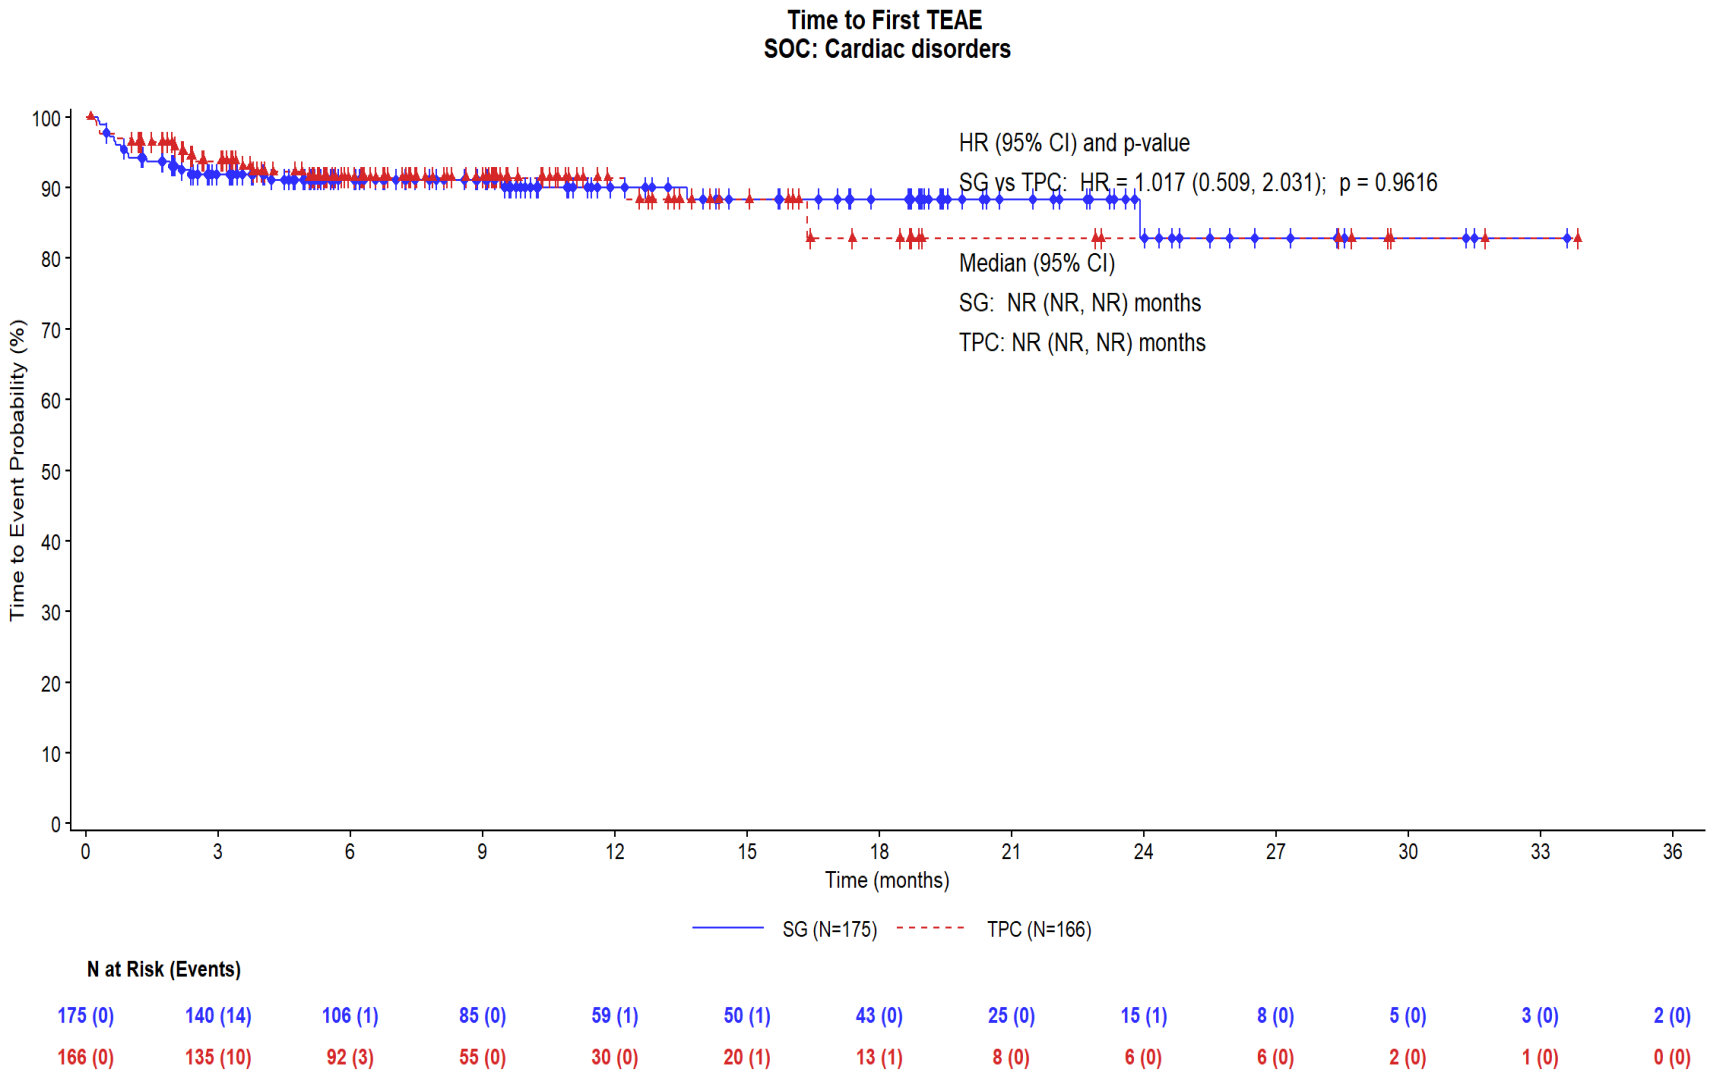
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.18. Figure 1.1.17: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation PD L1 Status CPS less than 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.19. Figure 1.1.18: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation PD L1 Status CPS 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

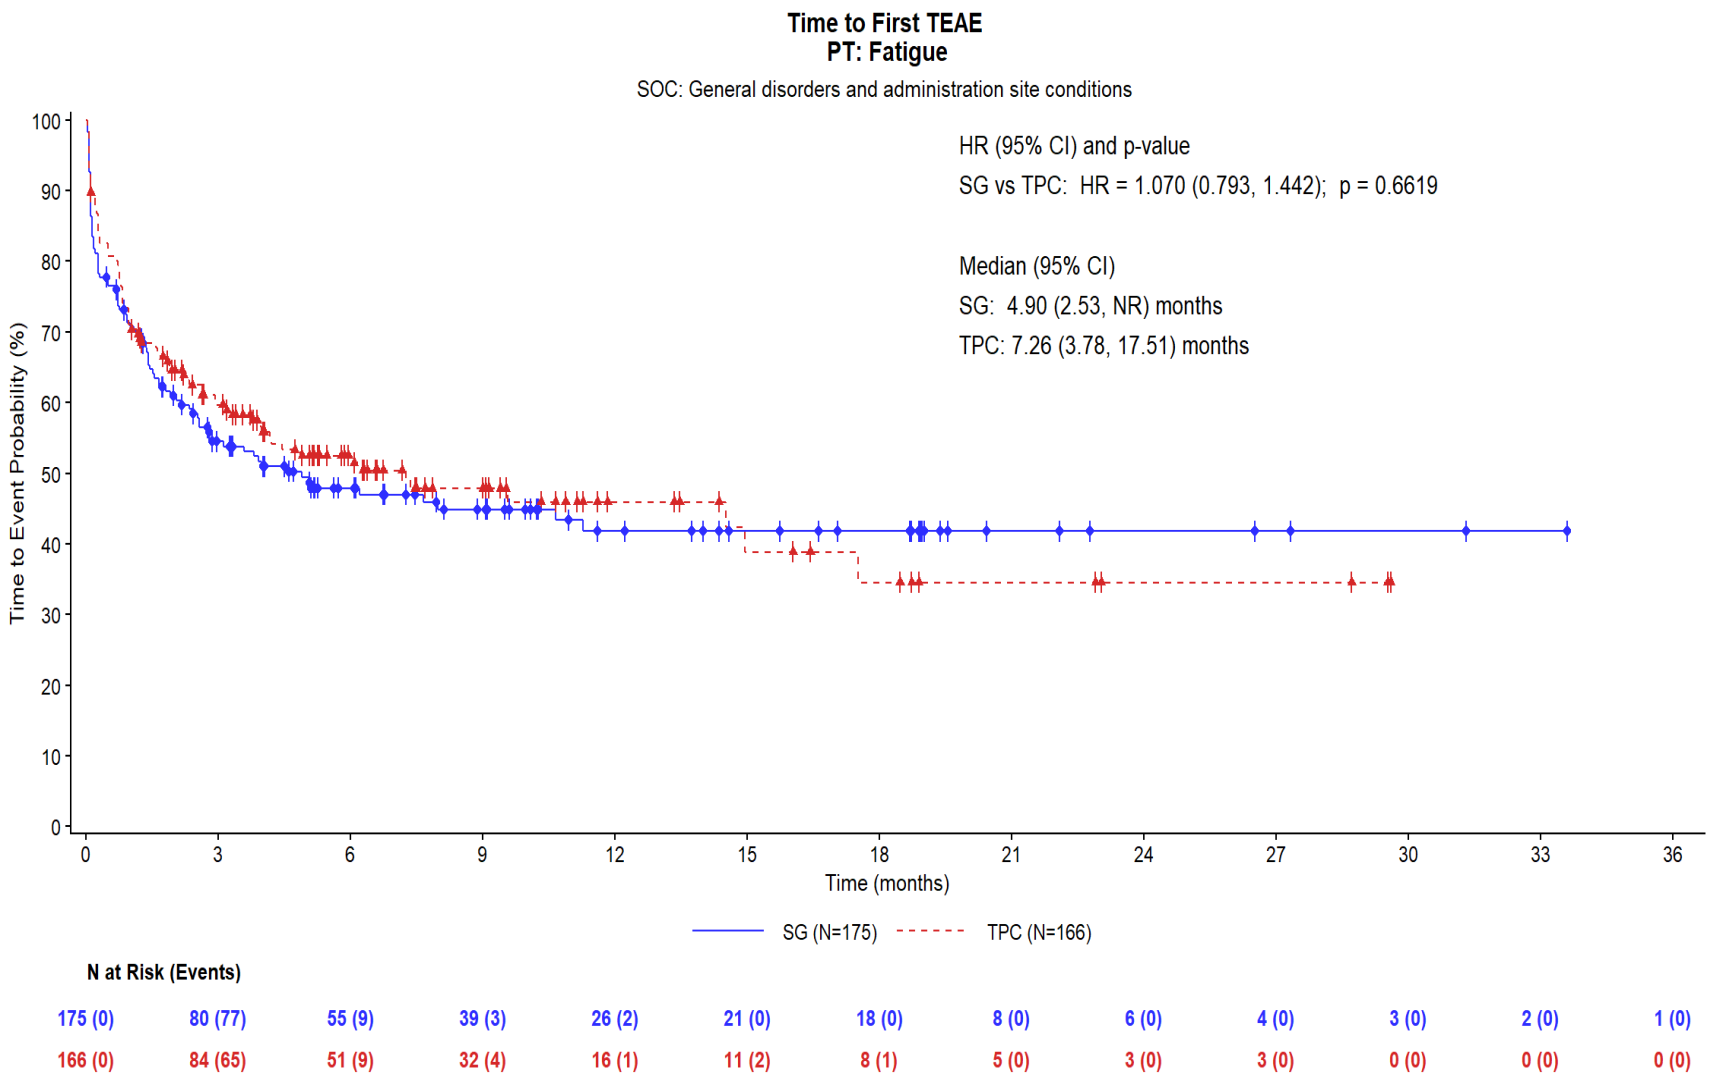
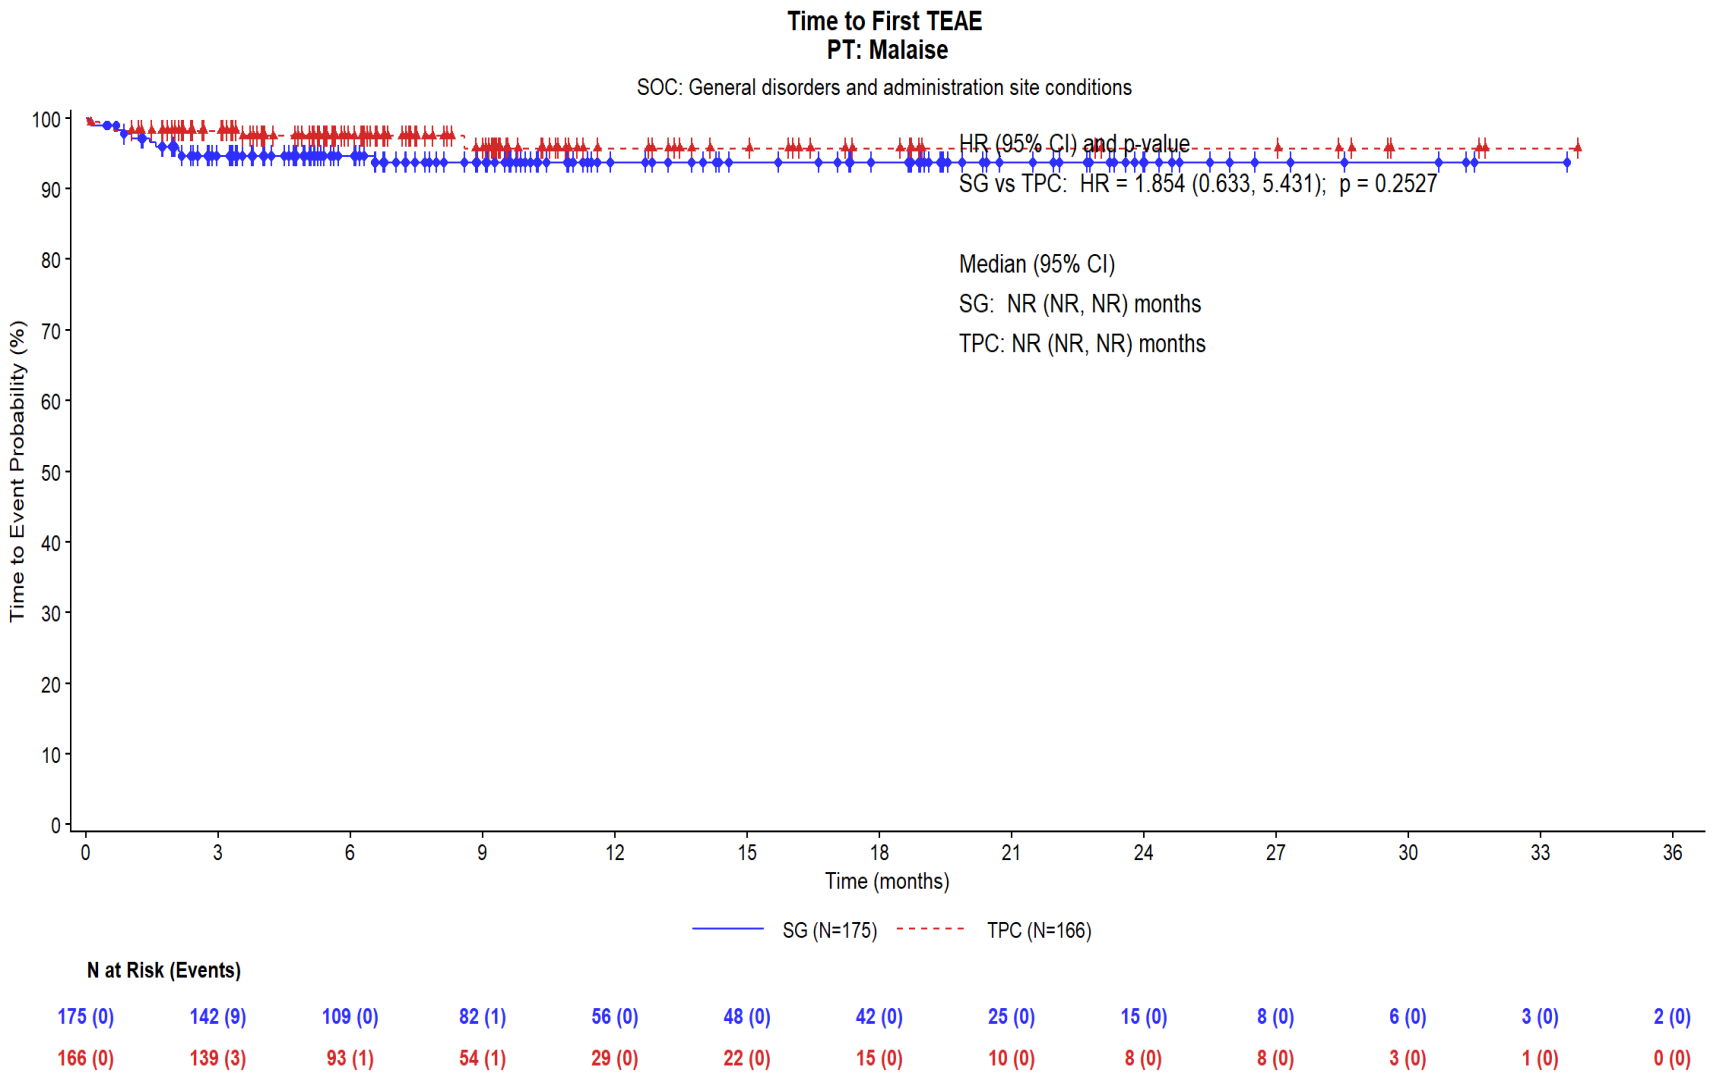
8.57. Figure 1.1.56: Kaplan Meier Plot of Time to First TEAE by PT Vomiting — mSAF — Excluding patients preselected to receive nab-paclitaxel



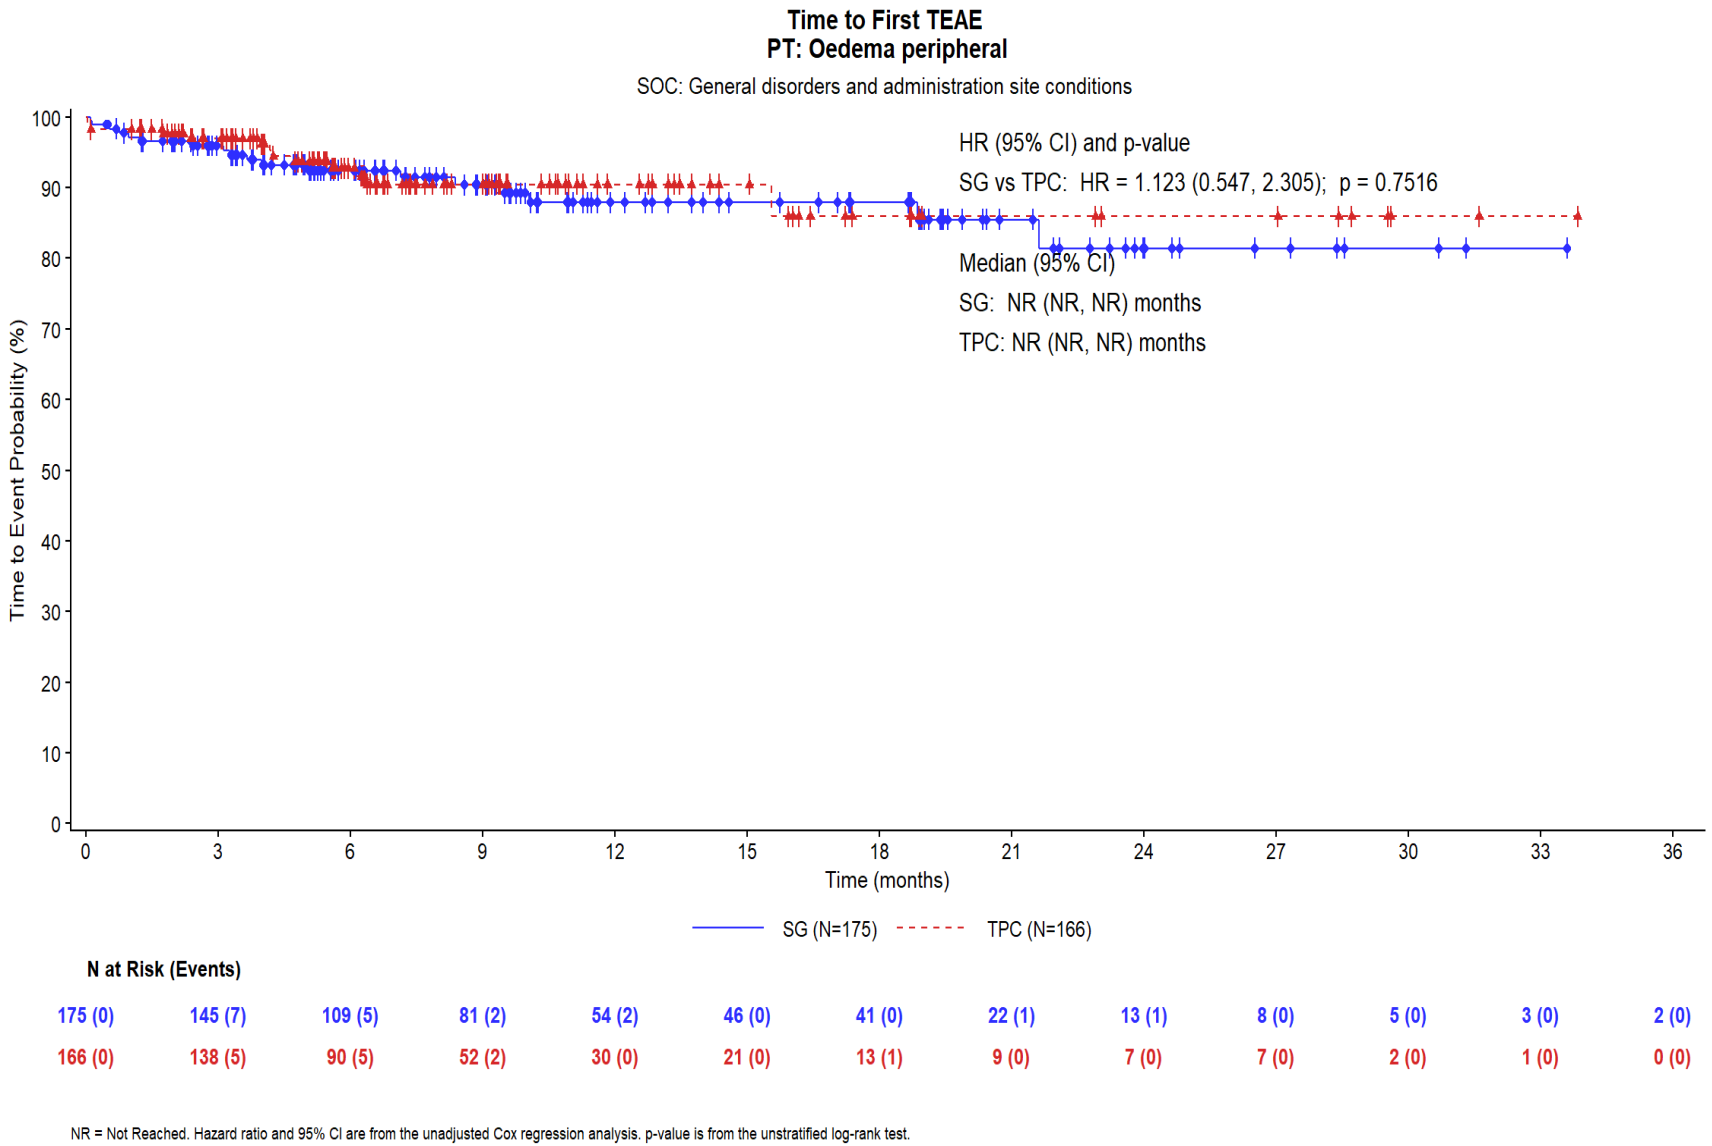
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.58. Figure 1.1.57: Kaplan Meier Plot of Time to First TEAE by PT Chest pain — mSAF — Excluding patients preselected to receive nab-paclitaxel



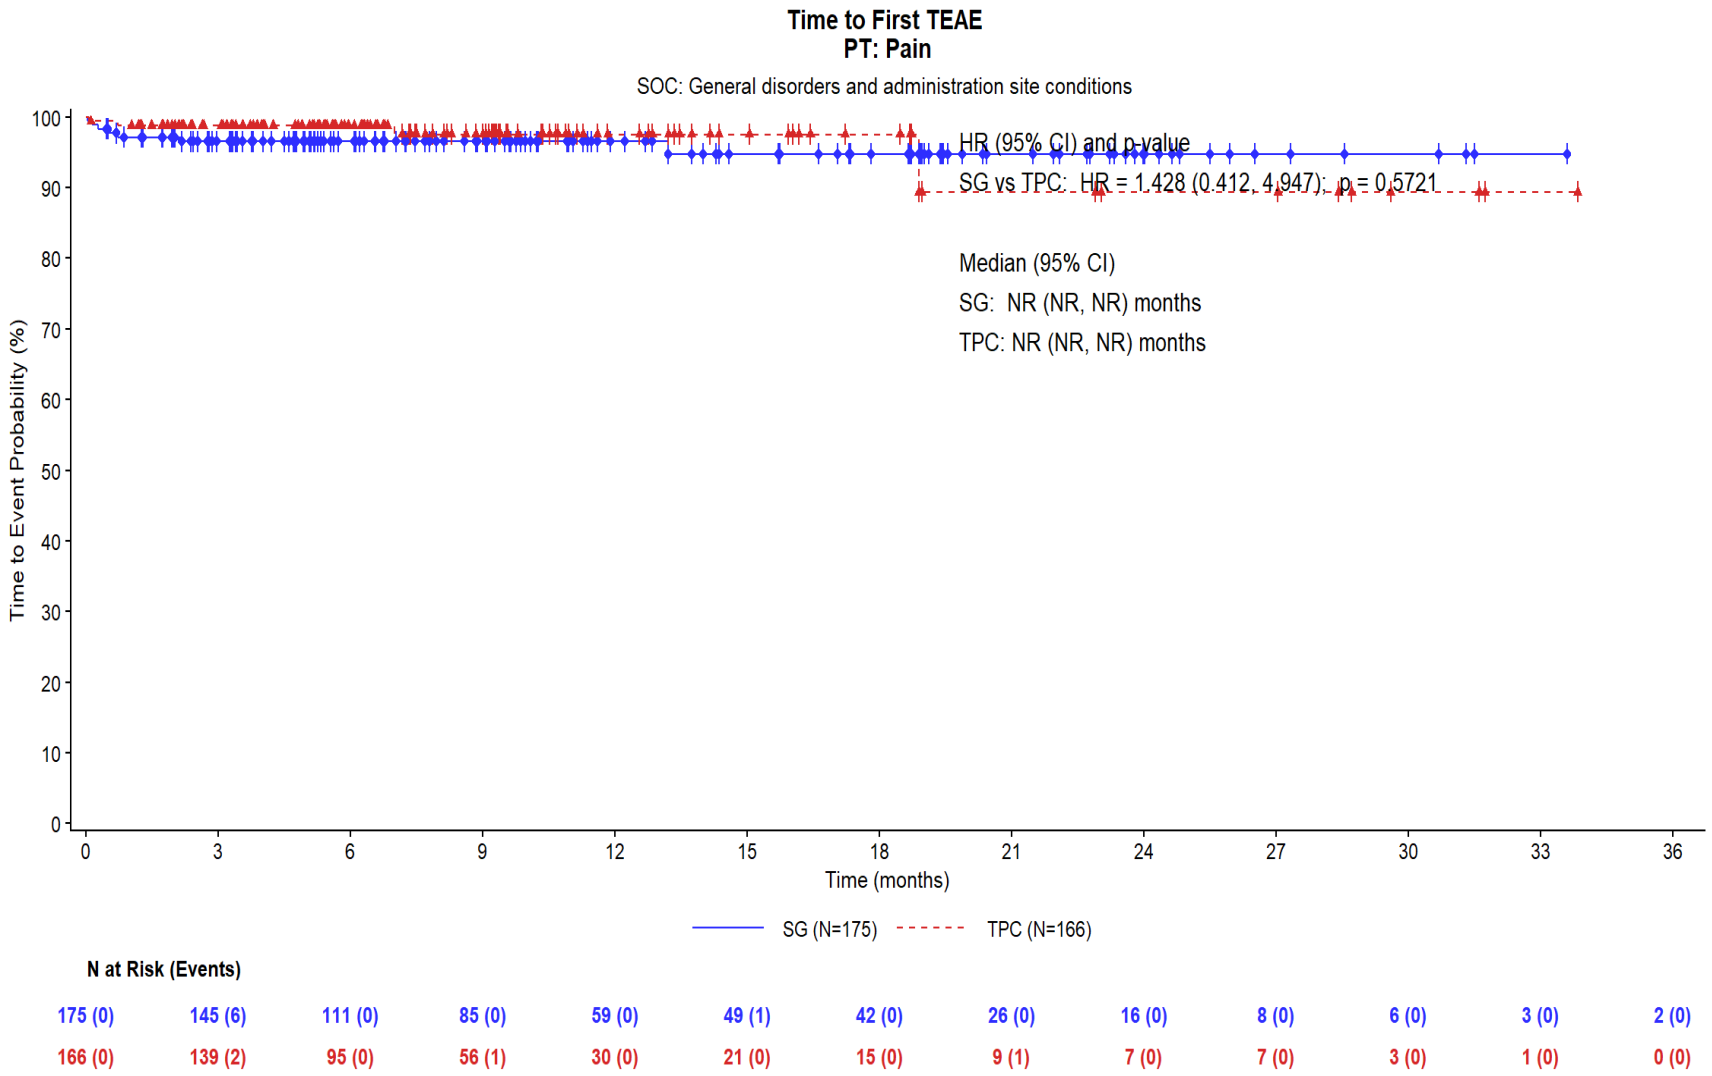
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.59. Figure 1.1.58: Kaplan Meier Plot of Time to First TEAE by PT Fatigue — mSAF — Excluding patients preselected to receive nab-paclitaxel



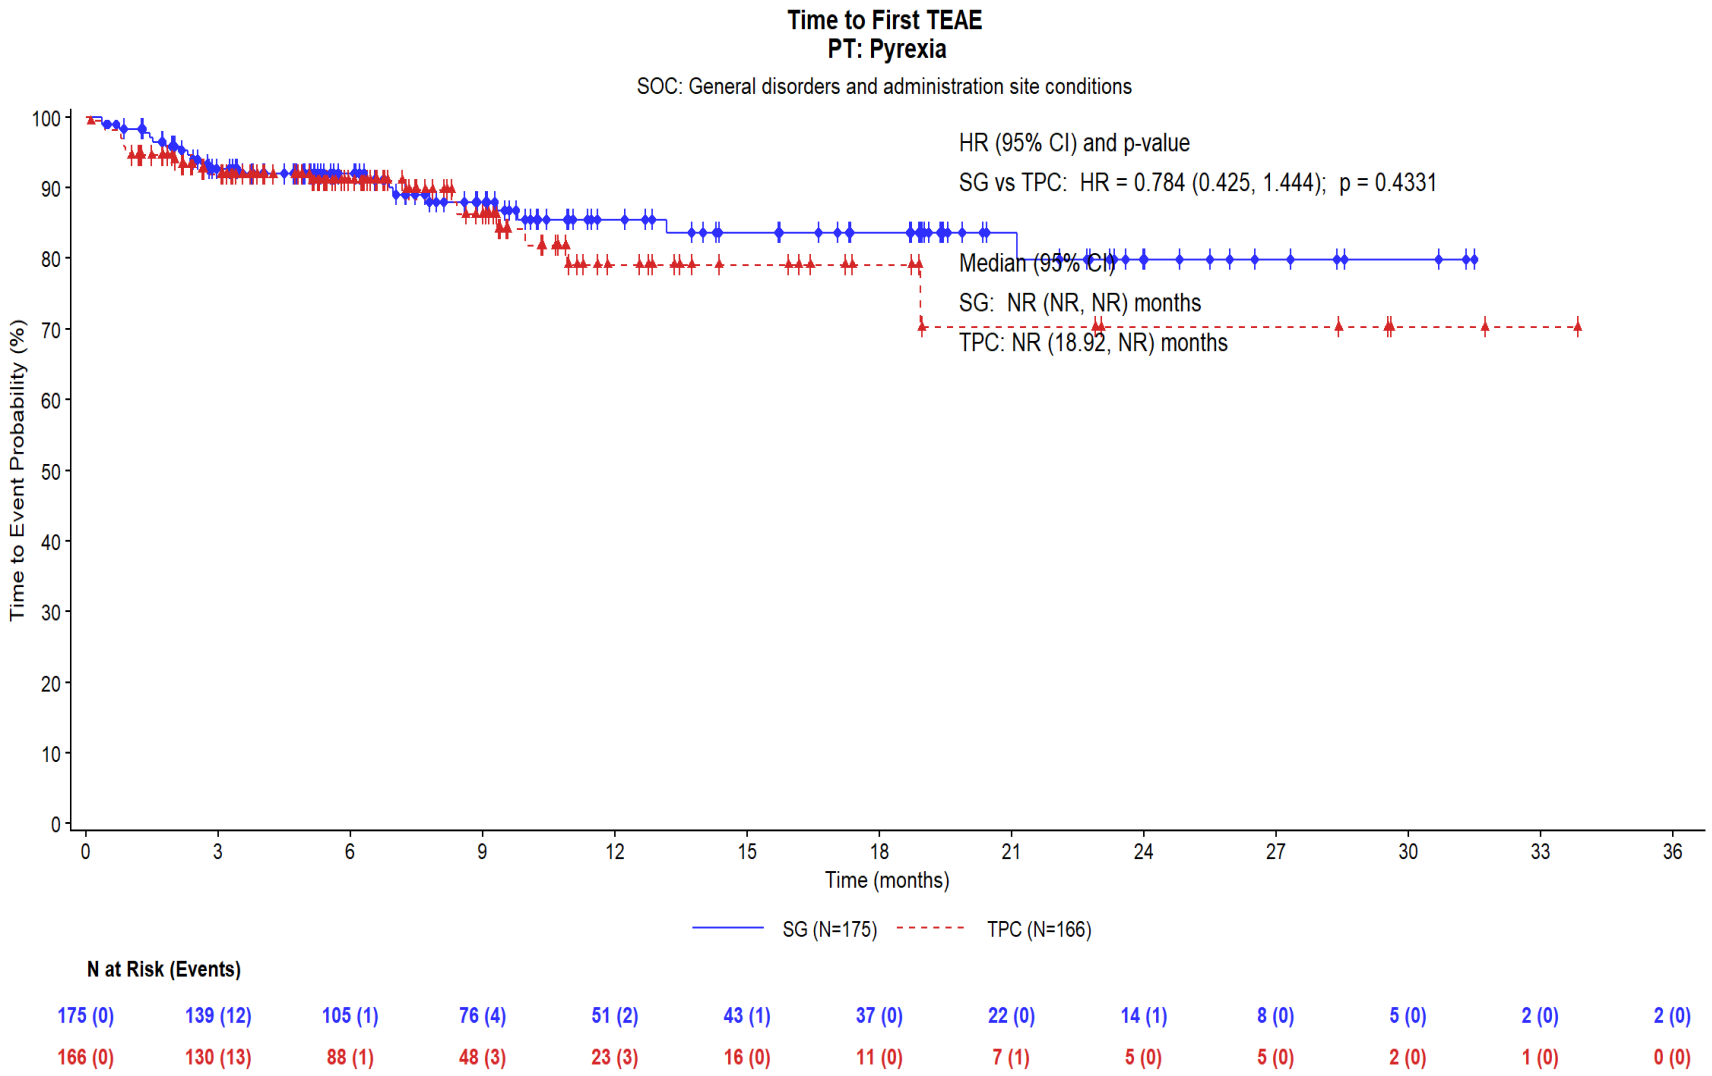
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.60. Figure 1.1.59: Kaplan Meier Plot of Time to First TEAE by PT Malaise — mSAF — Excluding patients preselected to receive nab-paclitaxel



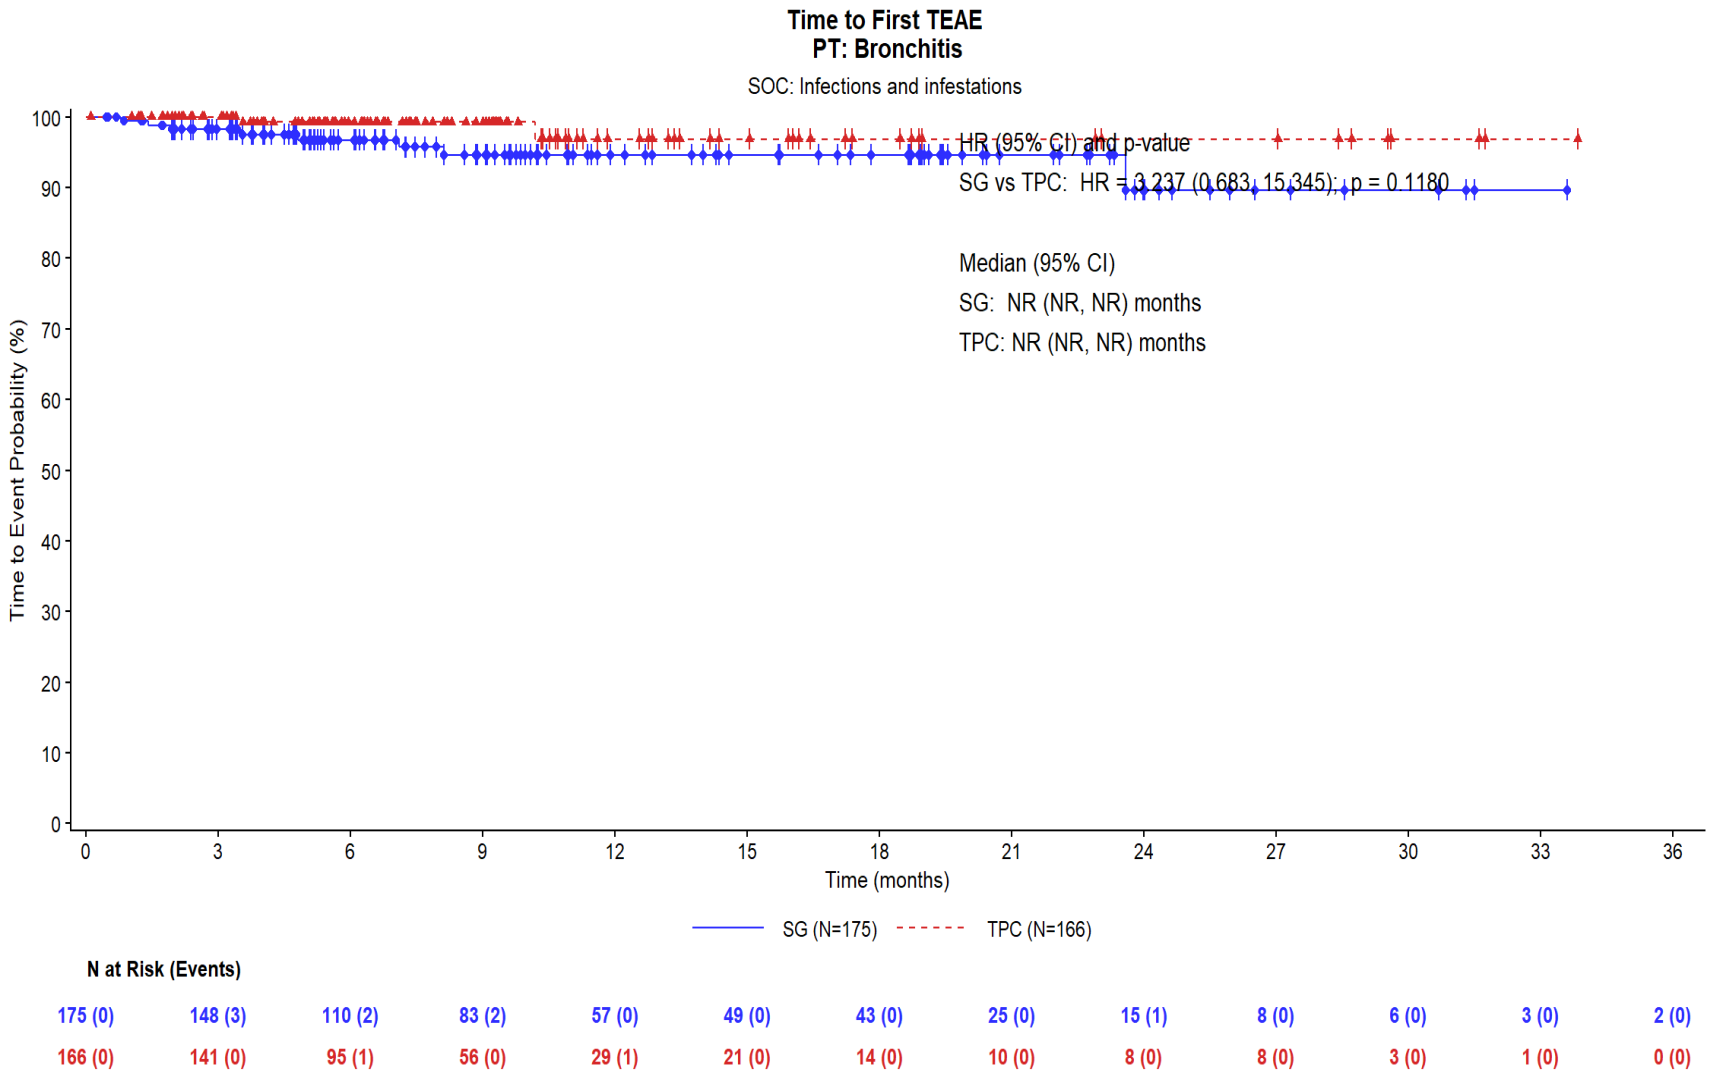
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.61. Figure 1.1.60: Kaplan Meier Plot of Time to First TEAE by PT Oedema peripheral — mSAF — Excluding patients preselected to receive nab-paclitaxel



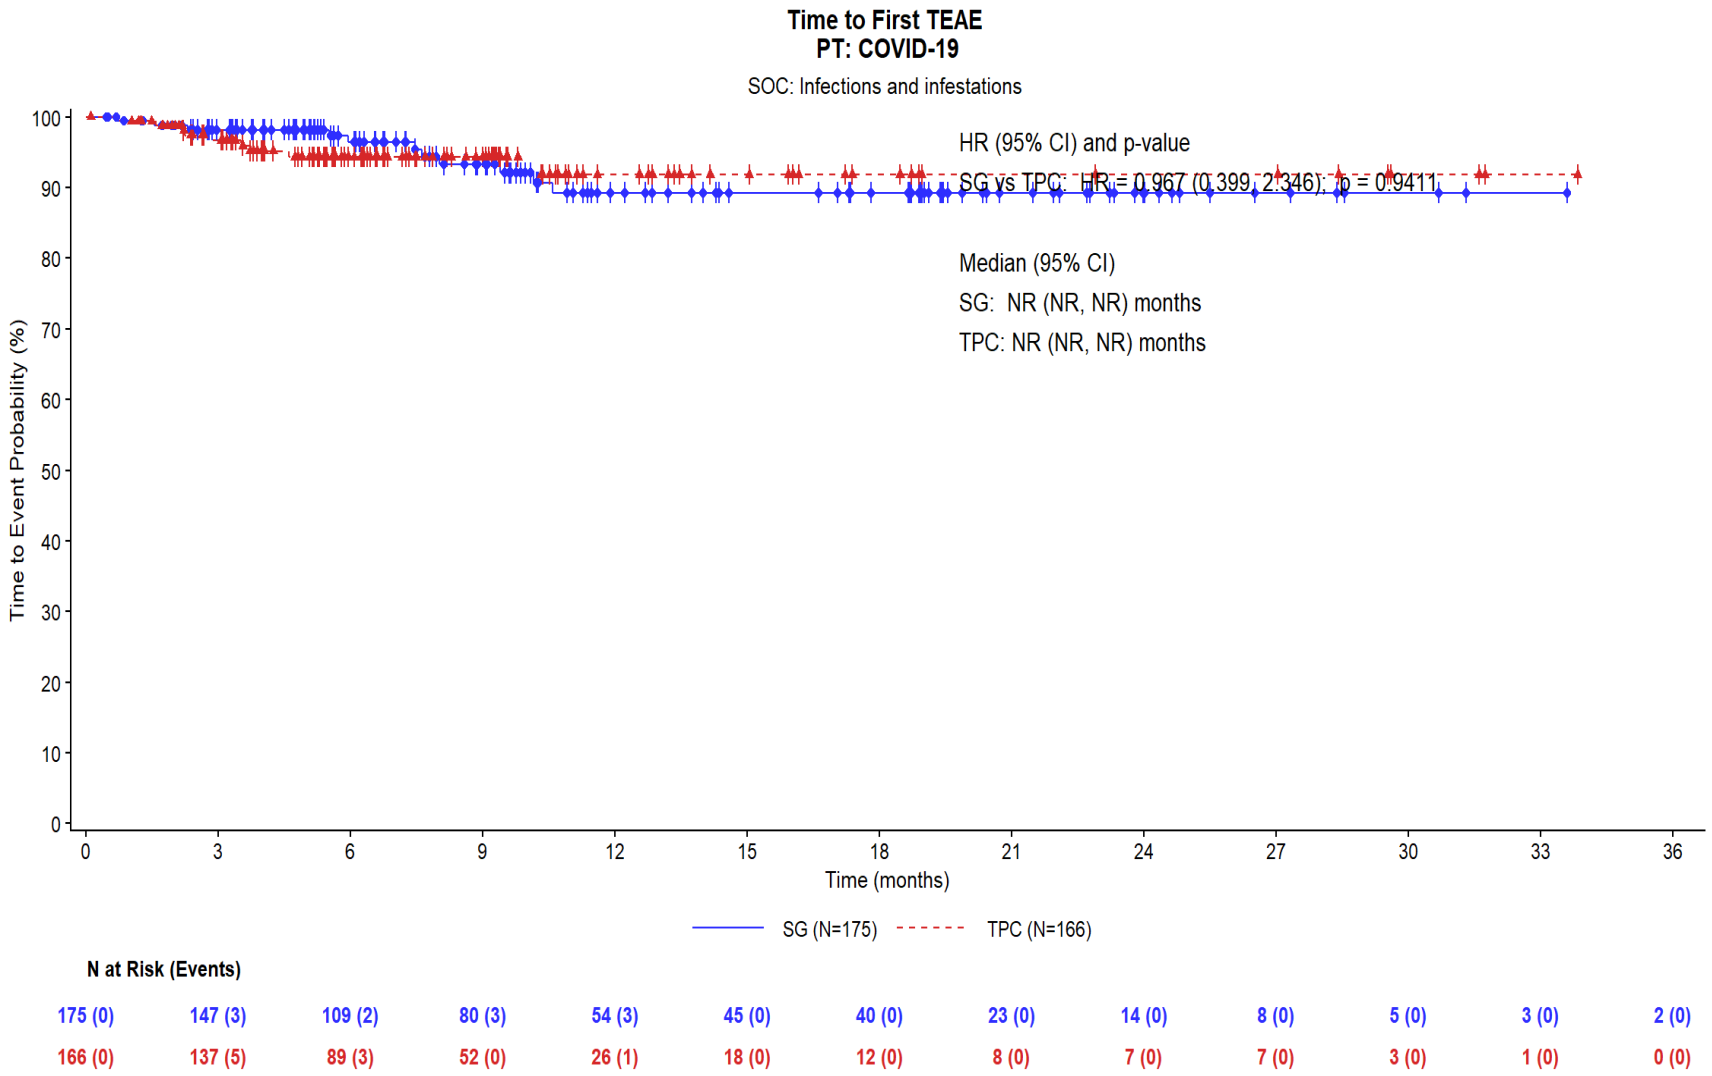
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.62. Figure 1.1.61: Kaplan Meier Plot of Time to First TEAE by PT Pain — mSAF — Excluding patients preselected to receive nab-paclitaxel



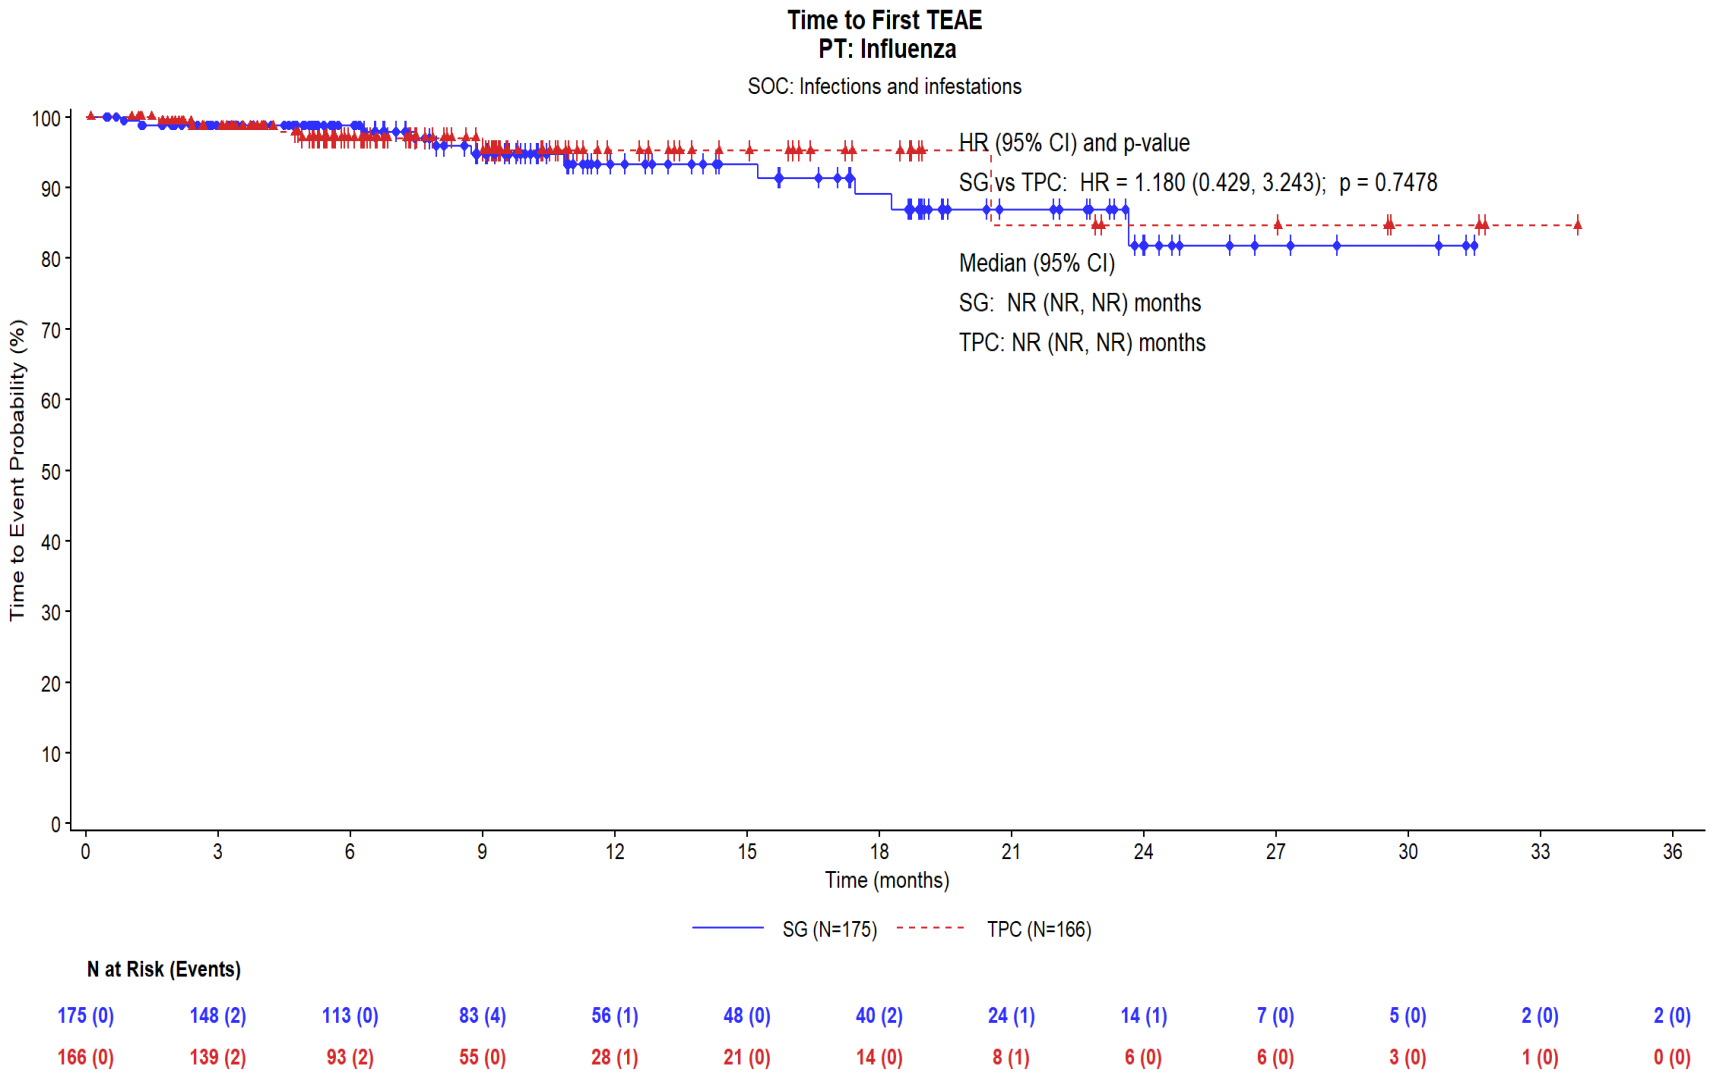
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.63. Figure 1.1.62: Kaplan Meier Plot of Time to First TEAE by PT Pyrexia — mSAF — Excluding patients preselected to receive nab-paclitaxel



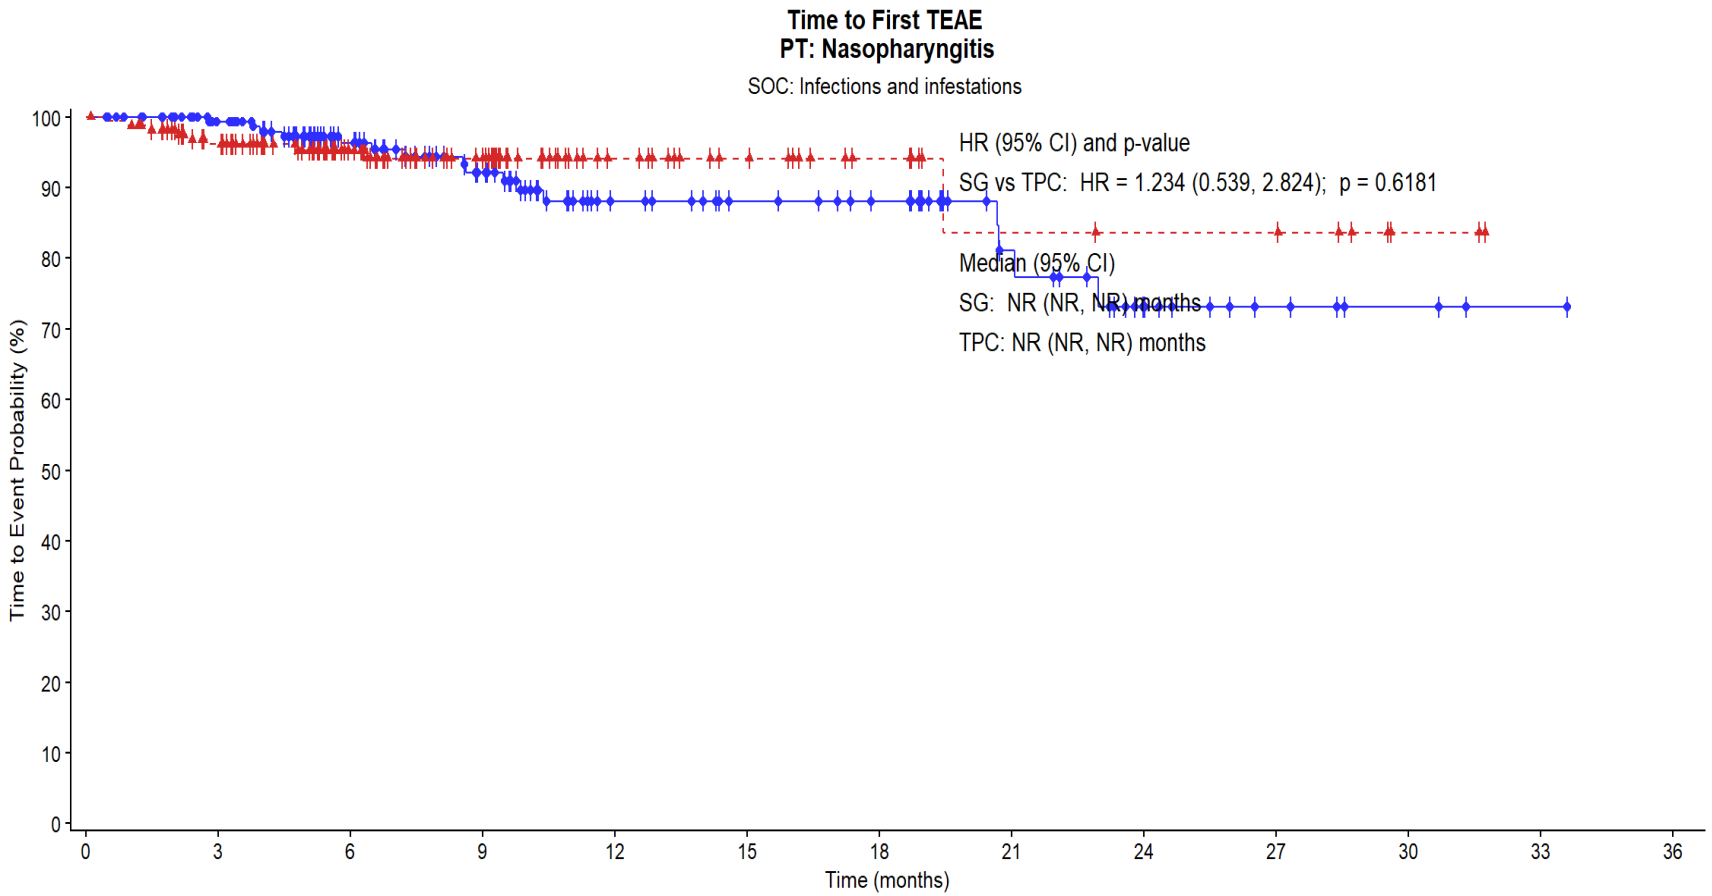
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.64. Figure 1.1.63: Kaplan Meier Plot of Time to First TEAE by PT Bronchitis — mSAF — Excluding patients preselected to receive nab-paclitaxel



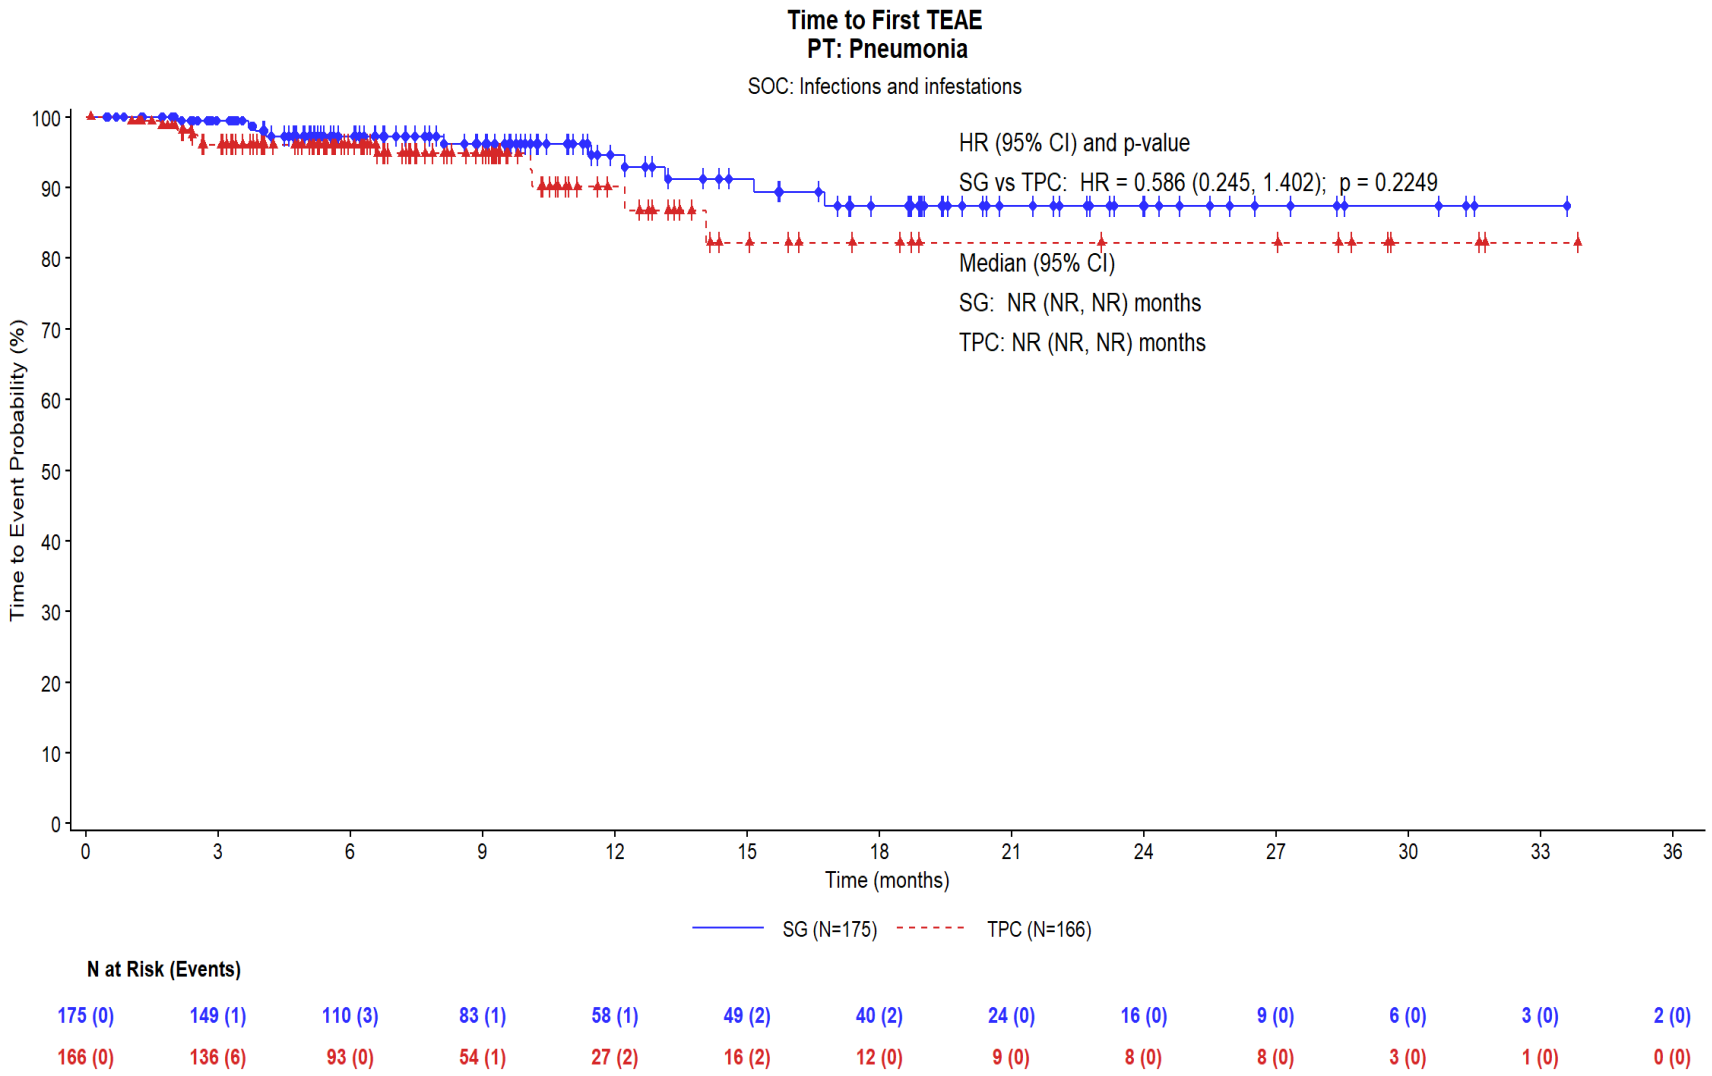
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.65. Figure 1.1.64: Kaplan Meier Plot of Time to First TEAE by PT COVID 19 — mSAF — Excluding patients preselected to receive nab-paclitaxel



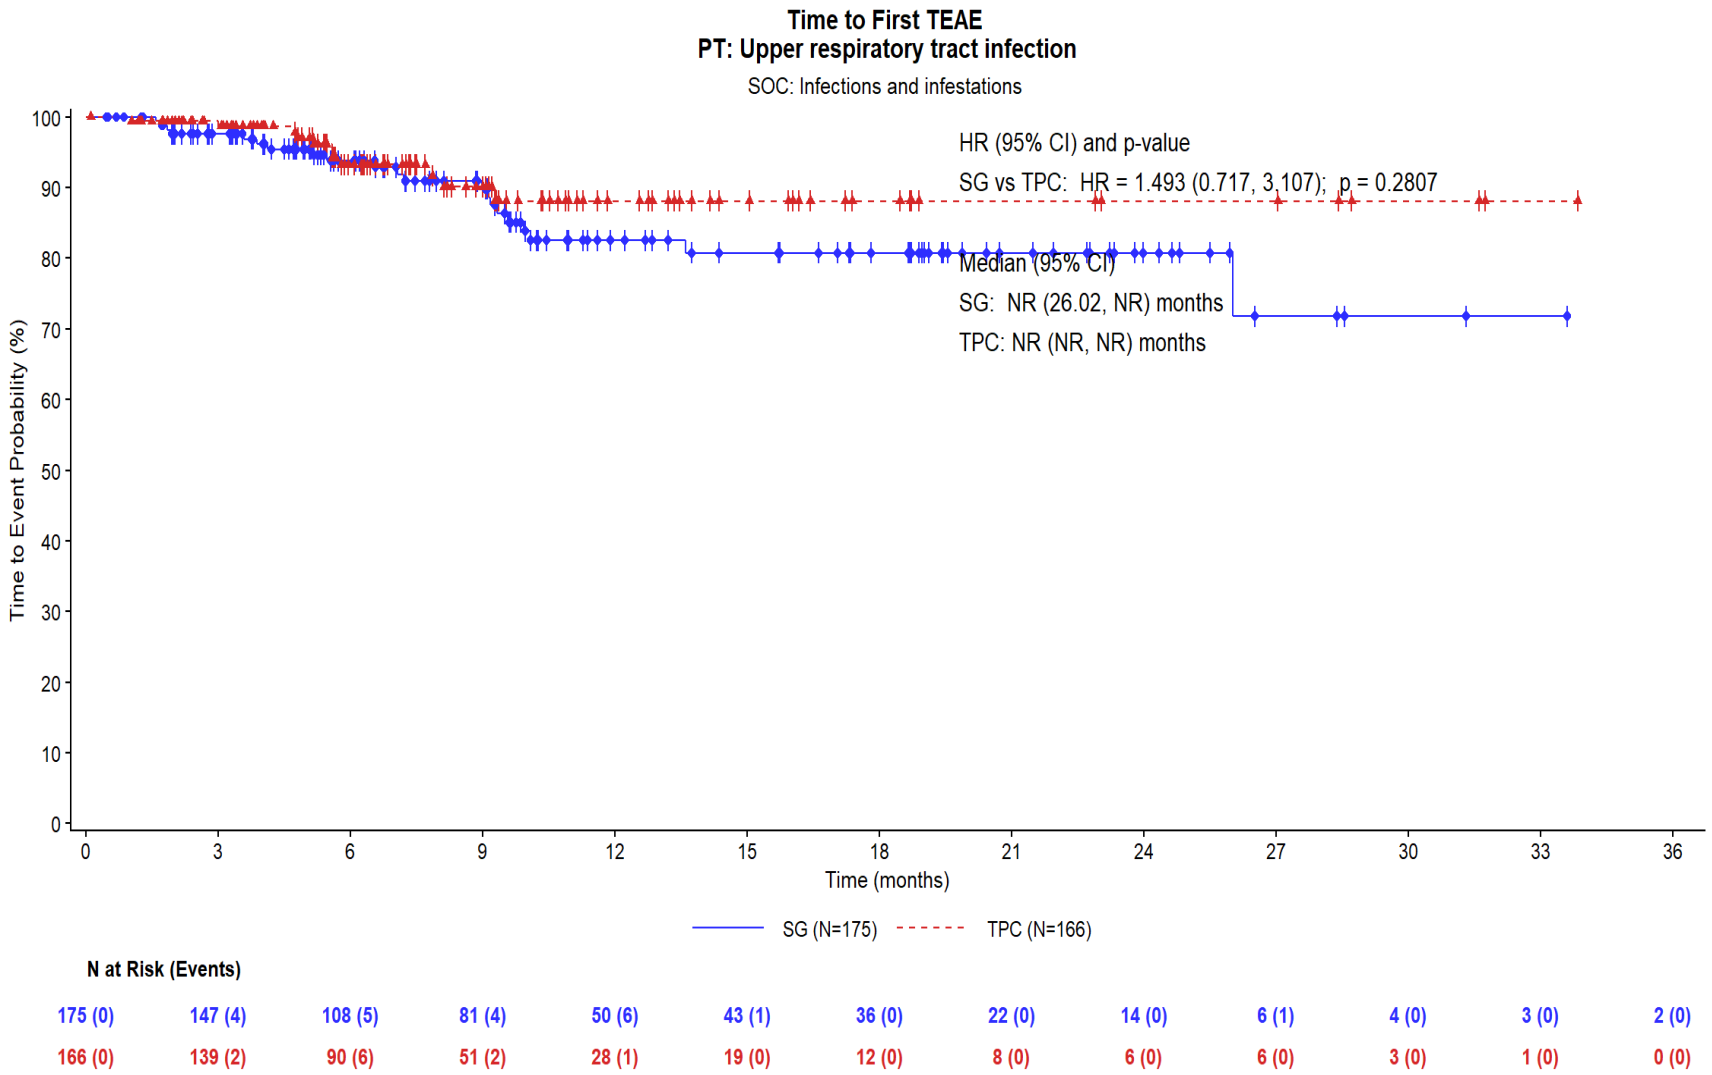
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.66. Figure 1.1.65: Kaplan Meier Plot of Time to First TEAE by PT Influenza — mSAF — Excluding patients preselected to receive nab-paclitaxel



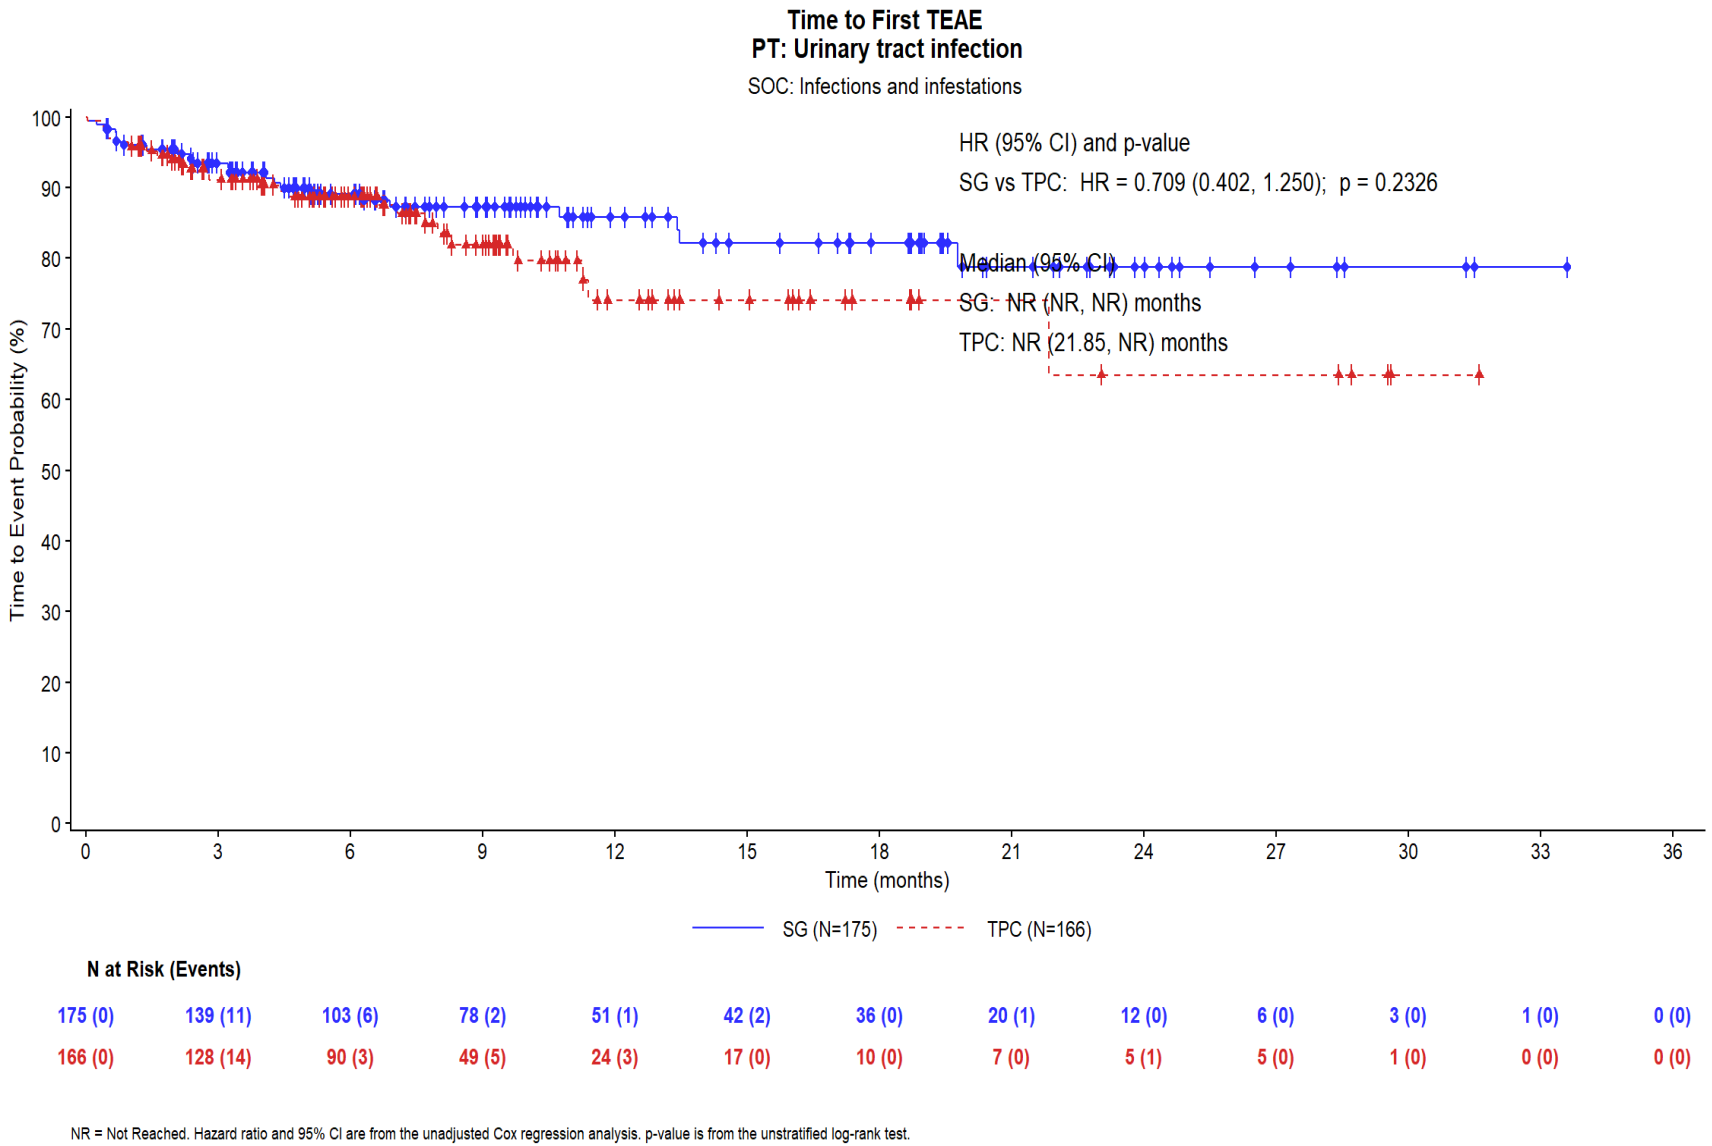
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.67. Figure 1.1.66: Kaplan Meier Plot of Time to First TEAE by PT Nasopharyngitis — mSAF — Excluding patients preselected to receive nab-paclitaxel



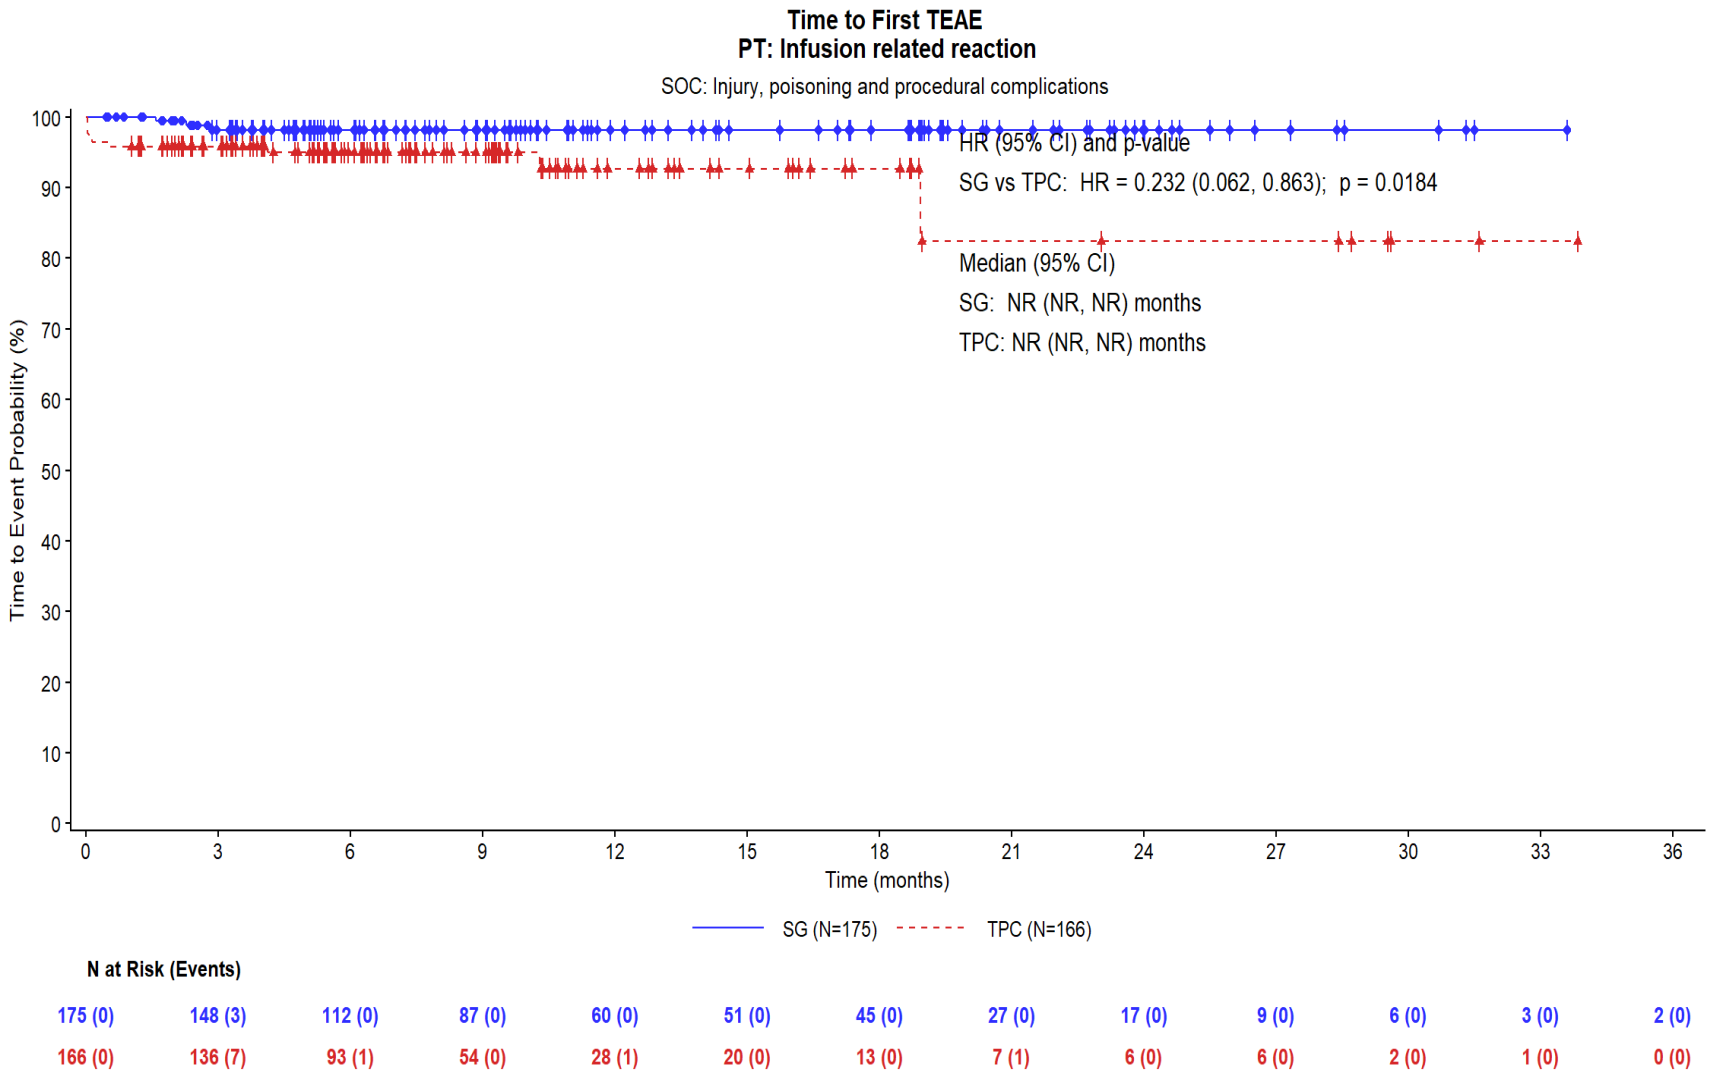
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.68. Figure 1.1.67: Kaplan Meier Plot of Time to First TEAE by PT Pneumonia — mSAF — Excluding patients preselected to receive nab-paclitaxel



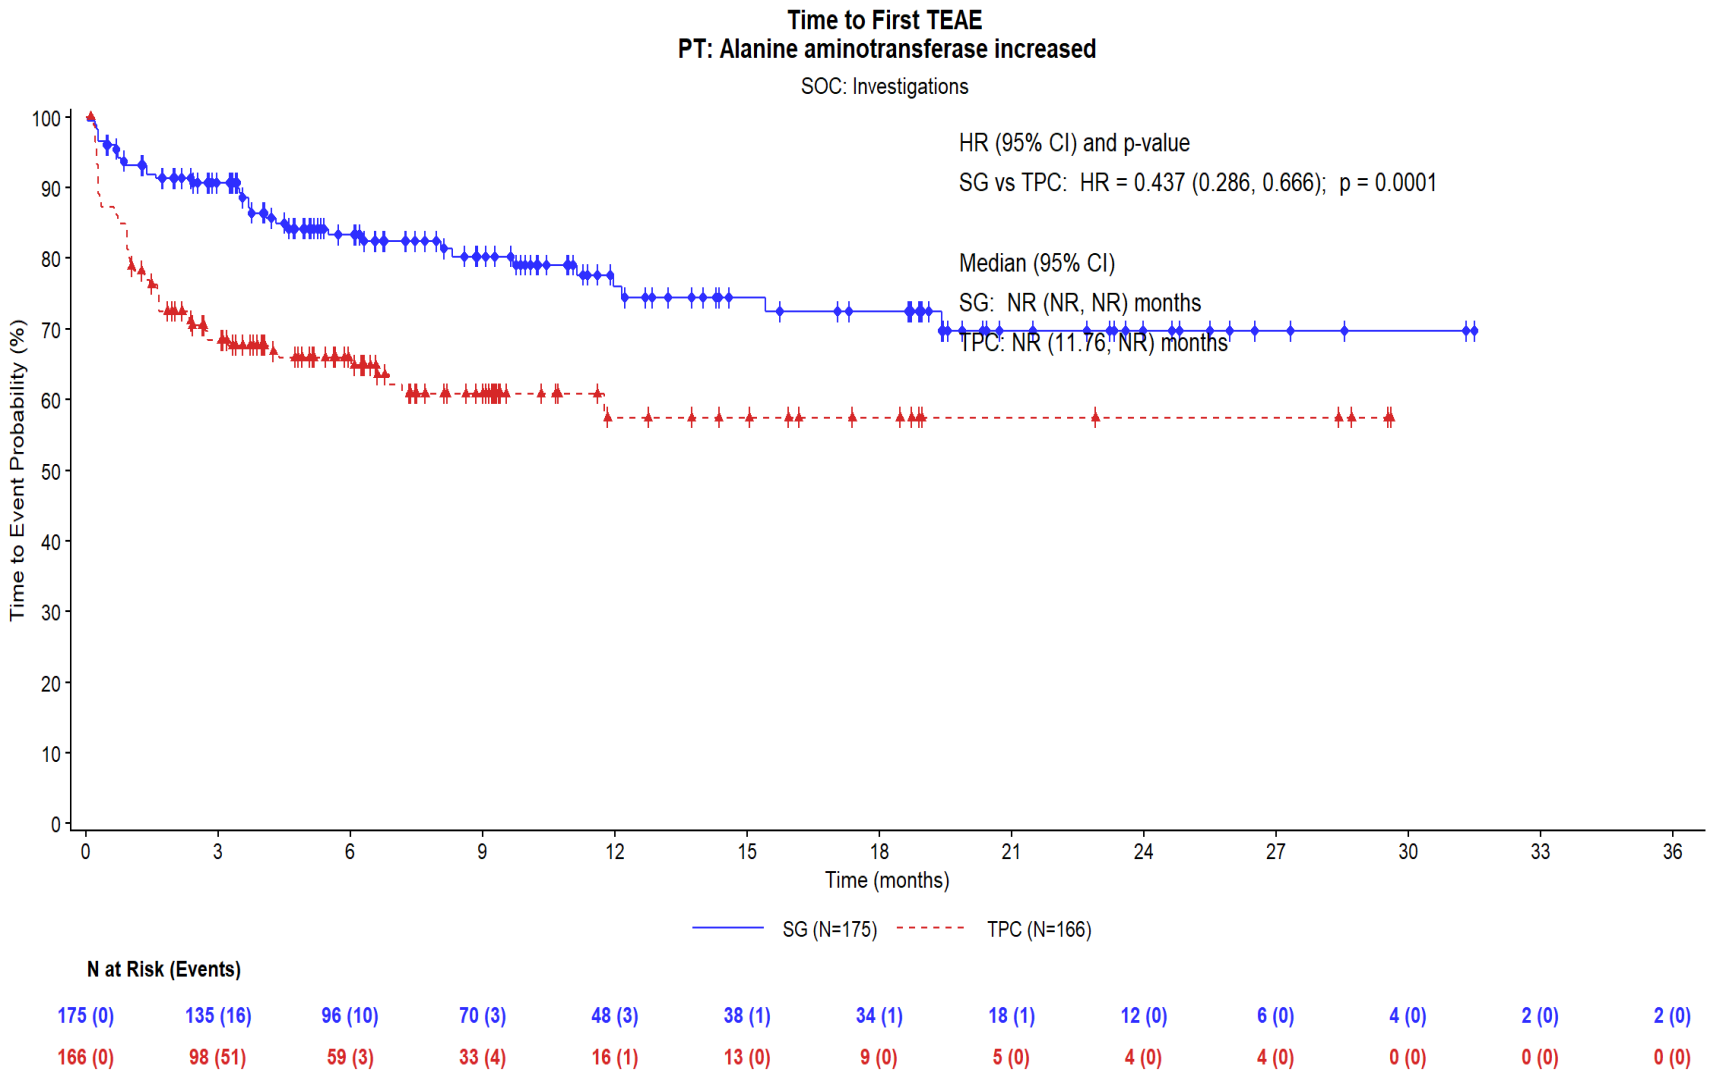
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.69. Figure 1.1.68: Kaplan Meier Plot of Time to First TEAE by PT Upper respiratory tract infection — mSAF — Excluding patients preselected to receive nab-paclitaxel



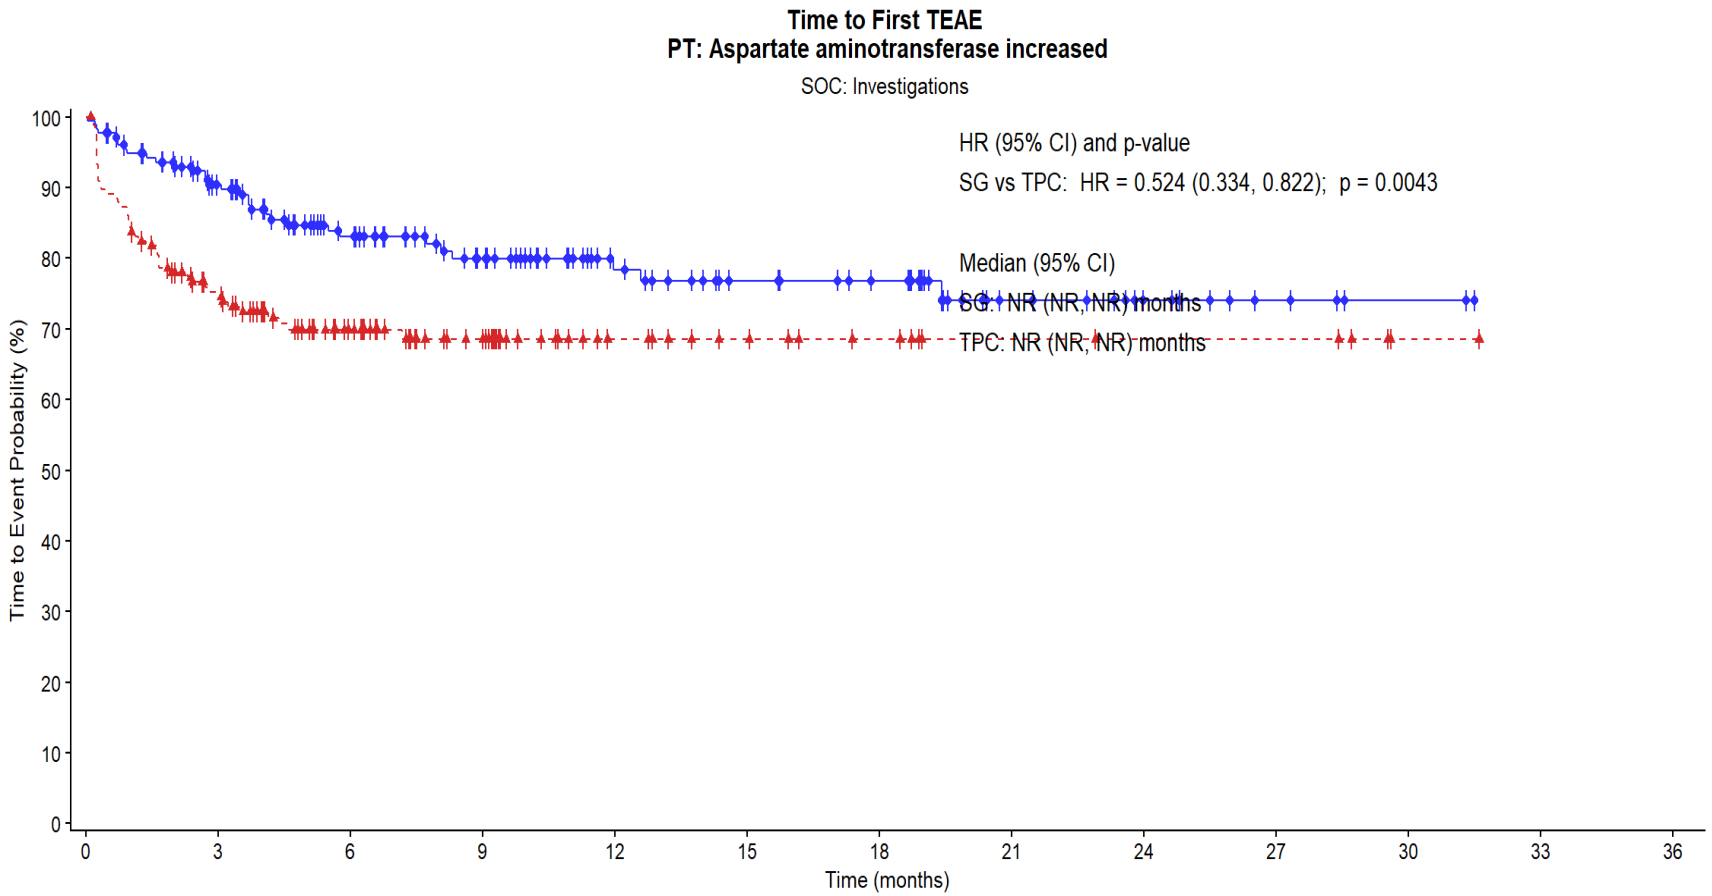
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.70. Figure 1.1.69: Kaplan Meier Plot of Time to First TEAE by PT Urinary tract infection — mSAF — Excluding patients preselected to receive nab-paclitaxel



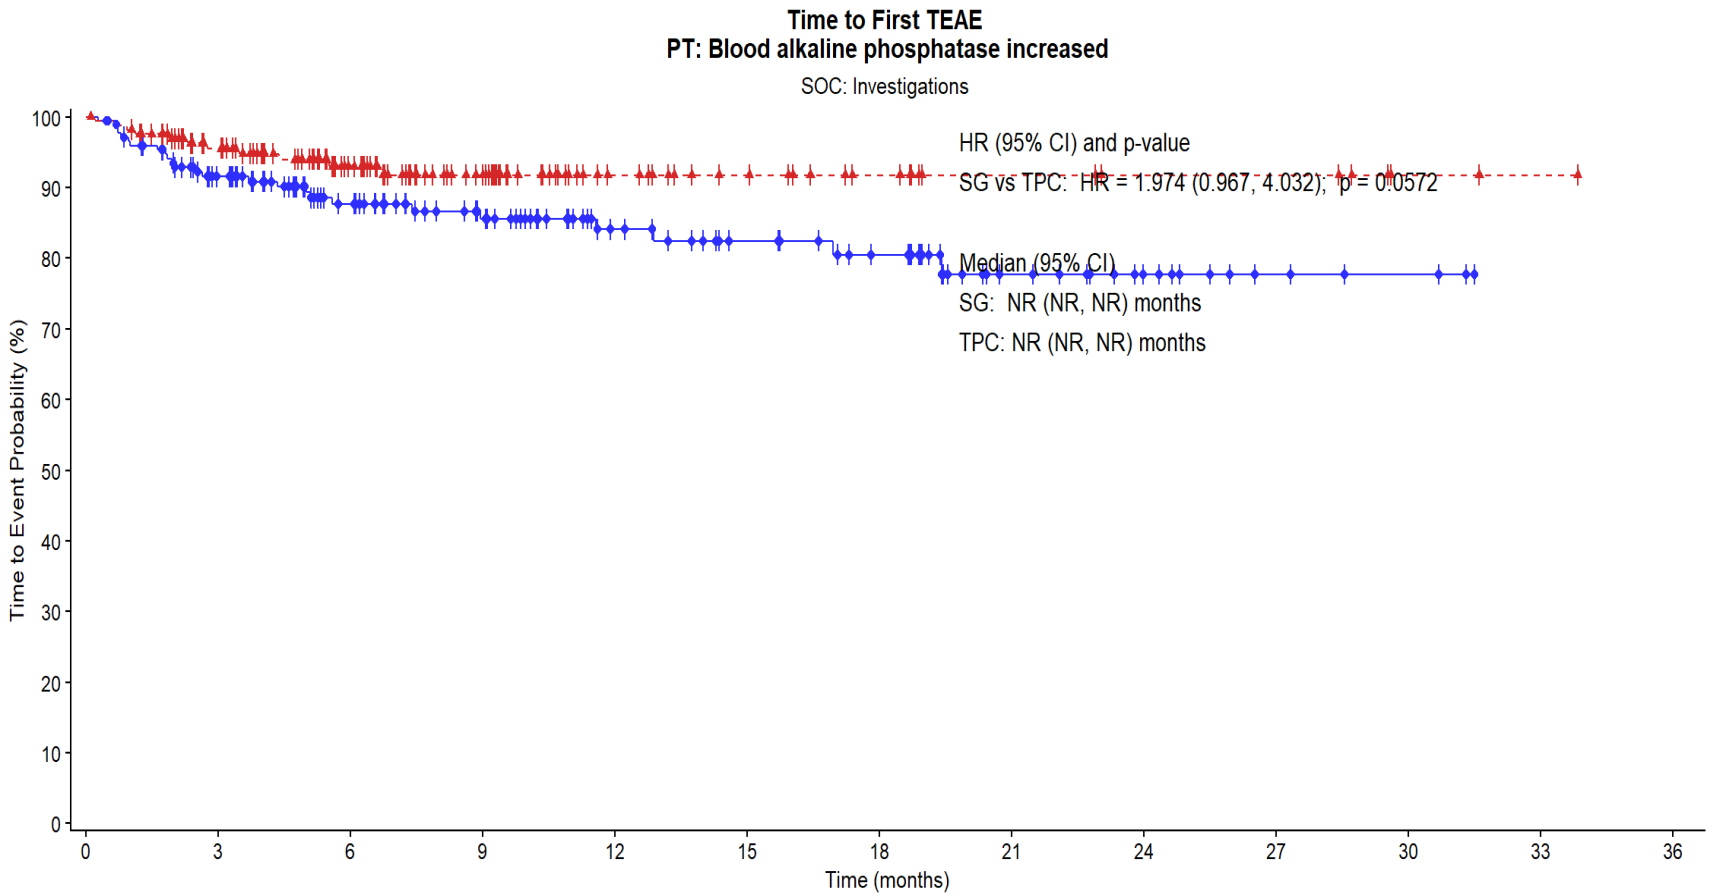
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.71. Figure 1.1.70: Kaplan Meier Plot of Time to First TEAE by PT Infusion related reaction — mSAF — Excluding patients preselected to receive nab-paclitaxel



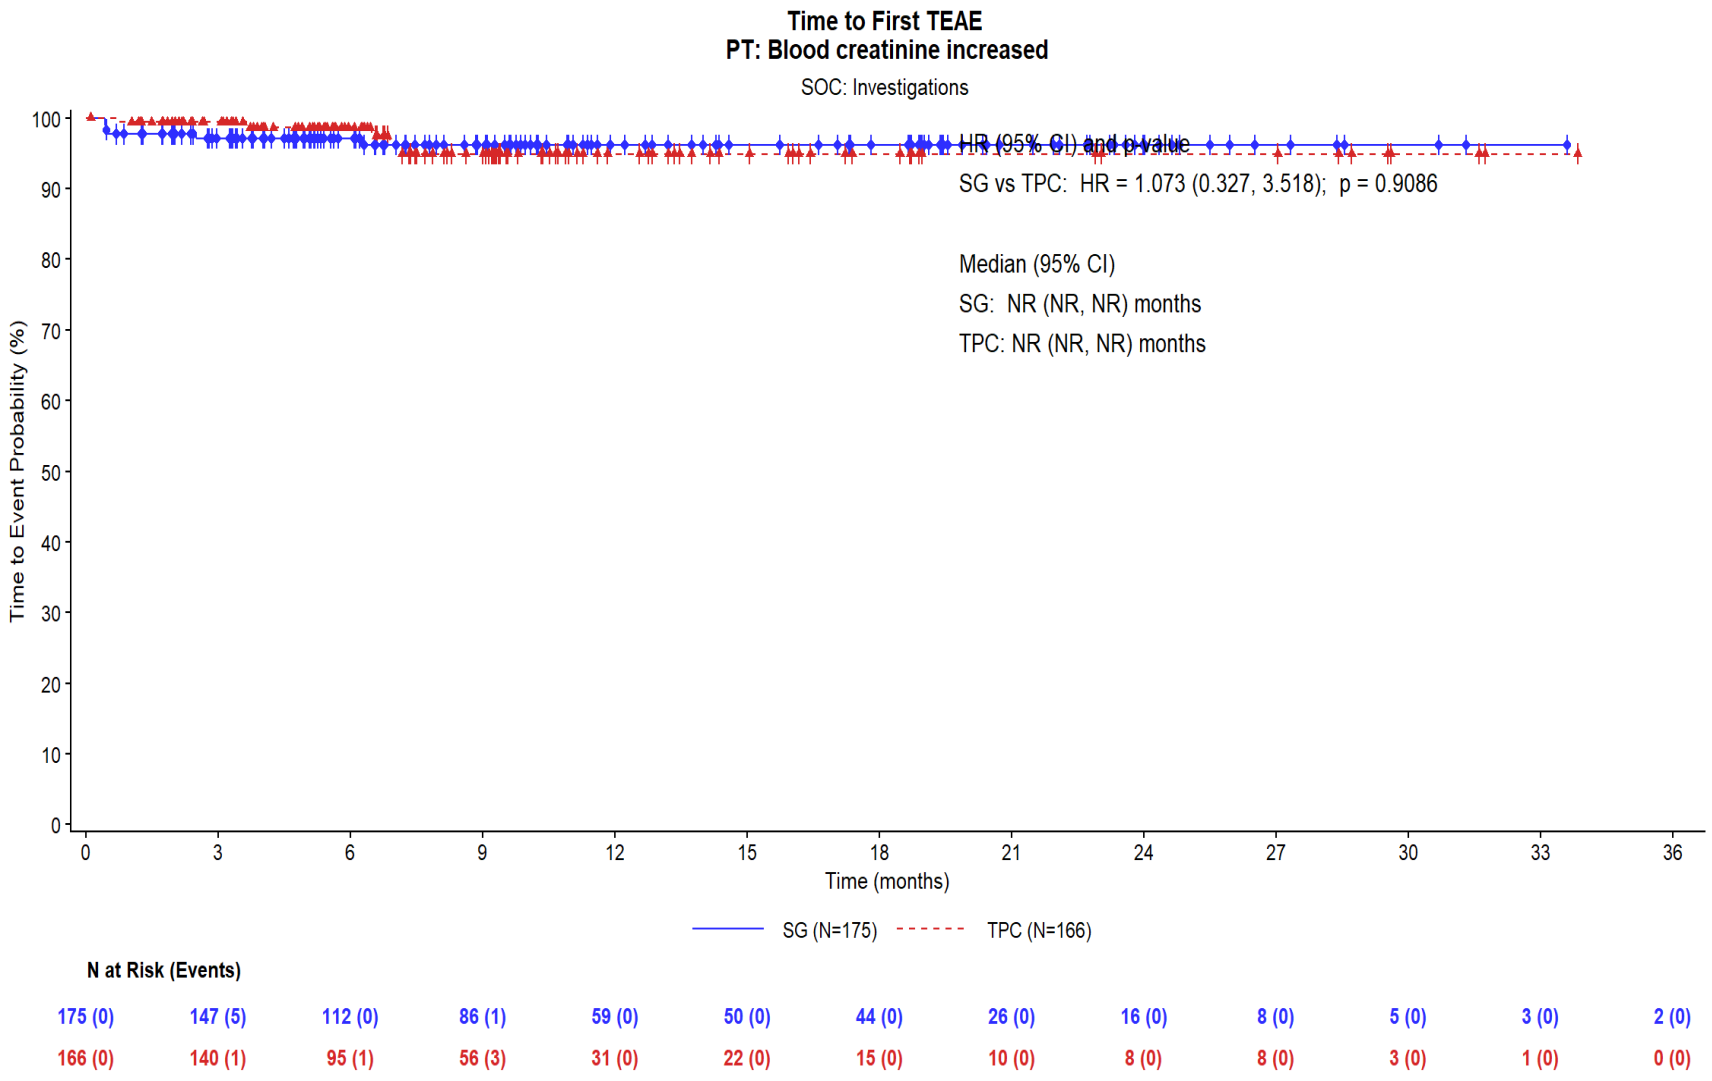
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.72. Figure 1.1.71: Kaplan Meier Plot of Time to First TEAE by PT Alanine aminotransferase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel



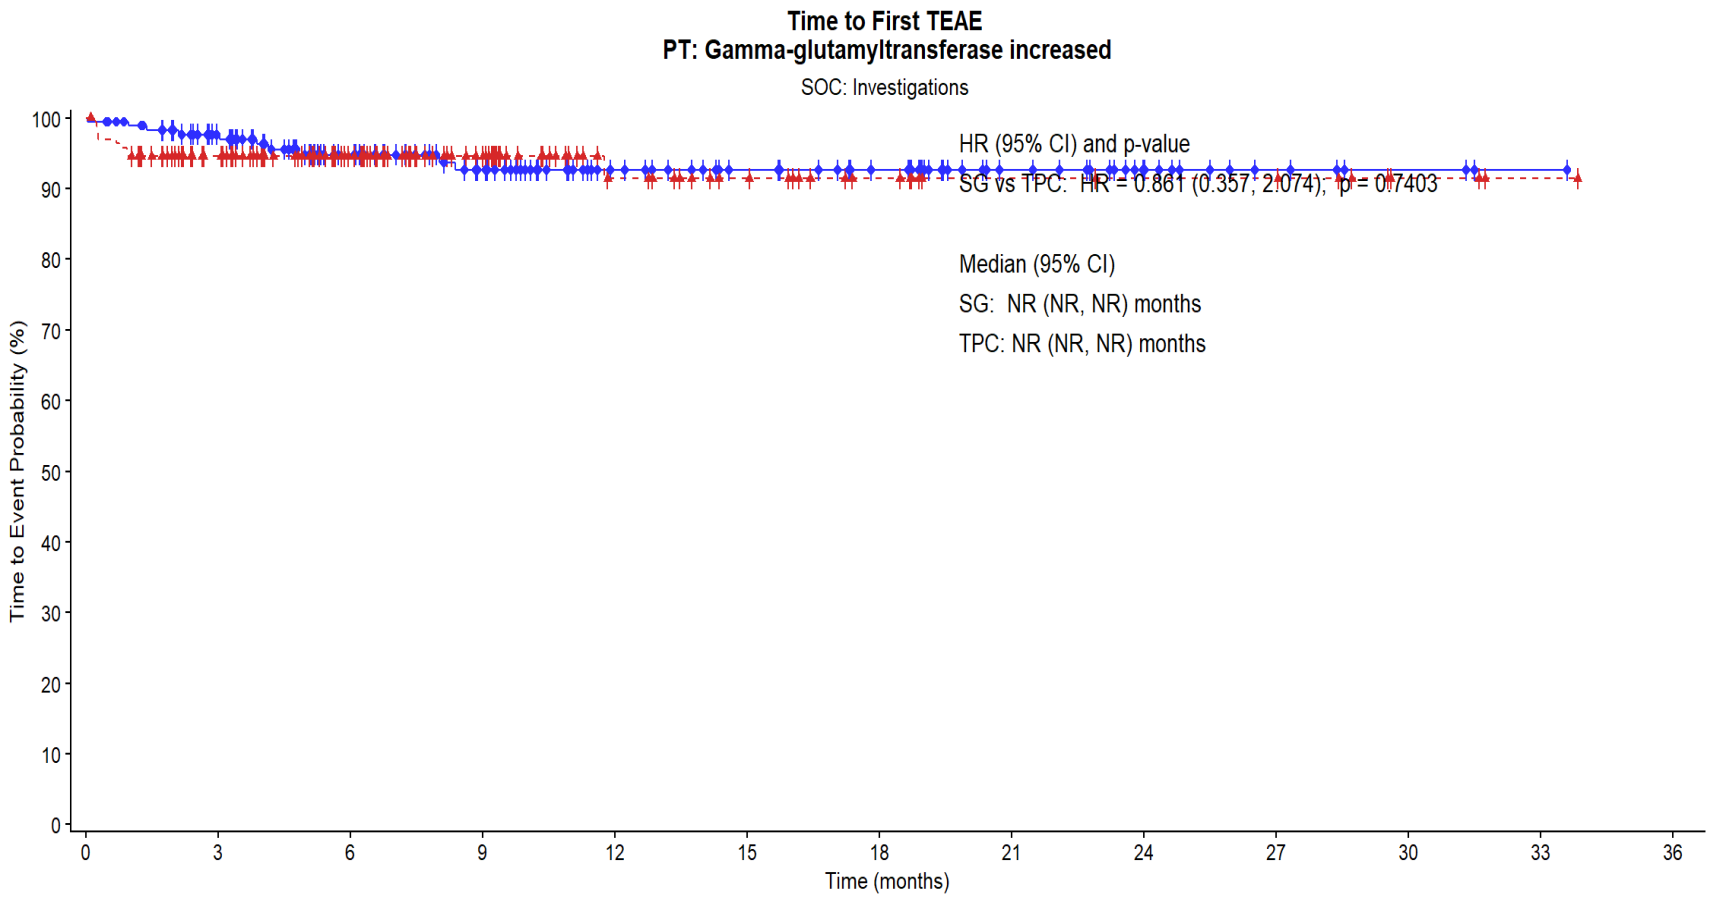
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.73. Figure 1.1.72: Kaplan Meier Plot of Time to First TEAE by PT Aspartate aminotransferase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel



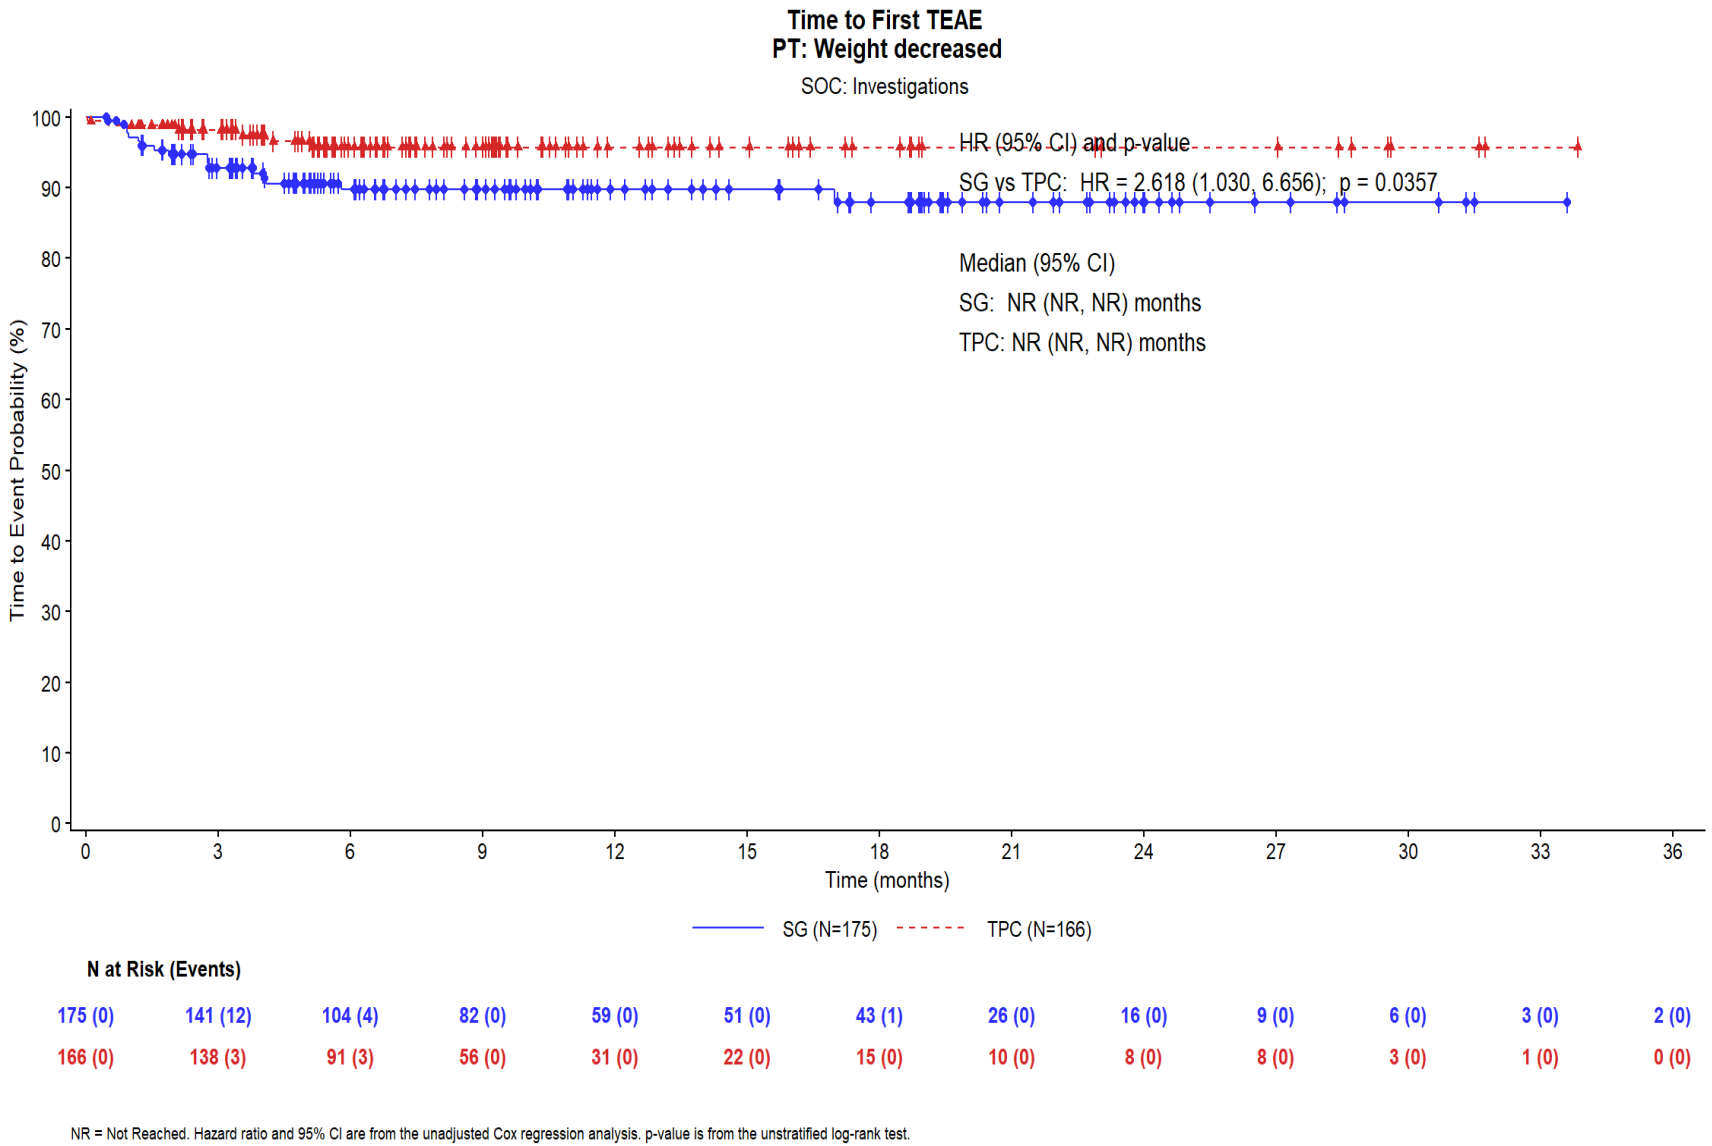
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.74. Figure 1.1.73: Kaplan Meier Plot of Time to First TEAE by PT Blood alkaline phosphatase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel



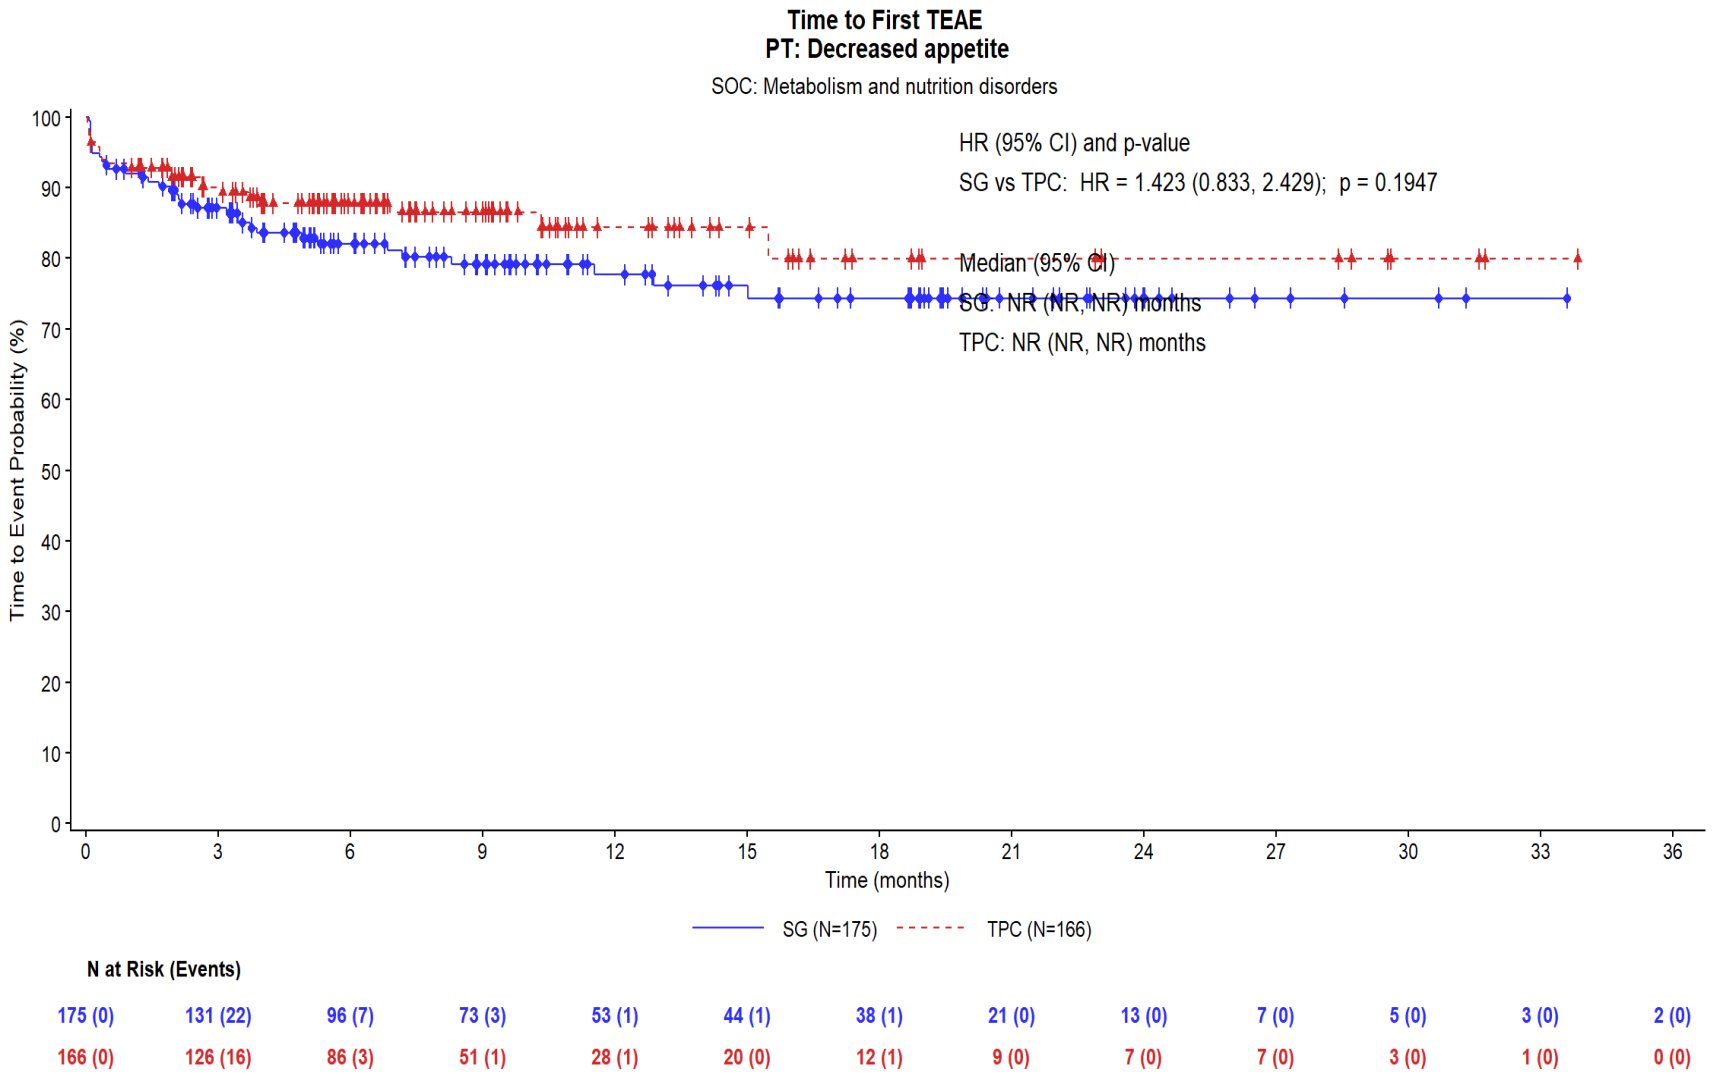
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.75. Figure 1.1.74: Kaplan Meier Plot of Time to First TEAE by PT Blood creatinine increased — mSAF — Excluding patients preselected to receive nab-paclitaxel



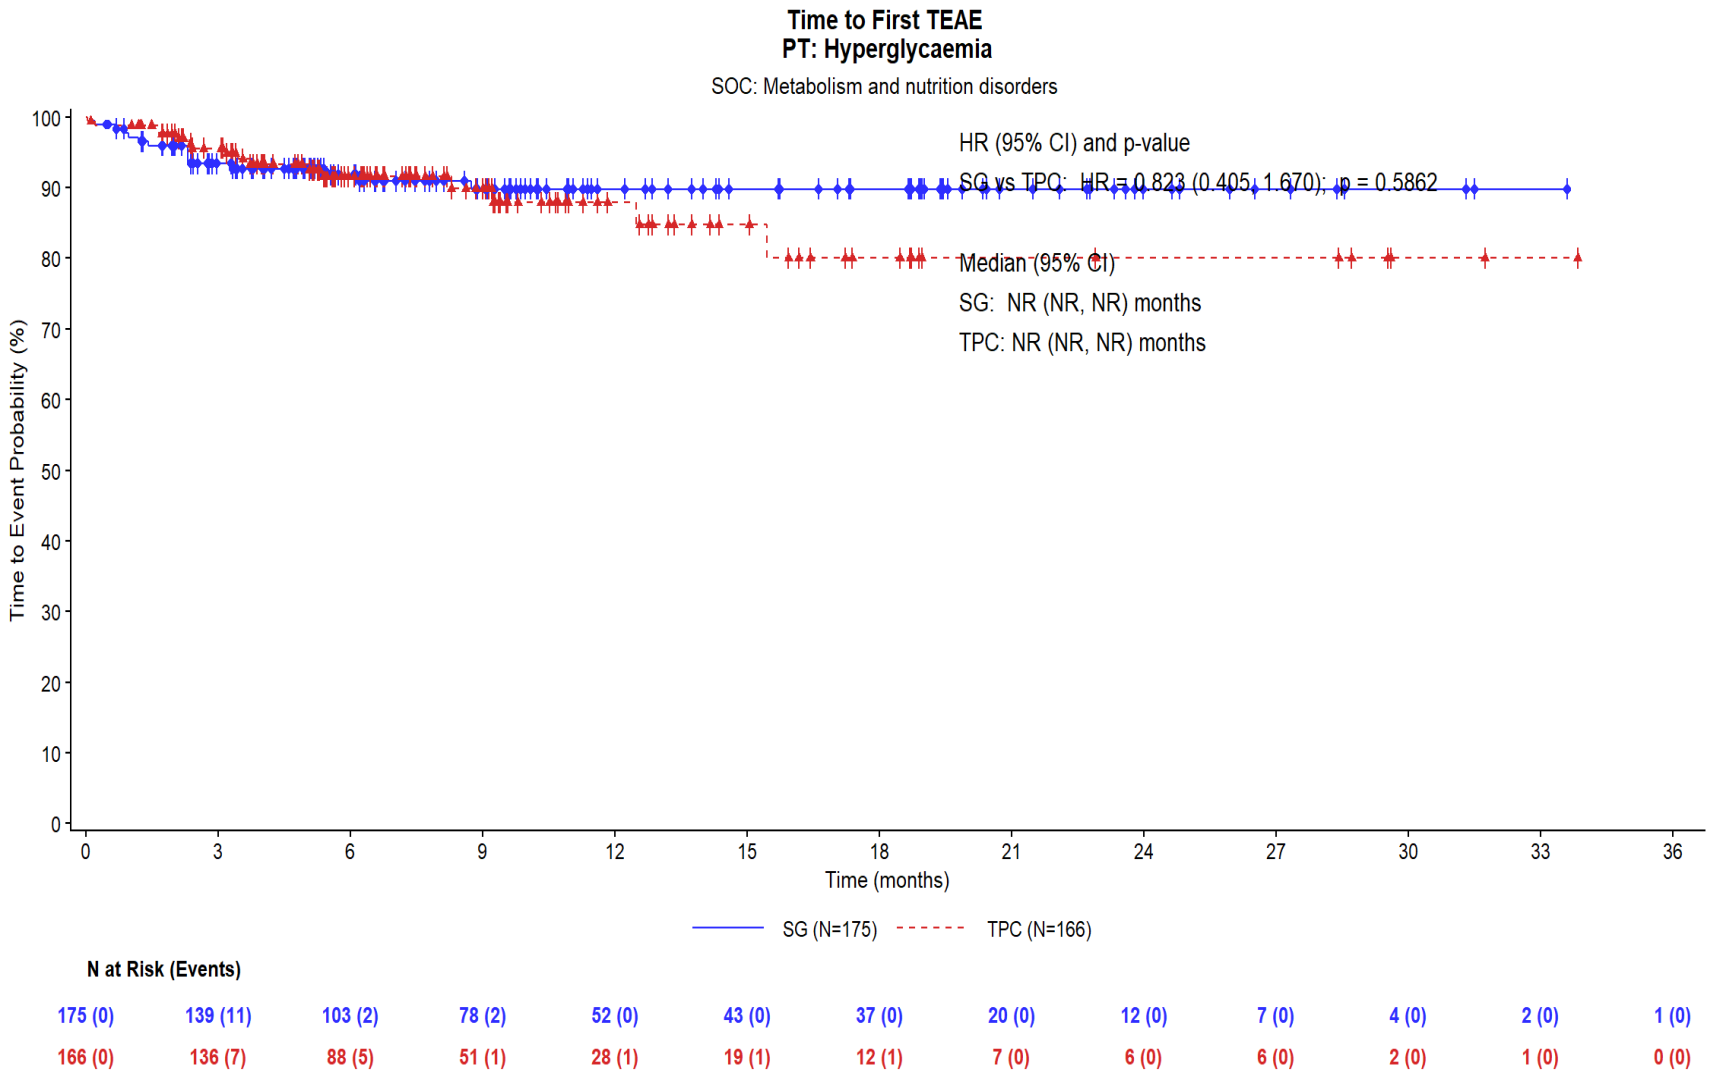
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.76. Figure 1.1.75: Kaplan Meier Plot of Time to First TEAE by PT Gamma glutamyltransferase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel



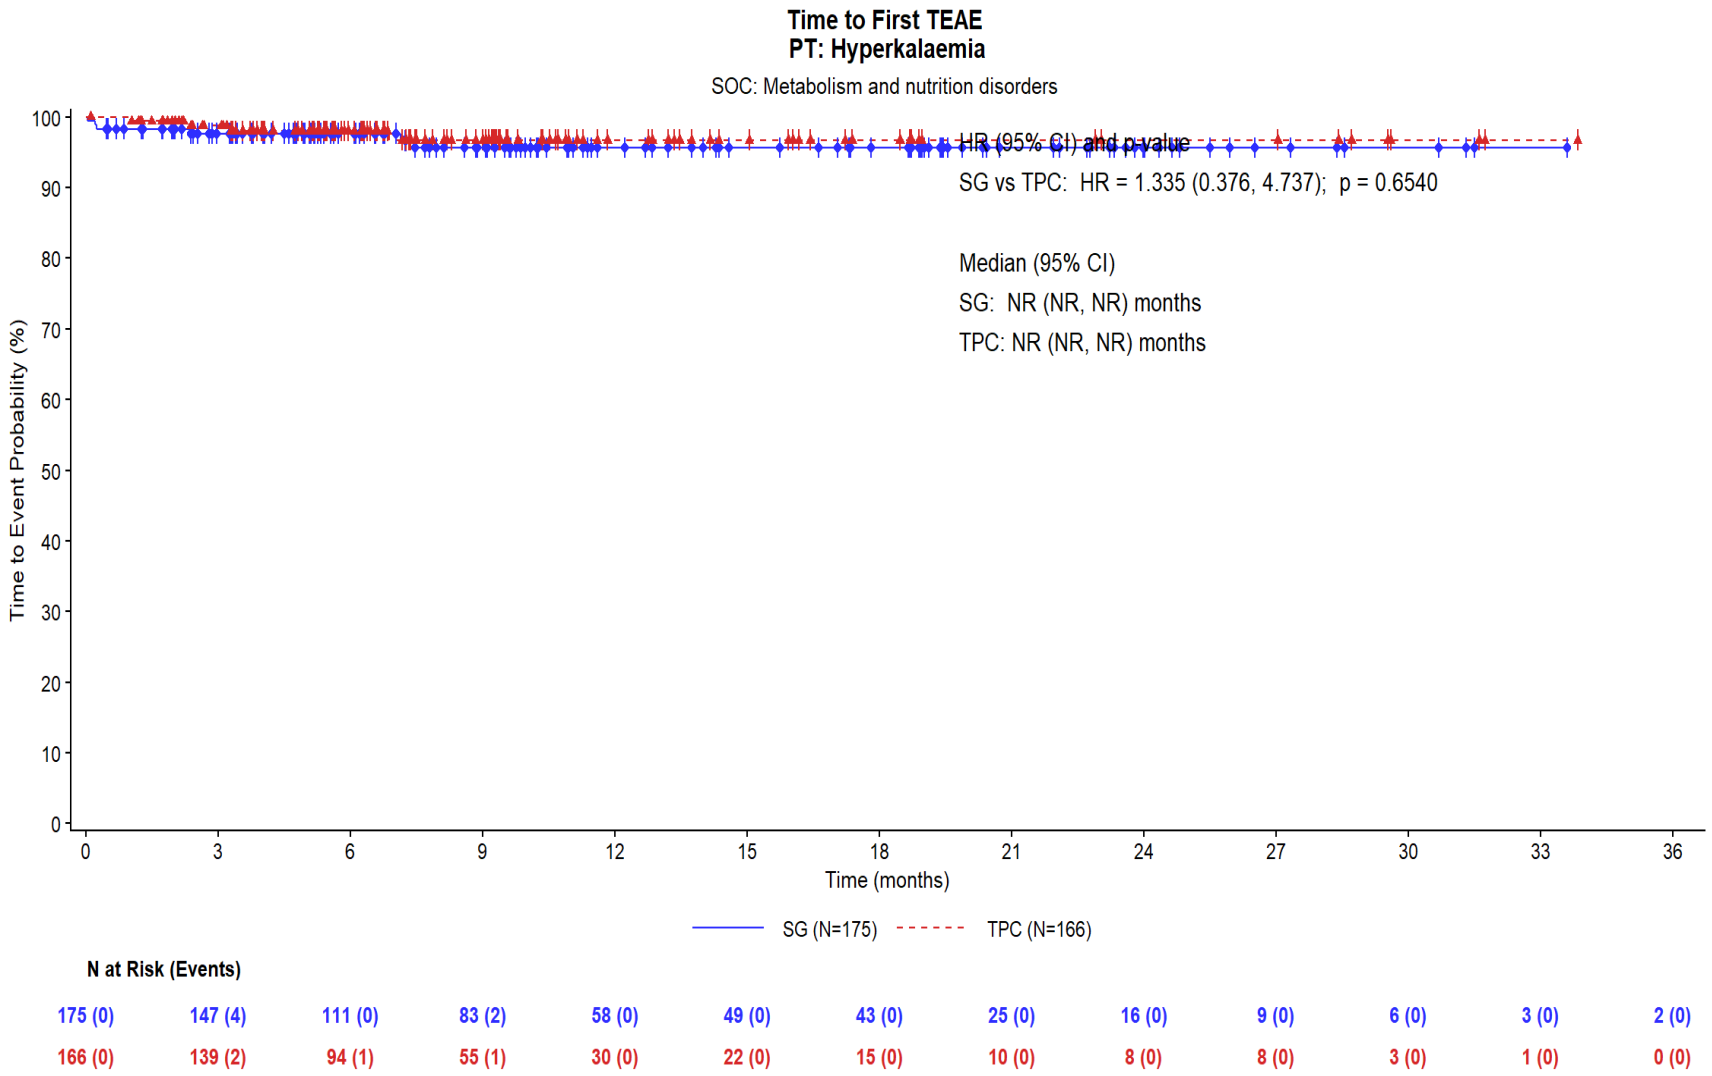
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.77. Figure 1.1.76: Kaplan Meier Plot of Time to First TEAE by PT Weight decreased — mSAF — Excluding patients preselected to receive nab-paclitaxel



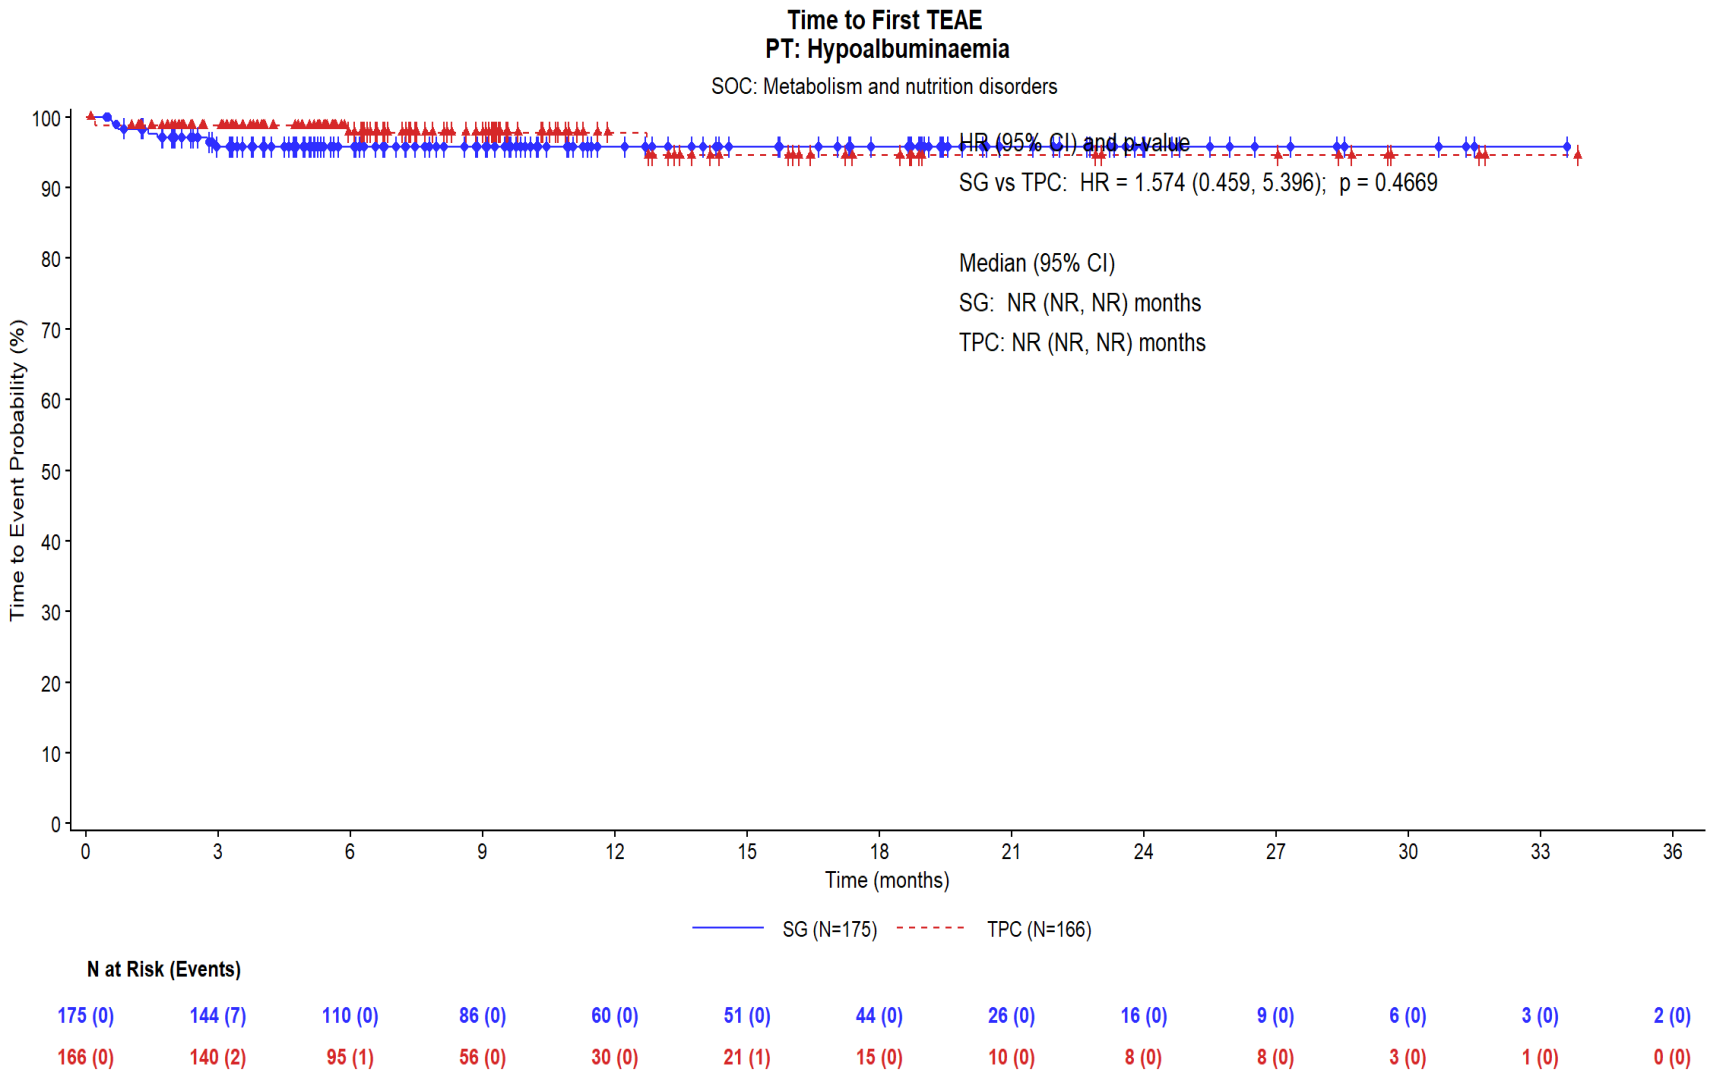
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.78. Figure 1.1.77: Kaplan Meier Plot of Time to First TEAE by PT Decreased appetite — mSAF — Excluding patients preselected to receive nab-paclitaxel



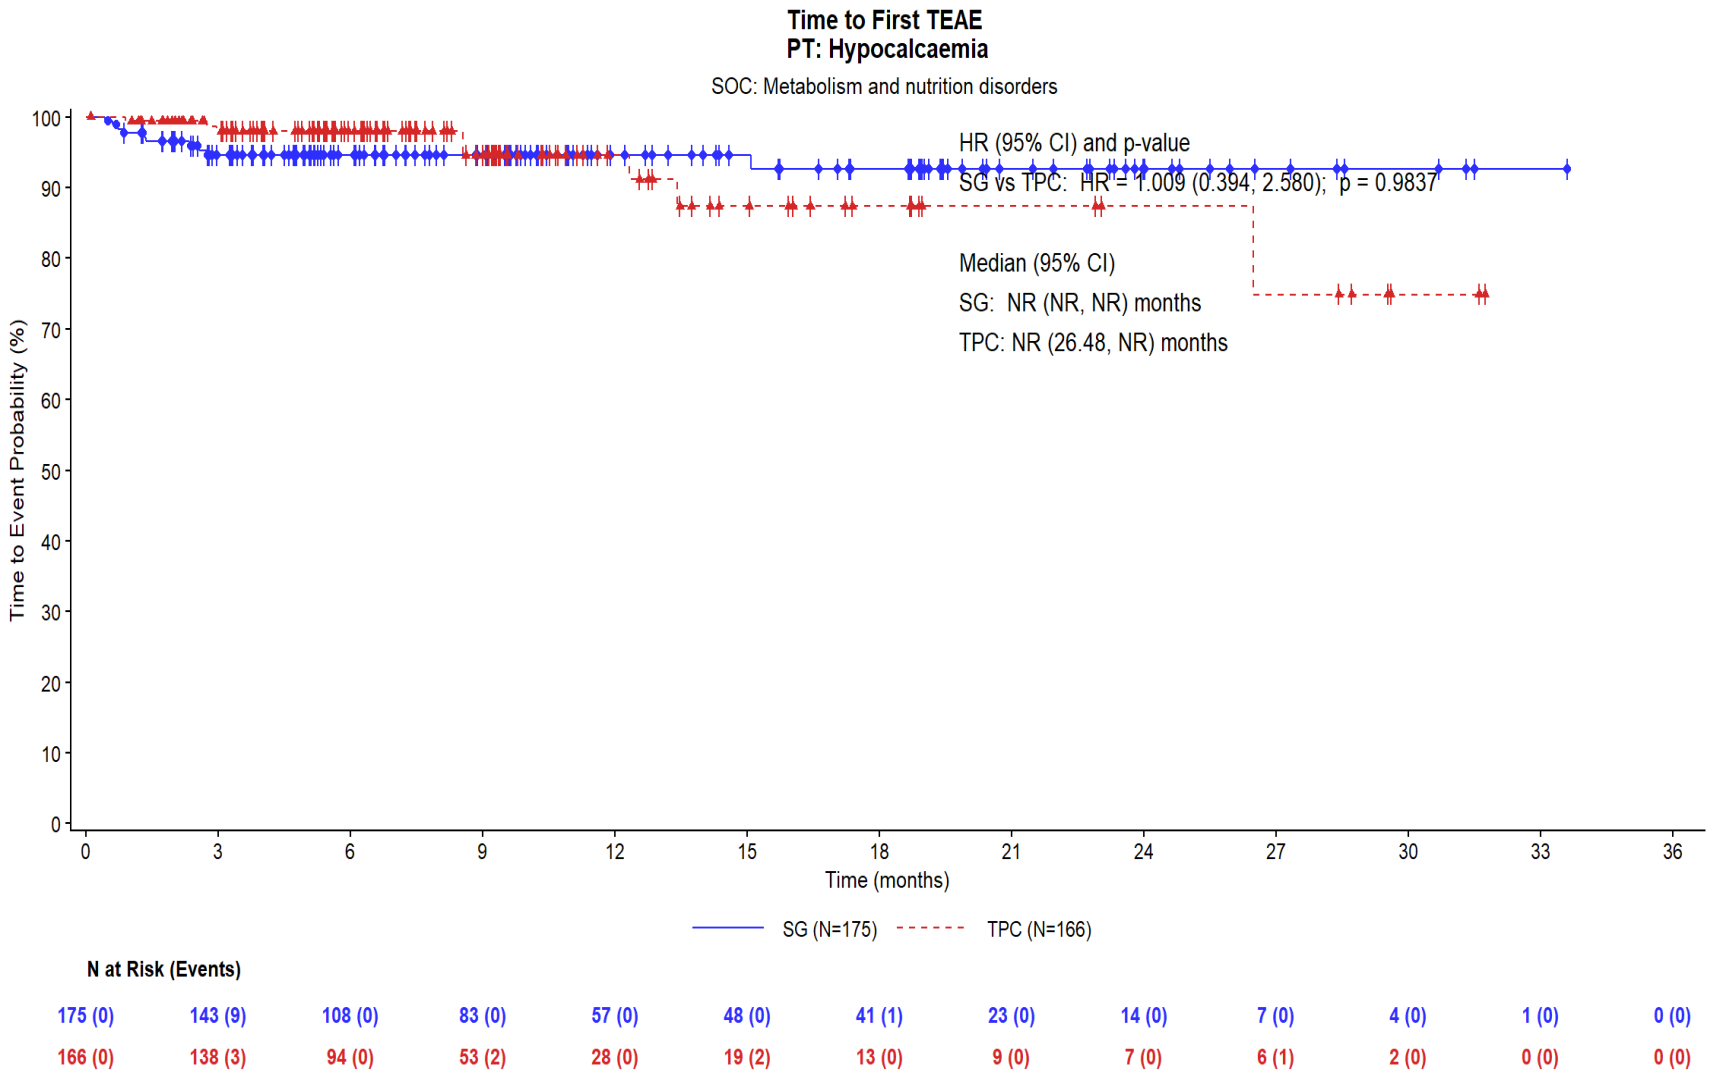
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.79. Figure 1.1.78: Kaplan Meier Plot of Time to First TEAE by PT Hyperglycaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel



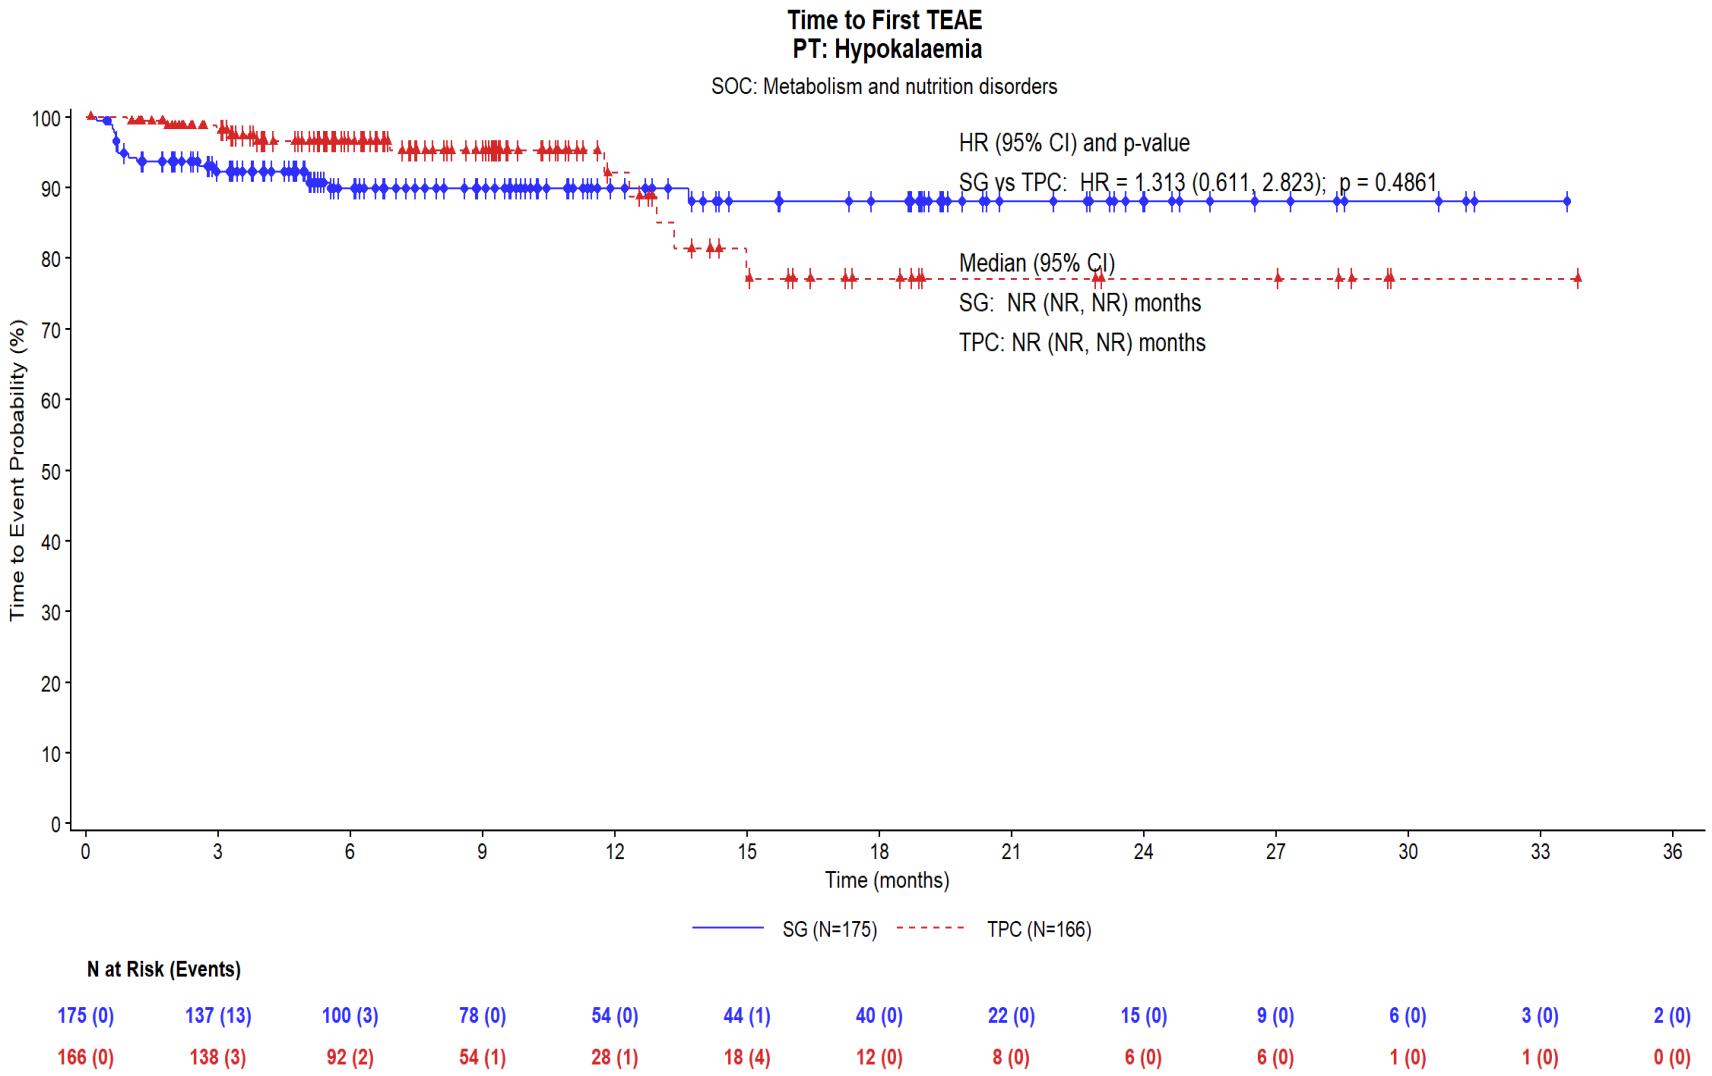
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.80. Figure 1.1.79: Kaplan Meier Plot of Time to First TEAE by PT Hyperkalaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel



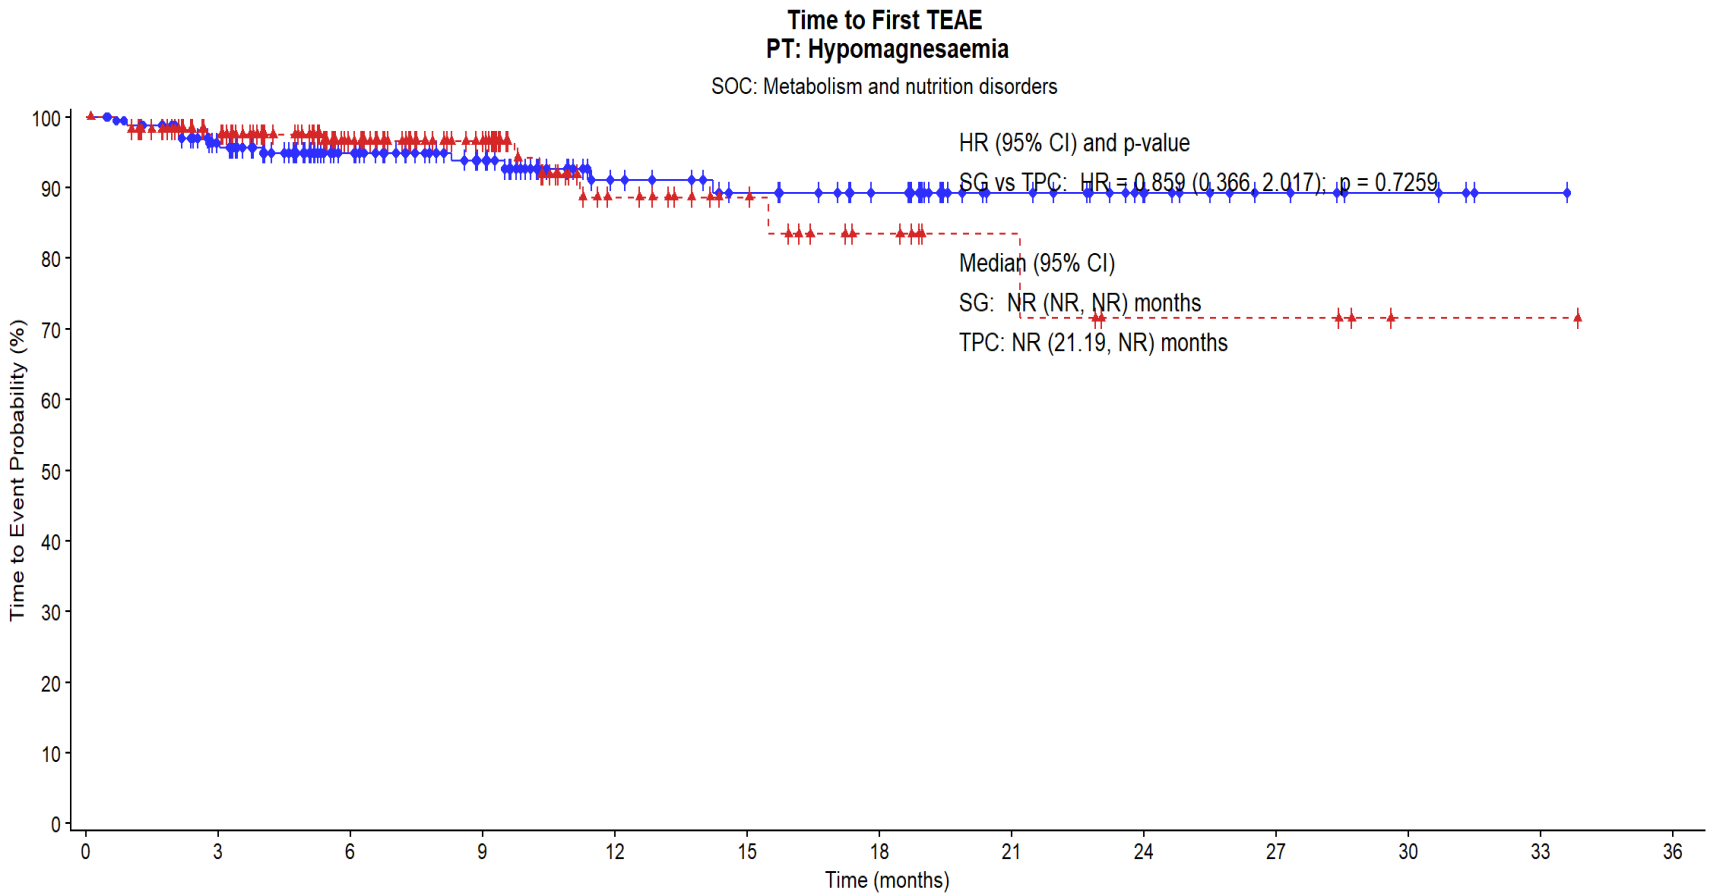
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.81. Figure 1.1.80: Kaplan Meier Plot of Time to First TEAE by PT Hypoalbuminaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel



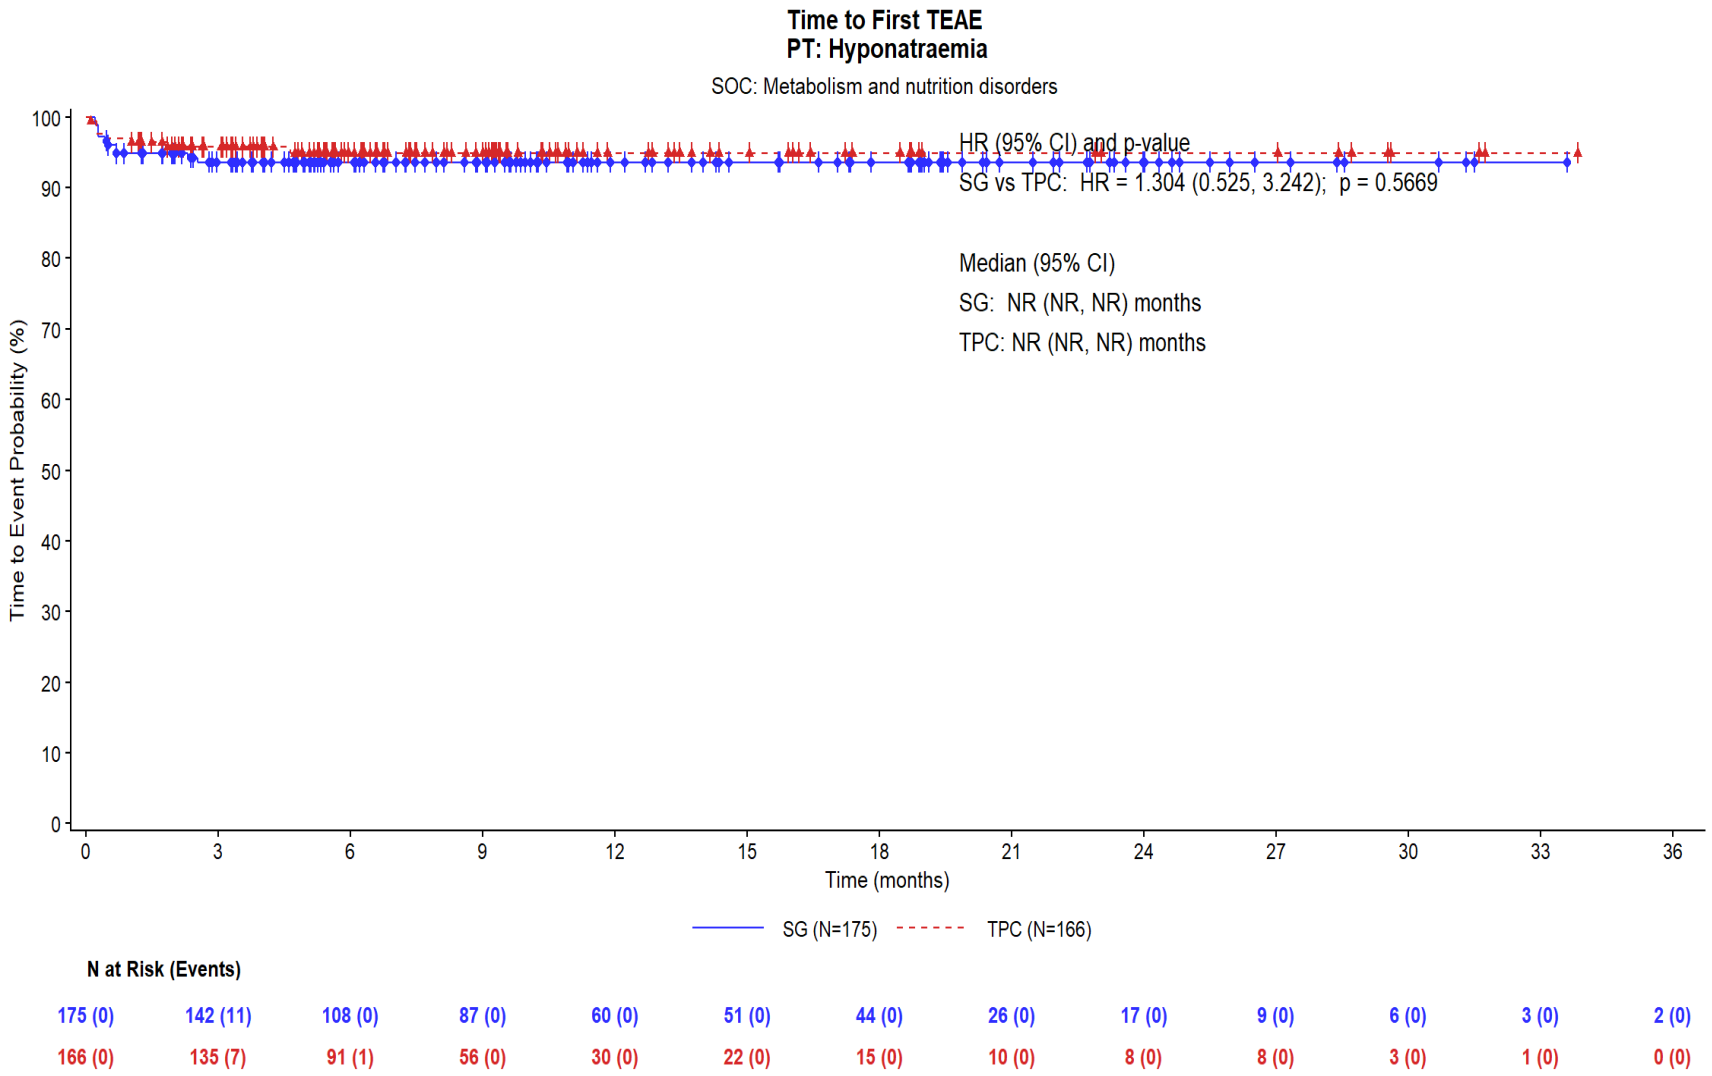
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.82. Figure 1.1.81: Kaplan Meier Plot of Time to First TEAE by PT Hypocalcaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.83. Figure 1.1.82: Kaplan Meier Plot of Time to First TEAE by PT Hypokalaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.84. Figure 1.1.83: Kaplan Meier Plot of Time to First TEAE by PT Hypomagnesaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel
