Dossier zur Nutzenbewertung gemäß § 35a SGB V

Sacituzumab govitecan (Trodelvy®)

Gilead Sciences GmbH

Anhang 4-G

Monotherapie zur Behandlung von erwachsenen Patienten mit nicht resezierbarem, lokal fortgeschrittenem oder metastasiertem triple-negativem Mammakarzinom (TNBC), die zuvor keine systemische Therapie zur Behandlung der metastasierten Erkrankung erhalten haben und für eine PD-1- oder eine PD-L1-Inhibitor-Therapie nicht geeignet sind

Analysen für das Nutzendossier

Stand: 20.07.2026

Inhaltsverzeichnis

Studie ASCENT-03

1. **Patient/-innen ohne hohen Remissionsdruck (Paclitaxel-Teilpopulation)**

   Datenschnitt: 22. April 2026

   - Inhaltsverzeichnis: Baseline-Charakteristika, Wirksamkeits- und Sicherheitsendpunkte
   - Inhaltsverzeichnis: Patientenberichtete Endpunkte

   Datenschnitt: 27. Oktober 2025

   - Inhaltsverzeichnis: Baseline-Charakteristika, Wirksamkeits- und Sicherheitsendpunkte
   - Inhaltsverzeichnis: Patientenberichtete Endpunkte

2. **Patient/-innen mit hohem Remissionsdruck (Carboplatin+Gemcitabin-Teilpopulation)**

   Datenschnitt: 22. April 2026

   - Inhaltsverzeichnis: Baseline-Charakteristika, Wirksamkeits- und Sicherheitsendpunkte
   - Inhaltsverzeichnis: Patientenberichtete Endpunkte

   Datenschnitt: 27. Oktober 2025

   - Inhaltsverzeichnis: Baseline-Charakteristika, Wirksamkeits- und Sicherheitsendpunkte
   - Inhaltsverzeichnis: Patientenberichtete Endpunkte

3. **Paclitaxel/Carboplatin+Gemcitabin-Population (ergänzend)**

   Datenschnitt: 22. April 2026

   - Inhaltsverzeichnis: Baseline-Charakteristika, Wirksamkeits- und Sicherheitsendpunkte
   - Inhaltsverzeichnis: Patientenberichtete Endpunkte

   Datenschnitt: 27. Oktober 2025

   - Inhaltsverzeichnis: Baseline-Charakteristika, Wirksamkeits- und Sicherheitsendpunkte
   - Inhaltsverzeichnis: Patientenberichtete Endpunkte

1. Statistical Analysis for German Submission of ASCENT-03

2. TFLs

Population: Triple-negative breast cancer (mTNBC)

Sub-Populations:
— Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin
Data Cut Date: 22 APR 2026
Report Date: 11 June 2026

Version 1.0 | CONFIDENTIAL

3. TABLE OF CONTENTS

1. Statistical Analysis for German Submission of ASCENT-03 1

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Screened Population: Participants who have signed an informed consent and participated in the screening procedures at site to assess eligibility.
Safety Analysis Set includes randomized participants who have received at least one dose of any study drug.
Denominator of percentages is the number of participants in each treatment group.
Randomized Phase excludes crossover phase when participants in TPC arm started to receive SG.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Denominator of percentages is the number of participants in each treatment group.
Age (in years) was collected on the date of first study drug administration (Day 1) if dosed, or randomization if not dosed.
Not Permitted = local regulators did not allow collection of race or ethnicity information or participant refused to provide information.
*Body Mass Index (BMI) (kg/m^2) = [Weight (kg) / Height (cm)^2]*10,000*
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Denominator of percentages is the number of participants in each treatment group.
Medical history was coded according to MedDRA Version 27.1.
Participants may report >=1 medical history per system organ class or preferred term. At each level of summarization, a participant was counted once if the participant reported 1 or more medical history.
SOCs were presented alphabetically and PTs within SOC were presented by descending order of the total frequencies.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice; NR = Not Reached; IWRS = Interactive Web Response System.
[a] Ongoing participants are those who have not discontinued participation in the study by the data cutoff date.
[b] OS (months) = (date of death or censoring − date of randomisation + 1) / 30.4375. Based on Kaplan-Meier estimates with 95% CI using the log-log transformation.
[c] The two-sided p-value is from stratified log-rank test, adjusted for randomization stratification factors (IWRS).
[d] Hazard ratio and 95% CIs are calculated using the Cox proportional hazards model, adjusted for randomization stratification factors (IWRS).
[e] Duration of OS follow-up (months) = (date of death or censoring - date of randomization + 1) / 30.4375.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
OS (months) = (date of death or censoring − date of randomisation + 1) / 30.4375. Median OS from Kaplan-Meier estimate. 95% CI based on log-log transformation.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
Log-rank test is unstratified.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Participants with unknown BRCA 1/2 status were excluded from that subgroup.
Disease stratification and geographic region are collected from IWRS.
Race subgroup Other - includes American Indian or Alaska Native, Black, Native Hawaiian or Pacific Islander and Other collected in clinical database.
Interaction p-value: likelihood ratio test from Cox model with treatment + subgroup + treatment×subgroup interaction terms; shown once per subgroup variable at first category level.
[a] Categories were merged for the following subgroup(s): Disease stratification: 'Recurrent disease within 6 to 12 months from completion of treatment in the curative setting' and 'Recurrent disease occurring > 12 months from completion of treatment in the curative setting' were combined into 'Recurrent disease' ('De novo' vs 'Recurrent disease'). Race: 'Asian' and 'Other' were combined into 'Other' ('White' vs 'Other').
Data Cut Date: 22 APR 2026.

5.4. Table 1.1.4: Follow-up Duration (Months) for PFS and Tumor Response by BICR — mITT — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
Intent-to-treat (ITT) Analysis Set includes all participants who were randomised in the study.
Denominator of percentages is the number of participants in each treatment group of each subgroup.
PFS (months) = (date of events or censoring − date of randomisation + 1) / 30.4375. 95% CI based on log-log transformation. Median PFS from Kaplan-Meier estimate.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
The two-sided p-value is from Unstratified log-rank test.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Disease stratification and geographic region are collected from IWRS (Interactive Web Response System).
Race subgroup Other - includes American Indian or Alaska Native, Black, Native Hawaiian or Pacific Islander and Other collected in clinical database.
Interaction p-value from a Cox model with treatment, subgroup factor, and treatment×subgroup interaction term; computed via likelihood ratio test (full vs. main-effects model). Displayed once per subgroup variable at first category level.
[a] Categories were merged for the following subgroup(s): Disease stratification: 'Recurrent disease within 6 to 12 months from completion of treatment in the curative setting' and 'Recurrent disease occurring

	SG (N=52)	TPC (N=45)	Interaction

> 12 months from completion of treatment in the curative setting' were combined into 'Recurrent disease' ('De novo' vs 'Recurrent disease'). Race: 'Asian' and 'Other' were combined into 'Other' ('White' vs 'Other').

Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; IWRS = Interactive Web Response System; NR = Not Reached.
PFS2 is defined as the time from date of randomization to the first documented progression on next-line therapy based on investigator assessment of PD or death due to any cause, whichever occurs first. Next line therapy is defined as the first new systemic anti-cancer therapy (including crossover treatment) initiated after discontinuation of study treatment regardless of end of treatment reason.
[a] Quantile of PFS2 is from Kaplan-Meier estimate. The 95% CI is based on log-log transformation.
[b] PFS2 rate is the proportion of participants alive without progression at the next line of therapy. The 95% CI is based on the log-log transformation.
[c] The two-sided p-value is from stratified log-rank test.
[d] Hazard ratio with 95% CIs are calculated using Cox proportional hazards model, stratified for randomization stratification factors (IWRS).
Data Cut Date: 22 APR 2026.

Parameter	SG (N=52)	TPC (N=45)
Hazard Ratio of SG vs TPC (95% CI) [d]	0.349 (0.219, 0.557)	

SG = sacituzumab govitecan; TPC = treatment of physician's choice; IWRS = Interactive Web Response System; NR = Not Reached.
Time to first subsequent therapy is defined as the time from randomization to the start date of the first subsequent anti-cancer therapy after discontinuation of randomized treatment, or death due to any cause.
[a] Quantile of TFST is from Kaplan-Meier estimate. The 95% CI is based on log-log transformation.
[b] TFST rate is the proportion of participants alive without any subsequent therapy. The 95% CI is based on the log-log transformation.
[c] The two-sided p-value is from stratified log-rank test.
[d]Hazard ratio and 95% CIs are calculated using the Cox proportional hazards model, adjusted for randomization stratification factors (IWRS).
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
Time to first subsequent therapy is defined as the time from randomisation to the start date of the first subsequent anti-cancer therapy after discontinuation of randomised treatment, or death due to any cause.
TFST rate is the proportion of participants alive without any subsequent therapy.
Hazard ratio and 95% CIs calculated using unstratified Cox proportional hazards model. Efron method used to handle ties. Reference arm = TPC.
Log-rank p-value is from an unstratified log-rank test.
Interaction p-value: likelihood ratio test from Cox model with treatment + subgroup + treatment×subgroup interaction terms; shown once per subgroup variable at first category level.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.

[a] Categories were merged for the following subgroup(s): Disease stratification: 'Recurrent disease within 6 to 12 months from completion of treatment in the curative setting' and 'Recurrent disease occurring > 12 months from completion of treatment in the curative setting' were combined into 'Recurrent disease' ('De novo' vs 'Recurrent disease'). Race: 'Asian' and 'Other' were combined into 'Other' ('White' vs 'Other').
Data Cut Date: 22 APR 2026.

Hazard Ratio (95% CI)		1.267 (0.826, 1.944)
p-value		0.2754

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if all categories contain ≥10 patients across both arms combined.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.

** Categories were merged for the following subgroup(s): Disease stratification: 'Recurrent disease within 6 to 12 months from completion of treatment in the curative setting' and 'Recurrent disease occurring > 12 months from completion of treatment in the curative setting' were combined into 'Recurrent disease' ('De novo' vs 'Recurrent disease'). Race: 'Asian' and 'Other' were combined into 'Other' ('White' vs 'Other').*
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if all categories contain ≥10 patients across both arms combined.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
** Categories were merged for the following subgroup(s): Disease stratification: 'Recurrent disease within 6 to 12 months from completion of treatment in the curative setting' and 'Recurrent disease occurring > 12 months from completion of treatment in the curative setting' were combined into 'Recurrent disease' ('De novo' vs 'Recurrent disease'). Race: 'Asian' and 'Other' were combined into 'Other' ('White' vs 'Other').*
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation

	SG (N=51)	TPC (N=44)

of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
Data Cut Date: 22 APR 2026.

6.12. Table 1.1.12.1: Subgroup Analysis of Time to First TEAE by SOC and PT — SOC: Blood and lymphatic system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
** Categories were merged for the following subgroup(s): Disease stratification: 'Recurrent disease within 6 to 12 months from completion of treatment in the curative setting' and 'Recurrent disease occurring > 12 months from completion of treatment in the curative setting' were combined into 'Recurrent disease' ('De novo' vs 'Recurrent disease'). Race: 'Asian' and 'Other' were combined into 'Other' ('White' vs 'Other').*
Data Cut Date: 22 APR 2026.

NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
** Categories were merged for the following subgroup(s): Disease stratification: 'Recurrent disease within 6 to 12 months from completion of treatment in the curative setting' and 'Recurrent disease occurring > 12 months from completion of treatment in the curative setting' were combined into 'Recurrent disease' ('De novo' vs 'Recurrent disease'). Race: 'Asian' and 'Other' were combined into 'Other' ('White' vs 'Other').*
Data Cut Date: 22 APR 2026.

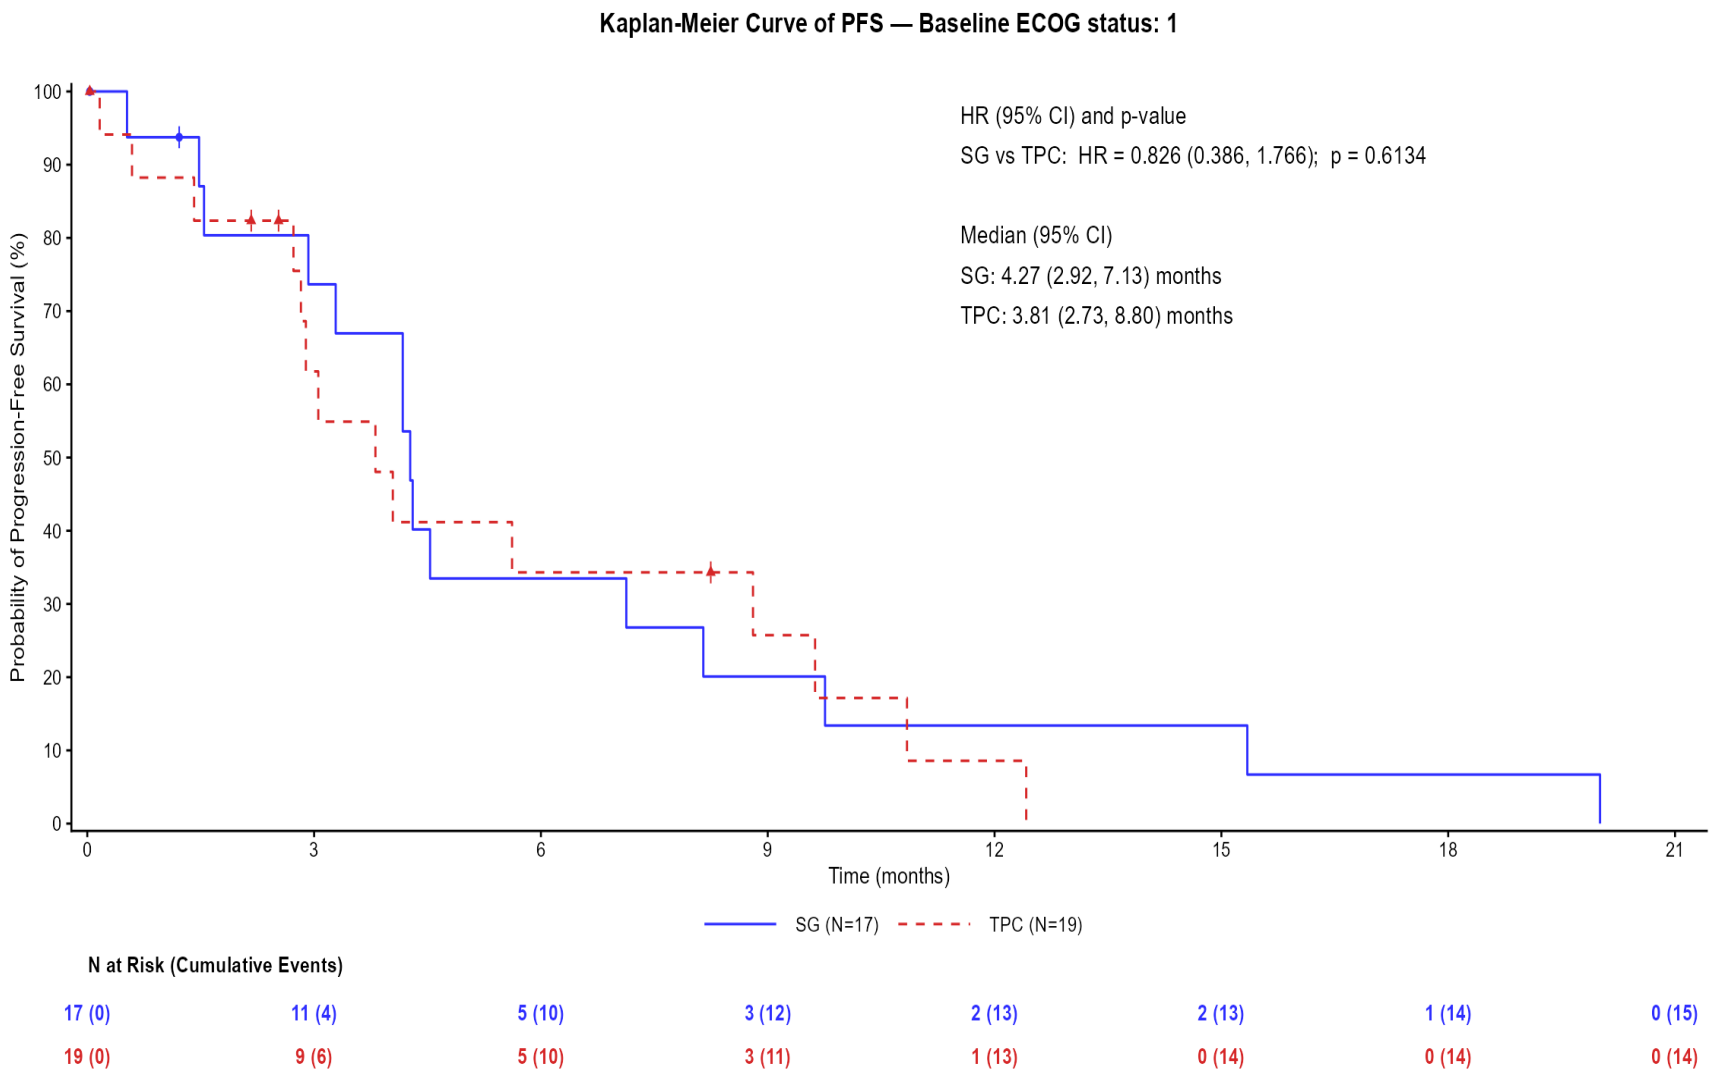
7.5. Figure 1.1.4: Kaplan-Meier Curve of Time to First Subsequent Therapy (TFST) — mITT — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

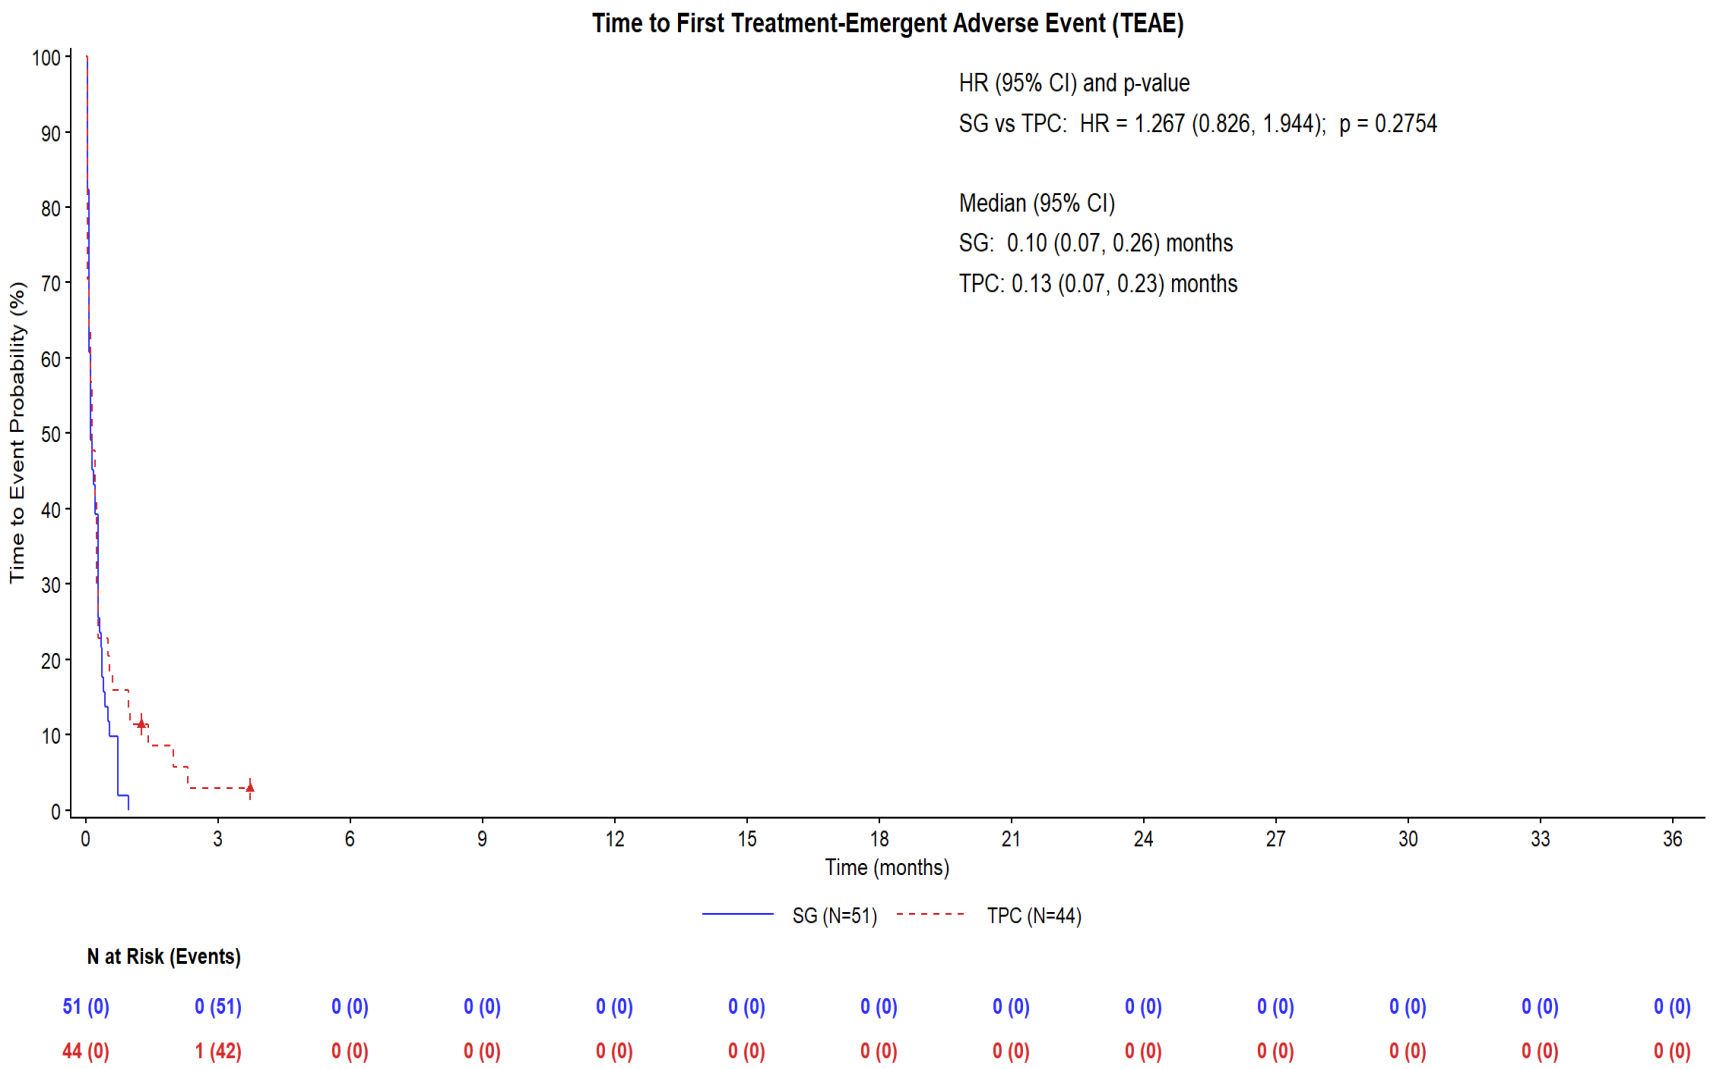


Two-sided p-value from the log-rank test stratified by the randomization stratification factors (STRAT1, STRAT2) from IWRS; hazard ratio from a Cox model adjusted for the same factors as covariates. SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.6. Figure 1.1.5: Kaplan-Meier Curve of PFS — Baseline ECOG status: 0 — mITT — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

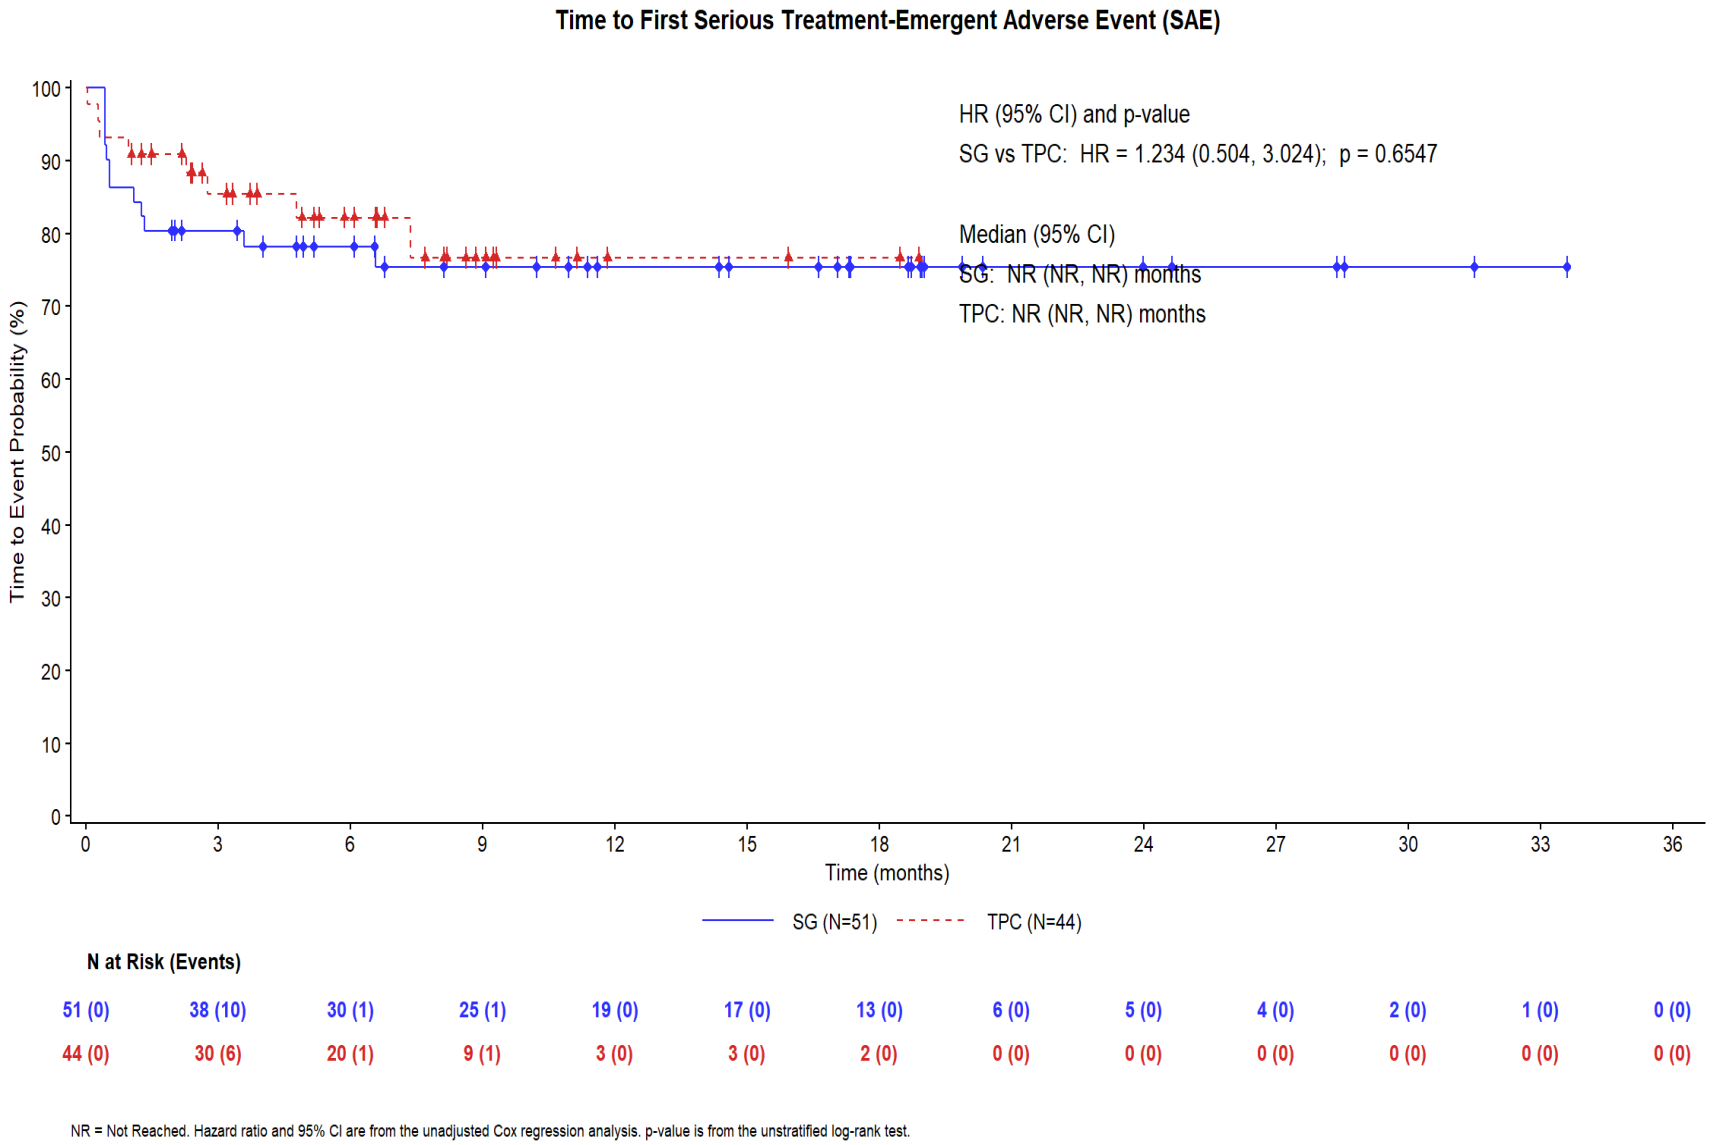
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.7. Figure 1.1.6: Kaplan-Meier Curve of PFS — Baseline ECOG status: 1 — mITT — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



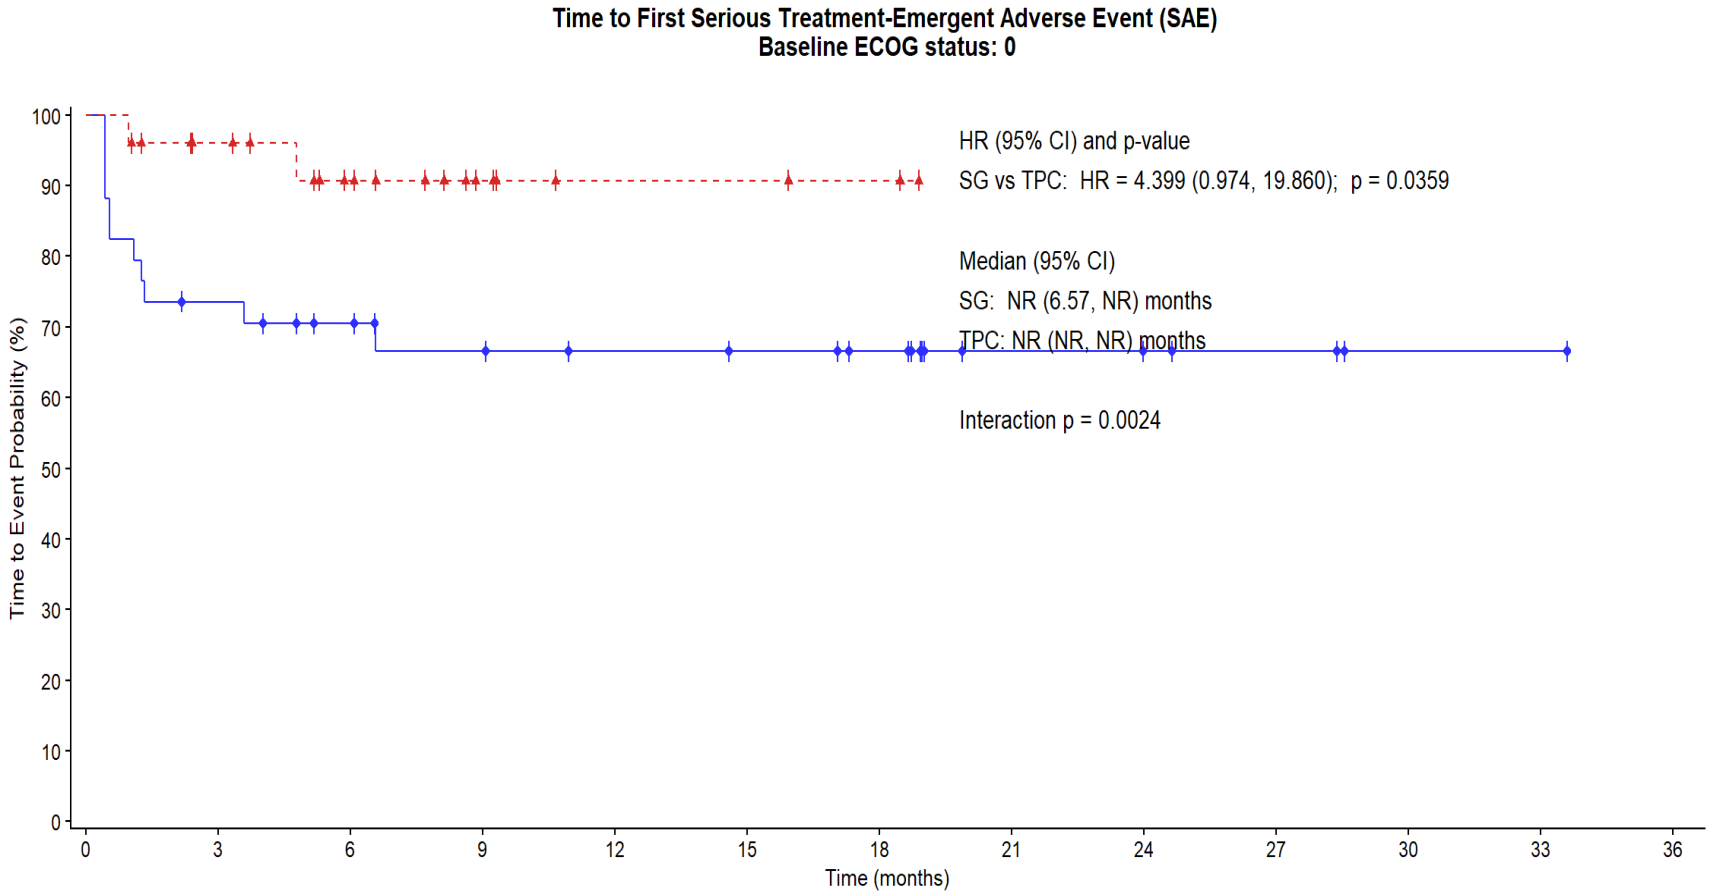
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

8. KM FIGURES — Safety



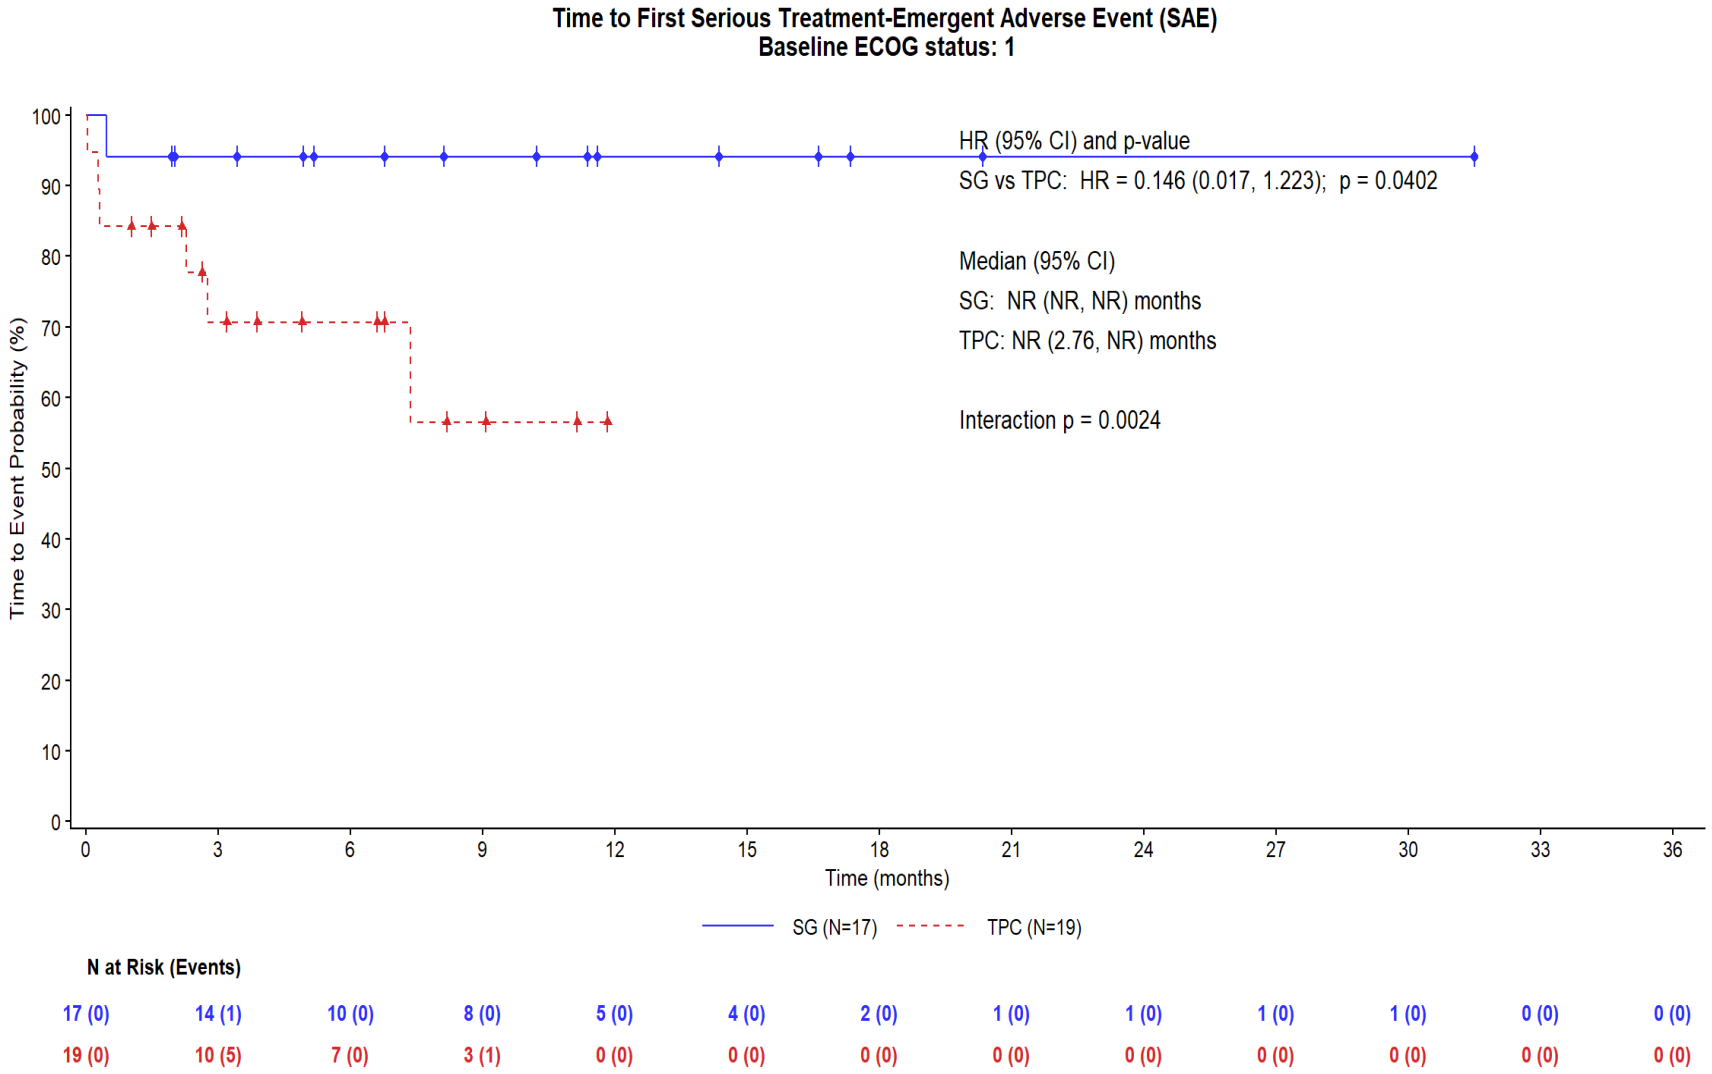
8.1. mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

8.2. Figure 1.1.1: Kaplan Meier Plot of Time to First TEAE — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



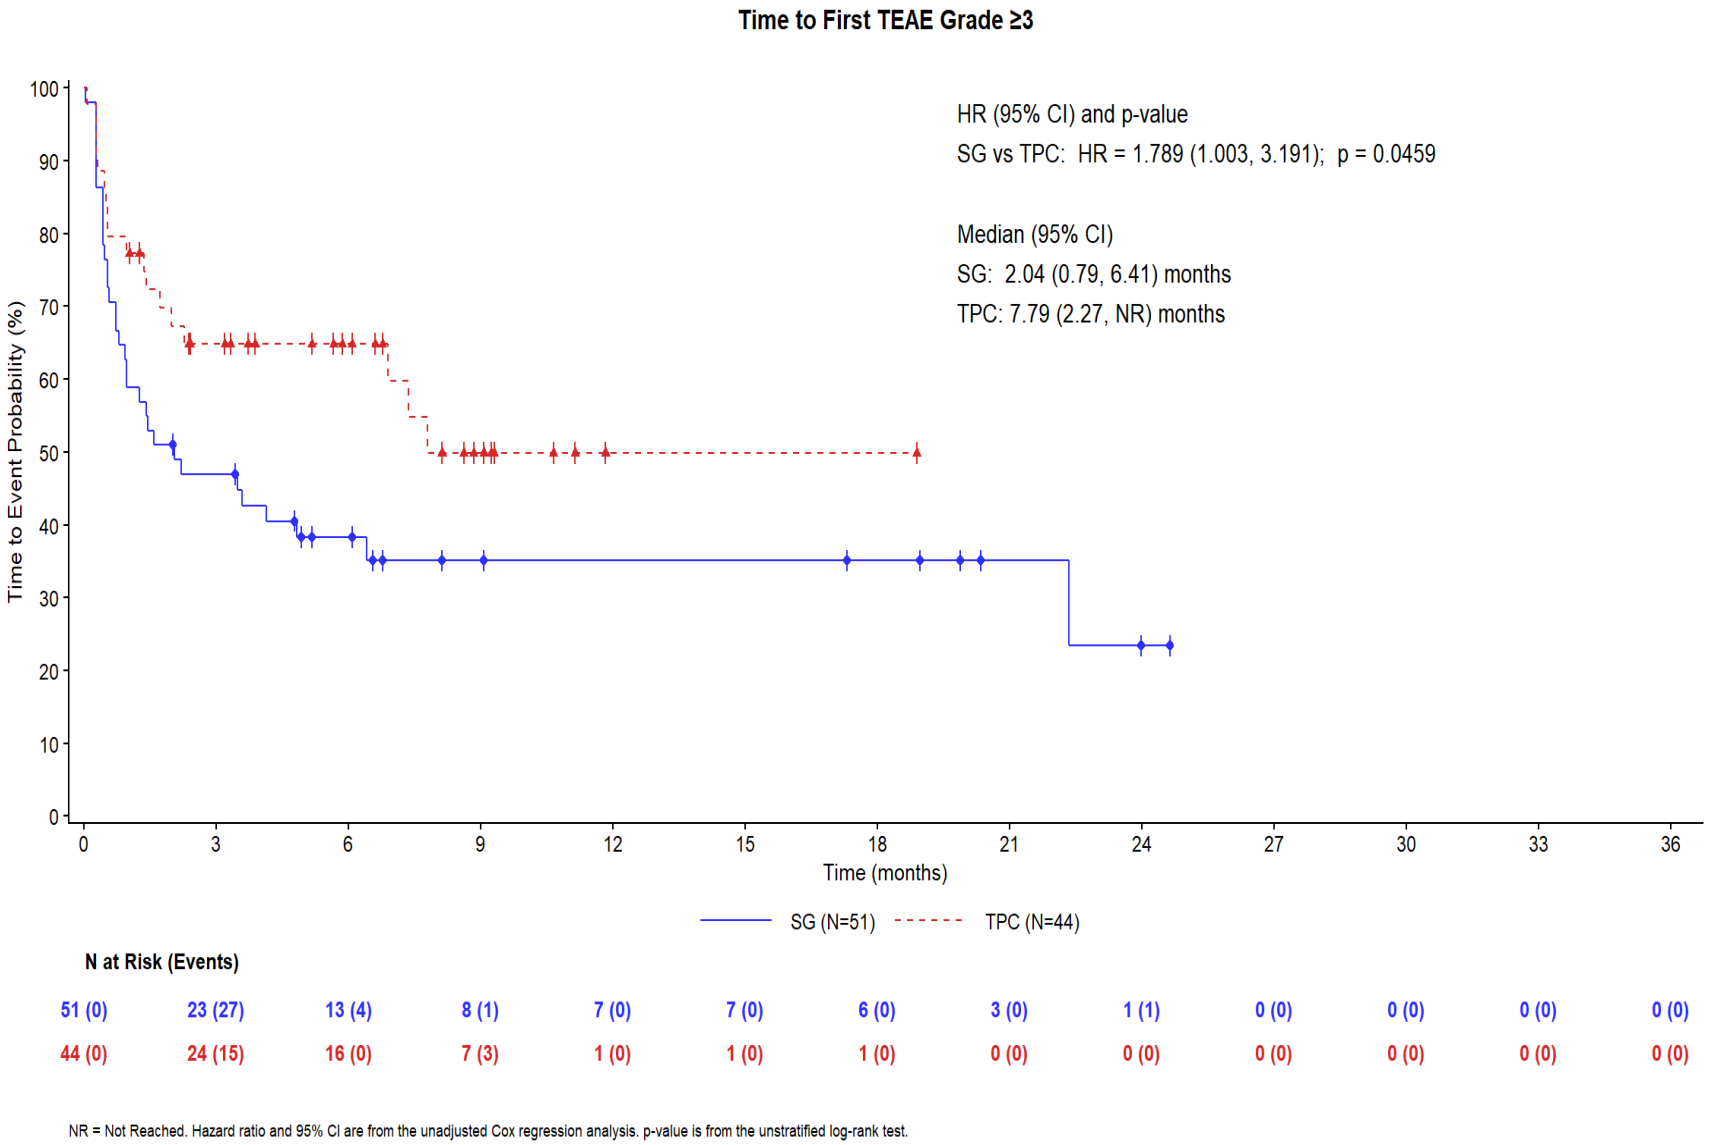
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.3. Figure 1.1.2: Kaplan Meier Plot of Time to First Serious TEAE (SAE) — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



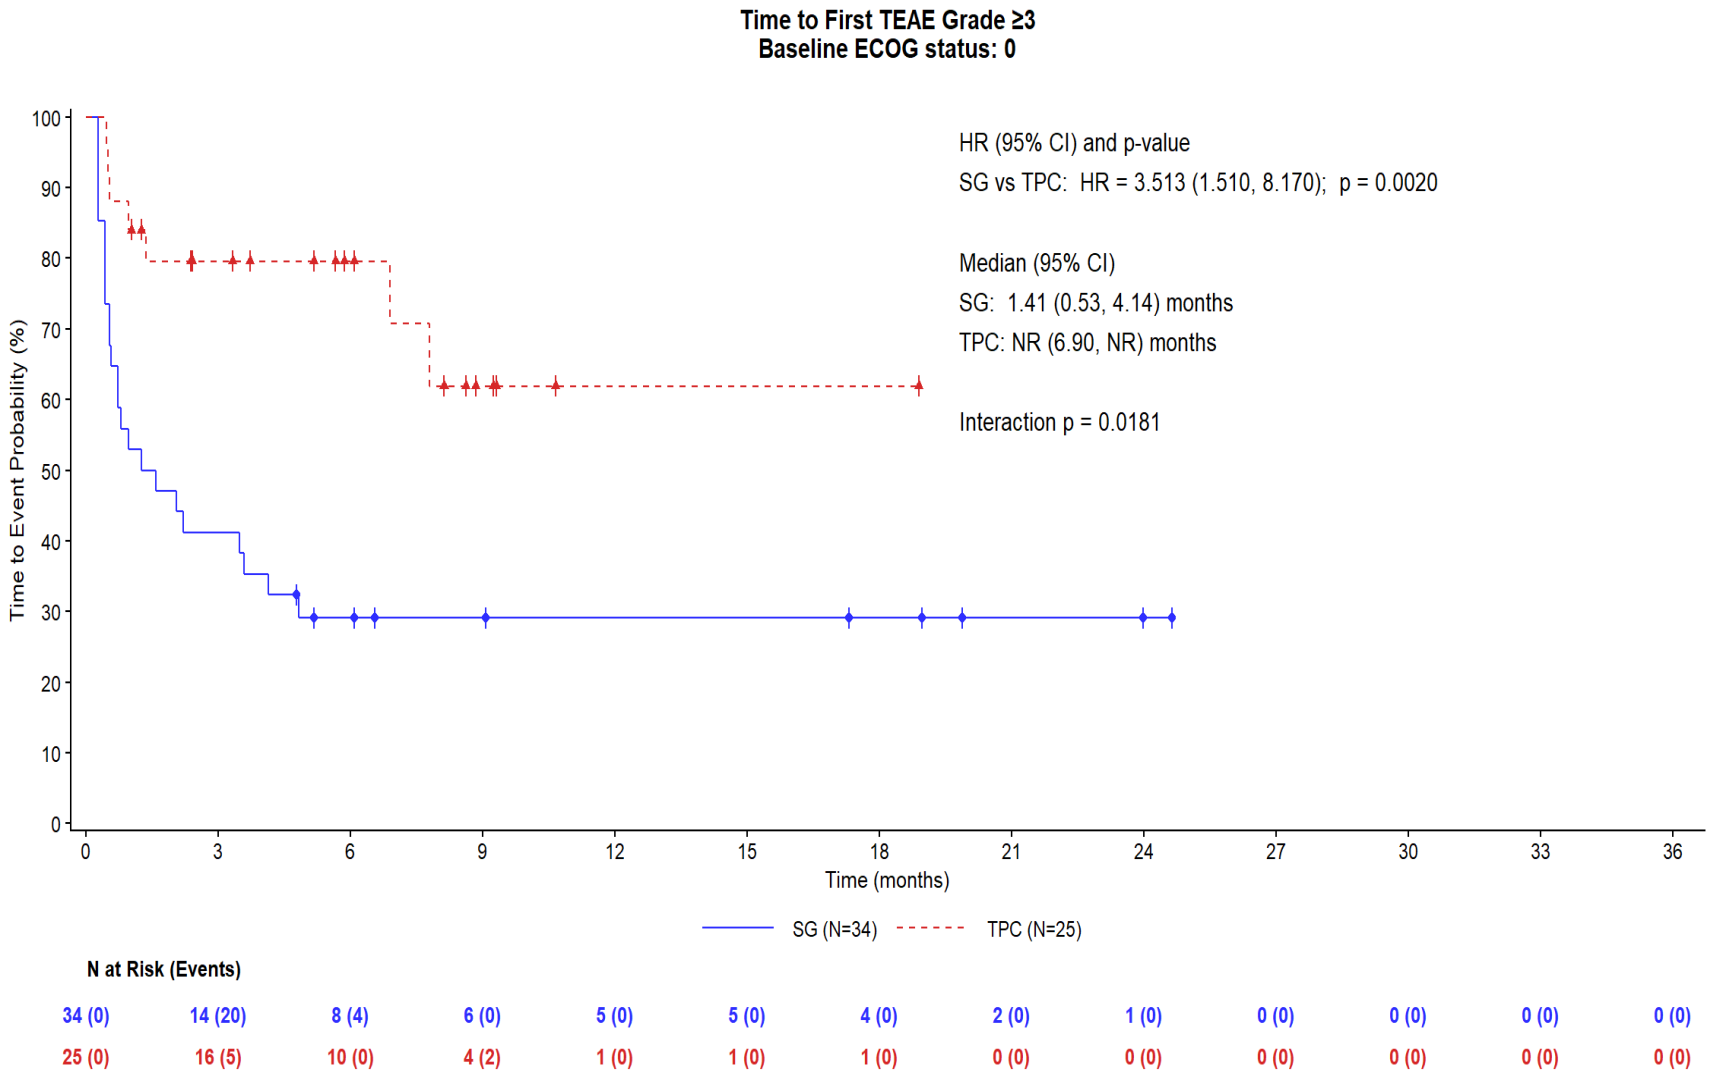
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.4. Figure 1.1.3: Kaplan Meier Plot of Time to First Serious TEAE (SAE) Baseline ECOG status 0 — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



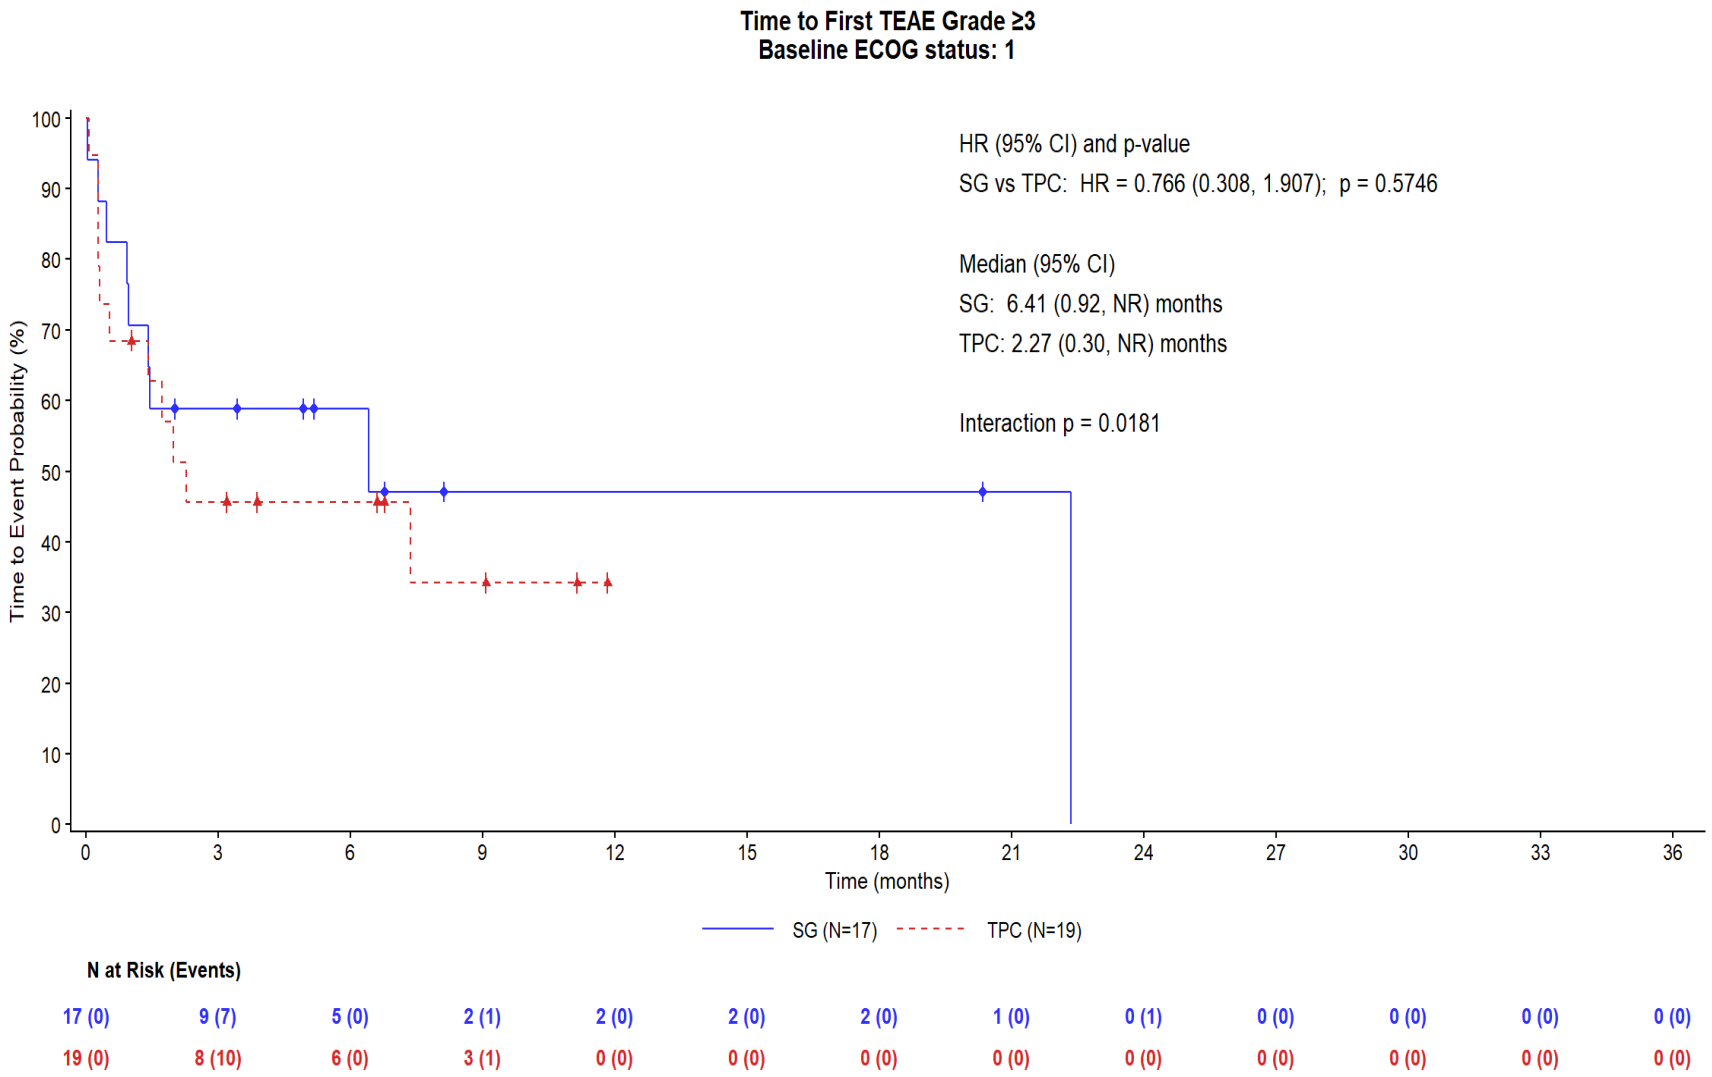
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.5. Figure 1.1.4: Kaplan Meier Plot of Time to First Serious TEAE (SAE) Baseline ECOG status 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



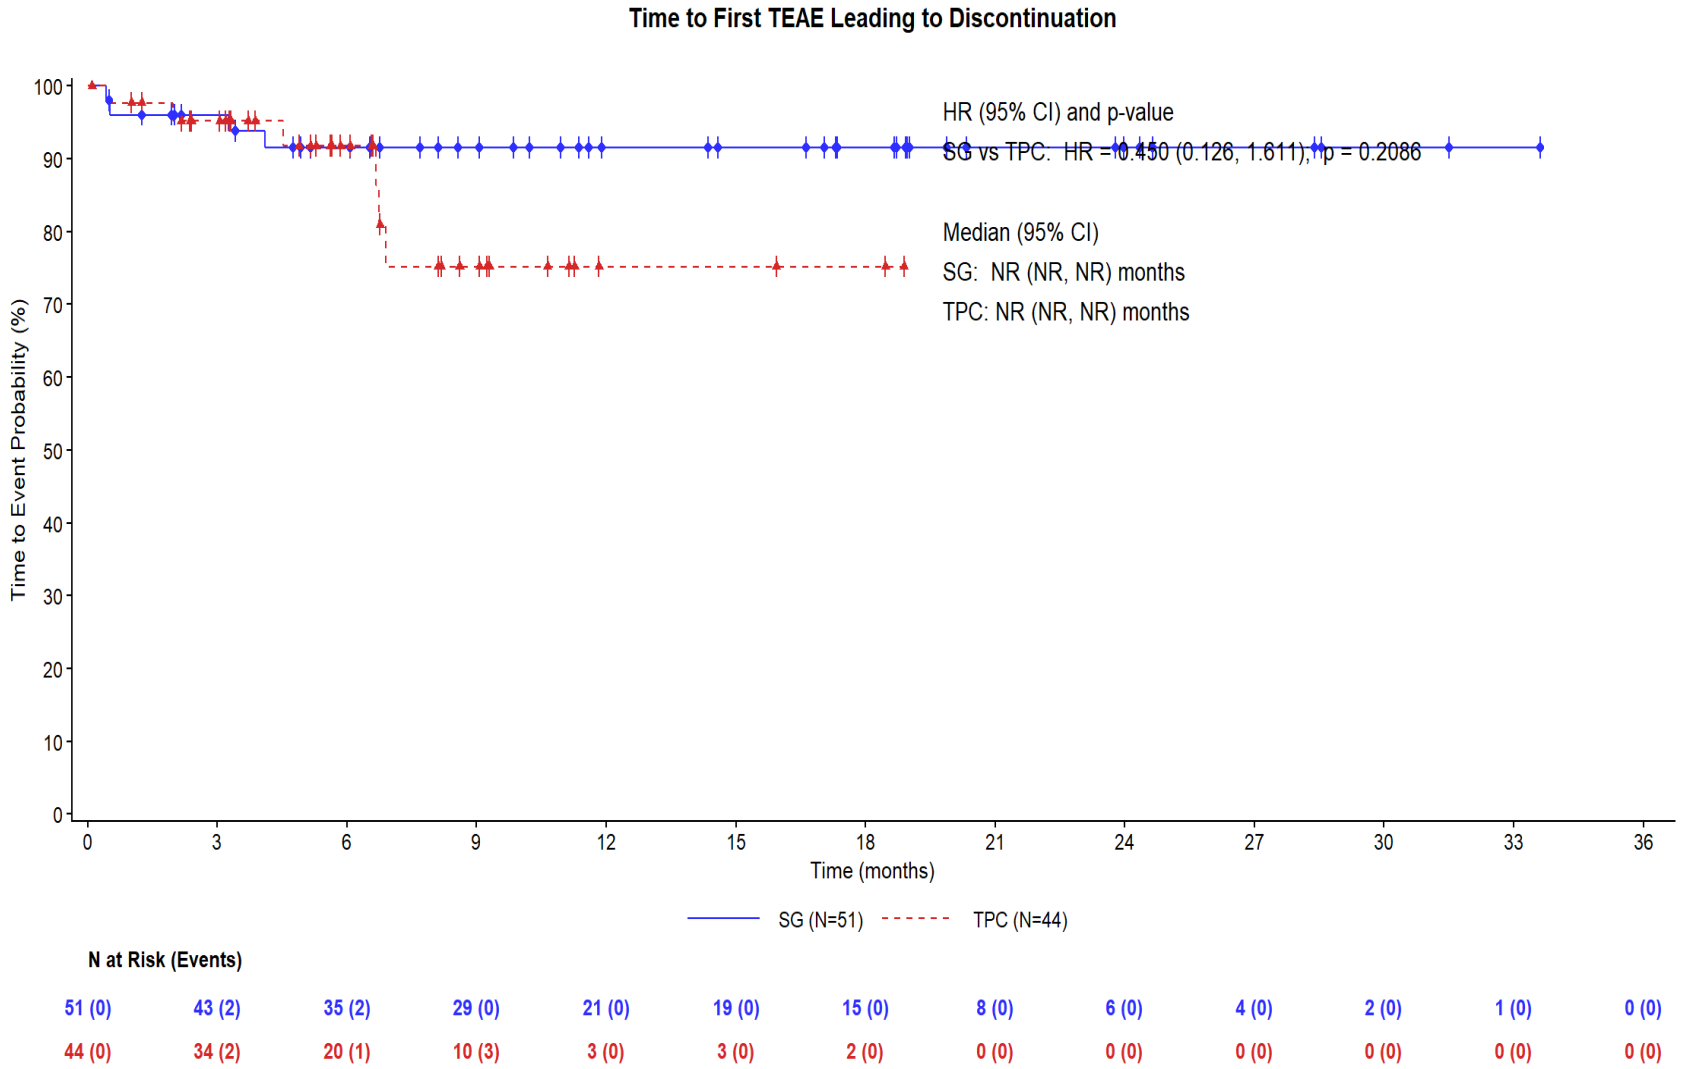
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.6. Figure 1.1.5: Kaplan Meier Plot of Time to First TEAE Grade 3 or higher — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



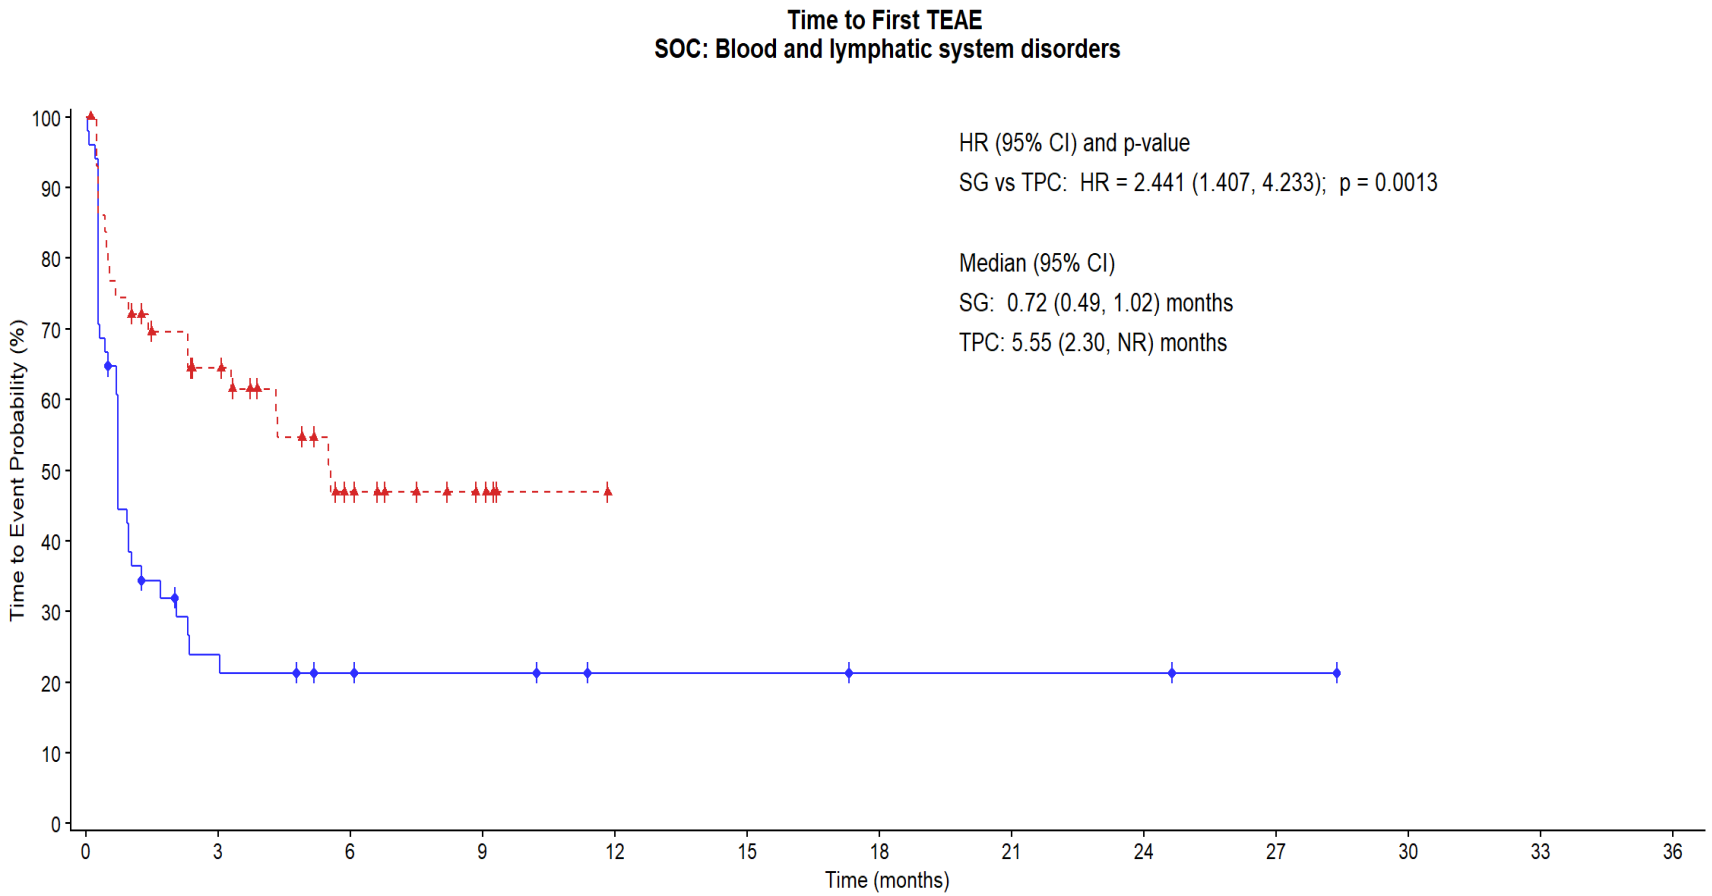
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.7. Figure 1.1.6: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) Baseline ECOG status 0 — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



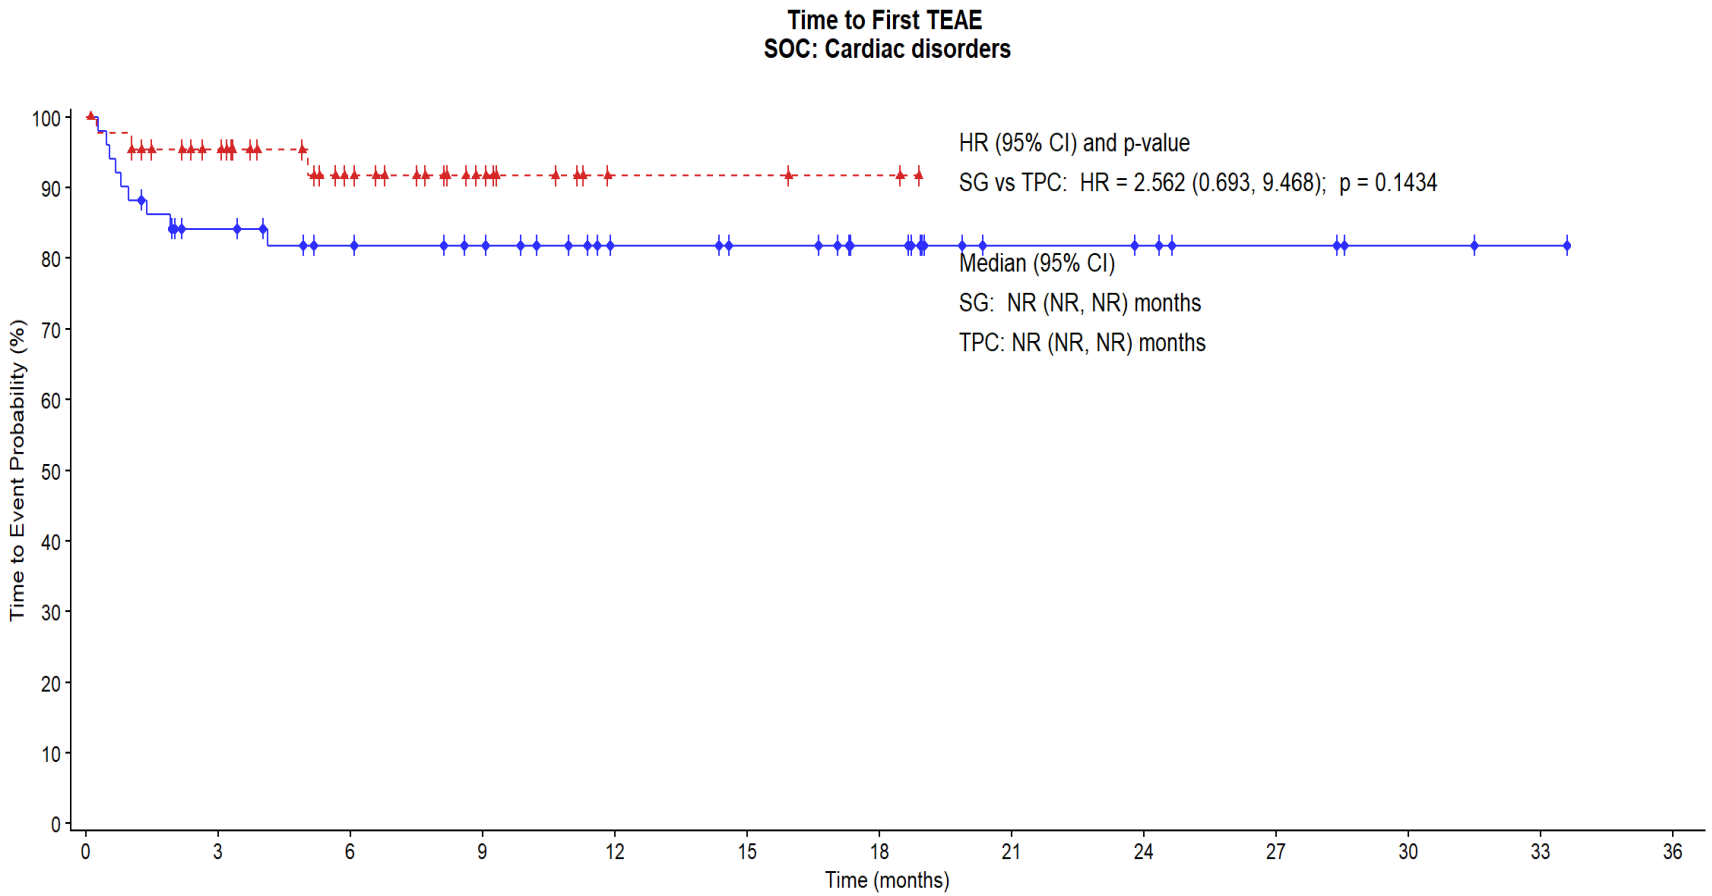
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.8. Figure 1.1.7: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) Baseline ECOG status 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



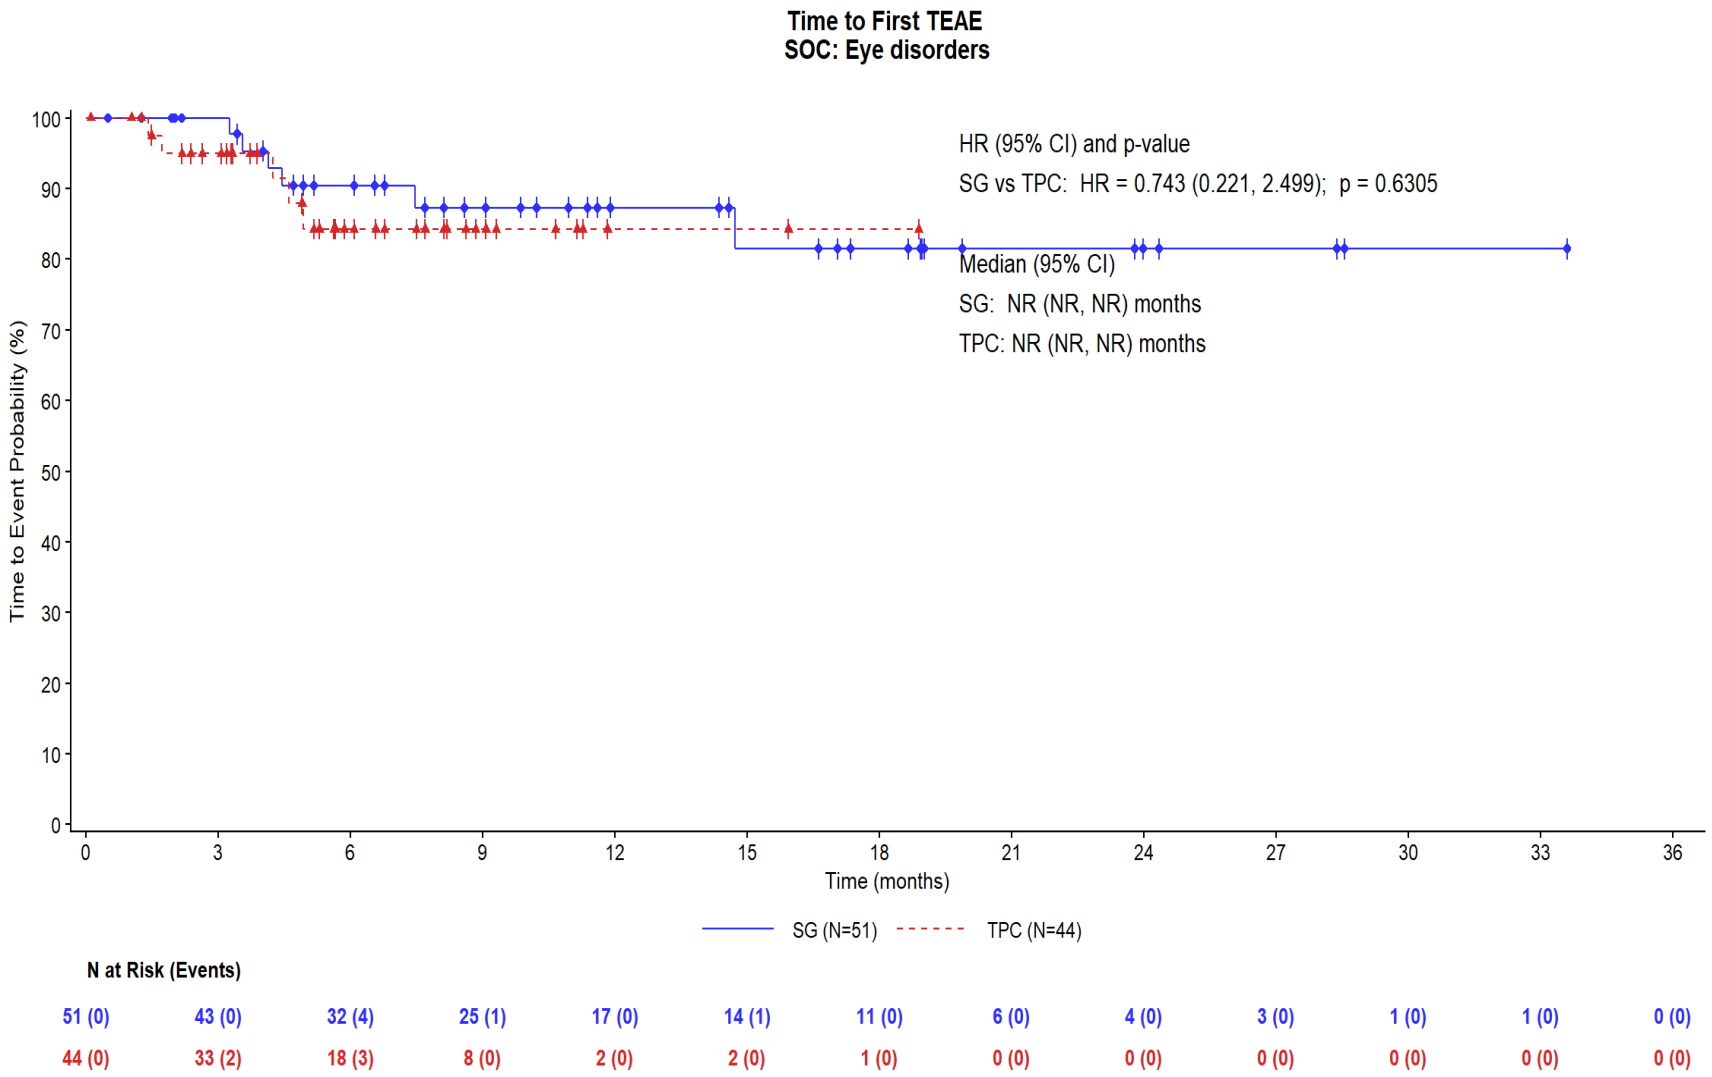
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.9. Figure 1.1.8: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



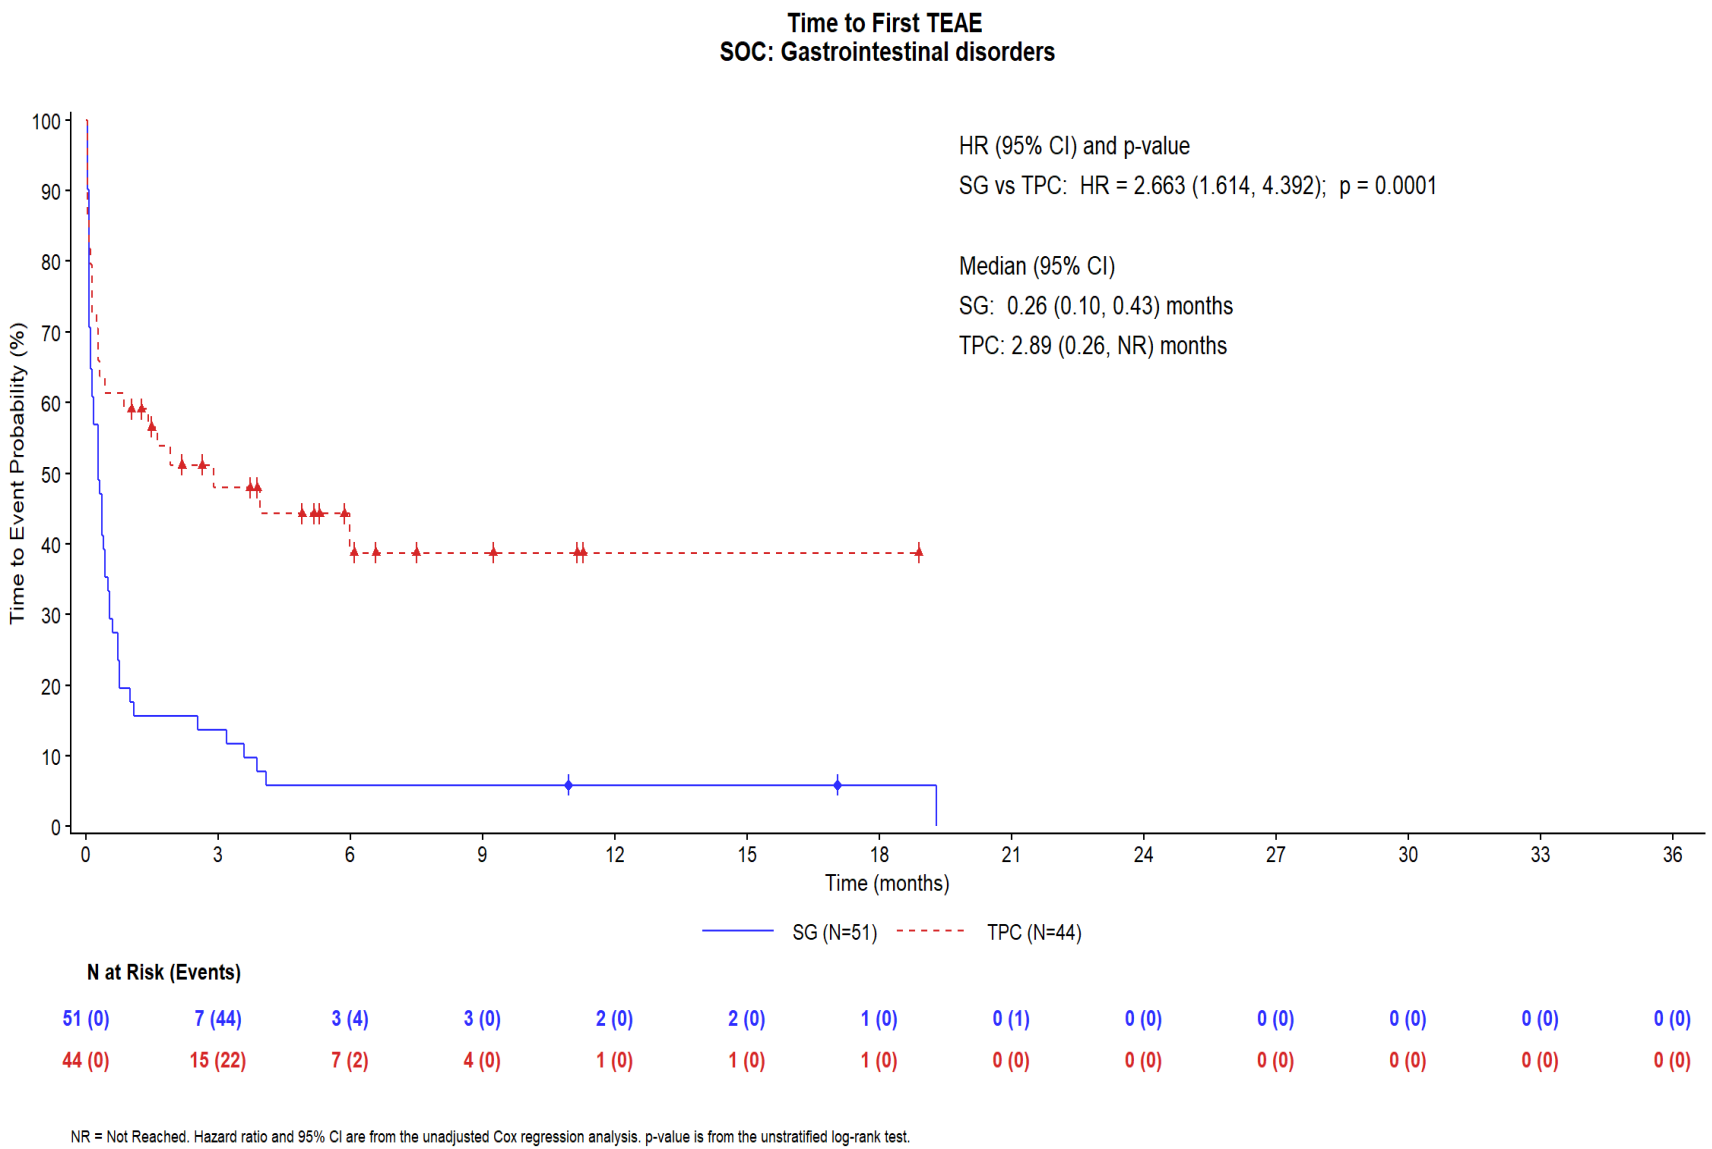
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.10. Figure 1.1.9: Kaplan Meier Plot of Time to First TEAE by SOC Blood and lymphatic system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



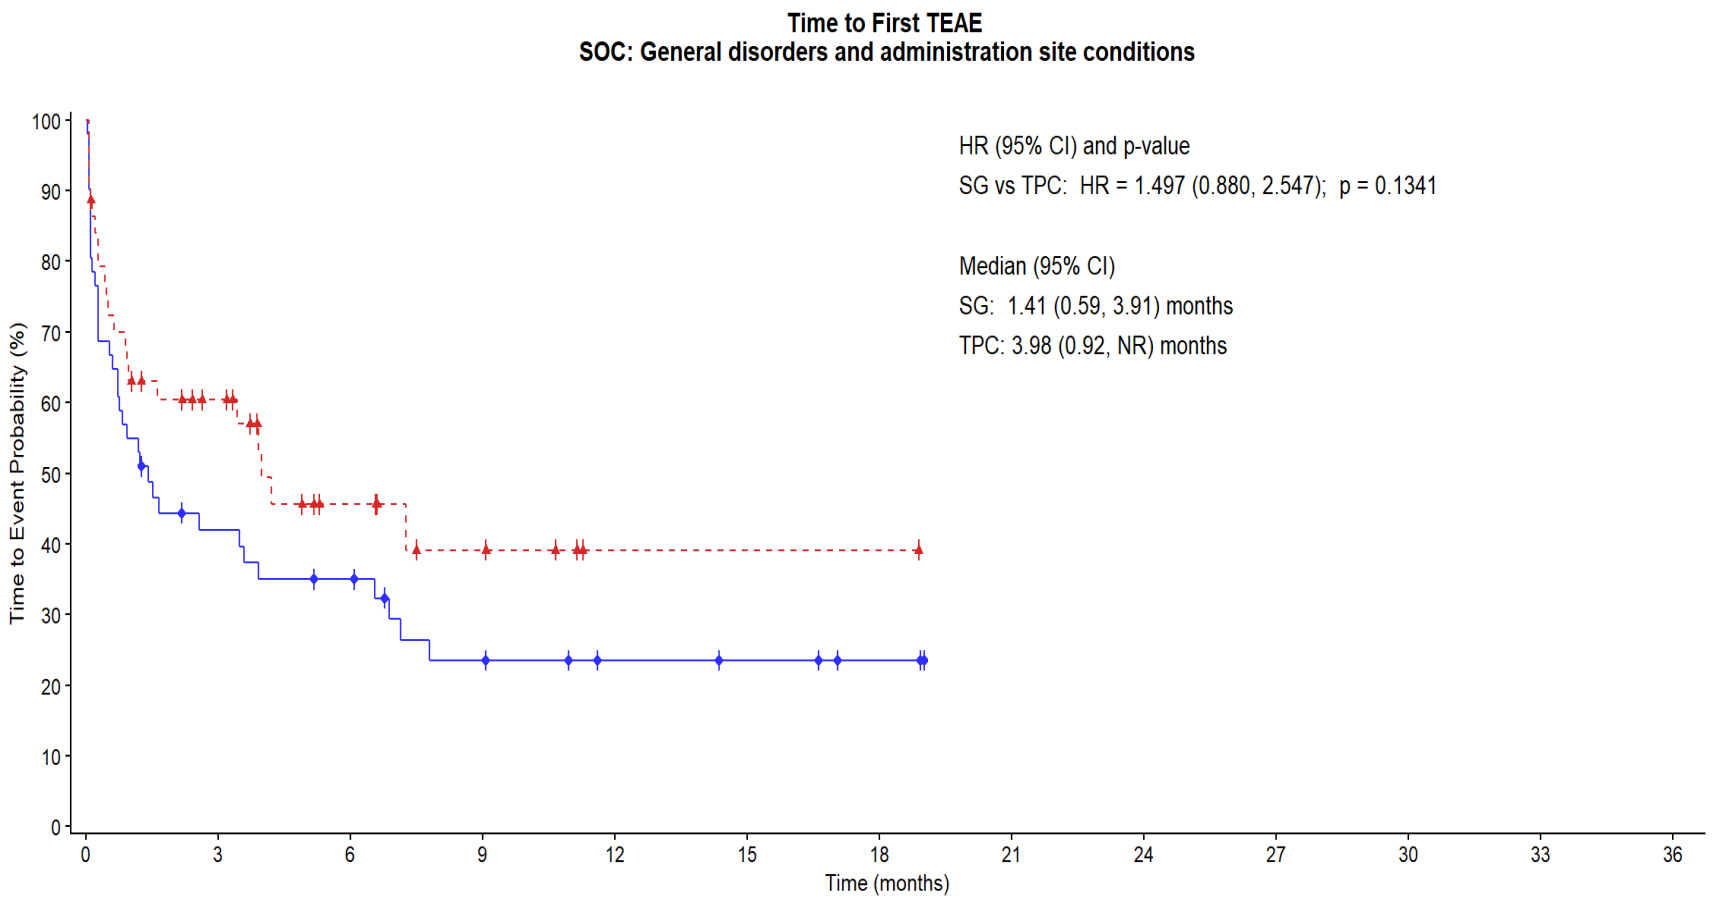
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.11. Figure 1.1.10: Kaplan Meier Plot of Time to First TEAE by SOC Cardiac disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



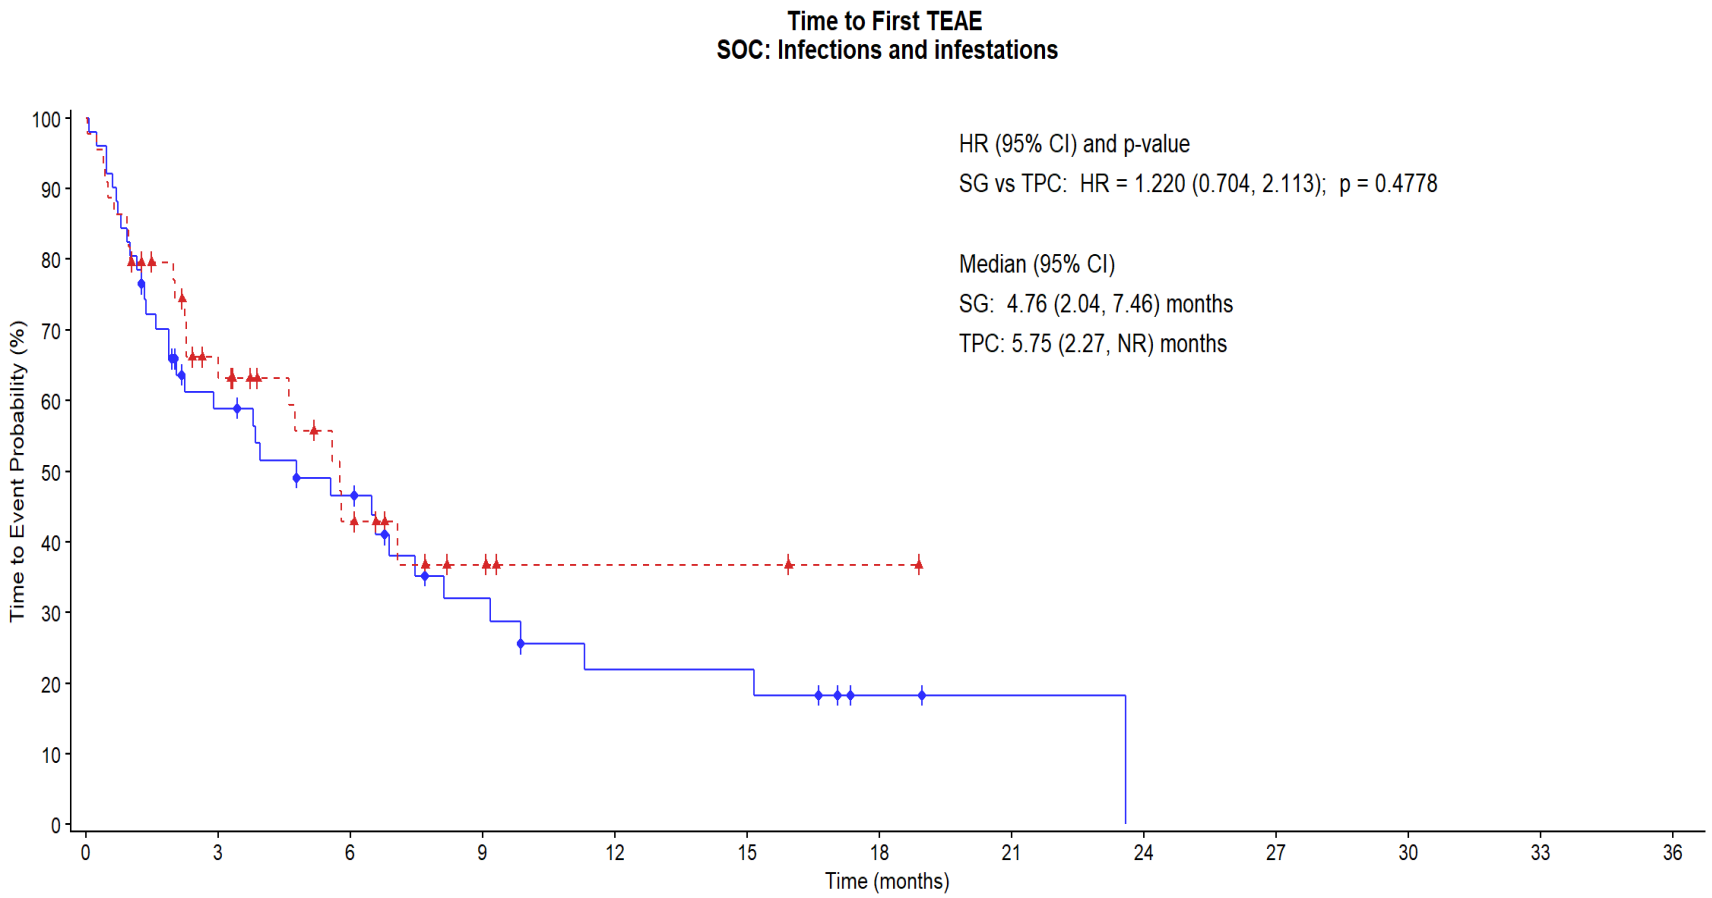
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.12. Figure 1.1.11: Kaplan Meier Plot of Time to First TEAE by SOC Eye disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



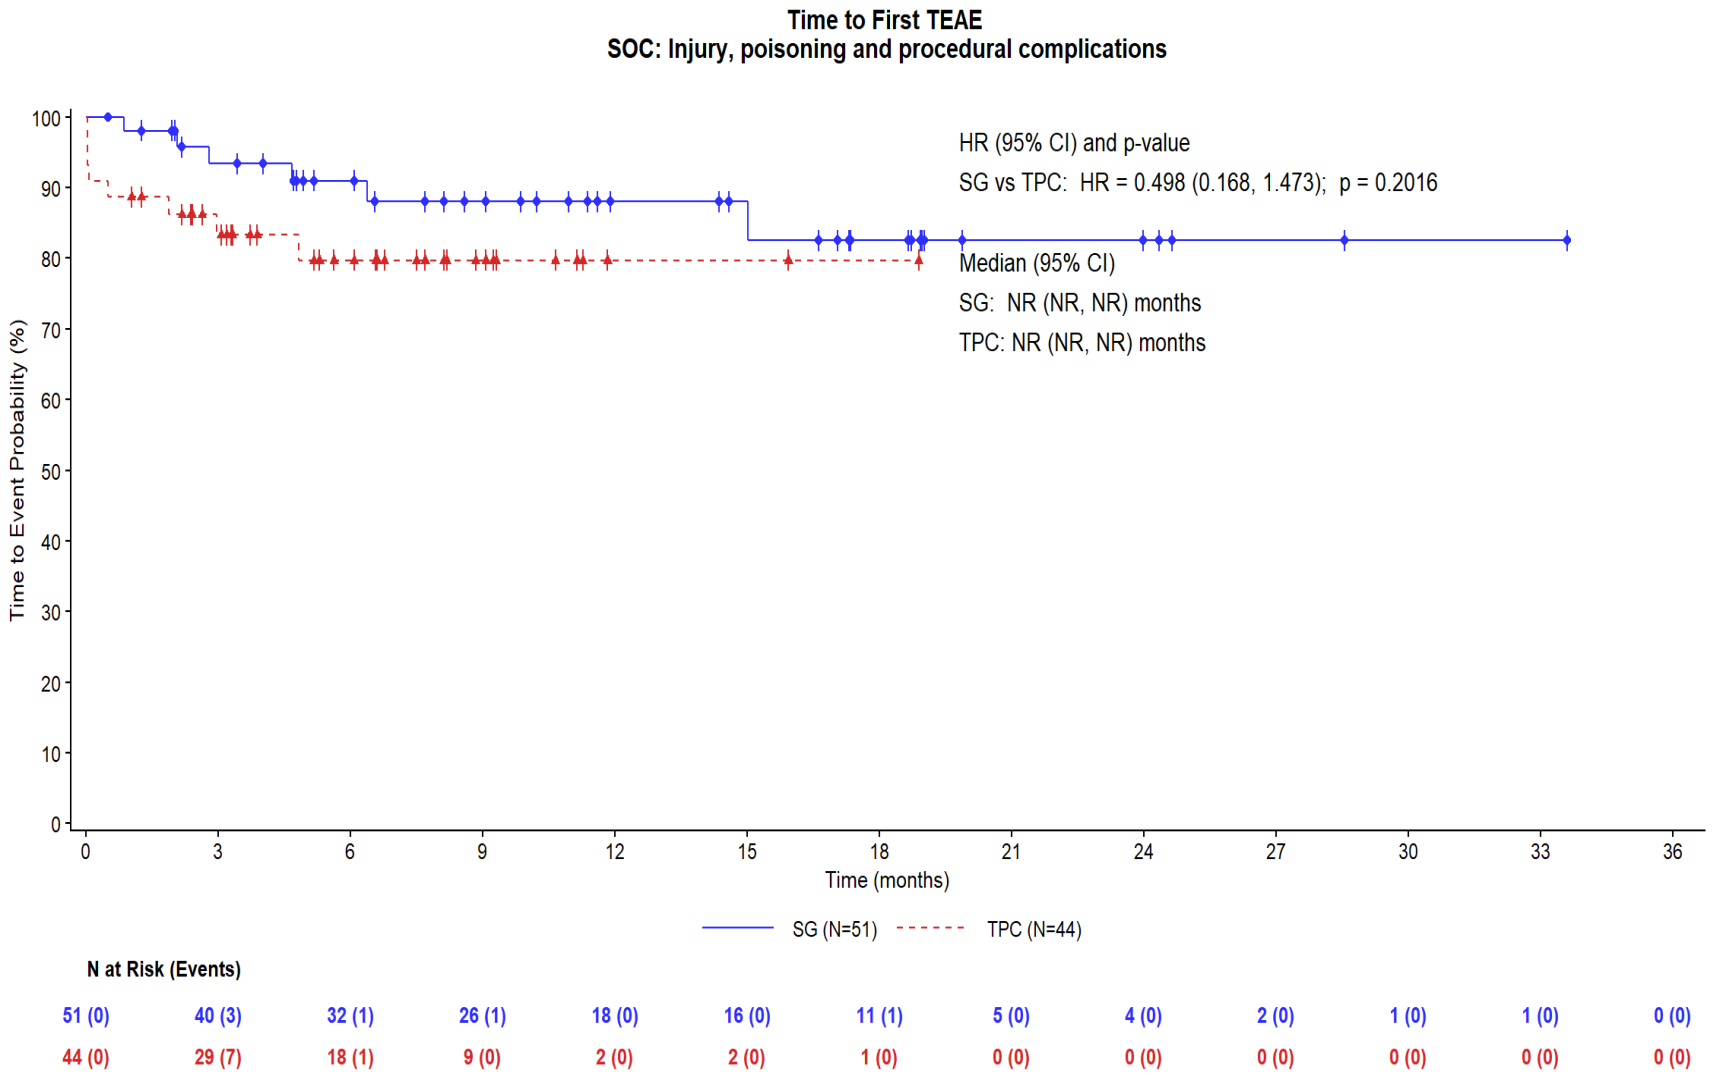
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.13. Figure 1.1.12: Kaplan Meier Plot of Time to First TEAE by SOC Gastrointestinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



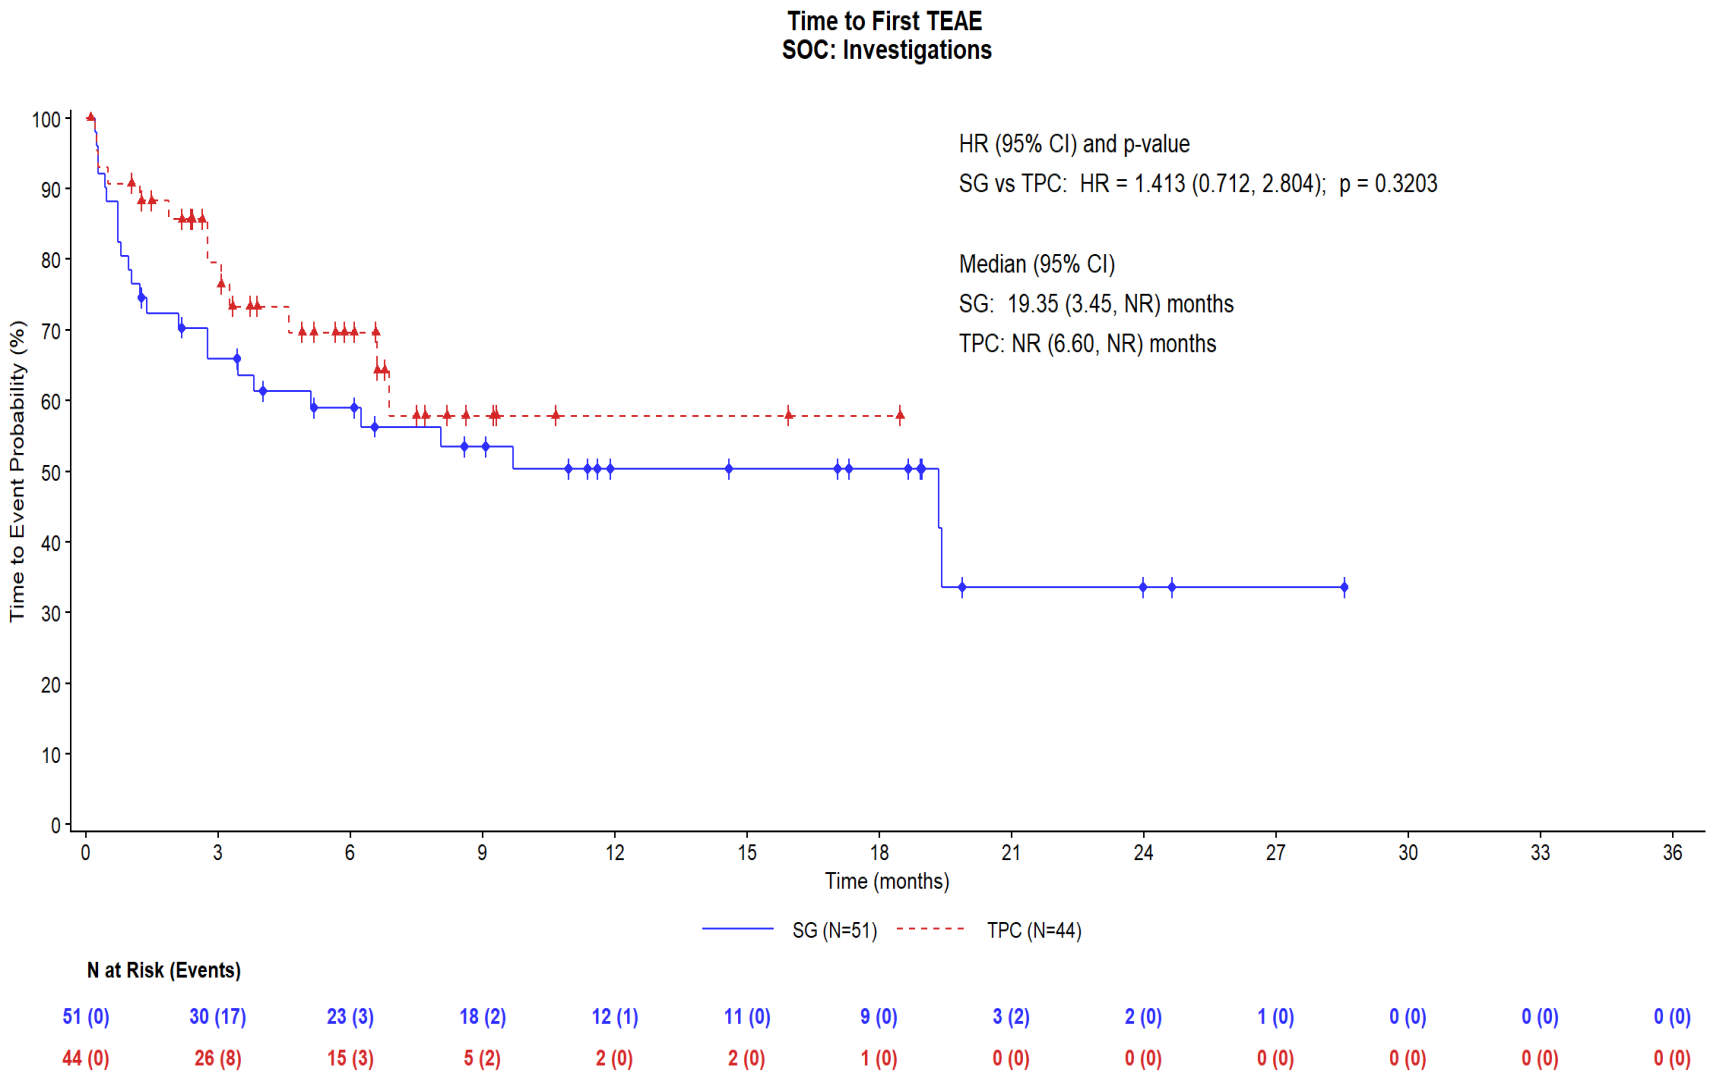
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.14. Figure 1.1.13: Kaplan Meier Plot of Time to First TEAE by SOC General disorders and administration site conditions — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



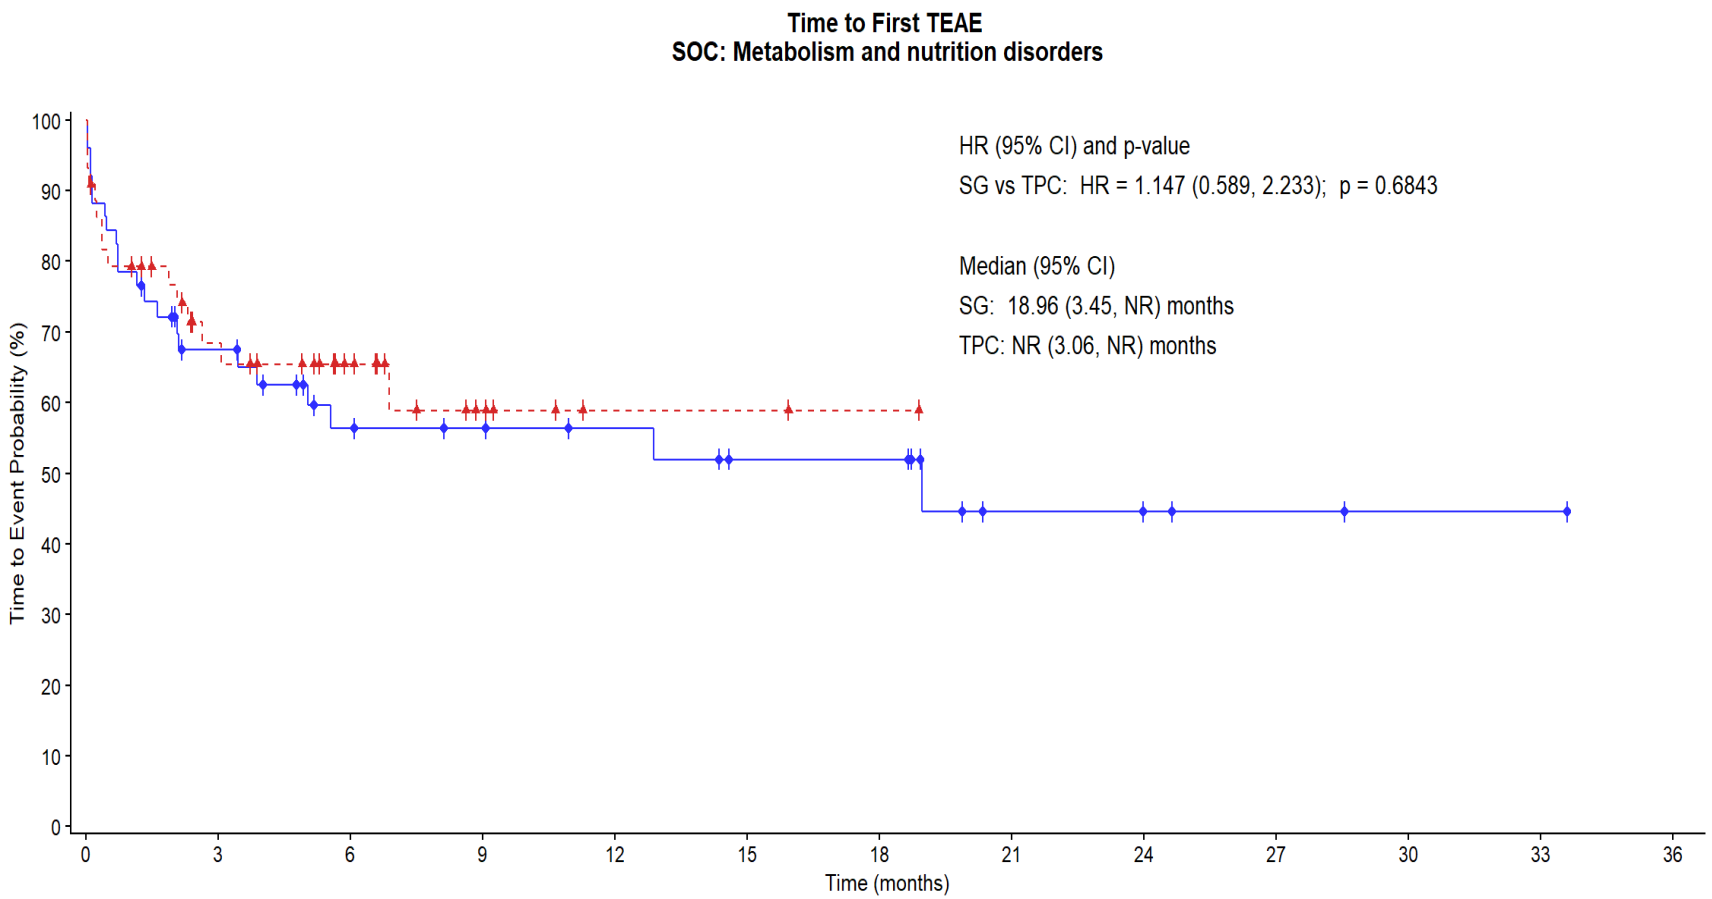
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.15. Figure 1.1.14: Kaplan Meier Plot of Time to First TEAE by SOC Infections and infestations — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



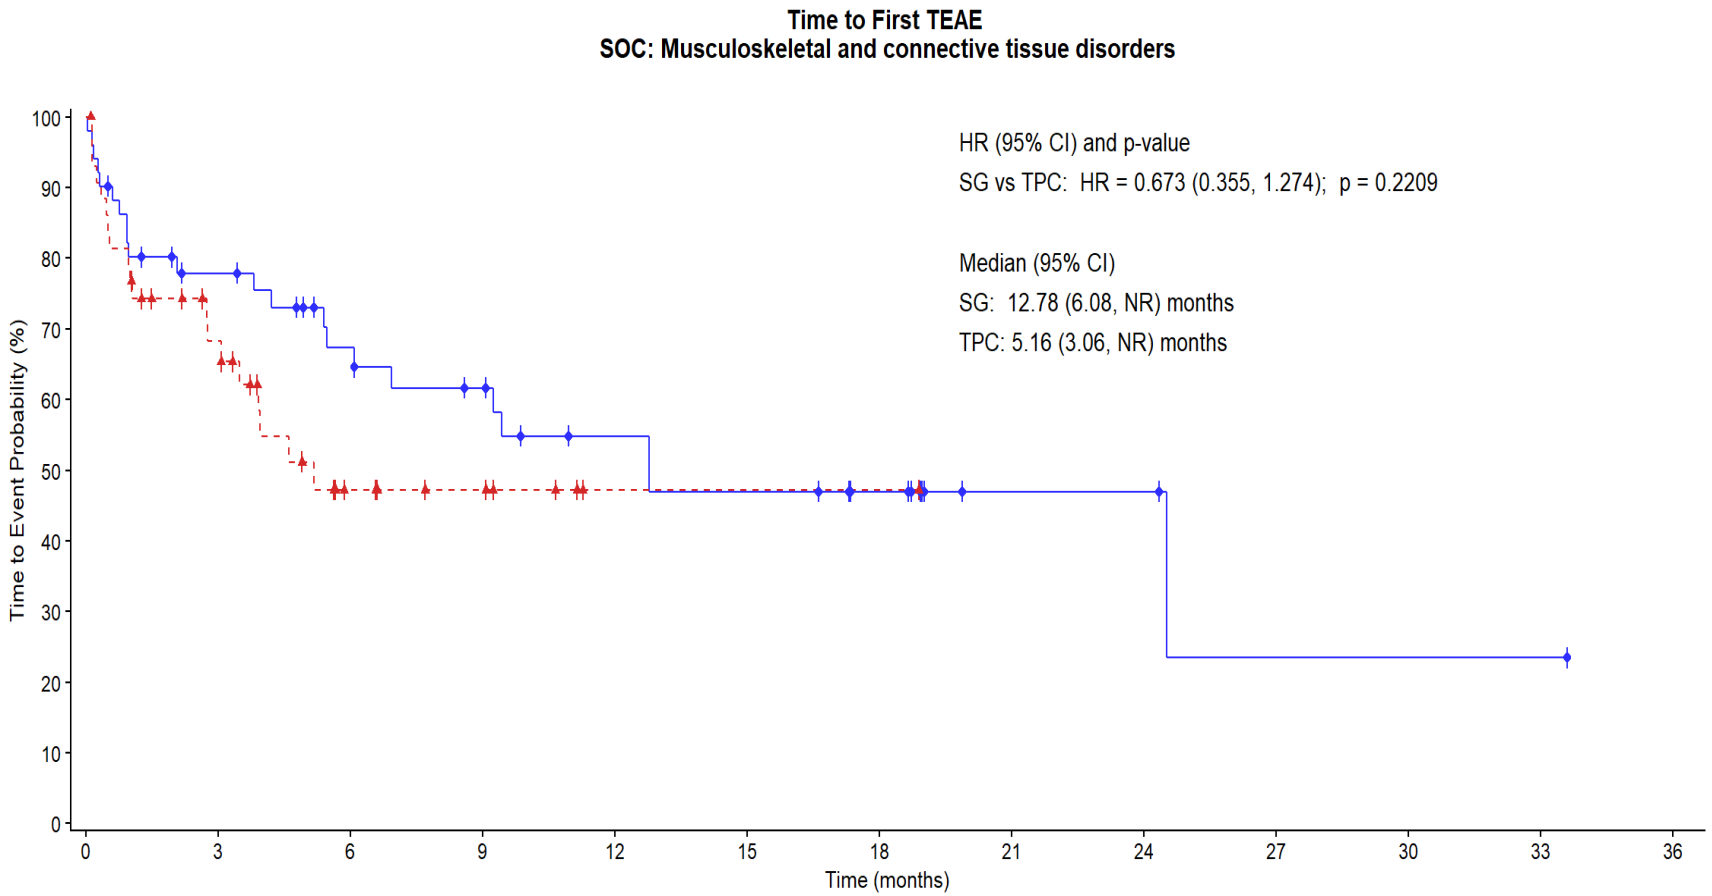
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.16. Figure 1.1.15: Kaplan Meier Plot of Time to First TEAE by SOC Injury poisoning and procedural complications — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



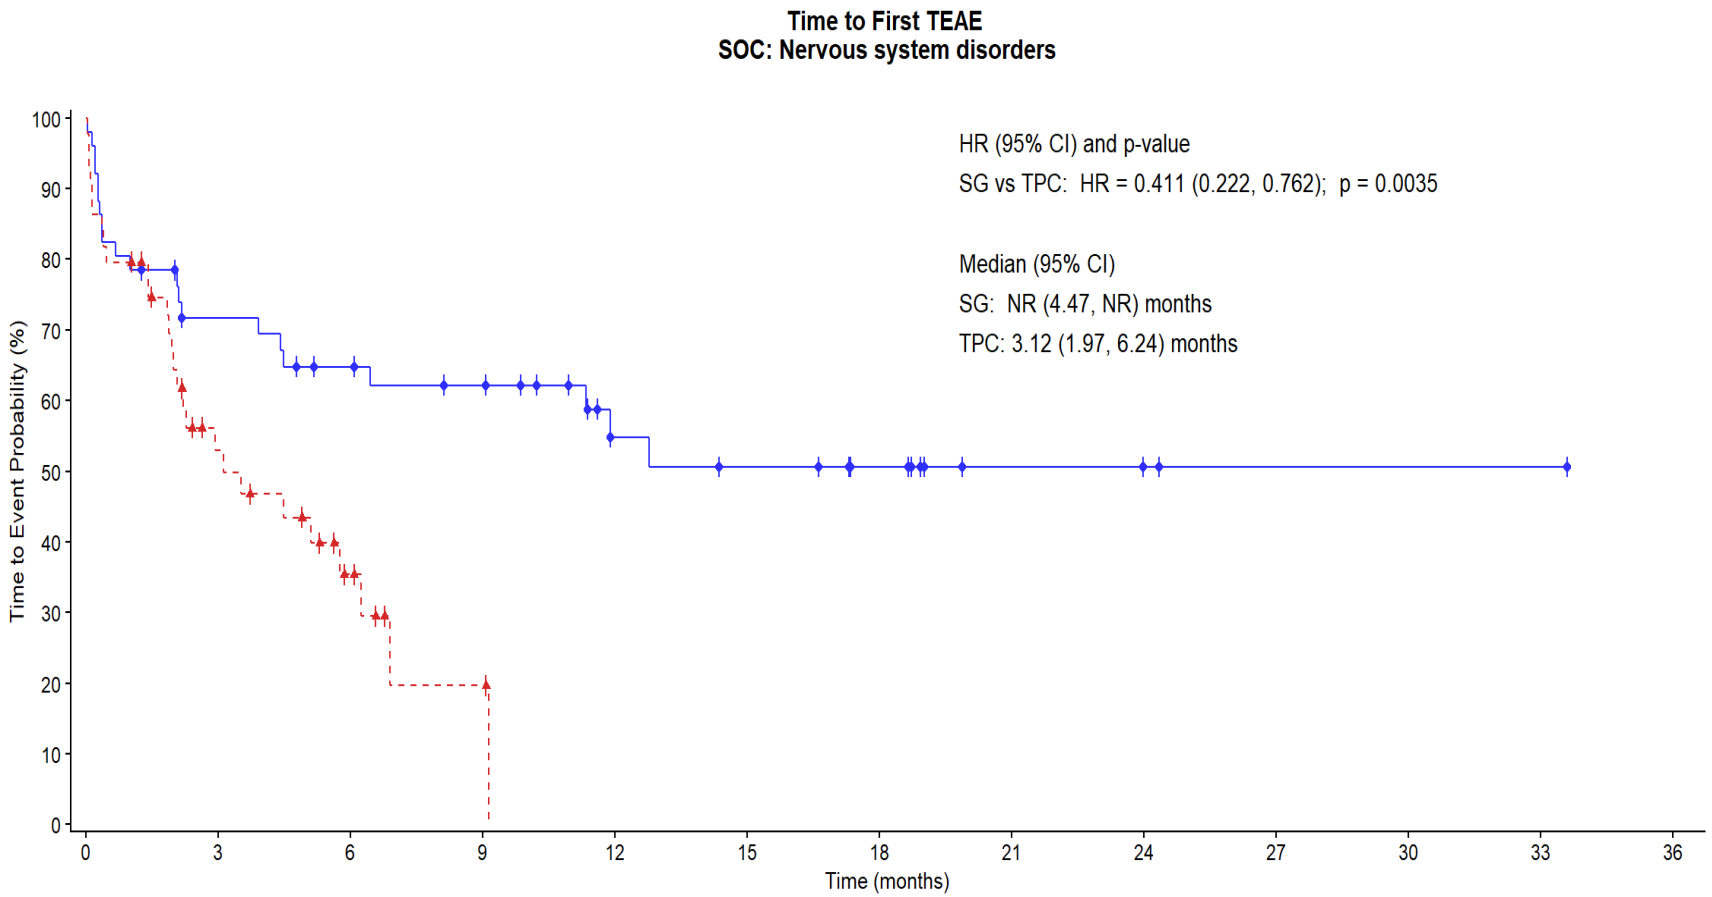
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.17. Figure 1.1.16: Kaplan Meier Plot of Time to First TEAE by SOC Investigations — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



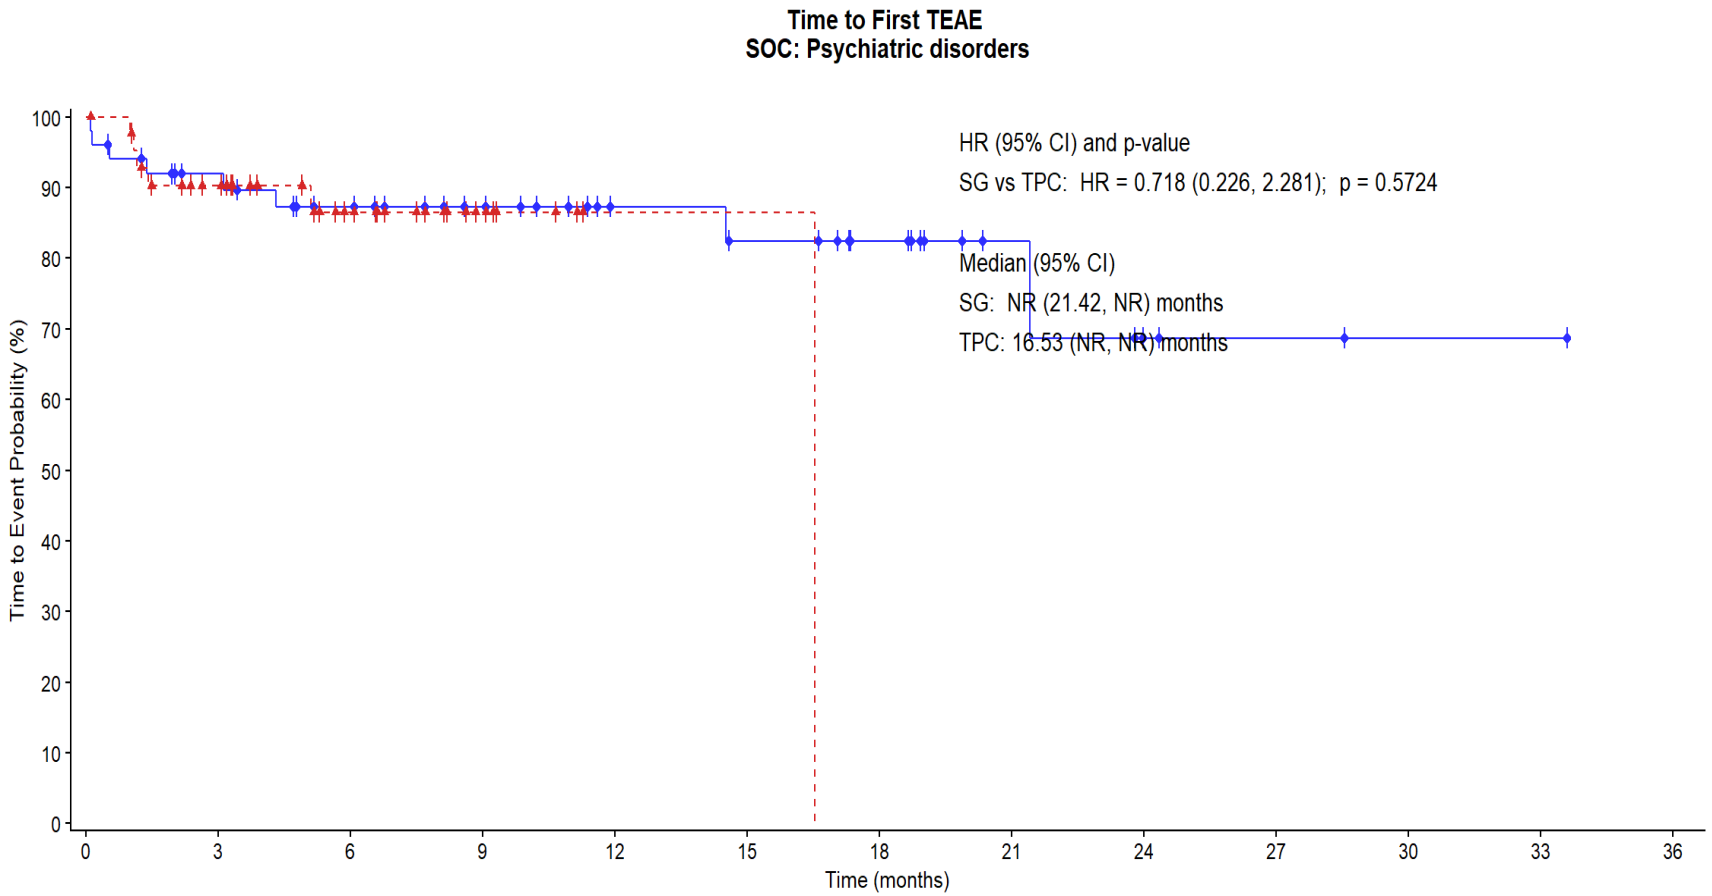
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.18. Figure 1.1.17: Kaplan Meier Plot of Time to First TEAE by SOC Metabolism and nutrition disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



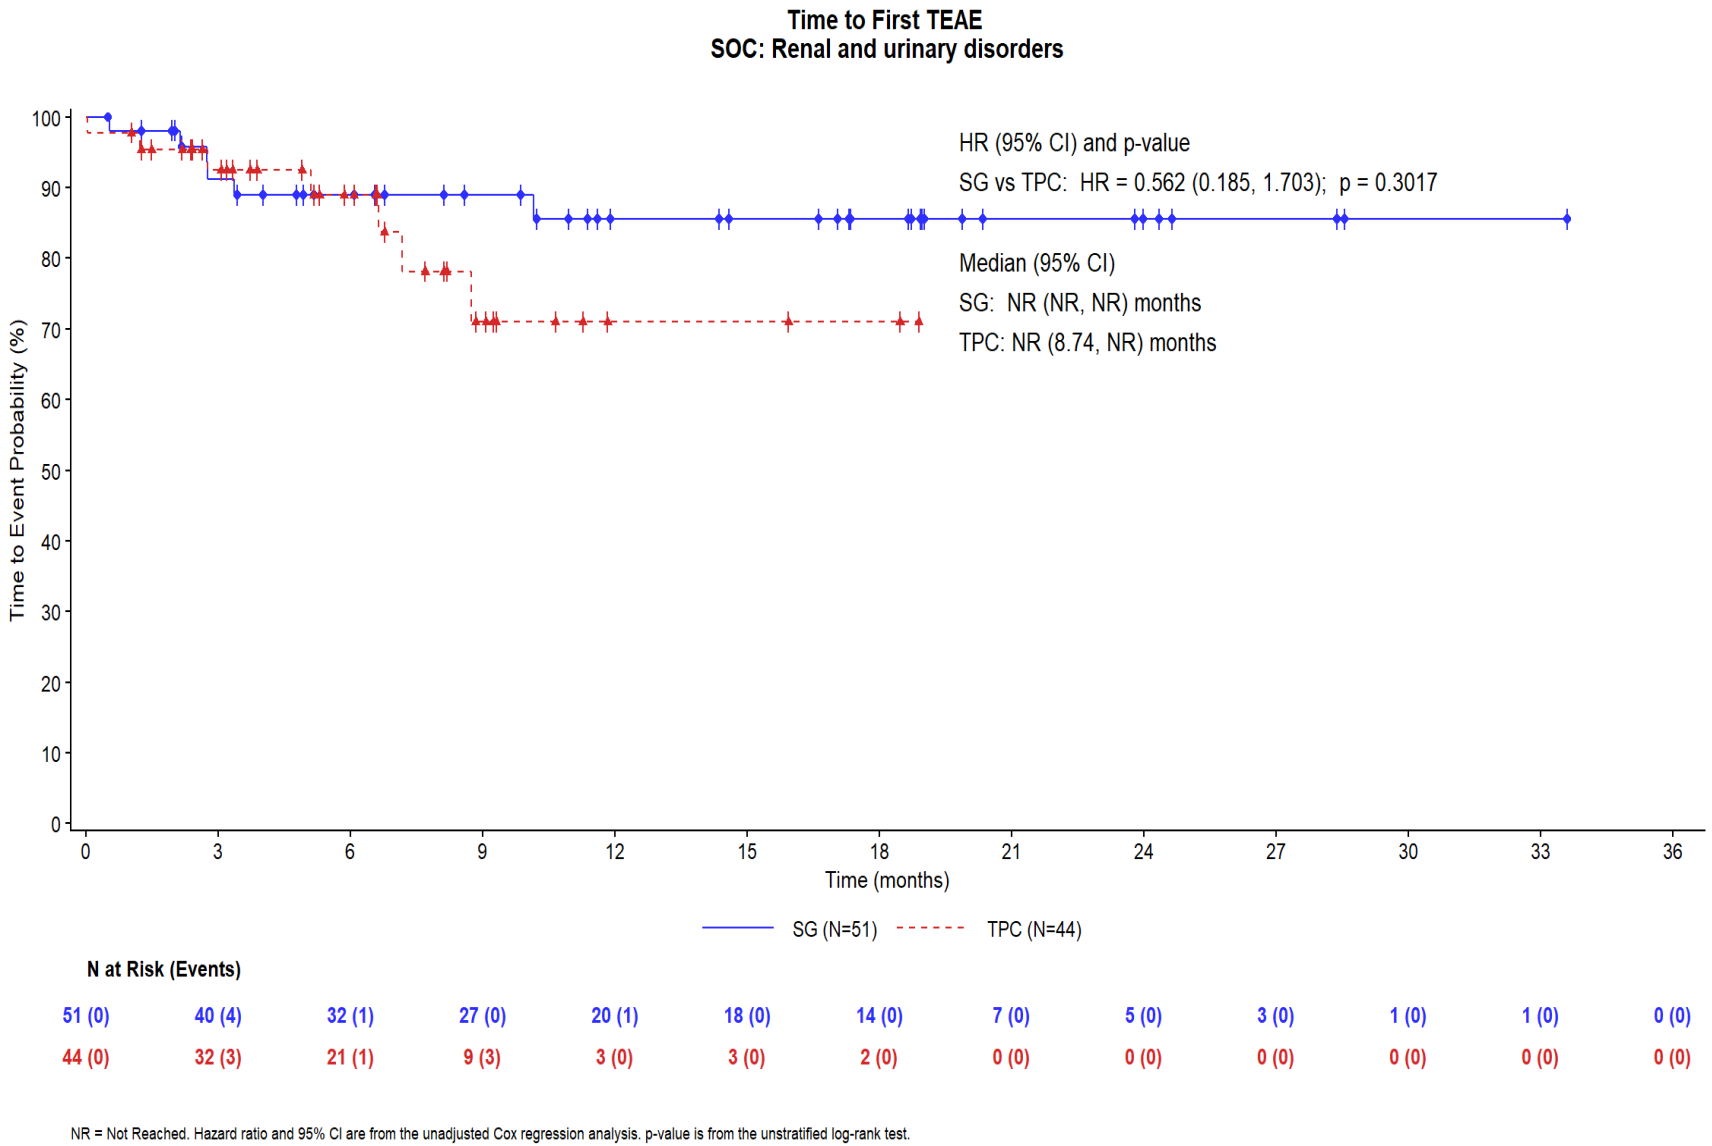
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.19. Figure 1.1.18: Kaplan Meier Plot of Time to First TEAE by SOC Musculoskeletal and connective tissue disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



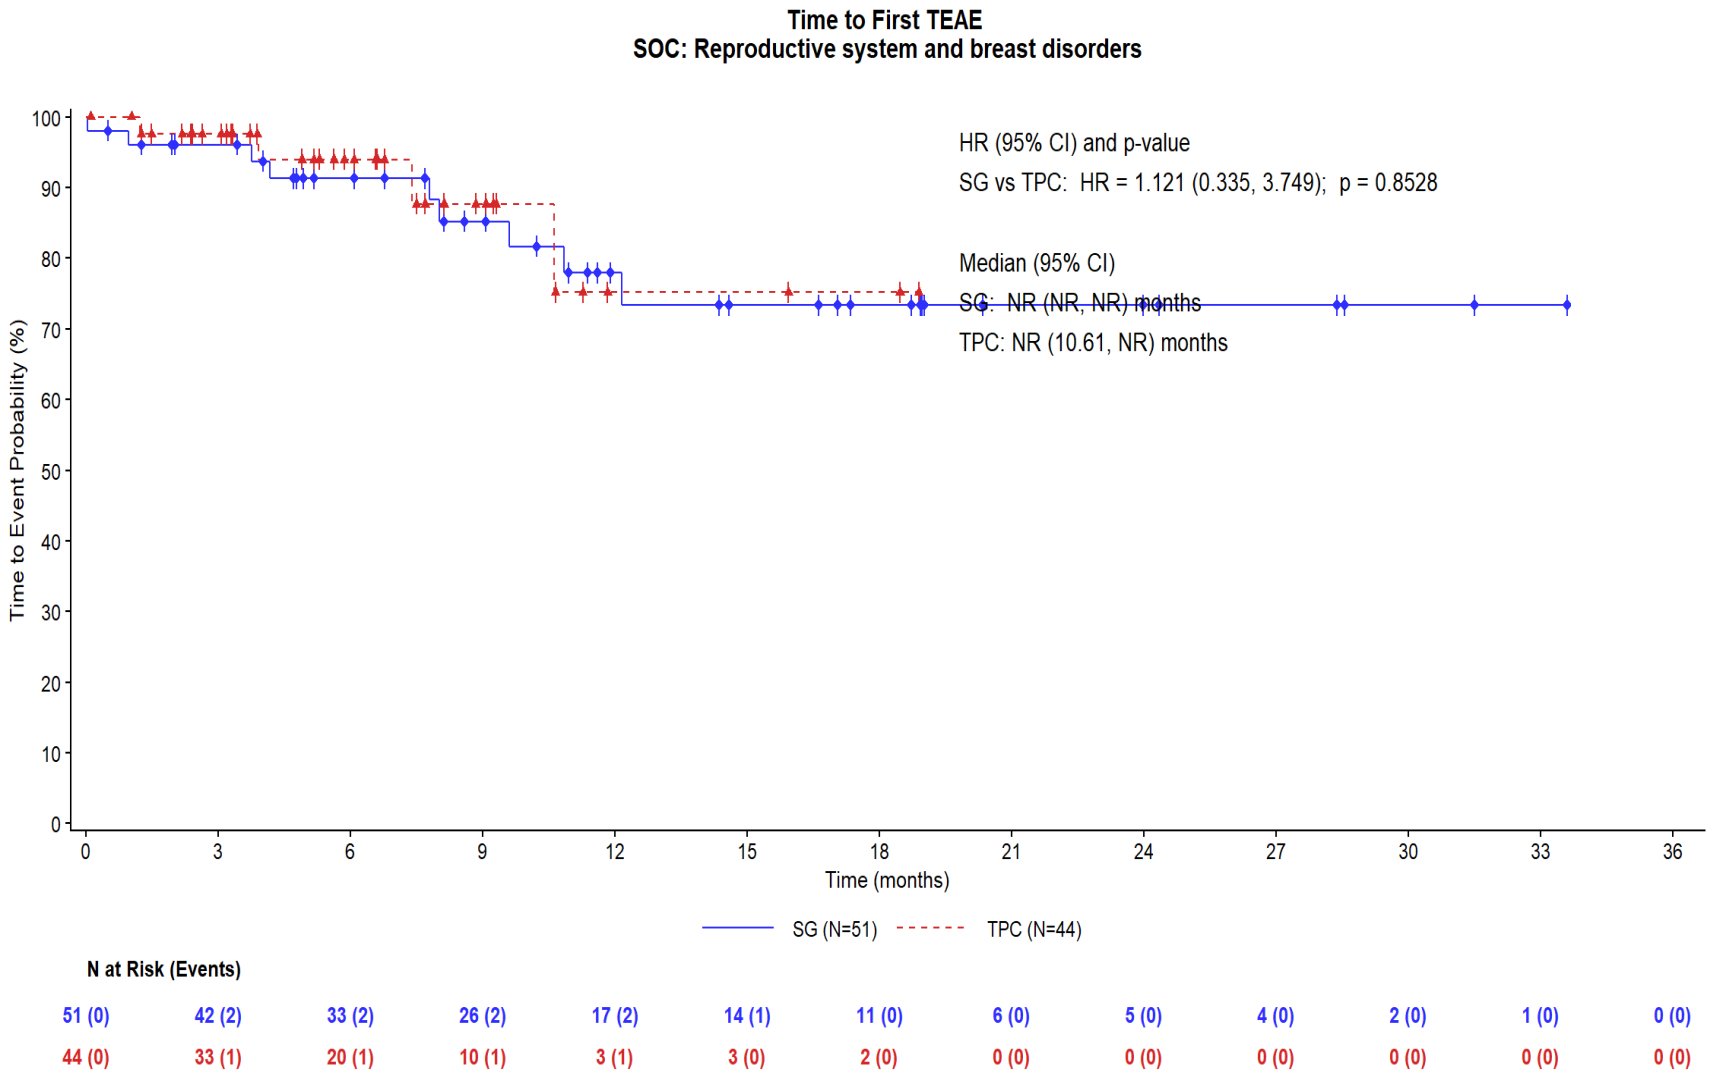
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.20. Figure 1.1.19: Kaplan Meier Plot of Time to First TEAE by SOC Nervous system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



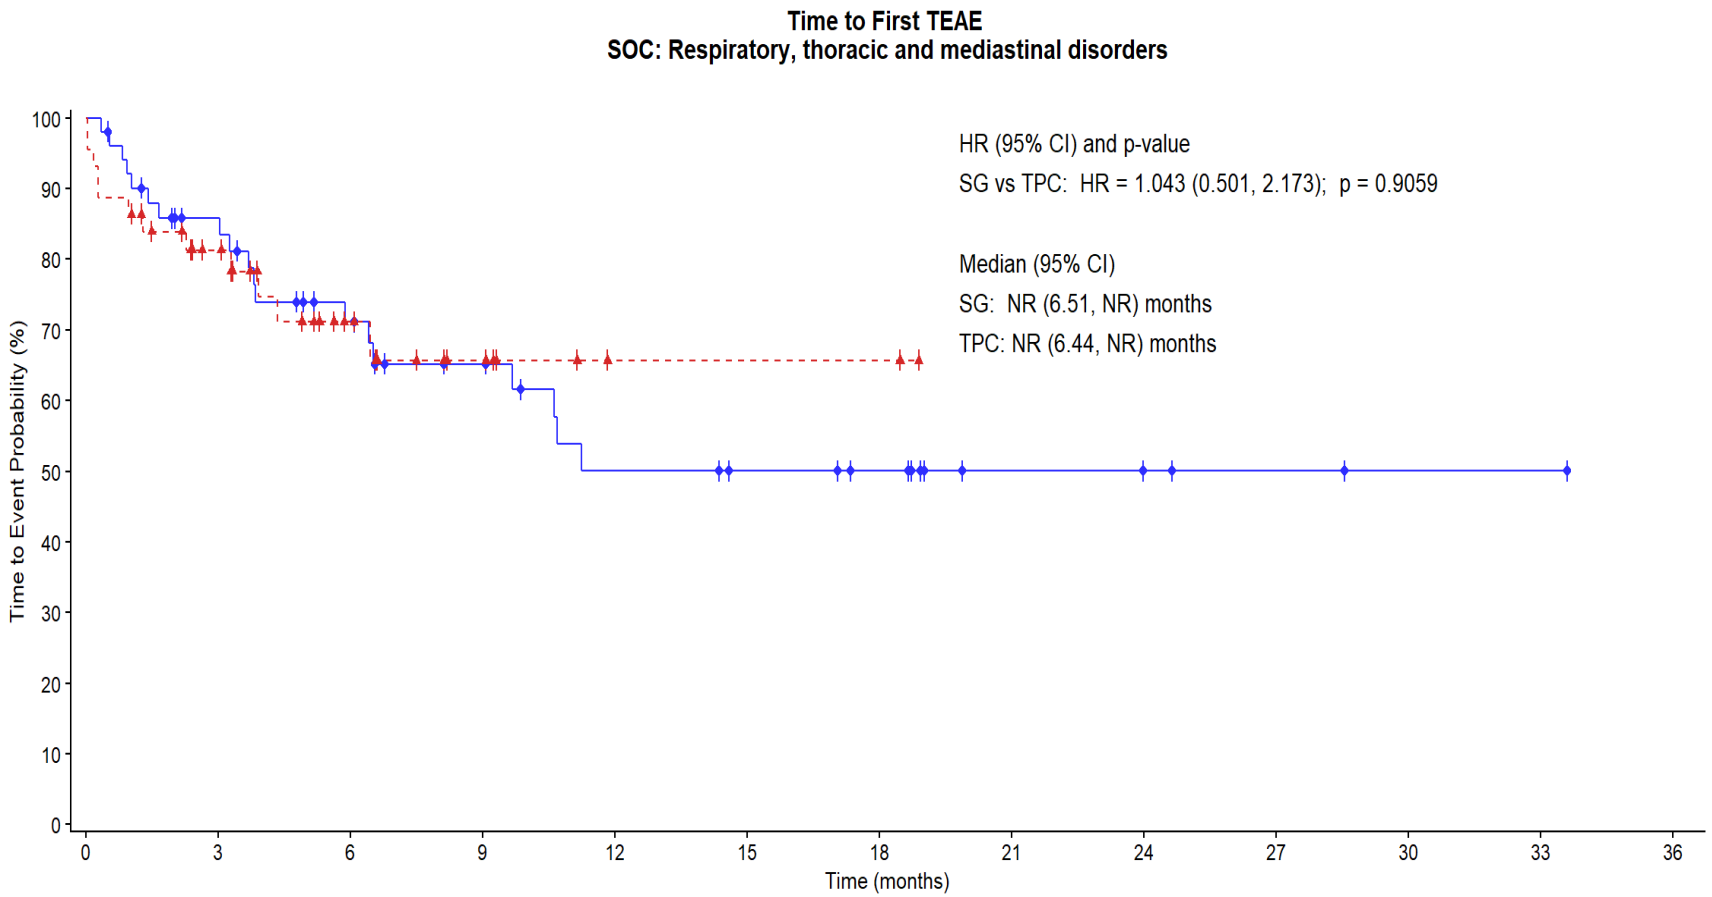
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.21. Figure 1.1.20: Kaplan Meier Plot of Time to First TEAE by SOC Psychiatric disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



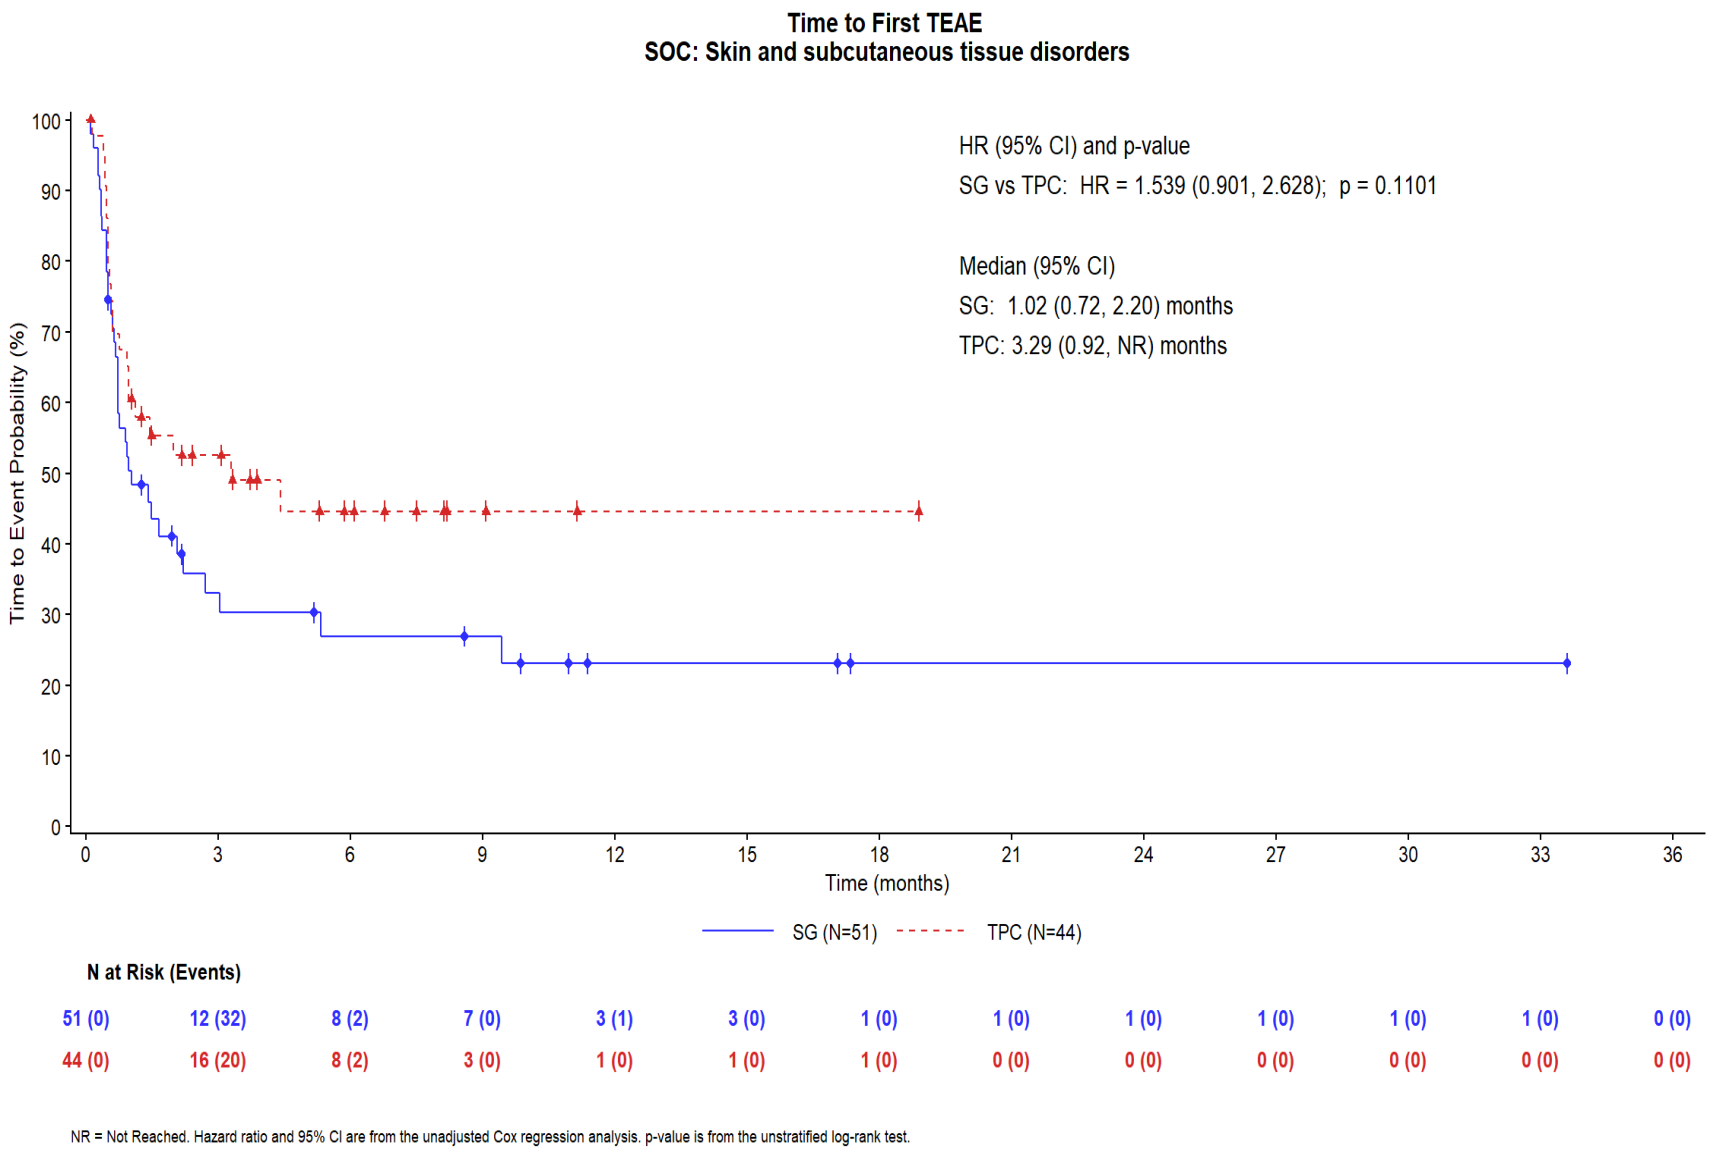
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.22. Figure 1.1.21: Kaplan Meier Plot of Time to First TEAE by SOC Renal and urinary disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



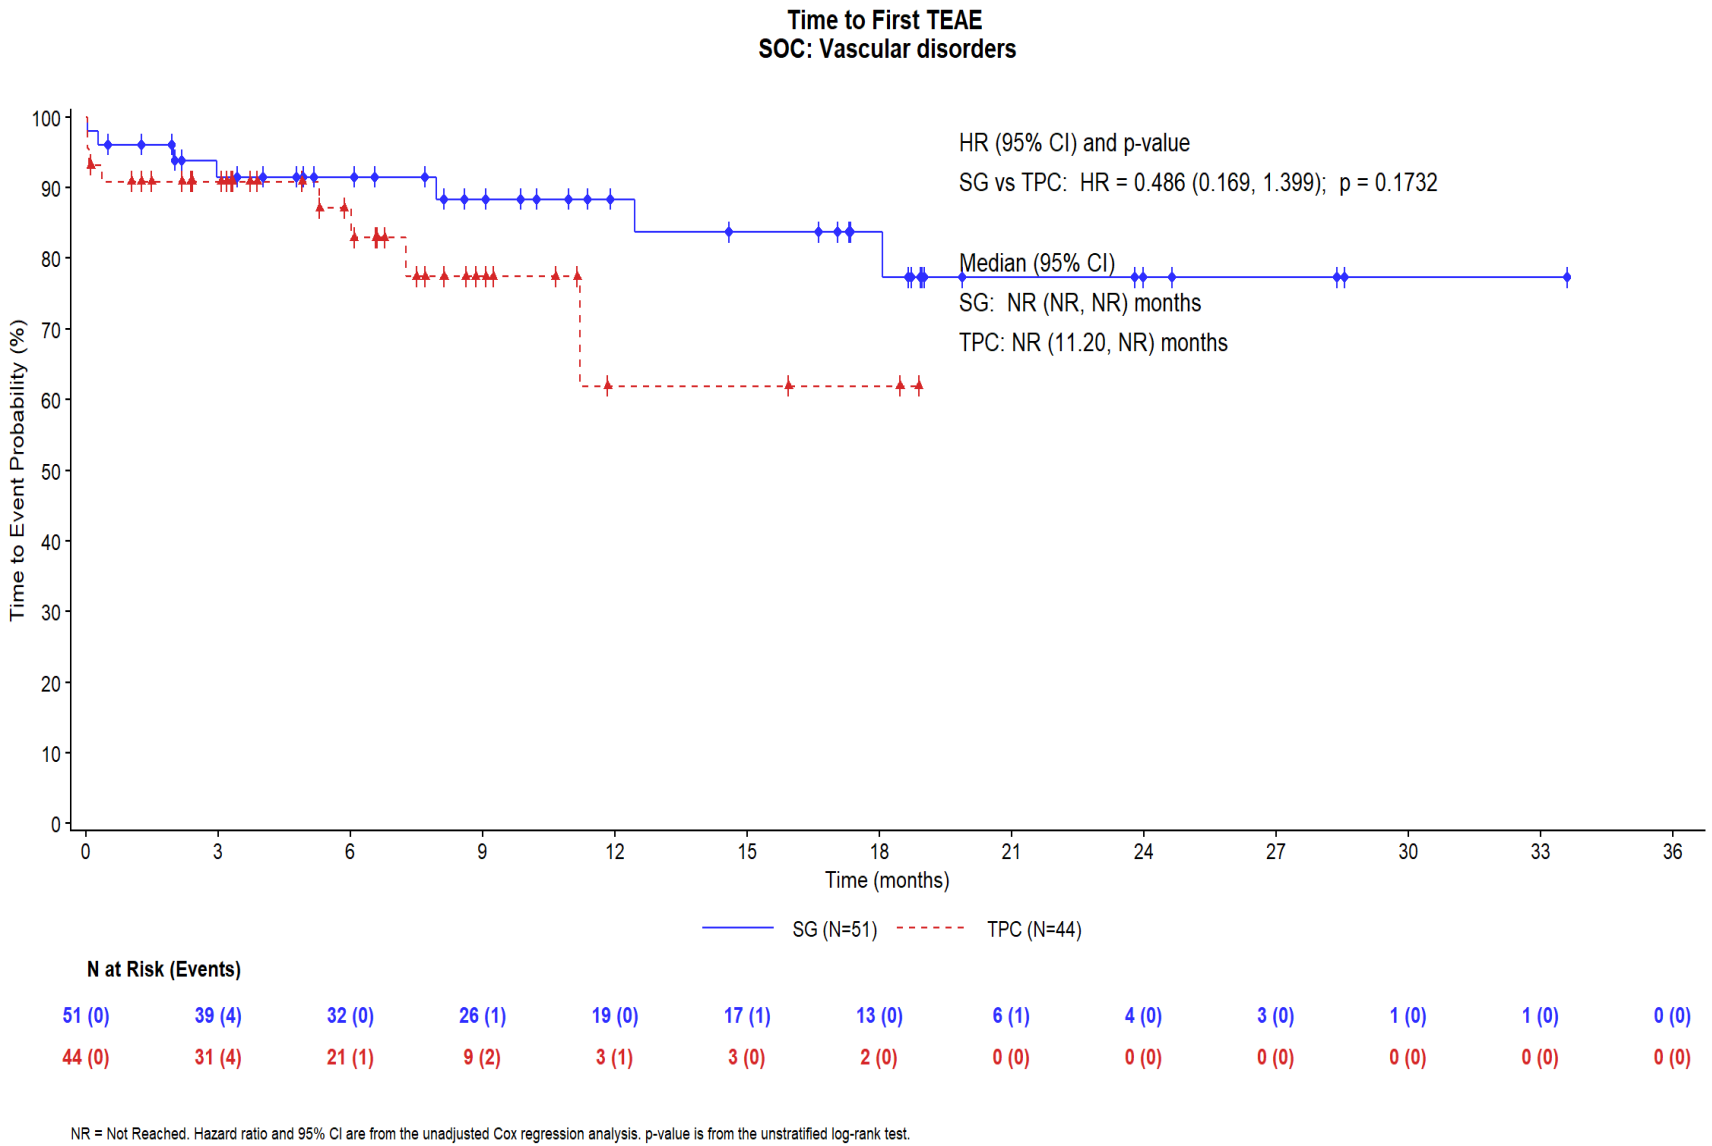
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.23. Figure 1.1.22: Kaplan Meier Plot of Time to First TEAE by SOC Reproductive system and breast disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



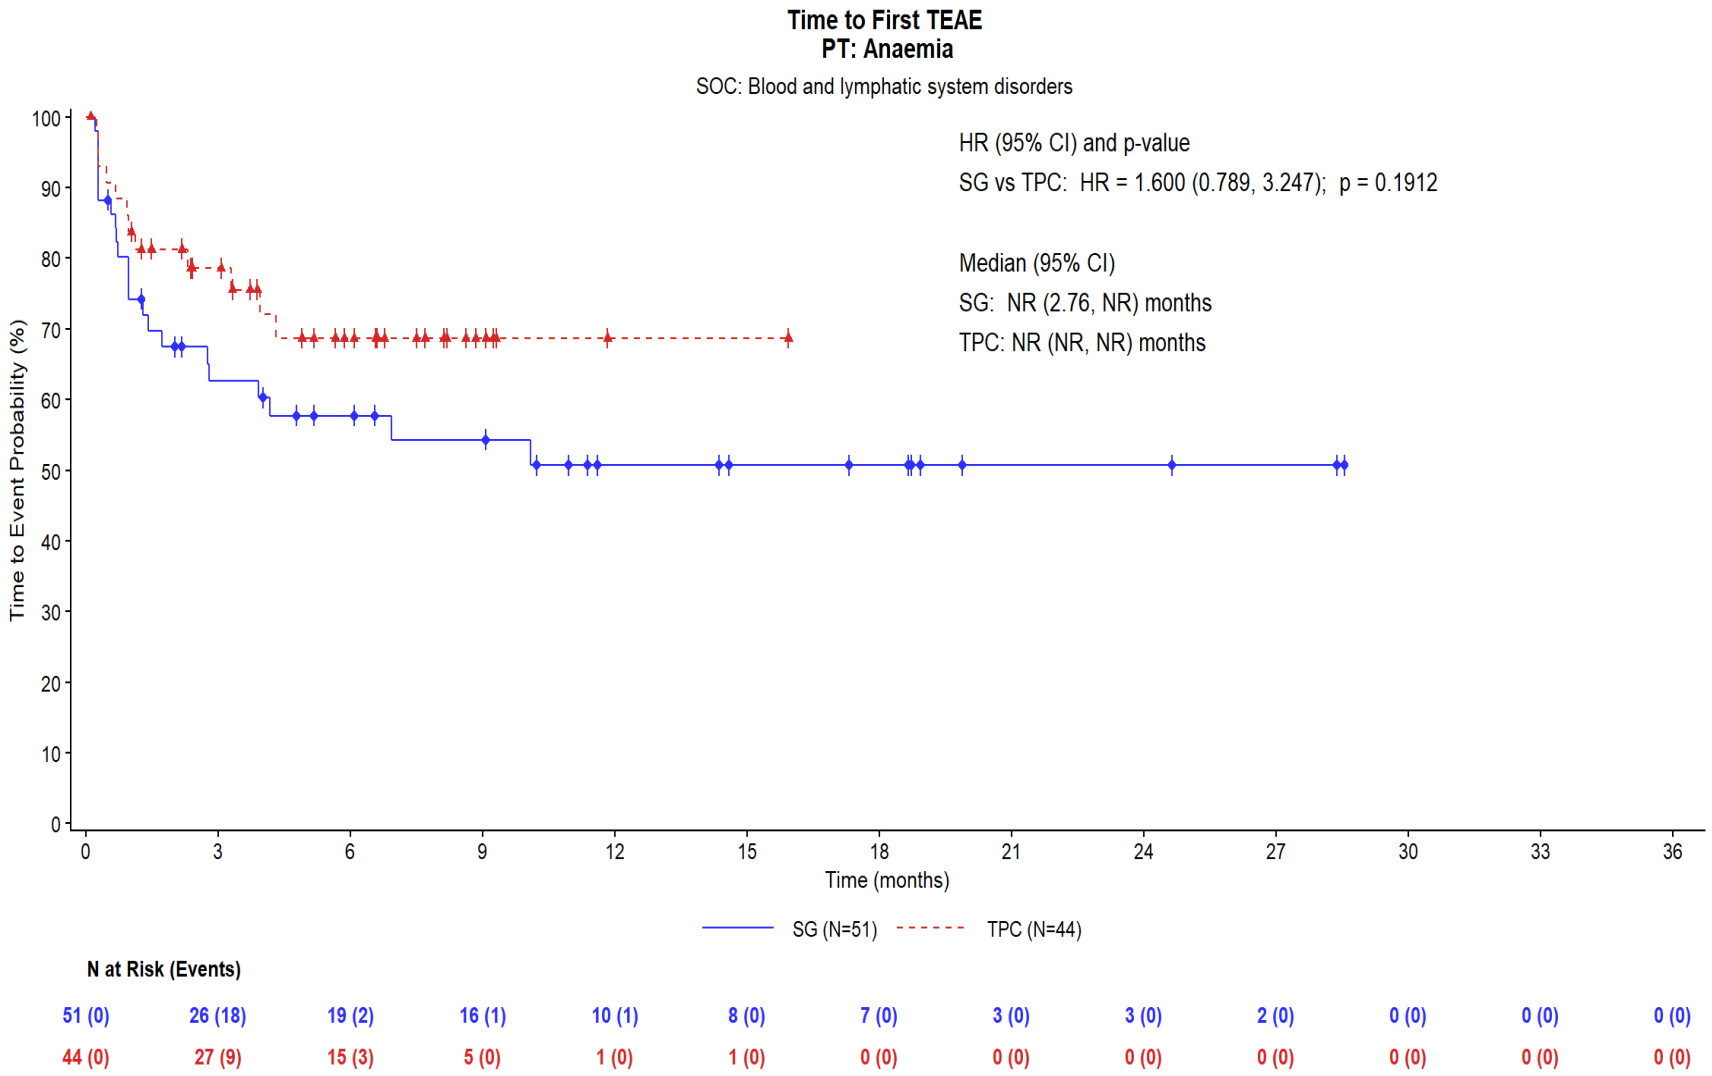
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.24. Figure 1.1.23: Kaplan Meier Plot of Time to First TEAE by SOC Respiratory thoracic and mediastinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



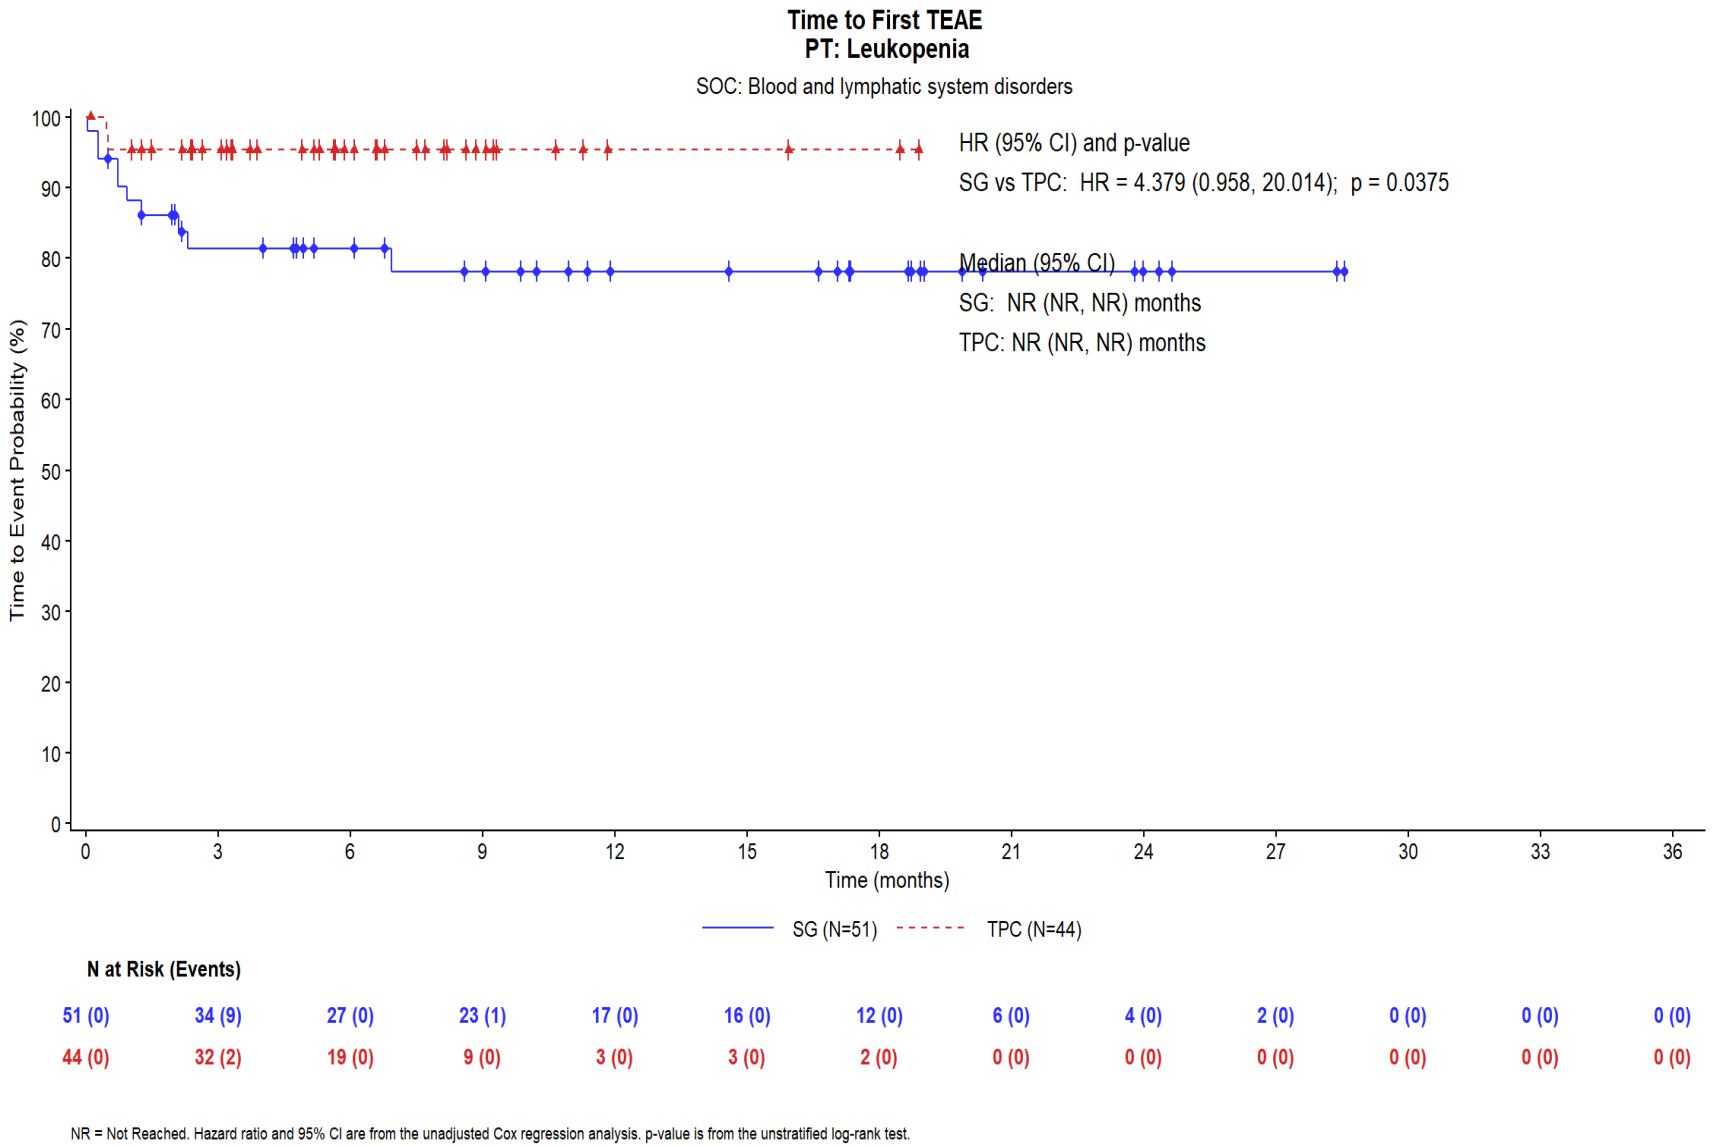
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.25. Figure 1.1.24: Kaplan Meier Plot of Time to First TEAE by SOC Skin and subcutaneous tissue disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



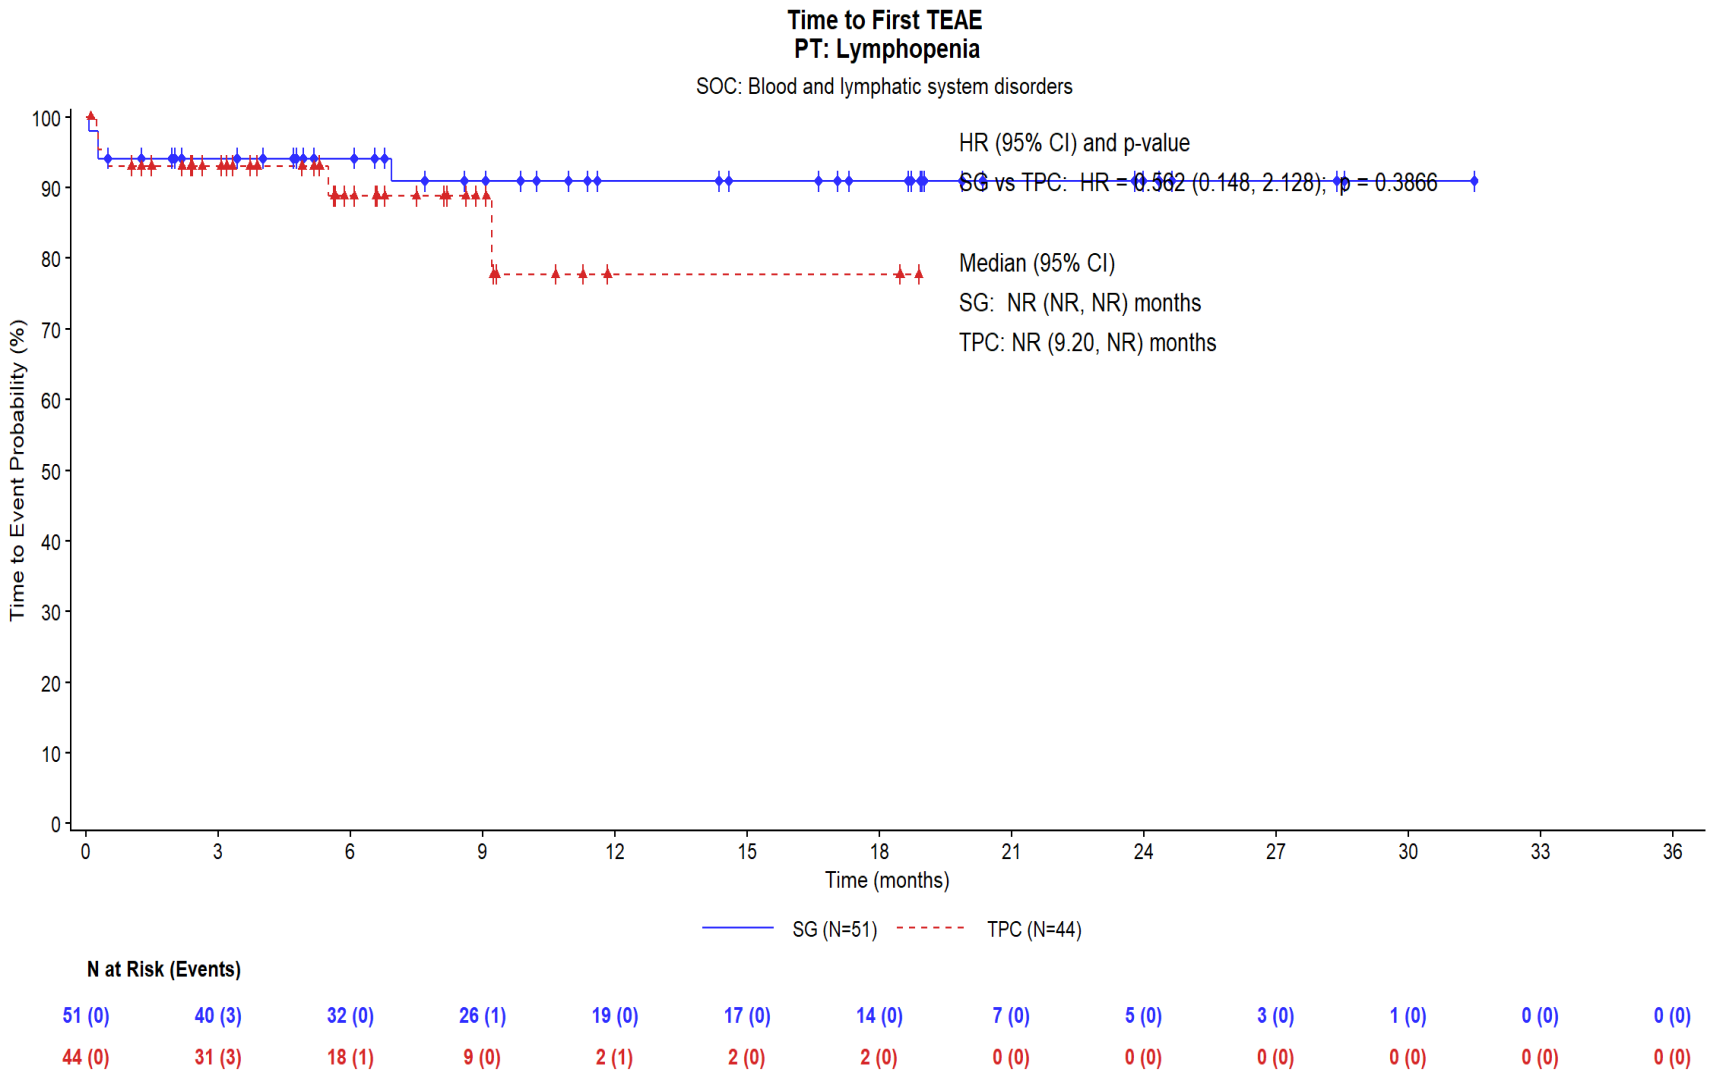
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.26. Figure 1.1.25: Kaplan Meier Plot of Time to First TEAE by SOC Vascular disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



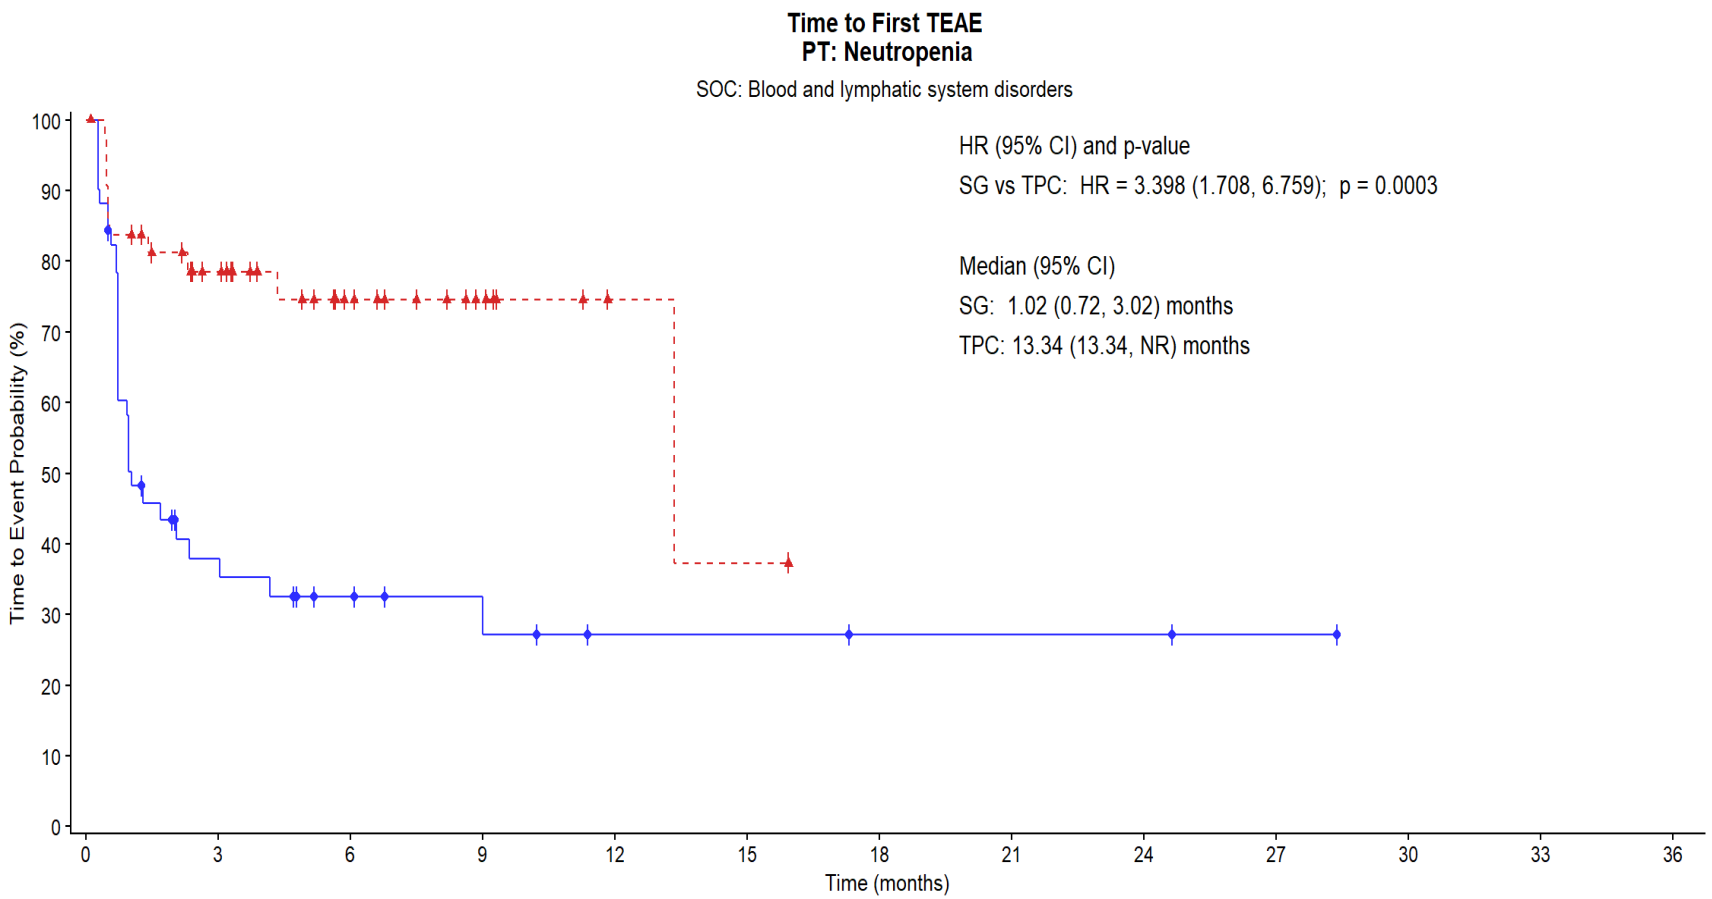
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.27. Figure 1.1.26: Kaplan Meier Plot of Time to First TEAE by PT Anaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



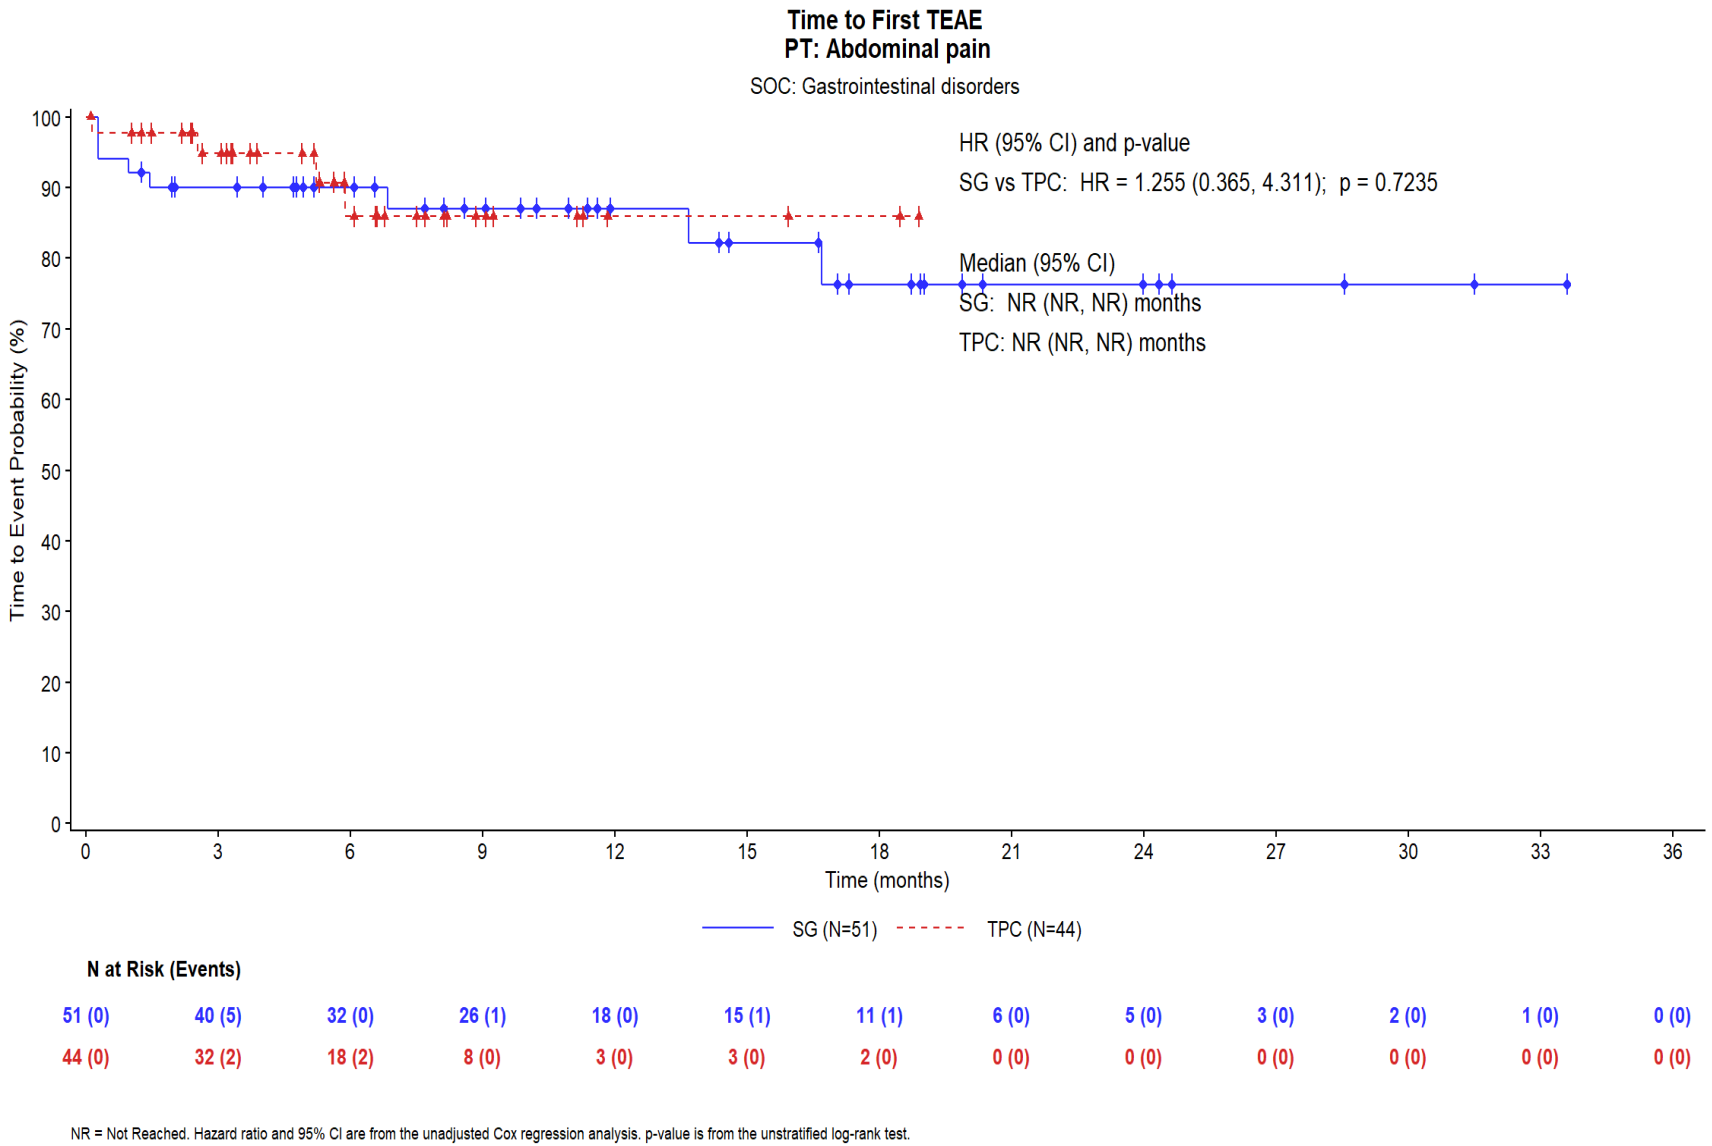
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.28. Figure 1.1.27: Kaplan Meier Plot of Time to First TEAE by PT Leukopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



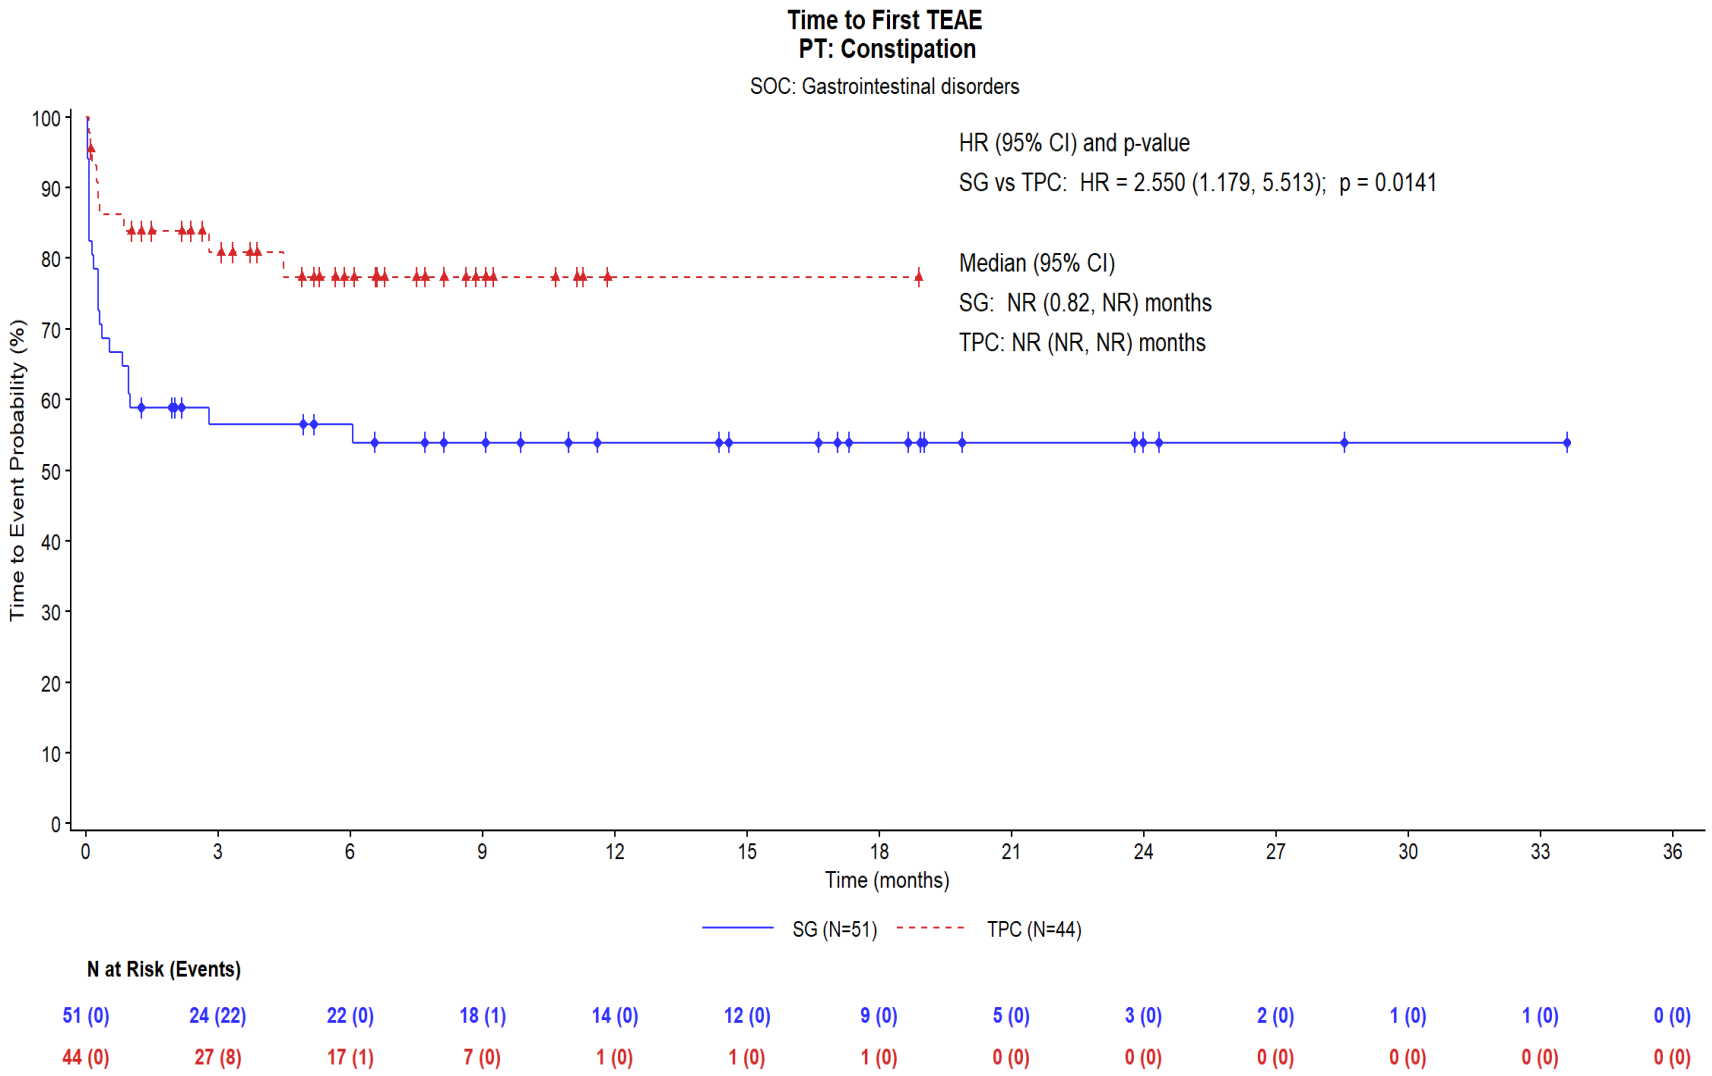
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.29. Figure 1.1.28: Kaplan Meier Plot of Time to First TEAE by PT Lymphopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



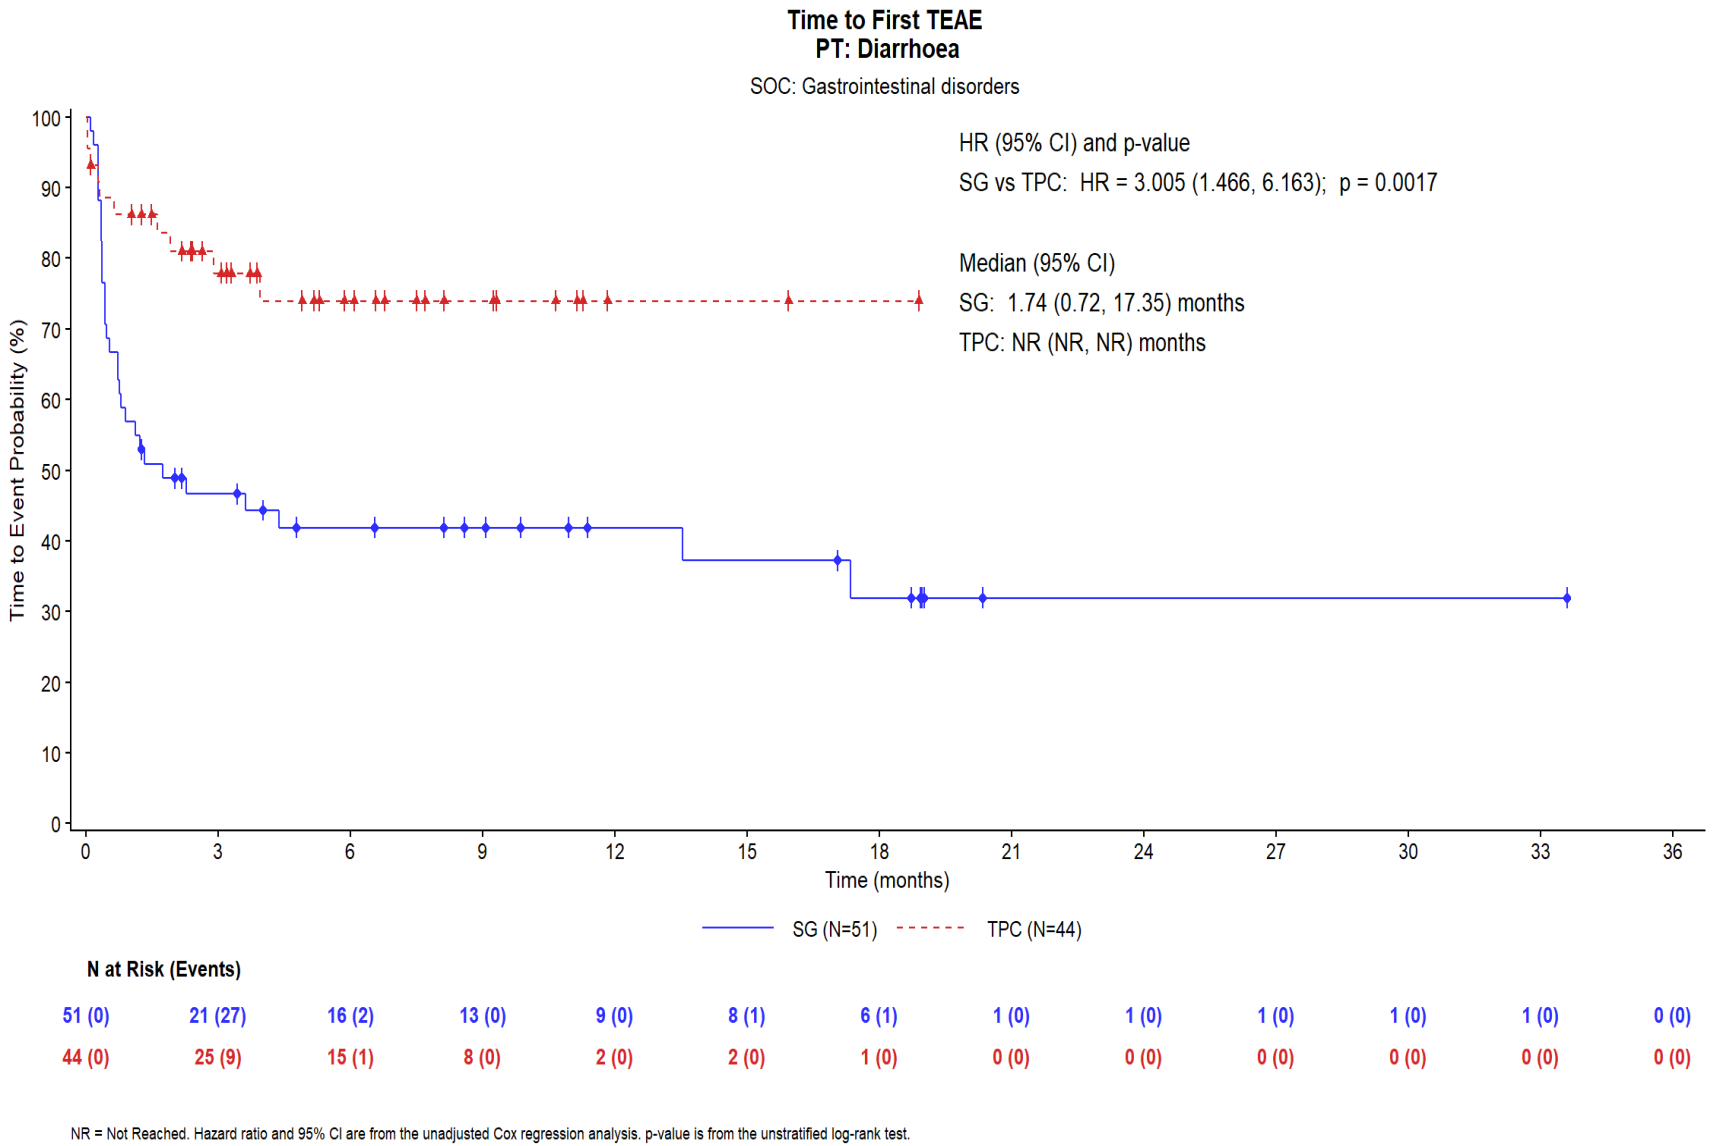
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.30. Figure 1.1.29: Kaplan Meier Plot of Time to First TEAE by PT Neutropenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



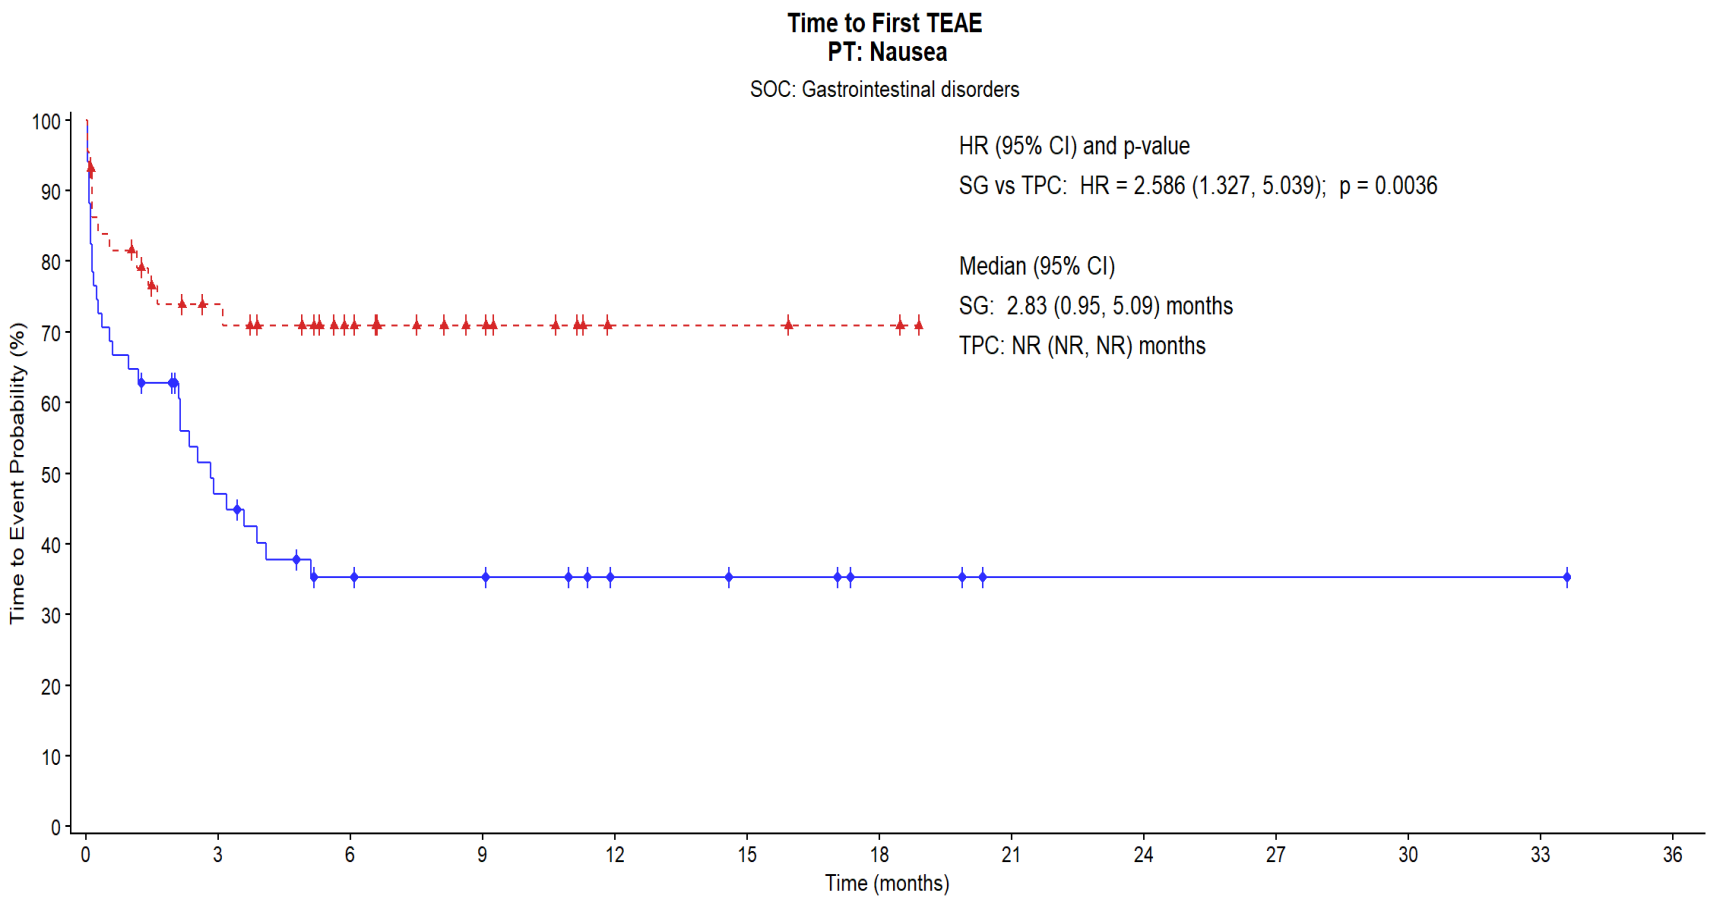
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.31. Figure 1.1.30: Kaplan Meier Plot of Time to First TEAE by PT Abdominal pain — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



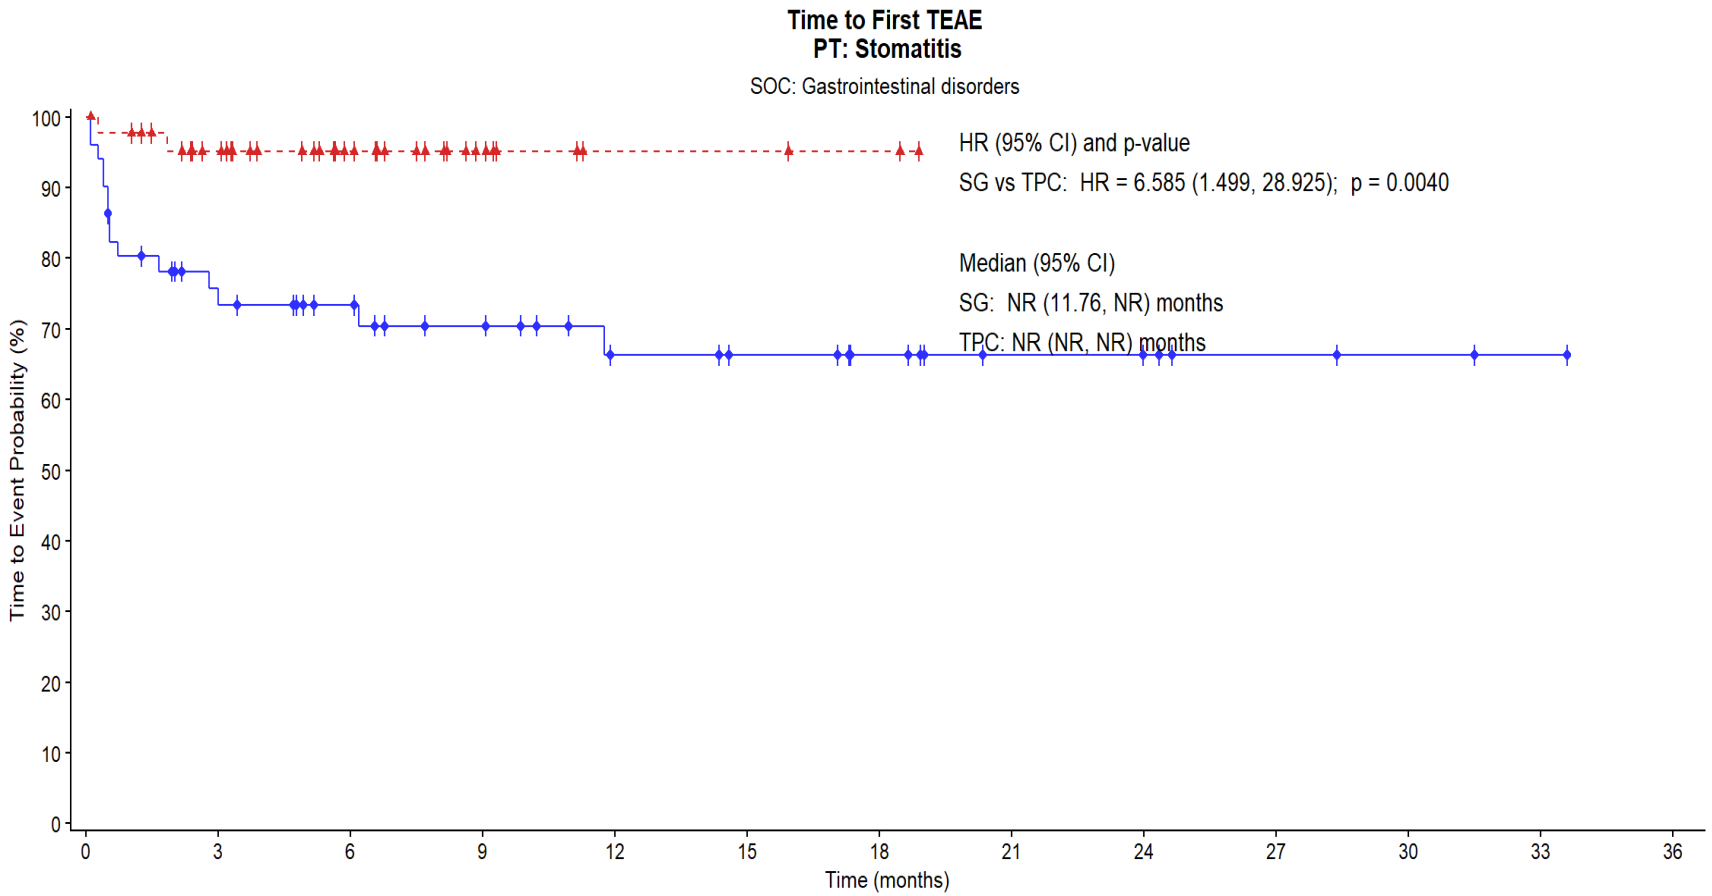
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.32. Figure 1.1.31: Kaplan Meier Plot of Time to First TEAE by PT Constipation — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



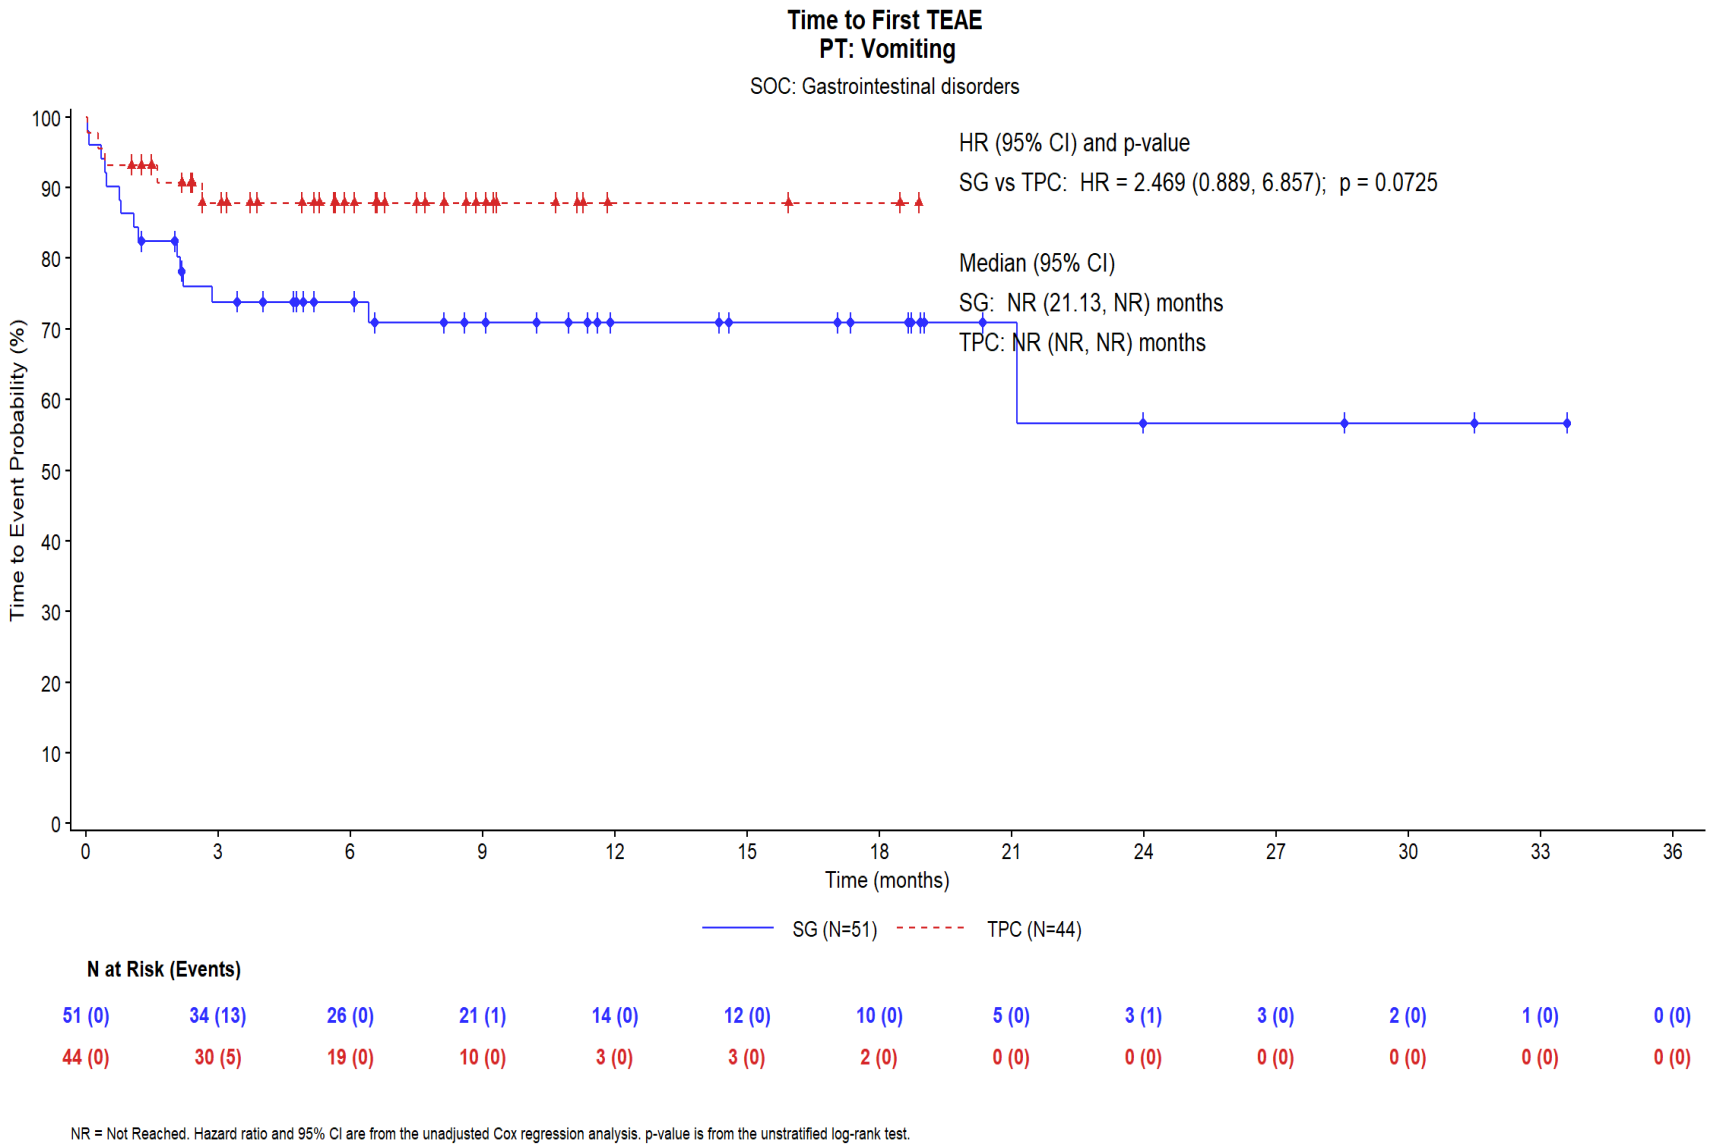
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.33. Figure 1.1.32: Kaplan Meier Plot of Time to First TEAE by PT Diarrhoea — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



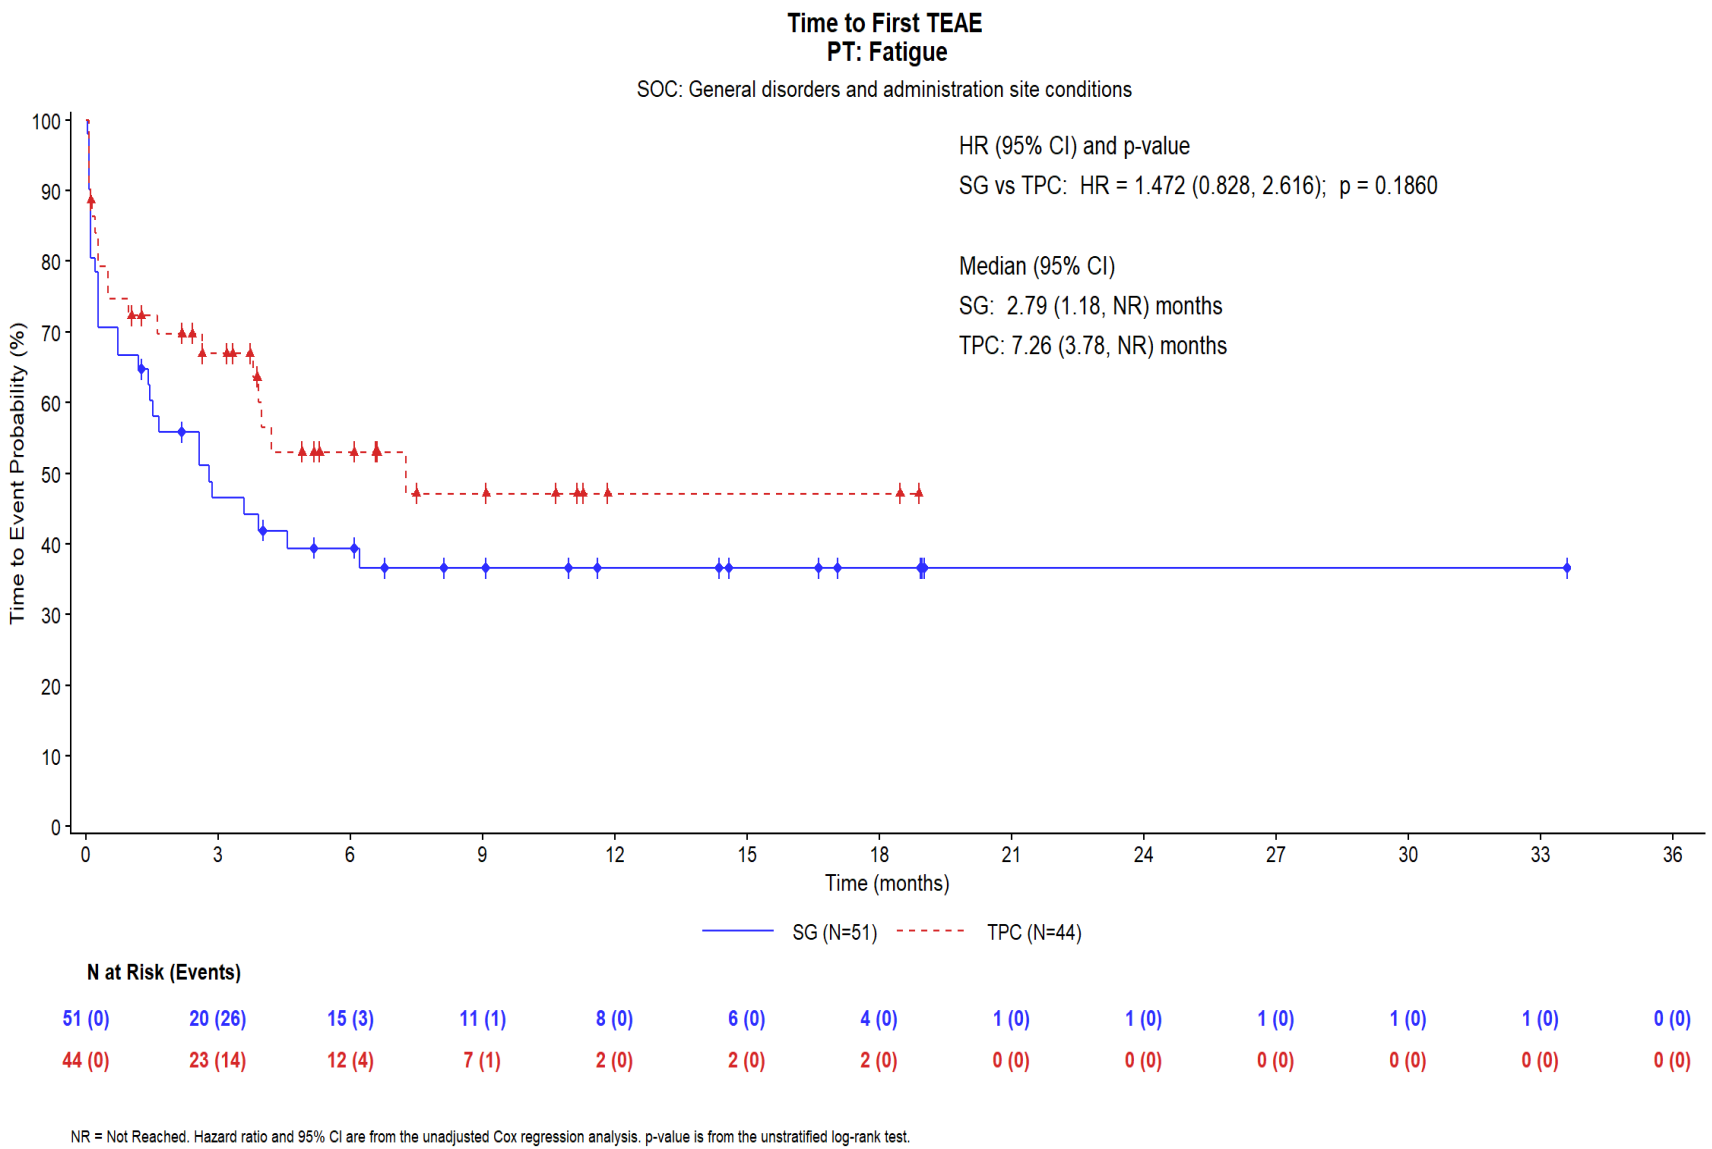
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.34. Figure 1.1.33: Kaplan Meier Plot of Time to First TEAE by PT Nausea — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



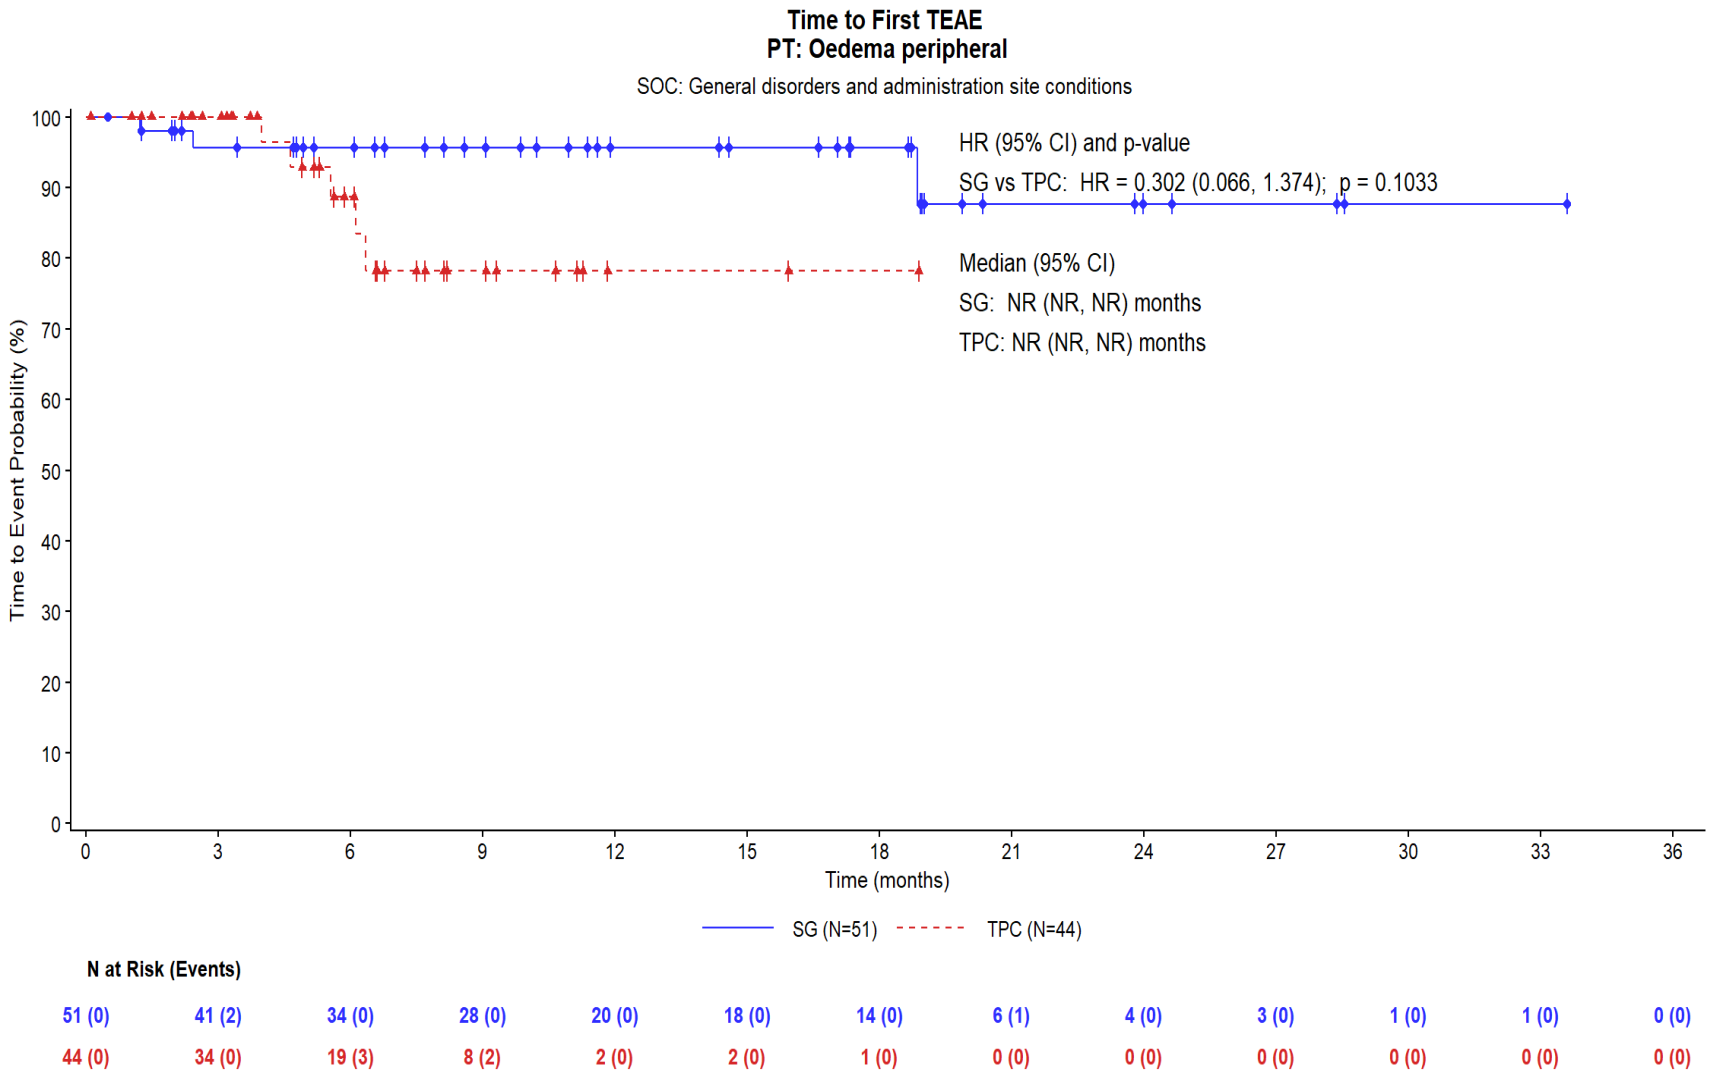
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.35. Figure 1.1.34: Kaplan Meier Plot of Time to First TEAE by PT Stomatitis — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



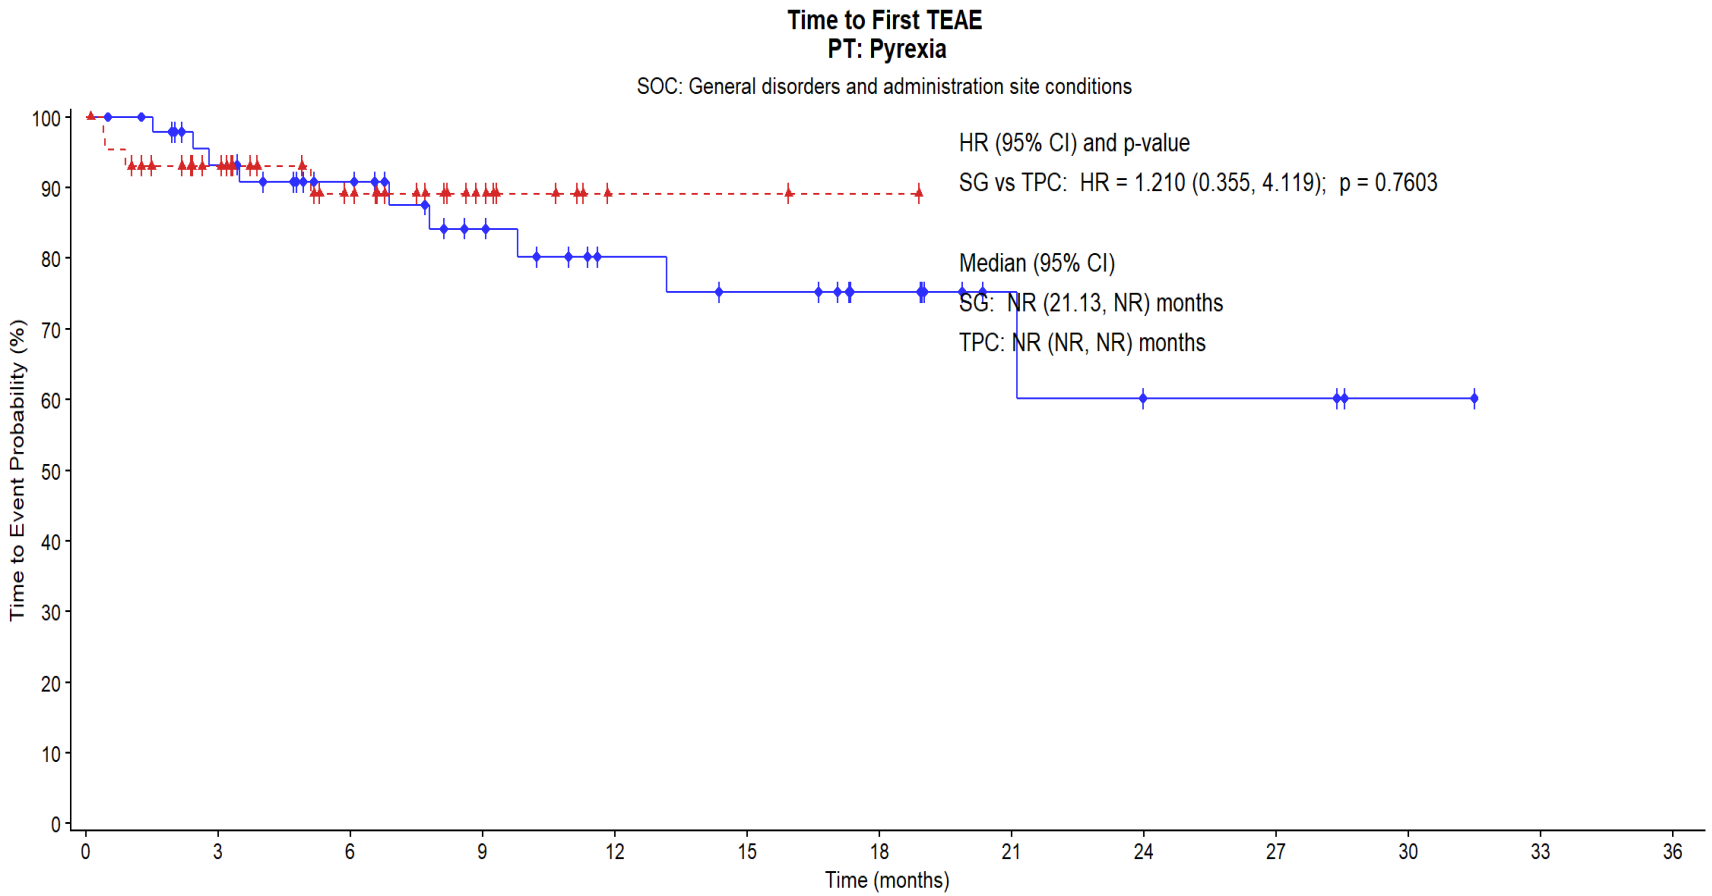
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.36. Figure 1.1.35: Kaplan Meier Plot of Time to First TEAE by PT Vomiting — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



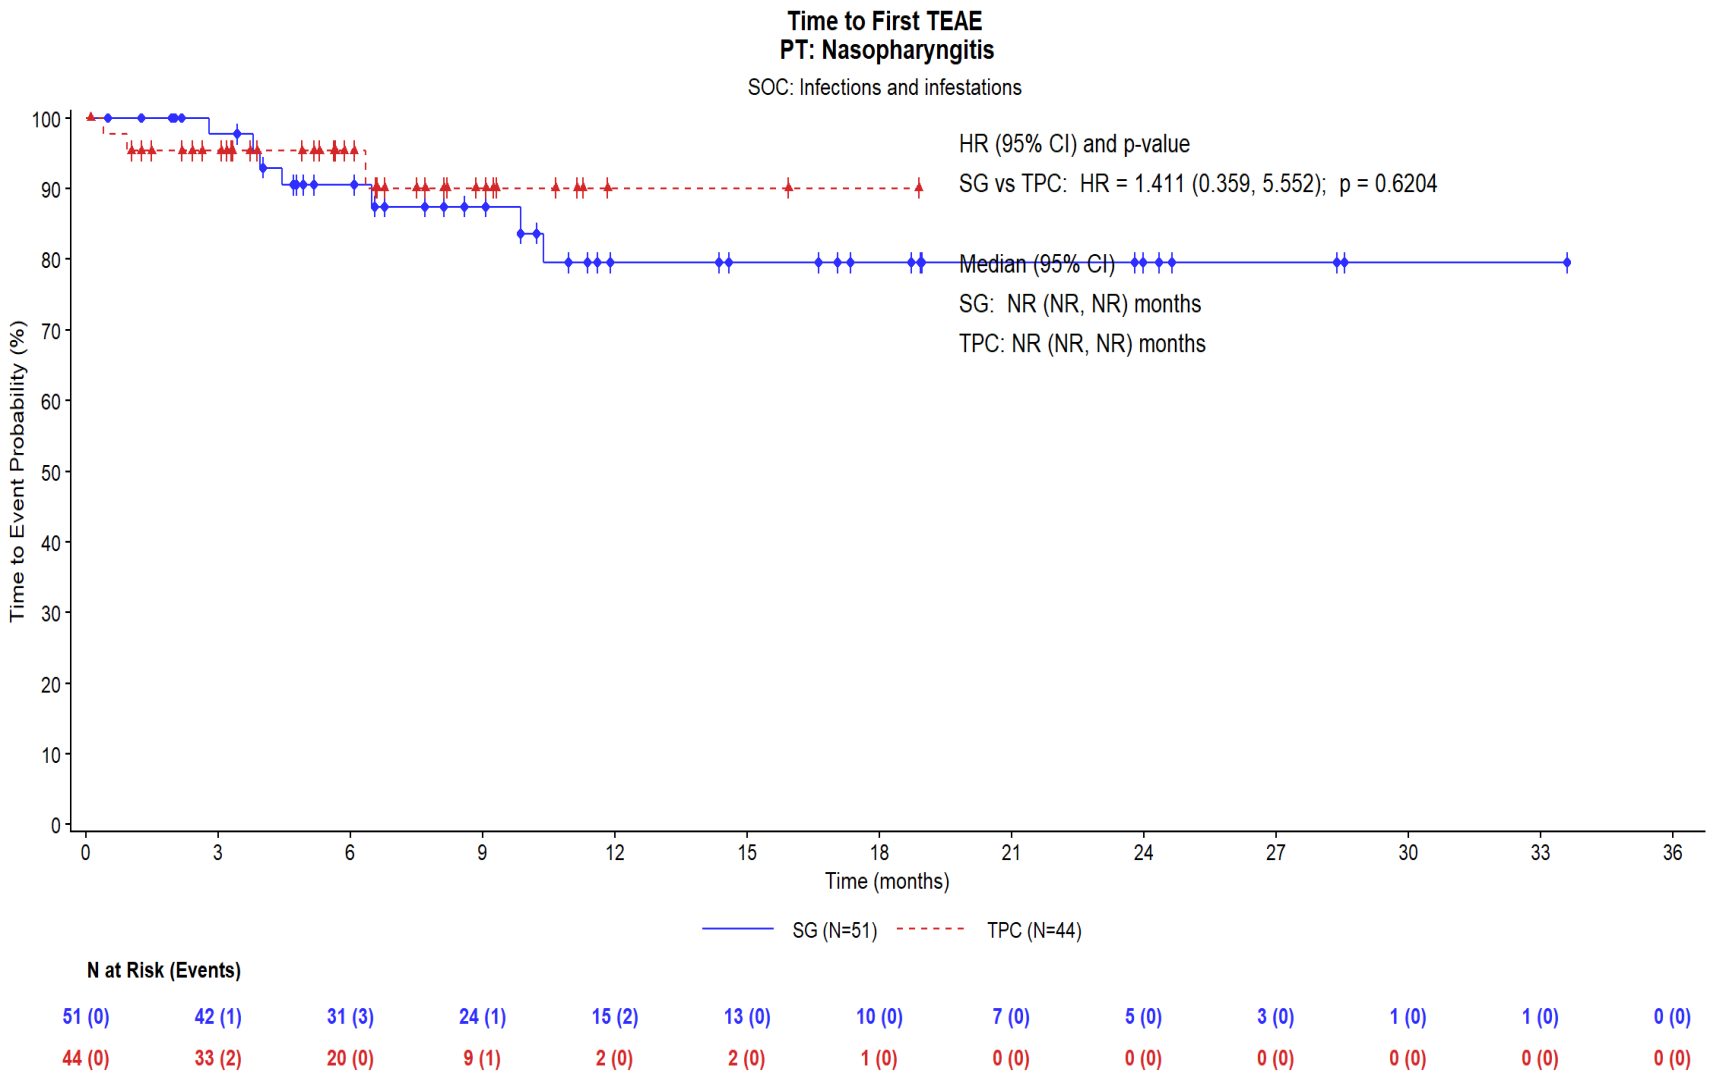
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.37. Figure 1.1.36: Kaplan Meier Plot of Time to First TEAE by PT Fatigue — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



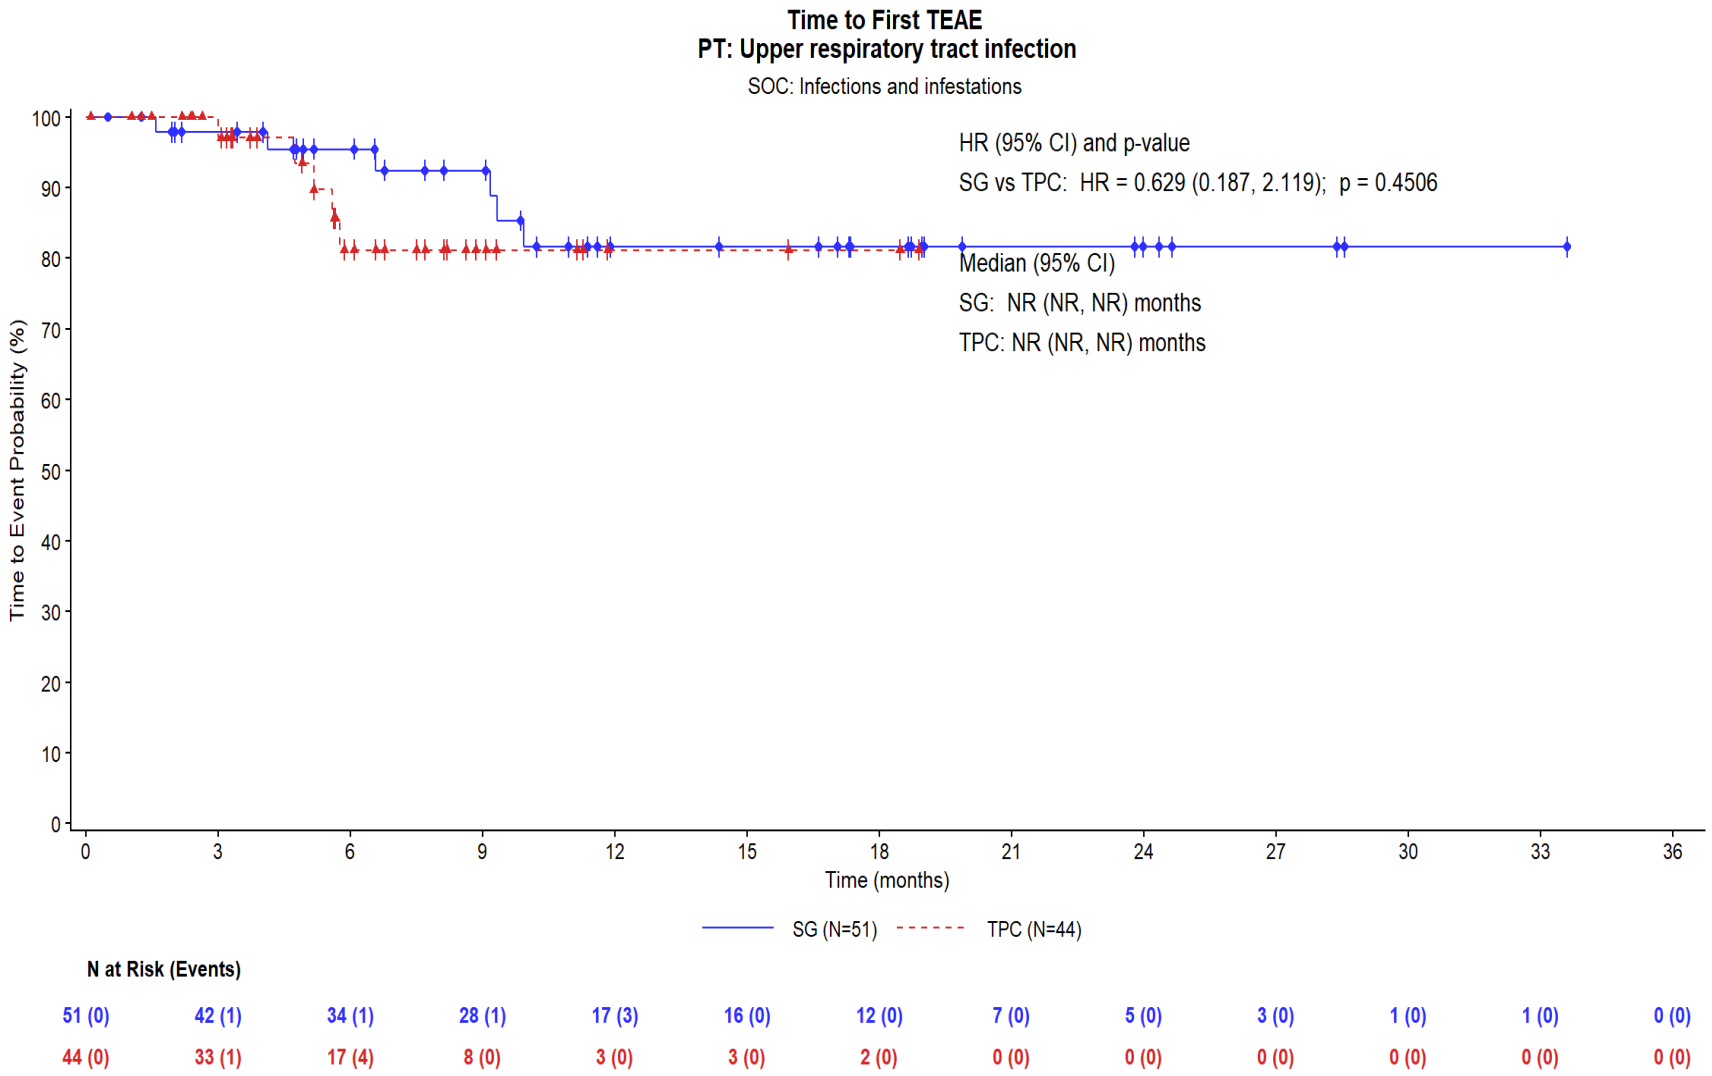
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.38. Figure 1.1.37: Kaplan Meier Plot of Time to First TEAE by PT Oedema peripheral — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



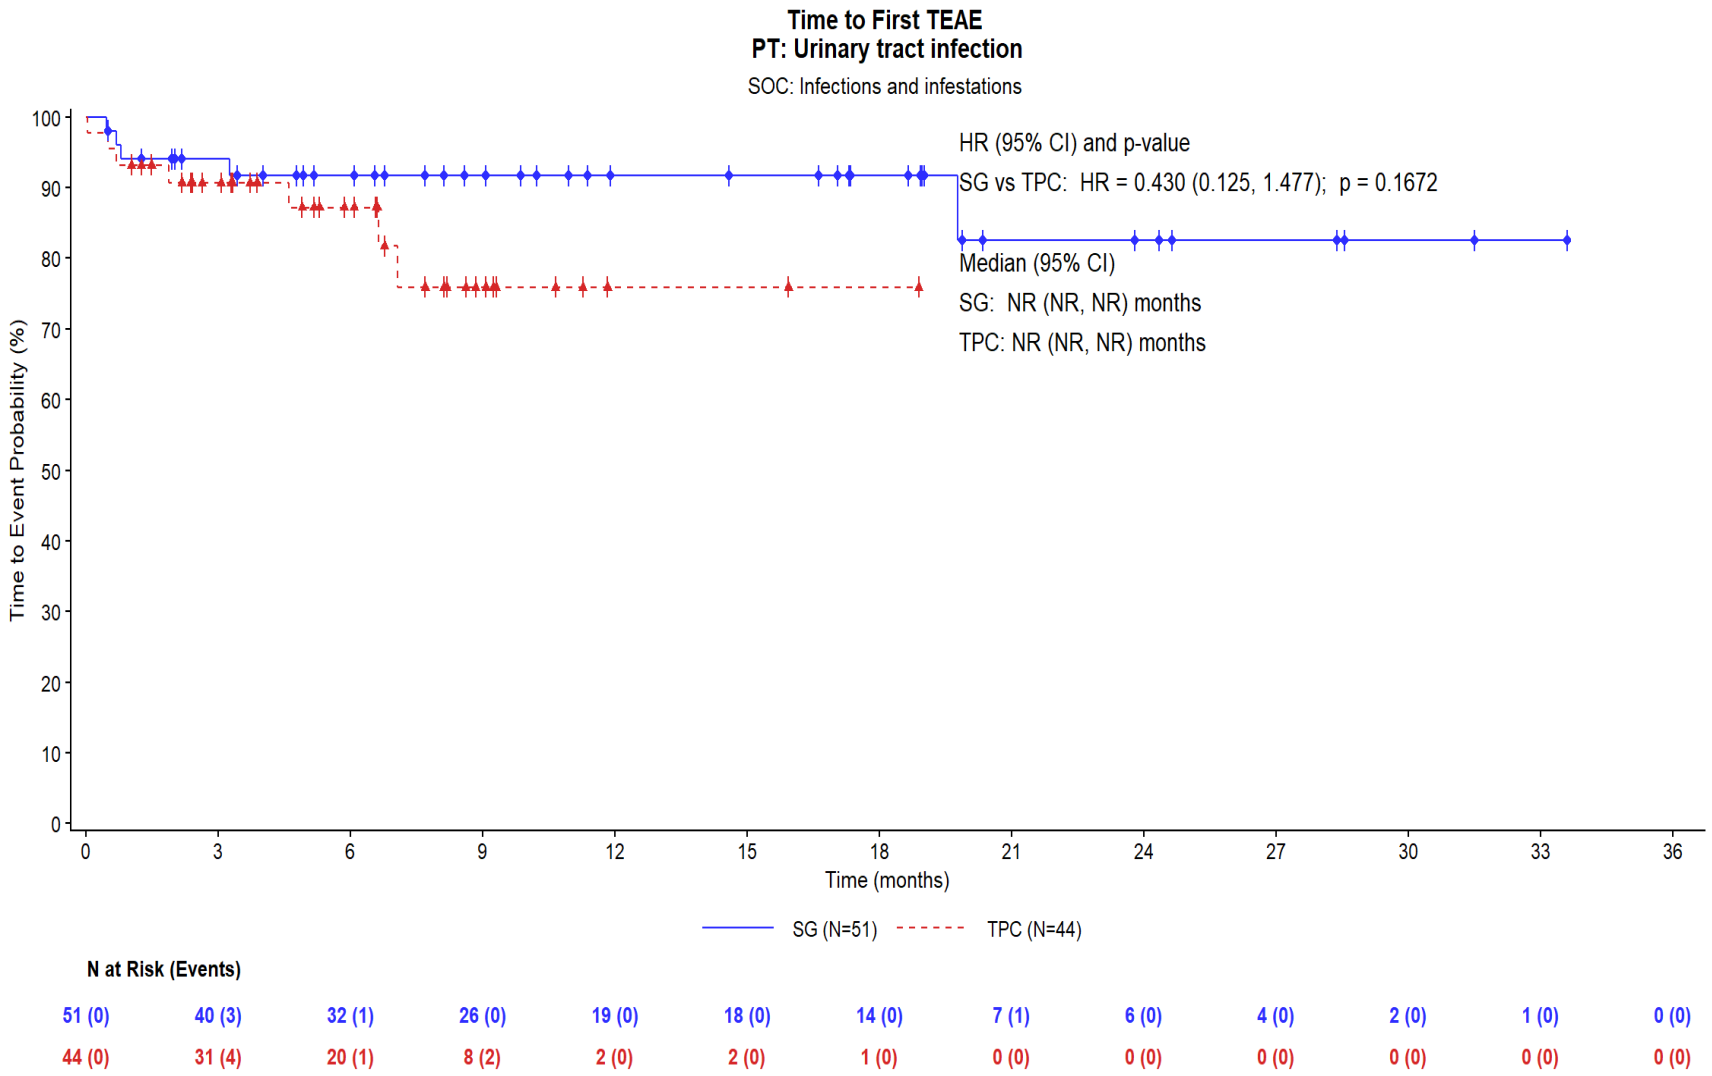
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.39. Figure 1.1.38: Kaplan Meier Plot of Time to First TEAE by PT Pyrexia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.40. Figure 1.1.39: Kaplan Meier Plot of Time to First TEAE by PT Nasopharyngitis — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

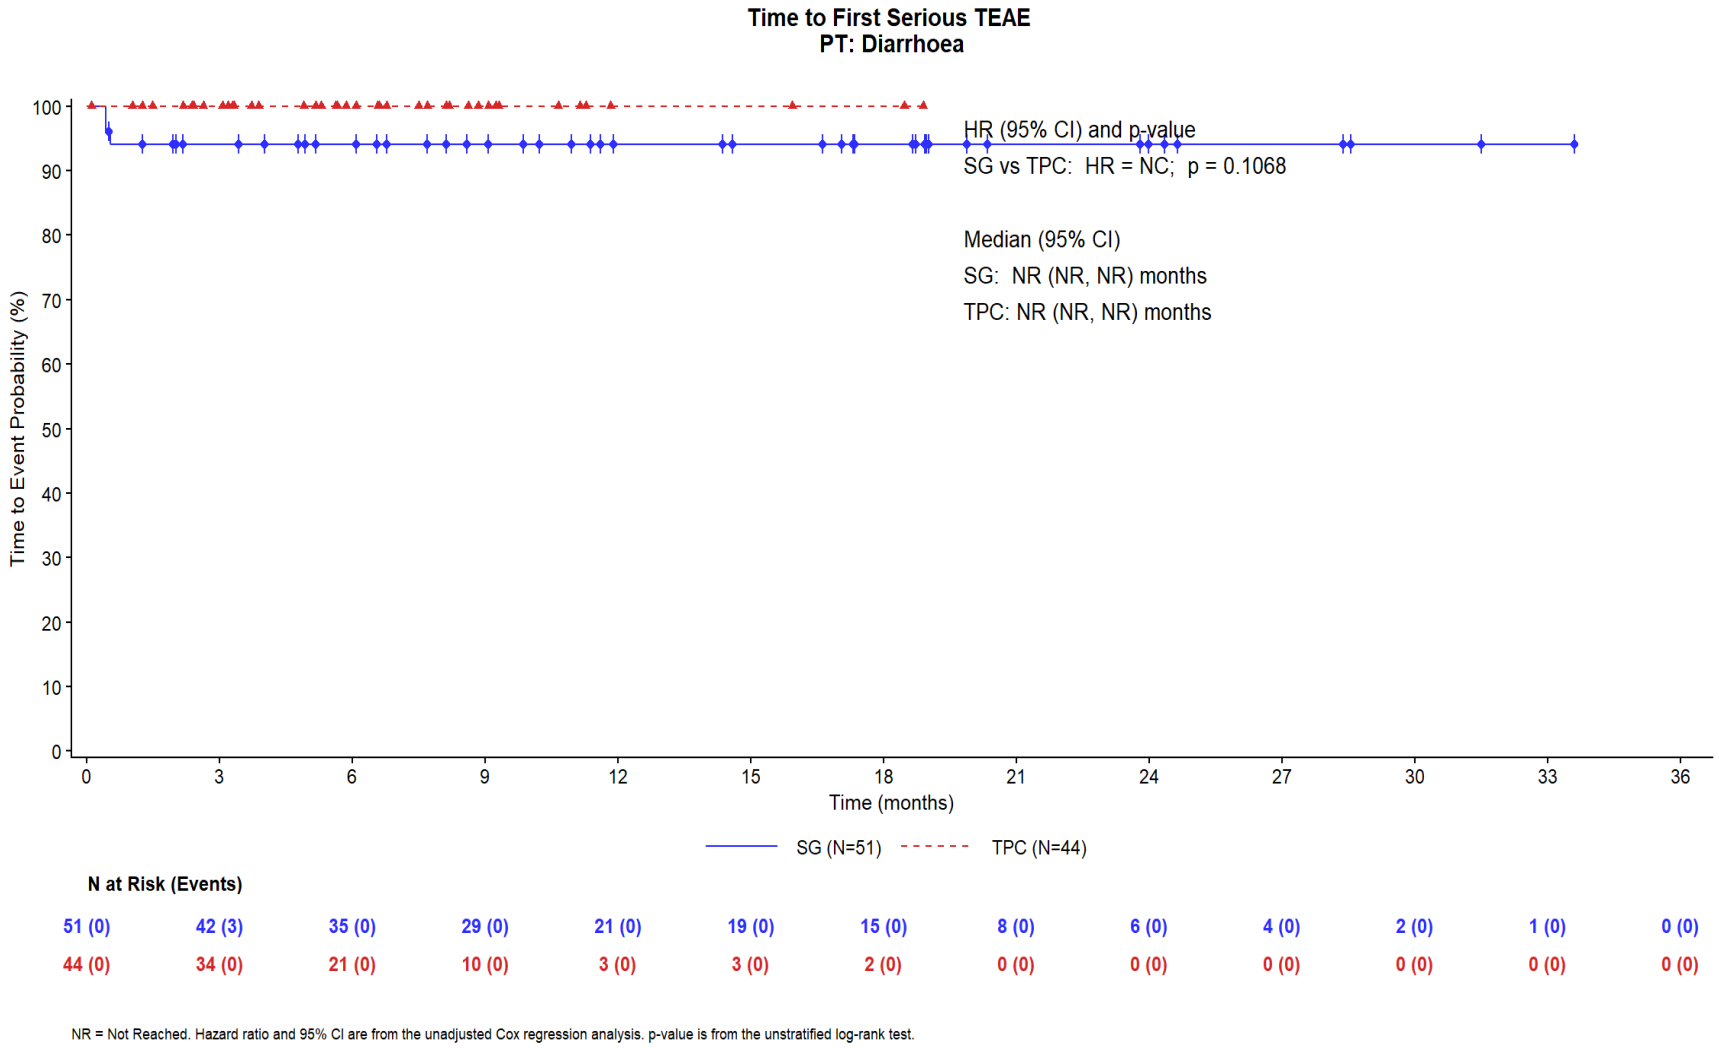
8.80. Figure 1.1.79: Kaplan Meier Plot of Time to First TEAE (SAE) by SOC Gastrointestinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.81. Figure 1.1.80: Kaplan Meier Plot of Time to First TEAE (SAE) by SOC Infections and infestations — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.82. Figure 1.1.81: Kaplan Meier Plot of Time to First TEAE (SAE) by PT Diarrhoea — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

Table. Recurrence of diarrhoea TEAE — mSAF2: Excluding patients preselected to nab-paclitaxel or gemcitabine+carboplatin

	SG (N=51)			TPC (N=44)		
Incidence of diarrhoea TEAE	**1 event**	**2 events**	**>2 events**	**1 event**	**2 events**	**>2 events**
Grade 1	17 (33.3%)	5 (9.8%)	4 (7.8%)	7 (15.9%)	0	2 (4.5%)
Grade 2	8 (15.7%)	2 (3.9%)	0	3 (6.8%)	1 (2.3%)	1 (2.3%)
Grade ≥3	3 (5.9%)	1 (2.0%)	0	0	0	0
Grade 3	4 (7.8%)	0	0	0	0	0
Grade 4	1 (2.0%)	0	0	0	0	0
Grade 5	0	0	0	0	0	0

n = number of events per patient;

GS-US-592-6238-20788-92106 (SG): 2 diarrhoea episodes at Grade≥3 (1×Grade 3 + 1×Grade 4)

Data cut off:- 22 APR 2026

Descriptive Analysis of G-CSF Use Prior to First Febrile Neutropenia AE

	Febrile Neutropenia CTCAE Grade ≥3[1]			Febrile Neutropenia Serious Adverse Event (SAE)[2]		
Parameter	**SG (N=51)**	**TPC (N=44)**	**Overall (N=95)**	**SG (N=51)**	**TPC (N=44)**	**Overall (N=95)**
Total Patients in Safety Analysis Set	**51**	**44**	**95**	**51**	**44**	**95**
Patients with Febrile Neutropenia, n (%)	**3 (5.9%)**	**0 (0.0%)**	**3 (3.2%)**	**2 (3.9%)**	**0 (0.0%)**	**2 (2.1%)**
G-CSF Prophylaxis Prior to AE						
Yes	0 (0.0%)	0	0 (0.0%)	0 (0.0%)	0	0 (0.0%)
No	3 (100.0%)	0	3 (100.0%)	2 (100.0%)	0	2 (100.0%)
Patients Without Febrile Neutropenia, n (%)	**48 (94.1%)**	**44 (100.0%)**	**92 (96.8%)**	**49 (96.1%)**	**44 (100.0%)**	**93 (97.9%)**

n (%) = number of subjects and percentage of the relevant denominator.
Denominator for Total Patients, Patients with Febrile Neutropenia, and Patients without Febrile Neutropenia rows = total number of patients in each treatment arm (or overall) in the Safety Analysis Set.
Denominator for G-CSF Prophylaxis Yes/No rows = number of patients who experienced a febrile neutropenia event in the respective treatment arm or overall.
[a] Observation period is the time from first dose until the earliest of: the data cut-off (DCO) date; the date of study treatment discontinuation plus 30 days; or death; whichever occurs first and stops the collection of endpoint data. The same observation period applies to any adverse event and any serious adverse event, so the adverse-event and serious-adverse-event windows coincide. Only febrile neutropenia events with an onset date within this period are counted.
Adverse events were coded using the Medical Dictionary for Regulatory Activities (MedDRA) Version 28.1.

[1] Febrile neutropenia with CTCAE Grade ≥3: includes only febrile neutropenia events with a toxicity grade of 3 or higher and an onset date within the adverse-event observation period defined in footnote [a]. [2] Febrile neutropenia classified as a Serious Adverse Event (SAE): includes only febrile neutropenia events that met at least one seriousness criterion and had an onset date within the serious-adverse-event observation period defined in footnote [a].

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Screened Population: Participants who have signed an informed consent and participated in the screening procedures at site to assess eligibility.
Safety Analysis Set includes randomized participants who have received at least one dose of any study drug.
Denominator of percentages is the number of participants in each treatment group.
Randomized Phase excludes crossover phase when participants in TPC arm started to receive SG.
Data Cut Date: 27 October 2025.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Denominator of percentages is the number of participants in each treatment group.
Medical history was coded according to MedDRA Version 27.1.
Participants may report >=1 medical history per system organ class or preferred term. At each level of summarization, a participant was counted once if the participant reported 1 or more medical history.
SOCs were presented alphabetically and PTs within SOC were presented by descending order of the total frequencies.
Data Cut Date: 27 October 2025.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
The denominator of percentages is the number of participants in each treatment group.
Medications are mapped using WHODRUG dictionary version BMAR24.
Participants are counted only once for each category and preferred drug name. Participants may be counted in more than one drug category if they received multiple drugs as part of their first subsequent anti-cancer therapy. The total number of participants with any subsequent anti-cancer therapy differs by 1 from the first subsequent therapy count because one patient in the TPC arm has a missing first subsequent therapy record but has two entries recorded for the fourth subsequent therapy. This patient is therefore counted in "Participants with any subsequent anti-cancer therapy" but not in "First subsequent anti-cancer therapy"
The preferred drug name "Sacituzumab Govitecan" includes both commercial use and crossover to SG on study.
Data Cut Date: 27 October 2025.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
OS (months) = (date of death or censoring − date of randomisation + 1) / 30.4375. Median OS from Kaplan-Meier estimate. 95% CI based on log-log transformation.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.

label	SG (N=52)	TPC (N=45)	Interaction

Log-rank test is unstratified.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Participants with unknown BRCA 1/2 status were excluded from that subgroup.
Disease stratification and geographic region are collected from IWRS.
Race subgroup Other - includes American Indian or Alaska Native, Black, Native Hawaiian or Pacific Islander and Other collected in clinical database.
[1] Interaction p-value: likelihood ratio test from Cox model with treatment + subgroup + treatment×subgroup interaction terms; shown once per subgroup variable at first category level.
Data Cut Date: 27 OCT 2025.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
Intent-to-treat (ITT) Analysis Set includes all participants who were randomised in the study.
Denominator of percentages is the number of participants in each treatment group of each subgroup.
PFS (months) = (date of events or censoring − date of randomisation + 1) / 30.4375. 95% CI based on log-log transformation. Median PFS from Kaplan-Meier estimate.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
The two-sided p-value is from Unstratified log-rank test.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Disease stratification and geographic region are collected from IWRS (Interactive Web Response System).
Race subgroup Other - includes American Indian or Alaska Native, Black, Native Hawaiian or Pacific Islander and Other collected in clinical database.
[a] Interaction p-value from a Cox model with treatment, subgroup factor, and treatment×subgroup interaction term; computed via likelihood ratio test (full vs. main-effects model). Displayed once per subgroup variable at first category level.
Data Cut Date: 27 OCT 2025.

Stratified Hazard Ratio of SG vs TPC (95% CI) [d]	0.449 (0.261, 0.775)	

SG = sacituzumab govitecan; TPC = treatment of physician's choice; IWRS = Interactive Web Response System; NR = Not Reached.
PFS2 is defined as the time from date of randomization to the first documented progression on next-line therapy based on investigator assessment of PD or death due to any cause, whichever occurs first. Next line therapy is defined as the first new systemic anti-cancer therapy (including crossover treatment) initiated after discontinuation of study treatment regardless of end of treatment reason.
[a] Quantile of PFS2 is from Kaplan-Meier estimate. The 95% CI is based on log-log transformation.
[b] PFS2 rate is the proportion of participants alive without progression at the next line of therapy. The 95% CI is based on the log-log transformation.
[c] The two-sided p-value is from stratified log-rank test.
[d] Hazard ratio with 95% CIs are calculated using Cox proportional hazards model, adjusted for randomization stratification factors (IWRS).
Data Cut Date: 27 OCT 2025.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
Time to first subsequent therapy is defined as the time from randomisation to the start date of the first subsequent anti-cancer therapy after discontinuation of randomised treatment, or death due to any cause.
TFST rate is the proportion of participants alive without any subsequent therapy.
Hazard ratio and 95% CIs calculated using unstratified Cox proportional hazards model. Efron method used to handle ties. Reference arm = TPC.
Log-rank p-value is from an unstratified log-rank test.
[1] Interaction p-value: likelihood ratio test from Cox model with treatment + subgroup + treatment×subgroup interaction terms; shown once per subgroup variable at first category level.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Data Cut Date: 27 OCT 2025.

6. Safety - mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

>= 24 months, n, (%)	2 (3.9%)	0 (0.0%)	0 (0.0%)

SG = sacituzumab govitecan, TPC = treatment of physician's choice, Gem = gemcitabine, Carbo = carboplatin.
Safety Analysis Set includes randomized participants who have received at least one dose of any study drug. Taxane includes participants who have received Paclitaxel. TPC column includes participants who have received any of Gem, Carbo or Paclitaxel.
Duration of exposure to study drug (months) = (last dosing date − first dosing date + 1)/30.4375.

6.2. Table 1.1.2: Observation Period (Months) for Safety — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

	SG (N=51)	TPC (N=44)	Total (N=95)
Observation Period (months) for Safety [a]

Median (95% CI)	0.10 (0.07, 0.26)	0.13 (0.07, 0.23)
Analysis SG vs. TPC		
Hazard Ratio (95% CI)		1.267 (0.826, 1.944)
p-value		0.2754

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.

	SG (N=51)	TPC (N=44)

p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
NC = Not Calculable: the hazard ratio and 95% CI are not estimable by the Cox model.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if all categories contain ≥10 patients across both arms combined.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.

	SG (N=51)	TPC (N=44)	Interaction p-value[1]

Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.

	SG (N=51)	TPC (N=44)

NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.

NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.

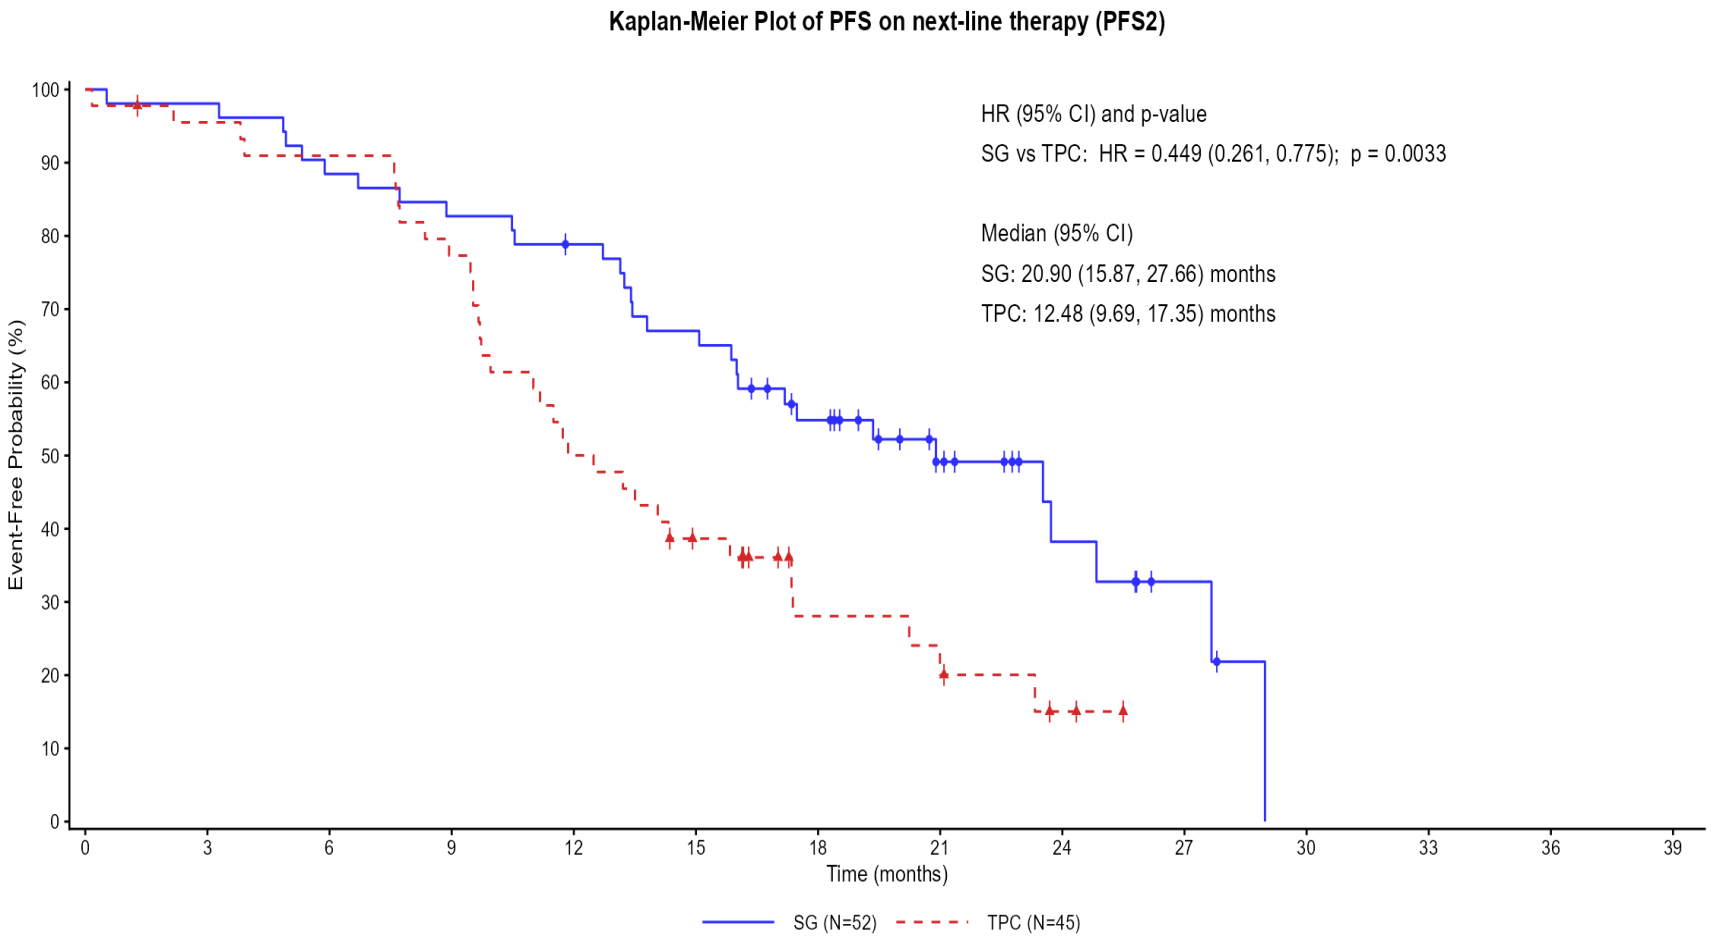
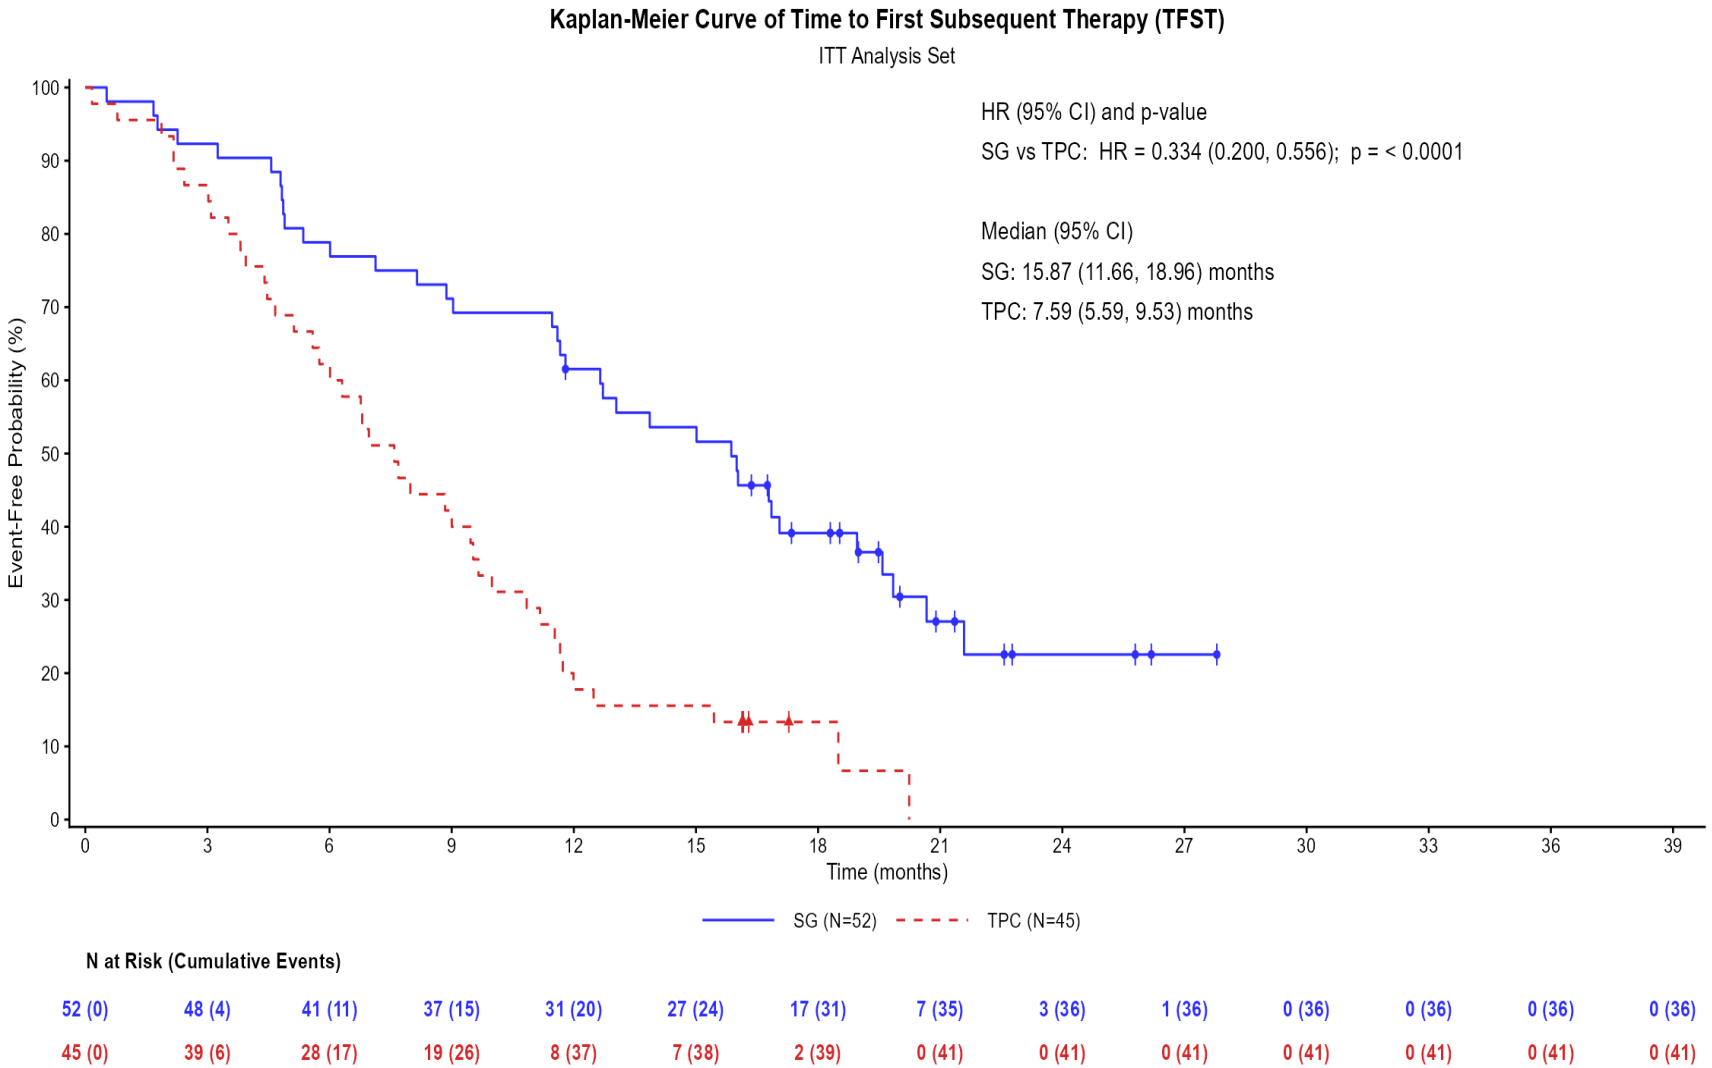
7. Efficacy - KM FIGURES - mITT - Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

7.1. Figure 1.1.1: Kaplan-Meier Curve of Overall Survival (OS) — mITT — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, adjusted for randomization stratification factors (STRAT1, STRAT2) from IWRS. Efron method for ties. Reference arm = TPC.

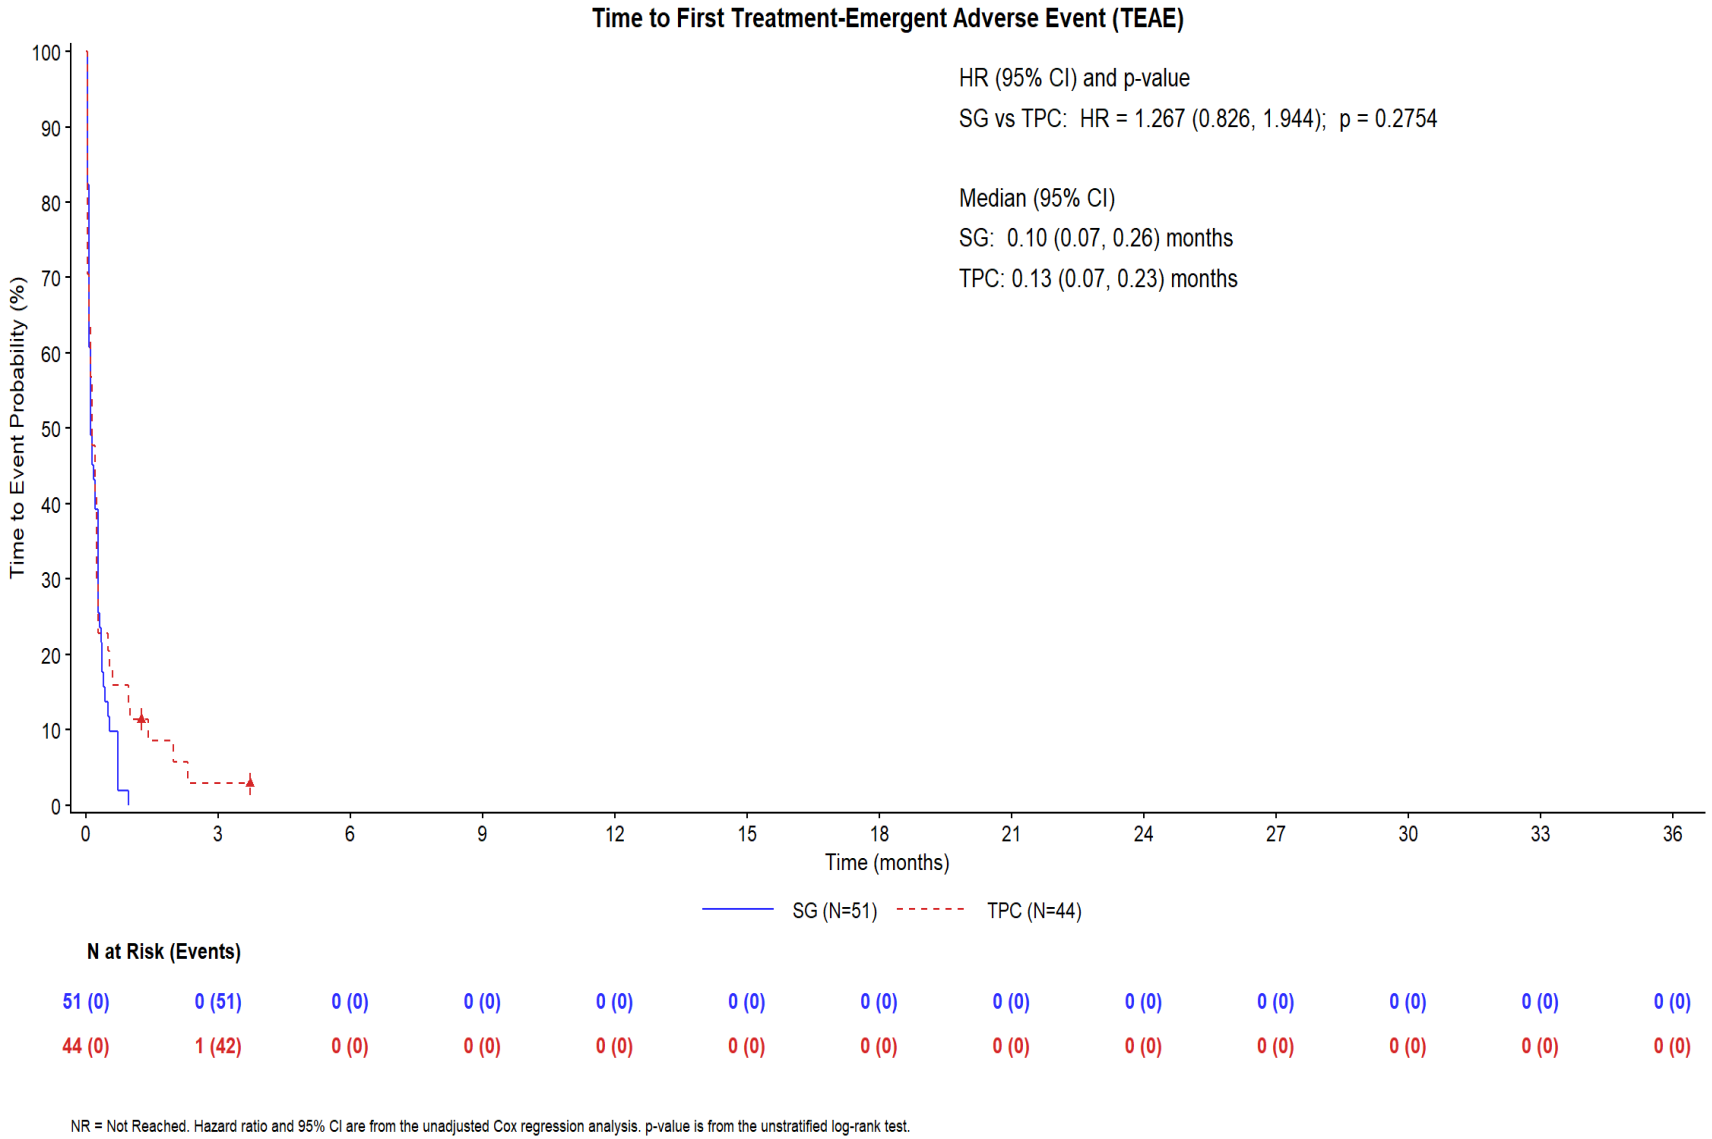
7.2. Figure 1.1.2: Kaplan-Meier Curve of Progression-Free Survival (PFS) by BICR — mITT — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, adjusted for randomization stratification factors (STRAT1, STRAT2) from IWRS. Efron method for ties. Reference arm = TPC.

7.3. Figure 1.1.3: Kaplan-Meier Plot of PFS on next-line therapy (PFS2) — mITT — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, adjusted for randomization stratification factors (STRAT1, STRAT2) from IWRS. Efron method for ties. Reference arm = TPC.



7.4. Figure 1.1.4: Kaplan-Meier Curve of Time to First Subsequent Therapy (TFST) — mITT — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached. ITT Analysis Set includes all participants who were randomized in the study. The two-sided p-value is from stratified log-rank test and the hazard ratio with 95% CIs are calculated using Cox proportional hazards model, adjusted for randomization stratification factors (STRAT1, STRAT2) from IWRS. Efron method for ties. Reference arm = TPC.

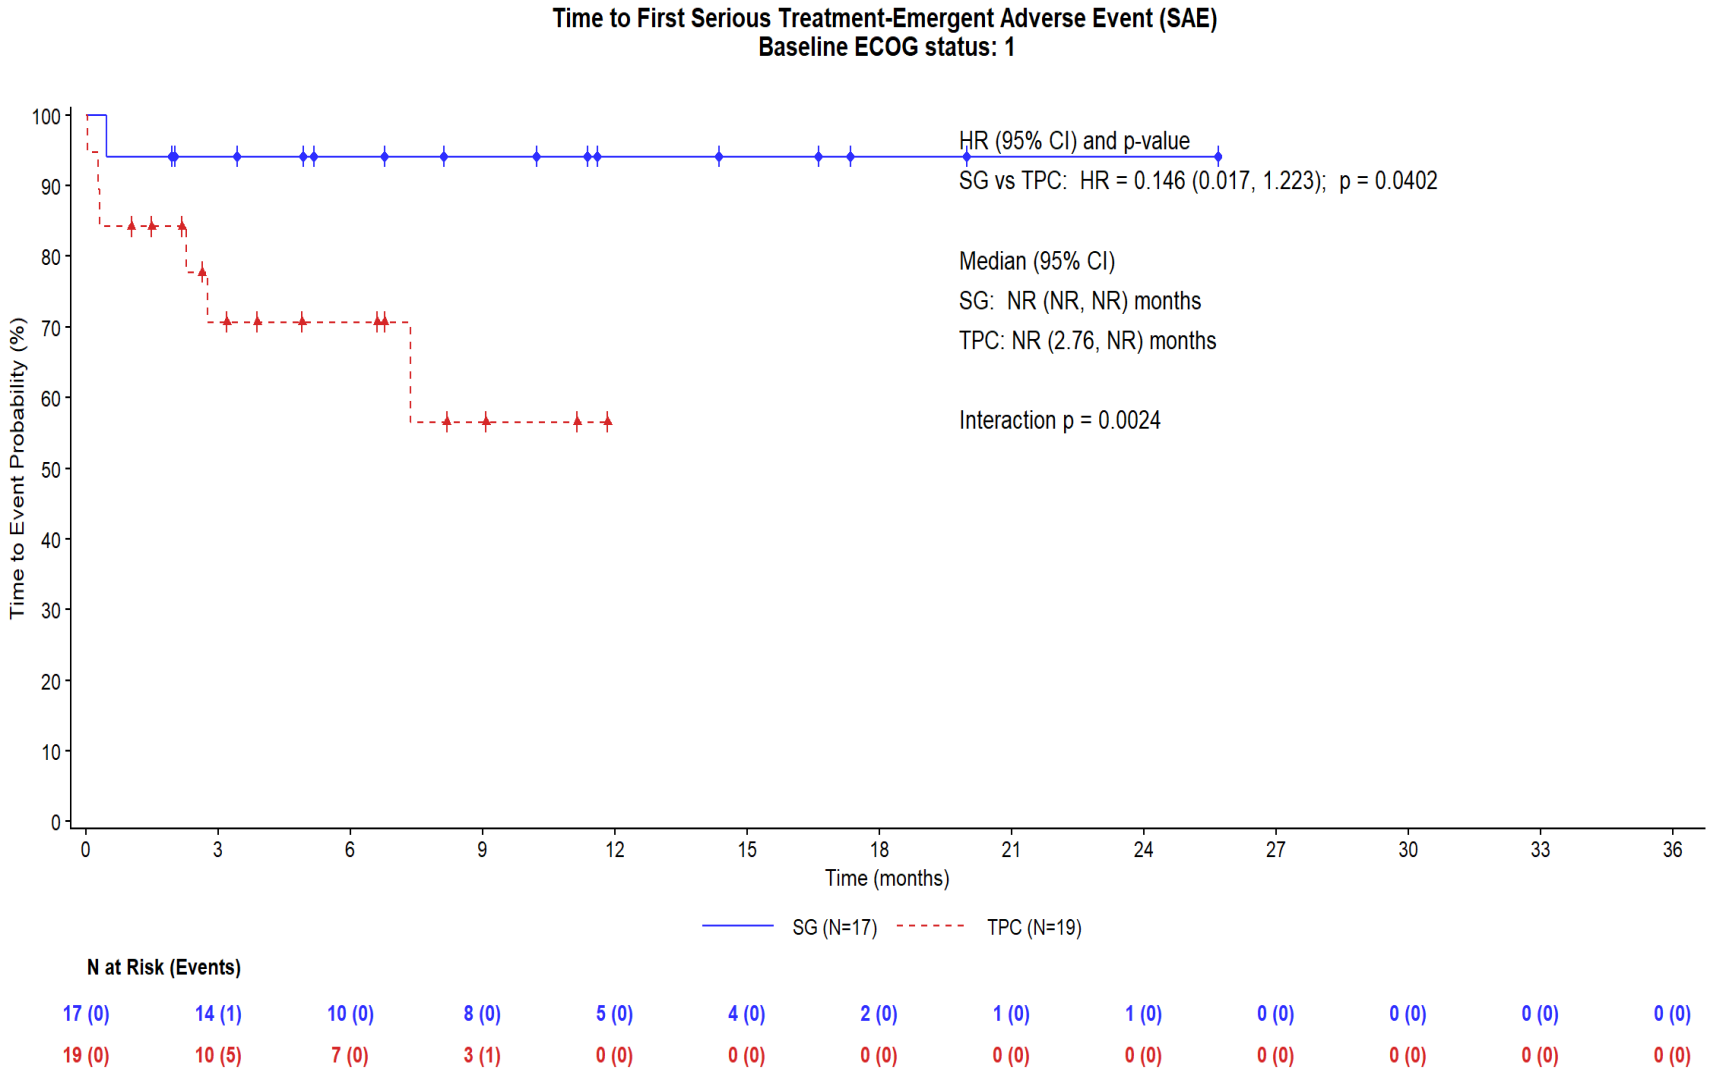
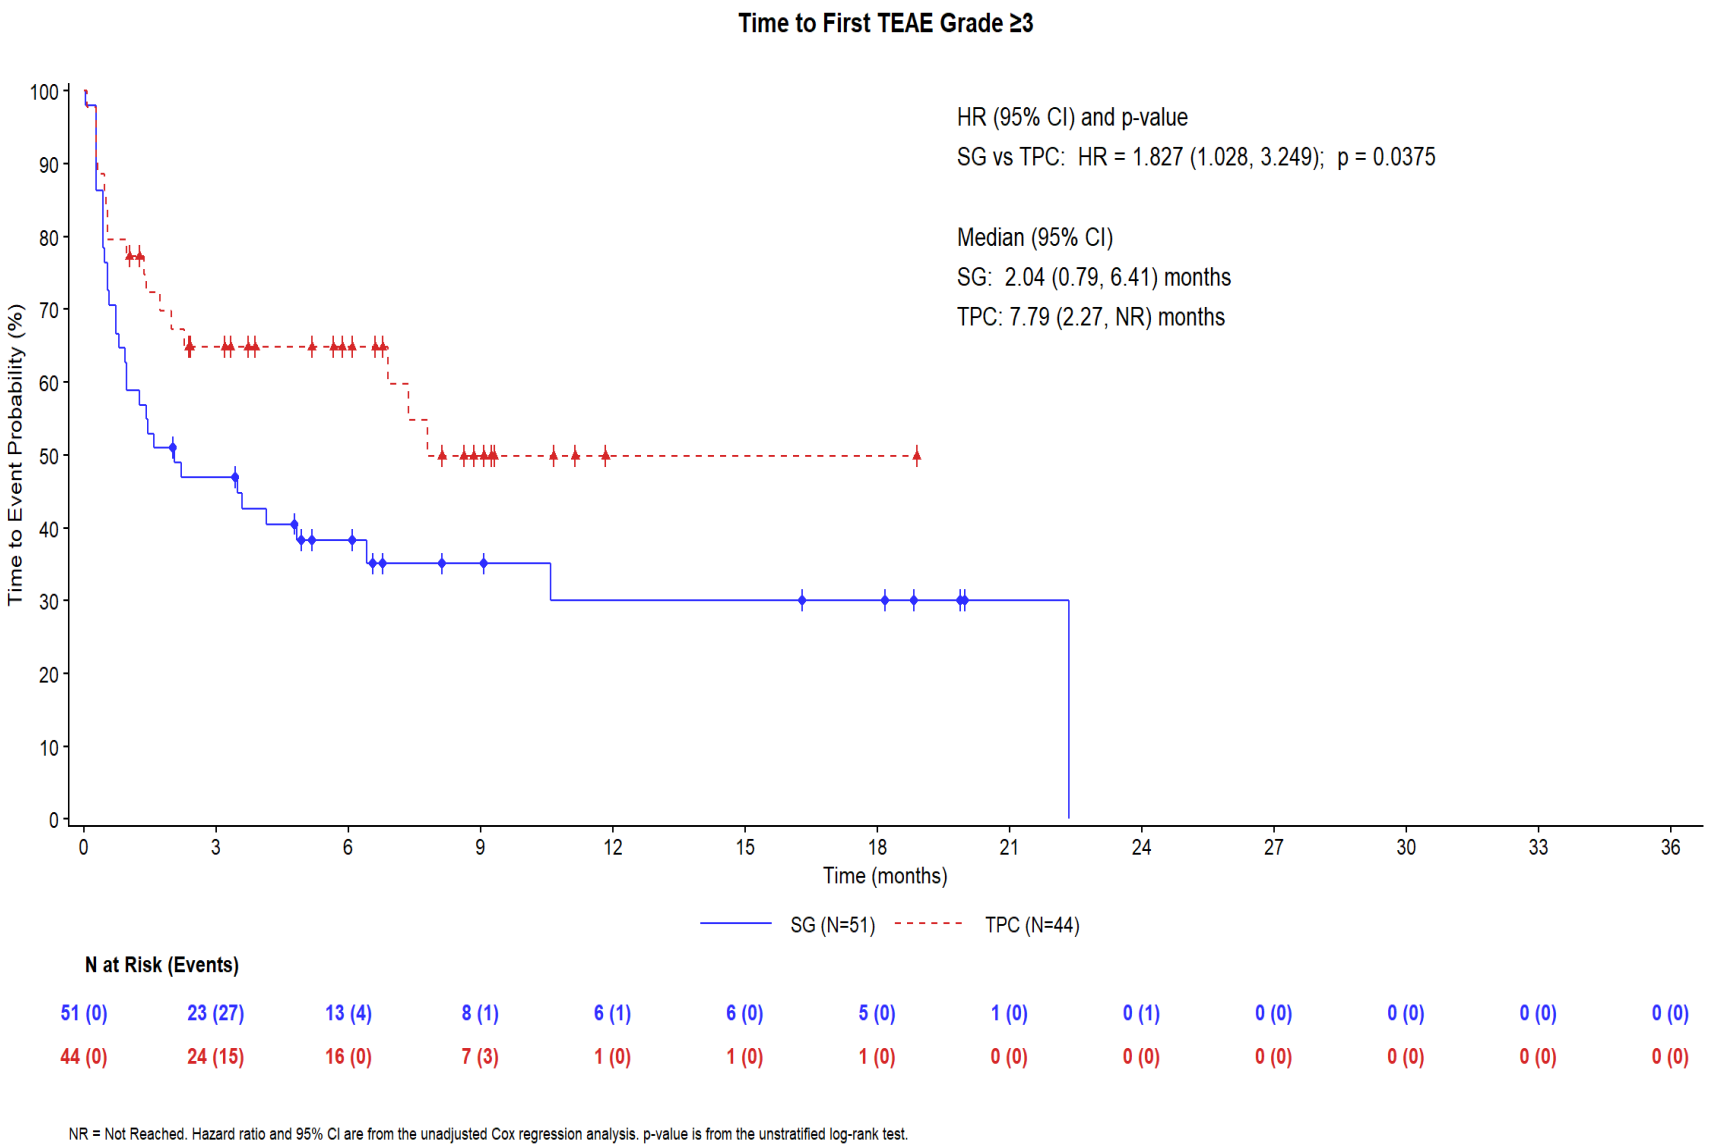
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.2. Figure 1.1.2: Kaplan Meier Plot of Time to First Serious TEAE (SAE) — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



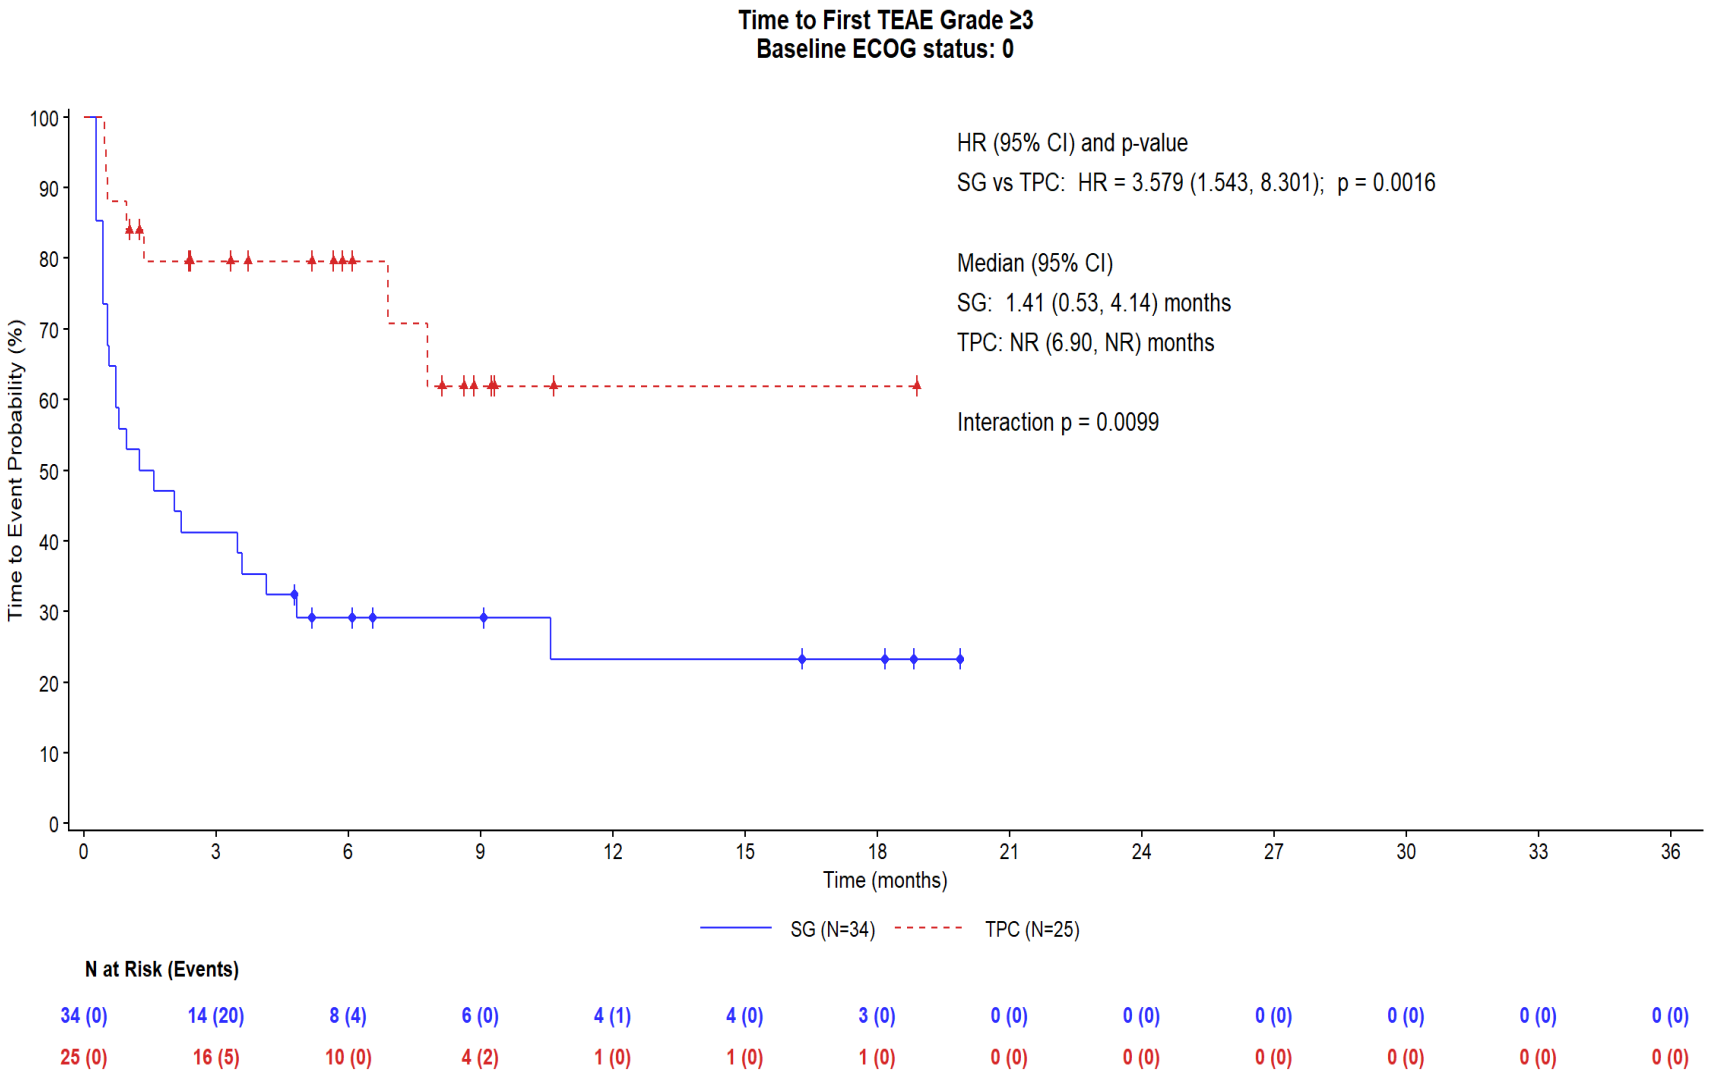
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.3. Figure 1.1.3: Kaplan Meier Plot of Time to First Serious TEAE (SAE) Baseline ECOG status 0 — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



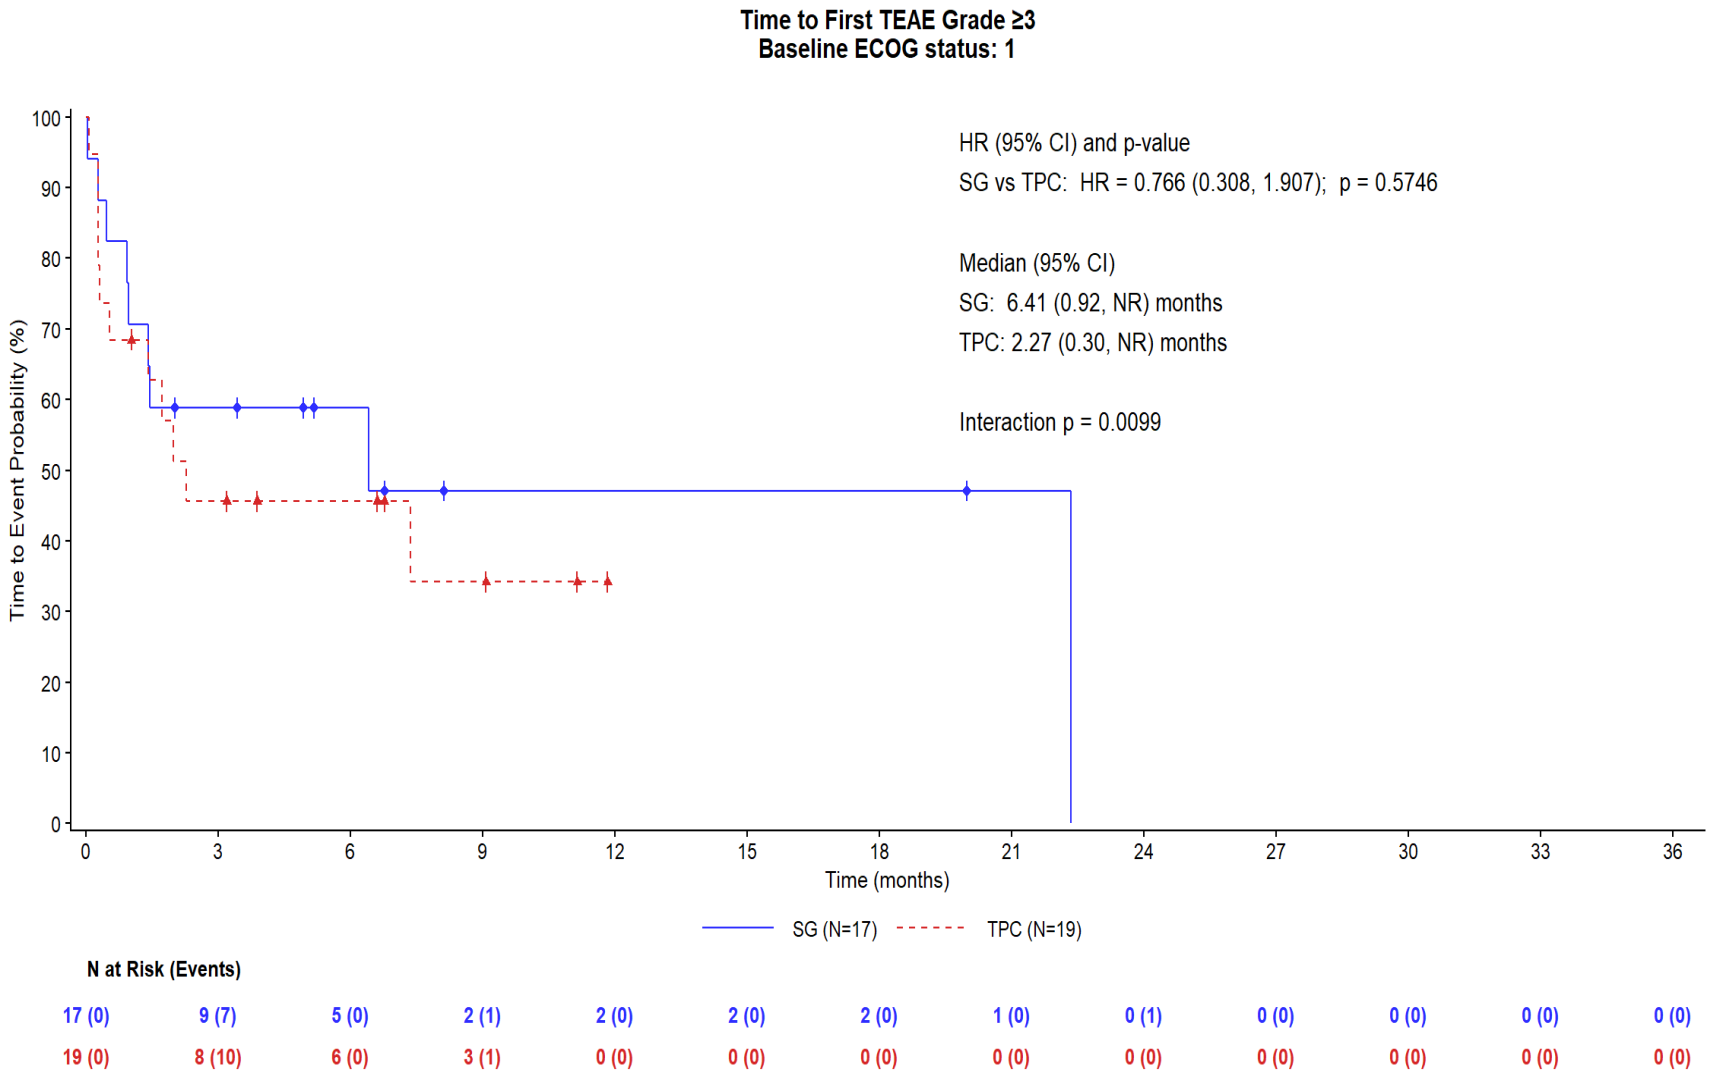
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.4. Figure 1.1.4: Kaplan Meier Plot of Time to First Serious TEAE (SAE) Baseline ECOG status 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



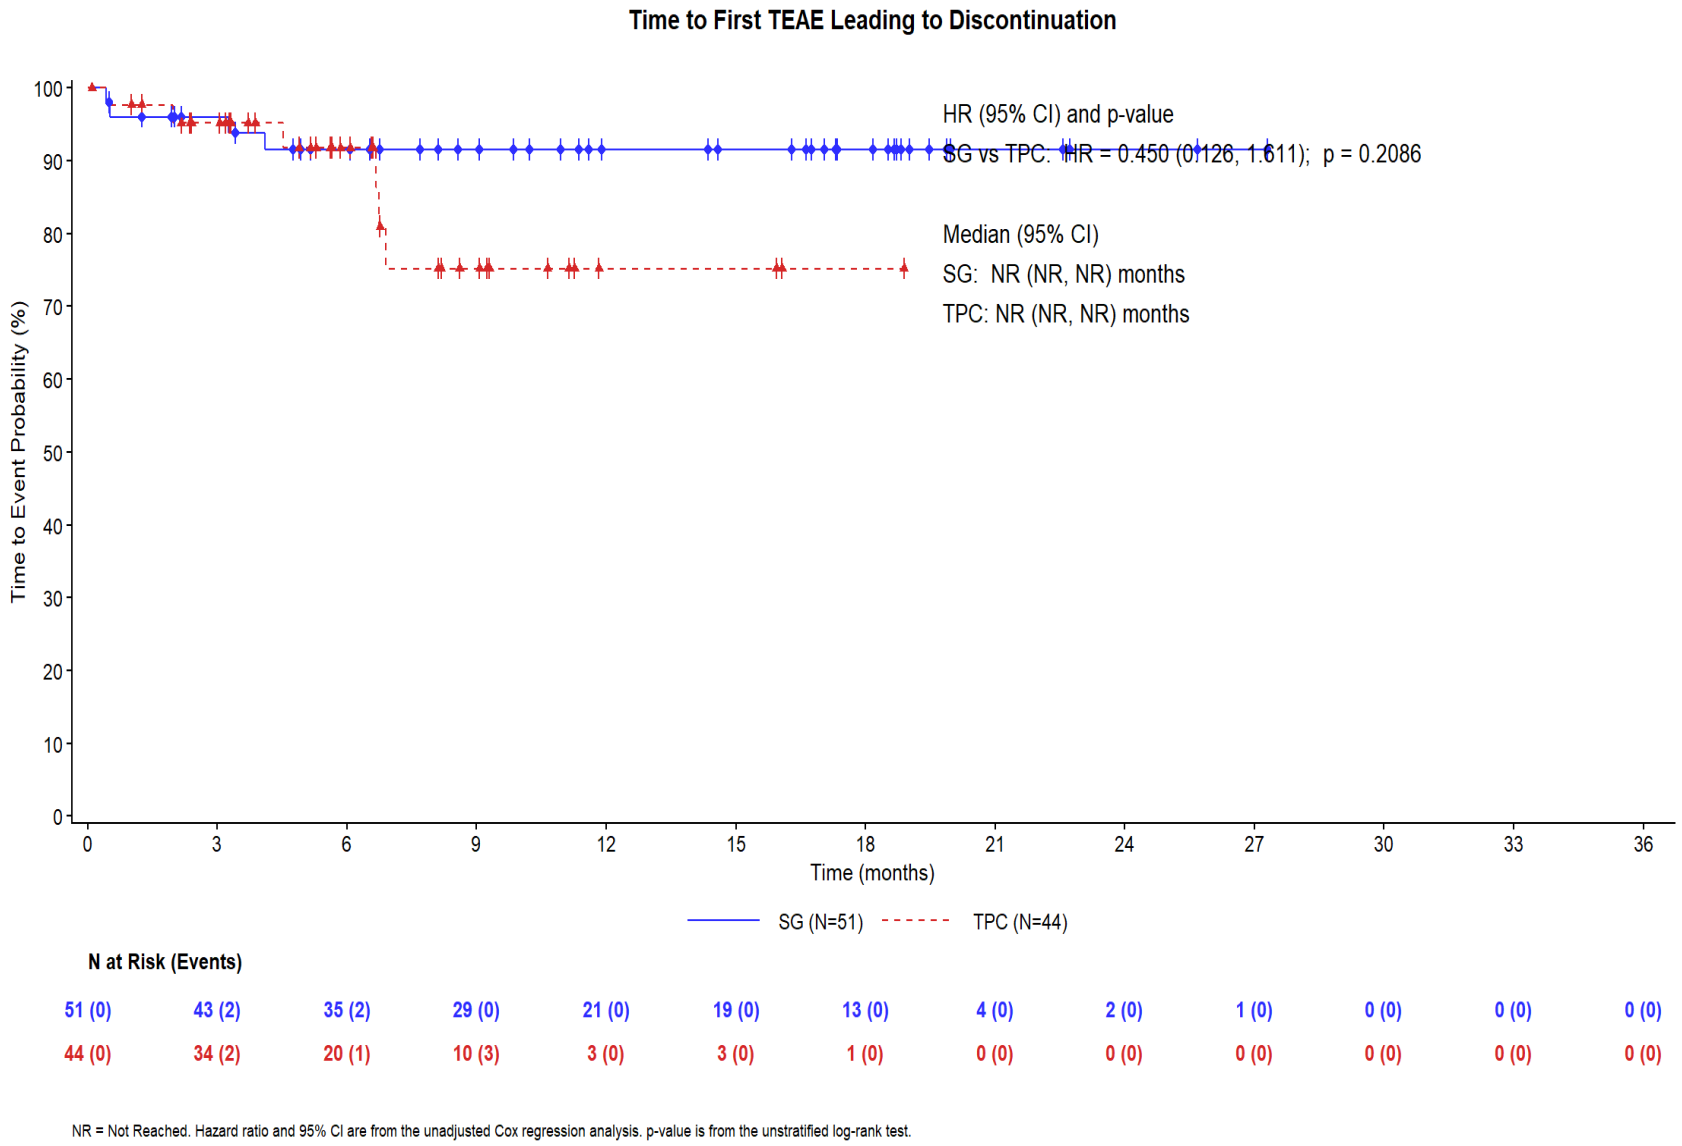
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.5. Figure 1.1.5: Kaplan Meier Plot of Time to First TEAE Grade 3 or higher — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



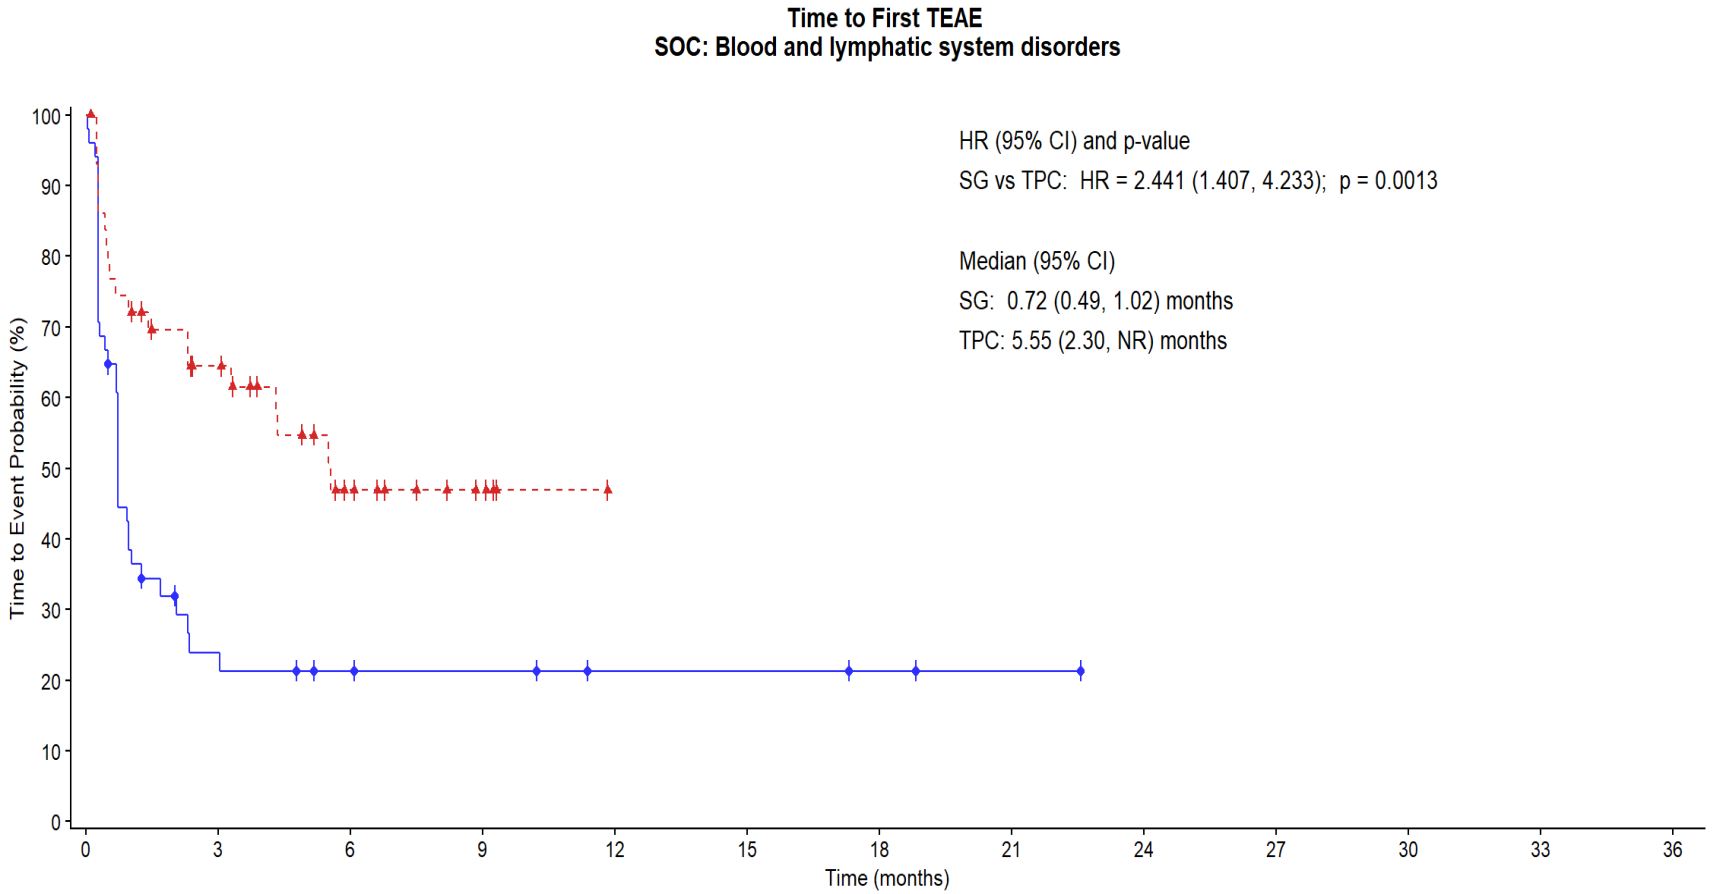
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.6. Figure 1.1.6: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) Baseline ECOG status 0 — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



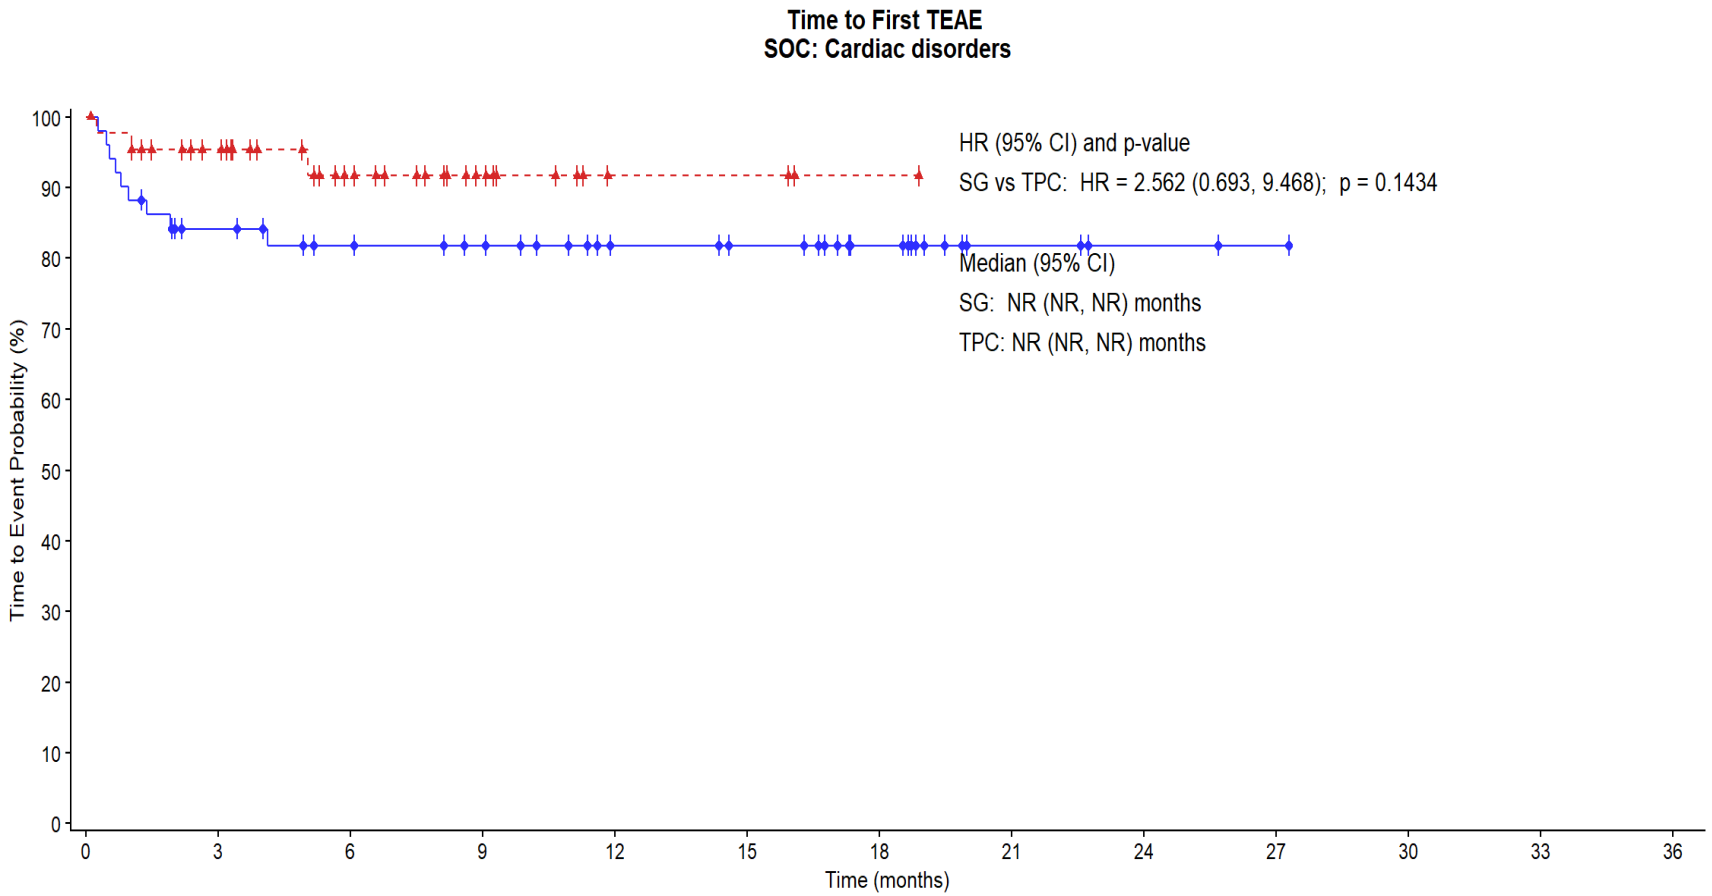
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.7. Figure 1.1.7: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) Baseline ECOG status 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



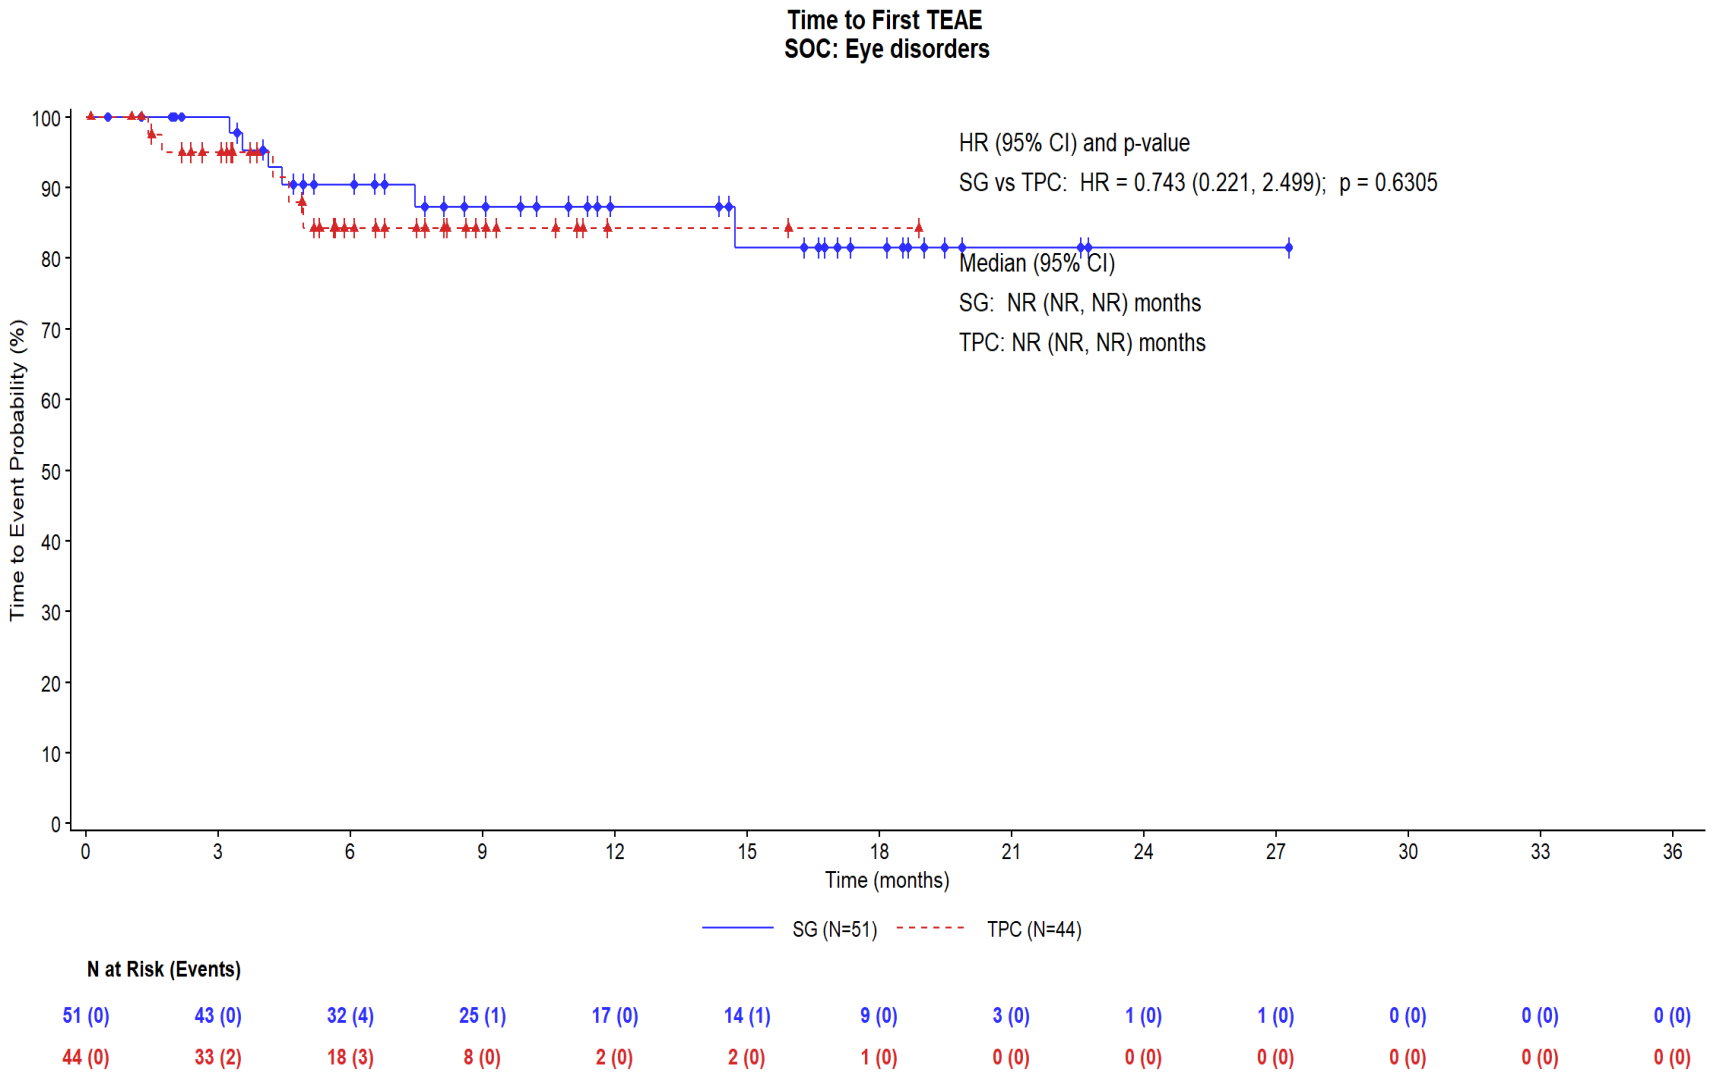
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.8. Figure 1.1.8: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



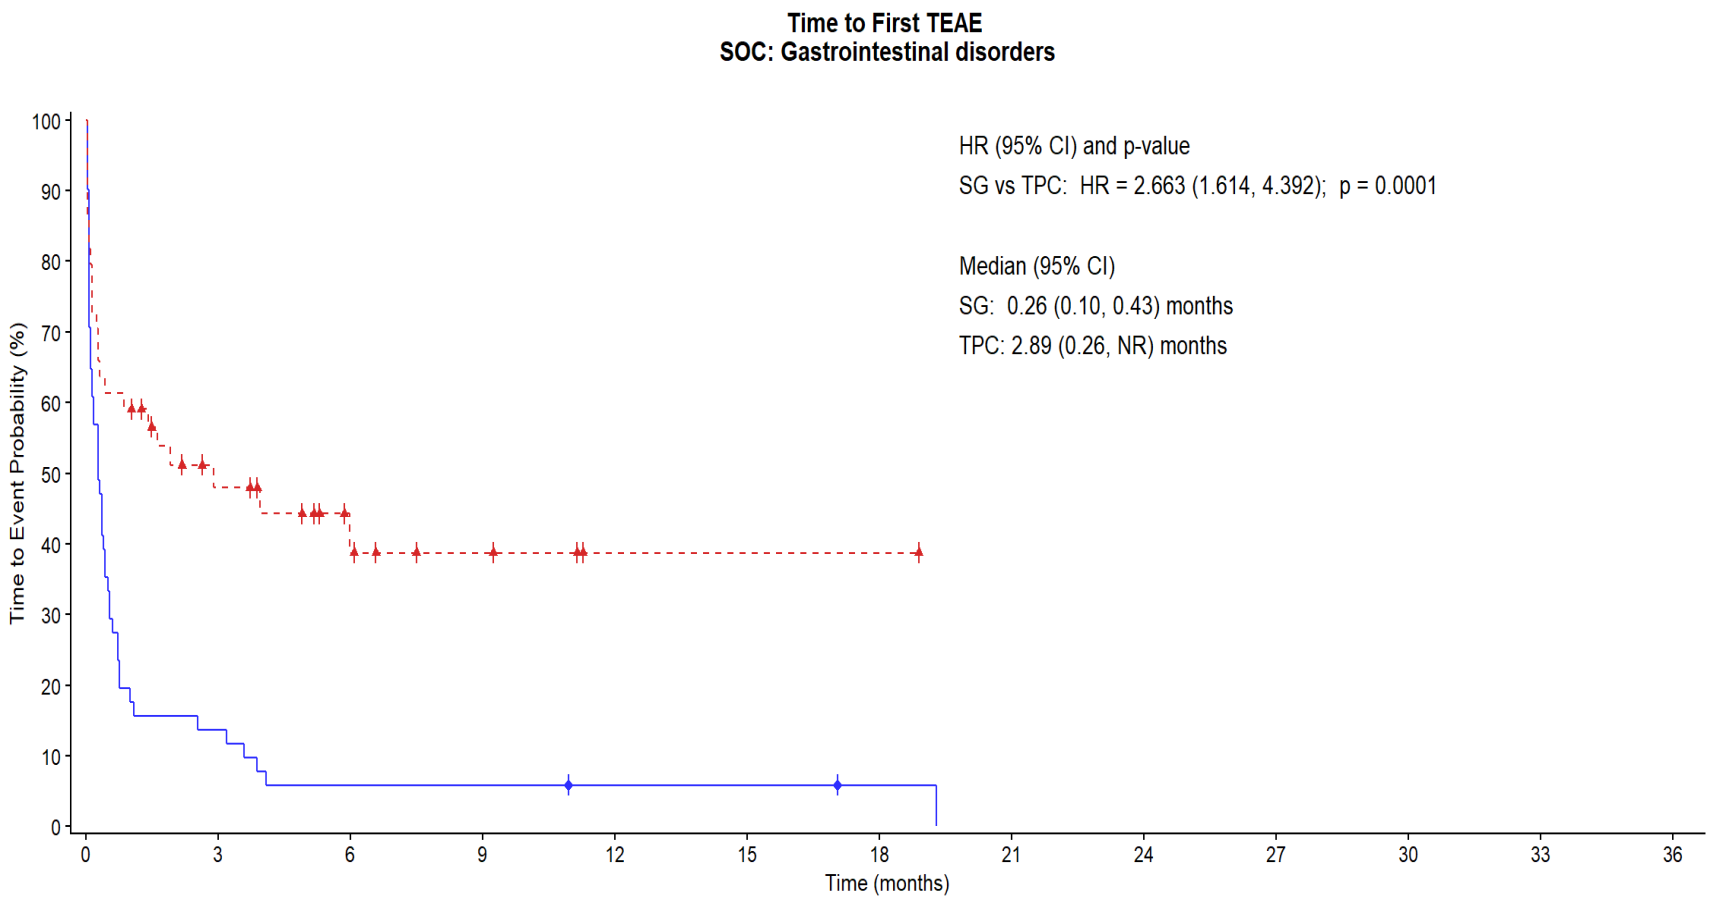
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.9. Figure 1.1.9: Kaplan Meier Plot of Time to First TEAE by SOC Blood and lymphatic system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



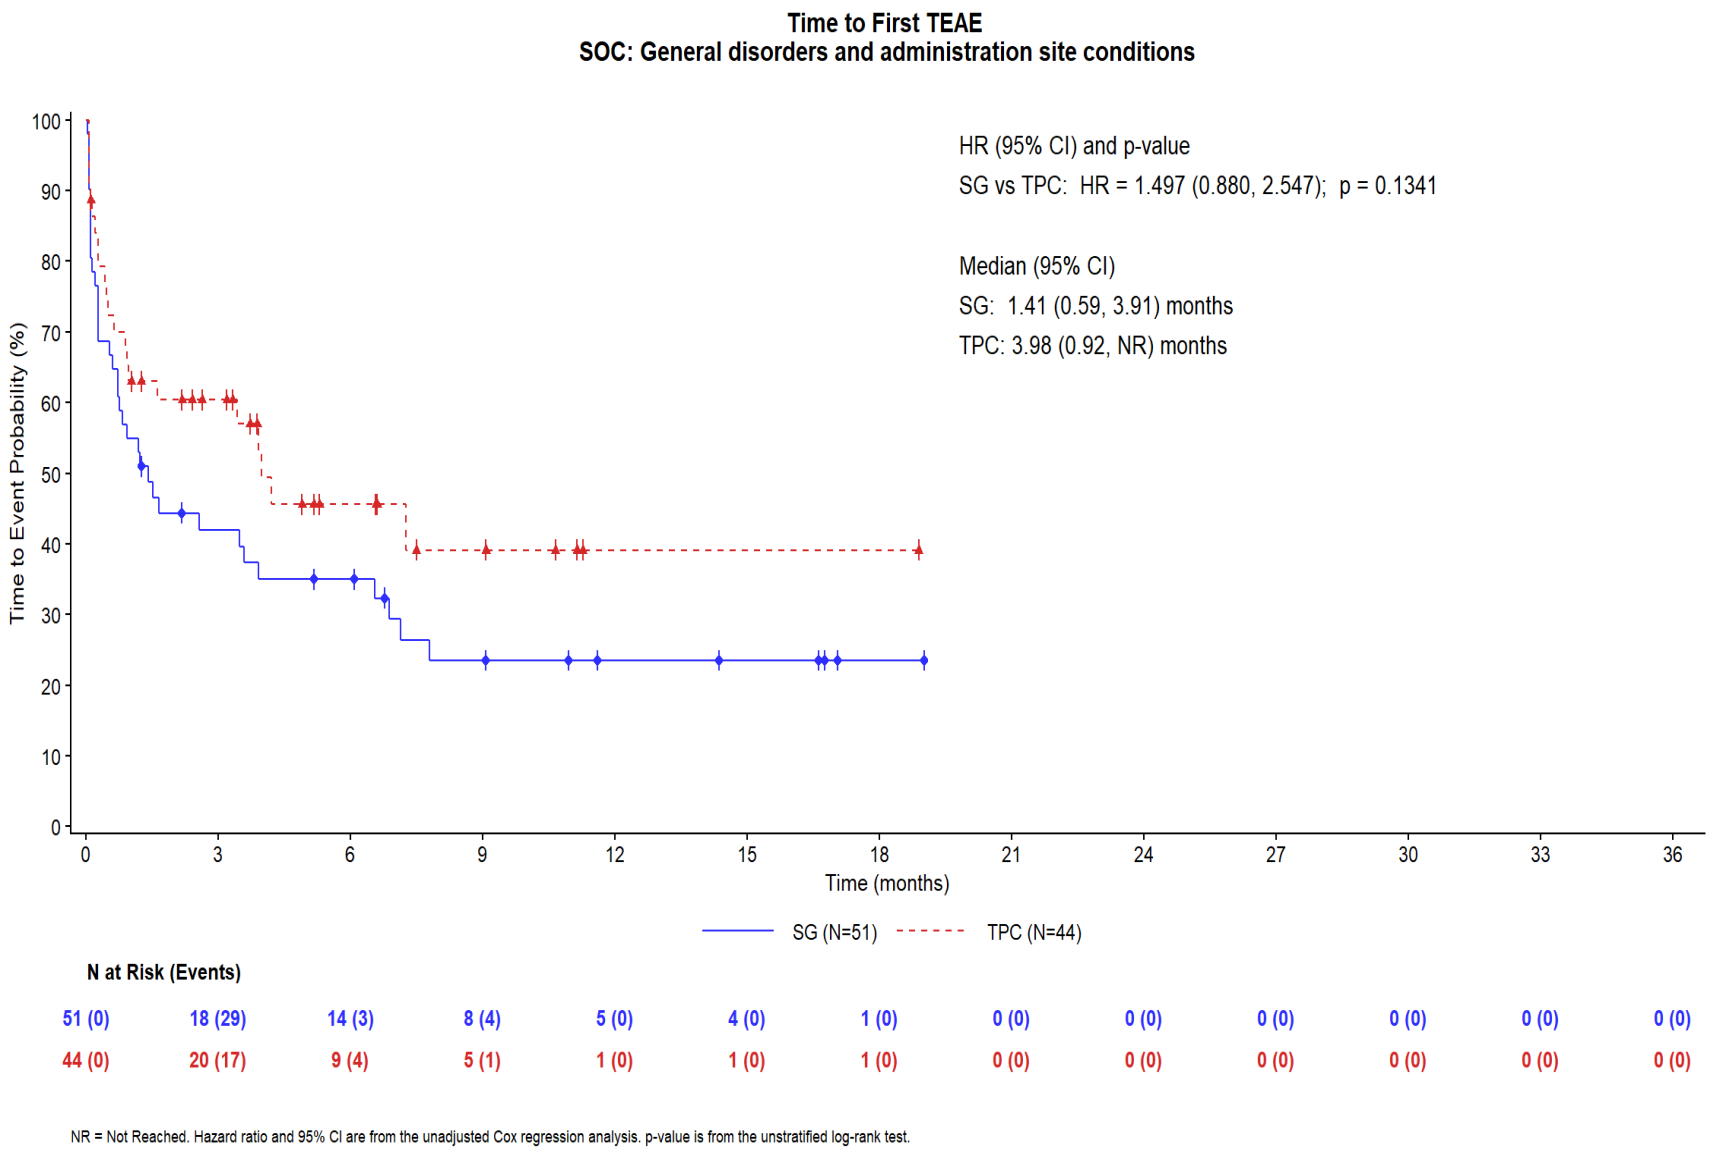
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.10. Figure 1.1.10: Kaplan Meier Plot of Time to First TEAE by SOC Cardiac disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



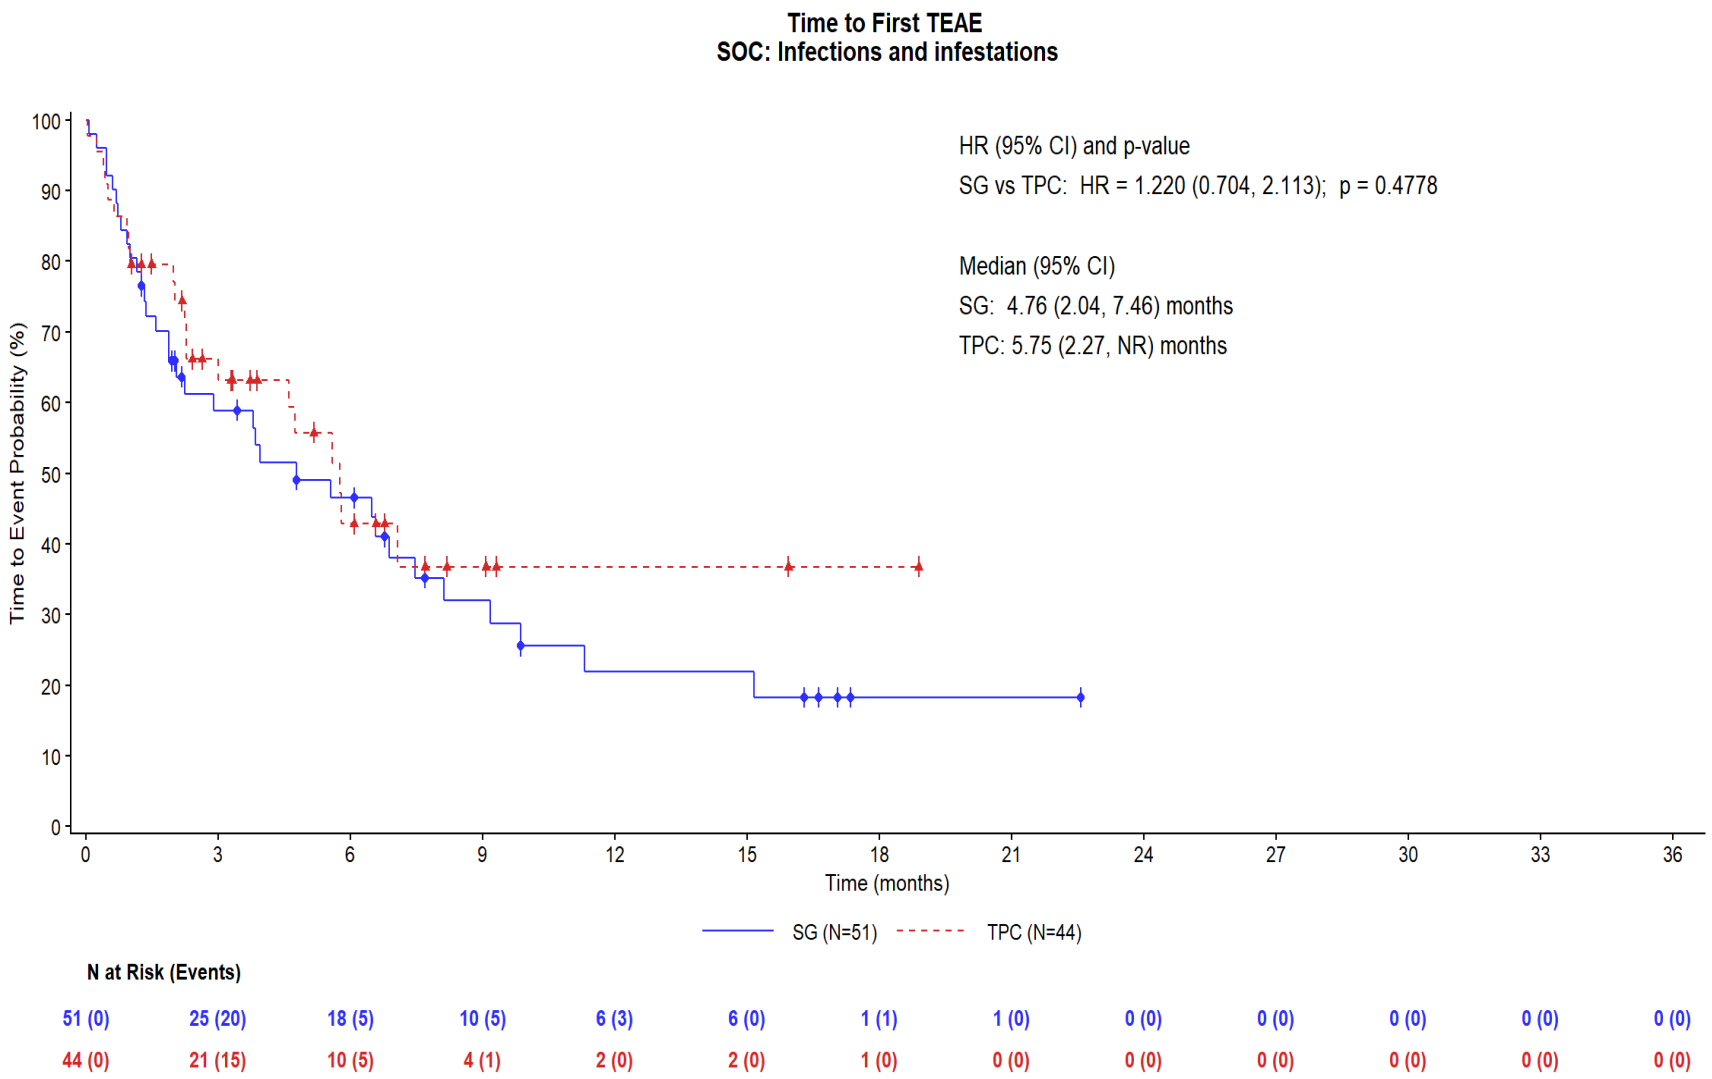
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.11. Figure 1.1.11: Kaplan Meier Plot of Time to First TEAE by SOC Eye disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



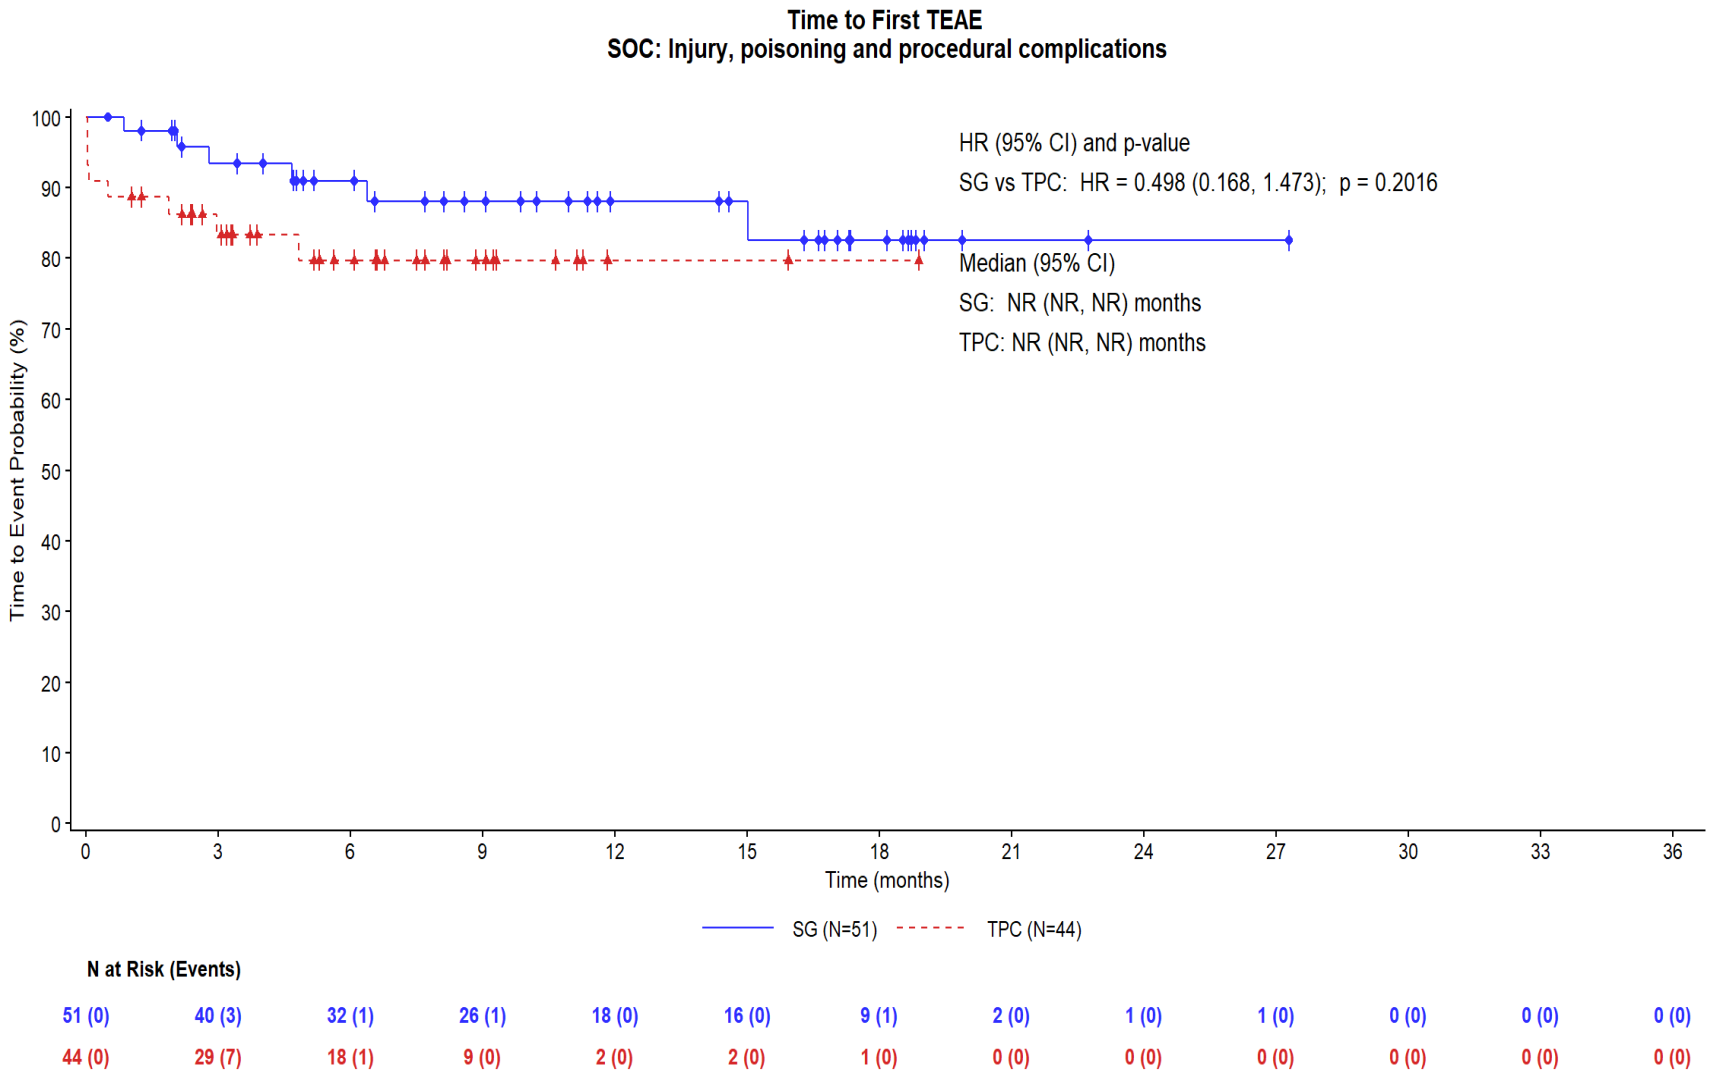
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.12. Figure 1.1.12: Kaplan Meier Plot of Time to First TEAE by SOC Gastrointestinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



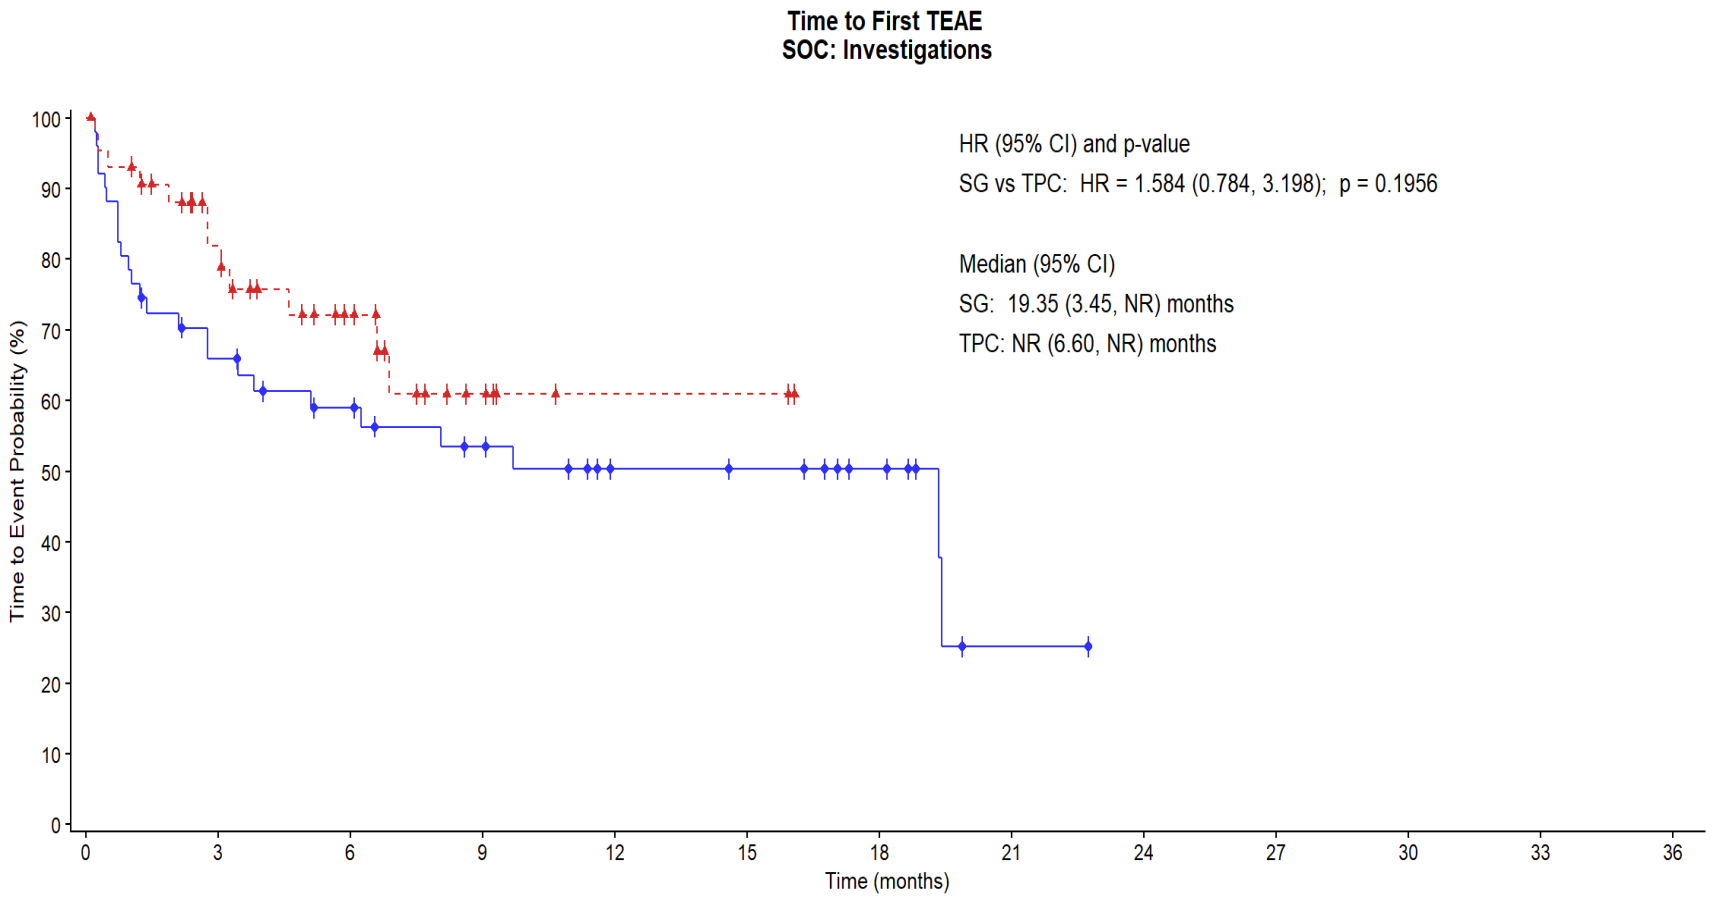
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.13. Figure 1.1.13: Kaplan Meier Plot of Time to First TEAE by SOC General disorders and administration site conditions — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



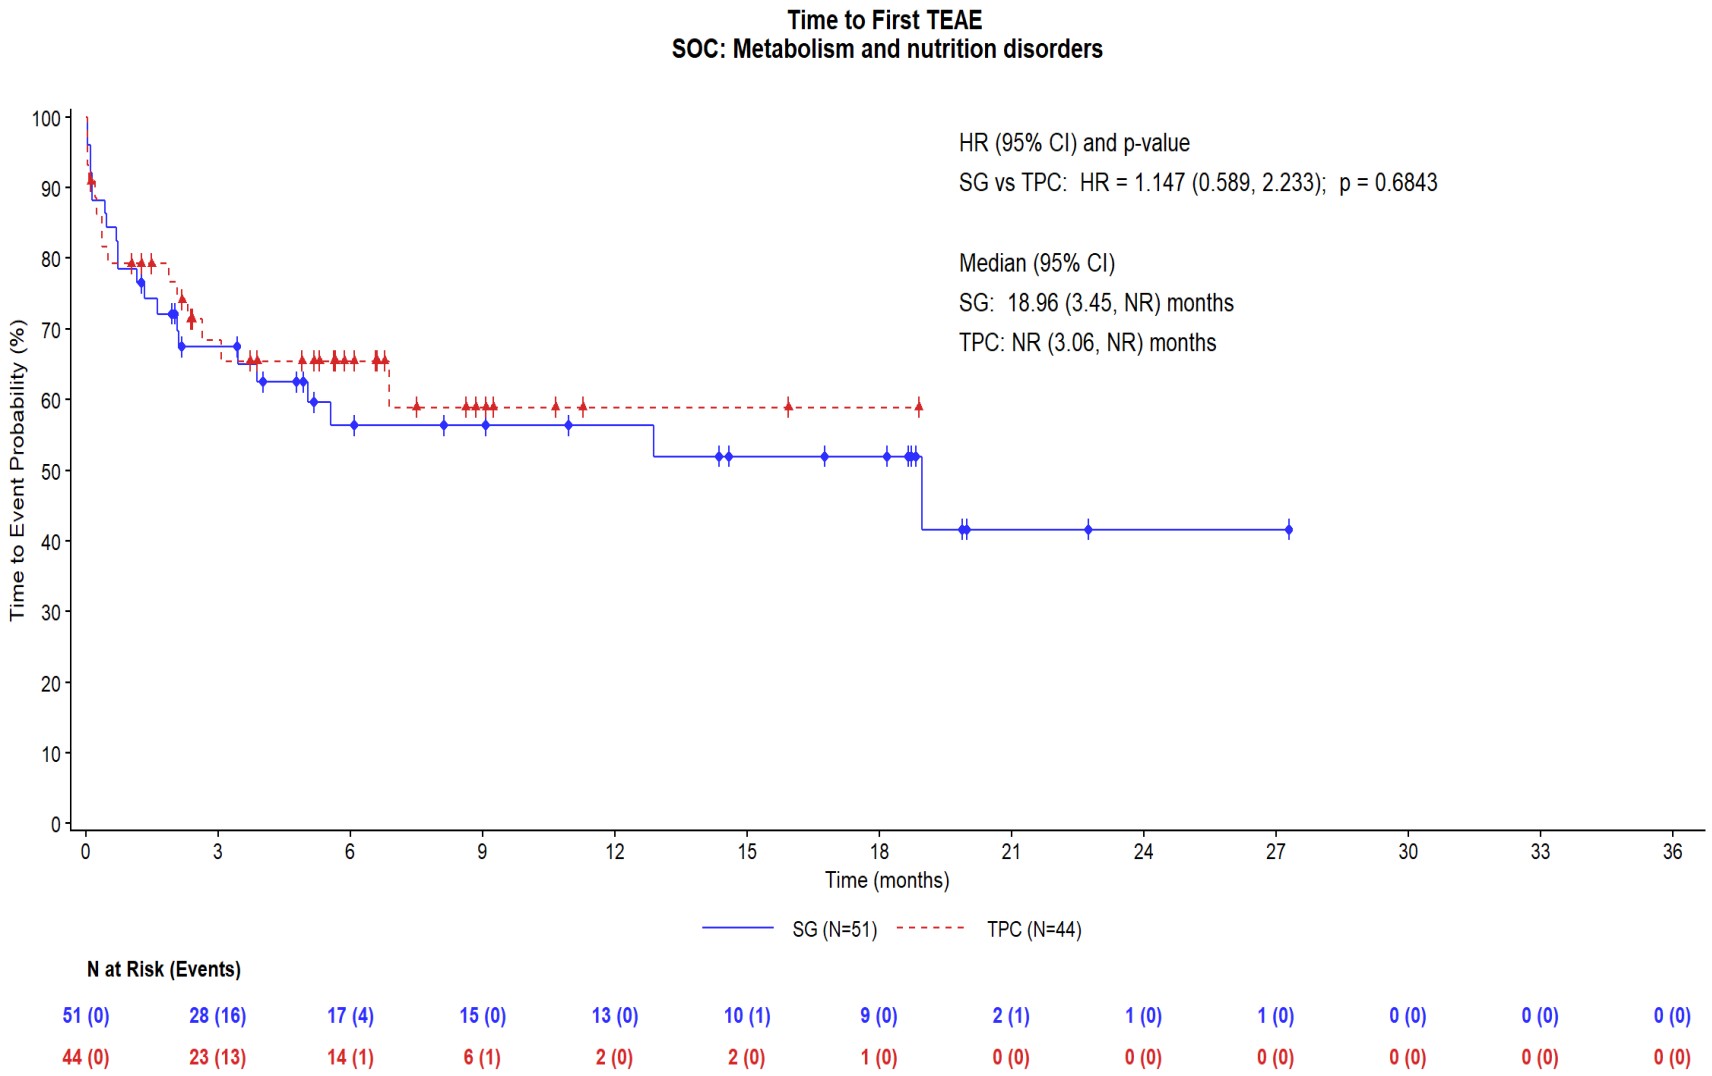
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.14. Figure 1.1.14: Kaplan Meier Plot of Time to First TEAE by SOC Infections and infestations — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



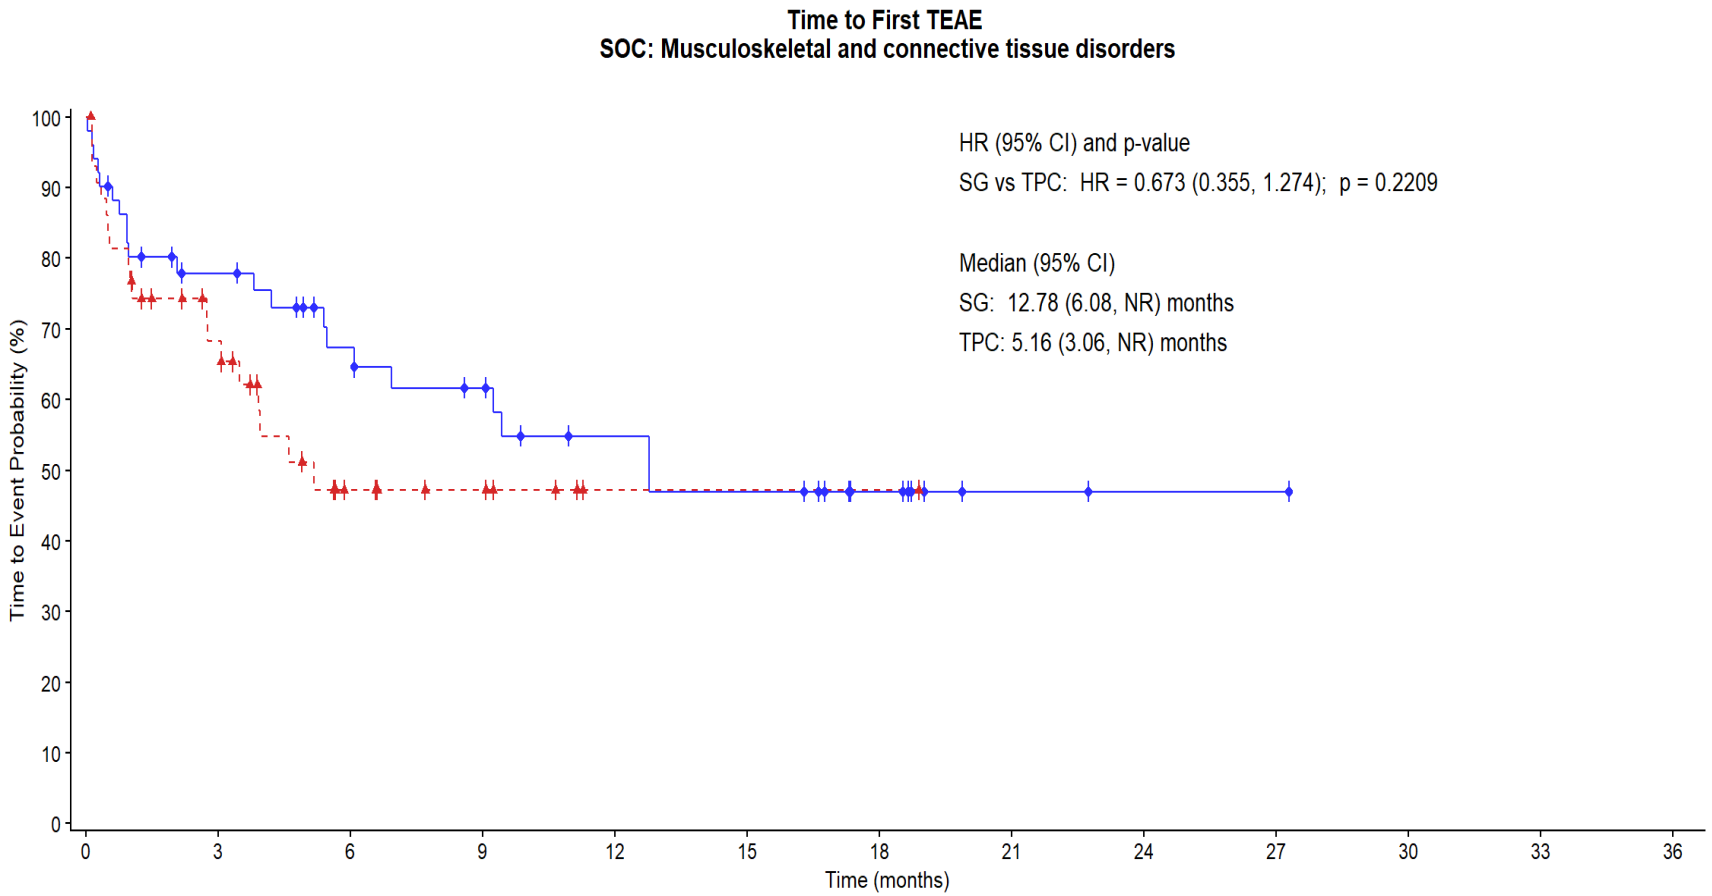
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.15. Figure 1.1.15: Kaplan Meier Plot of Time to First TEAE by SOC Injury poisoning and procedural complications — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



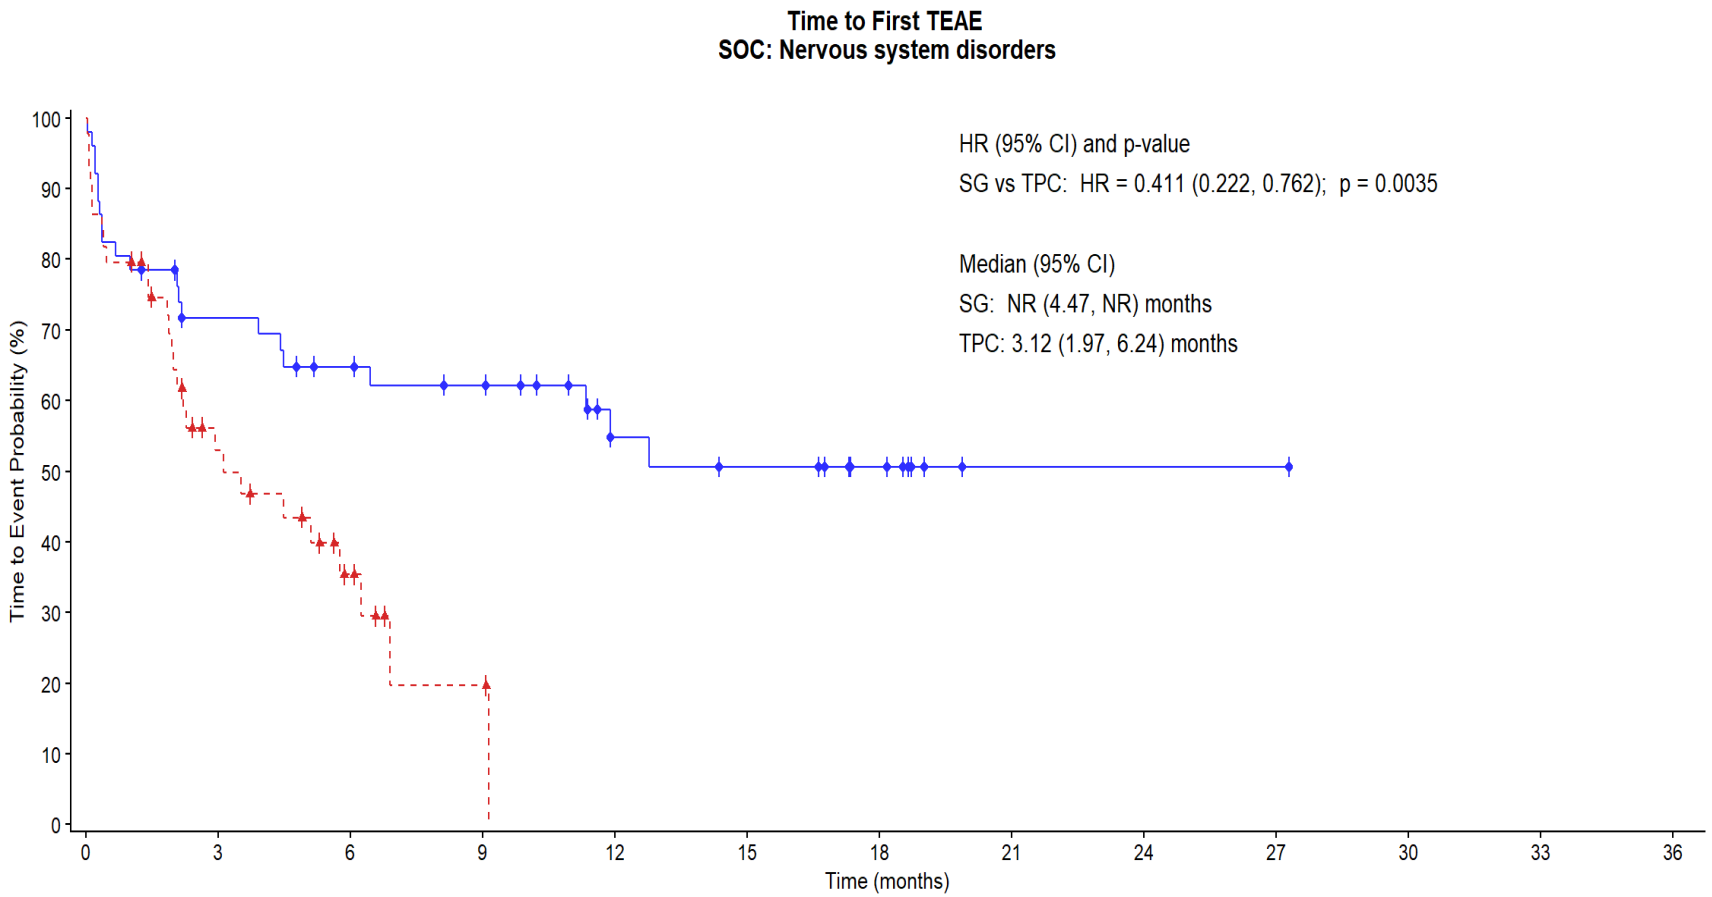
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.16. Figure 1.1.16: Kaplan Meier Plot of Time to First TEAE by SOC Investigations — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



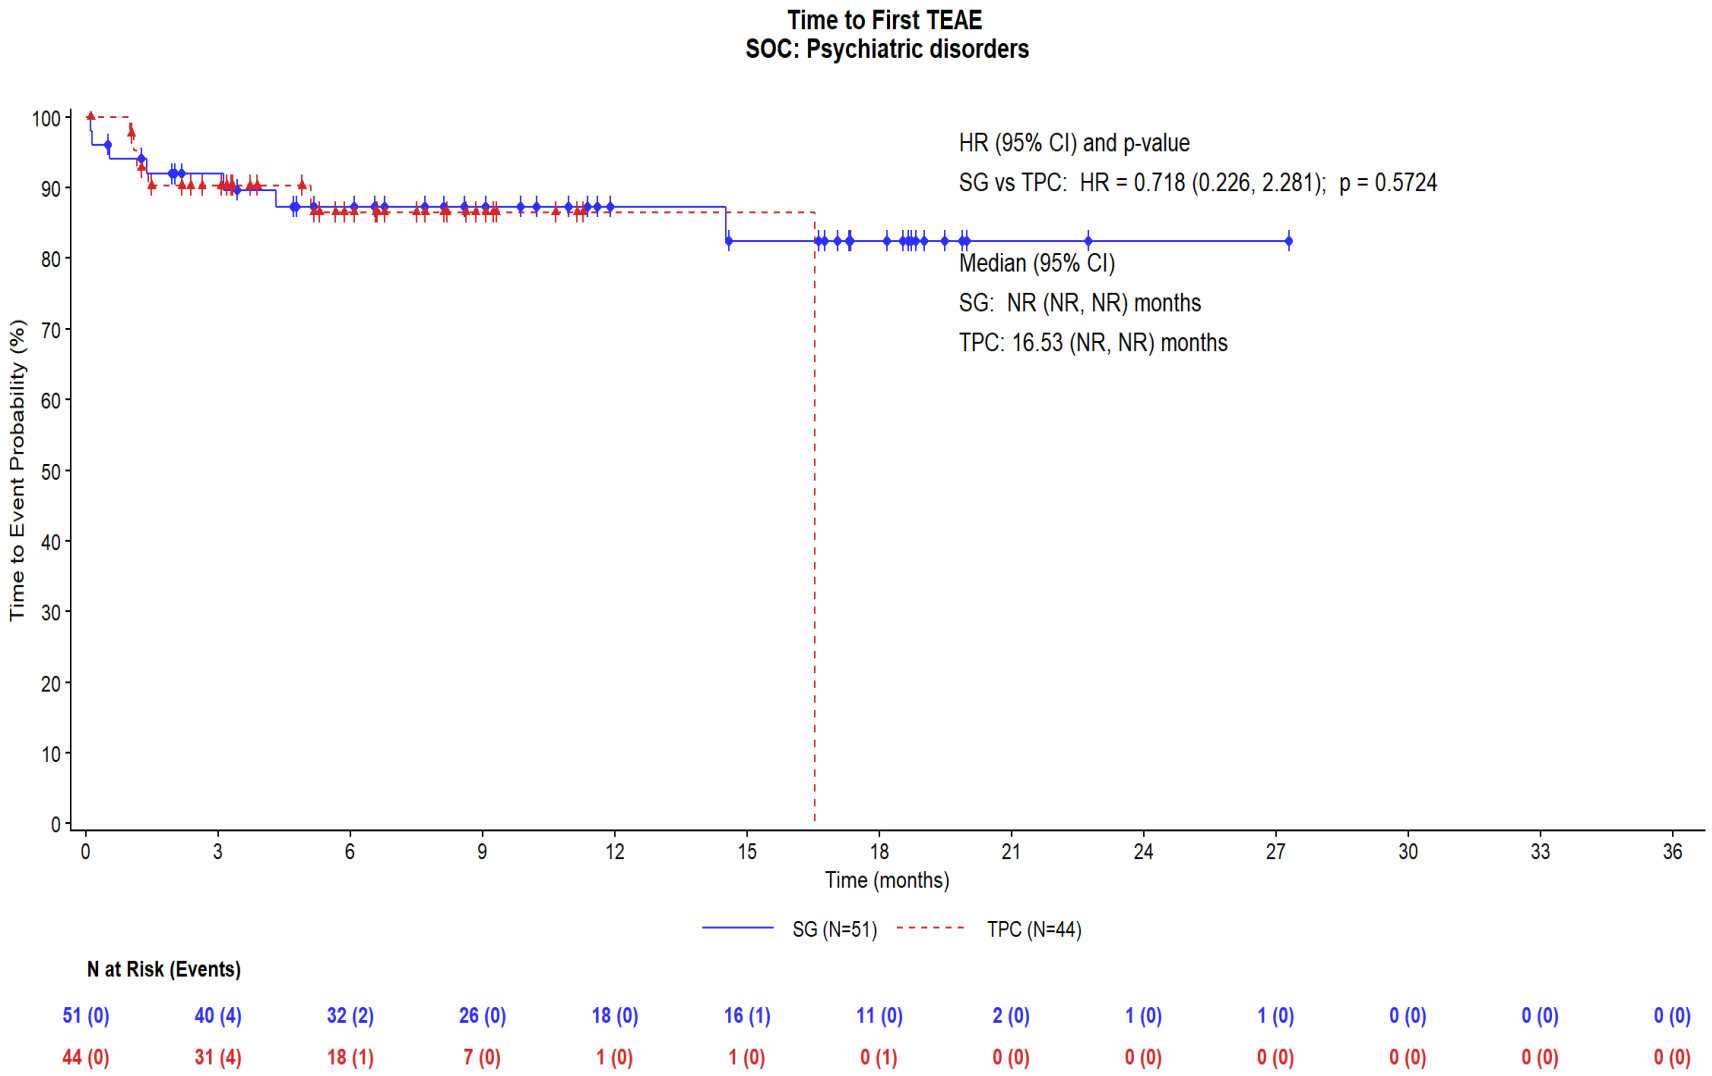
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.17. Figure 1.1.17: Kaplan Meier Plot of Time to First TEAE by SOC Metabolism and nutrition disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



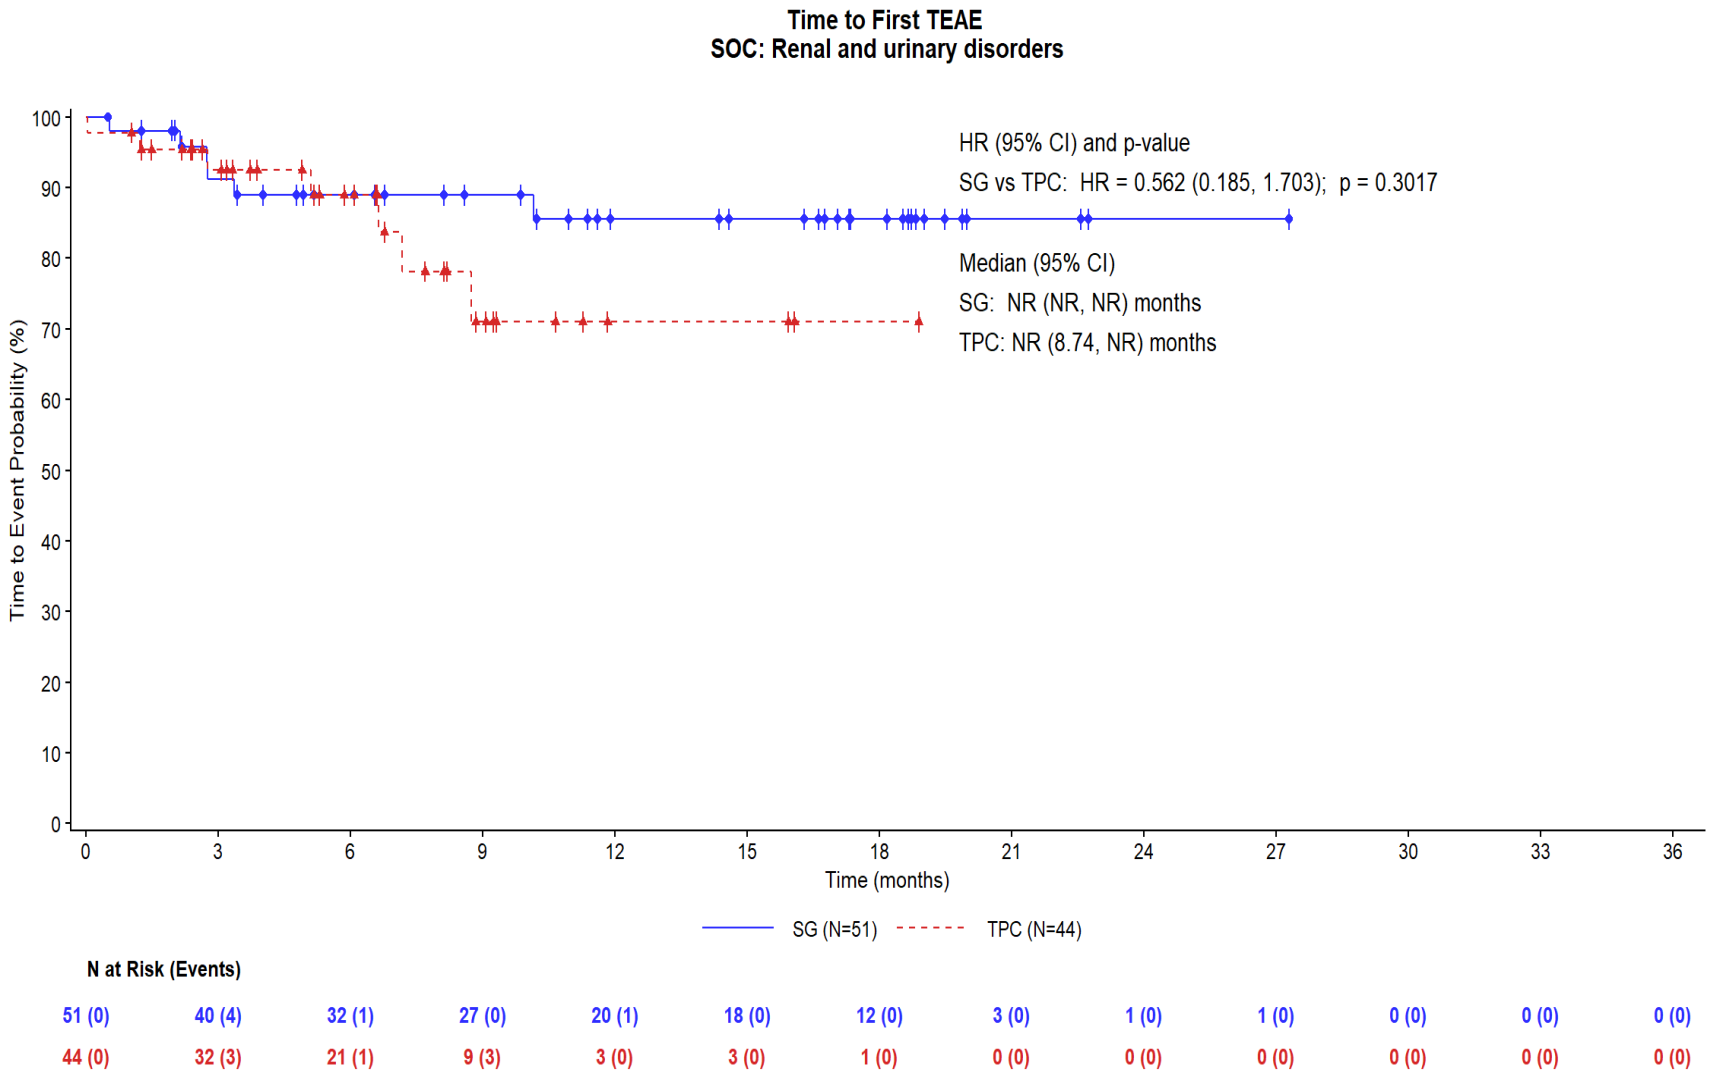
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.18. Figure 1.1.18: Kaplan Meier Plot of Time to First TEAE by SOC Musculoskeletal and connective tissue disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



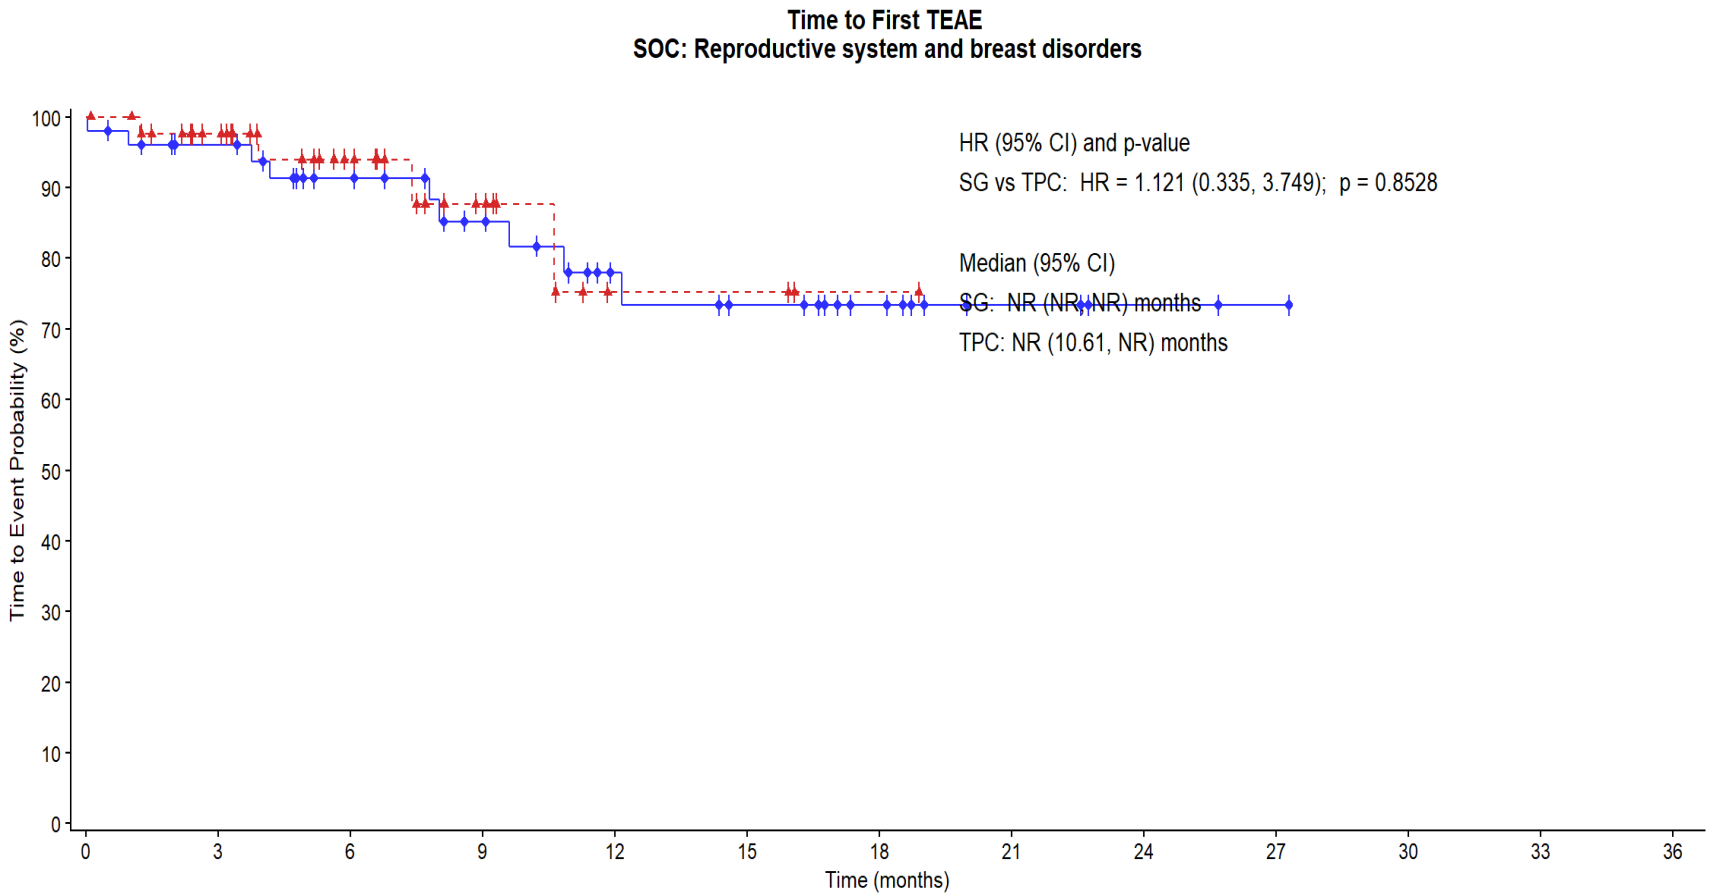
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.19. Figure 1.1.19: Kaplan Meier Plot of Time to First TEAE by SOC Nervous system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



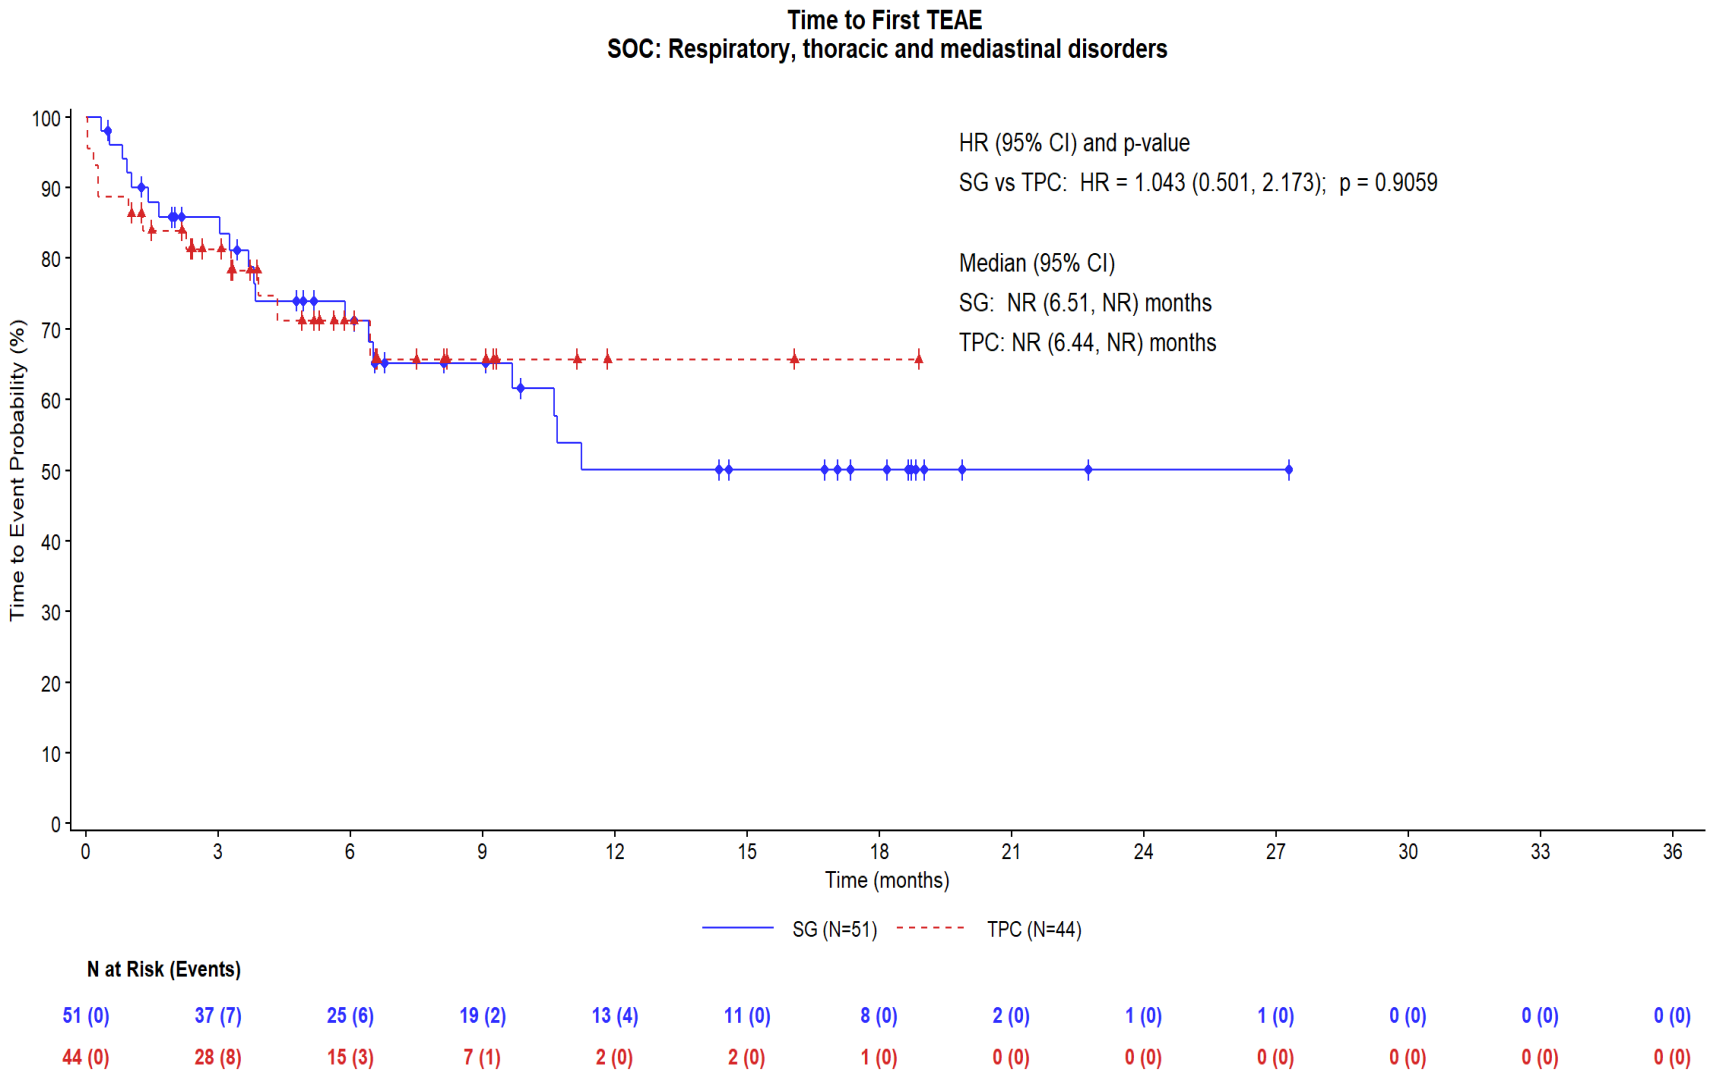
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.20. Figure 1.1.20: Kaplan Meier Plot of Time to First TEAE by SOC Psychiatric disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



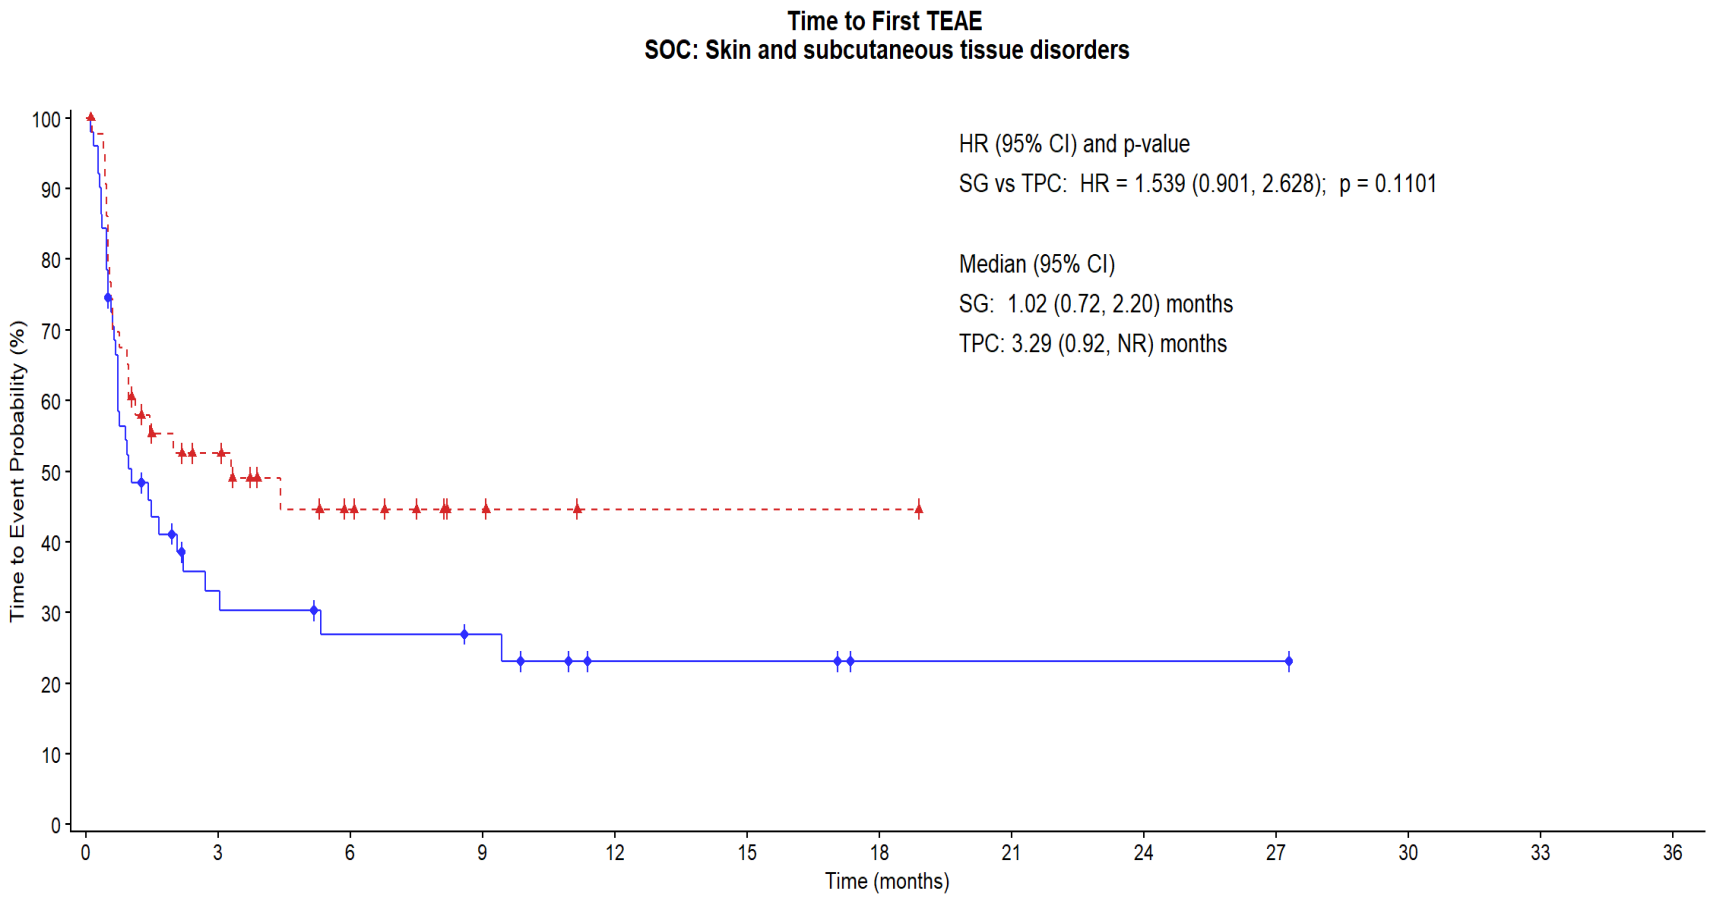
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.21. Figure 1.1.21: Kaplan Meier Plot of Time to First TEAE by SOC Renal and urinary disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



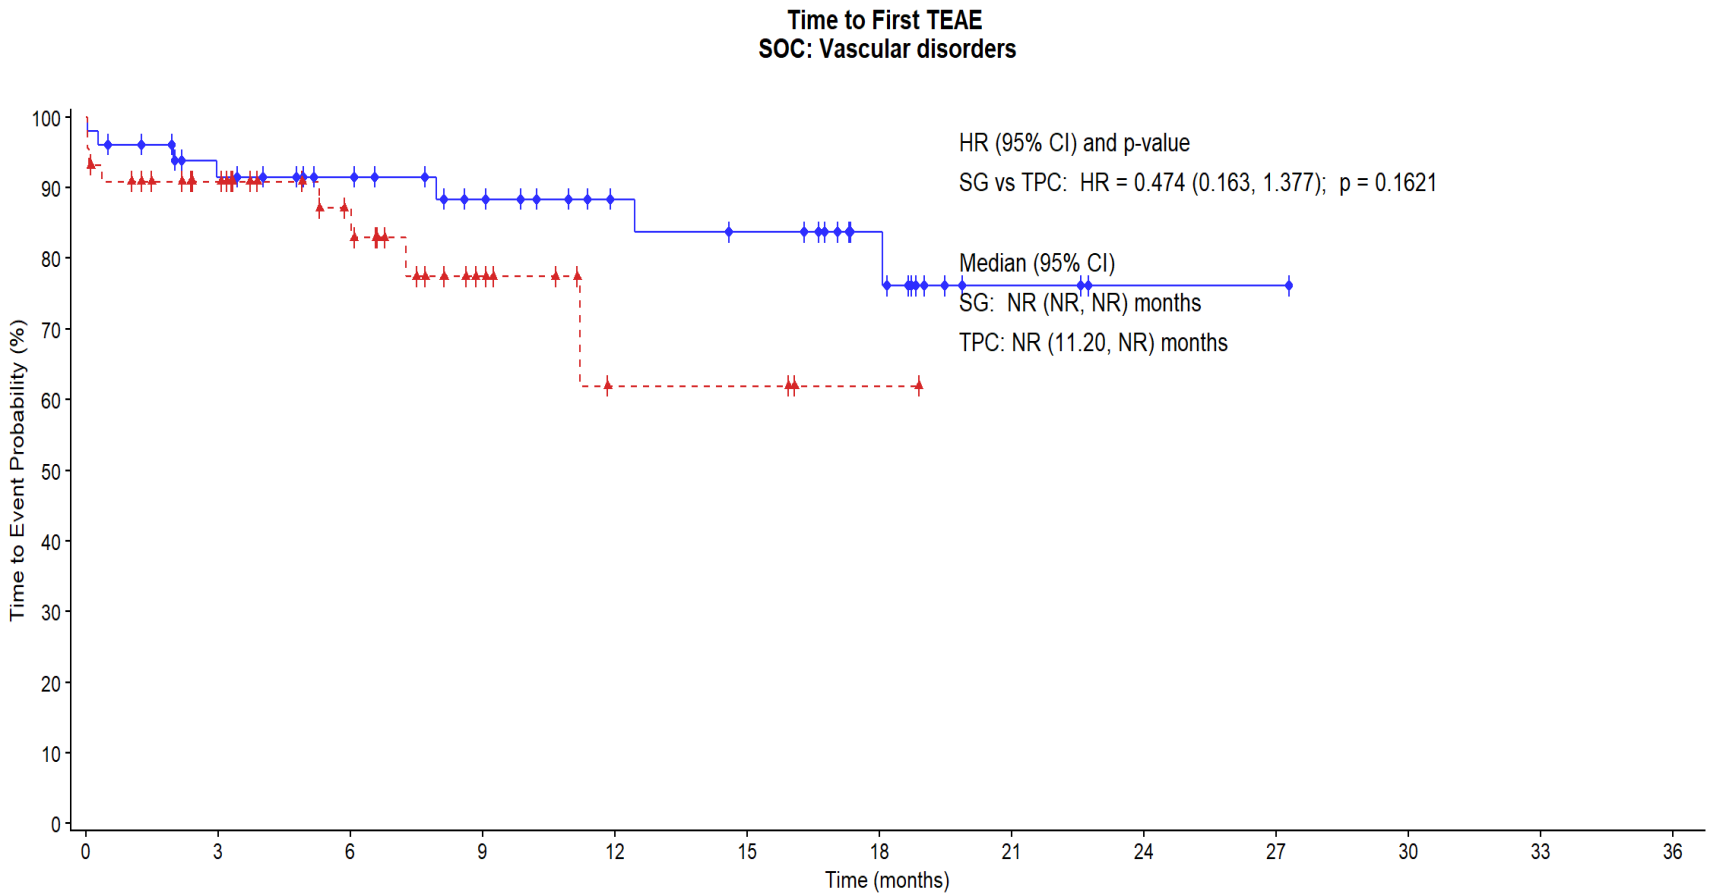
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.22. Figure 1.1.22: Kaplan Meier Plot of Time to First TEAE by SOC Reproductive system and breast disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



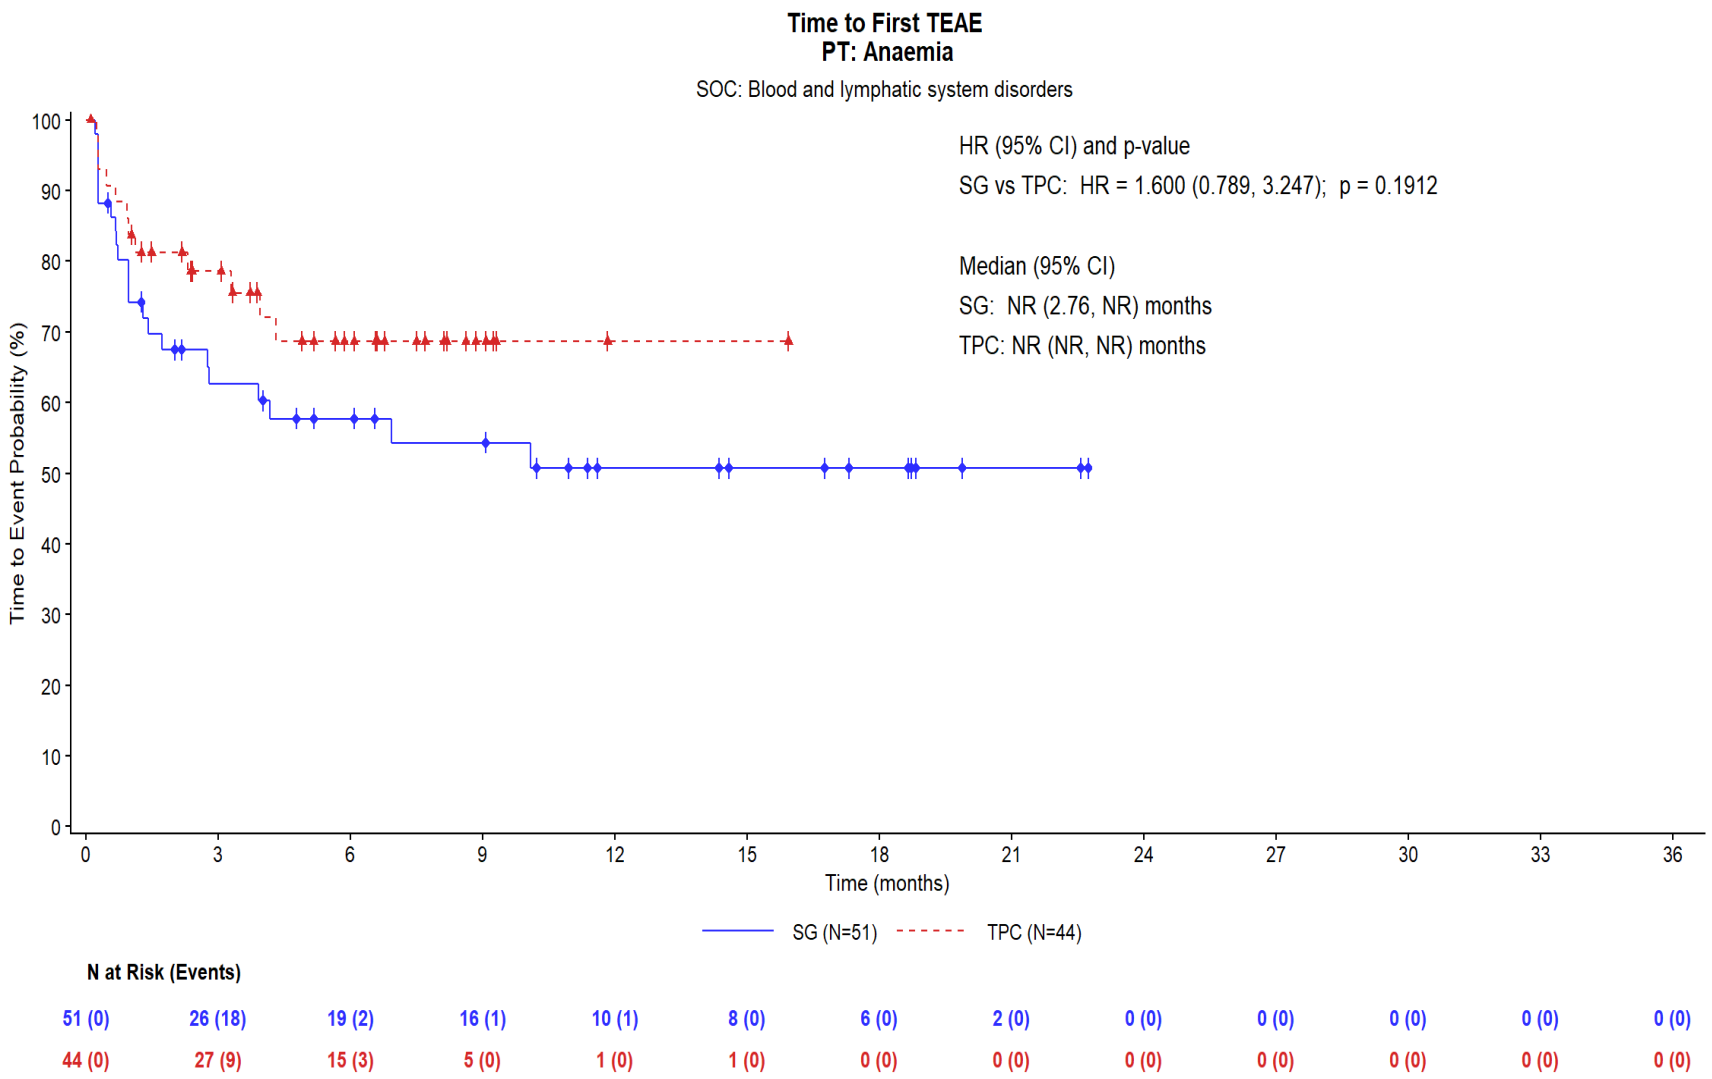
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.23. Figure 1.1.23: Kaplan Meier Plot of Time to First TEAE by SOC Respiratory thoracic and mediastinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



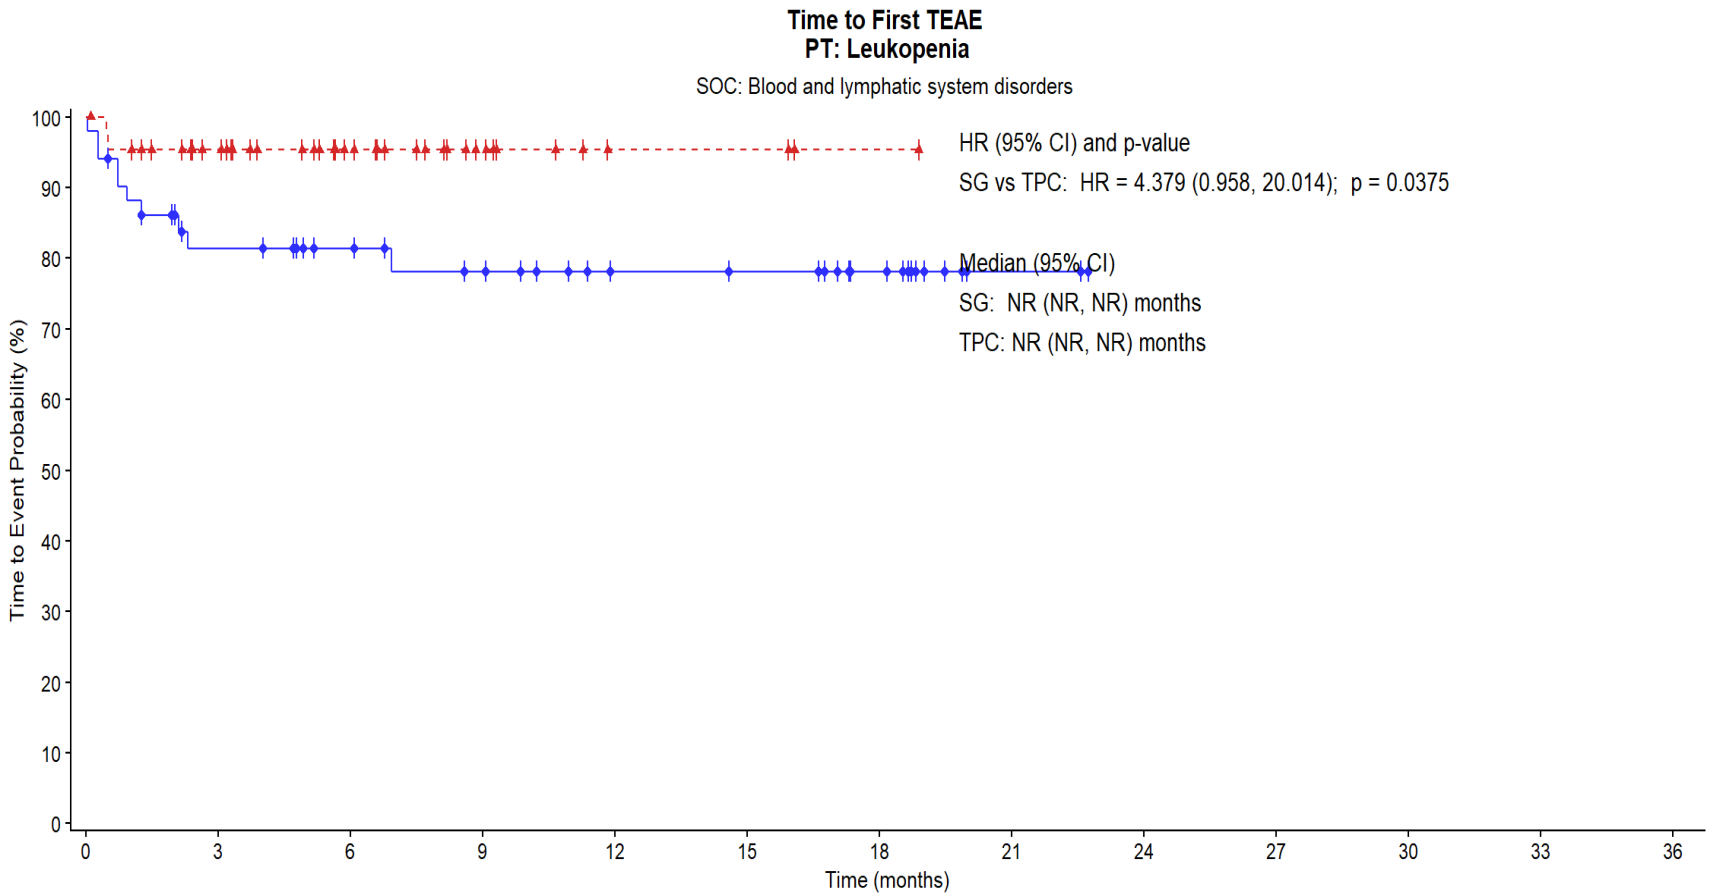
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.24. Figure 1.1.24: Kaplan Meier Plot of Time to First TEAE by SOC Skin and subcutaneous tissue disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



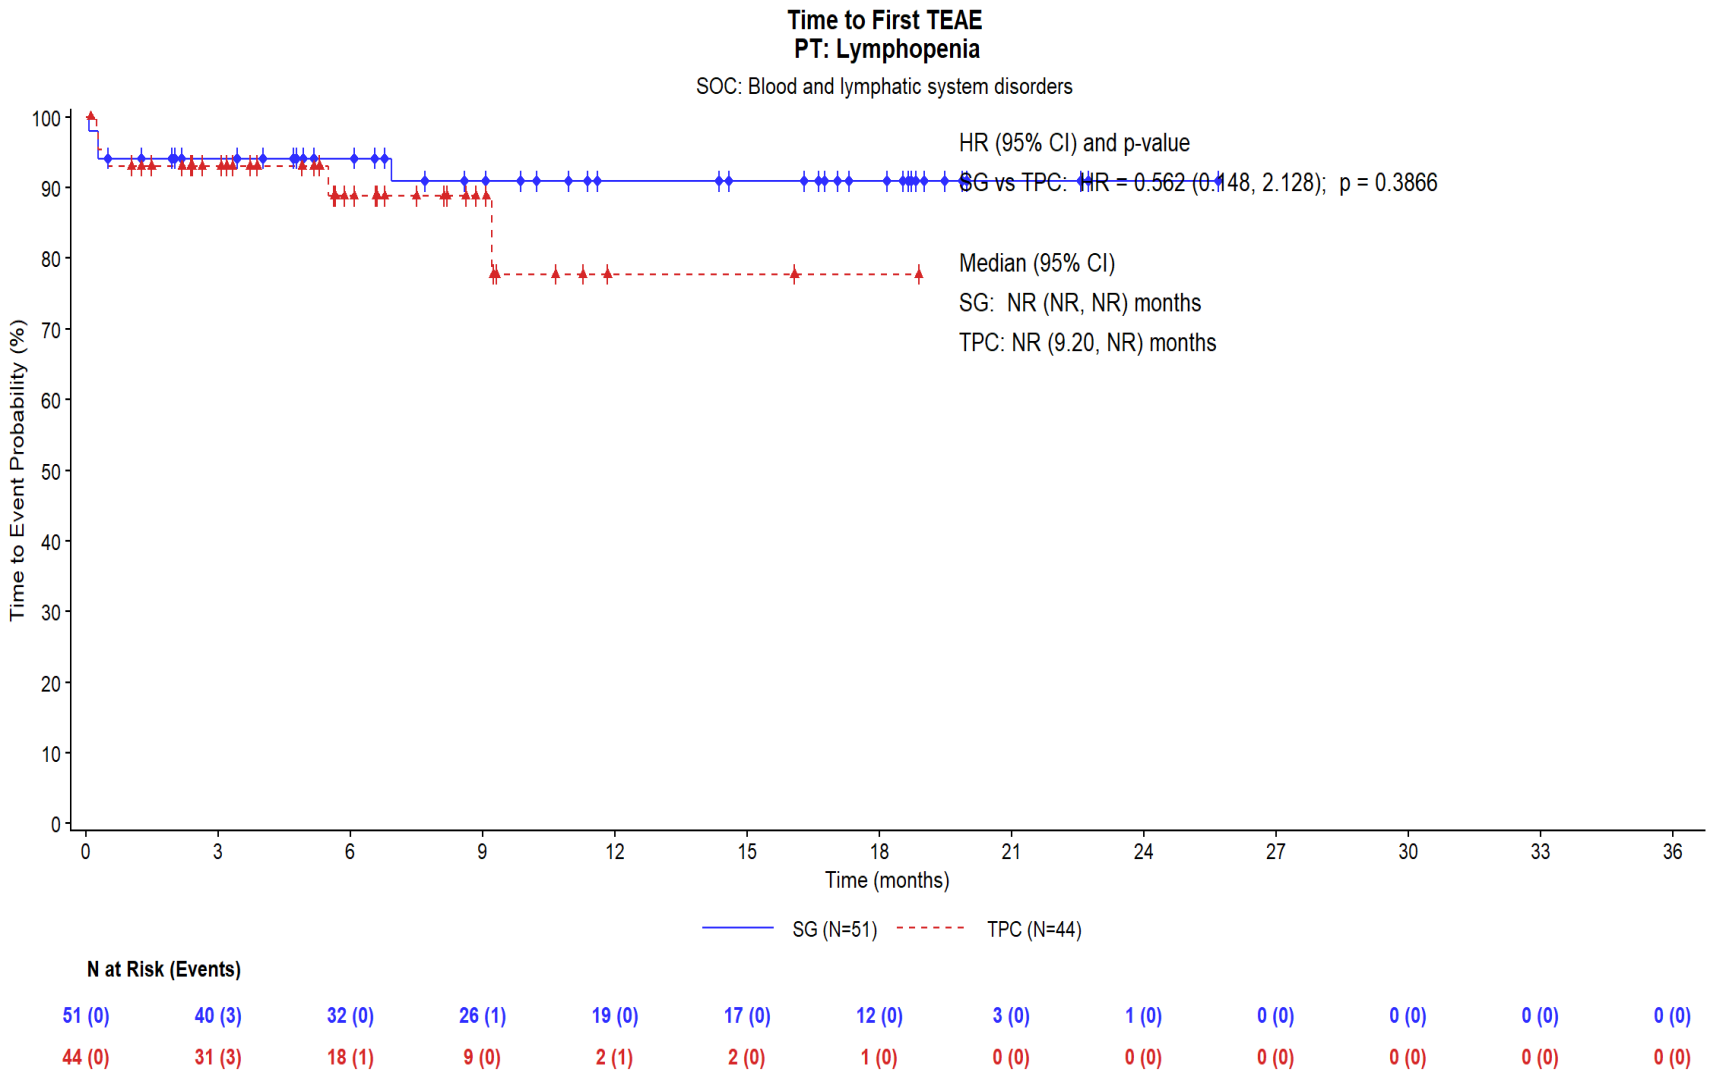
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.25. Figure 1.1.25: Kaplan Meier Plot of Time to First TEAE by SOC Vascular disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



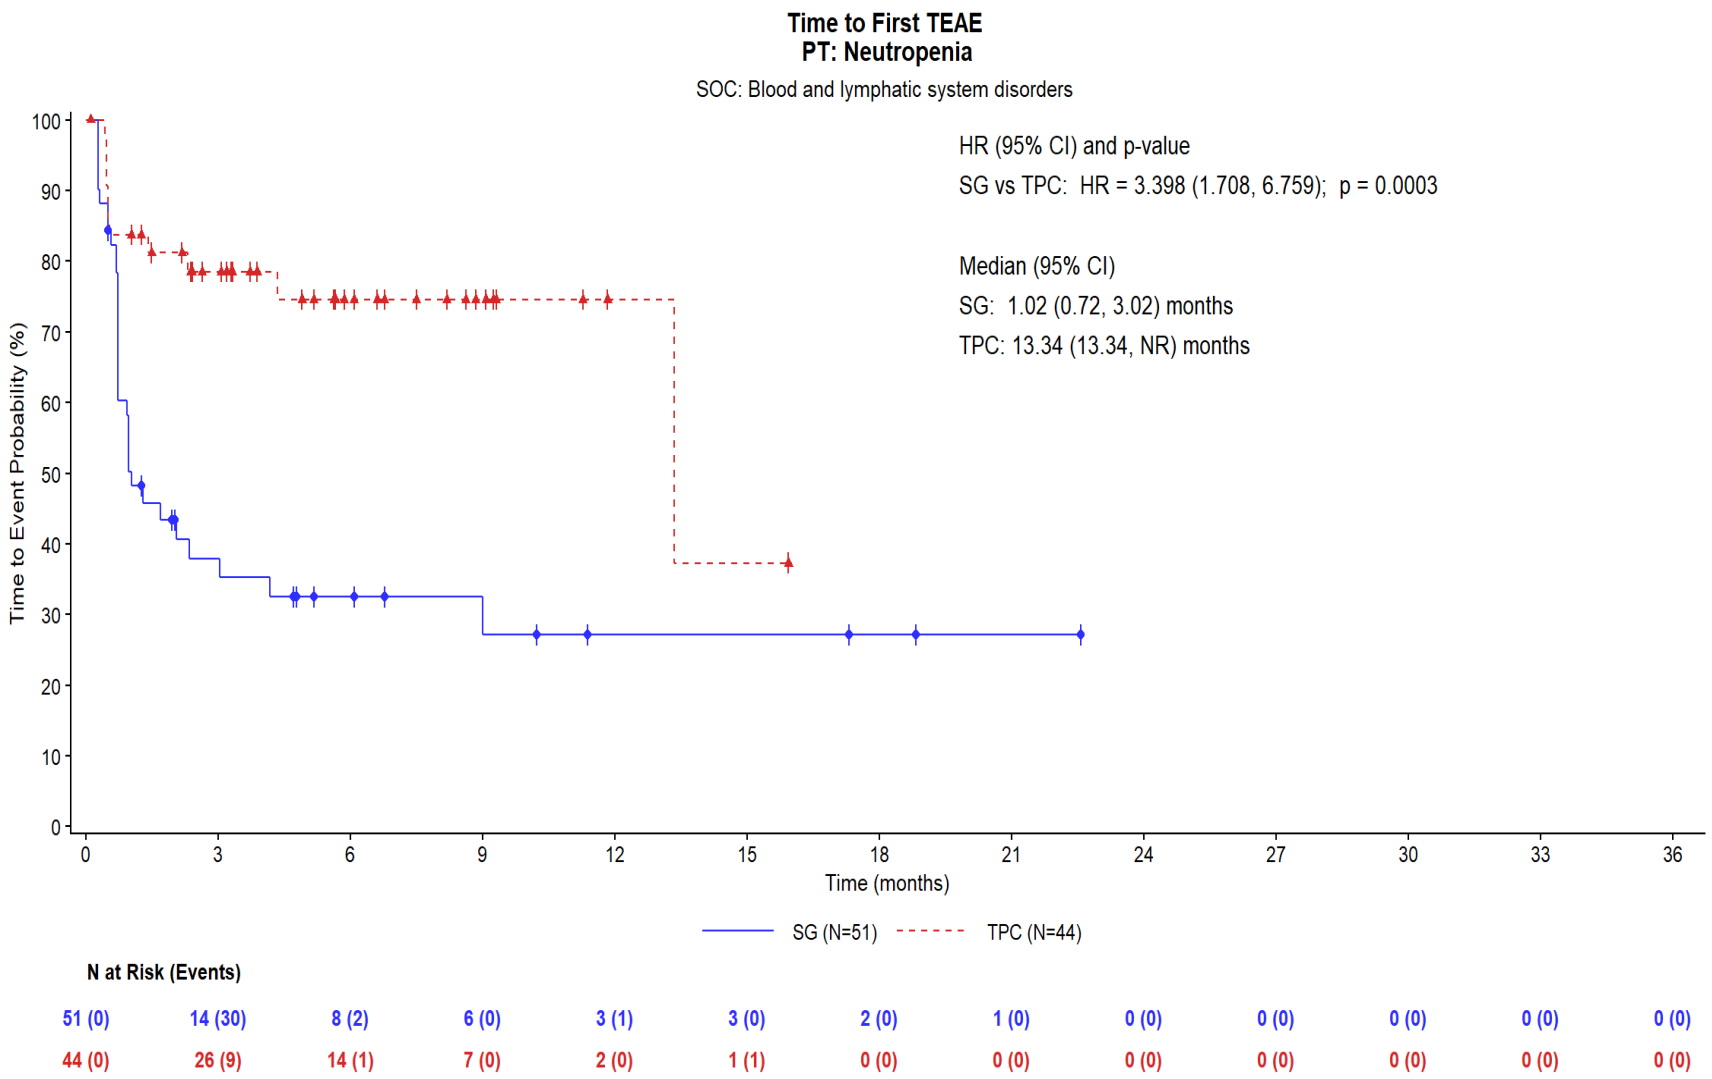
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.26. Figure 1.1.26: Kaplan Meier Plot of Time to First TEAE by PT Anaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



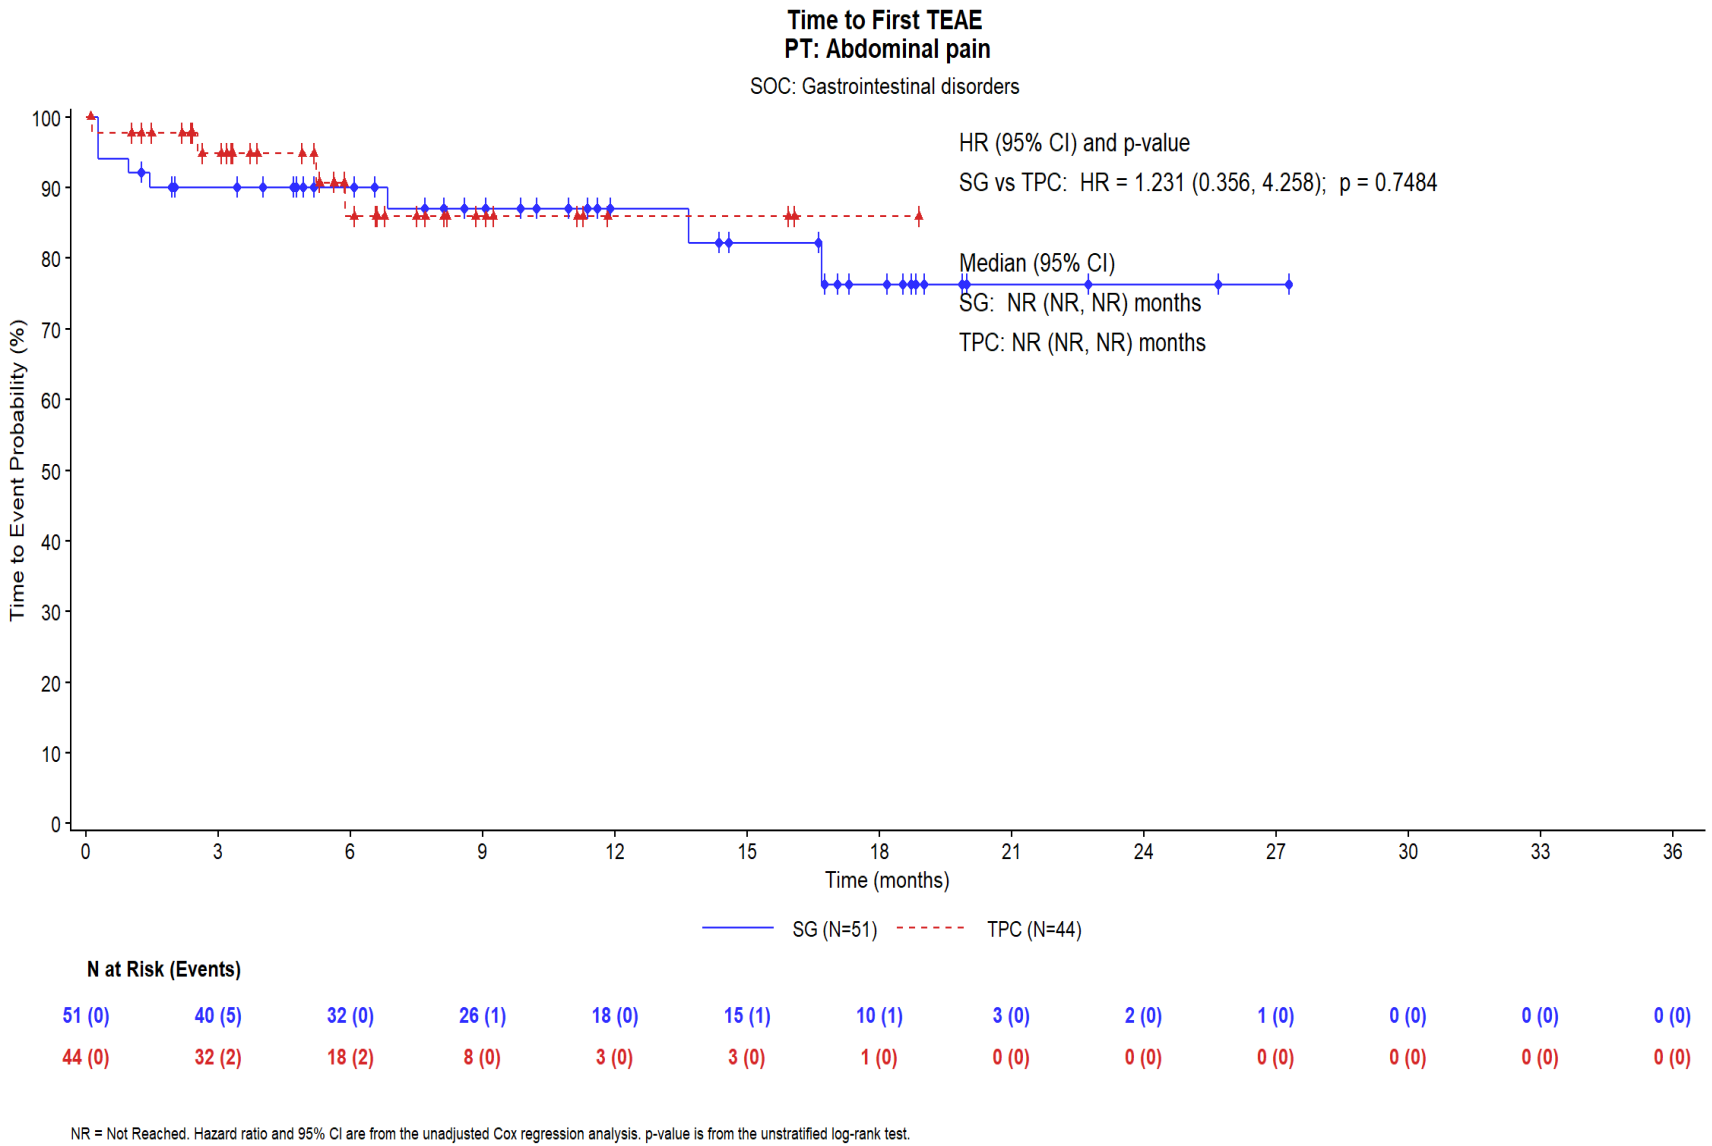
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.27. Figure 1.1.27: Kaplan Meier Plot of Time to First TEAE by PT Leukopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



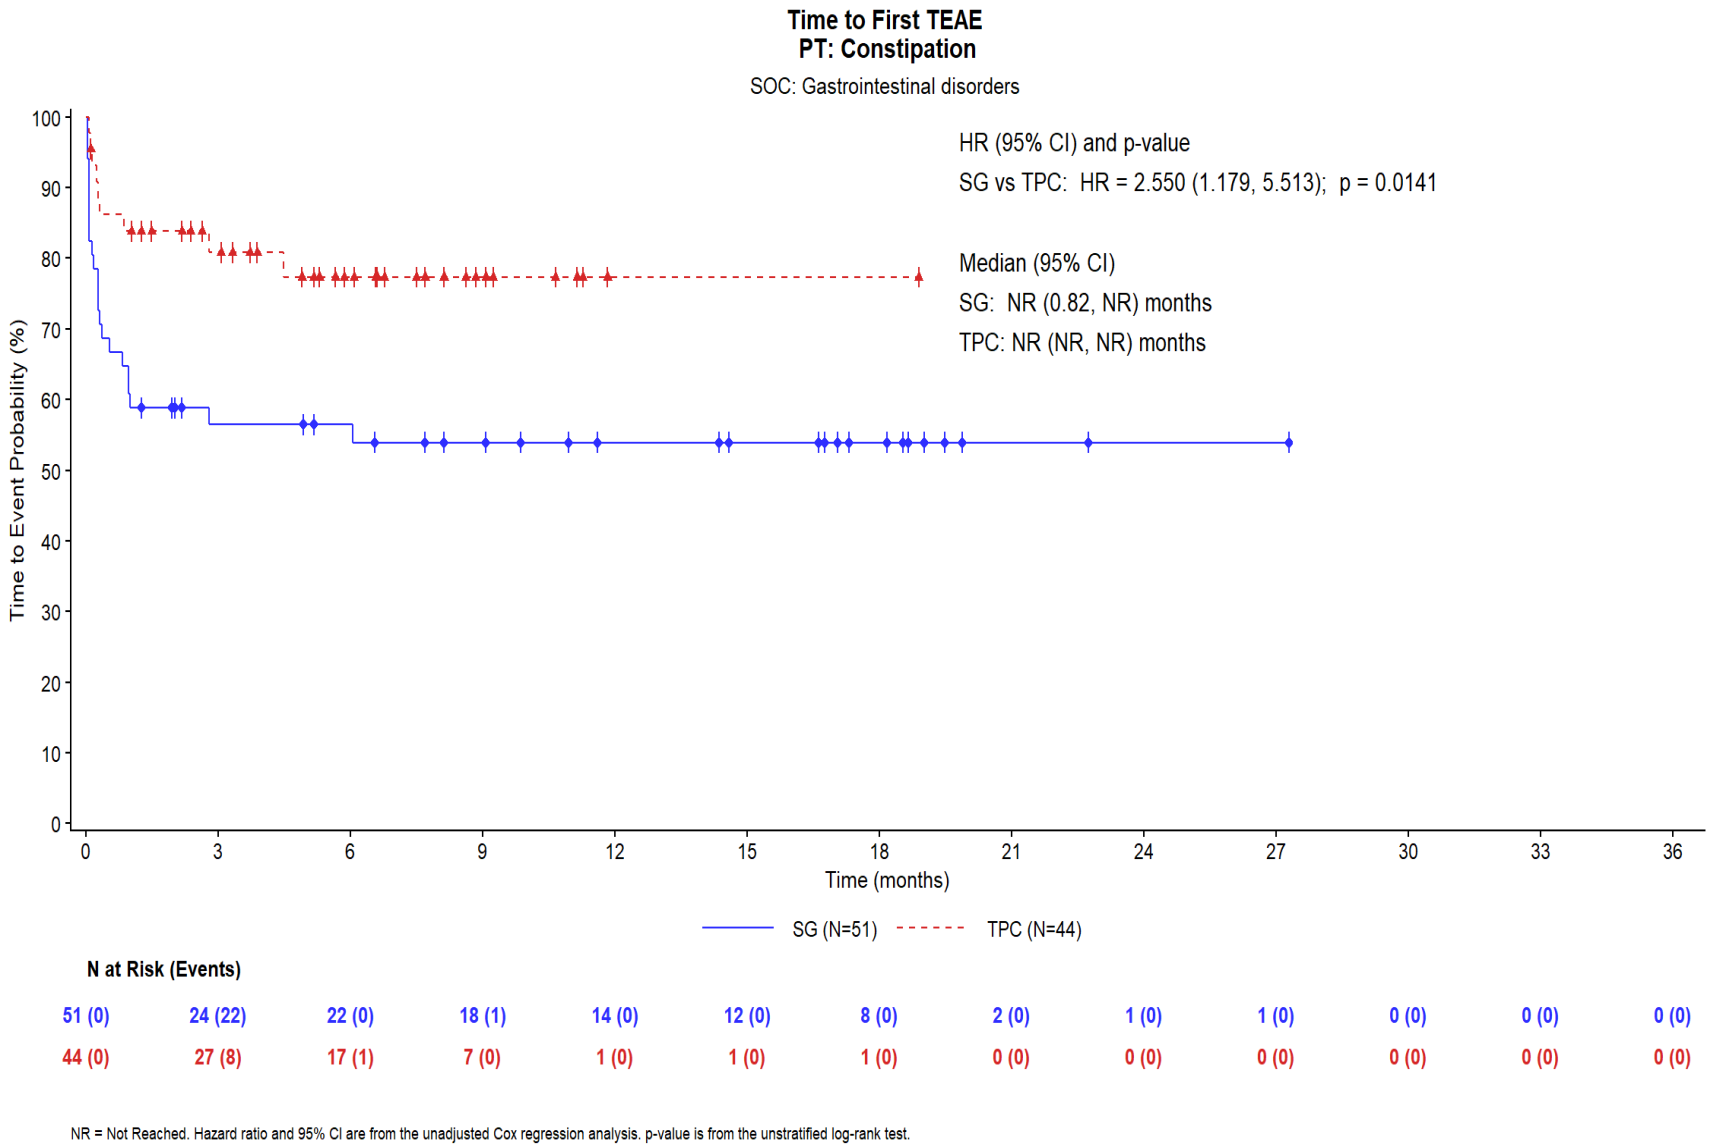
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.28. Figure 1.1.28: Kaplan Meier Plot of Time to First TEAE by PT Lymphopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



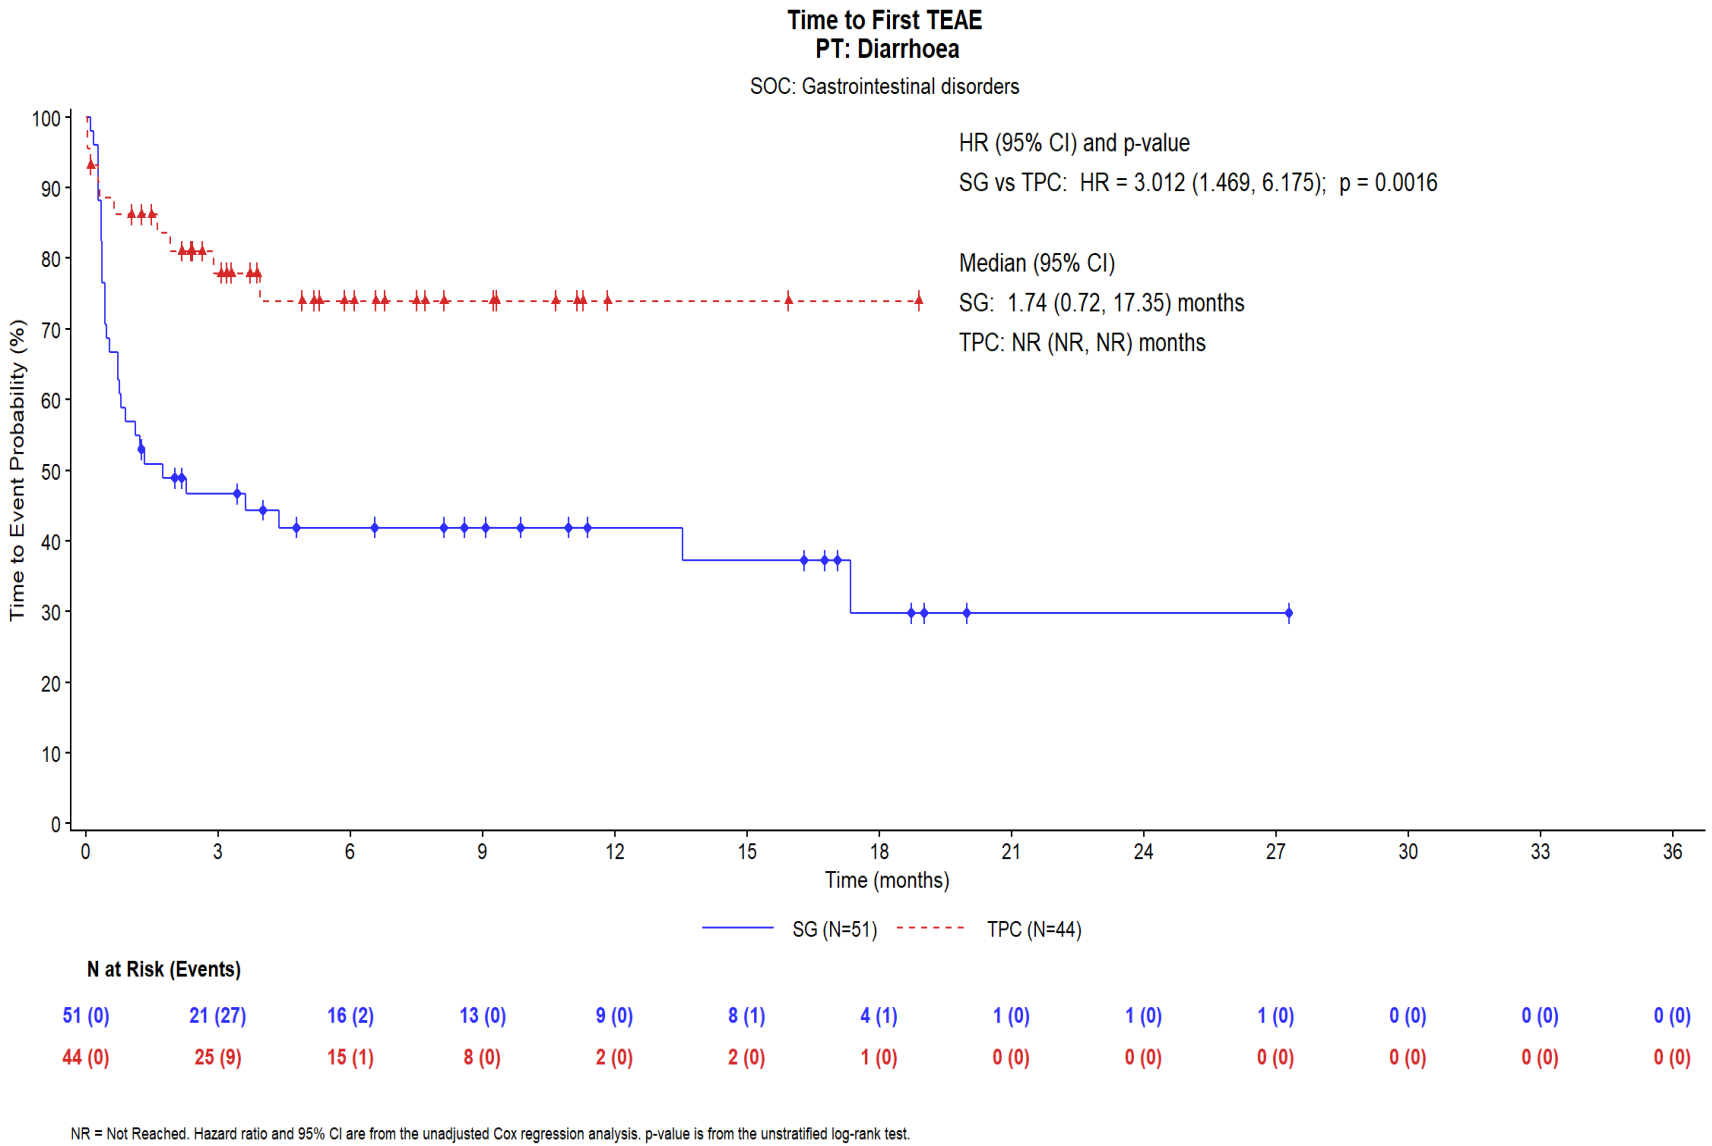
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.29. Figure 1.1.29: Kaplan Meier Plot of Time to First TEAE by PT Neutropenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



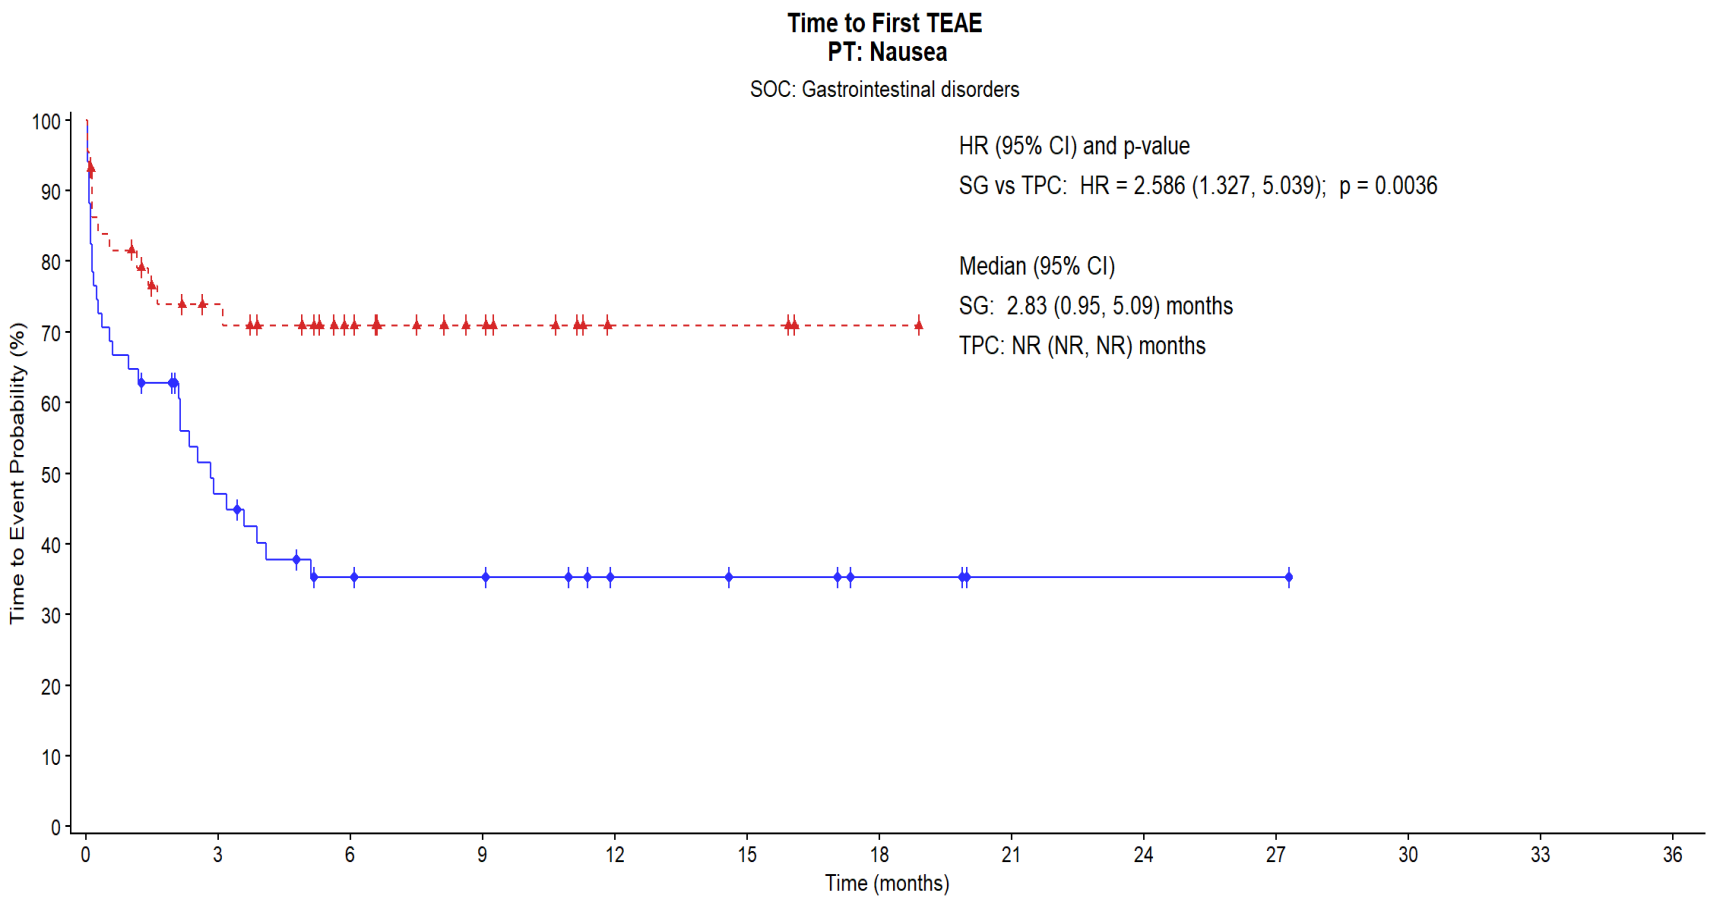
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.30. Figure 1.1.30: Kaplan Meier Plot of Time to First TEAE by PT Abdominal pain — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



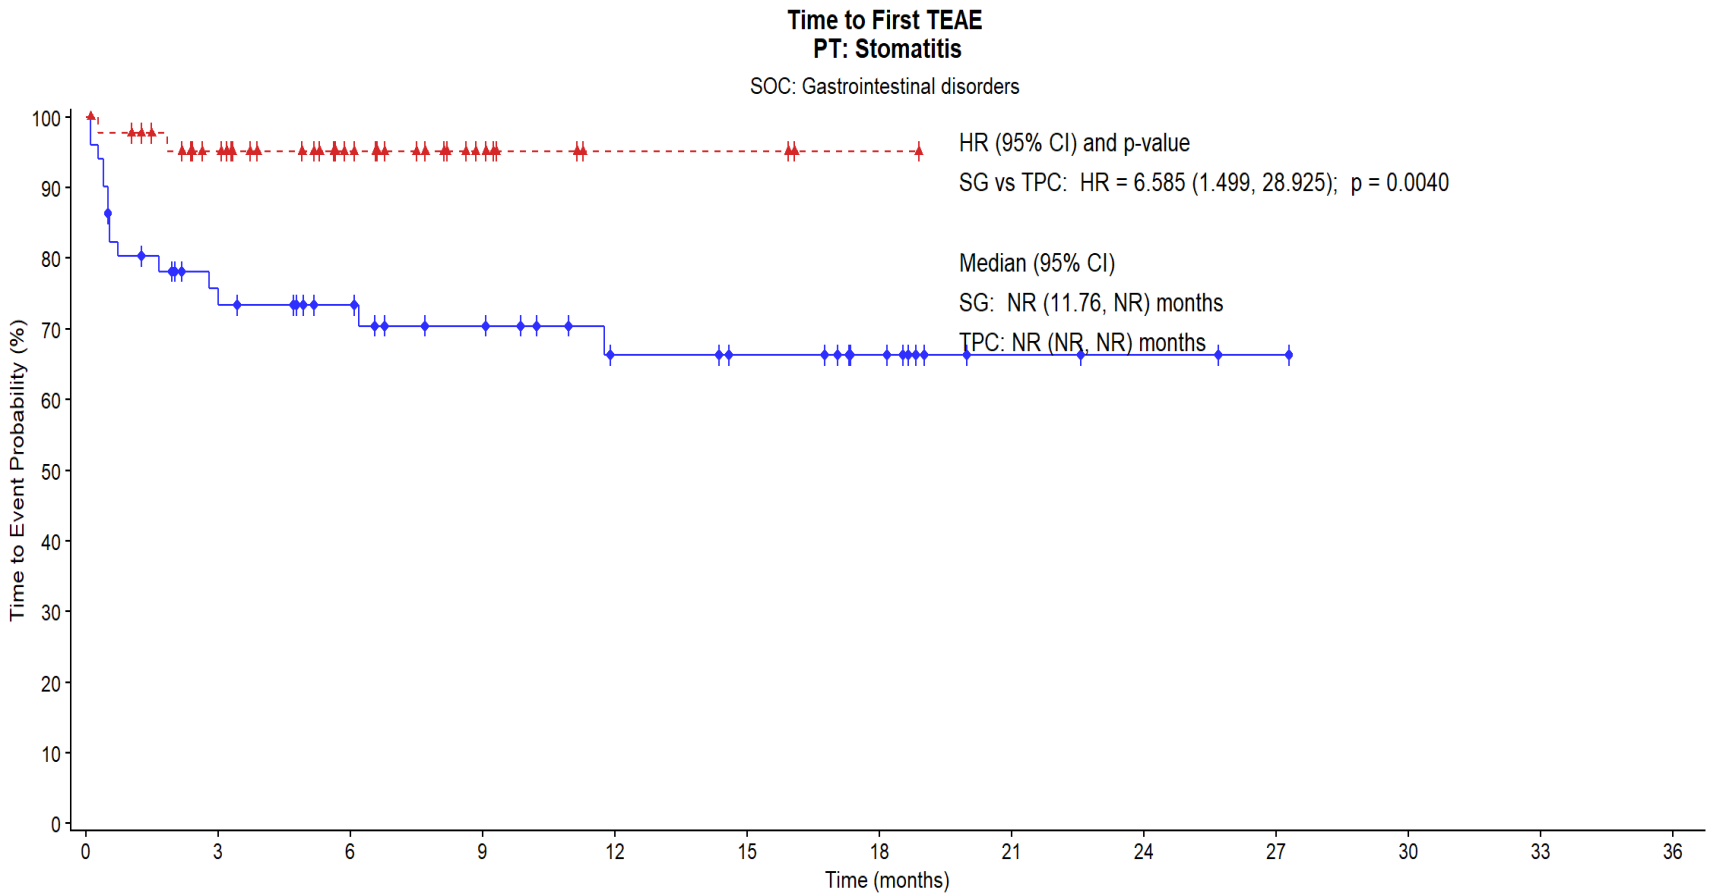
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.31. Figure 1.1.31: Kaplan Meier Plot of Time to First TEAE by PT Constipation — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



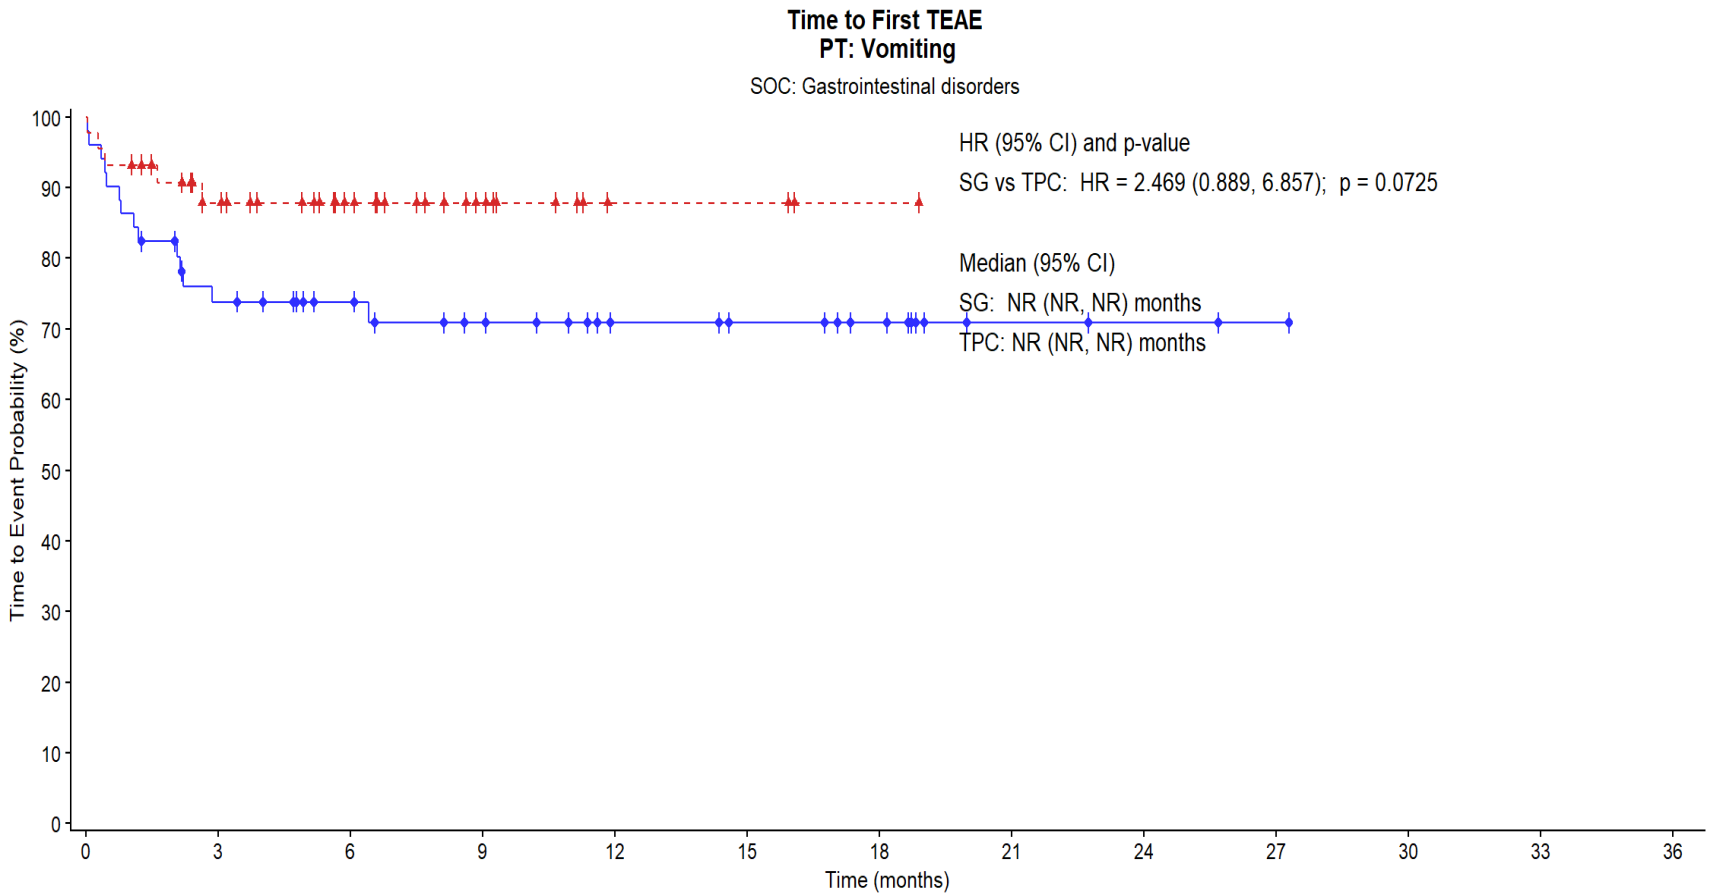
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.32. Figure 1.1.32: Kaplan Meier Plot of Time to First TEAE by PT Diarrhoea — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



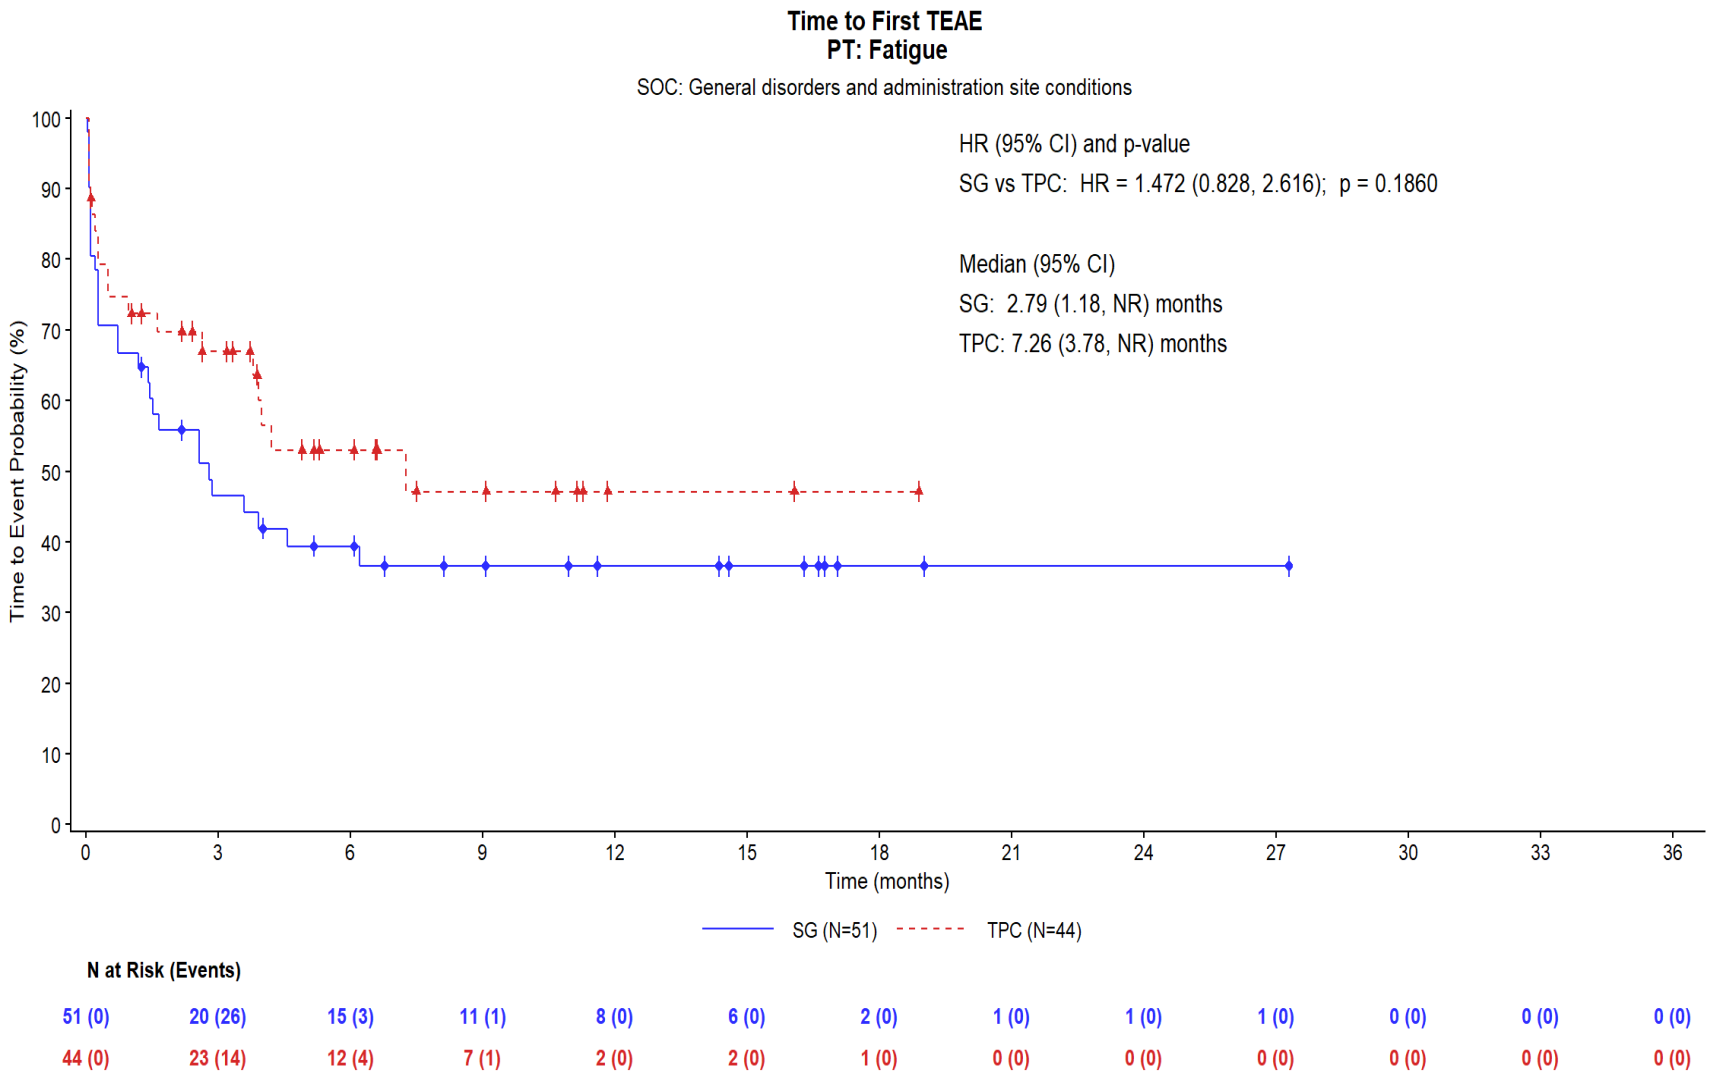
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.33. Figure 1.1.33: Kaplan Meier Plot of Time to First TEAE by PT Nausea — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



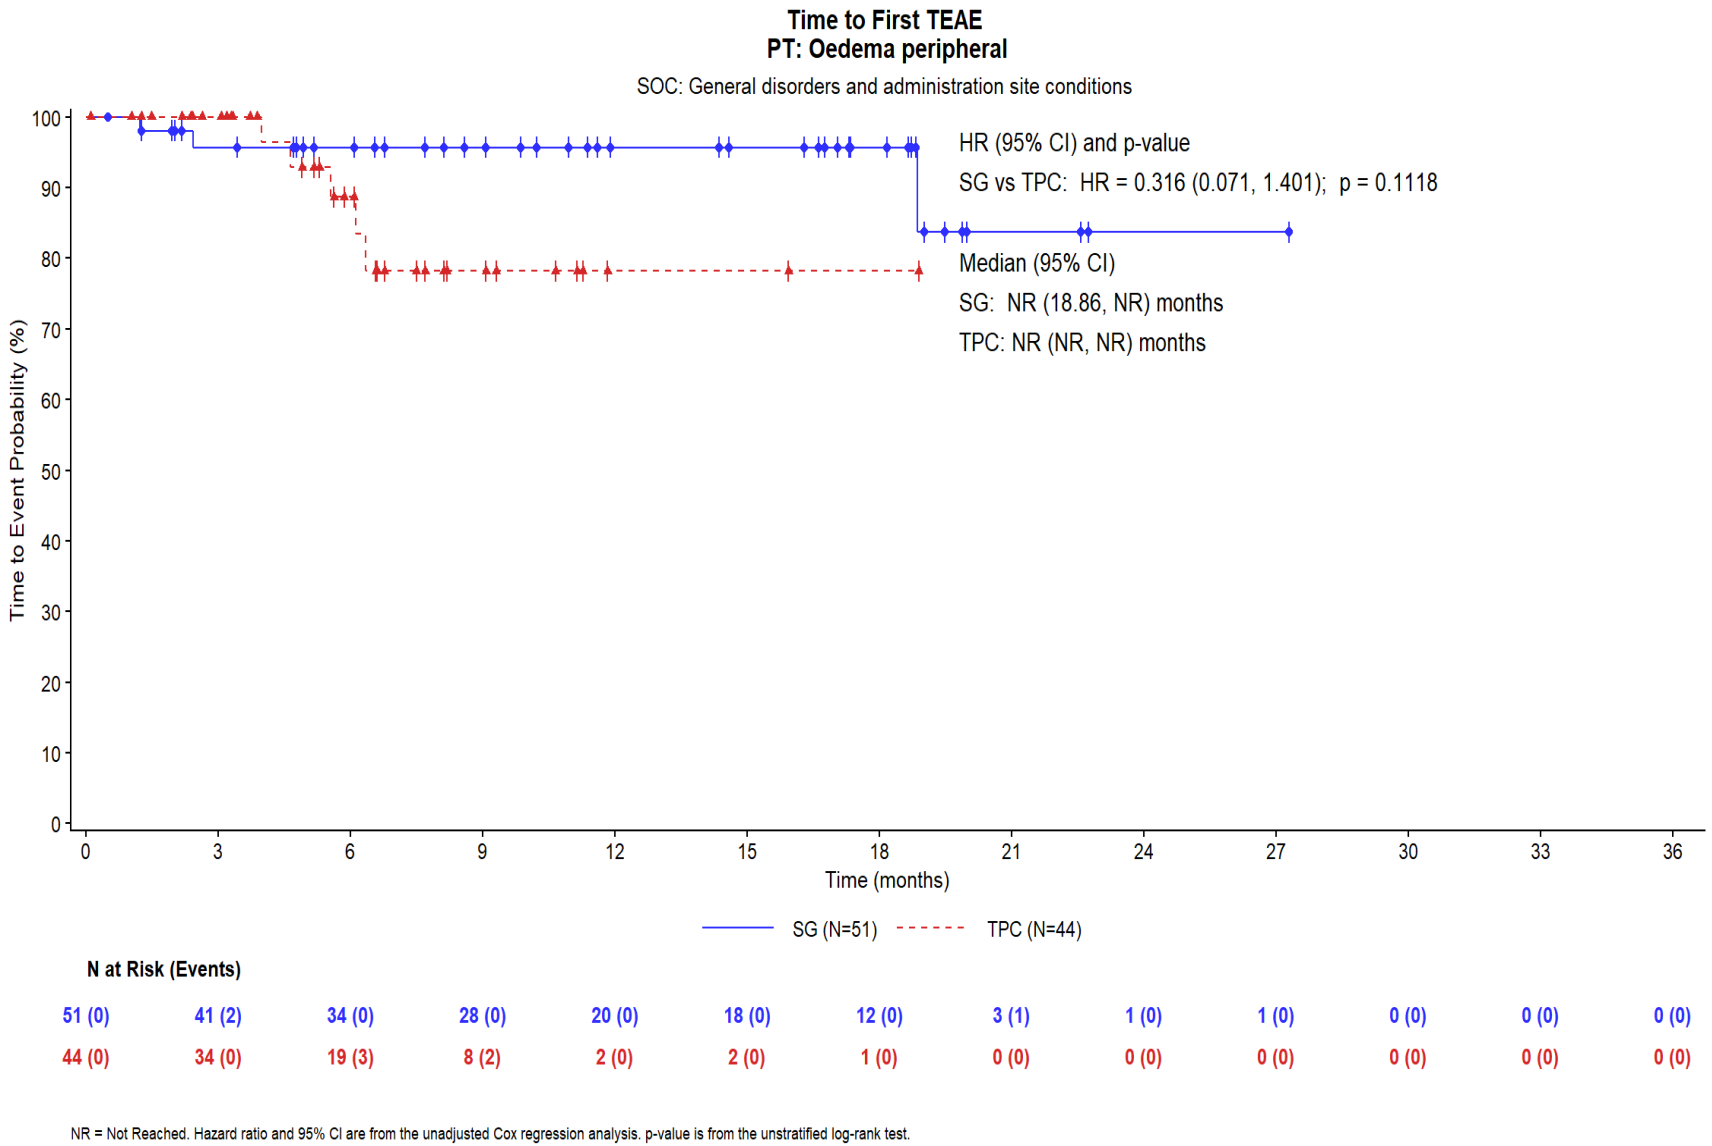
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.34. Figure 1.1.34: Kaplan Meier Plot of Time to First TEAE by PT Stomatitis — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



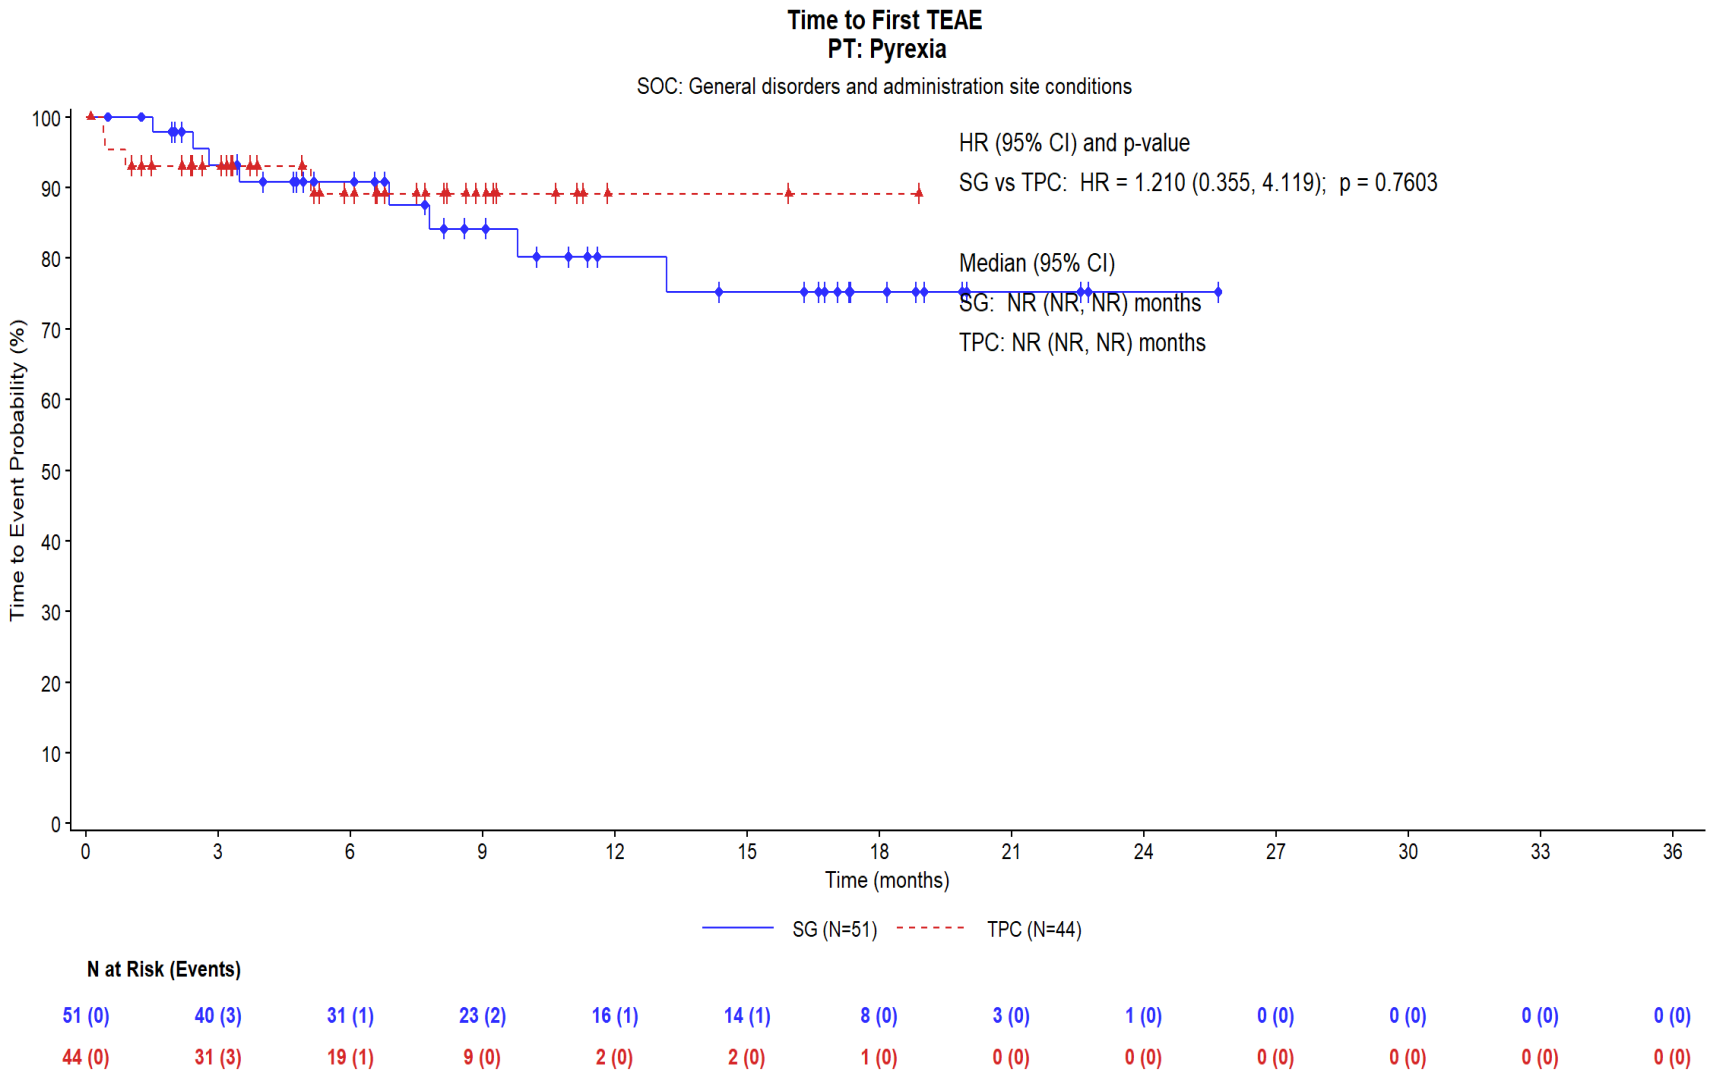
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.35. Figure 1.1.35: Kaplan Meier Plot of Time to First TEAE by PT Vomiting — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



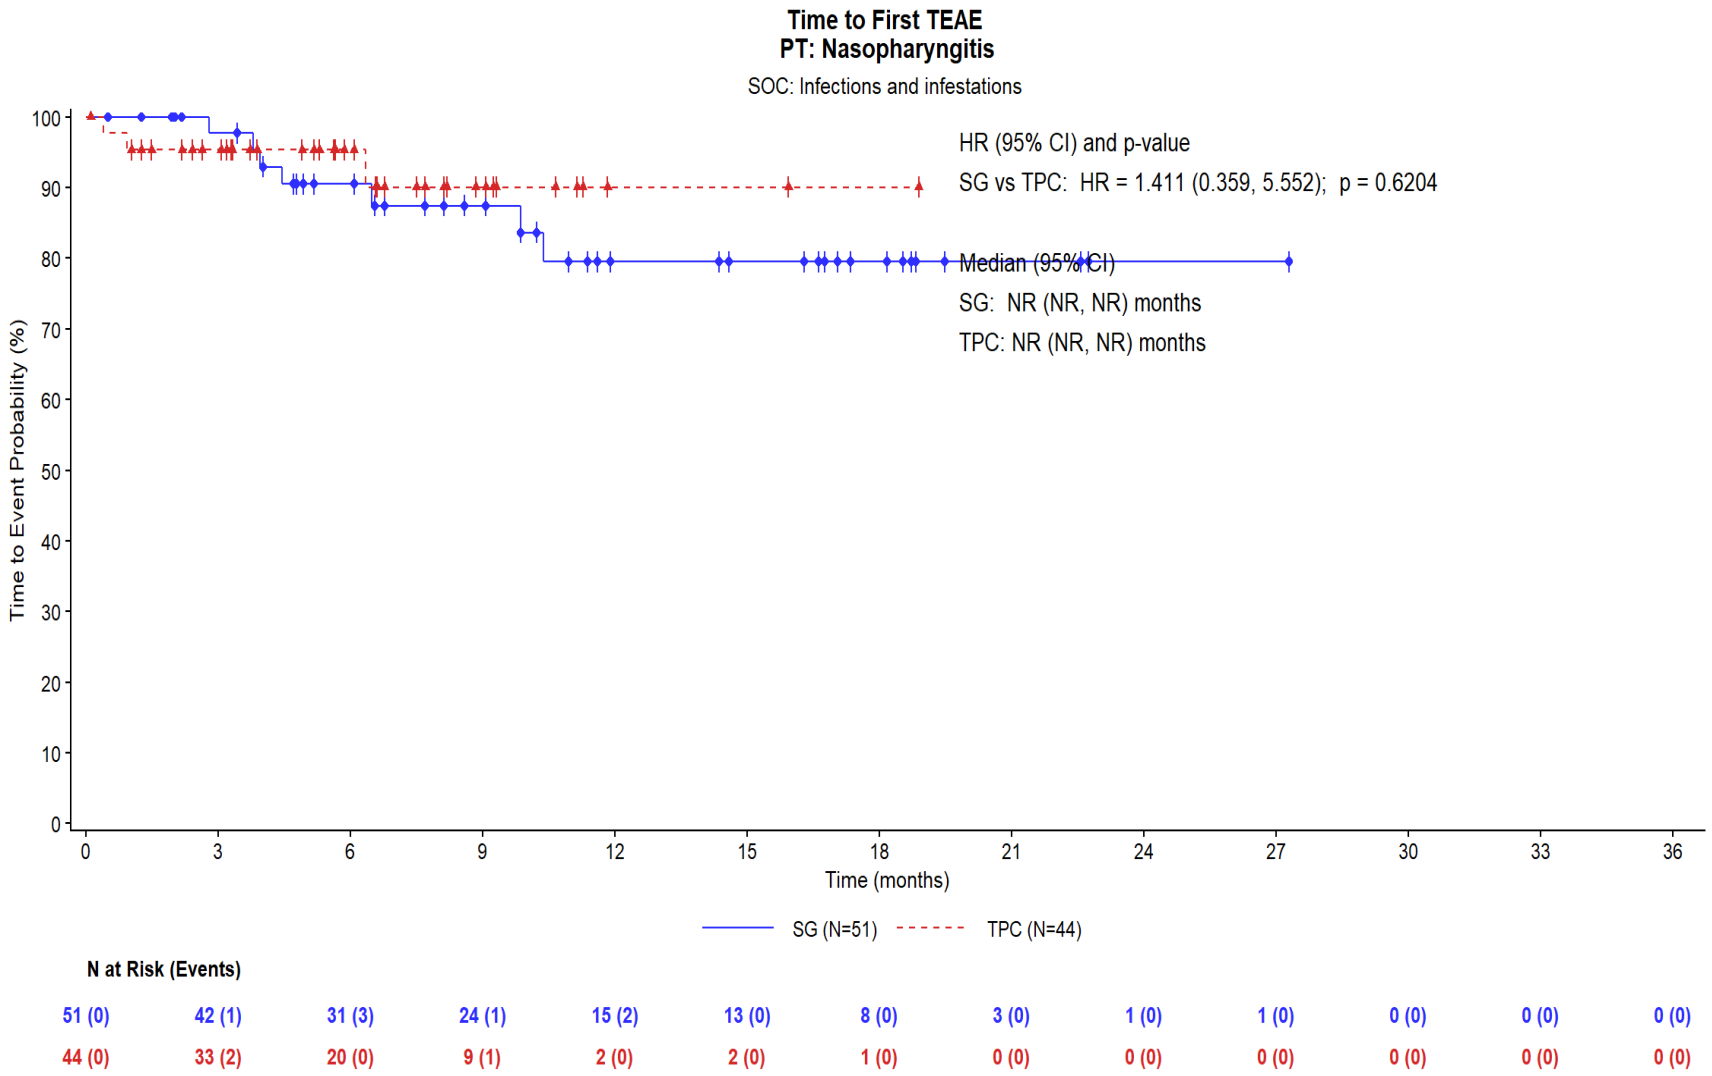
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.36. Figure 1.1.36: Kaplan Meier Plot of Time to First TEAE by PT Fatigue — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



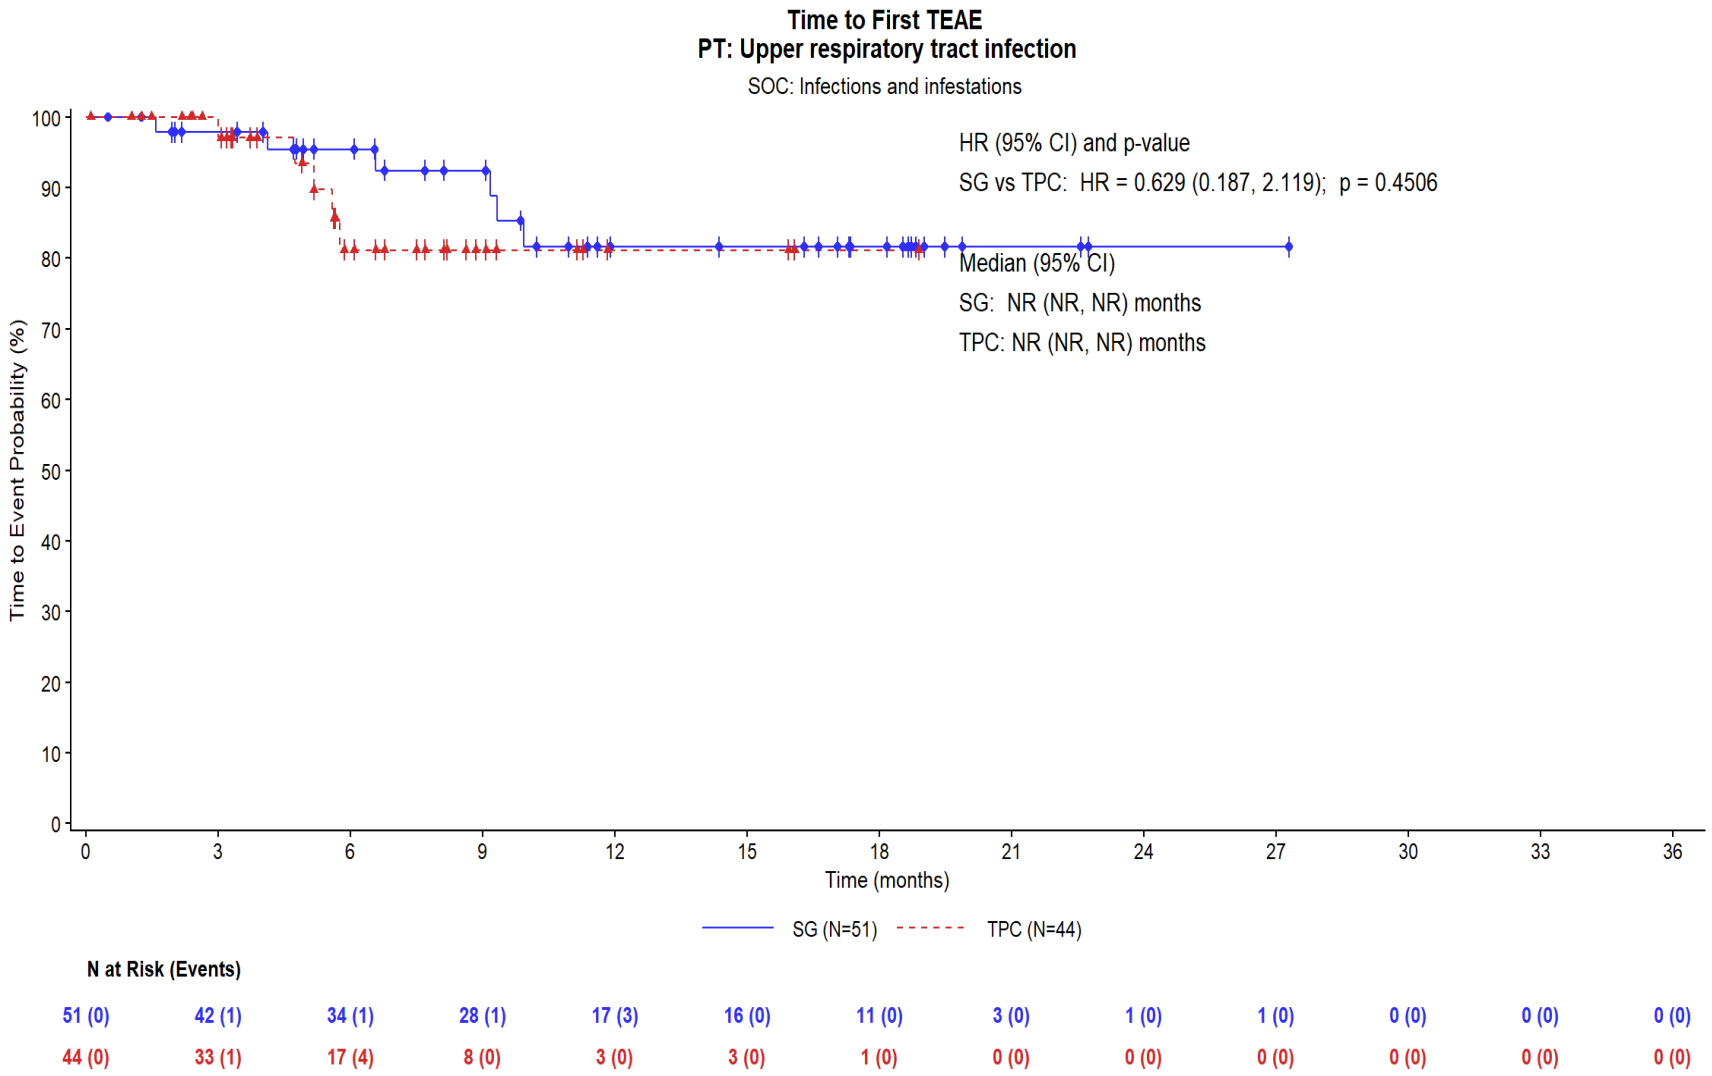
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.37. Figure 1.1.37: Kaplan Meier Plot of Time to First TEAE by PT Oedema peripheral — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



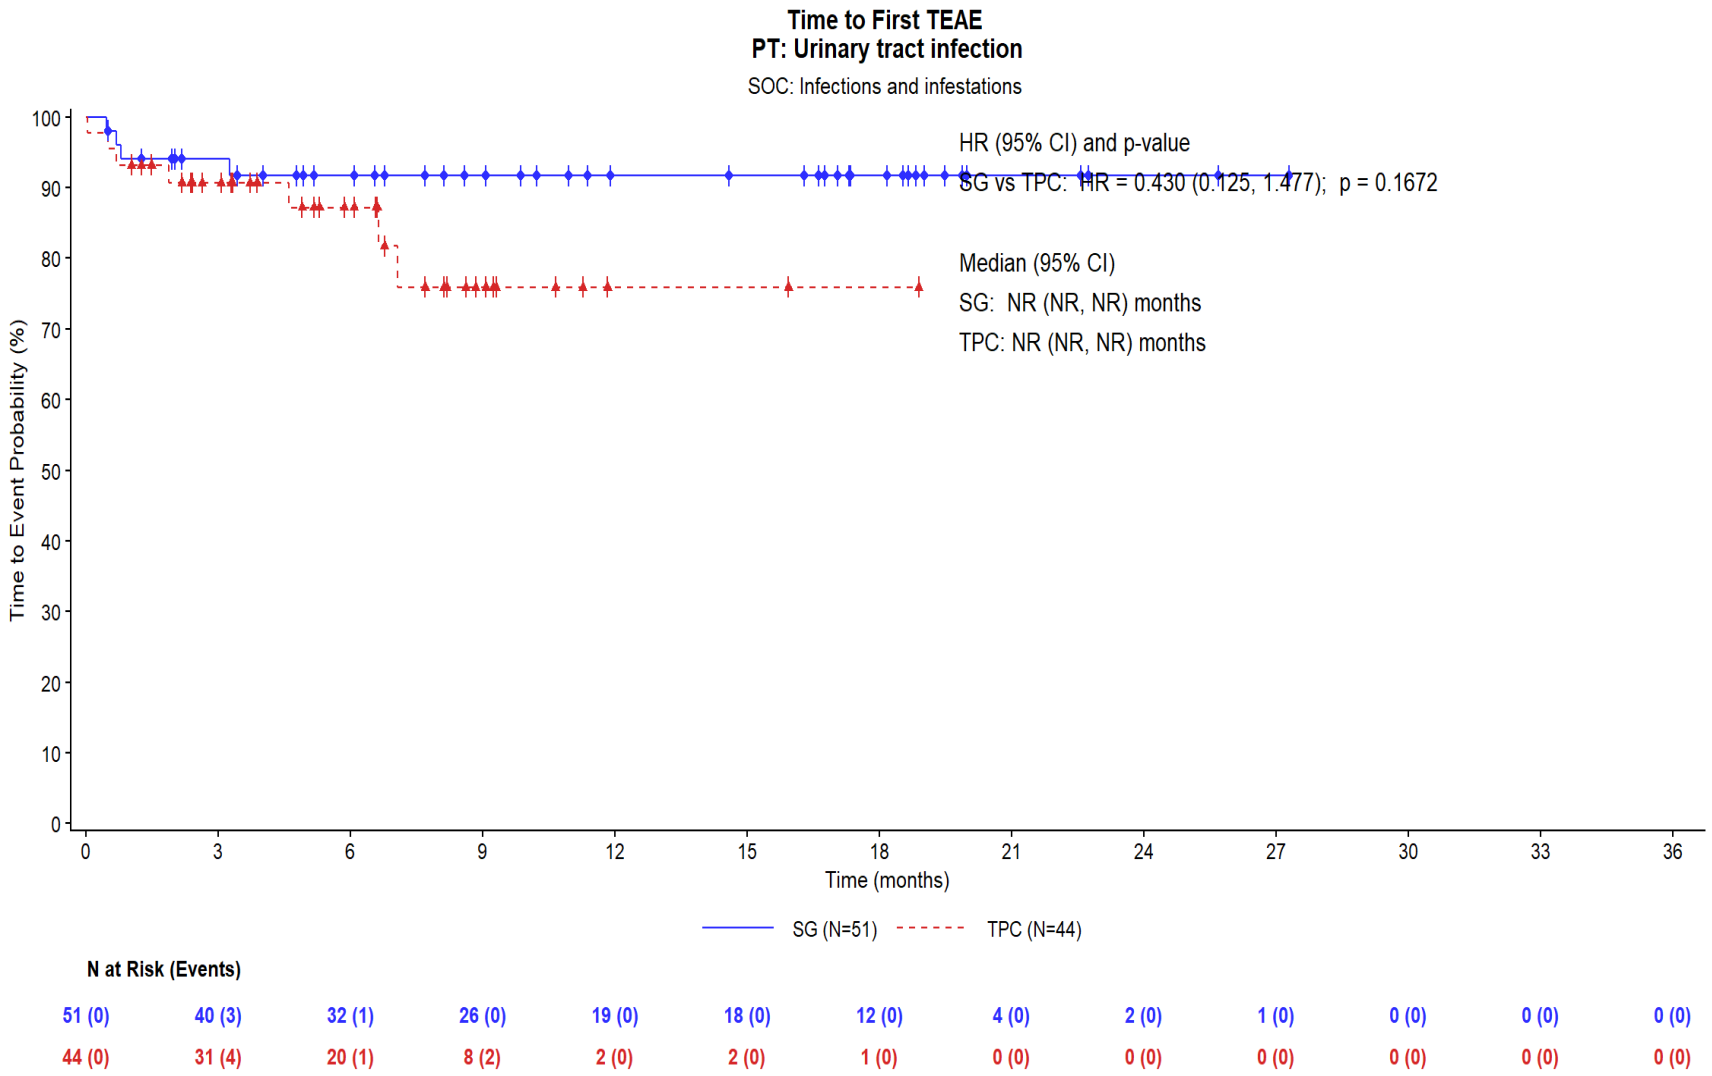
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.38. Figure 1.1.38: Kaplan Meier Plot of Time to First TEAE by PT Pyrexia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



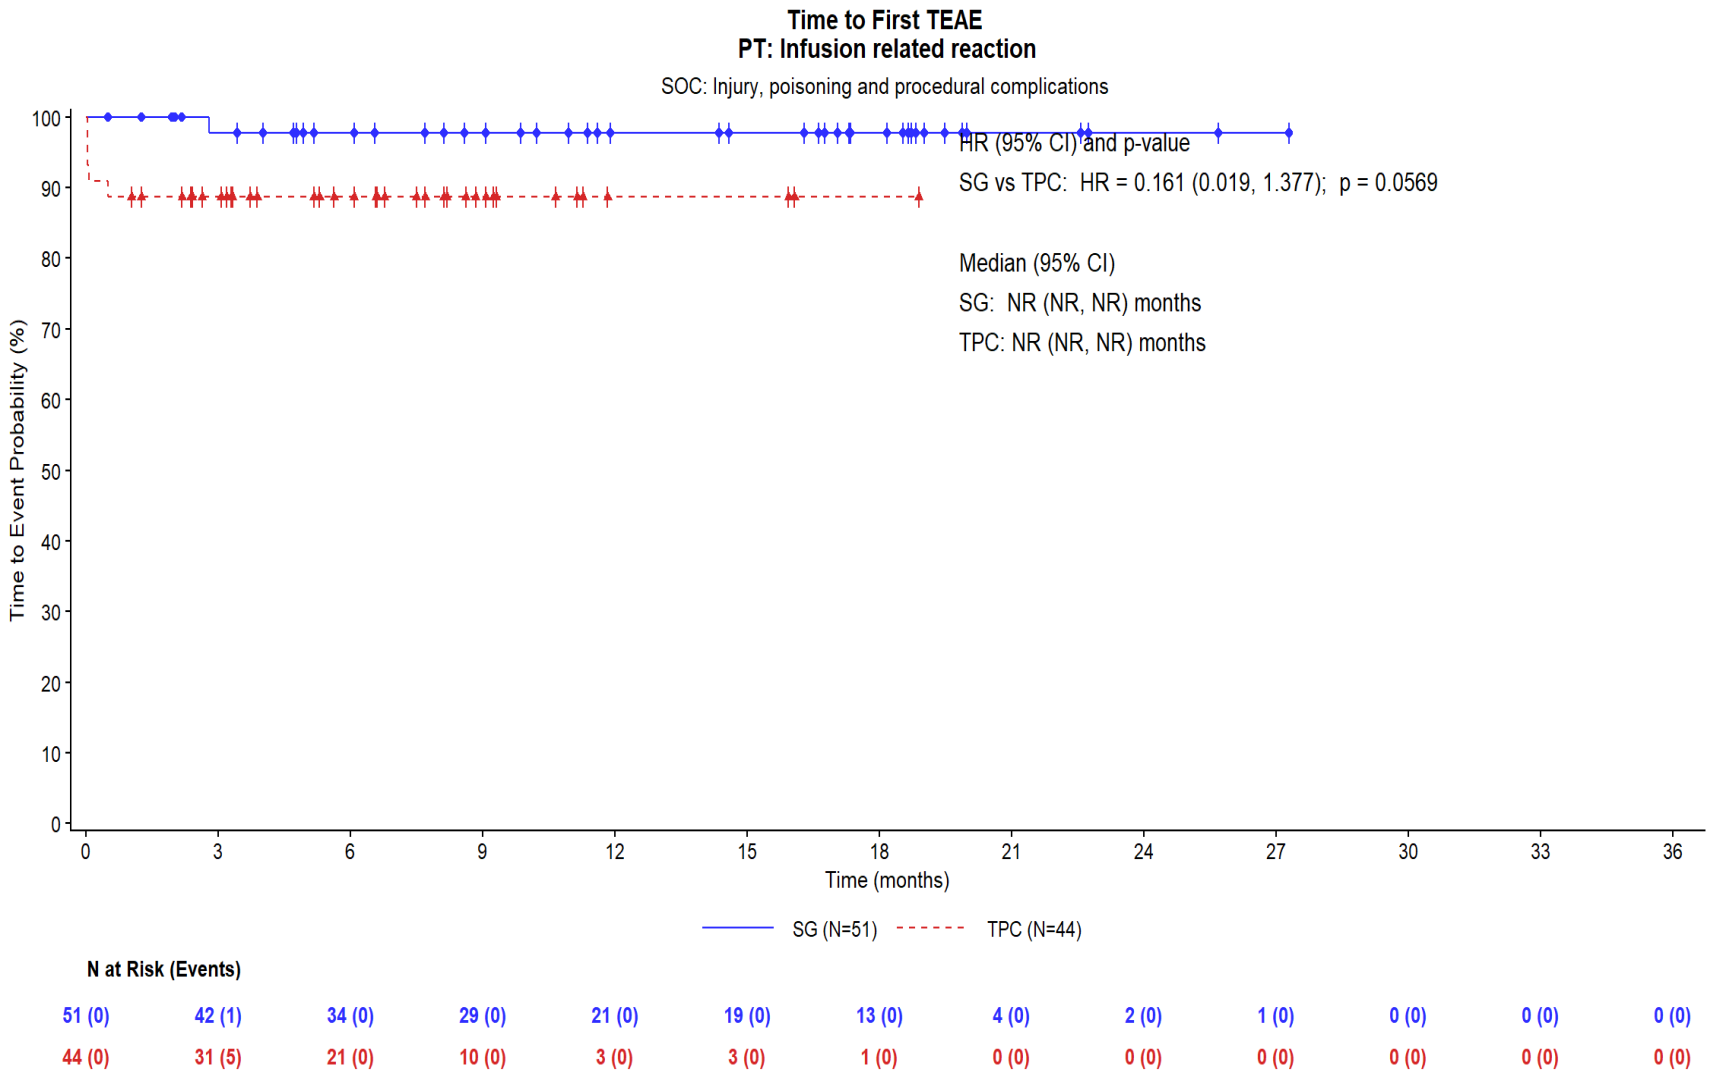
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.39. Figure 1.1.39: Kaplan Meier Plot of Time to First TEAE by PT Nasopharyngitis — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



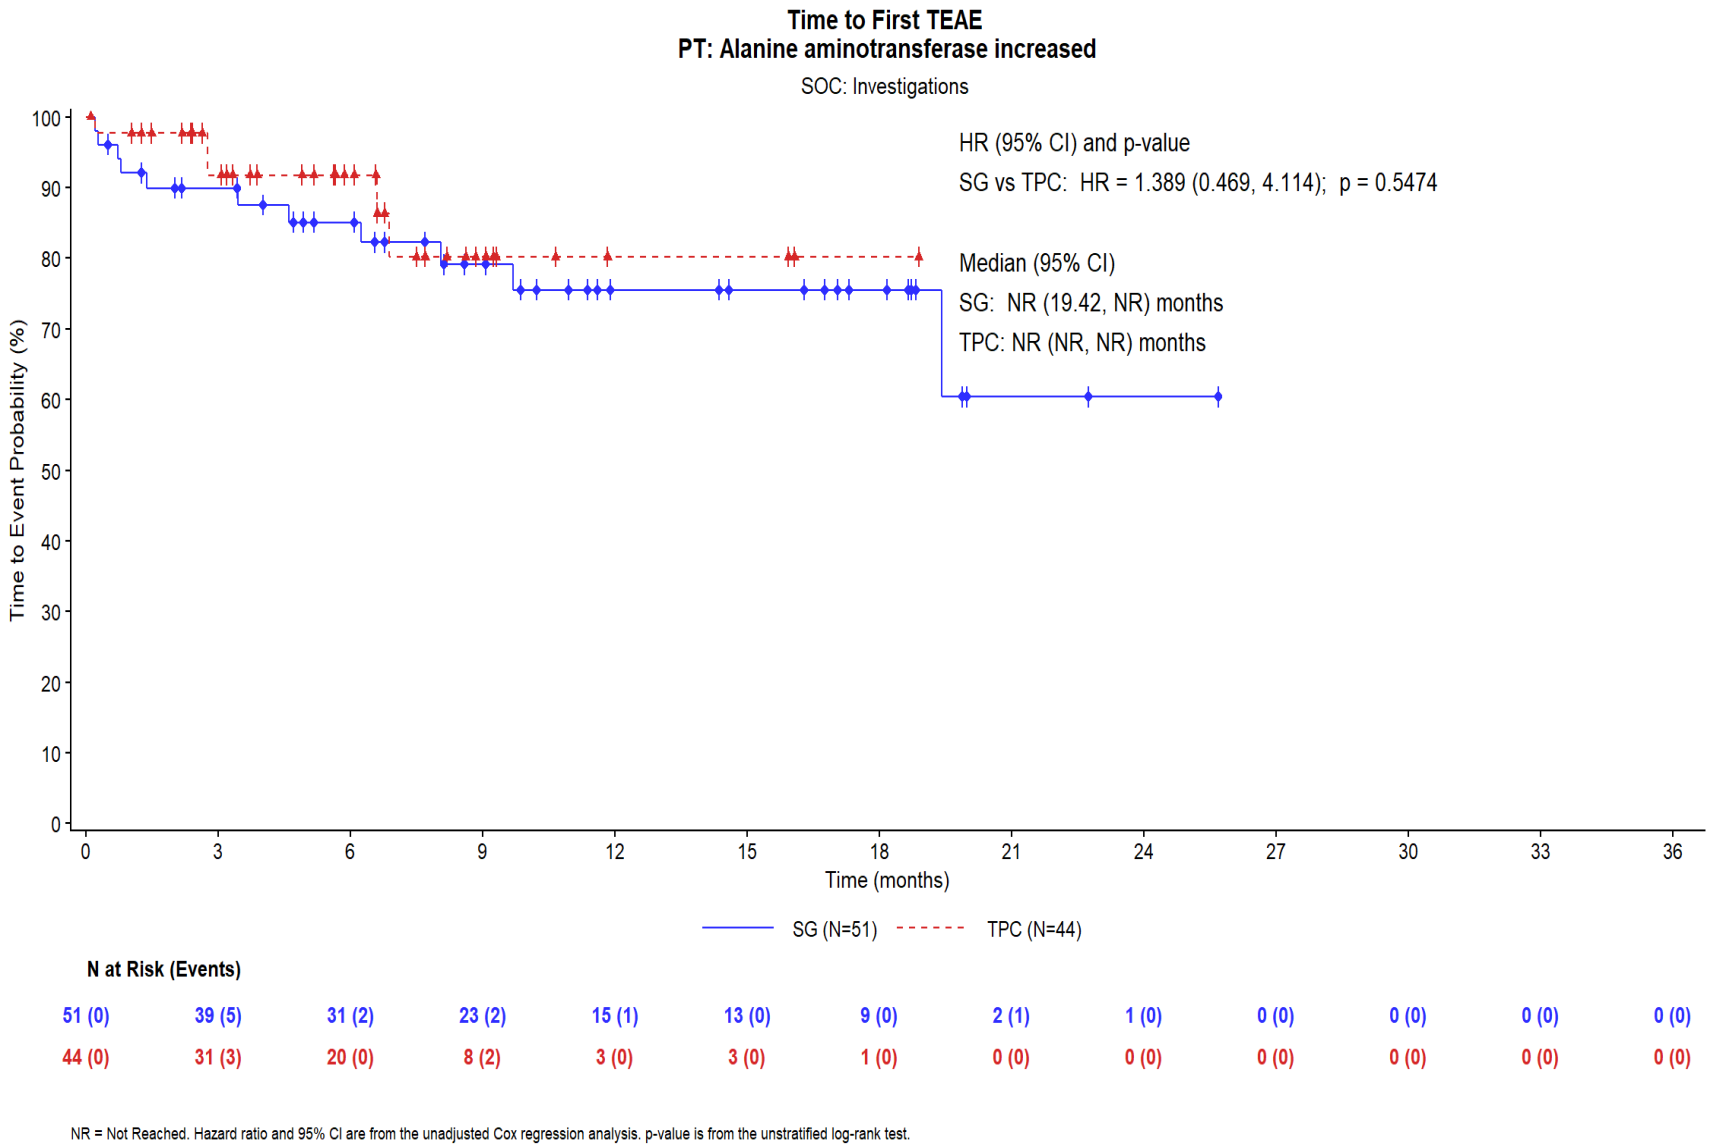
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.40. Figure 1.1.40: Kaplan Meier Plot of Time to First TEAE by PT Upper respiratory tract infection — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



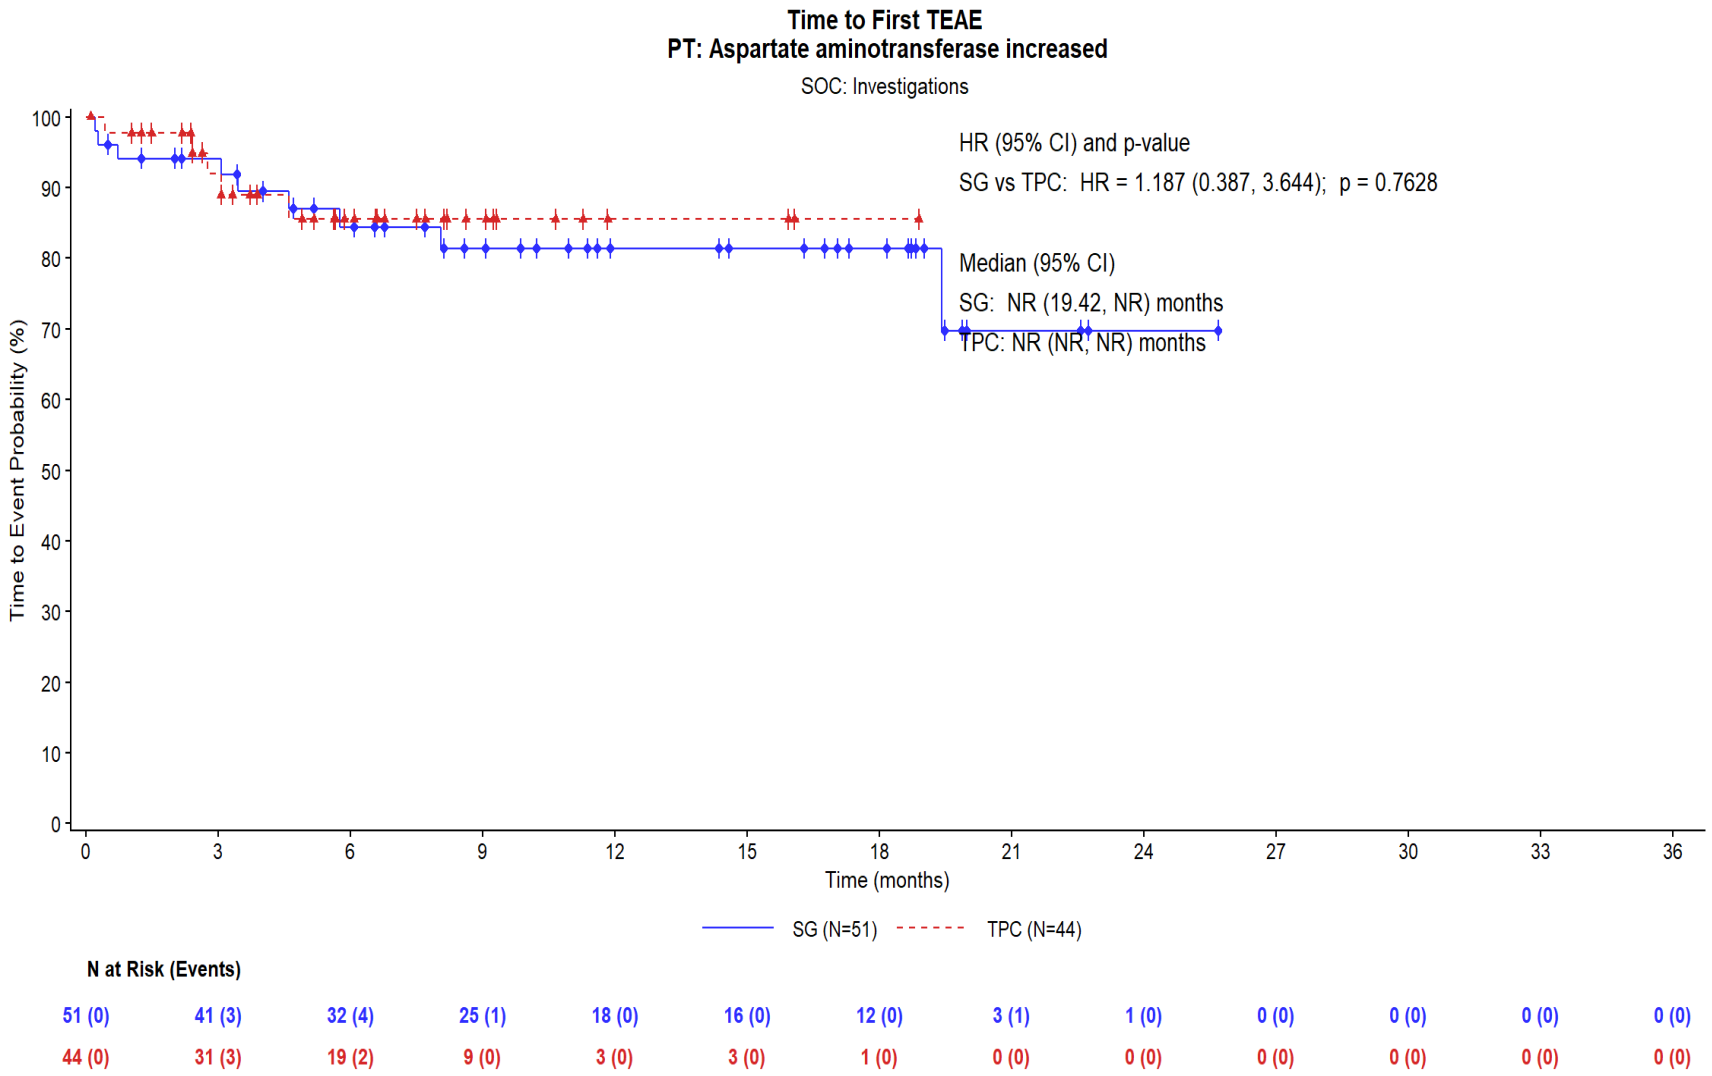
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.41. Figure 1.1.41: Kaplan Meier Plot of Time to First TEAE by PT Urinary tract infection — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



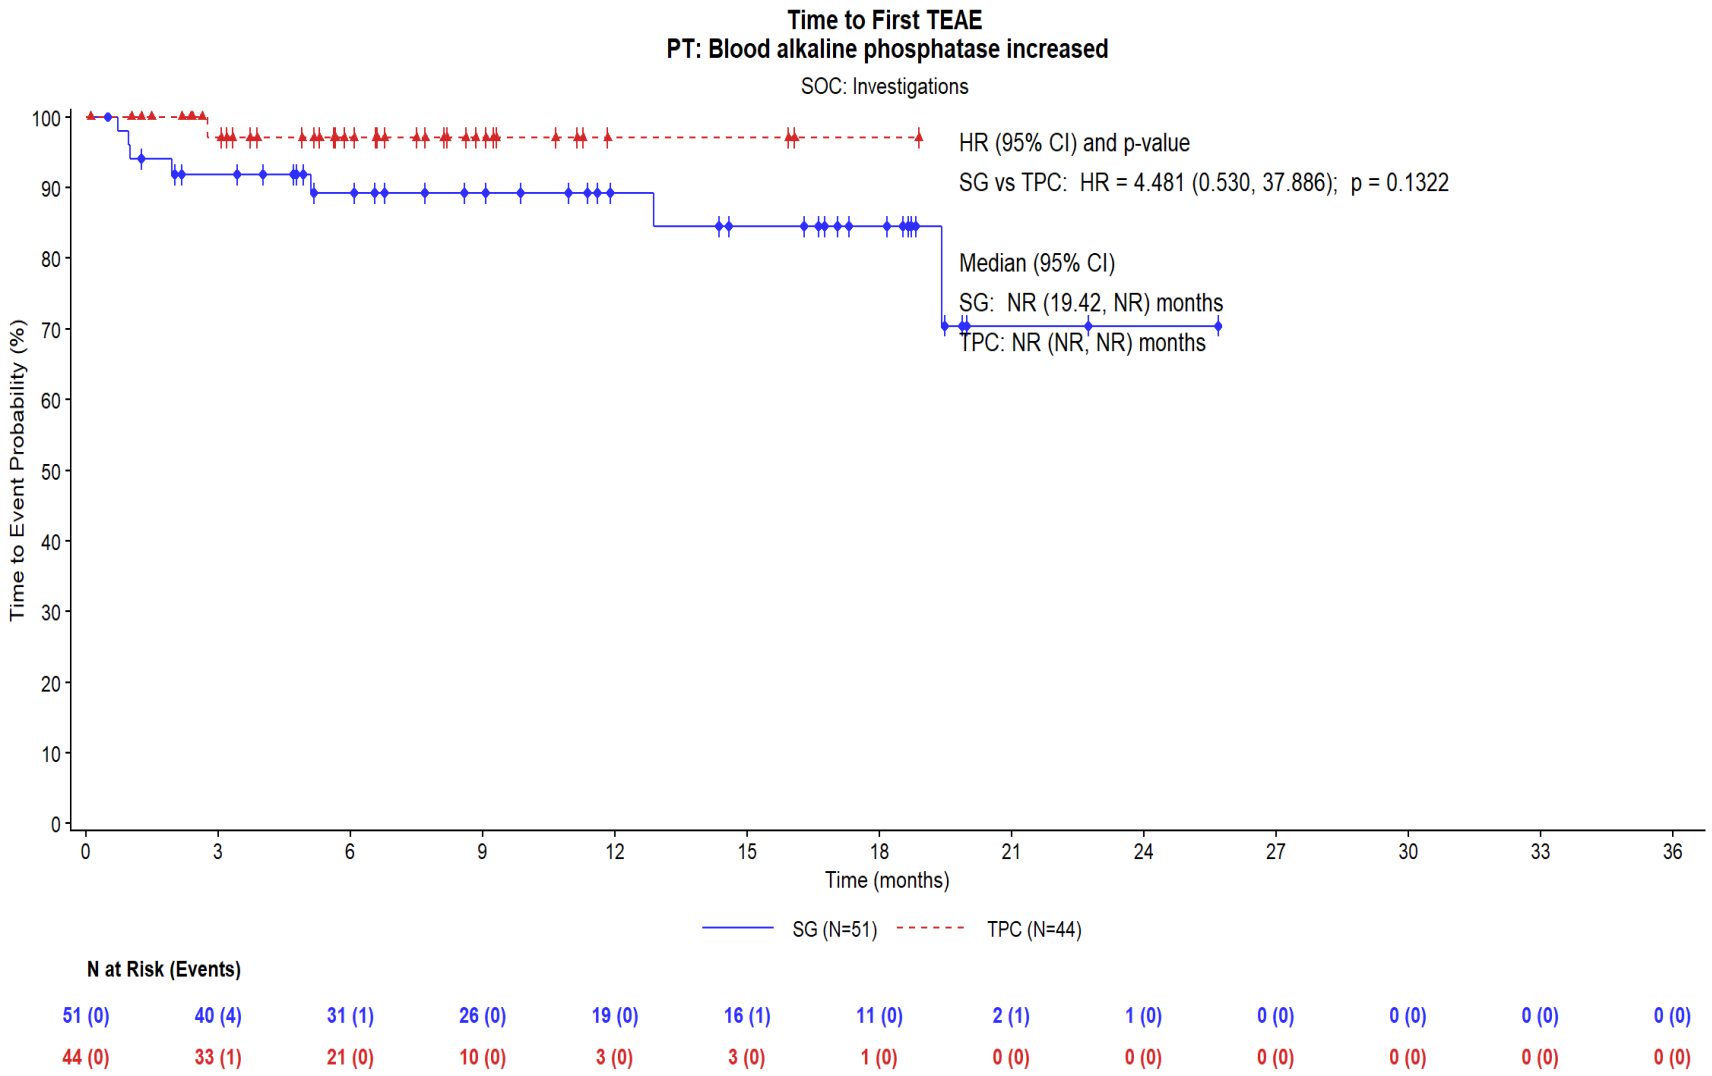
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.42. Figure 1.1.42: Kaplan Meier Plot of Time to First TEAE by PT Infusion related reaction — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



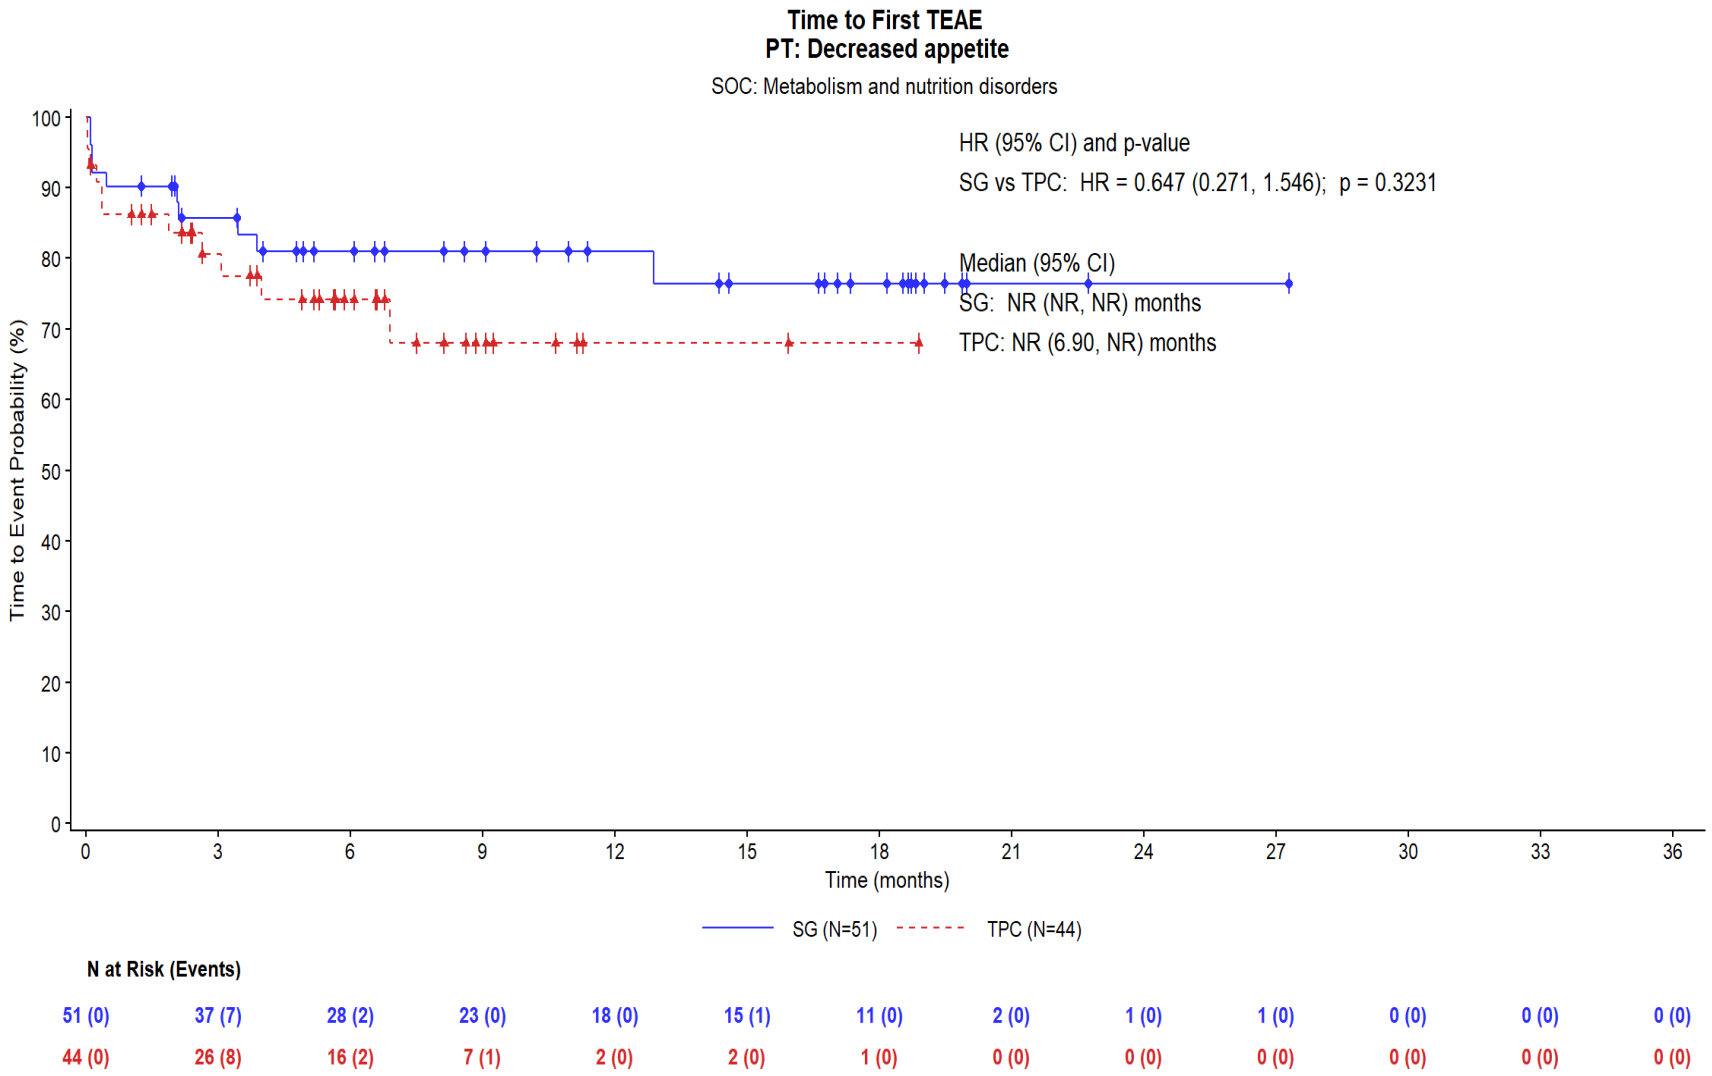
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.43. Figure 1.1.43: Kaplan Meier Plot of Time to First TEAE by PT Alanine aminotransferase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



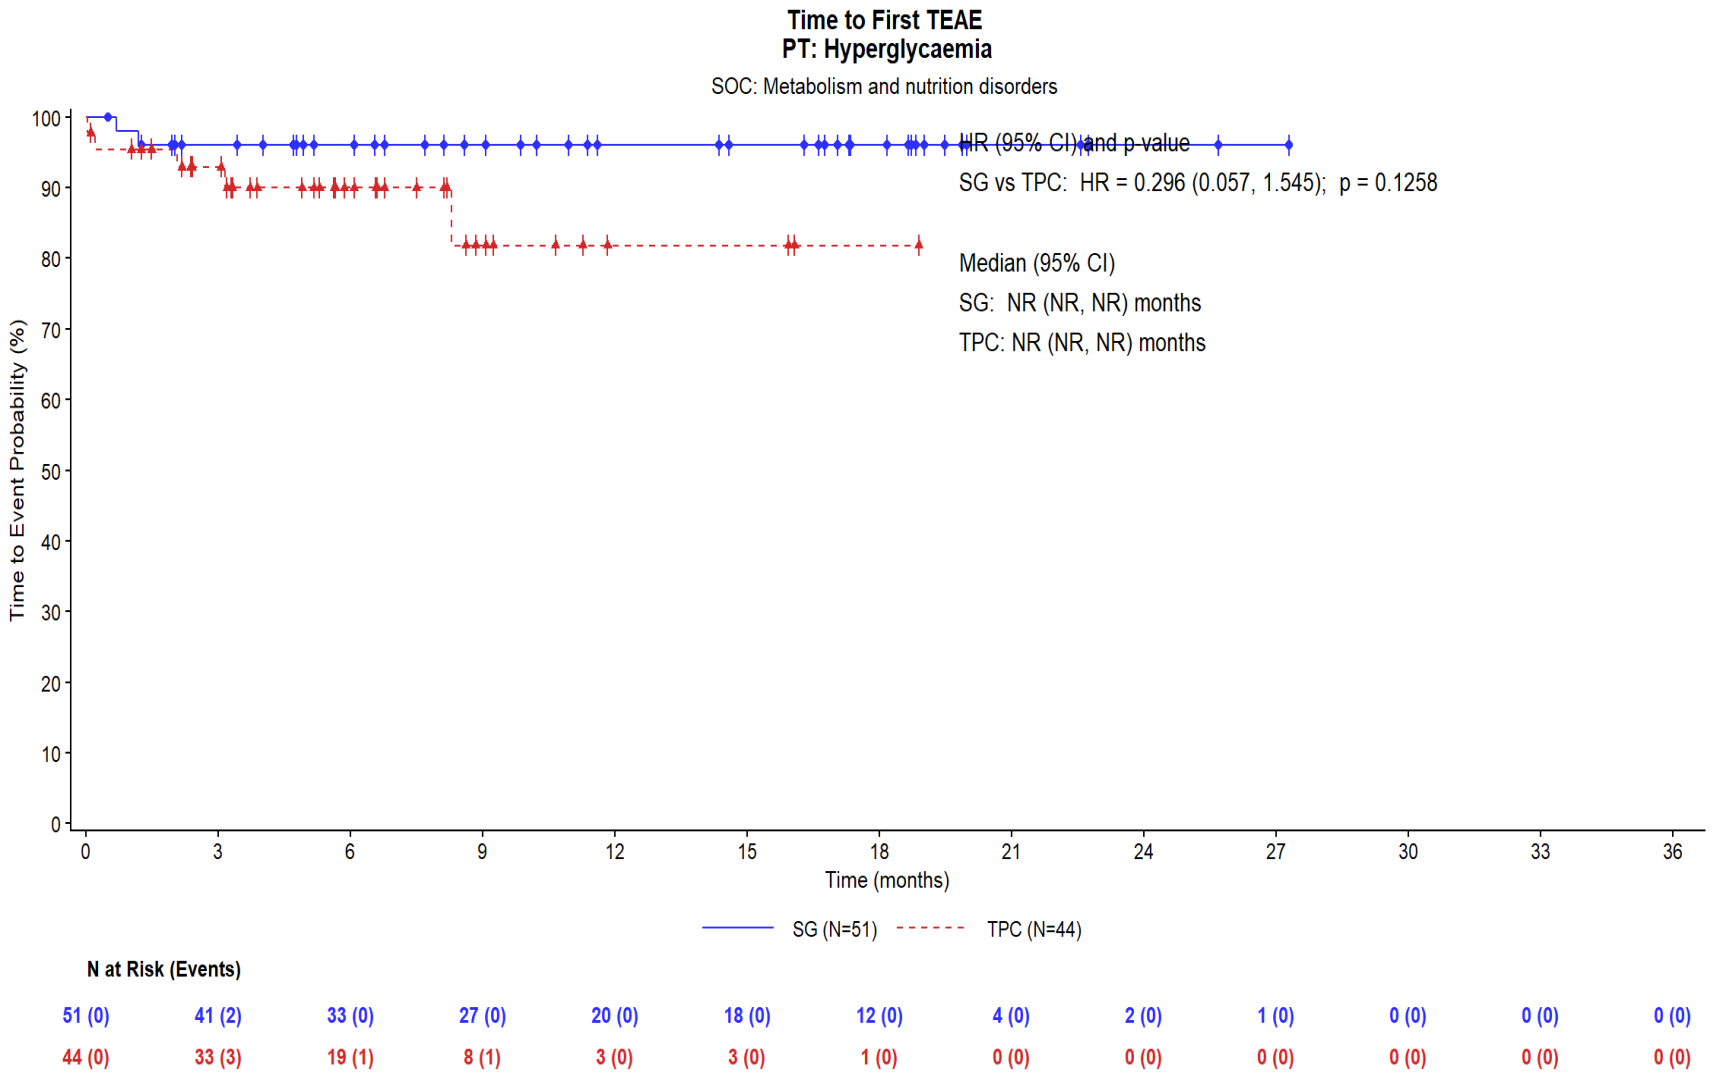
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.44. Figure 1.1.44: Kaplan Meier Plot of Time to First TEAE by PT Aspartate aminotransferase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



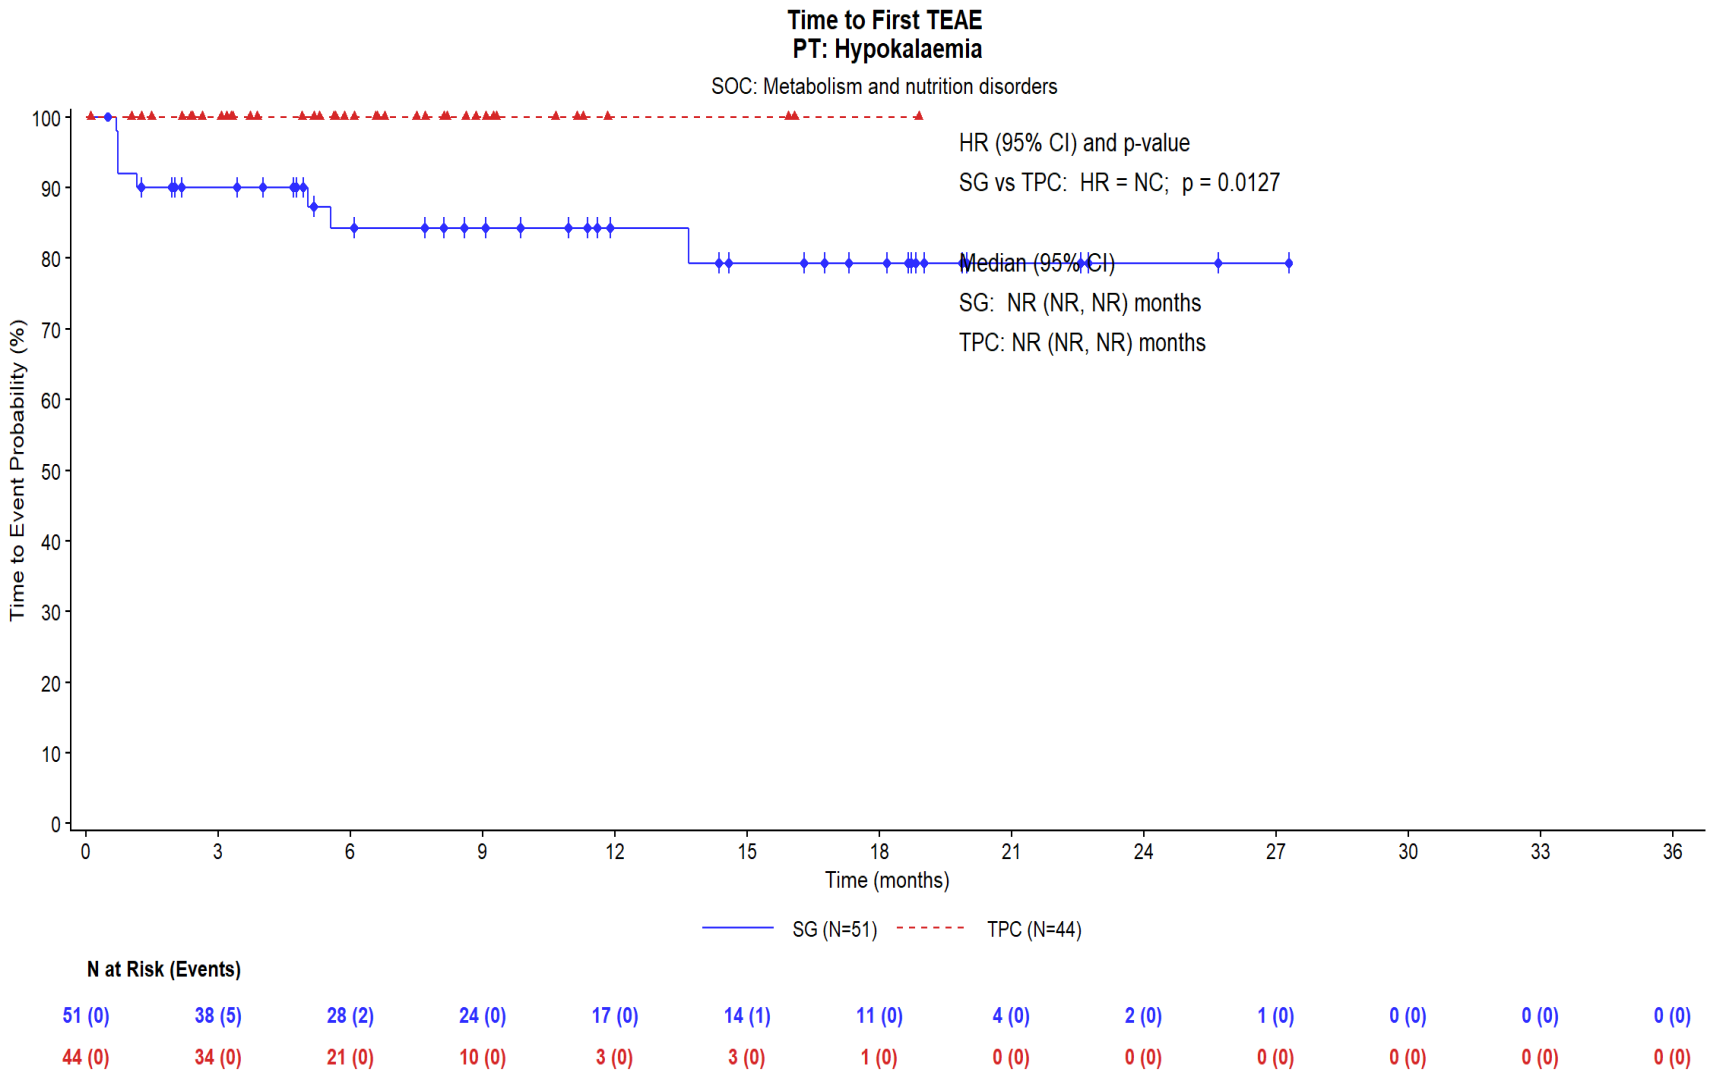
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.45. Figure 1.1.45: Kaplan Meier Plot of Time to First TEAE by PT Blood alkaline phosphatase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



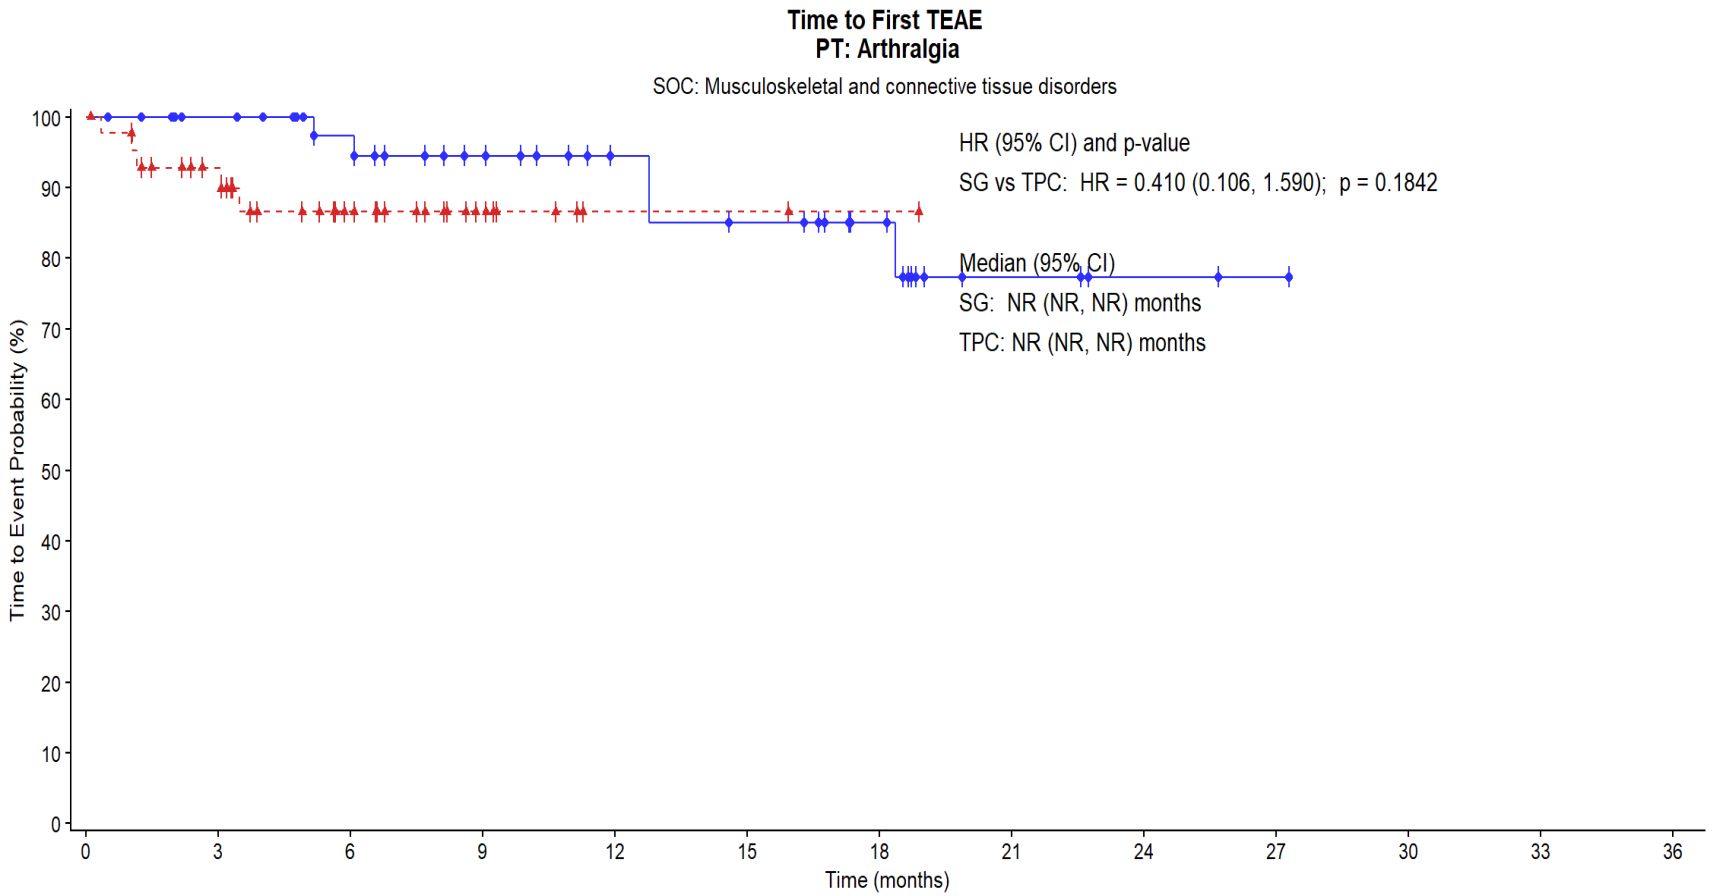
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.46. Figure 1.1.46: Kaplan Meier Plot of Time to First TEAE by PT Decreased appetite — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



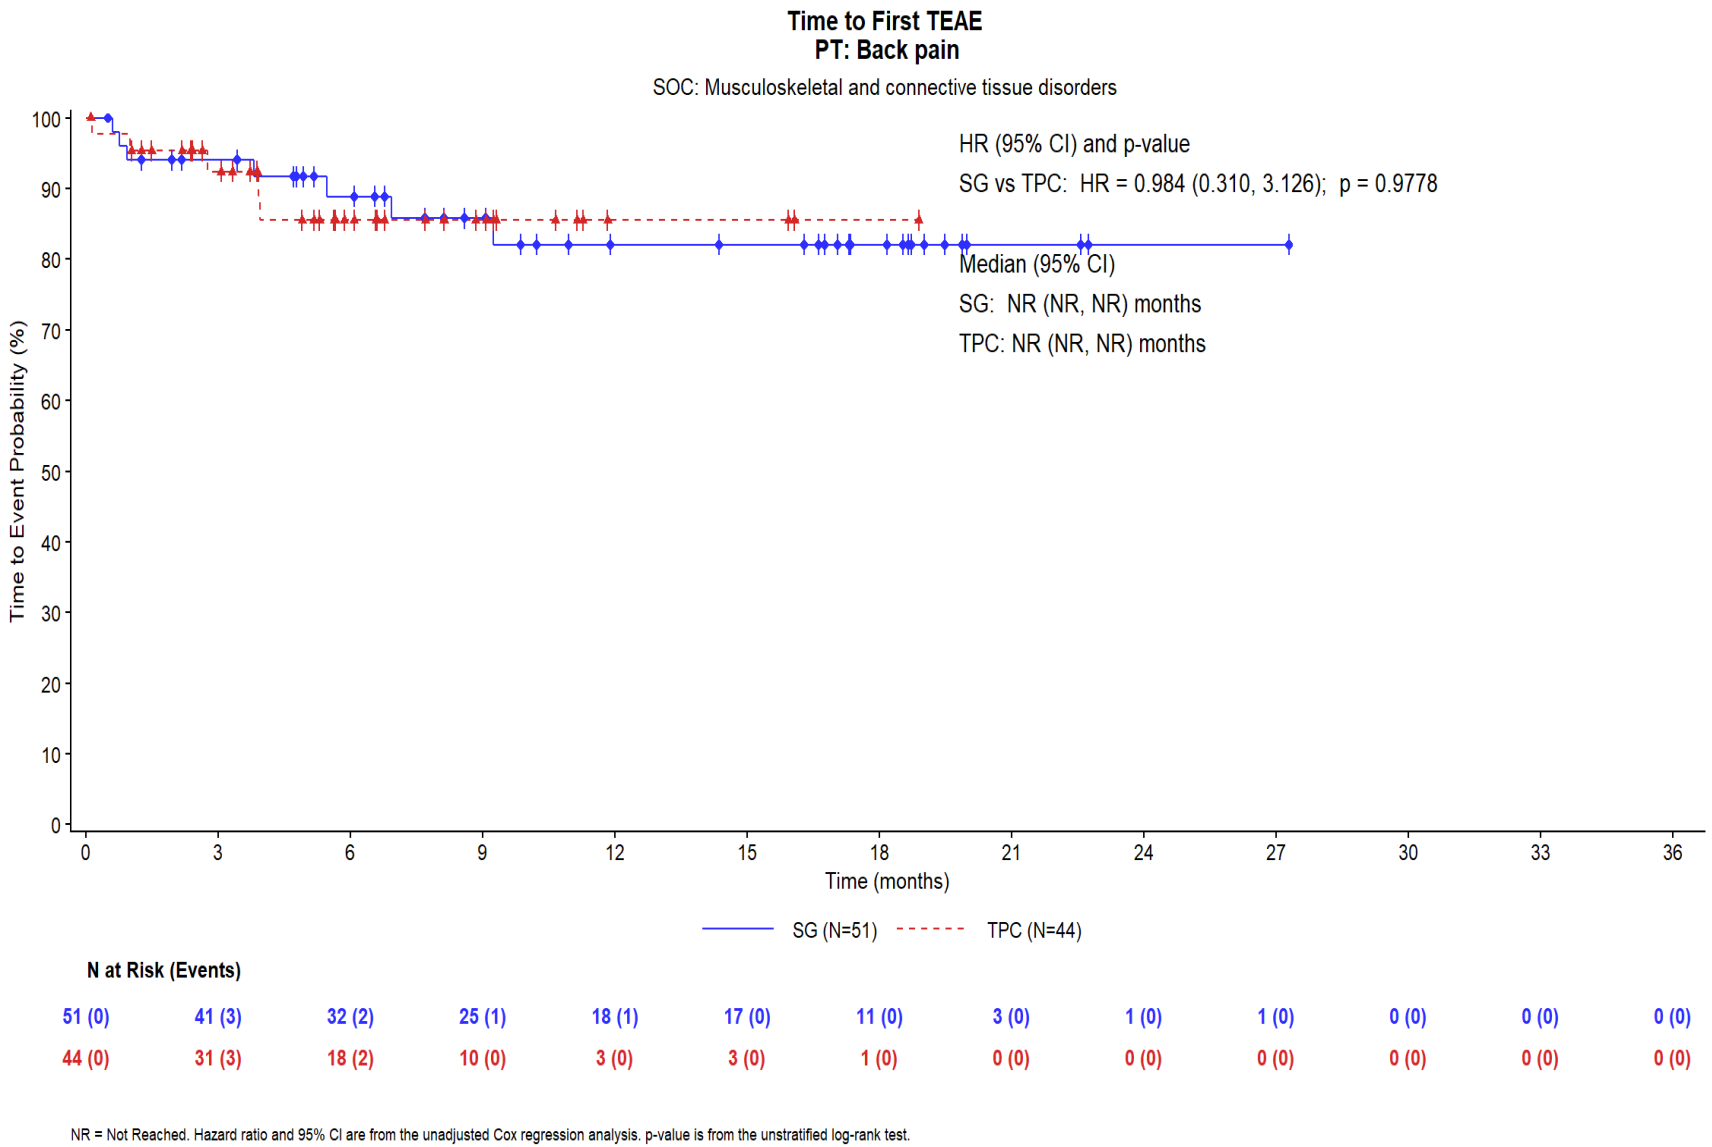
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.47. Figure 1.1.47: Kaplan Meier Plot of Time to First TEAE by PT Hyperglycaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



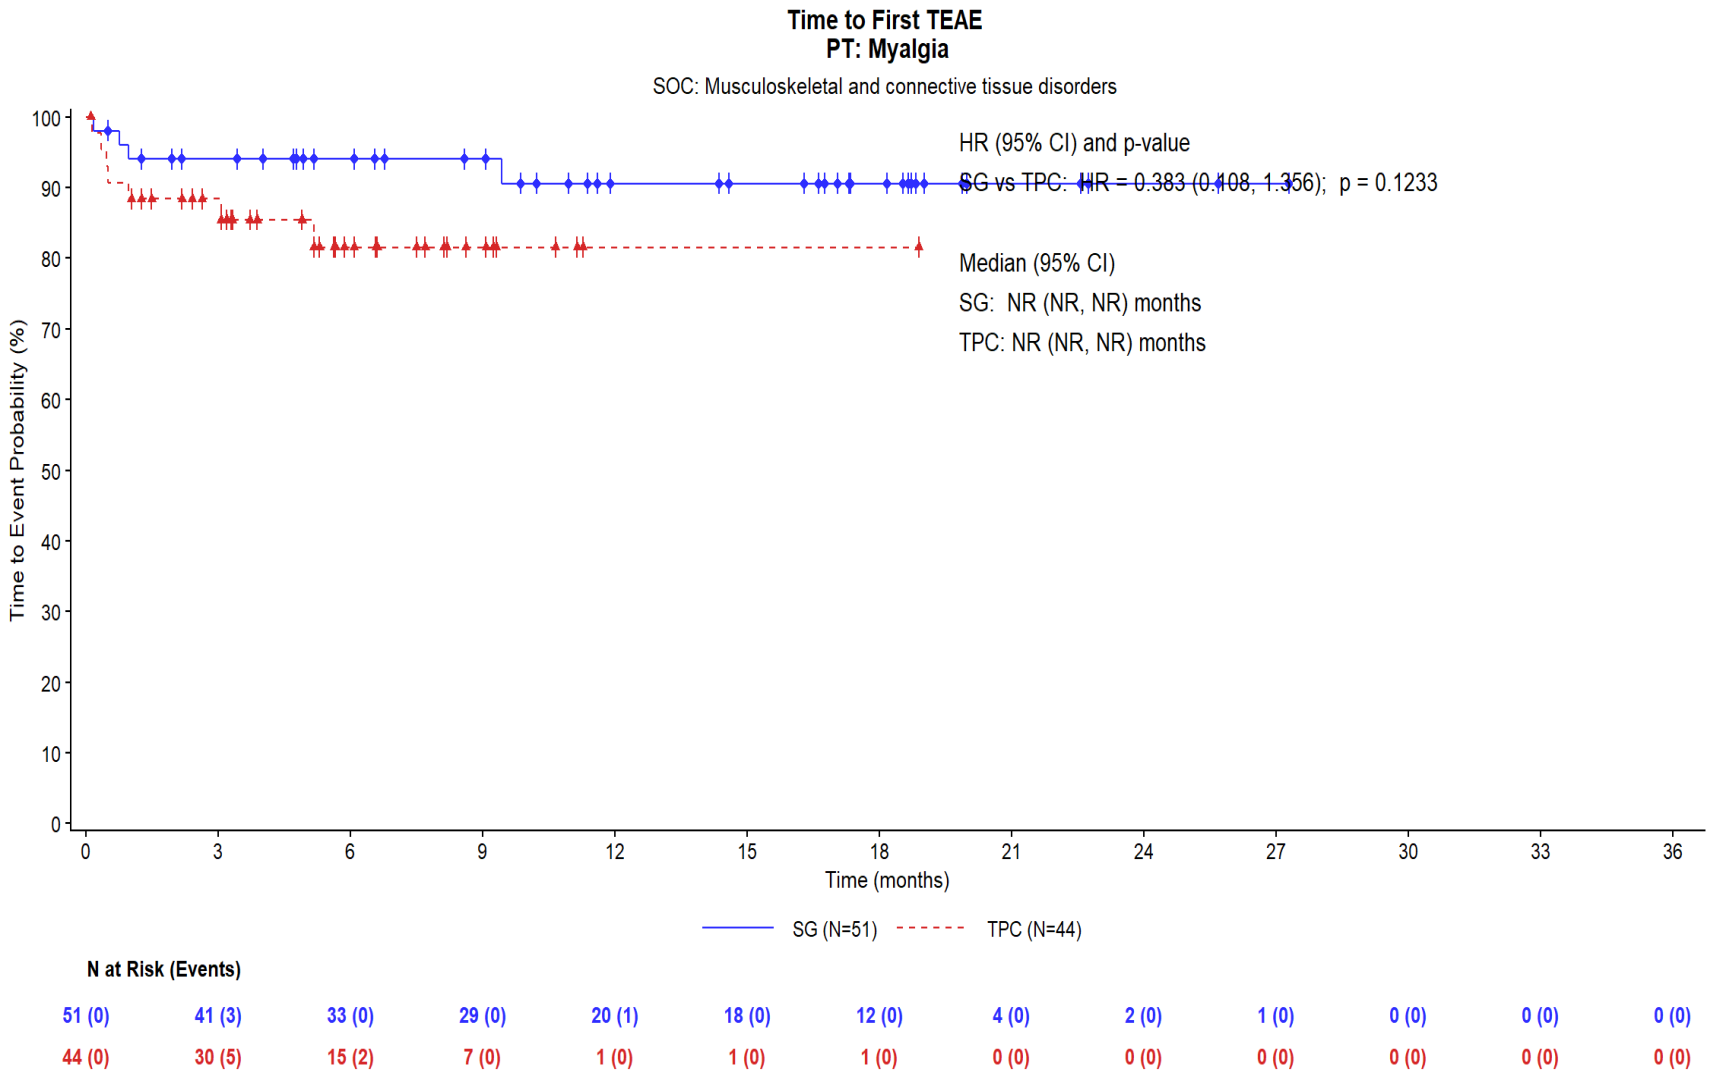
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.48. Figure 1.1.48: Kaplan Meier Plot of Time to First TEAE by PT Hypokalaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



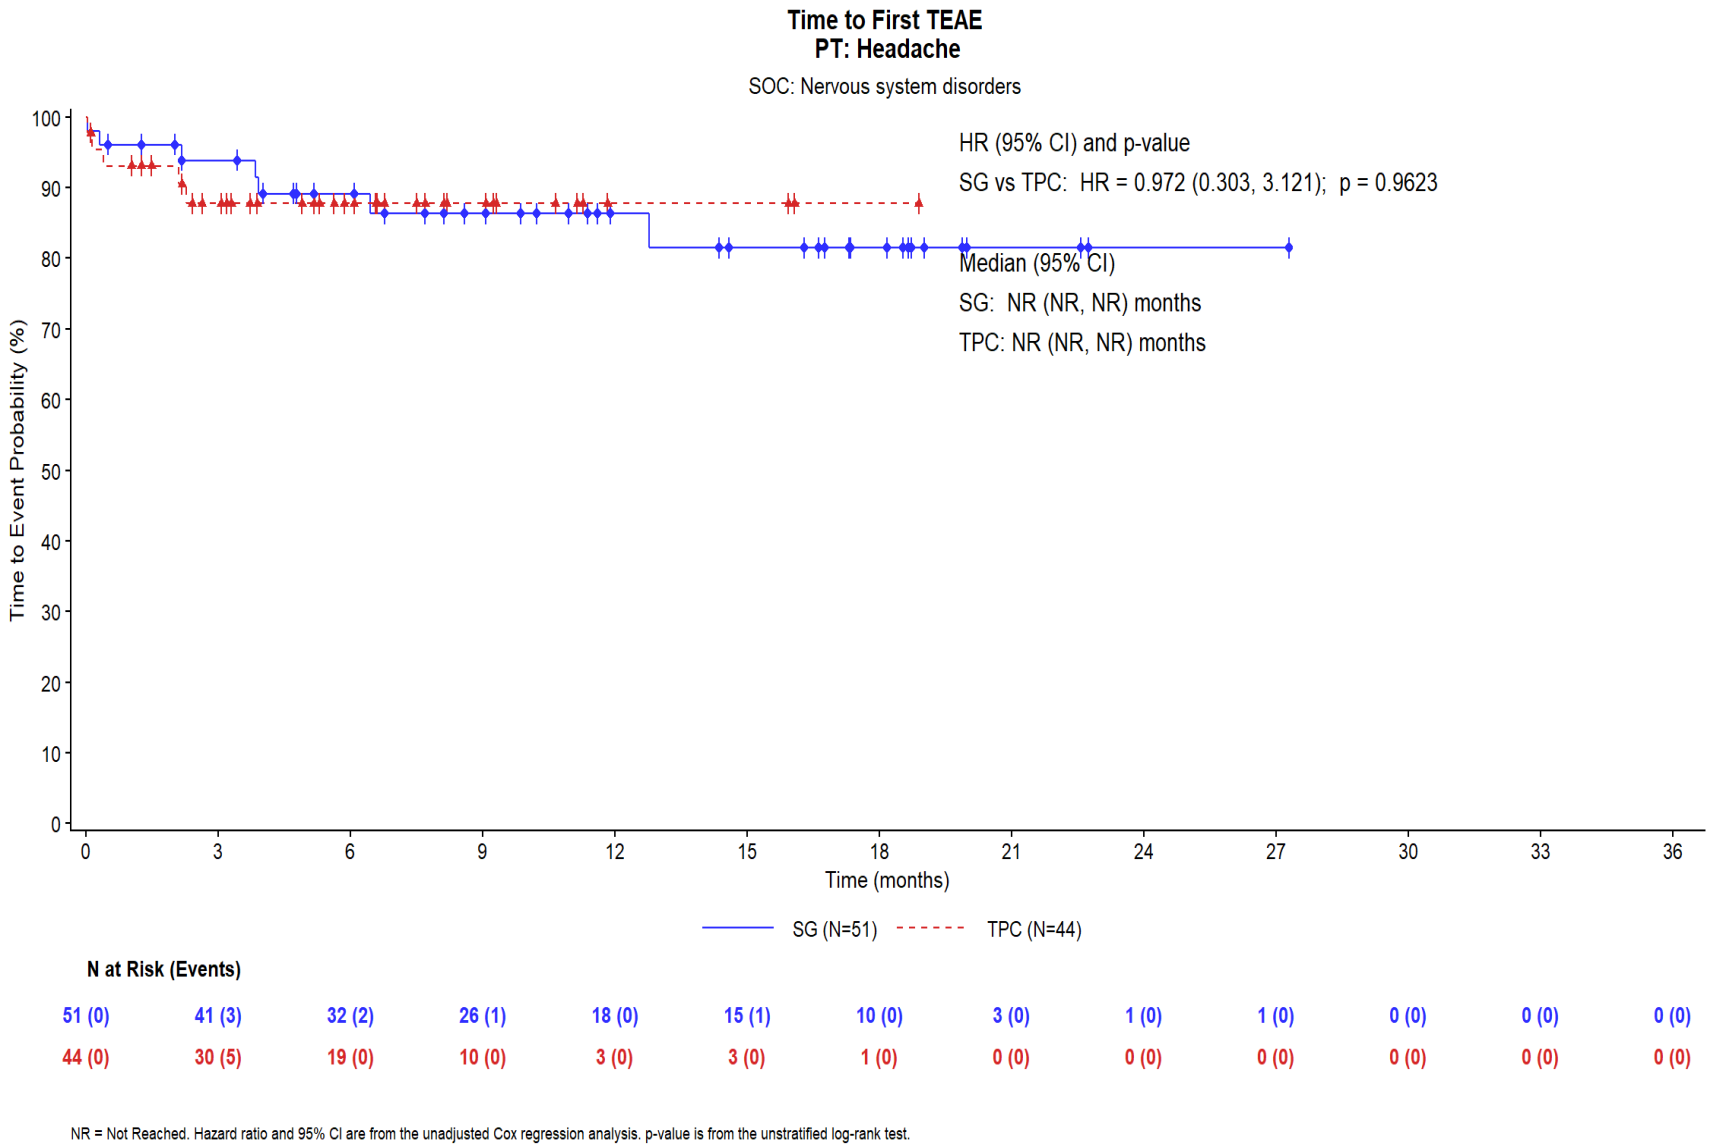
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.49. Figure 1.1.49: Kaplan Meier Plot of Time to First TEAE by PT Arthralgia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



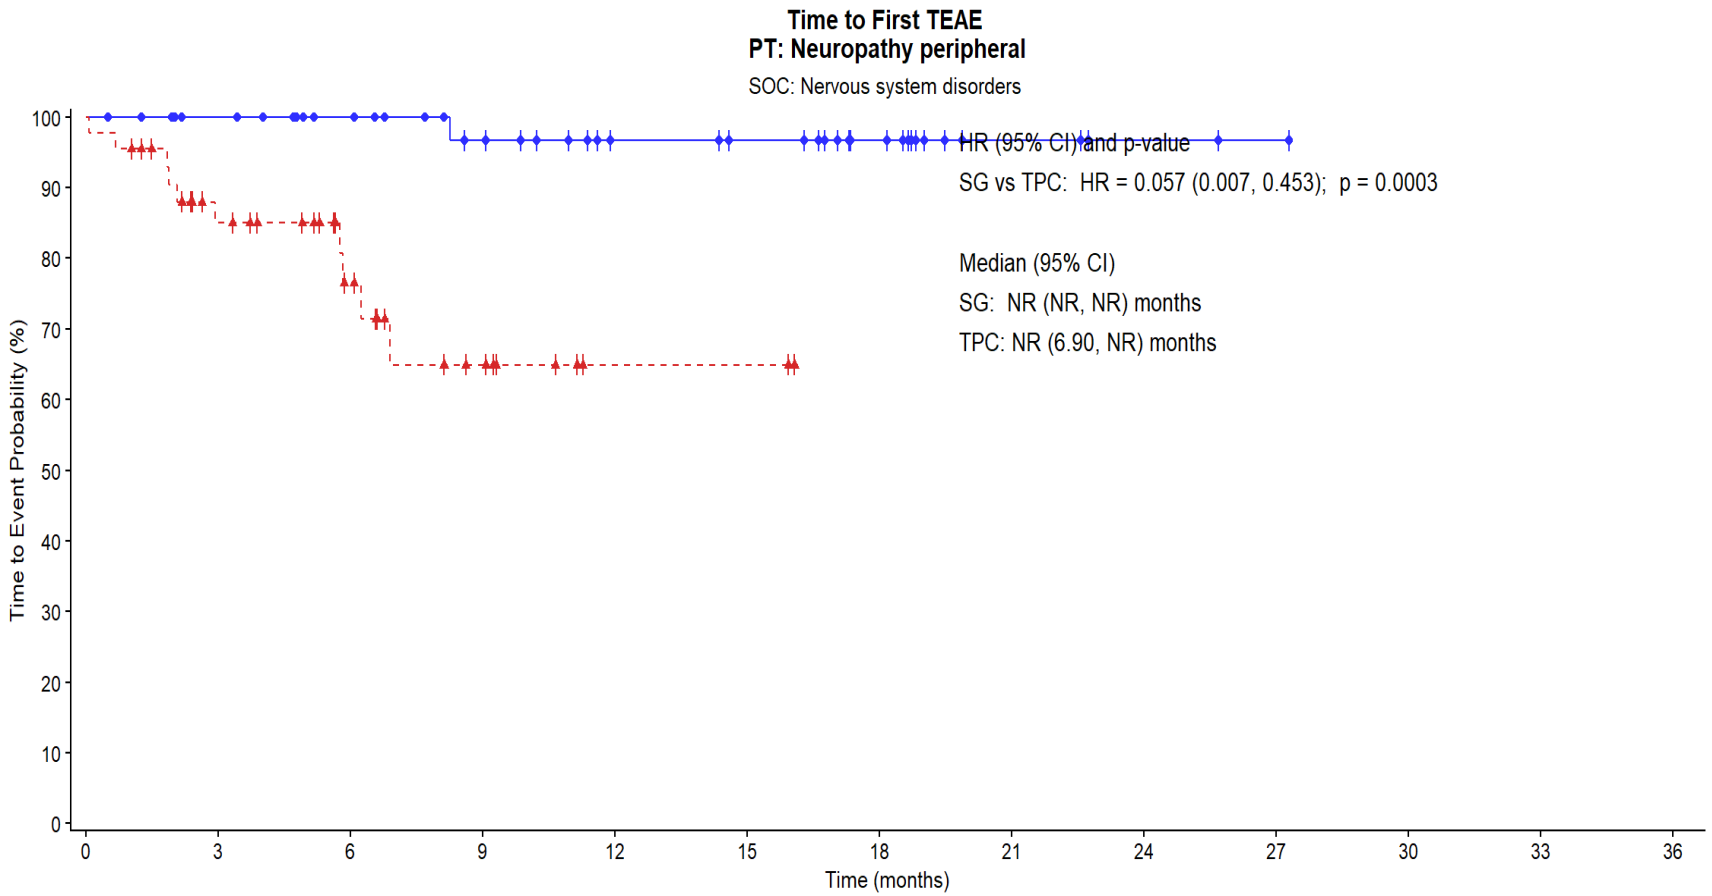
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.50. Figure 1.1.50: Kaplan Meier Plot of Time to First TEAE by PT Back pain — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



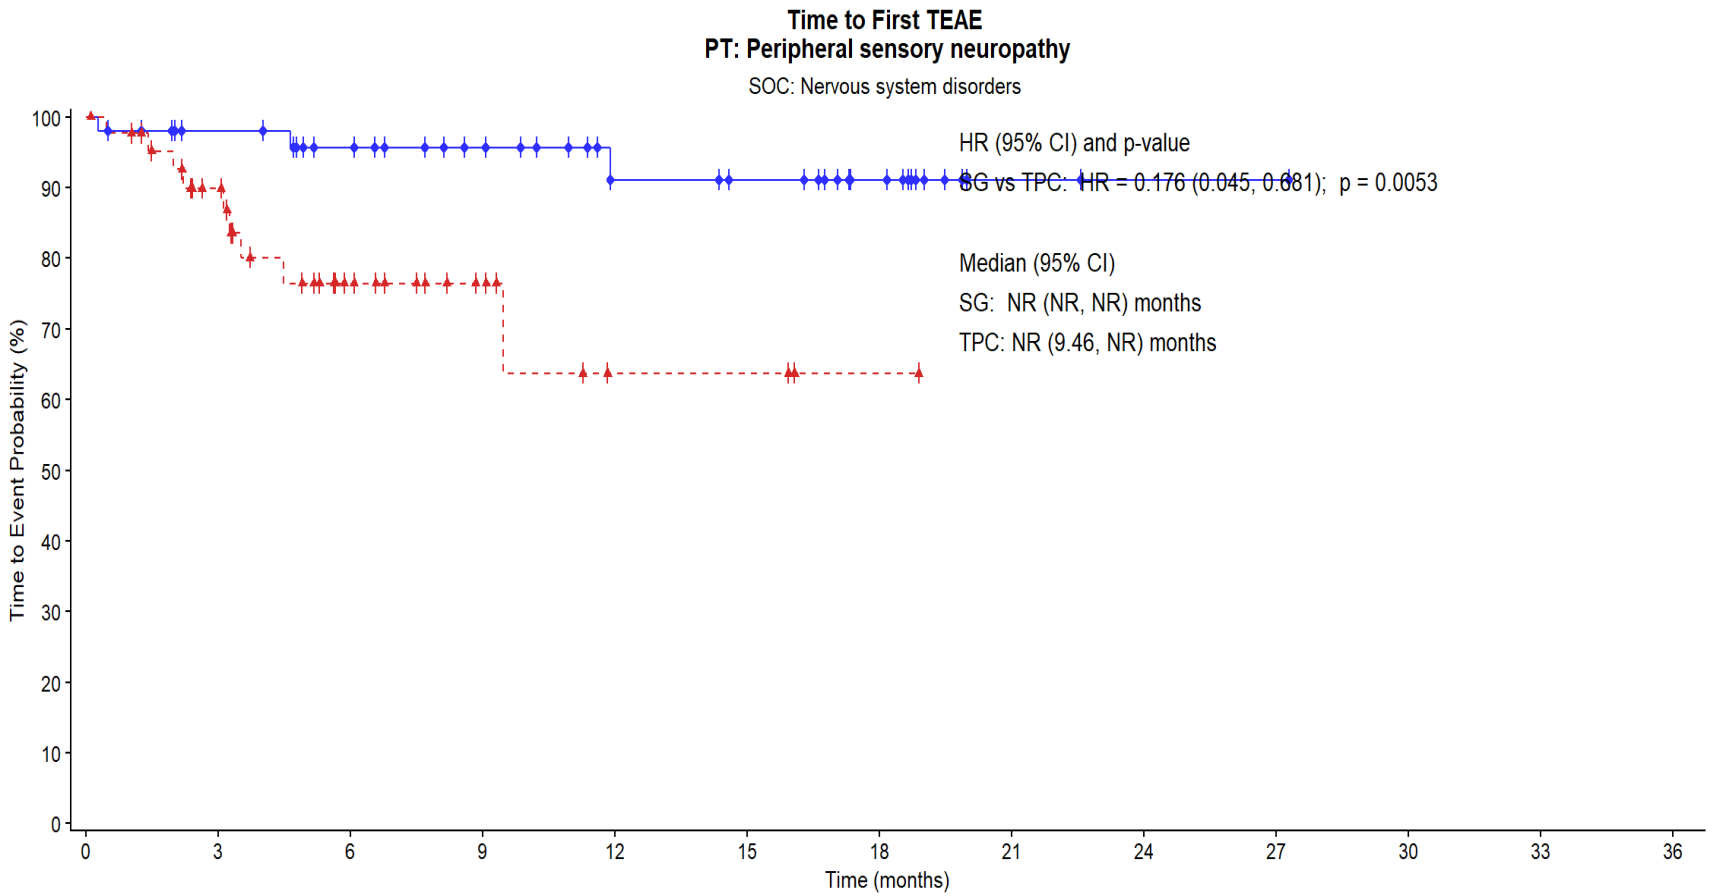
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.51. Figure 1.1.51: Kaplan Meier Plot of Time to First TEAE by PT Myalgia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



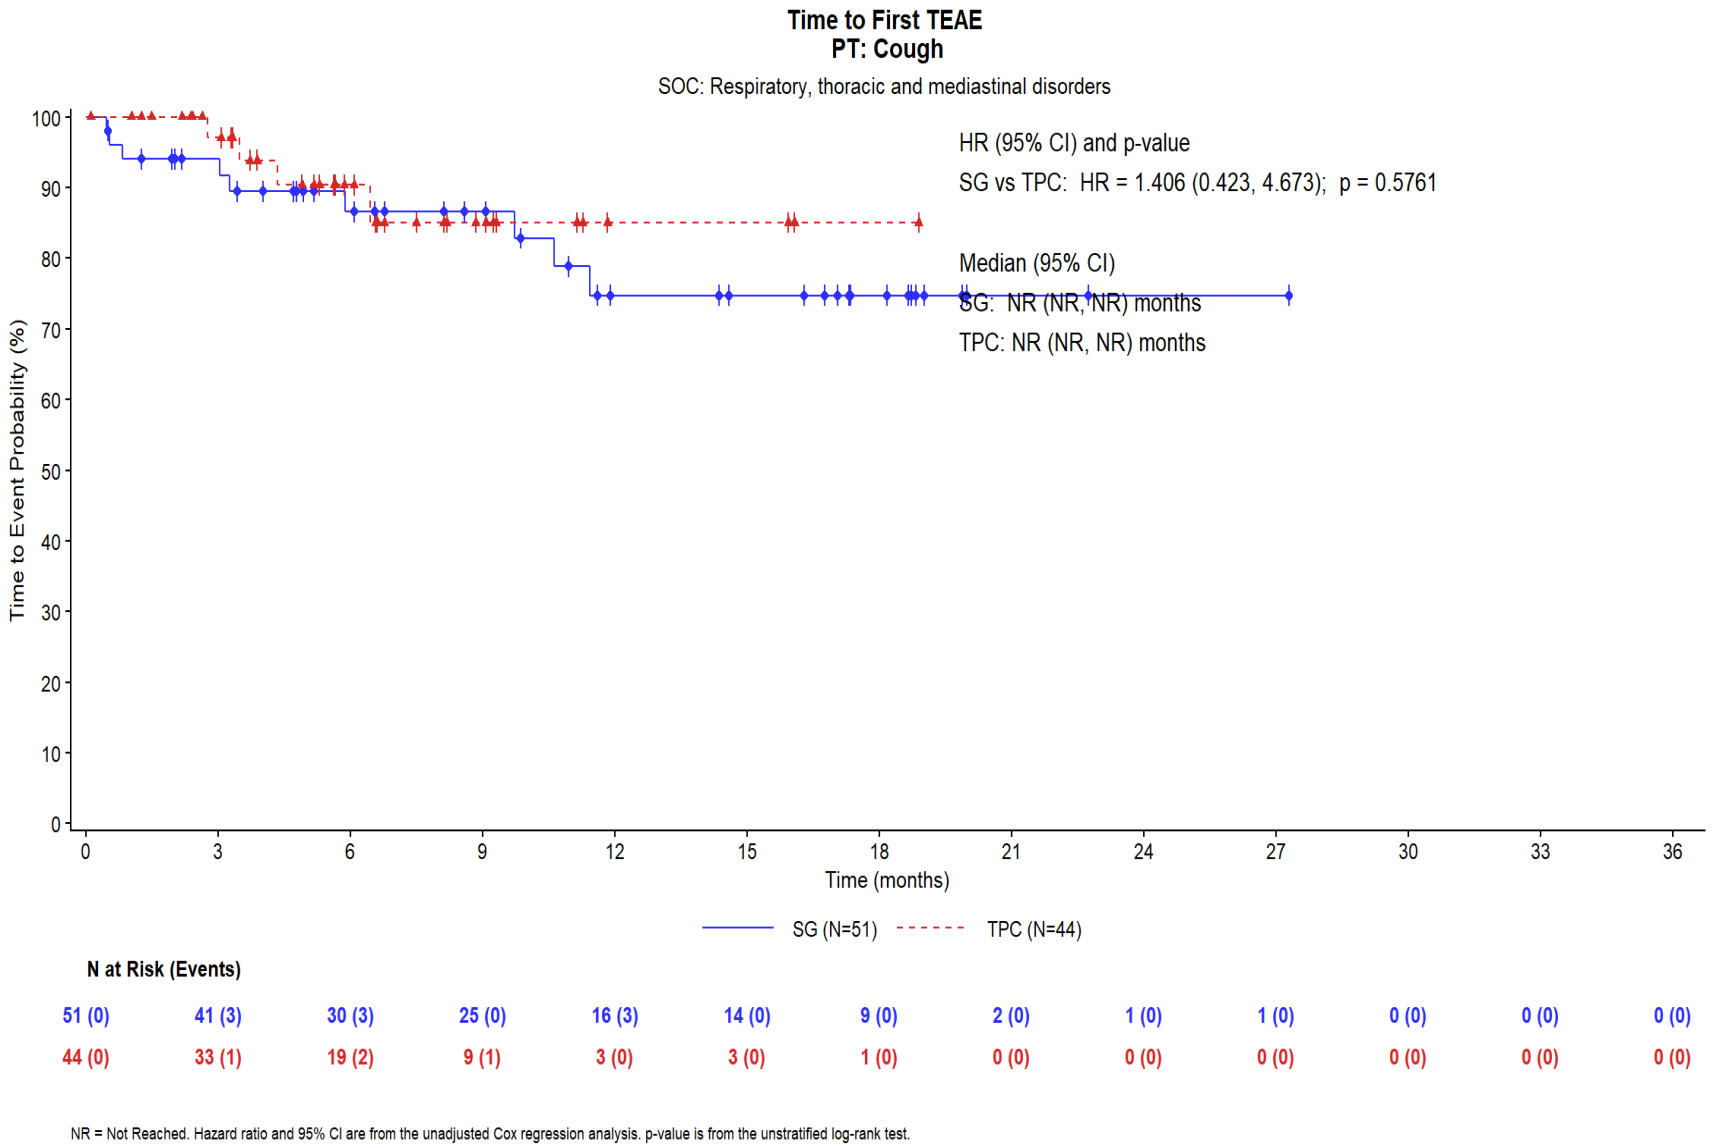
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.52. Figure 1.1.52: Kaplan Meier Plot of Time to First TEAE by PT Headache — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



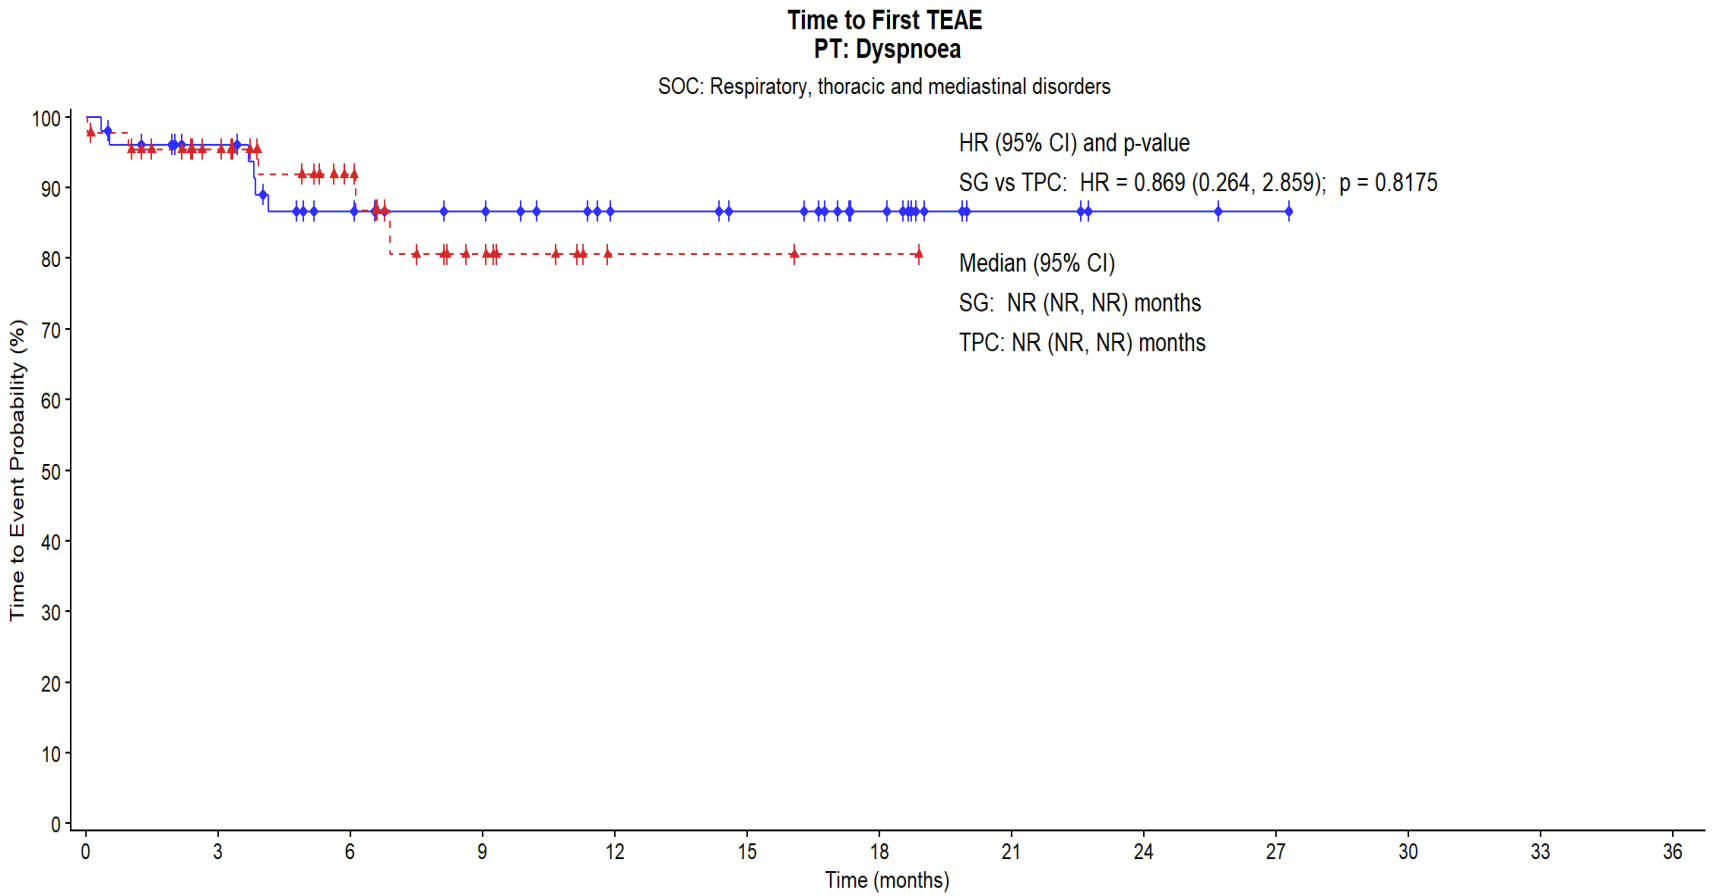
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.53. Figure 1.1.53: Kaplan Meier Plot of Time to First TEAE by PT Neuropathy peripheral — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



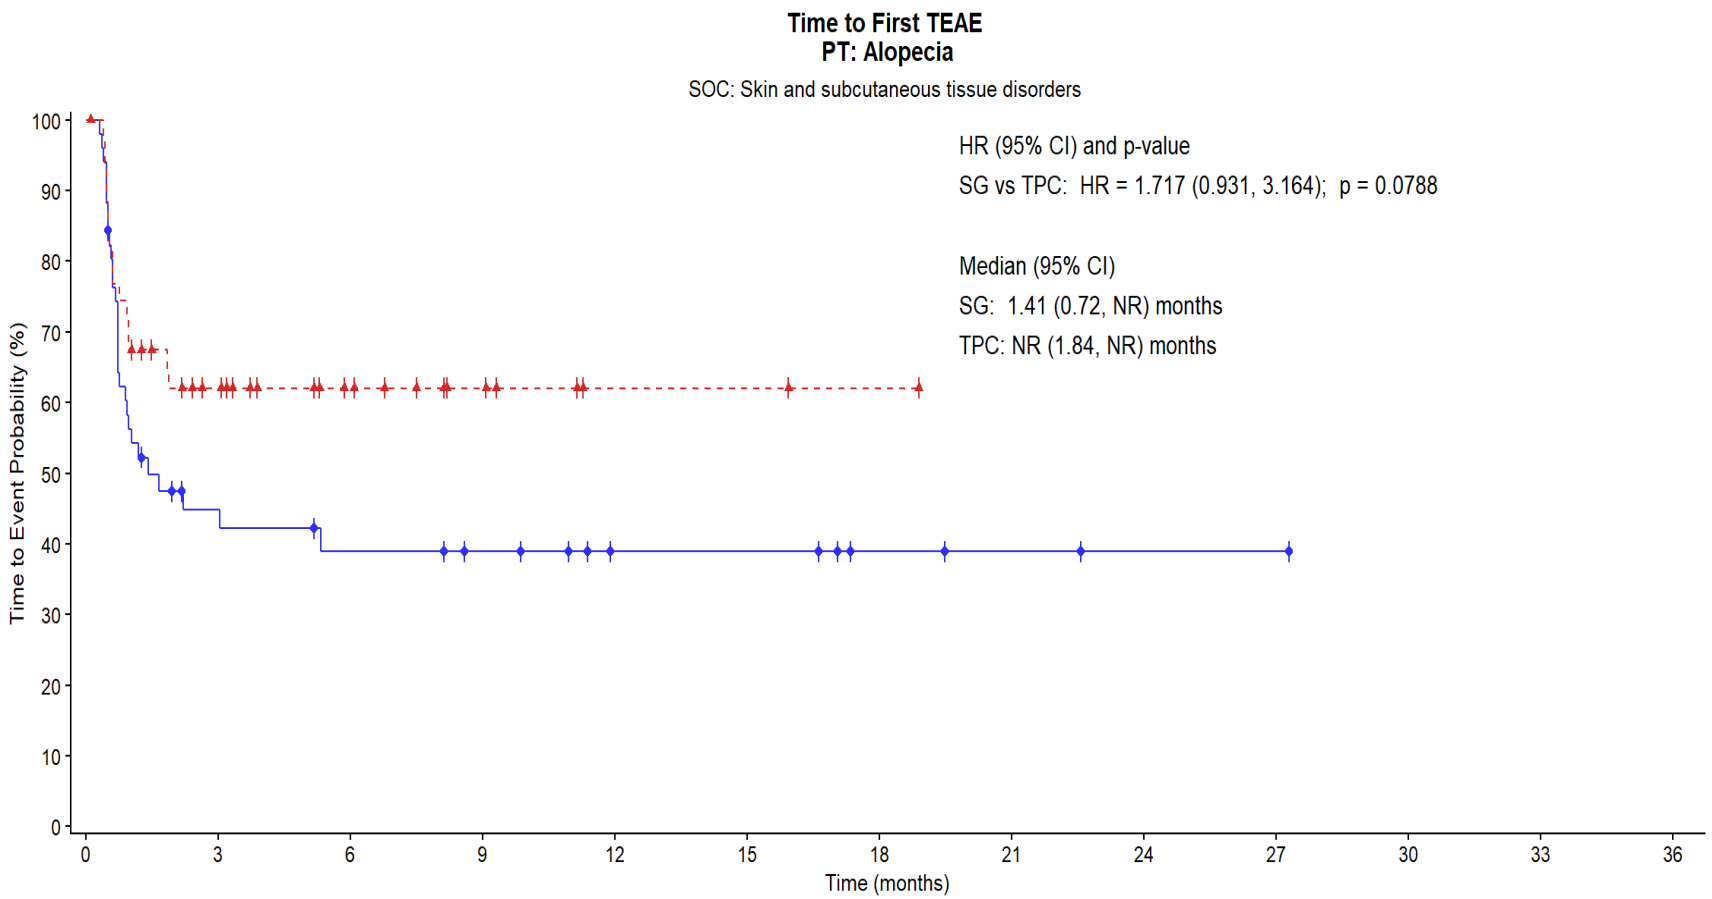
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.54. Figure 1.1.54: Kaplan Meier Plot of Time to First TEAE by PT Peripheral sensory neuropathy — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



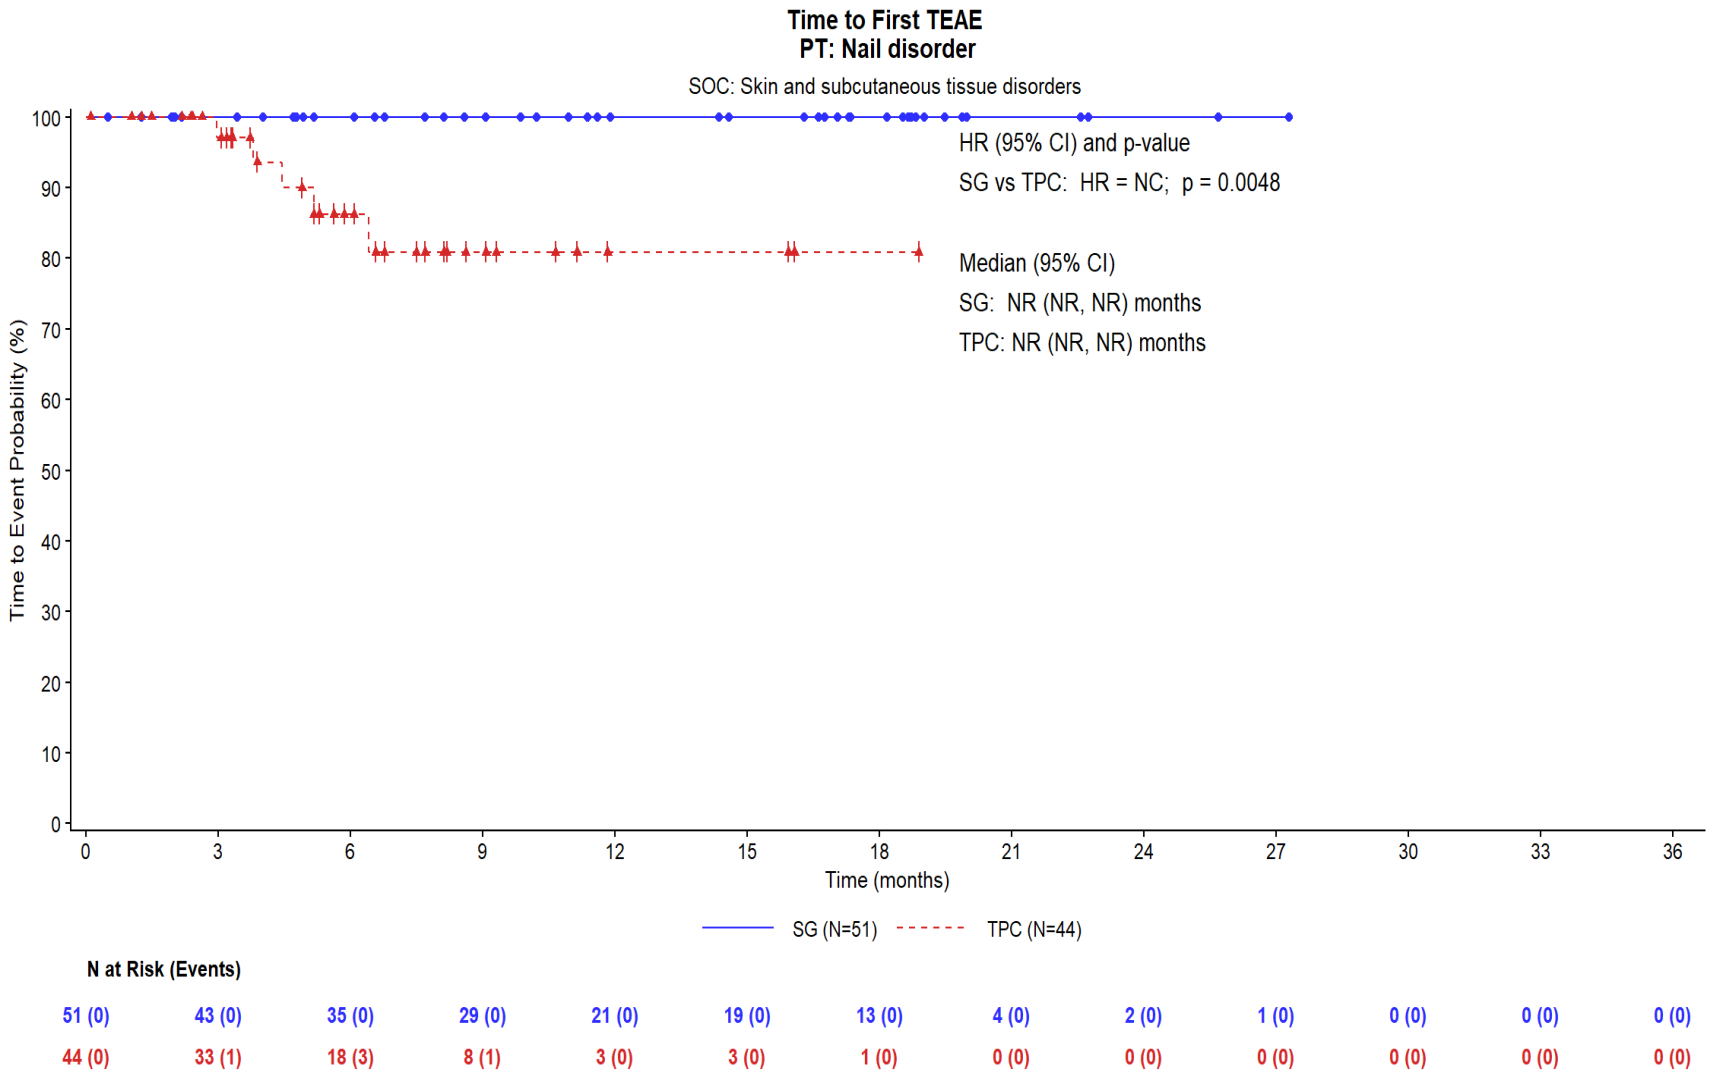
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.55. Figure 1.1.55: Kaplan Meier Plot of Time to First TEAE by PT Cough — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



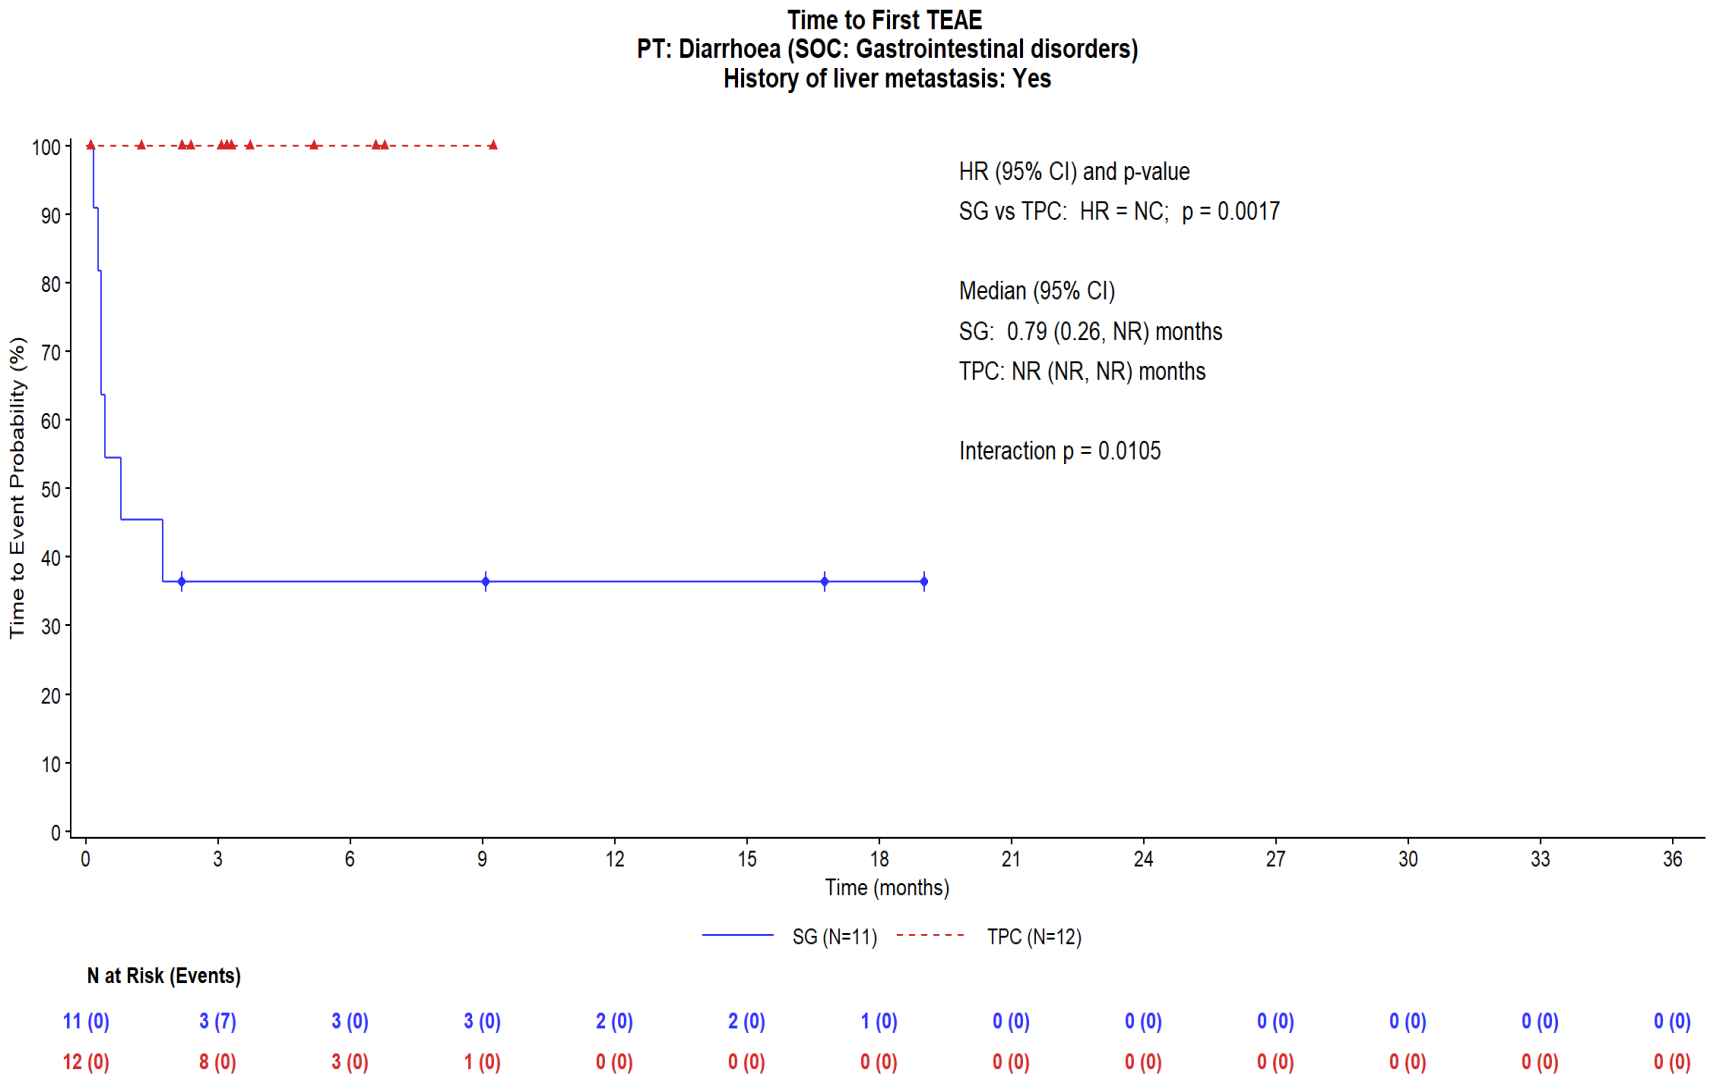
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.56. Figure 1.1.56: Kaplan Meier Plot of Time to First TEAE by PT Dyspnoea — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



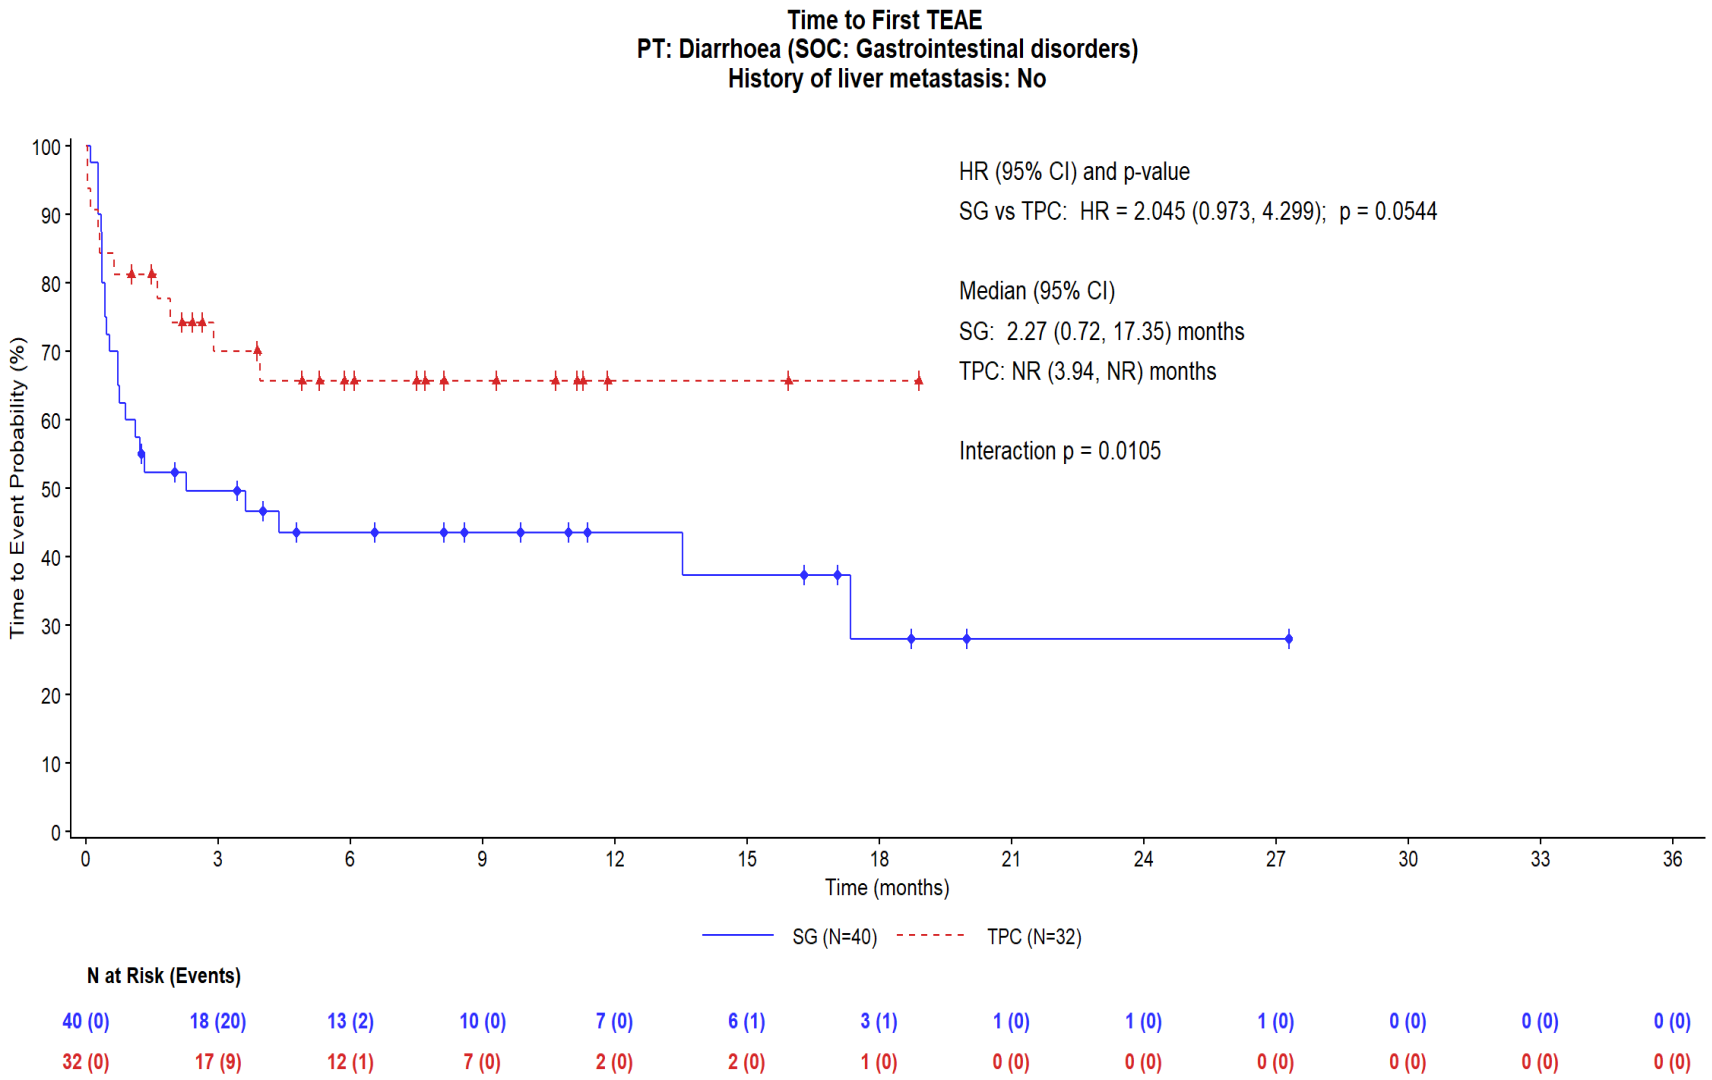
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.57. Figure 1.1.57: Kaplan Meier Plot of Time to First TEAE by PT Alopecia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



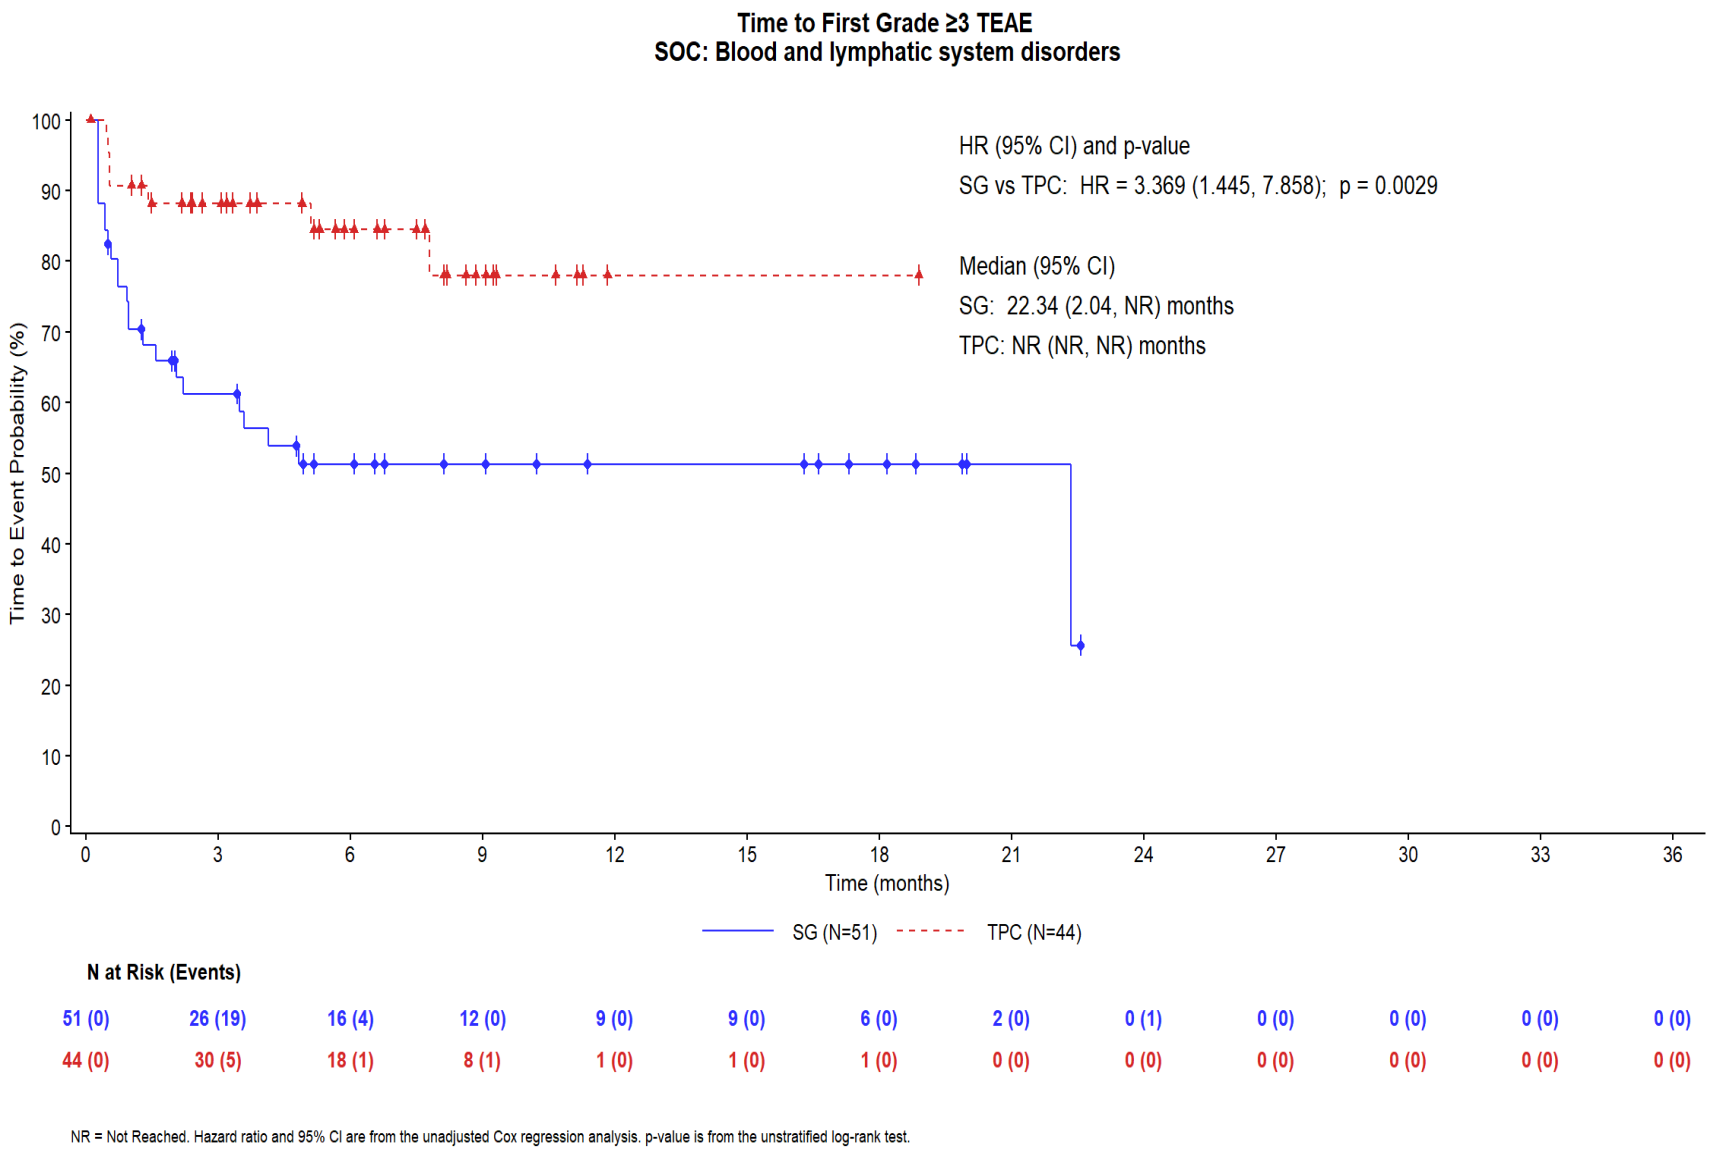
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.58. Figure 1.1.58: Kaplan Meier Plot of Time to First TEAE by PT Nail disorder — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



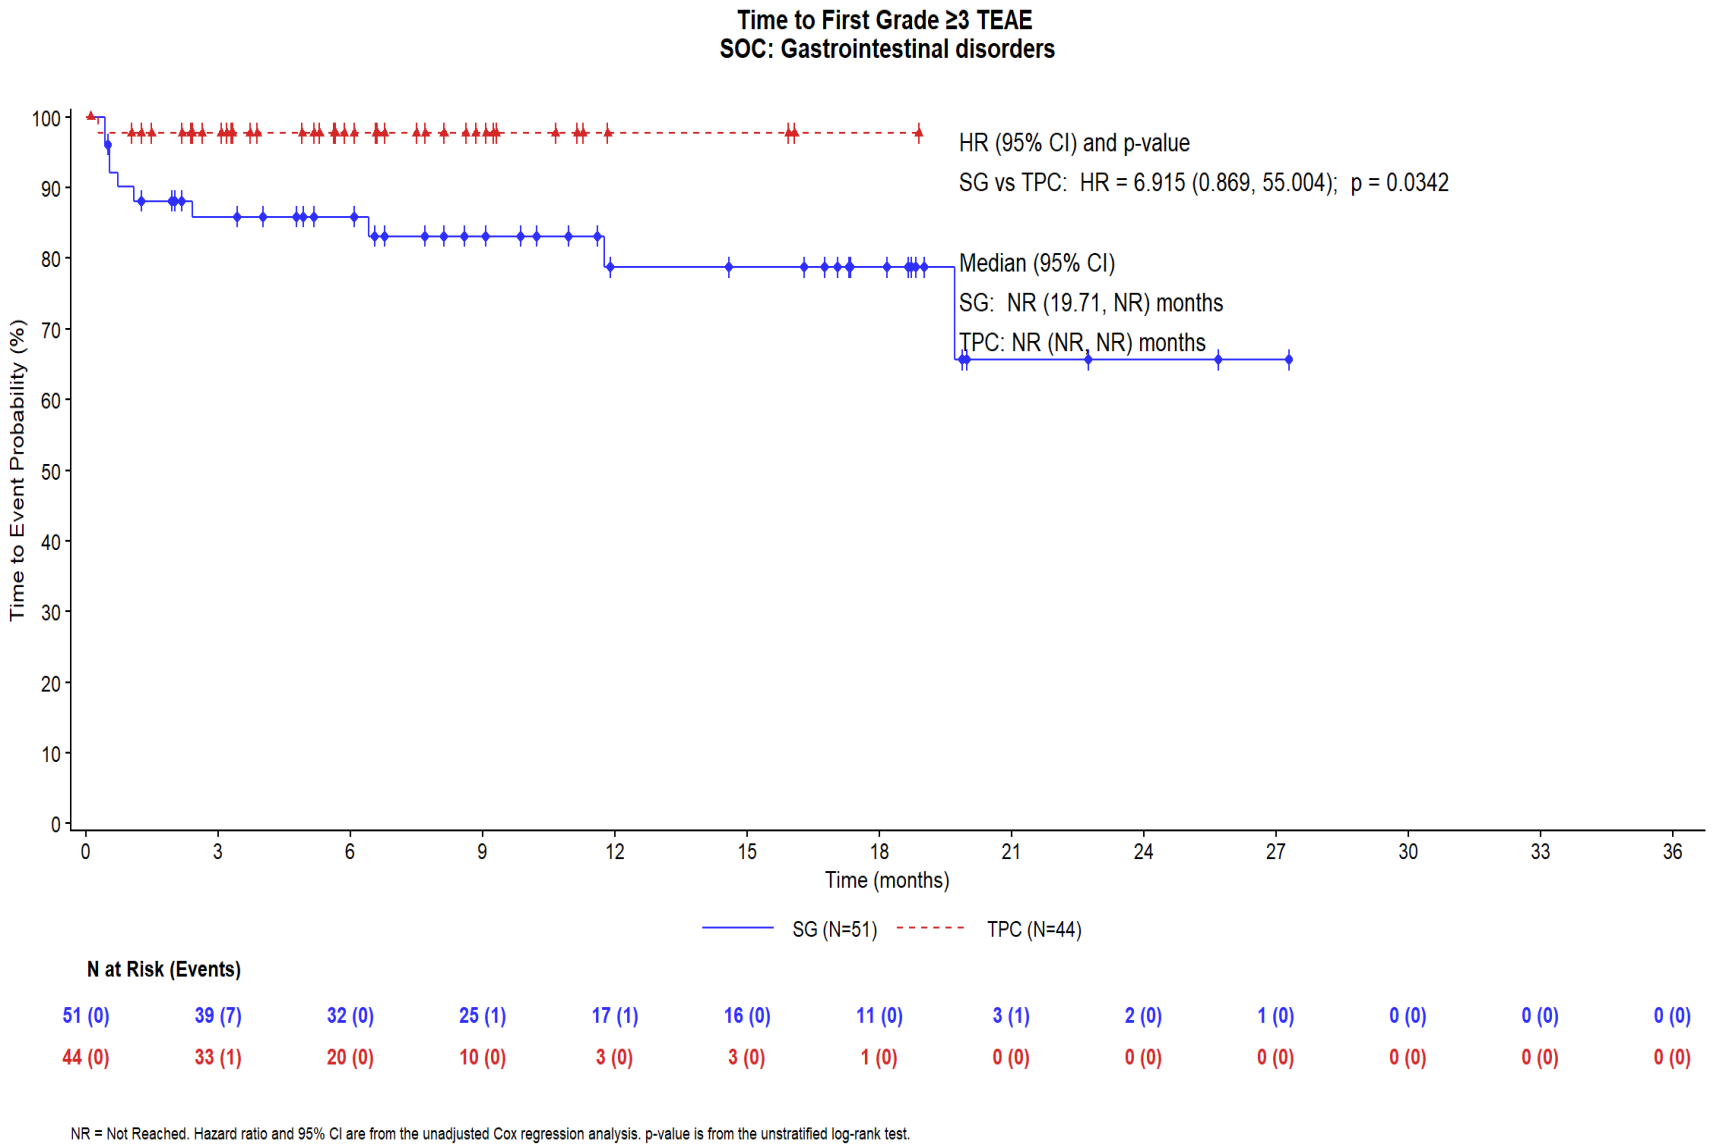
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.59. Figure 1.1.59: Kaplan Meier Plot of Time to First TEAE by PT Diarrhoea (SOC Gastrointestinal disorders) History of liver metastasis Yes — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



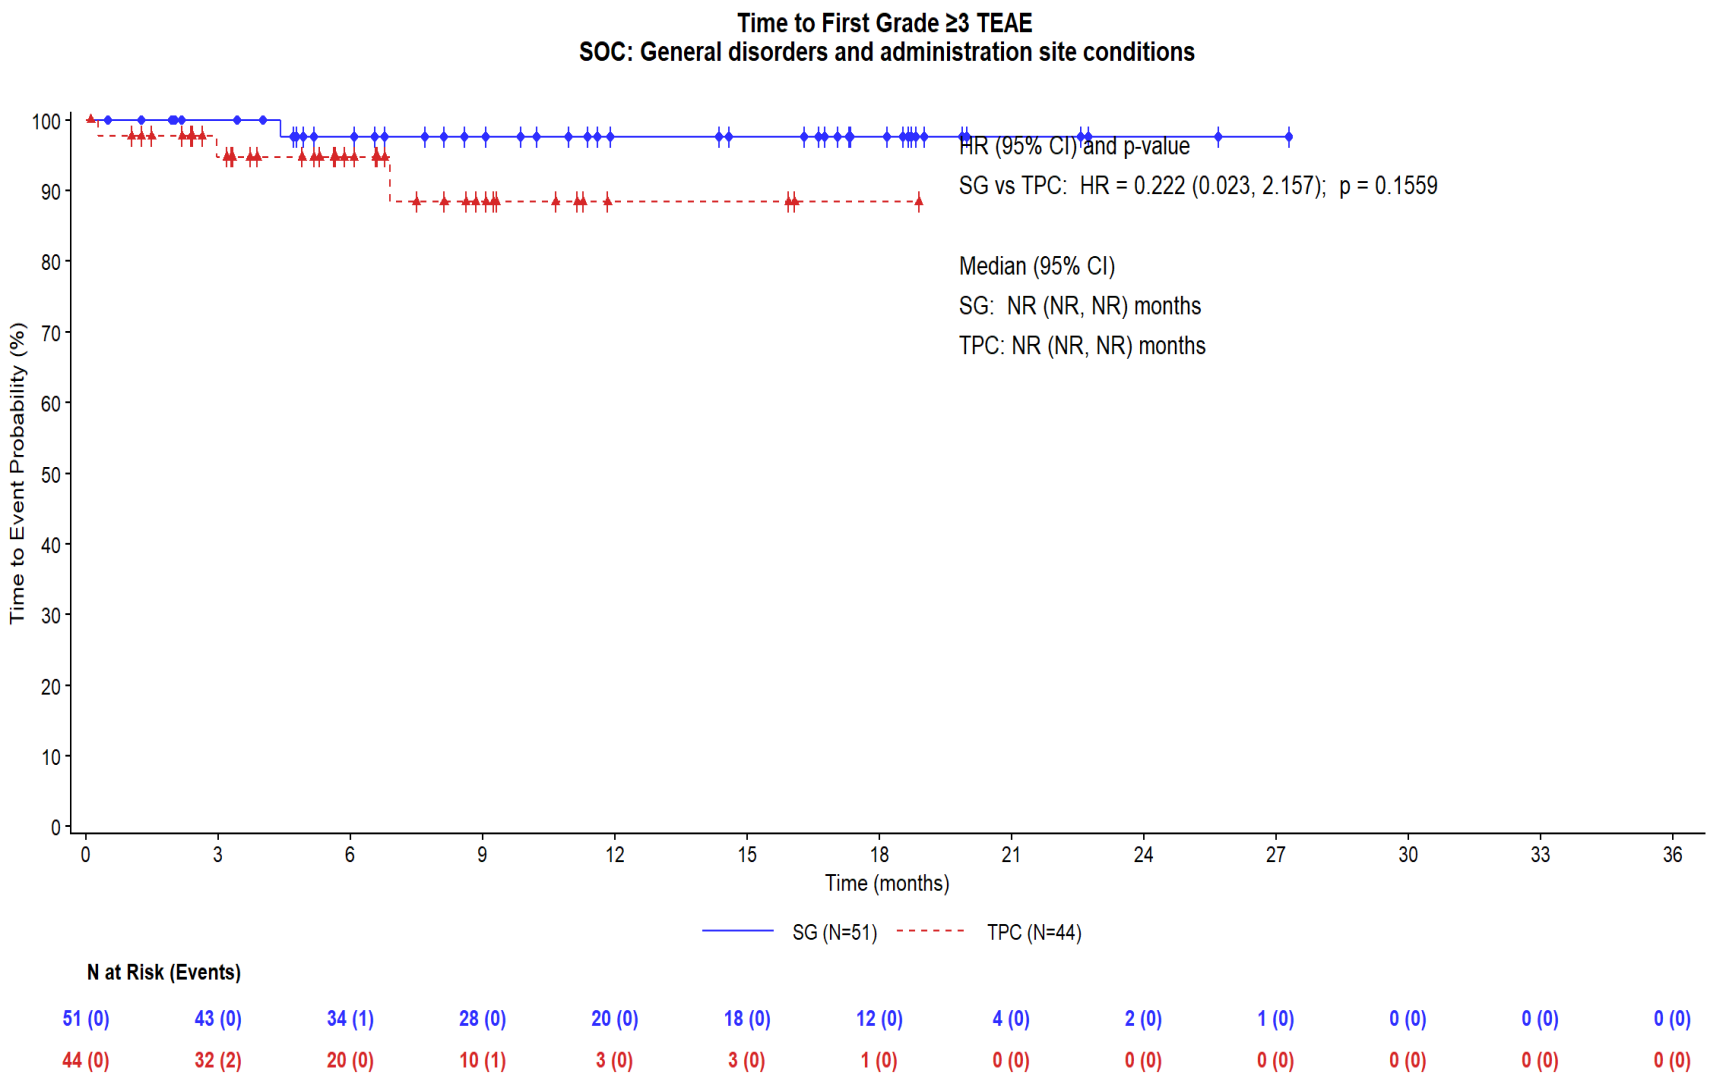
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.60. Figure 1.1.60: Kaplan Meier Plot of Time to First TEAE by PT Diarrhoea (SOC Gastrointestinal disorders) History of liver metastasis No — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



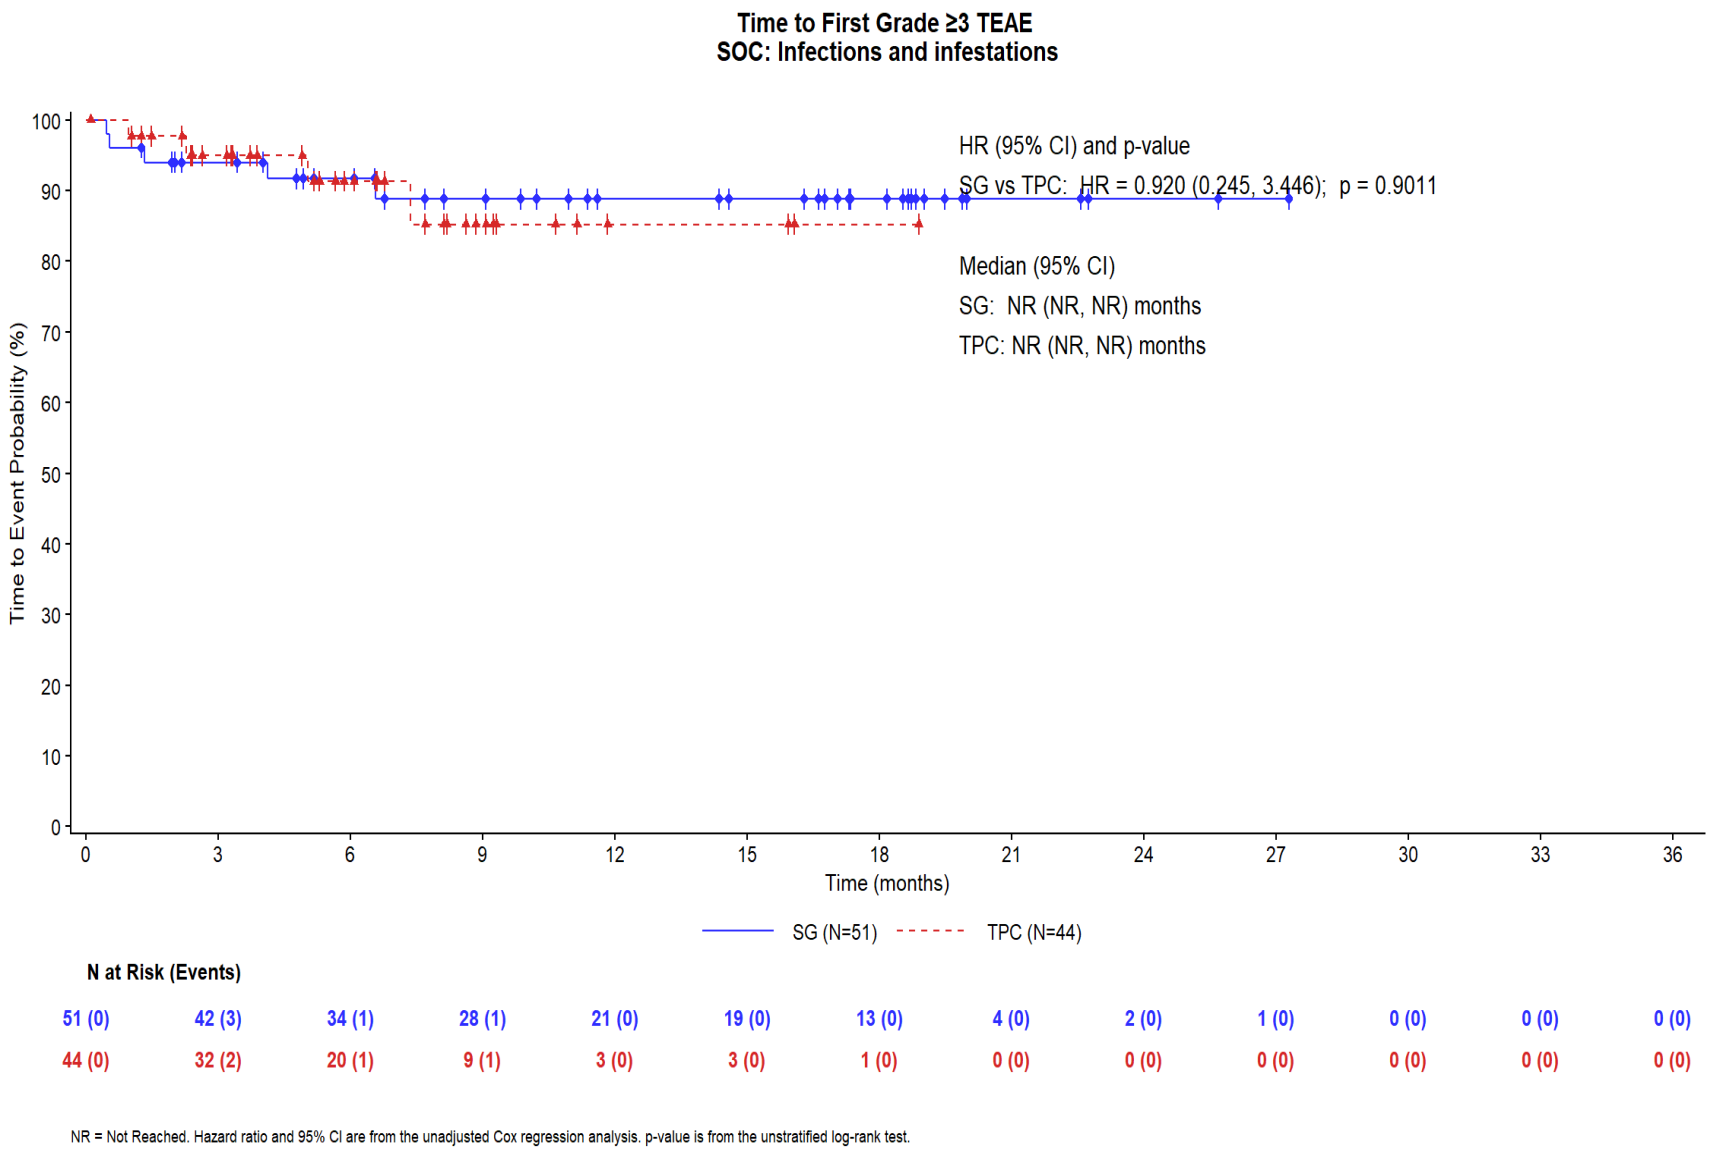
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.61. Figure 1.1.61: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Blood and lymphatic system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



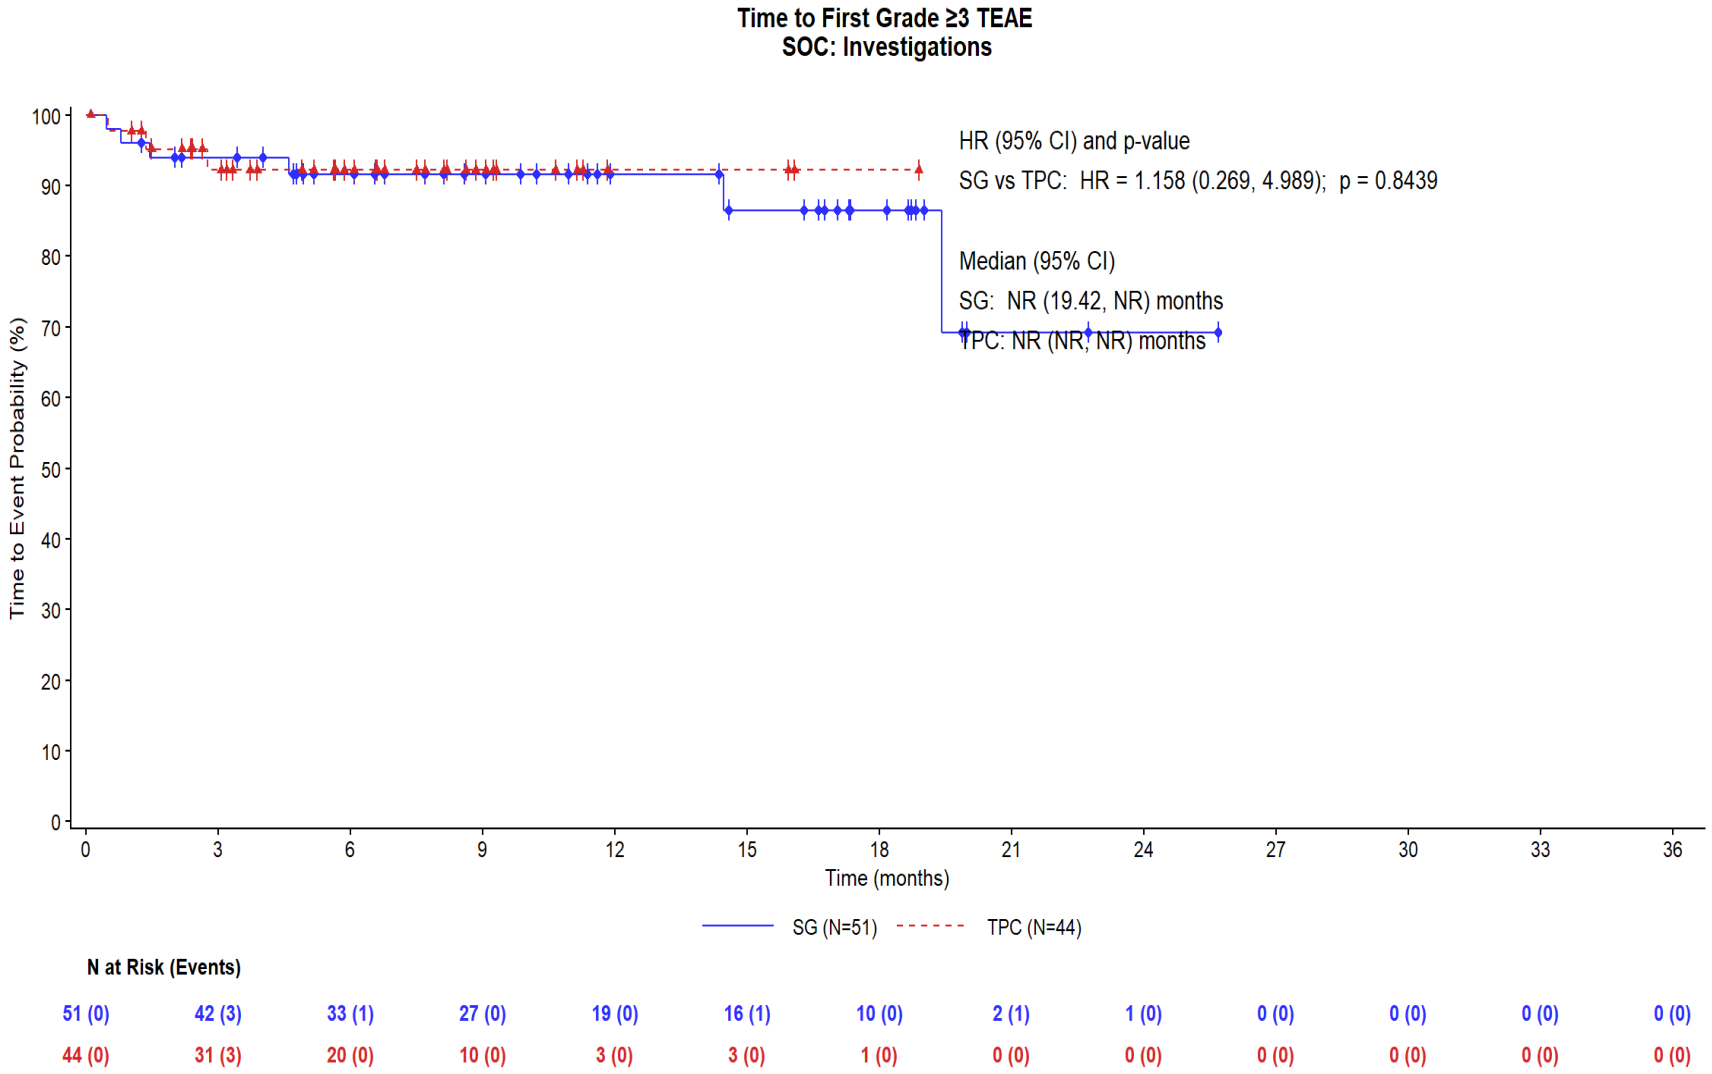
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.62. Figure 1.1.62: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Gastrointestinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



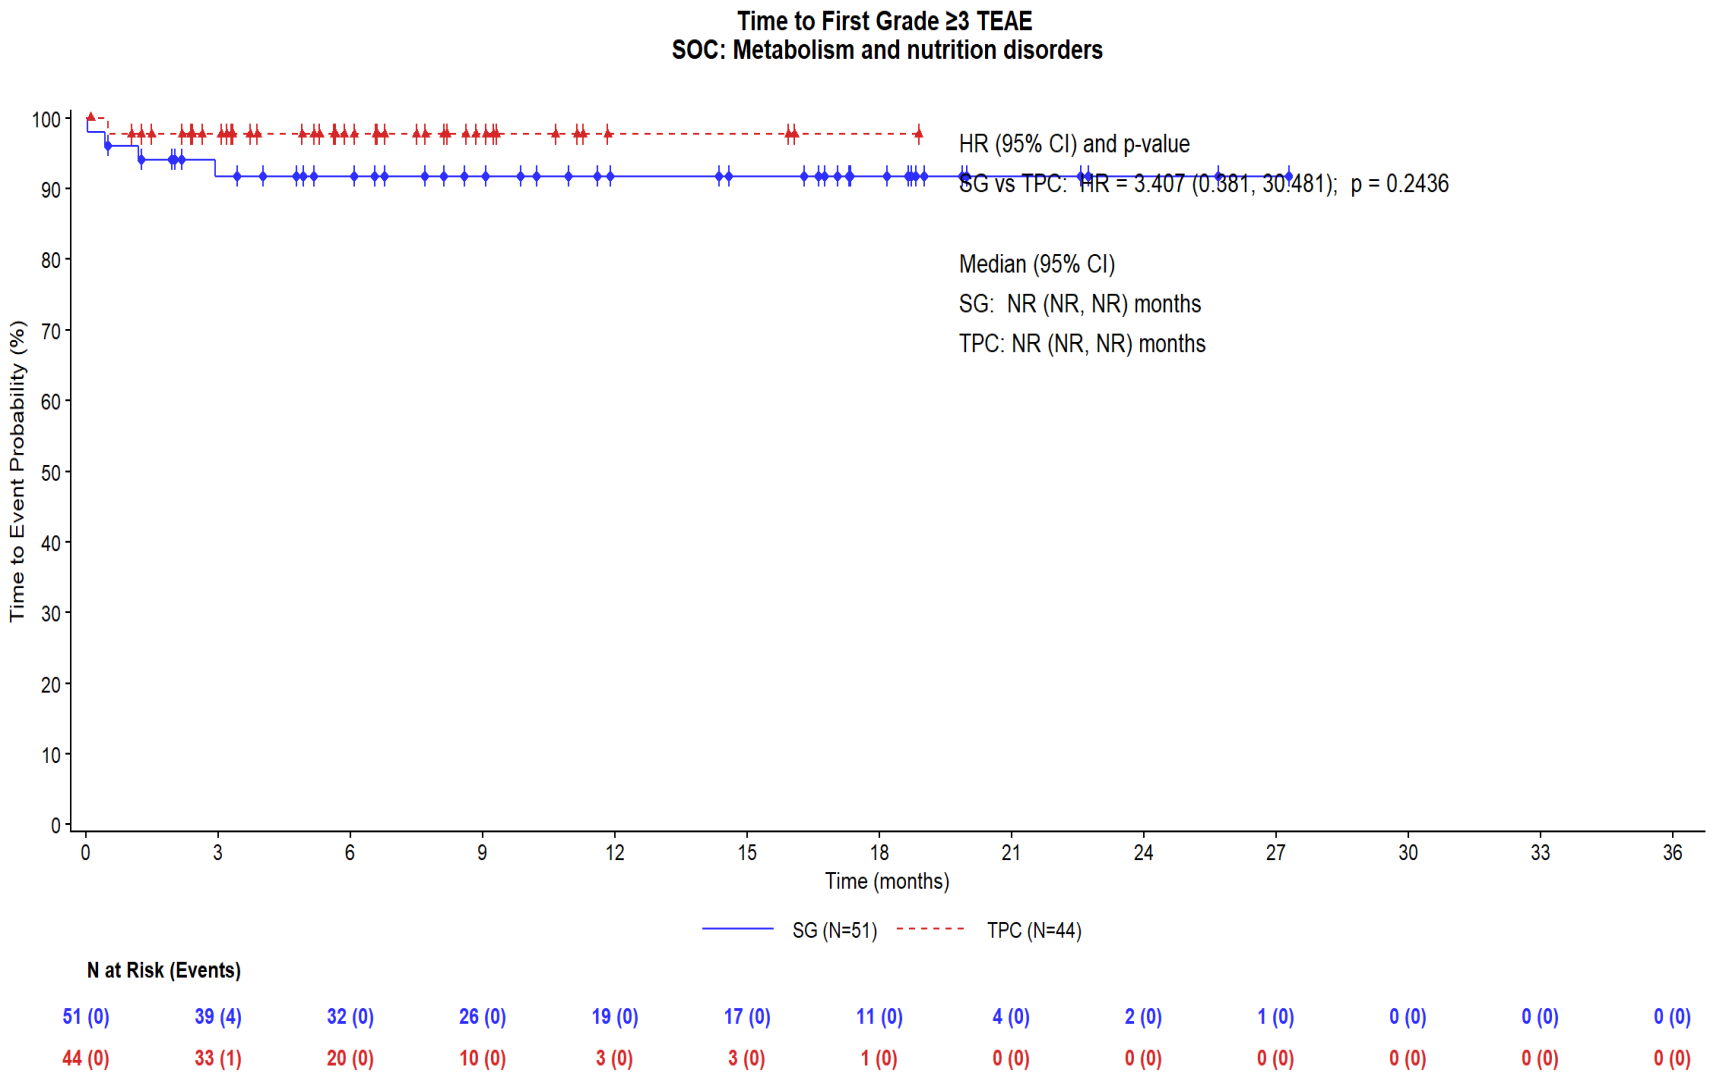
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.63. Figure 1.1.63: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC General disorders and administration site conditions — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



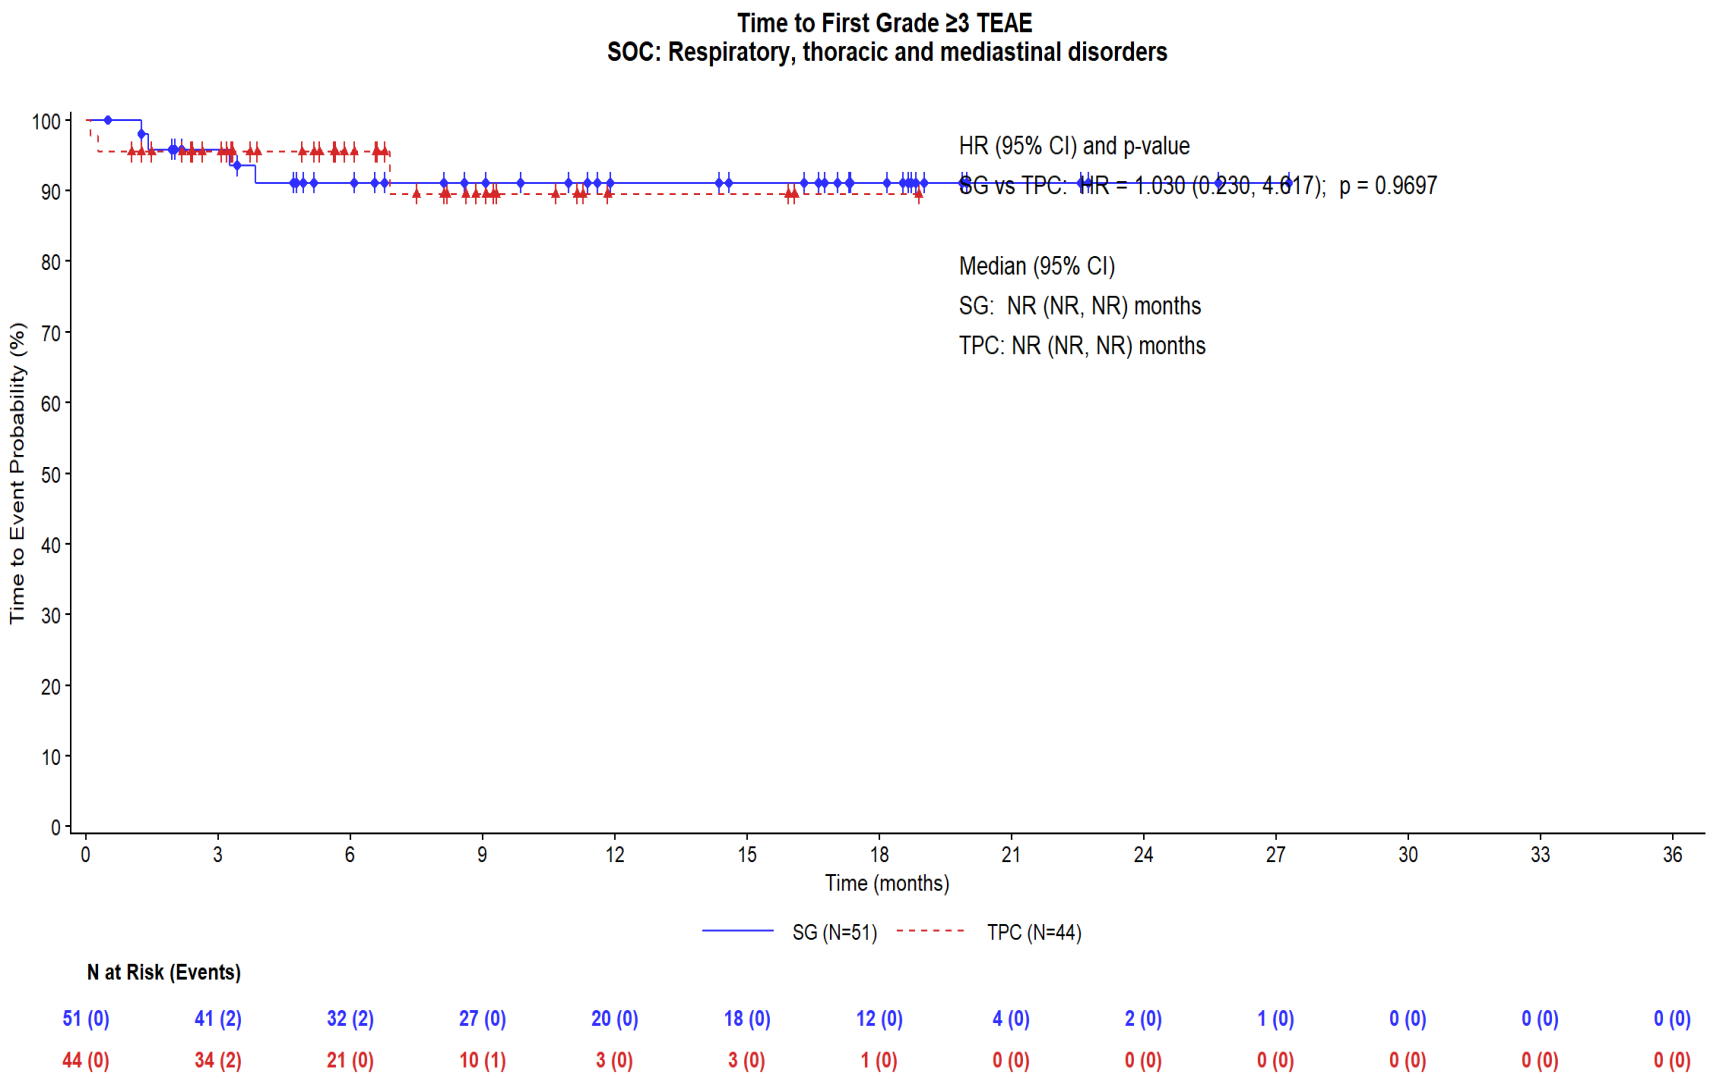
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.64. Figure 1.1.64: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Infections and infestations — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



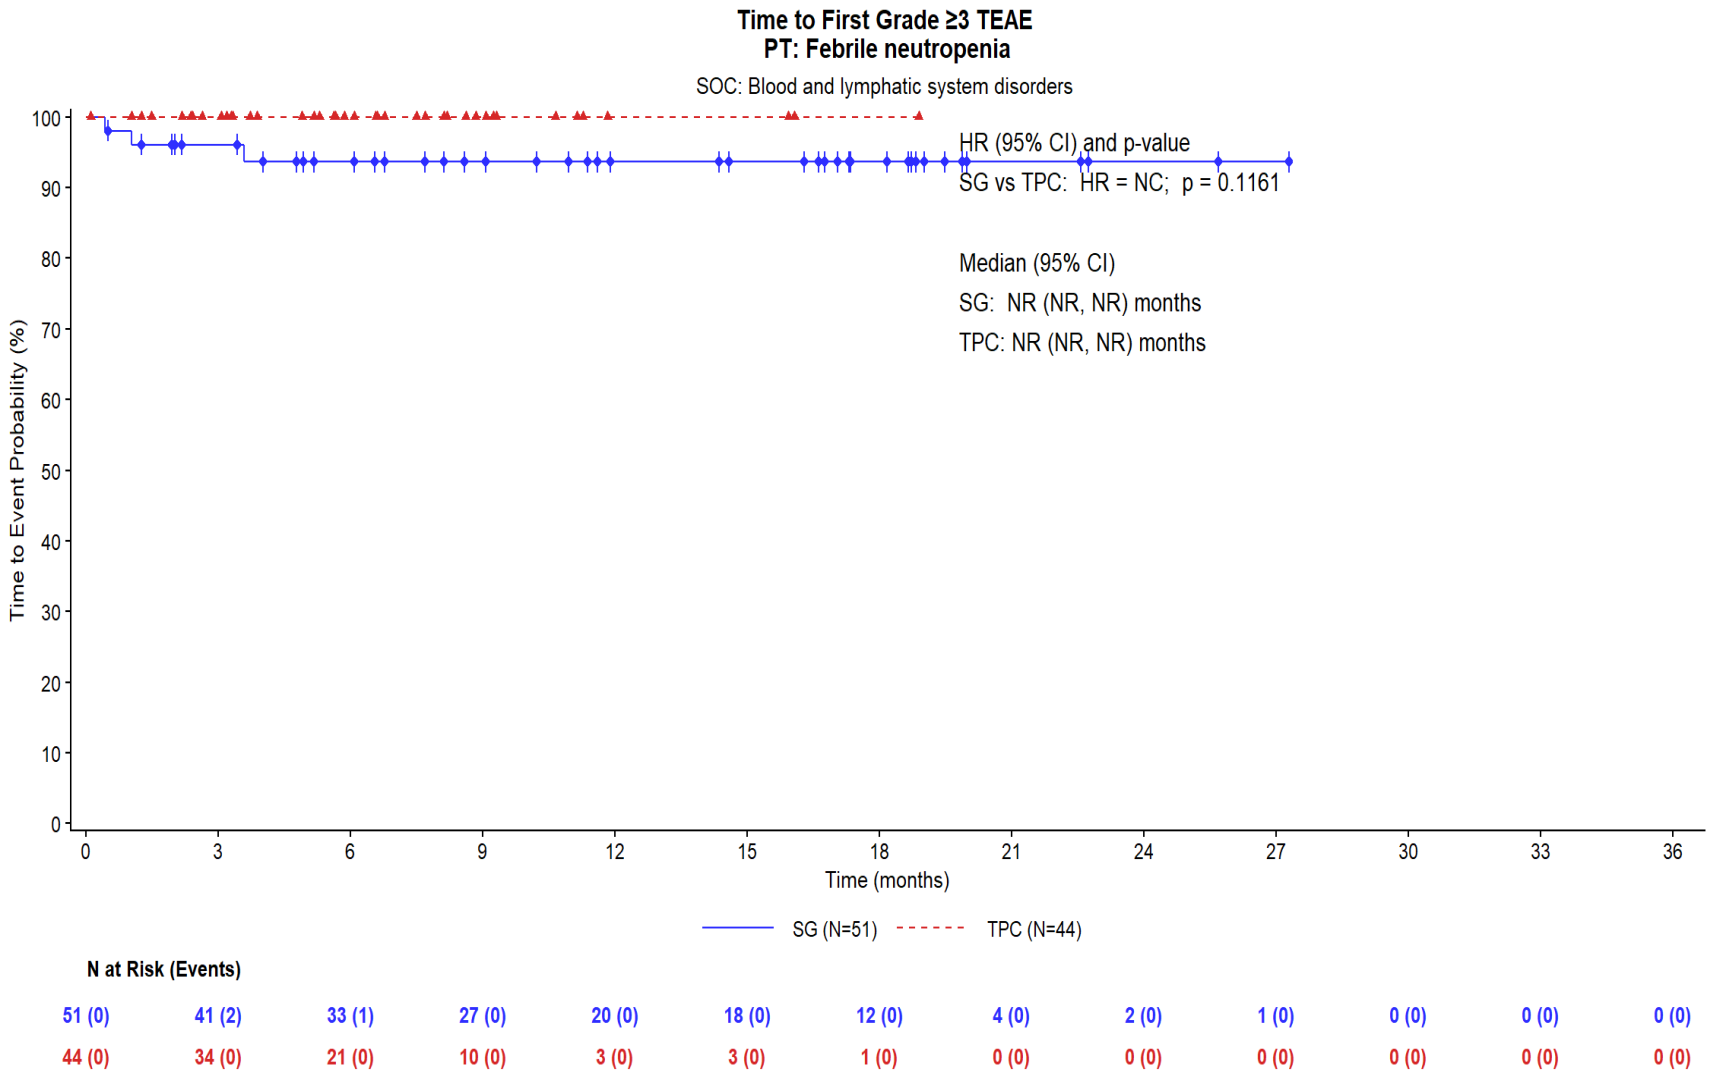
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.65. Figure 1.1.65: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Investigations — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



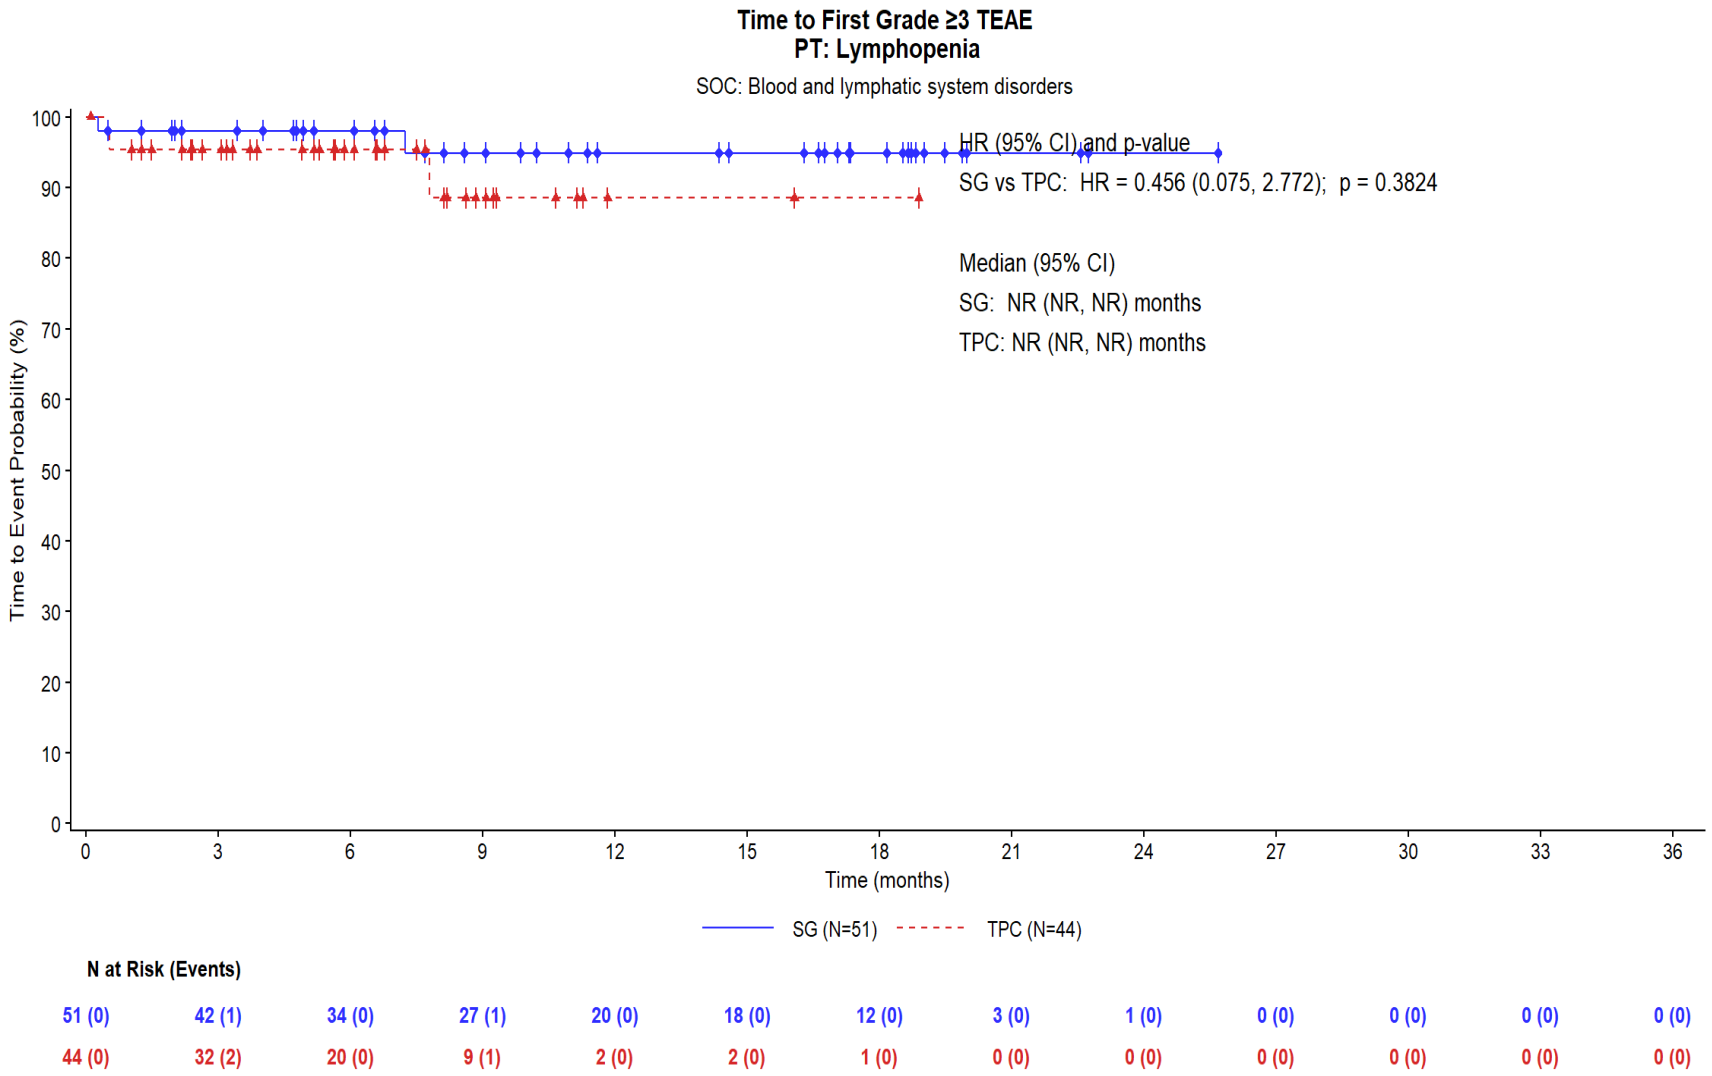
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.66. Figure 1.1.66: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Metabolism and nutrition disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



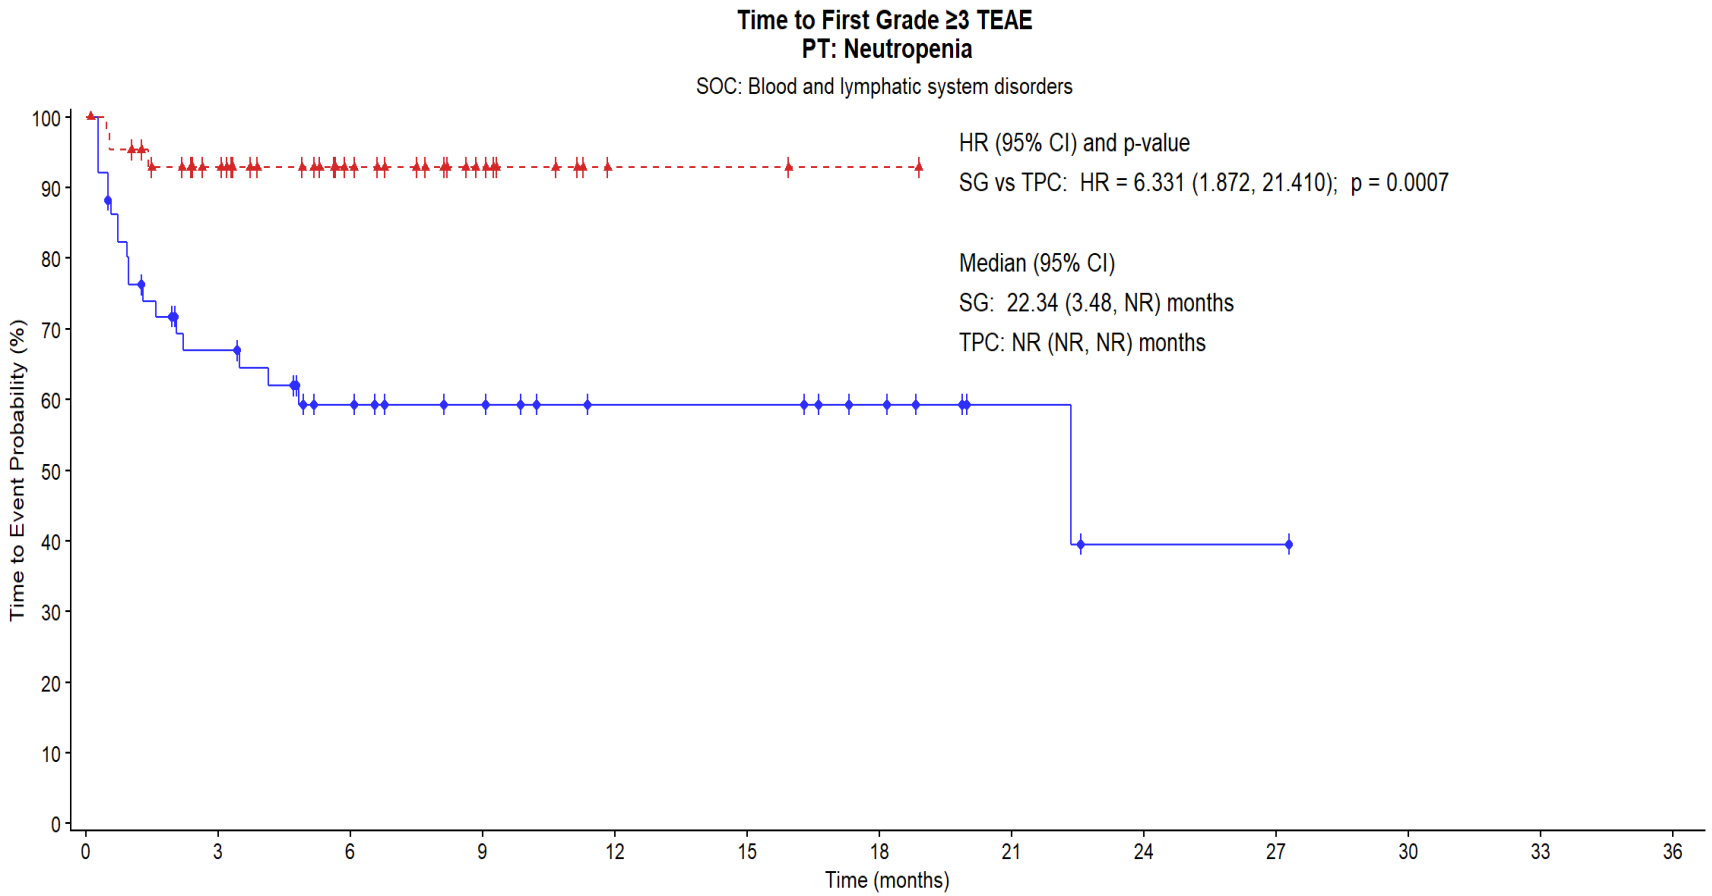
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.67. Figure 1.1.67: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Respiratory thoracic and mediastinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



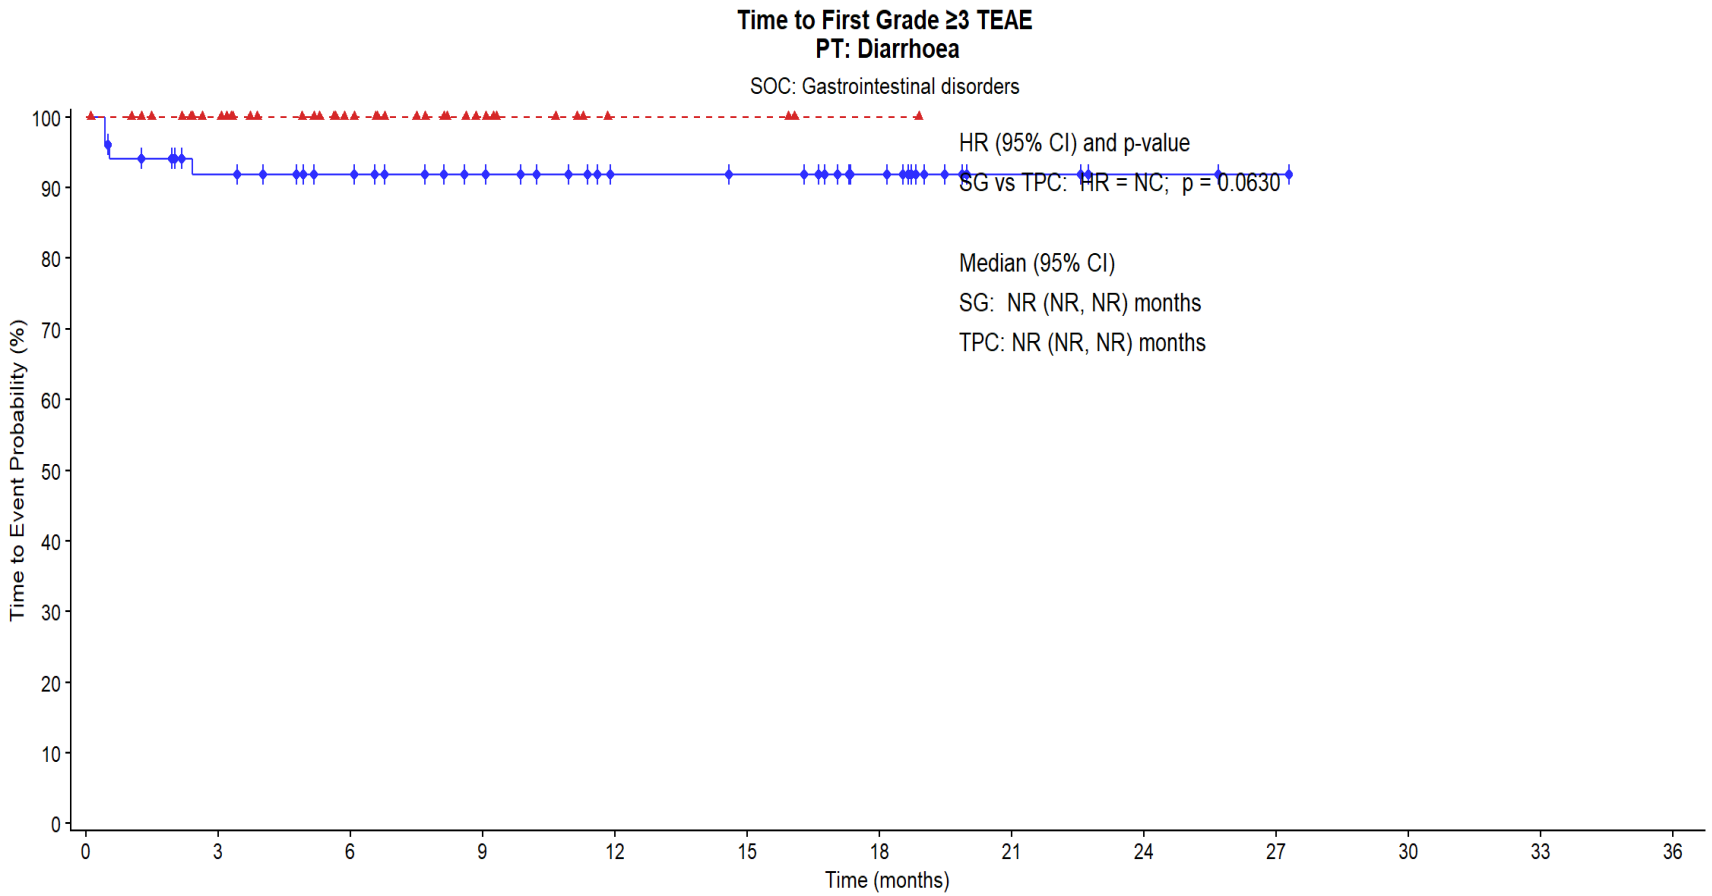
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.68. Figure 1.1.68: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Febrile neutropenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



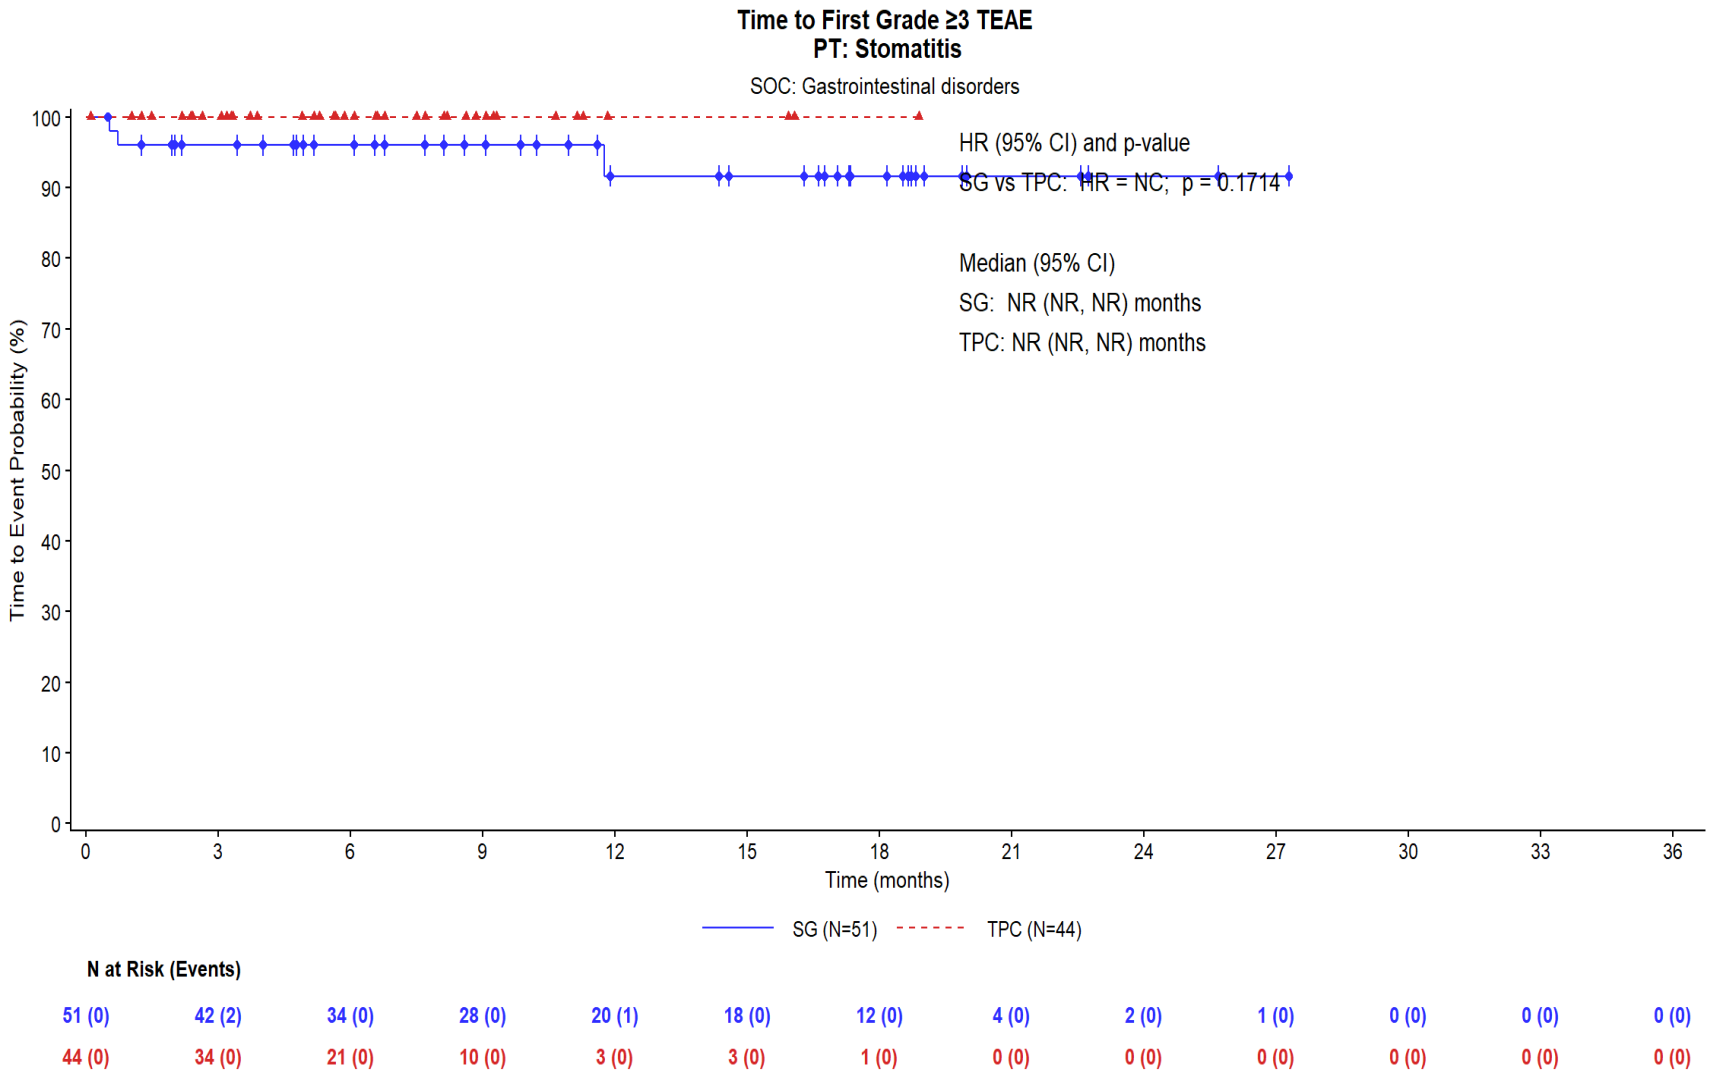
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.69. Figure 1.1.69: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Lymphopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



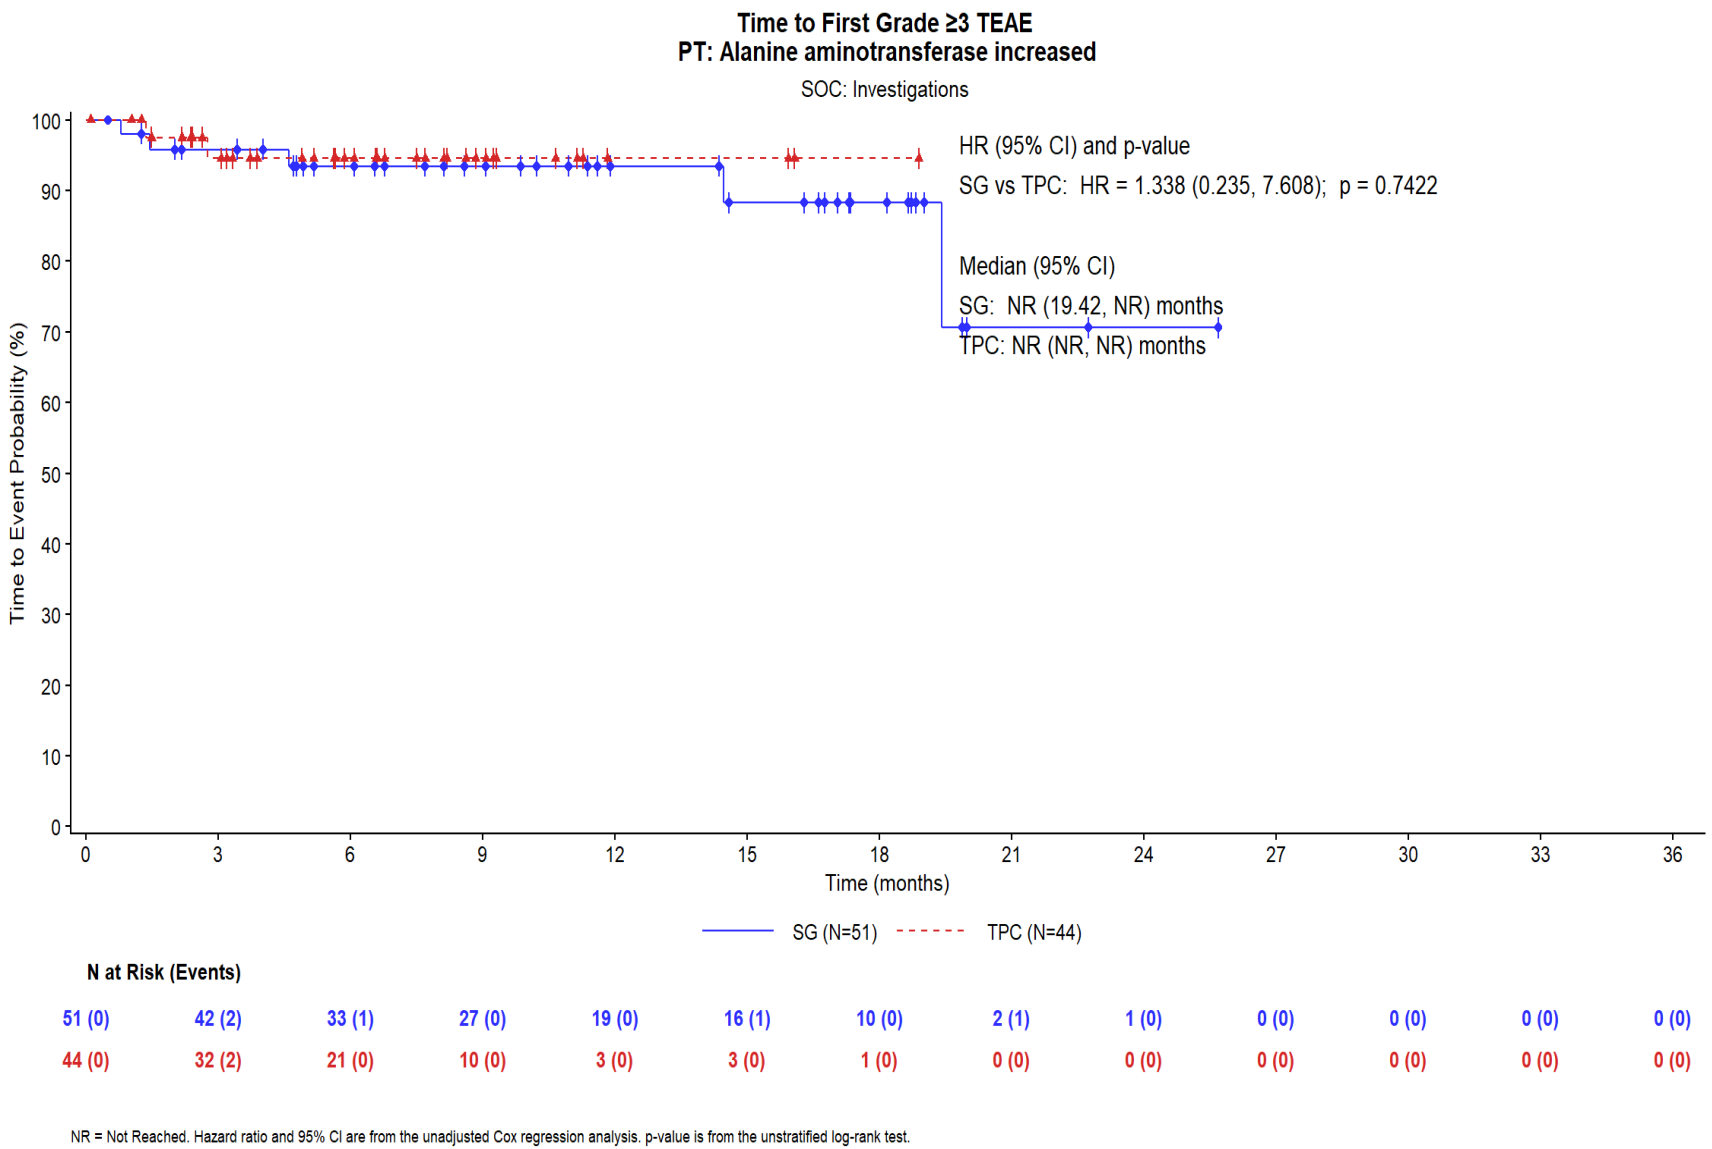
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.70. Figure 1.1.70: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Neutropenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



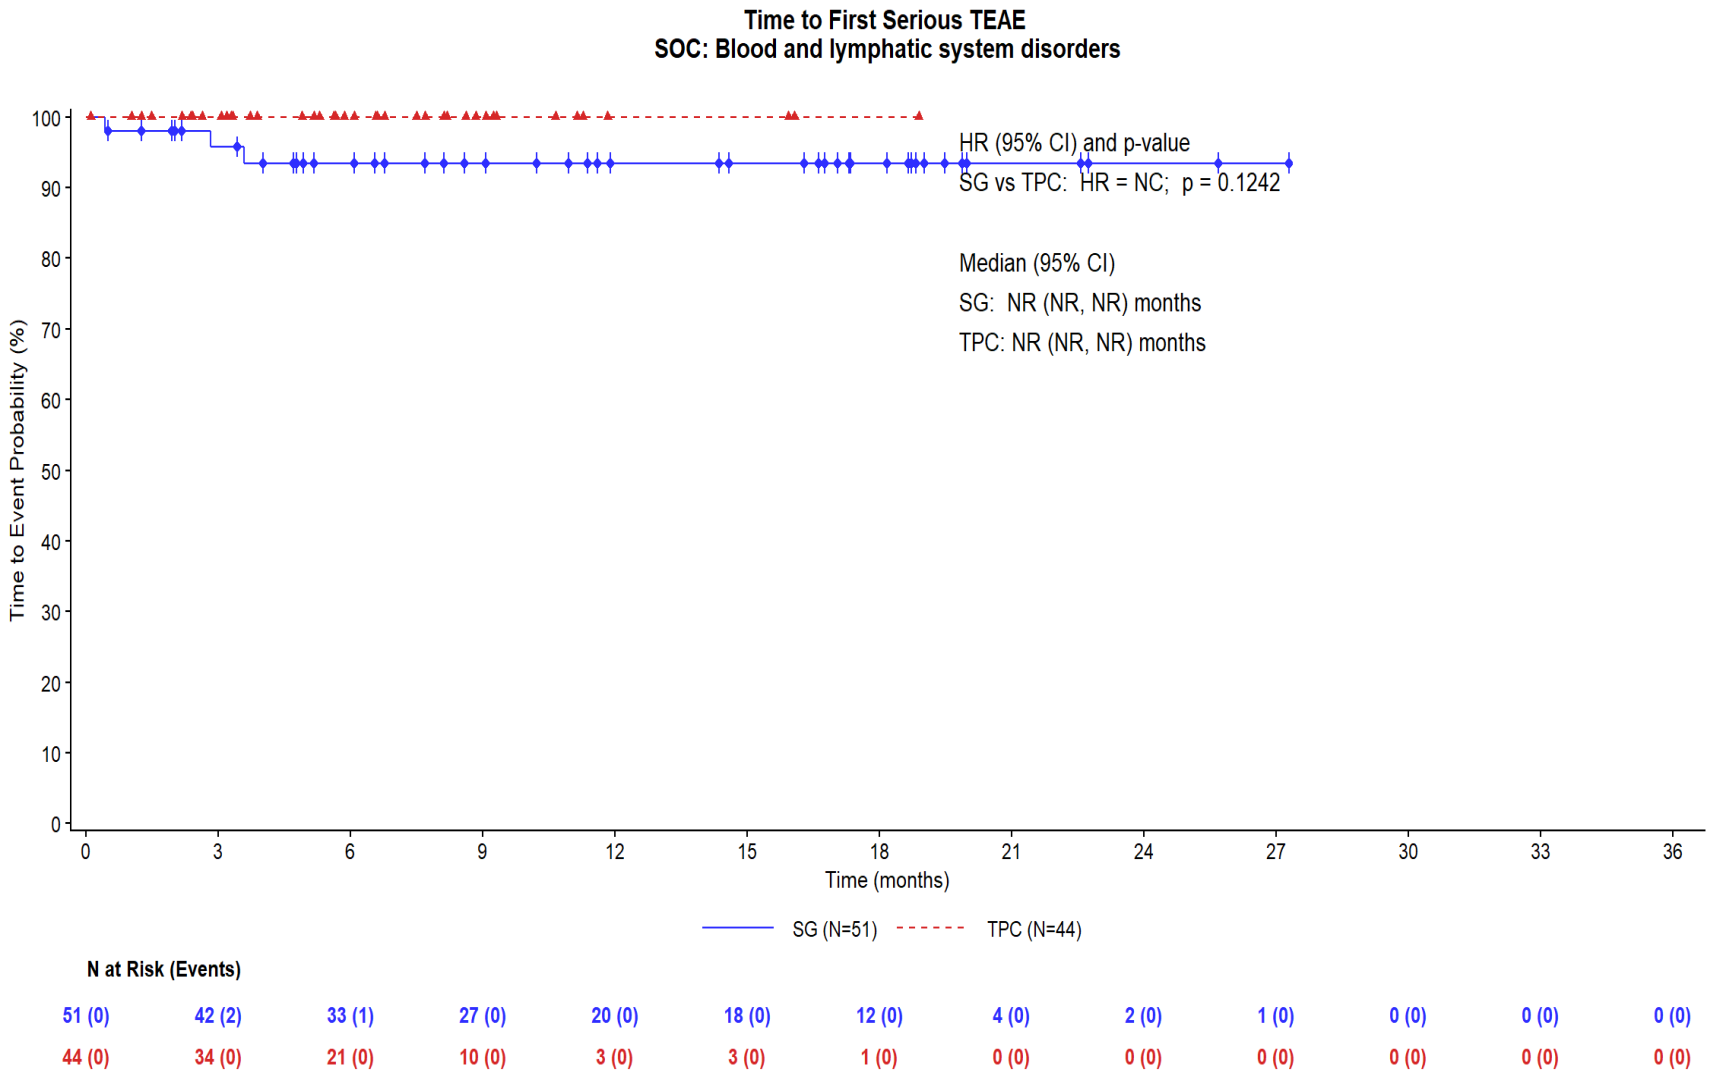
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.71. Figure 1.1.71: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Diarrhoea — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



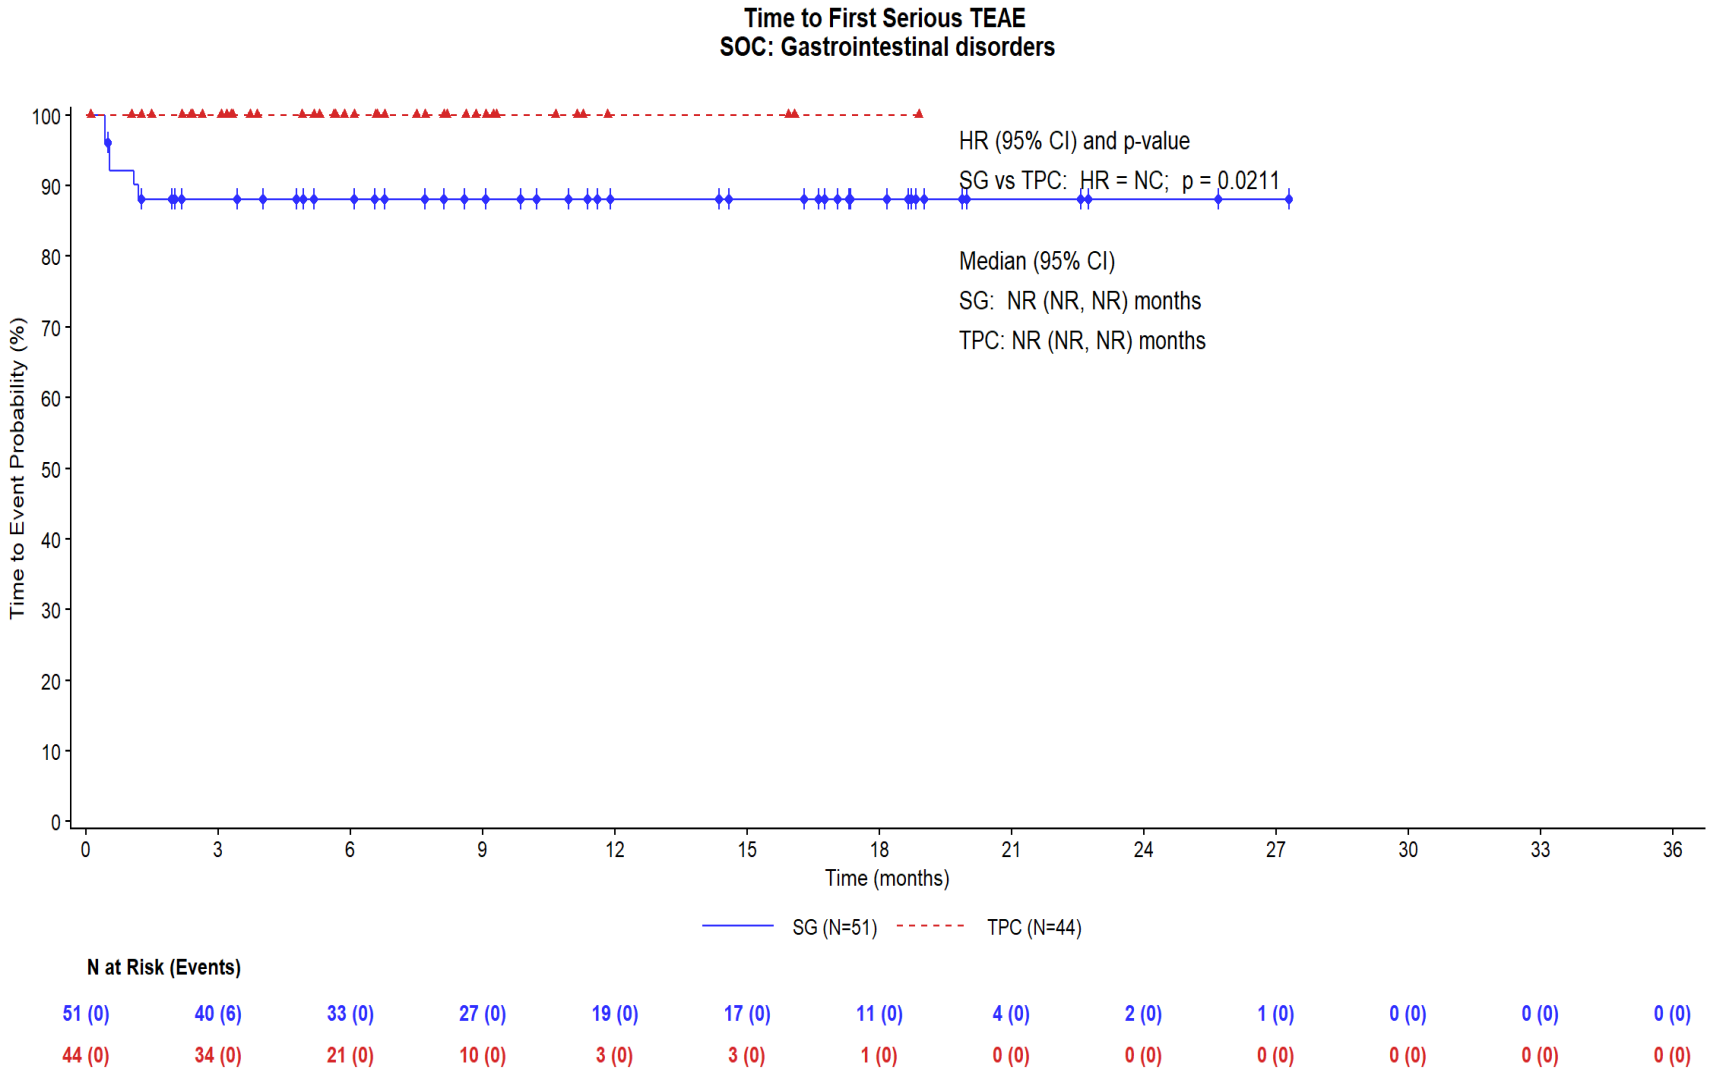
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.72. Figure 1.1.72: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Stomatitis — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



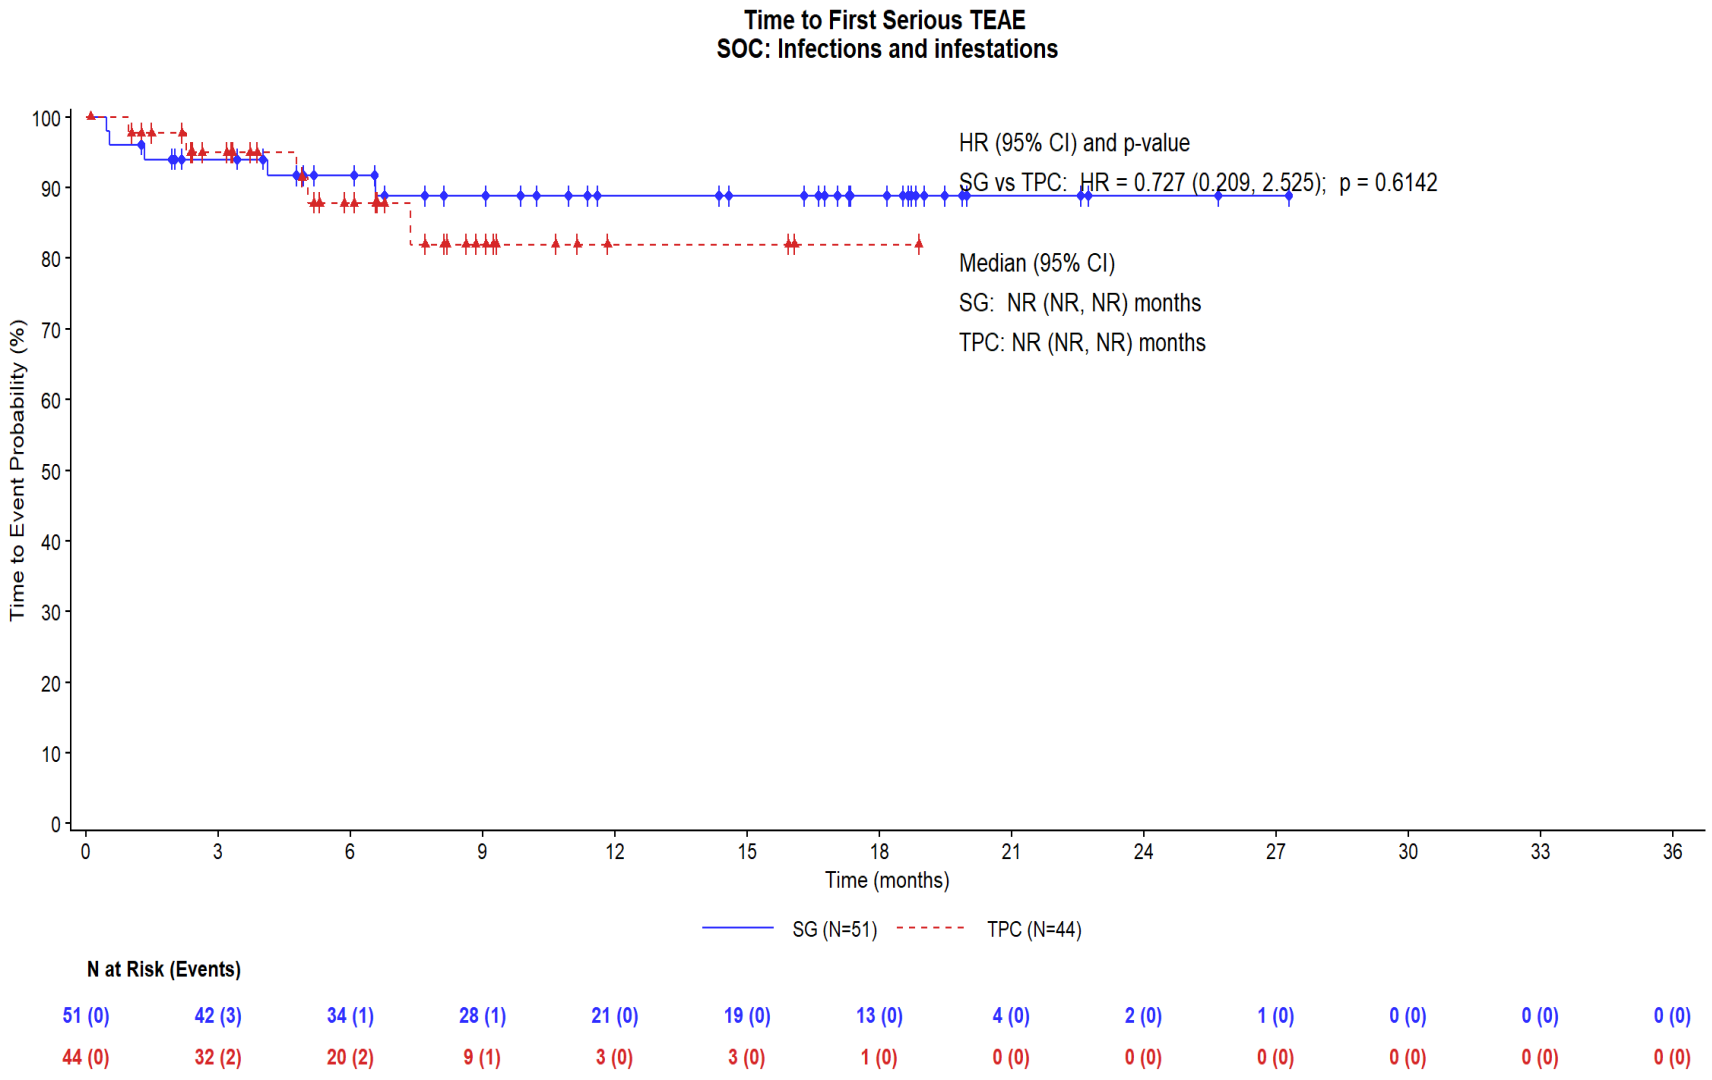
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.73. Figure 1.1.73: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Alanine aminotransferase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



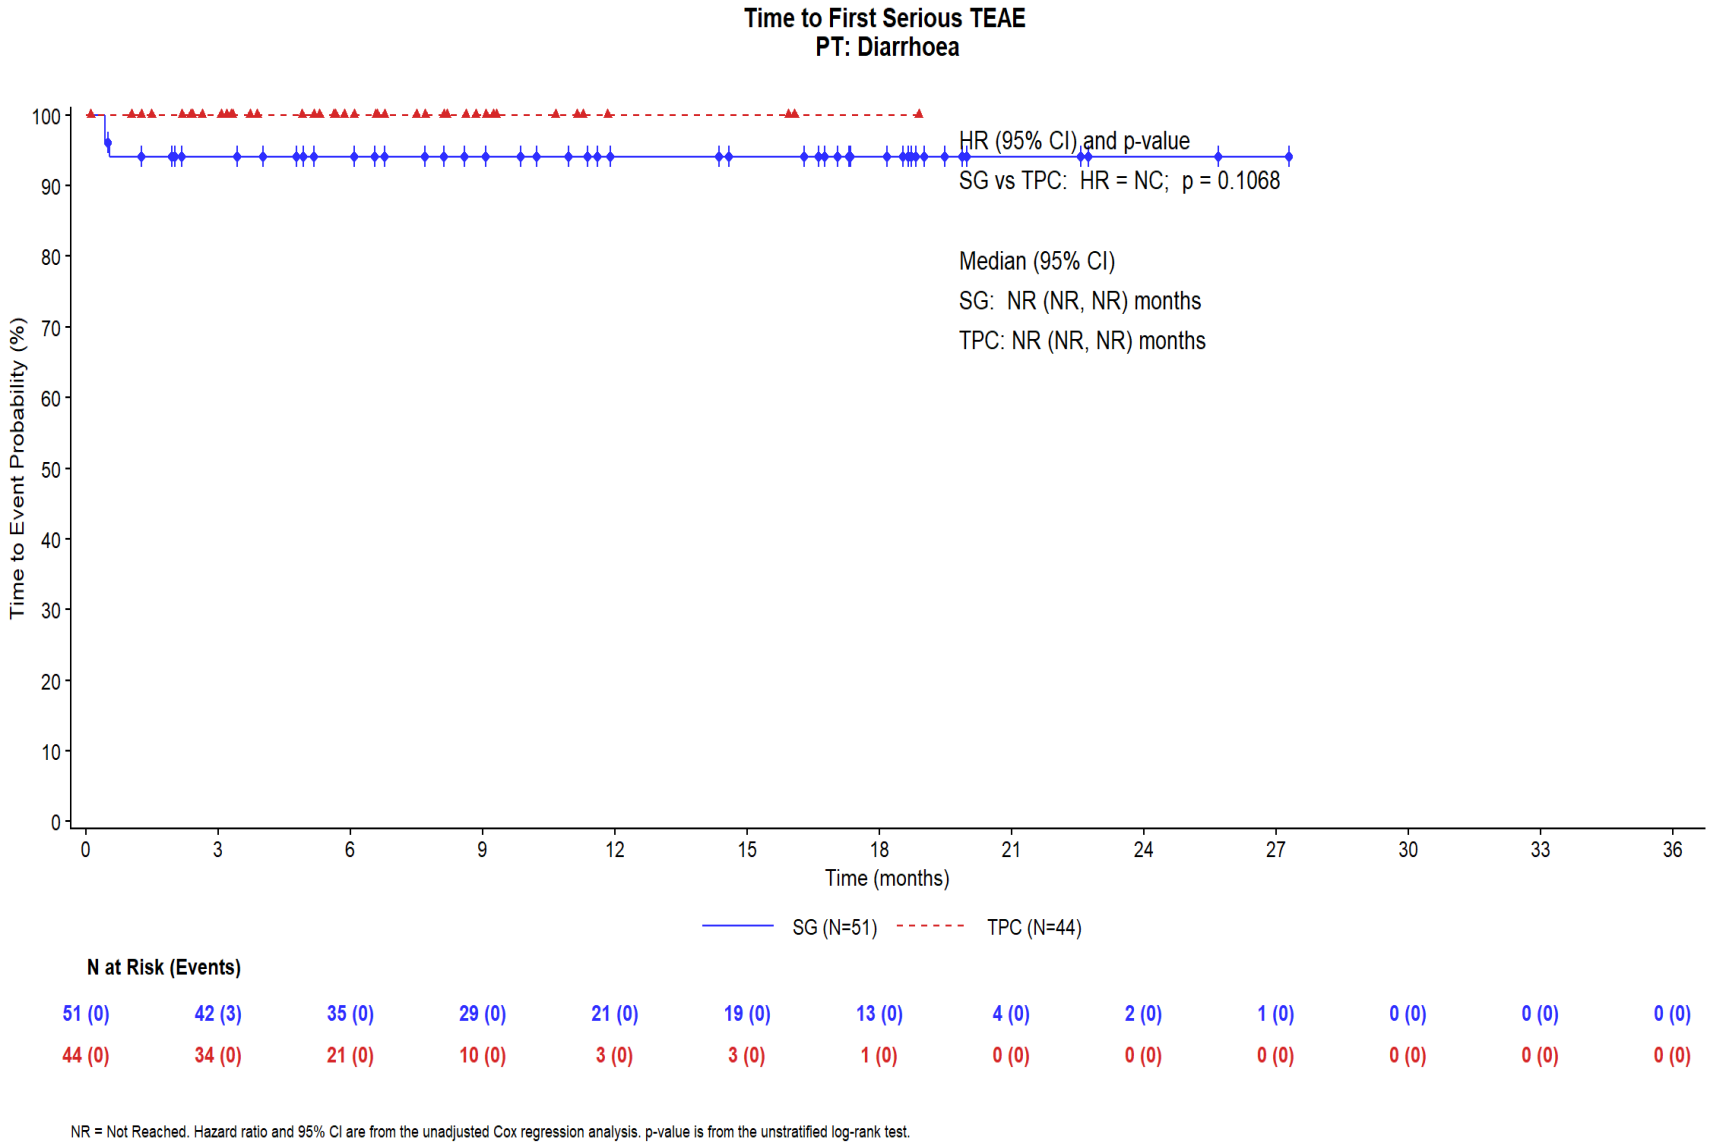
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.74. Figure 1.1.74: Kaplan Meier Plot of Time to First TEAE (SAE) by SOC Blood and lymphatic system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.75. Figure 1.1.75: Kaplan Meier Plot of Time to First TEAE (SAE) by SOC Gastrointestinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.76. Figure 1.1.76: Kaplan Meier Plot of Time to First TEAE (SAE) by SOC Infections and infestations — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.77. Figure 1.1.77: Kaplan Meier Plot of Time to First TEAE (SAE) by PT Diarrhoea — mSAF — Excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin

NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

Table. Recurrence of diarrhoea TEAE — mSAF: Excluding patients preselected to nab-paclitaxel or gemcitabine+carboplatin

	SG (N=51)			TPC (N=44)		
Incidence of diarrhoea TEAE	**1 event**	**2 events**	**>2 events**	**1 event**	**2 events**	**>2 events**
Grade 1	17 (33.3%)	5 (9.8%)	4 (7.8%)	7 (15.9%)	0	2 (4.5%)
Grade 2	8 (15.7%)	2 (3.9%)	0	3 (6.8%)	1 (2.3%)	1 (2.3%)
Grade ≥3	3 (5.9%)	1 (2.0%)	0	0	0	0
Grade 3	4 (7.8%)	0	0	0	0	0
Grade 4	1 (2.0%)	0	0	0	0	0
Grade 5	0	0	0	0	0	0

n = number of events per patient;

GS-US-592-6238-20788-92106 (SG): 2 diarrhoea episodes at Grade≥3 (1×Grade 3 + 1×Grade 4)

Table 1.2.1
Summary of Observation Period (Months) for EORTC QLQ-C30
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)

Statistic	SG (N=52)	TPC (N=45)	Overall (N=97)
N	51	44	95
Mean (SD)	10.7 (7.55)	5.8 (4.21)	8.4 (6.67)
95% CI	8.6, 12.8	4.5, 7.1	7.1, 9.8
Median	10.0	5.7	6.9
Q1, Q3	4.4, 16.8	2.4, 8.5	3.2, 14.1
Min, Max	0.0, 27.5	0.0, 18.3	0.0, 27.5

Note: Observation period is defined as the time from the start of treatment to the final study visit and is truncated at the date of the last questionnaire completion if it occurs earlier. If the treatment start date is missing, the randomization date is used. The final study visit is defined as the maximum of Period 01 end date and Period 02 end date.

CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Time to First Meaningful Deterioration for EORTC QLQ-C30 Nausea and Vomiting
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)

Parameter	SG (N=52)	TPC (N=45)
The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or	52	45
The number (%) of patients with an event [a]	29 (55.8%)	14 (31.1%)
The number (%) of patients censored [a]	23 (44.2%)	31 (68.9%)
Not at risk at baseline n (%) [a]	0 (0.0%)	0 (0.0%)
Missing baseline only n (%) [a]	1 (1.9%)	0 (0.0%)
Having baseline but no postbaseline visit n (%) [a]	6 (11.5%)	3 (6.7%)
No baseline or any postbaseline n (%) [a]	1 (1.9%)	1 (2.2%)
Missing PRO for two consecutive visits n (%) [a]	3 (5.8%)	2 (4.4%)
Premature treatment discontinuation n (%) [a]	10 (19.2%)	24 (53.3%)
Others n (%) [a]	2 (3.8%)	1 (2.2%)
Median time to event (95% CI) [b]	2.8 (1.5, 5.7)	NE (5.6, NE)
Q1	0.9 (0.7, 1.7)	1.9 (1.1, 6.5)
Q3	16.9 (5.0, NE)	NE (NE, NE)
Proportion of patients who are event-free		
by 3 Months, % (95% CI)	46.5% (31.1%, 60.5%)	72.8% (55.1%, 84.4%)
by 6 Months, % (95% CI)	34.7% (20.2%, 49.6%)	60.6% (41.0%, 75.5%)
by 12 Months, % (95% CI)	31.2% (17.2%, 46.4%)	53.9% (32.5%, 71.2%)
by 18 Months, % (95% CI)	15.6% (1.7%, 43.1%)	53.9% (32.5%, 71.2%)
by 24 Months, % (95% CI)	NE (NE, NE)	NE (NE, NE)
Nominal p-value for stratified log-rank test [c]	0.044	
HR (95% CI) [d]	2.02 (1.06, 3.85)	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[d] HR (95% CI) of SG vs. TPC was estimated using a Cox proportional hazards regression model adjusted for the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

	P-value of subgroup*treatment interaction [e]	0.513	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.2.2.1.7
Time to First Meaningful Deterioration for EORTC QLQ-C30 Fatigue by Subgroup - Age Group
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)

Subgroup	Parameter	SG (N=52)	TPC (N=45)
<65 Years	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin	35	35
	The number (%) of patients with an event [a]	26 (74.3%)	26 (74.3%)
	The number (%) of patients censored [a]	9 (25.7%)	9 (25.7%)
	Median time to event (95% CI) [b]	1.3 (0.8, 2.1)	1.4 (1.1, 3.0)
	Nominal p-value for unstratified log-rank test [c]	0.462	
	HR (95% CI) [d]	1.23 (0.71, 2.13)	
≥65 Years	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin	17	10
	The number (%) of patients with an event [a]	10 (58.8%)	6 (60.0%)
	The number (%) of patients censored [a]	7 (41.2%)	4 (40.0%)
	Median time to event (95% CI) [b]	0.8 (0.7, 2.2)	1.7 (0.9, 3.0)
	Nominal p-value for unstratified log-rank test [c]	0.531	
	HR (95% CI) [d]	1.42 (0.50, 4.03)	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.2.3.1.1

Time to First Meaningful Deterioration for EORTC QLQ-C30 Global Health Status/QoL by Subgroup - Baseline ECOG
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)

Subgroup	Parameter	SG (N=52)	TPC (N=45)
0	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin	35	26
	The number (%) of patients with an event [a]	23 (65.7%)	16 (61.5%)
	The number (%) of patients censored [a]	12 (34.3%)	10 (38.5%)
	Median time to event (95% CI) [b]	2.2 (1.4, 5.6)	4.5 (1.5, 6.5)
	Nominal p-value for unstratified log-rank test [c]	0.975	
	HR (95% CI) [d]	1.00 (0.52, 1.92)	
1	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin	17	19
	The number (%) of patients with an event [a]	9 (52.9%)	7 (36.8%)
	The number (%) of patients censored [a]	8 (47.1%)	12 (63.2%)
	Median time to event (95% CI) [b]	3.6 (0.8, NE)	7.5 (2.0, NE)
	Nominal p-value for unstratified log-rank test [c]	0.414	
	HR (95% CI) [d]	1.51 (0.56, 4.06)	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.2.3.1.8

Time to First Meaningful Deterioration for EORTC QLQ-C30 Nausea and Vomiting by Subgroup - Baseline ECOG
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)

Subgroup	Parameter	SG (N=52)	TPC (N=45)
0	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin	35	26
	The number (%) of patients with an event [a]	19 (54.3%)	8 (30.8%)
	The number (%) of patients censored [a]	16 (45.7%)	18 (69.2%)
	Median time to event (95% CI) [b]	2.8 (1.4, 16.9)	NE (5.6, NE)
	Nominal p-value for unstratified log-rank test [c]	0.047	
	HR (95% CI) [d]	2.26 (0.99, 5.18)	
1	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin	17	19
	The number (%) of patients with an event [a]	10 (58.8%)	6 (31.6%)
	The number (%) of patients censored [a]	7 (41.2%)	13 (68.4%)
	Median time to event (95% CI) [b]	2.8 (0.8, NE)	NE (1.1, NE)
	Nominal p-value for unstratified log-rank test [c]	0.104	
	HR (95% CI) [d]	2.30 (0.82, 6.39)	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

	P-value of subgroup*treatment interaction [e]	0.556	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.2.4.1.2
Time to First Meaningful Deterioration for EORTC QLQ-C30 Physical Functioning by Subgroup - Liver Metastasis
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)

Subgroup	Parameter	SG (N=52)	TPC (N=45)
Yes	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin	11	13
	The number (%) of patients with an event [a]	7 (63.6%)	5 (38.5%)
	The number (%) of patients censored [a]	4 (36.4%)	8 (61.5%)
	Median time to event (95% CI) [b]	3.8 (0.7, NE)	4.7 (1.0, NE)
	Nominal p-value for unstratified log-rank test [c]	0.576	
	HR (95% CI) [d]	1.40 (0.42, 4.65)	
No	The number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin	41	32
	The number (%) of patients with an event [a]	24 (58.5%)	18 (56.3%)
	The number (%) of patients censored [a]	17 (41.5%)	14 (43.8%)
	Median time to event (95% CI) [b]	2.5 (1.4, 5.6)	3.7 (1.9, 11.1)
	Nominal p-value for unstratified log-rank test [c]	0.322	
	HR (95% CI) [d]	1.36 (0.74, 2.51)	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Subgroup	Parameter	SG (N=52)	TPC (N=45)
	P-value of subgroup*treatment interaction [e]	0.688	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.2.4.1.15
Time to First Meaningful Deterioration for EORTC QLQ-C30 Financial Difficulties by Subgroup - Liver Metastasis
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)

Subgroup	Parameter	SG (N=52)	TPC (N=45)
	P-value of subgroup*treatment interaction [e]	0.124	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.2.4.2.7
Time to First Meaningful Deterioration for EORTC QLQ-BR23 Arm Symptoms by Subgroup - Liver Metastasis
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)

Subgroup	Parameter	SG (N=52)	TPC (N=45)
	P-value of subgroup*treatment interaction [e]	0.300	

Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 7.2.5.1.9
Time to First Meaningful Deterioration for EORTC QLQ-C30 Pain by Subgroup - Menopausal Status
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)

Subgroup	Parameter	SG (N=52)	TPC (N=45)
	P-value of subgroup*treatment interaction [e]	0.768	

Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] Denominator was the number of patients in the mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin per subgroup.
[b] Median time to event (95% CI) was estimated from the Kaplan-Meier product-limit method.
[c] P-value was estimated from the unstratified log-rank test.
[d] HR (95% CI) of SG vs. TPC was estimated using an unadjusted/unstratified Cox proportional hazards regression model.
[e] P-value of subgroup*treatment interaction from a Cox model with treatment, subgroup and treatment*subgroup interaction.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[b] HR (95% CI) of SG versus TPC was estimated using a Cox proportional hazards regression model stratified by the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

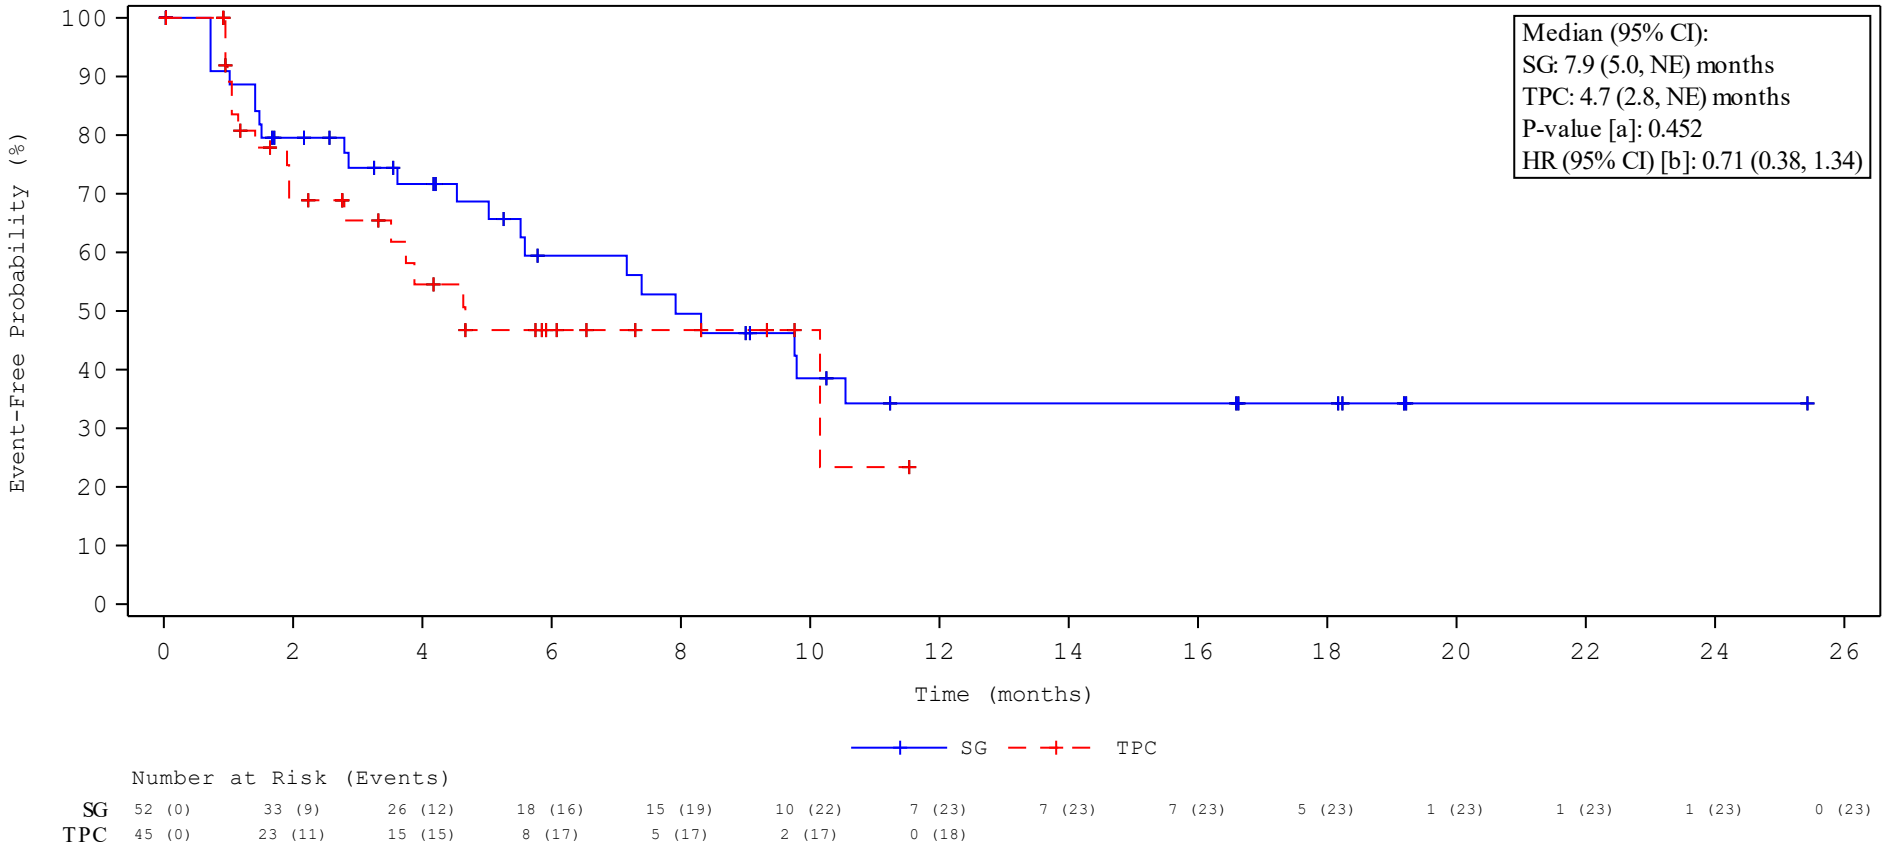
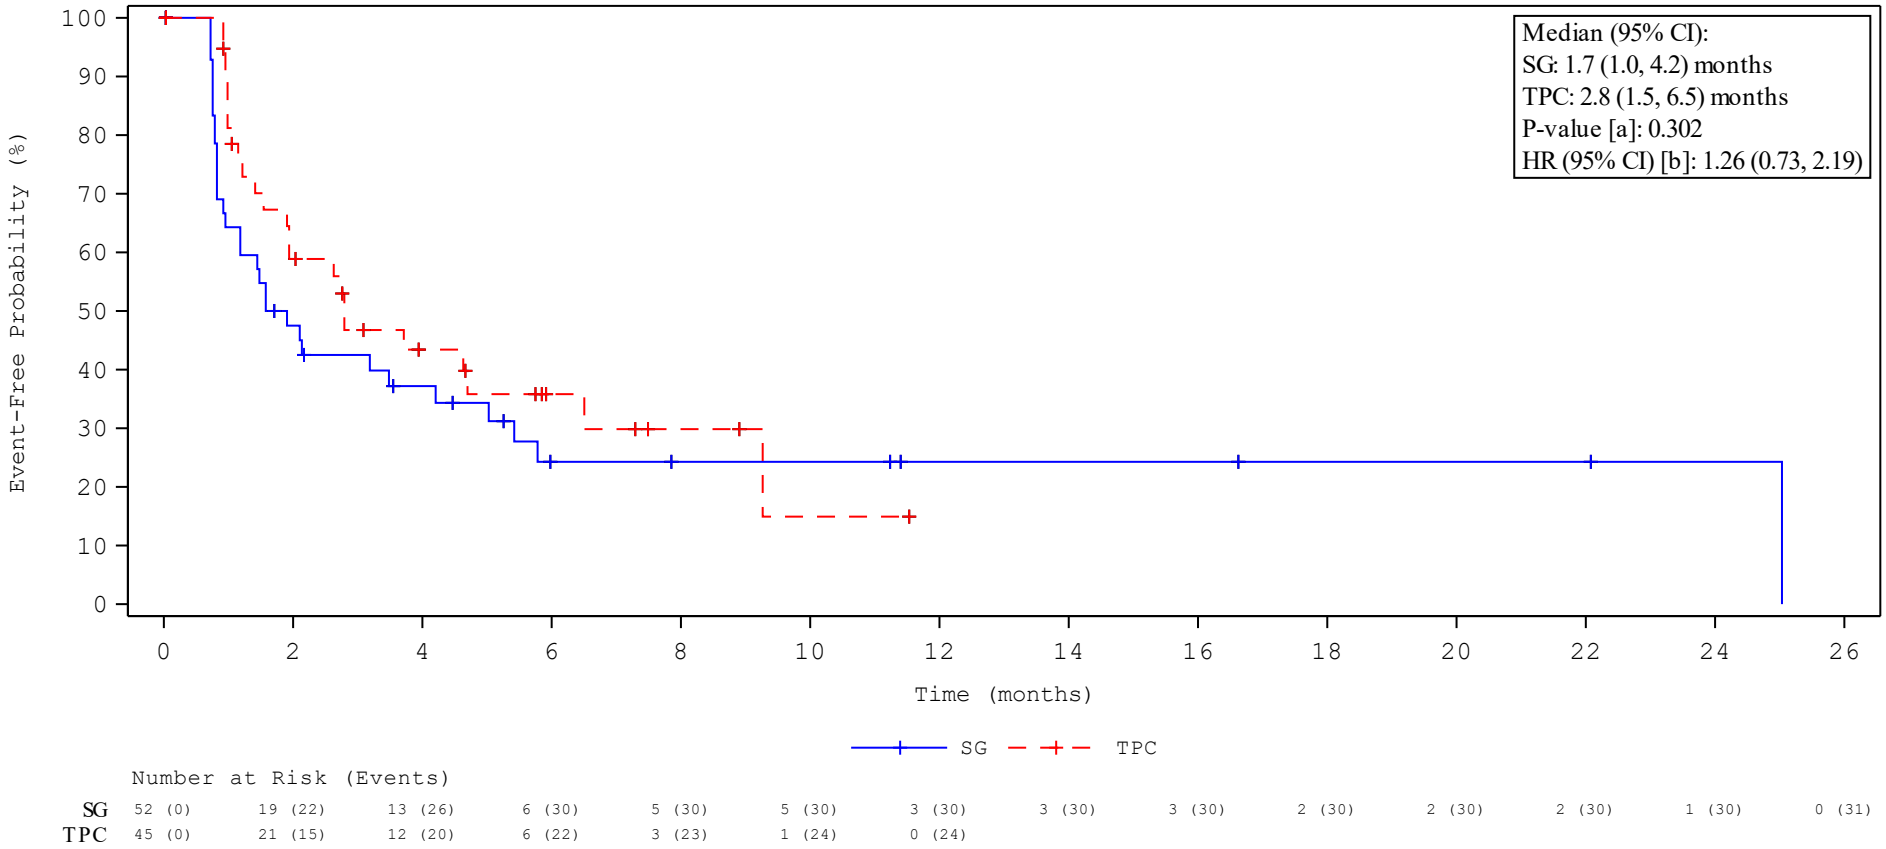
Figure 2.2.1.13
Kaplan-Meier Plot of Time to First Meaningful Deterioration in EORTC QLQ-C30 Constipation by Treatment Group
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)



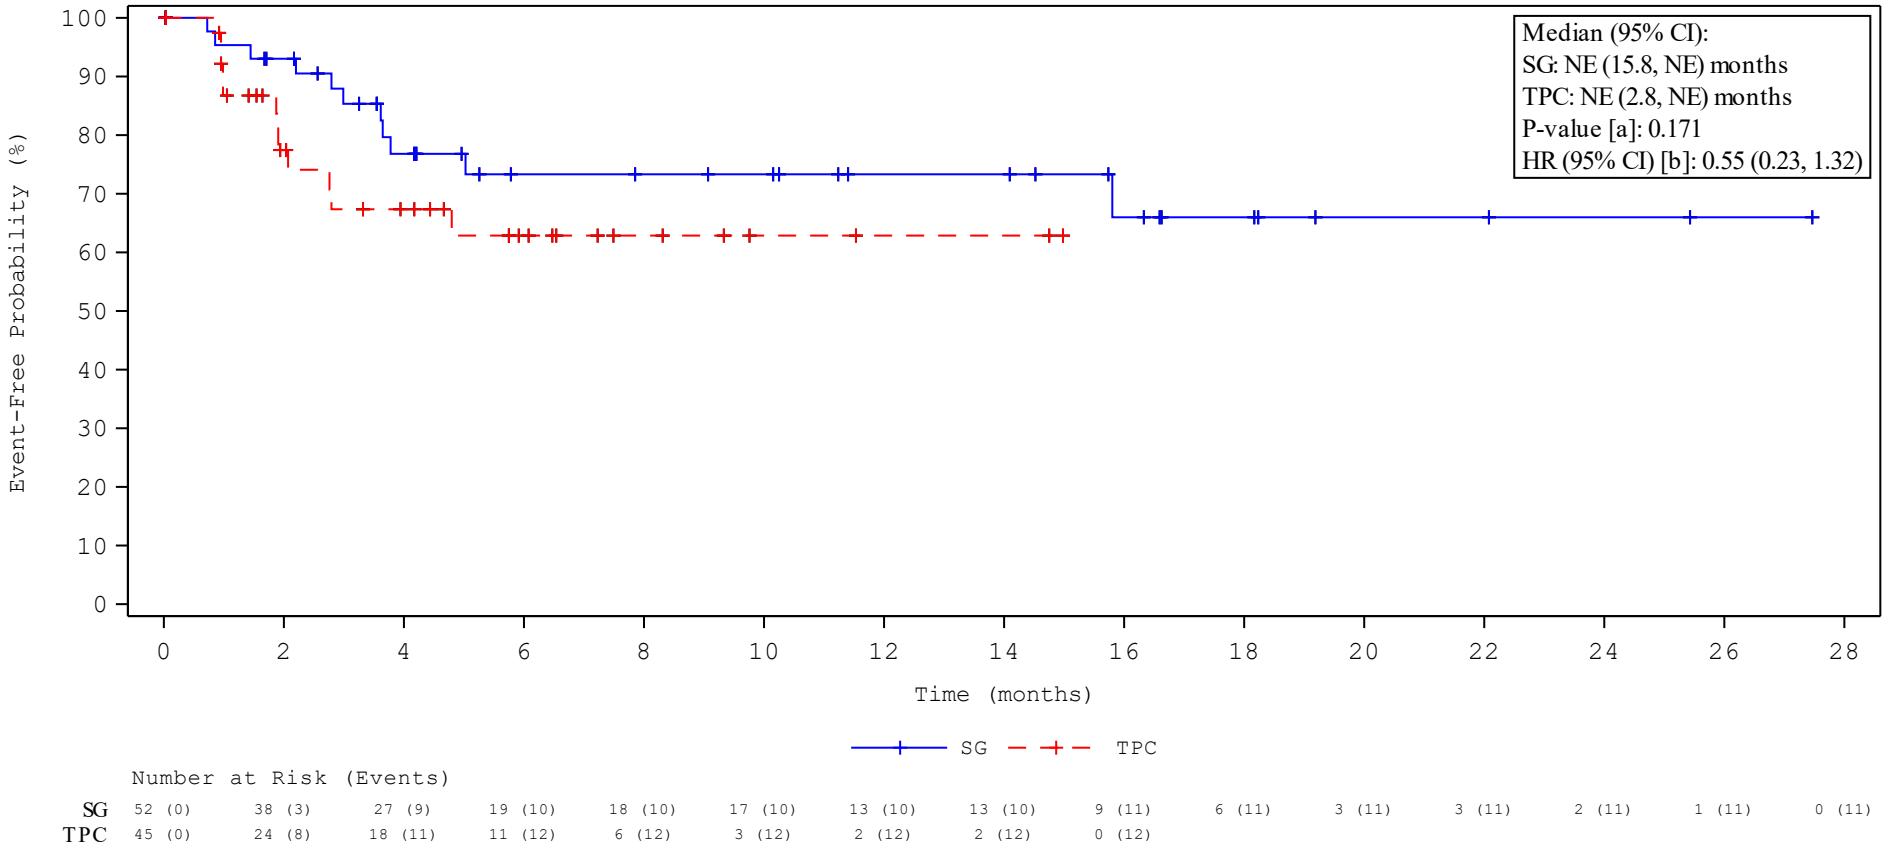
Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[b] HR (95% CI) of SG versus TPC was estimated using a Cox proportional hazards regression model stratified by the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Figure 2.2.1.14
Kaplan-Meier Plot of Time to First Meaningful Deterioration in EORTC QLQ-C30 Diarrhoea by Treatment Group
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)



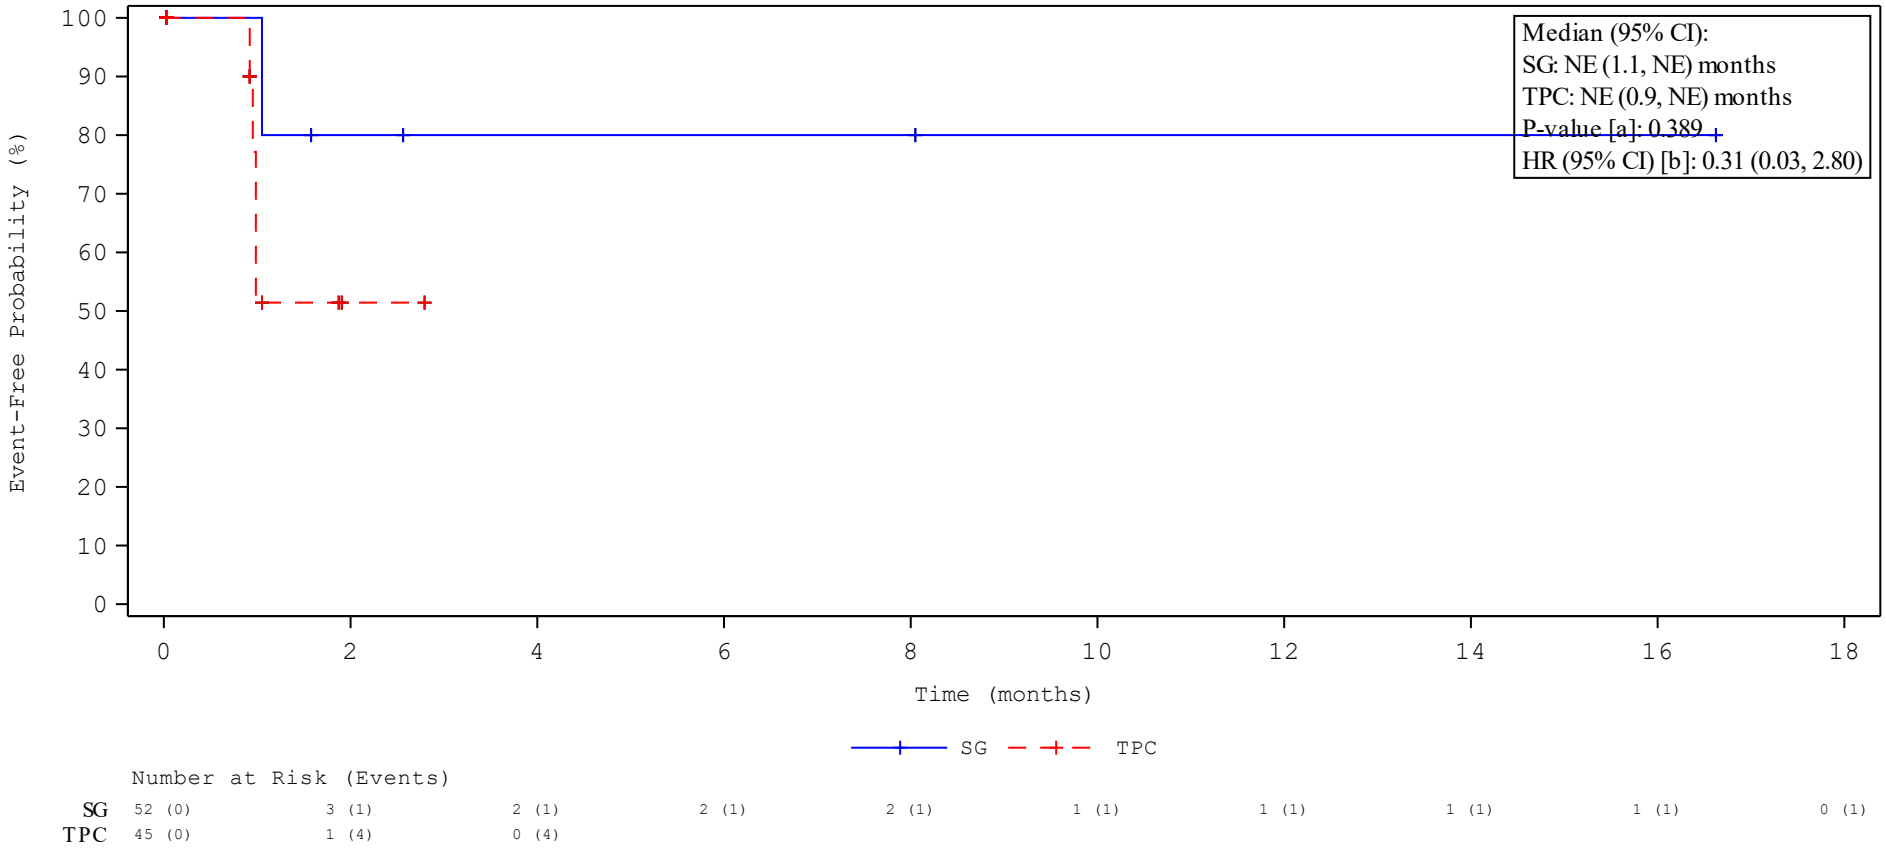
Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[b] HR (95% CI) of SG versus TPC was estimated using a Cox proportional hazards regression model stratified by the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Figure 2.2.1.15
Kaplan-Meier Plot of Time to First Meaningful Deterioration in EORTC QLQ-C30 Financial Difficulties by Treatment Group
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)



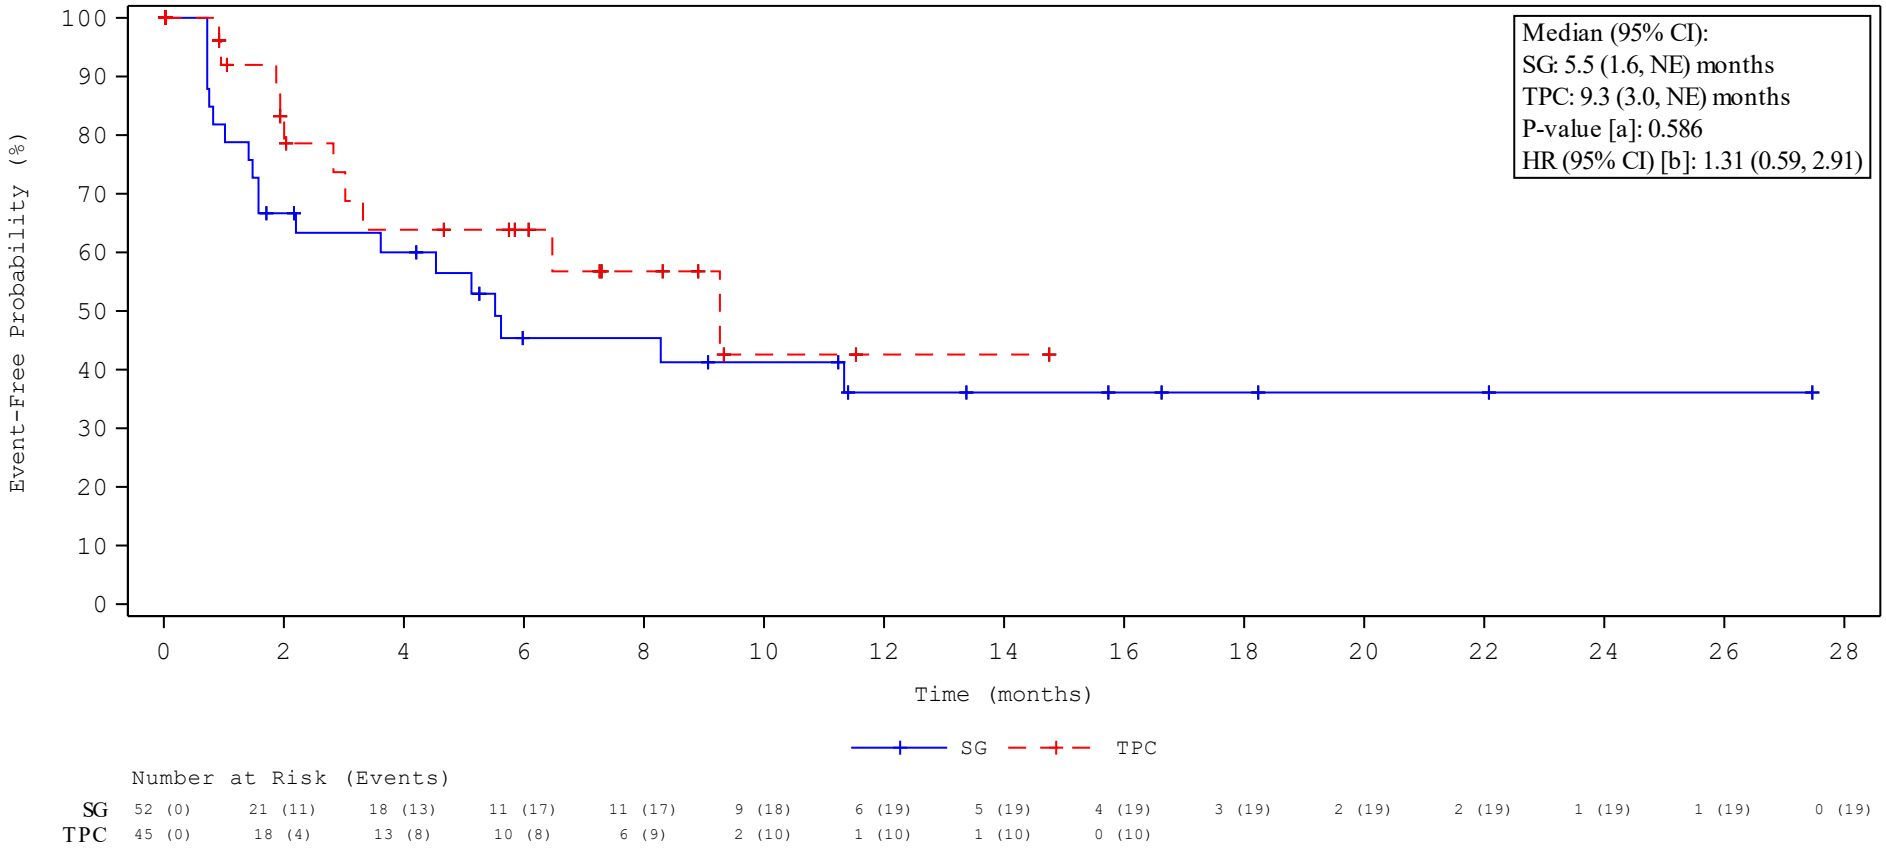
Note: The response threshold for EORTC QLQ-C30 domains is ≥10 points.
[a] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[b] HR (95% CI) of SG versus TPC was estimated using a Cox proportional hazards regression model stratified by the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-Core 30; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Figure 2.2.2.1
Kaplan-Meier Plot of Time to First Meaningful Deterioration in EORTC QLQ-BR23 Body Image by Treatment Group
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)



Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[b] HR (95% CI) of SG versus TPC was estimated using a Cox proportional hazards regression model stratified by the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Figure 2.2.2.2
Kaplan-Meier Plot of Time to First Meaningful Deterioration in EORTC QLQ-BR23 Sexual Function by Treatment Group
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)



Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[b] HR (95% CI) of SG versus TPC was estimated using a Cox proportional hazards regression model stratified by the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

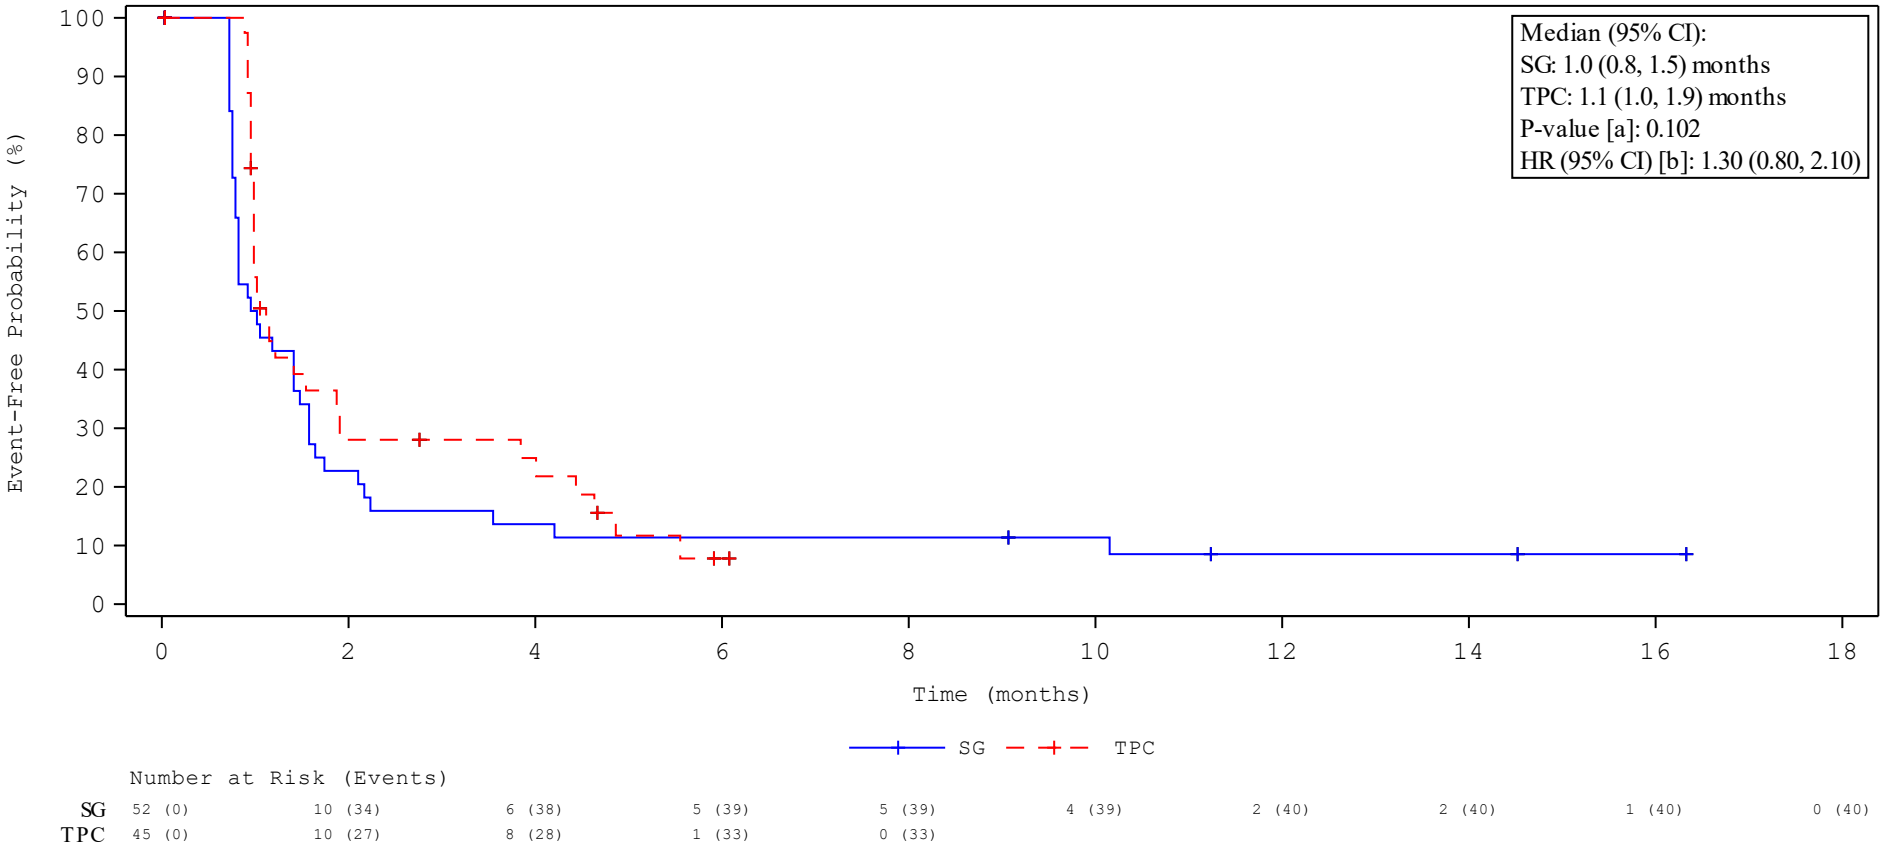
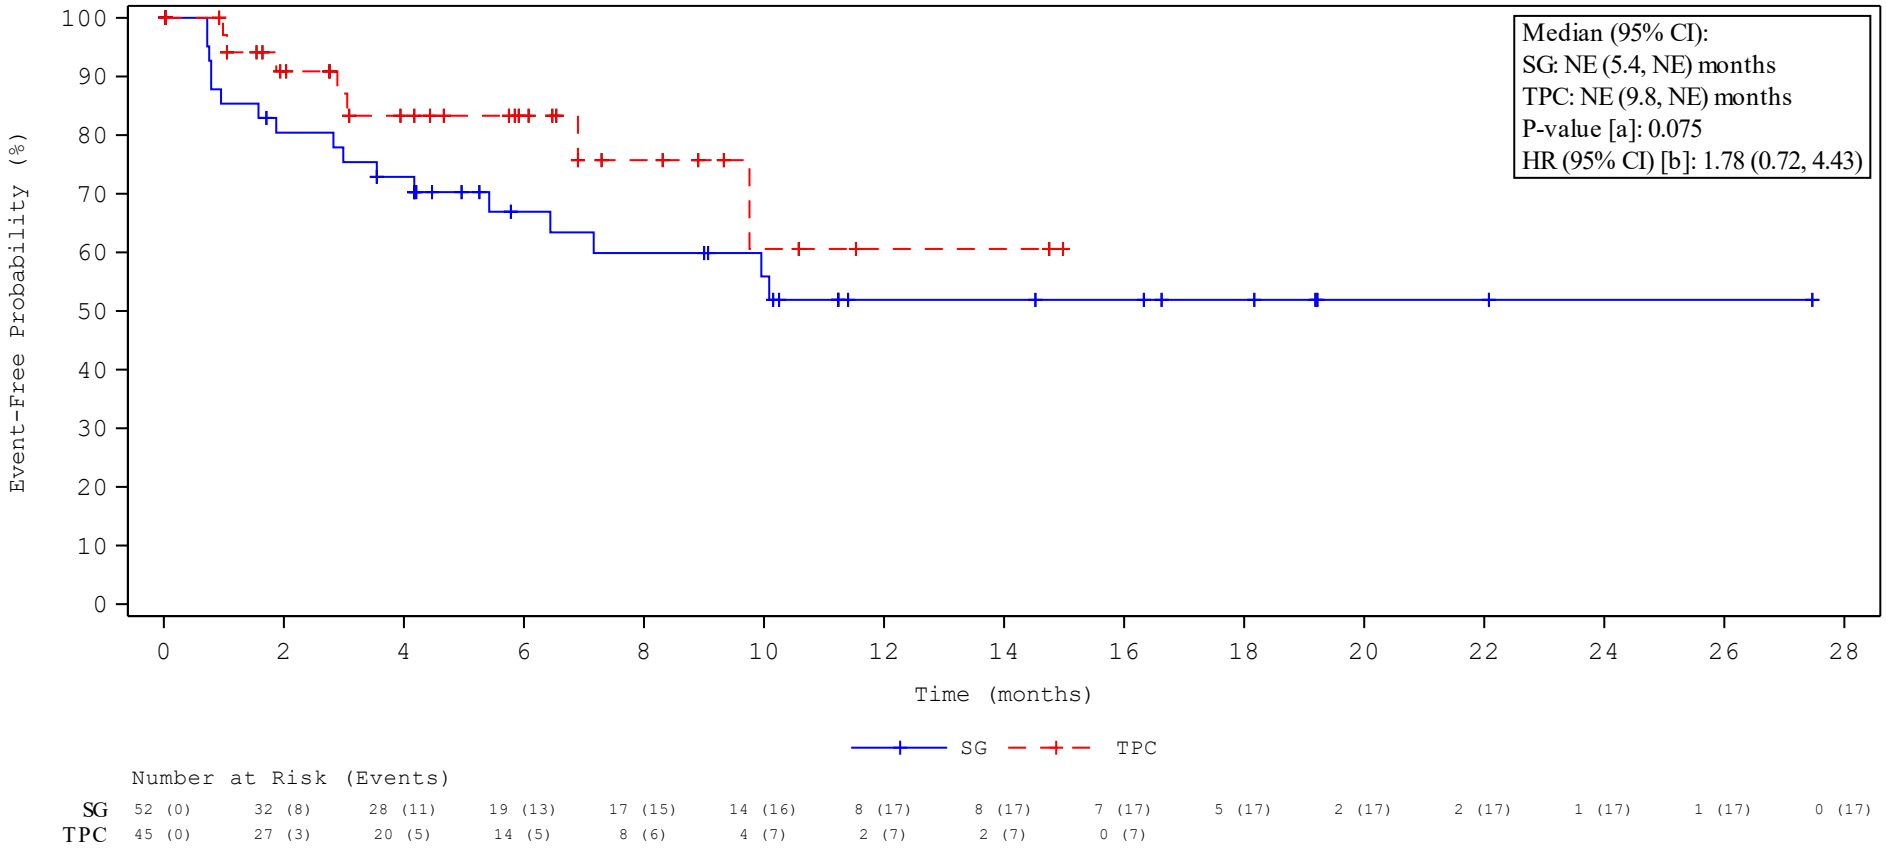
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)



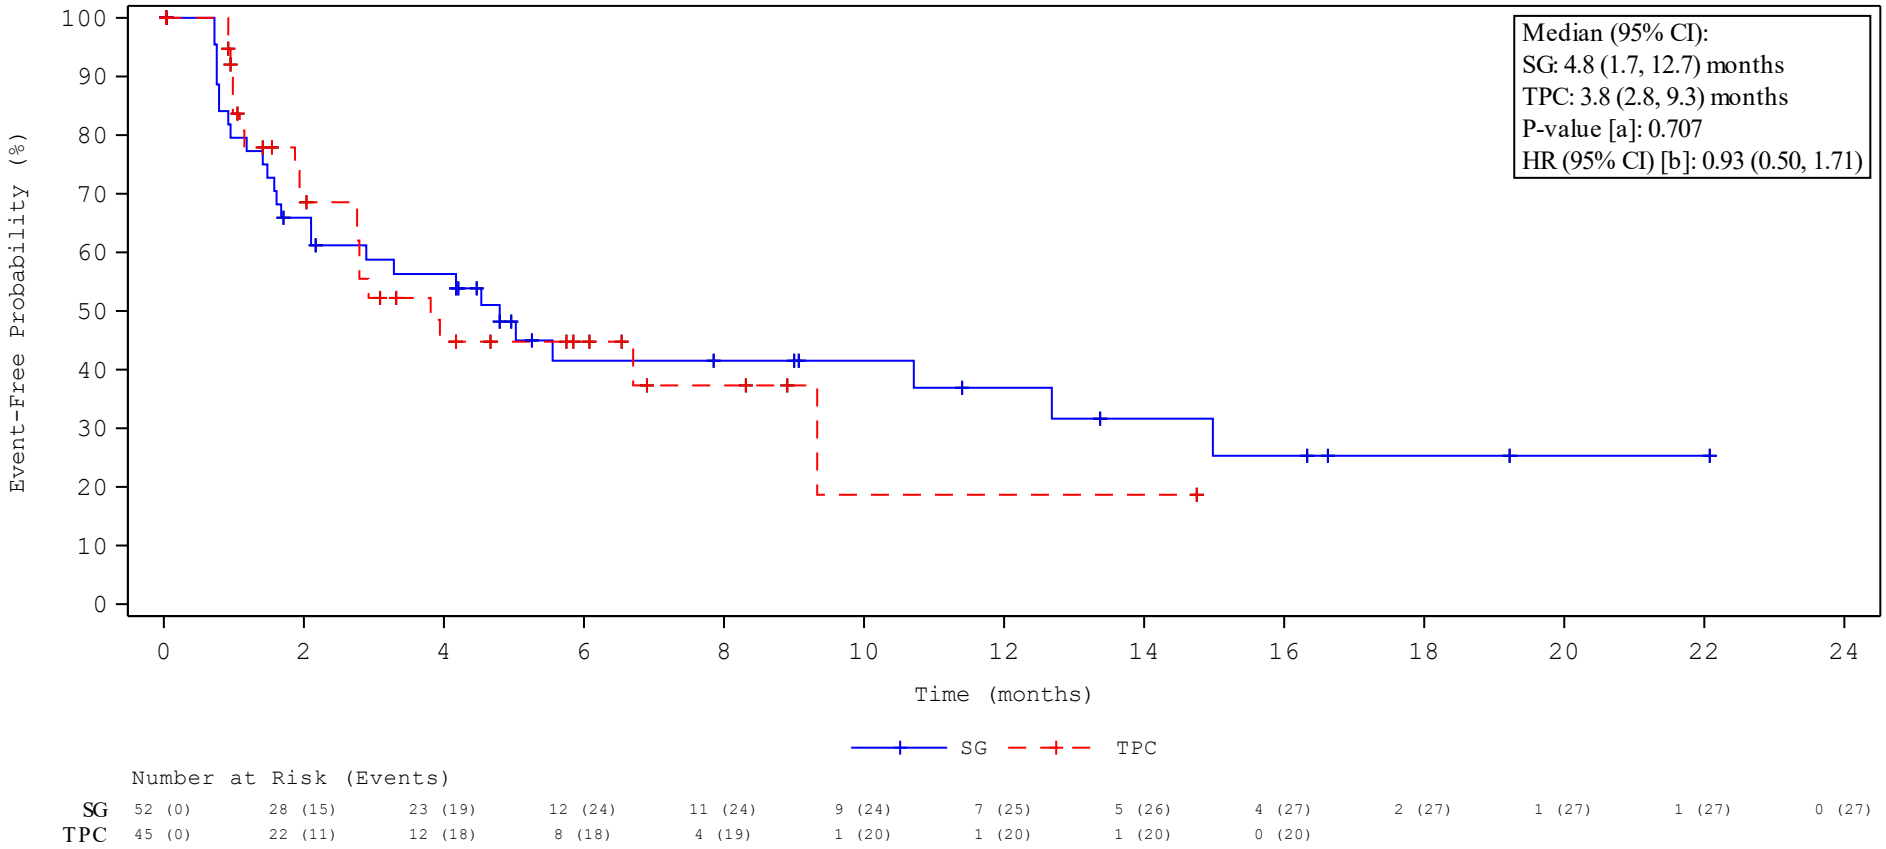
Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[b] HR (95% CI) of SG versus TPC was estimated using a Cox proportional hazards regression model stratified by the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Figure 2.2.2.4
Kaplan-Meier Plot of Time to First Meaningful Deterioration in EORTC QLQ-BR23 Future Perspective by Treatment Group
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)



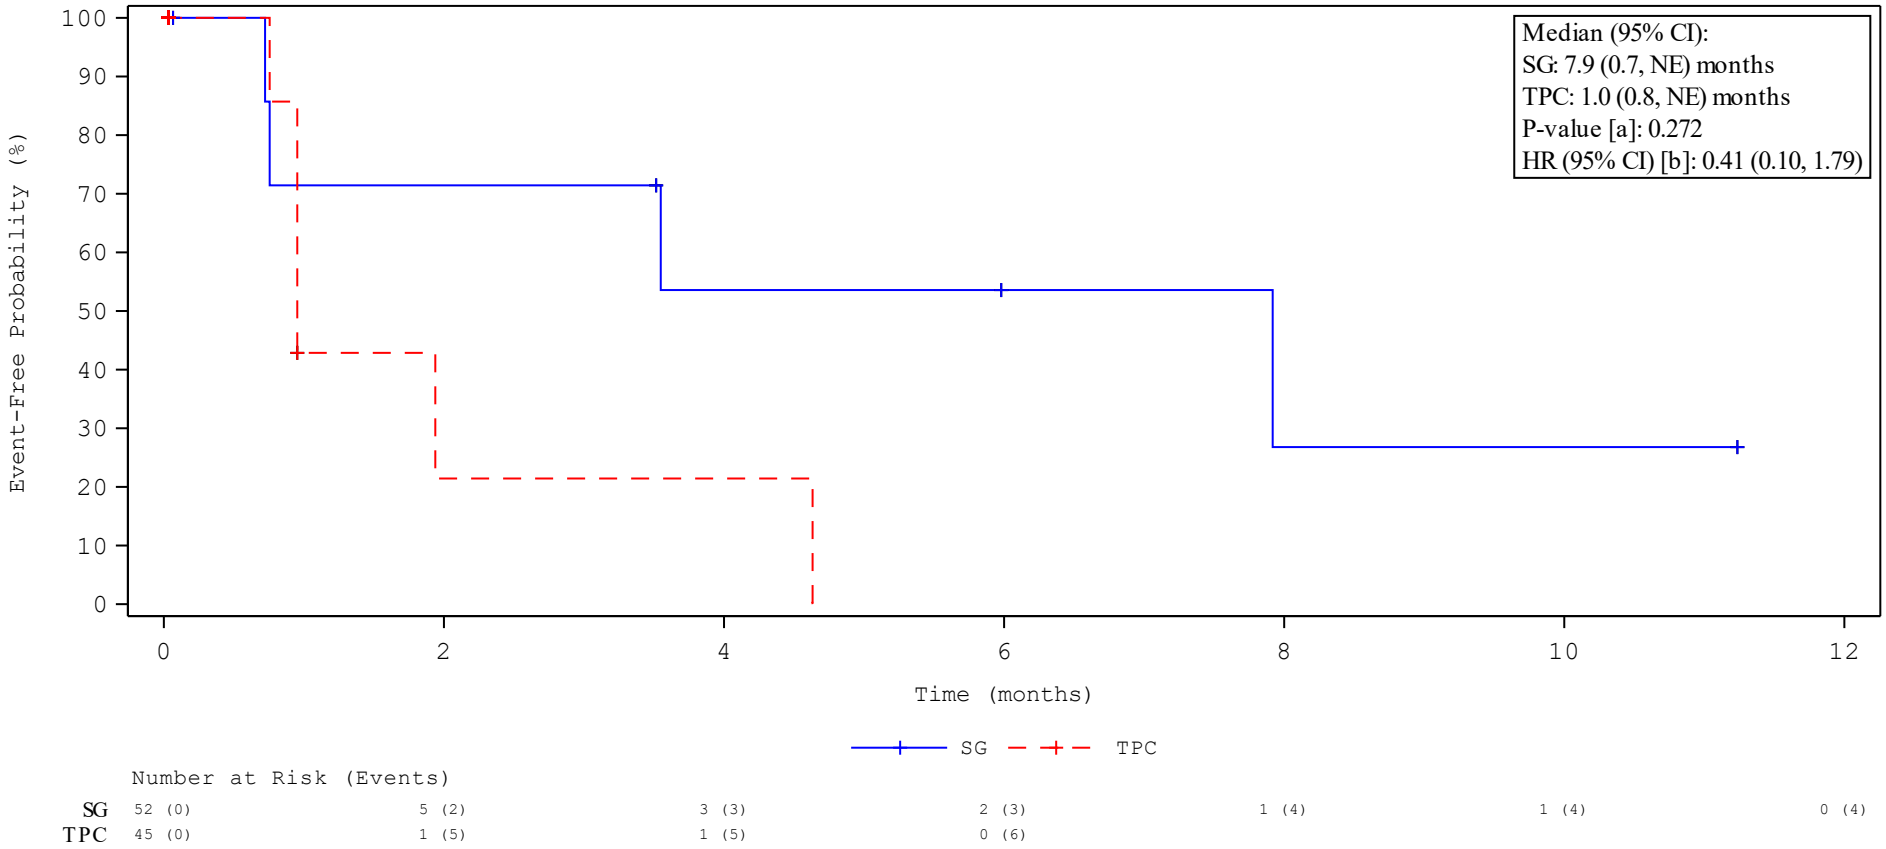
Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[b] HR (95% CI) of SG versus TPC was estimated using a Cox proportional hazards regression model stratified by the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Figure 2.2.2.5
Kaplan-Meier Plot of Time to First Meaningful Deterioration in EORTC QLQ-BR23 Systemic Therapy Side Effects by Treatment Group
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)



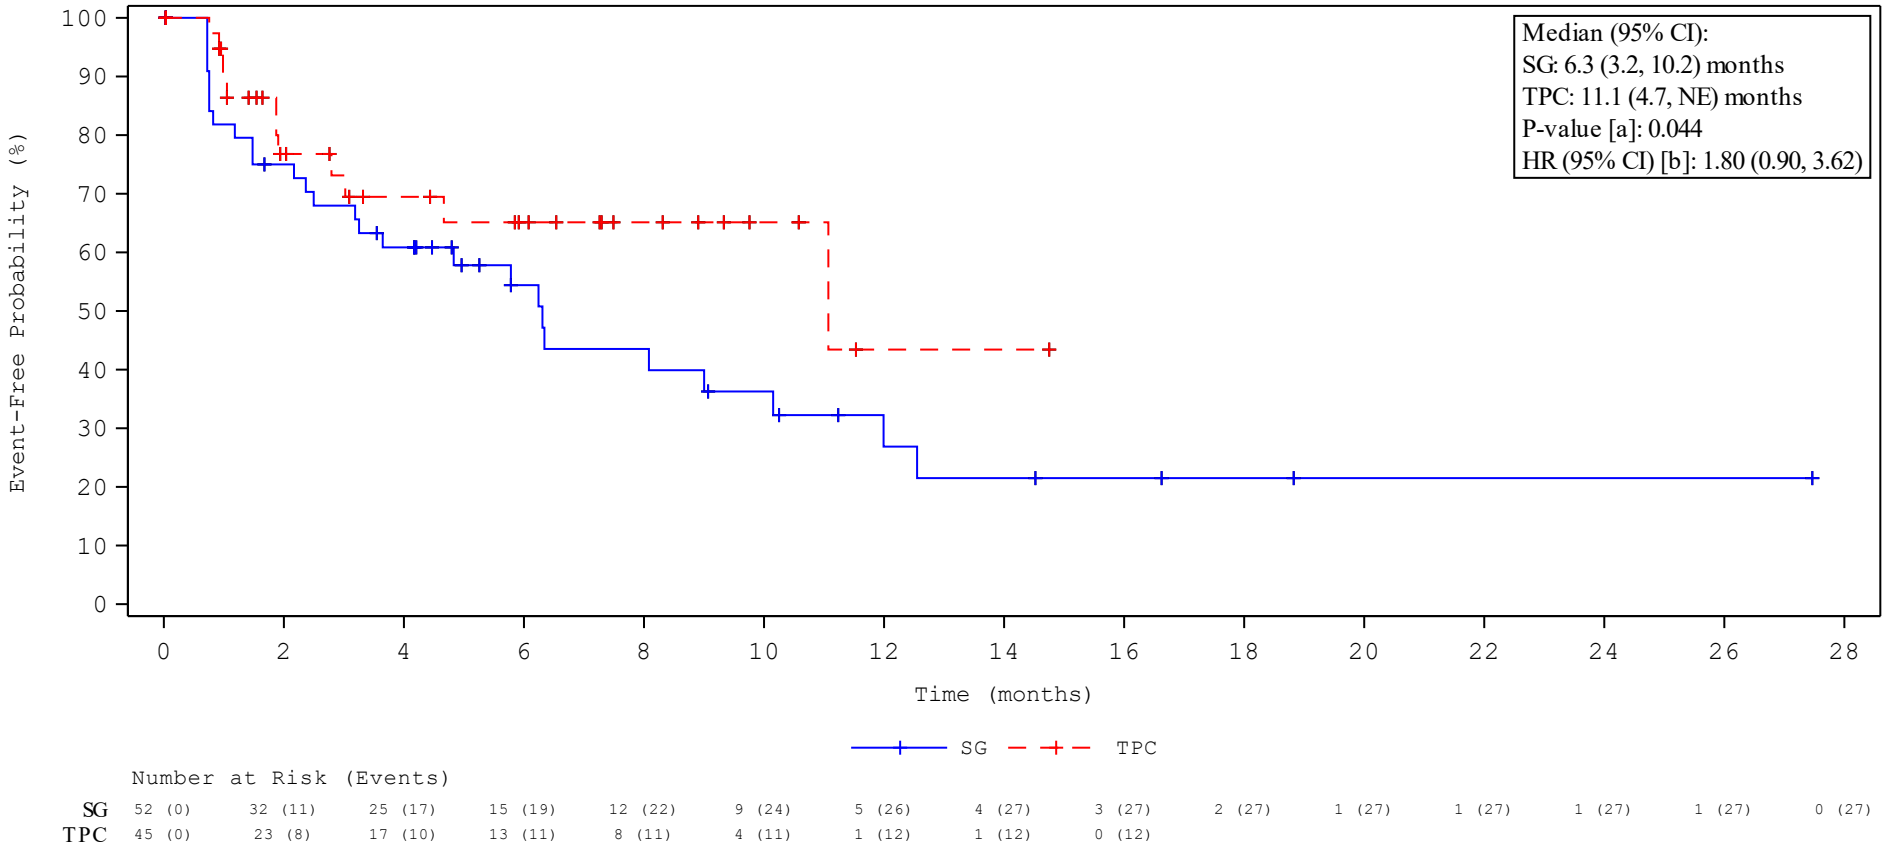
Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[b] HR (95% CI) of SG versus TPC was estimated using a Cox proportional hazards regression model stratified by the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Figure 2.2.2.6
Kaplan-Meier Plot of Time to First Meaningful Deterioration in EORTC QLQ-BR23 Breast Symptoms by Treatment Group
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)



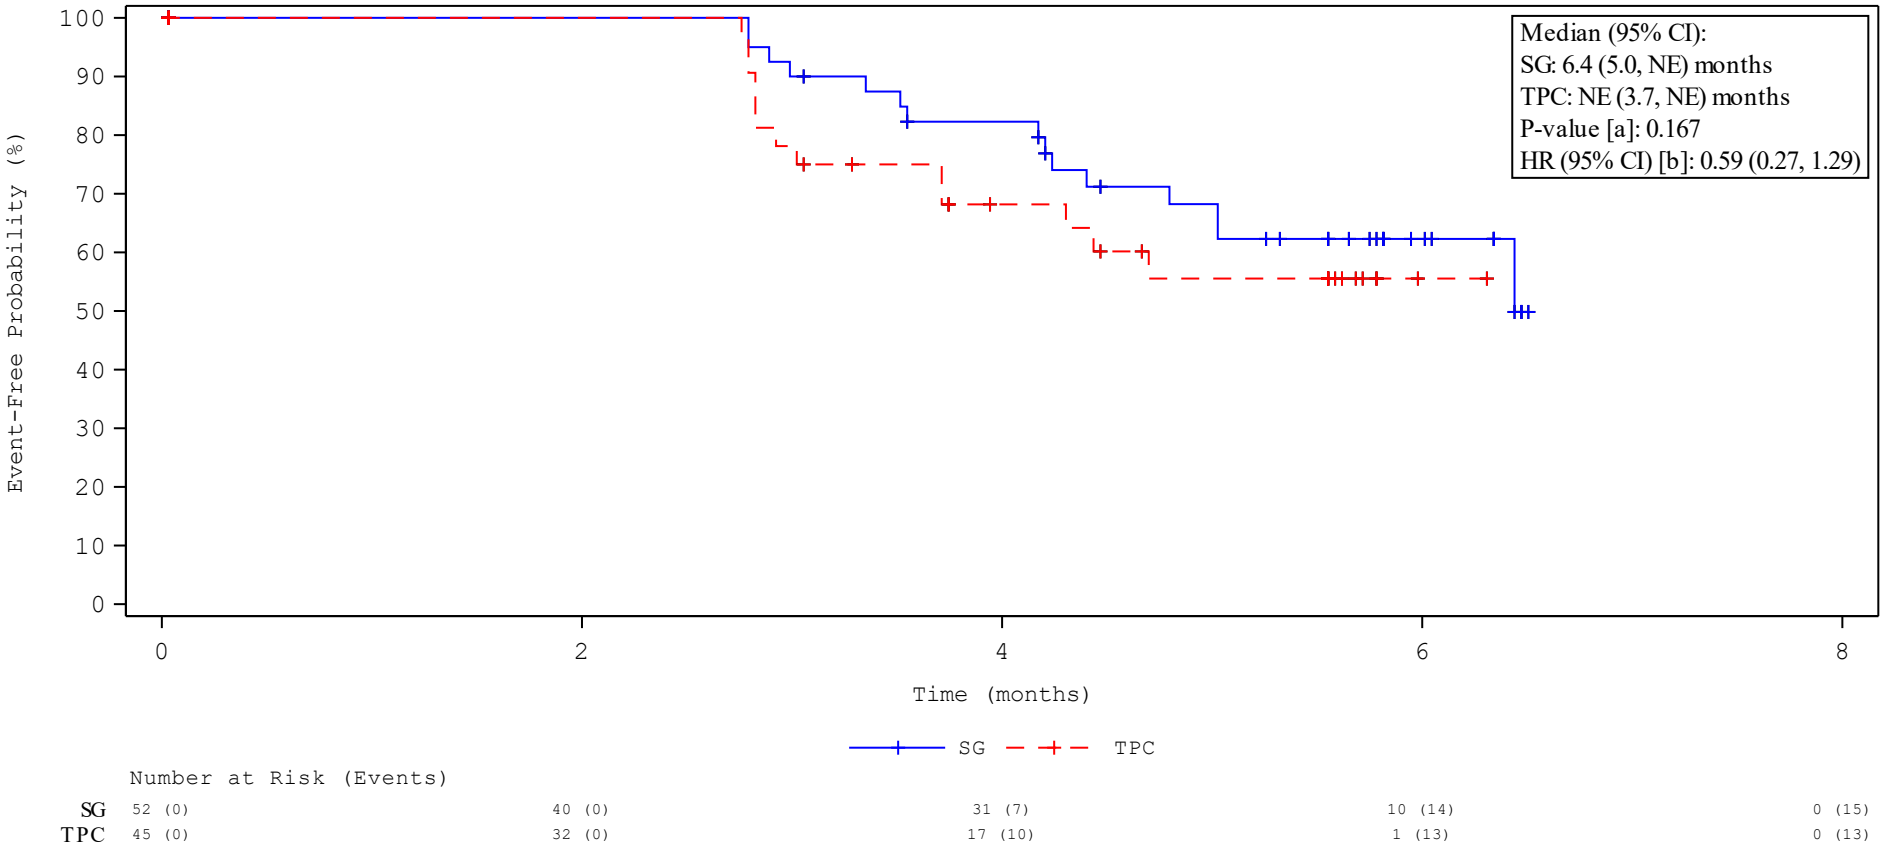
Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[b] HR (95% CI) of SG versus TPC was estimated using a Cox proportional hazards regression model stratified by the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Figure 2.2.2.7
Kaplan-Meier Plot of Time to First Meaningful Deterioration in EORTC QLQ-BR23 Arm Symptoms by Treatment Group
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)



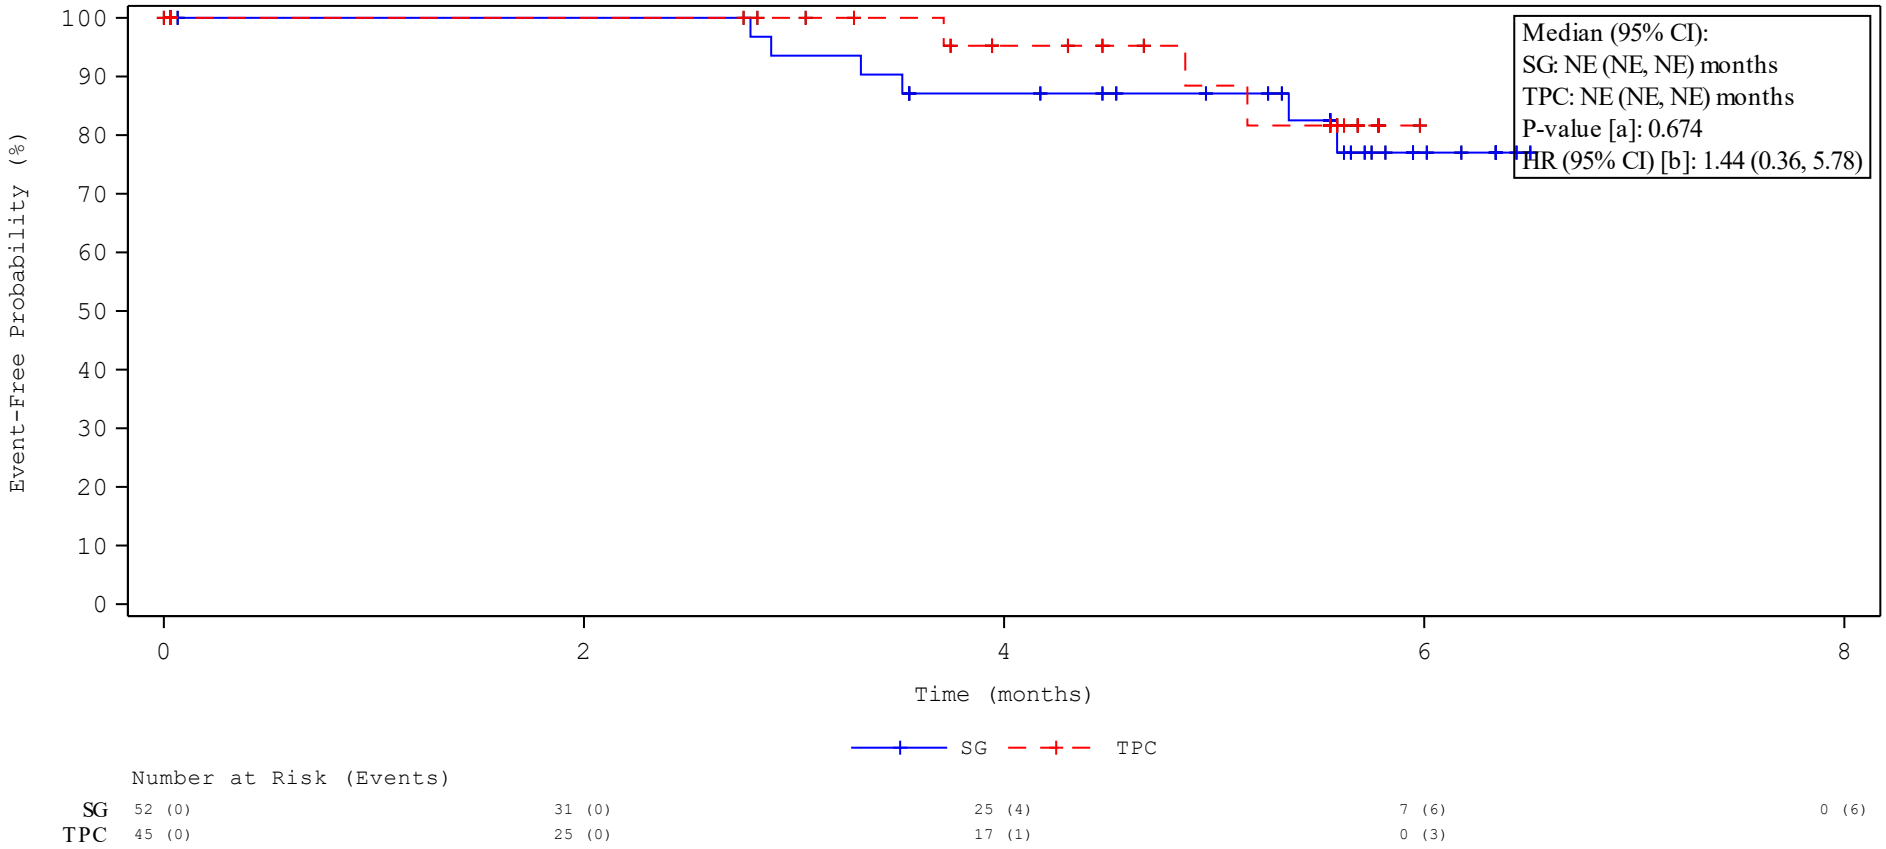
Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[b] HR (95% CI) of SG versus TPC was estimated using a Cox proportional hazards regression model stratified by the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Figure 2.2.2.8
Kaplan-Meier Plot of Time to First Meaningful Deterioration in EORTC QLQ-BR23 Upset by Hair Loss by Treatment Group
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)



Note: The response threshold for EORTC QLQ-BR23 domains is ≥10 points.
[a] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[b] HR (95% CI) of SG versus TPC was estimated using a Cox proportional hazards regression model stratified by the randomization stratification factors.
CI = Confidence Interval; EORTC QLQ-BR23 = European Organization for Research and Treatment of Cancer Quality of Life Questionnaire Breast Cancer Module; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Figure 2.2.3
Kaplan-Meier Plot of Time to First Meaningful Deterioration in EQ-VAS by Treatment Group
(mITT excluding patients preselected to receive nab-paclitaxel or gemcitabine+carboplatin)



Note: The response threshold for EQ-VAS is ≥15 points.
[a] P-value was estimated from the stratified log-rank test by randomization stratification factors.
[b] HR (95% CI) of SG versus TPC was estimated using a Cox proportional hazards regression model stratified by the randomization stratification factors.
CI = Confidence Interval; HR = hazard ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice; VAS = Visual analogue scale.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Screened Population: Participants who have signed an informed consent and participated in the screening procedures at site to assess eligibility.
Safety Analysis Set includes randomized participants who have received at least one dose of any study drug.
Denominator of percentages is the number of participants in each treatment group.
Randomized Phase excludes crossover phase when participants in TPC arm started to receive SG.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Denominator of percentages is the number of participants in each treatment group.
Age (in years) was collected on the date of first study drug administration (Day 1) if dosed, or randomization if not dosed.
Not Permitted = local regulators did not allow collection of race or ethnicity information or participant refused to provide information.
*Body Mass Index (BMI) (kg/m^2) = [Weight (kg) / Height (cm)^2]*10,000*
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Denominator of percentages is the number of participants in each treatment group.
Medical history was coded according to MedDRA Version 27.1.
Participants may report >=1 medical history per system organ class or preferred term. At each level of summarization, a participant was counted once if the participant reported 1 or more medical history.
SOCs were presented alphabetically and PTs within SOC were presented by descending order of the total frequencies.
Data Cut Date: 22 APR 2026.

Hazard Ratio of SG vs TPC (95% CI) from Cox Model	0.996 (0.698, 1.422)		

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
OS (months) = (date of death or censoring − date of randomisation + 1) / 30.4375. Median OS from Kaplan-Meier estimate. 95% CI based on log-log transformation.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
Log-rank test is unstratified.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Participants with unknown BRCA 1/2 status were excluded from that subgroup.
Disease stratification and geographic region are collected from IWRS.
Race subgroup Other - includes American Indian or Alaska Native, Black, Native Hawaiian or Pacific Islander and Other collected in clinical database.
Interaction p-value: likelihood ratio test from Cox model with treatment + subgroup + treatment×subgroup interaction terms; shown once per subgroup variable at first category level.
Data Cut Date: 22 APR 2026.

5.4. Table 1.1.4: Follow-up Duration (Months) for PFS and Tumor Response by BICR — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

PD	11 (8.8%)	13 (10.5%)	24 (9.6%)
NE	0 (0.0%)	0 (0.0%)	0 (0.0%)
NON-CR/NON-PD	0 (0.0%)	1 (0.8%)	1 (0.4%)
Missing/NE	6 (4.8%)	5 (4.0%)	11 (4.4%)

SG = sacituzumab govitecan; TPC = treatment of physician's choice; BICR = blinded independent central review; IWRS = Interactive Web Response System; CR = complete response; PR = partial response; SD = stable disease; PD = progressive disease; NE = not evaluable; NON-CR/NON-PD = non-complete response/non-progressive disease (applicable to non-measurable disease).
[a] Observation period for PFS is defined as time from randomisation to the event or censoring date of progression-free survival.
Tumour response assessed by BICR per RECIST v1.1; confirmed responses only.
Data Cut Date: 22 APR 2026.

5.5. Table 1.1.5: Analysis of PFS by BICR — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

Parameter	SG (N=125)	TPC (N=124)

Q3	17.91 (12.71, 31.93)	12.68 (9.46, 16.66)
Absolute Difference in Median PFS, SG vs TPC (Months)	0.26	
Kaplan-Meier Estimate of PFS Rate (95% CI) [c]		
At 3 Months	0.808 (0.726, 0.868)	0.869 (0.792, 0.919)
At 6 Months	0.610 (0.514, 0.693)	0.583 (0.484, 0.670)
At 9 Months	0.466 (0.370, 0.556)	0.369 (0.275, 0.464)
At 12 Months	0.375 (0.284, 0.466)	0.299 (0.210, 0.393)
At 18 Months	0.242 (0.163, 0.331)	0.136 (0.071, 0.222)
Treatment Comparison		
Stratified Log-rank p-value of SG vs TPC [d]	0.1410	
Stratified Hazard Ratio of SG vs TPC (95% CI) [e]	0.792 (0.580, 1.081)	

SG = sacituzumab govitecan; TPC = treatment of physician's choice; IWRS = Interactive Web Response System; NR = Not Reached.
[a] Censoring due to no baseline or no postbaseline evaluable assessment does not include death events before the second scheduled postbaseline visit.
[b] PFS (months) = (date of event or censoring − date of randomisation + 1) / 30.4375. The 95% CI is based on the log-log transformation.

Parameter	SG (N=125)	TPC (N=124)

[c] PFS rate is the proportion of participants alive without progressive disease (PD). The 95% CI is based on the log-log transformation.
[d] The two-sided p-value is from stratified log-rank test.
[e] Hazard ratio with 95% CIs are calculated using Cox proportional hazards model, stratified for randomization stratification factors (IWRS).
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
Intent-to-treat (ITT) Analysis Set includes all participants who were randomised in the study.
Denominator of percentages is the number of participants in each treatment group of each subgroup.
PFS (months) = (date of events or censoring − date of randomisation + 1) / 30.4375. 95% CI based on log-log transformation. Median PFS from Kaplan-Meier estimate.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.

	SG (N=125)	TPC (N=124)	Interaction

The two-sided p-value is from Unstratified log-rank test.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Disease stratification and geographic region are collected from IWRS (Interactive Web Response System).
Race subgroup Other - includes American Indian or Alaska Native, Black, Native Hawaiian or Pacific Islander and Other collected in clinical database.
Interaction p-value from a Cox model with treatment, subgroup factor, and treatment×subgroup interaction term; computed via likelihood ratio test (full vs. main-effects model). Displayed once per subgroup variable at first category level.
Data Cut Date: 22 APR 2026.

Treatment Comparison		
Stratified Log-rank p-value of SG vs TPC [c]	0.1447	
Stratified Hazard Ratio of SG vs TPC (95% CI) [d]	0.805 (0.602, 1.076)	

SG = sacituzumab govitecan; TPC = treatment of physician's choice; IWRS = Interactive Web Response System; NR = Not Reached.
PFS2 is defined as the time from date of randomization to the first documented progression on next-line therapy based on investigator assessment of PD or death due to any cause, whichever occurs first. Next line therapy is defined as the first new systemic anti-cancer therapy (including crossover treatment) initiated after discontinuation of study treatment regardless of end of treatment reason.
[a] Quantile of PFS2 is from Kaplan-Meier estimate. The 95% CI is based on log-log transformation.
[b] PFS2 rate is the proportion of participants alive without progression at the next line of therapy. The 95% CI is based on the log-log transformation.
[c] The two-sided p-value is from stratified log-rank test.
[d] Hazard ratio with 95% CIs are calculated using Cox proportional hazards model, stratified for randomization stratification factors (IWRS).
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
PFS2 is defined as the time from date of randomization to the first documented progression on next-line therapy based on investigator assessment of PD or death due to any cause, whichever occurs first.
Denominator of percentages is the number of participants in each treatment group of each subgroup.
PFS2 rate is the proportion of participants alive without progression at the next line of therapy. The 95% CI is based on the log-log transformation.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
The two-sided p-value is from an unstratified log-rank test.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Disease stratification and geographic region are collected from IWRS (Interactive Web Response System).
Interaction p-value: likelihood ratio test from Cox model with treatment + subgroup + treatment×subgroup interaction terms; shown once per subgroup variable at first category level.
Data Cut Date: 22 APR 2026.

5.9. Table 1.1.9: Analysis of Time to First Subsequent Therapy (TFST) — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

Parameter	SG (N=125)	TPC (N=124)

Treatment Comparison		
Log-rank p-value of SG vs TPC [c]	0.0464	
Hazard Ratio of SG vs TPC (95% CI) [d]	0.807 (0.616, 1.057)	

SG = sacituzumab govitecan; TPC = treatment of physician's choice; IWRS = Interactive Web Response System; NR = Not Reached.
Time to first subsequent therapy is defined as the time from randomization to the start date of the first subsequent anti-cancer therapy after discontinuation of randomized treatment, or death due to any cause.
[a] Quantile of TFST is from Kaplan-Meier estimate. The 95% CI is based on log-log transformation.
[b] TFST rate is the proportion of participants alive without any subsequent therapy. The 95% CI is based on the log-log transformation.
[c] The two-sided p-value is from stratified log-rank test.
[d]Hazard ratio and 95% CIs are calculated using the Cox proportional hazards model, adjusted for randomization stratification factors (IWRS).
Data Cut Date: 22 APR 2026.

Kaplan-Meier Estimate of TFST (Months) (95% CI)			
Median	10.25 (8.31, 11.99)	7.85 (6.11, 9.40)	
Hazard Ratio of SG vs TPC (95% CI) from Cox Model	0.755 (0.553, 1.031)		
p-value (Log-Rank Test, Unstratified)	0.0759		

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
Time to first subsequent therapy is defined as the time from randomisation to the start date of the first subsequent anti-cancer therapy after discontinuation of randomised treatment, or death due to any cause.
TFST rate is the proportion of participants alive without any subsequent therapy.
Hazard ratio and 95% CIs calculated using unstratified Cox proportional hazards model. Efron method used to handle ties. Reference arm = TPC.
Log-rank p-value is from an unstratified log-rank test.
Interaction p-value: likelihood ratio test from Cox model with treatment + subgroup + treatment×subgroup interaction terms; shown once per subgroup variable at first category level.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Data Cut Date: 22 APR 2026.

6. Safety - mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

SG = sacituzumab govitecan, TPC = treatment of physician's choice, Gem = gemcitabine, Carbo = carboplatin.
Safety Analysis Set includes randomized participants who have received at least one dose of any study drug. Taxane includes participants who have received Paclitaxel. TPC column includes participants who have received any of Gem, Carbo or Paclitaxel.
Duration of exposure to study drug (months) = (last dosing date − first dosing date + 1)/30.4375.
Data Cut Date: 22 APR 2026.

6.2. Table 1.1.2: Observation Period (Months) for Safety — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
NC = Not Calculable: the hazard ratio and 95% CI are not estimable by the Cox model.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if all categories contain ≥10 patients across both arms combined.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
Data Cut Date: 22 APR 2026.

p-value		<0.0001

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[a] Estimated from the Kaplan-Meier method.
[b] Calculated using the log-log transformation (Brookmeyer-Crowley method).
[c] Median 95% CI based on Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties. p-value is from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm in the Safety Analysis Set.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. NC = Not Calculable (HR is NC when one treatment arm has zero events; log-rank p-value remains valid).
Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if all categories contain ≥10 patients across both arms combined.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.

	SG (N=124)	TPC (N=122)	Interaction p-value[1]

p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
Data Cut Date: 22 APR 2026.

Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
Data Cut Date: 22 APR 2026.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥5% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.
Data Cut Date: 22 APR 2026.

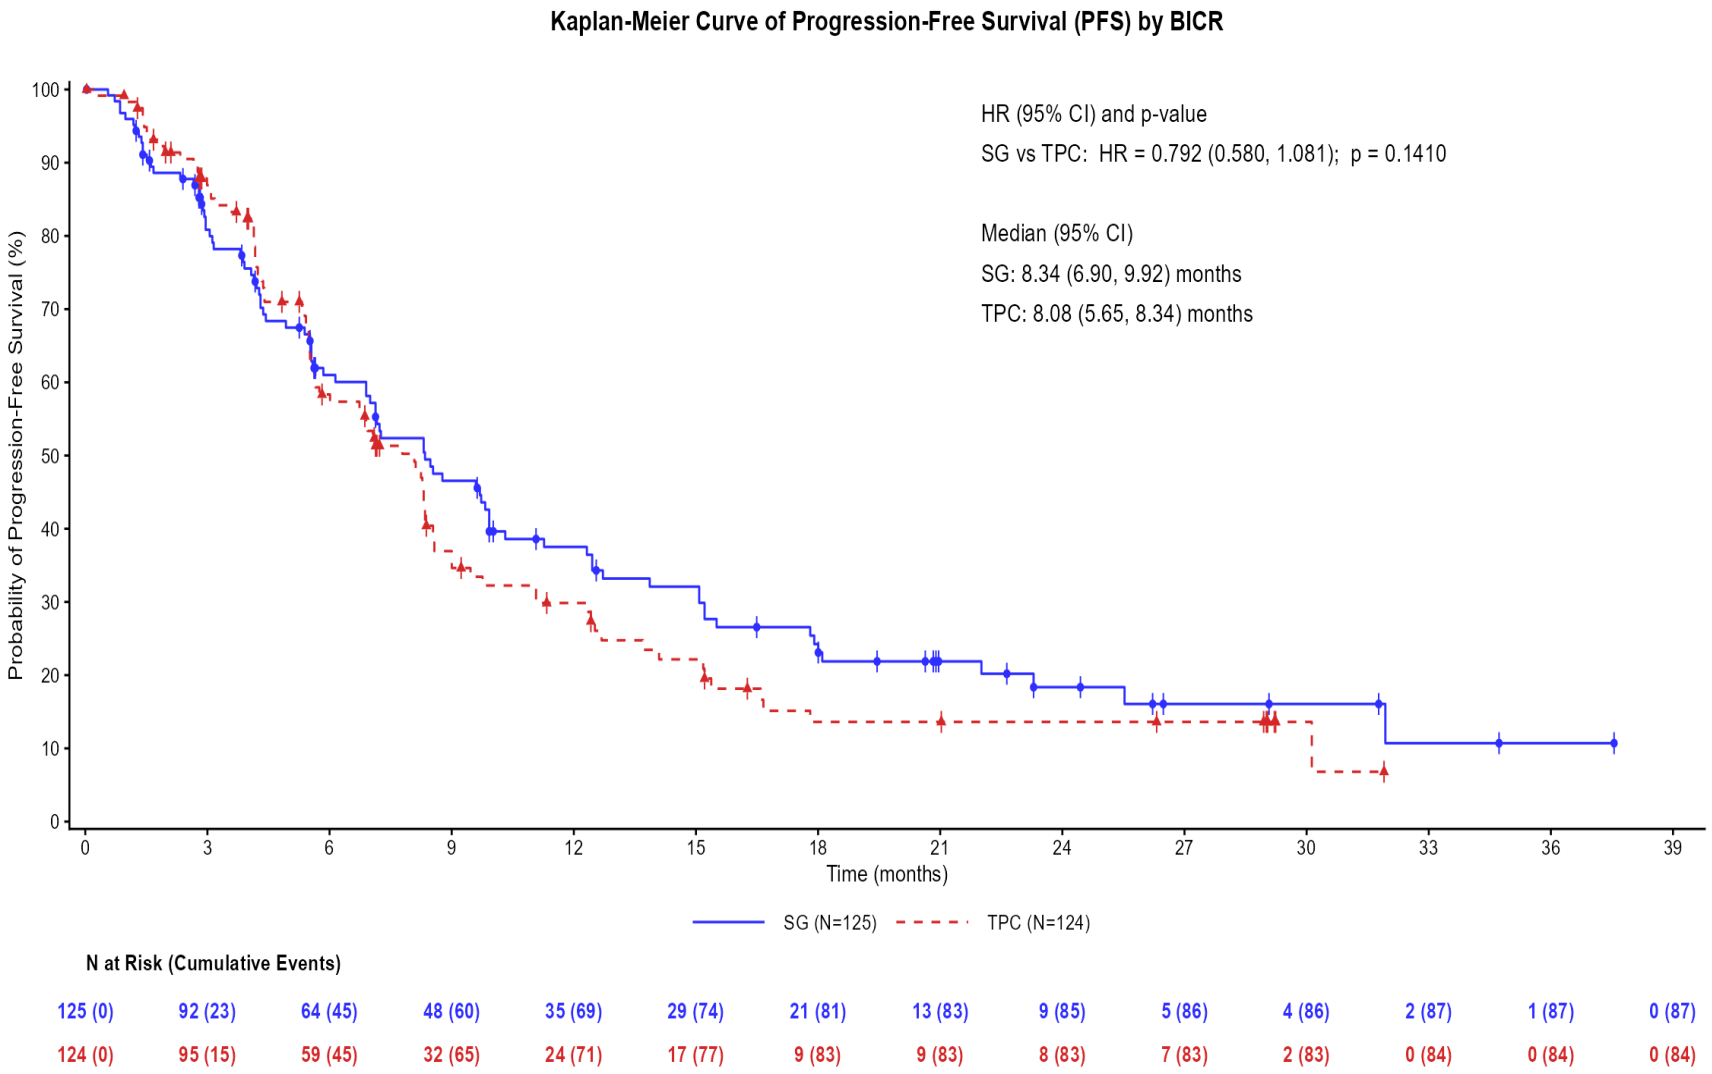
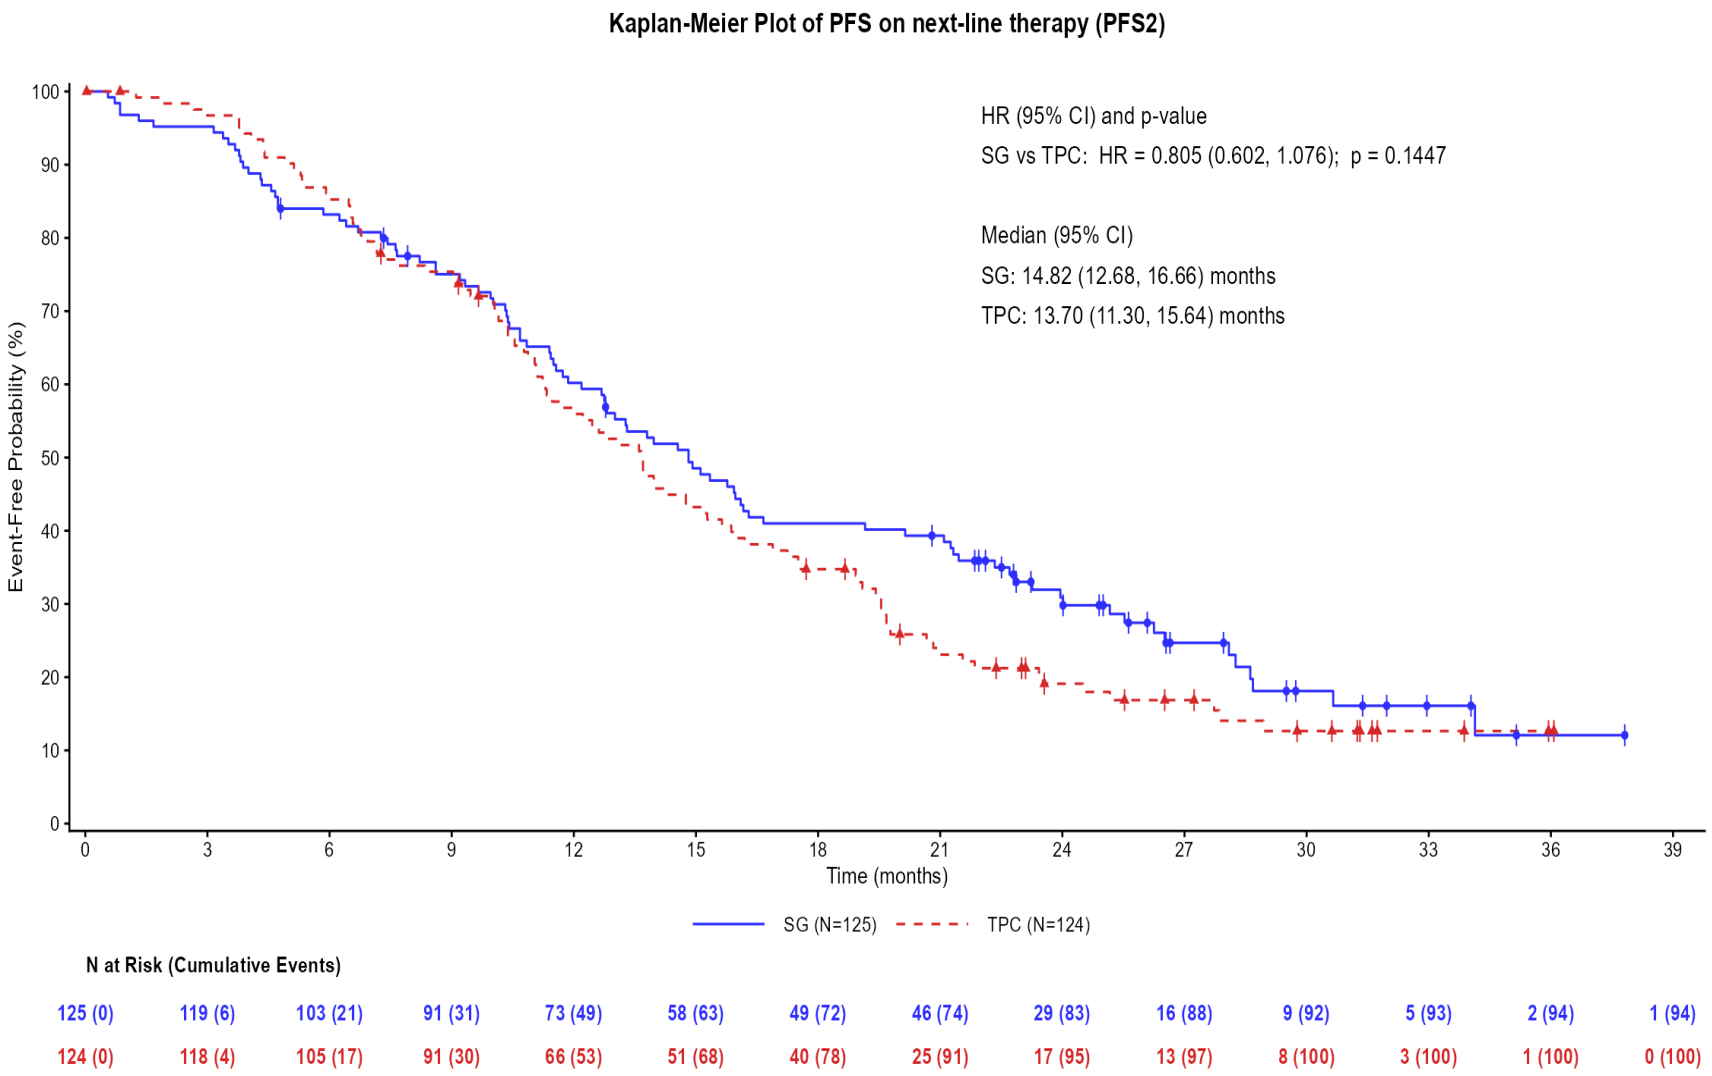
7. KM FIGURES — Efficacy



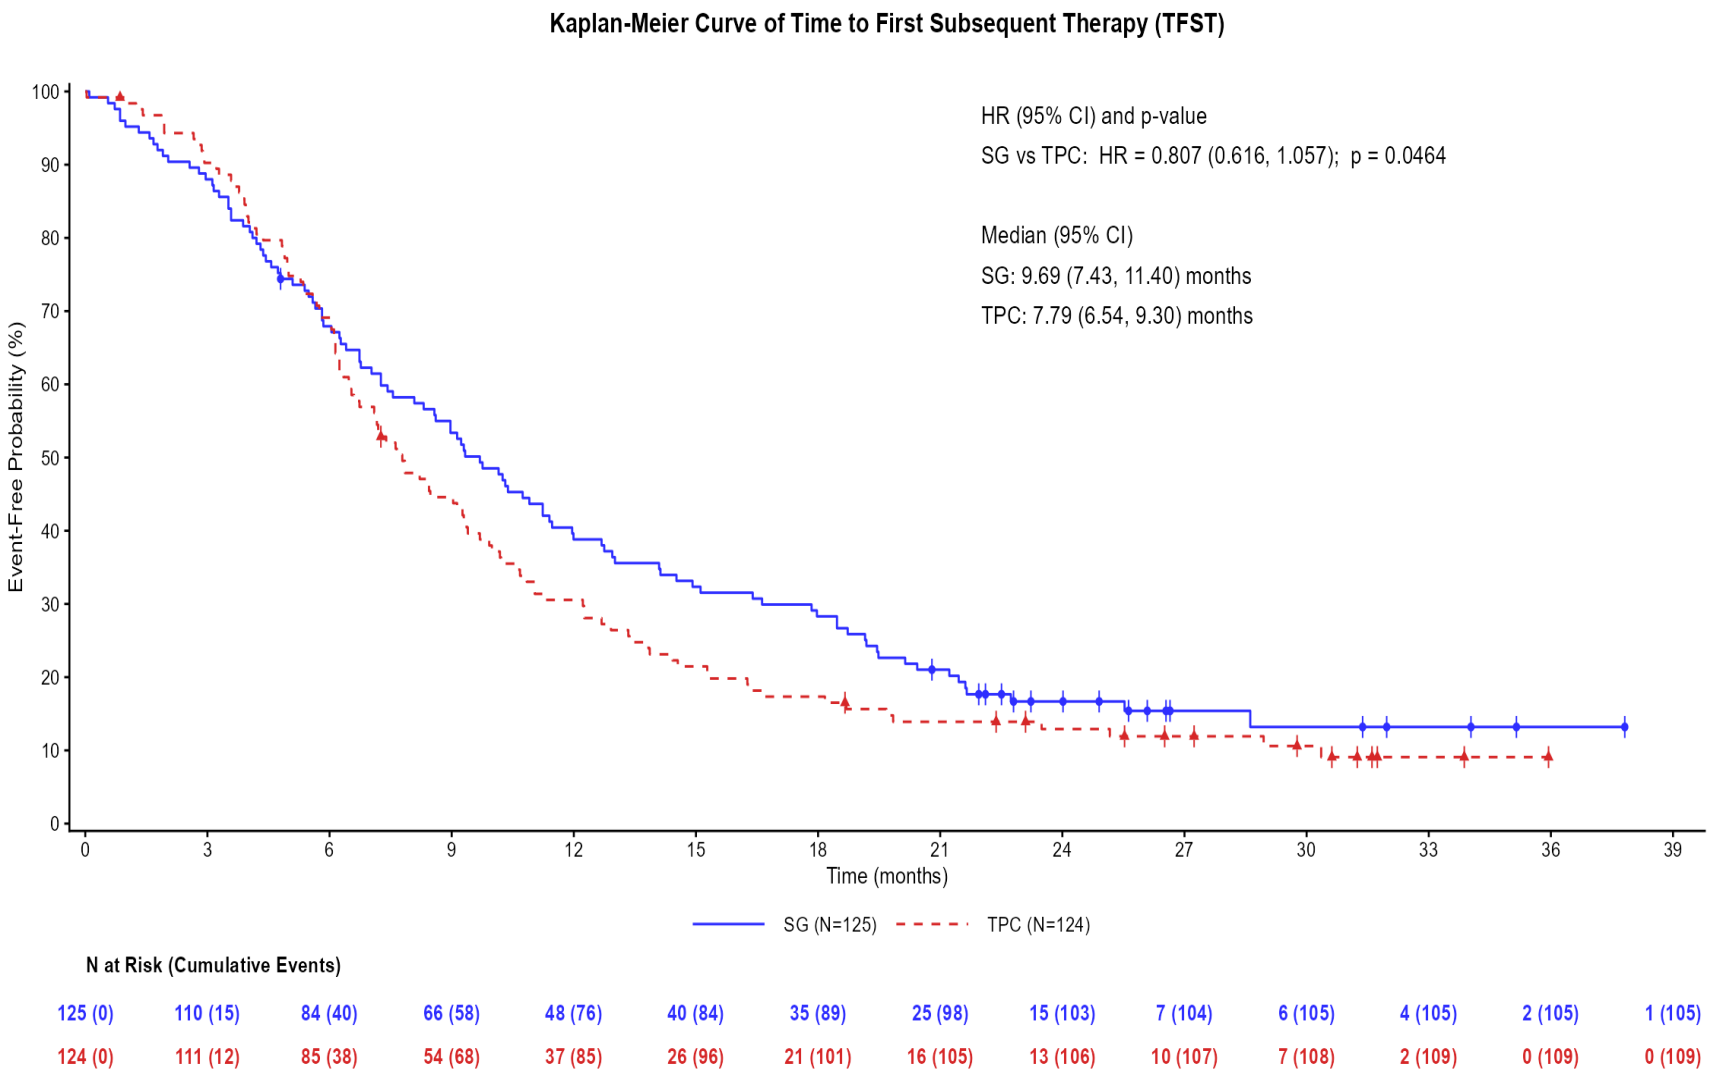
7.1. mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

7.2. Figure 1.1.1: Kaplan-Meier Curve of Overall Survival (OS) — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



Two-sided p-value from the log-rank test stratified by the randomization stratification factors (STRAT1, STRAT2) from IWRS; hazard ratio from a Cox model adjusted for the same factors as covariates. SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.3. Figure 1.1.2: Kaplan-Meier Curve of Progression-Free Survival (PFS) by BICR — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

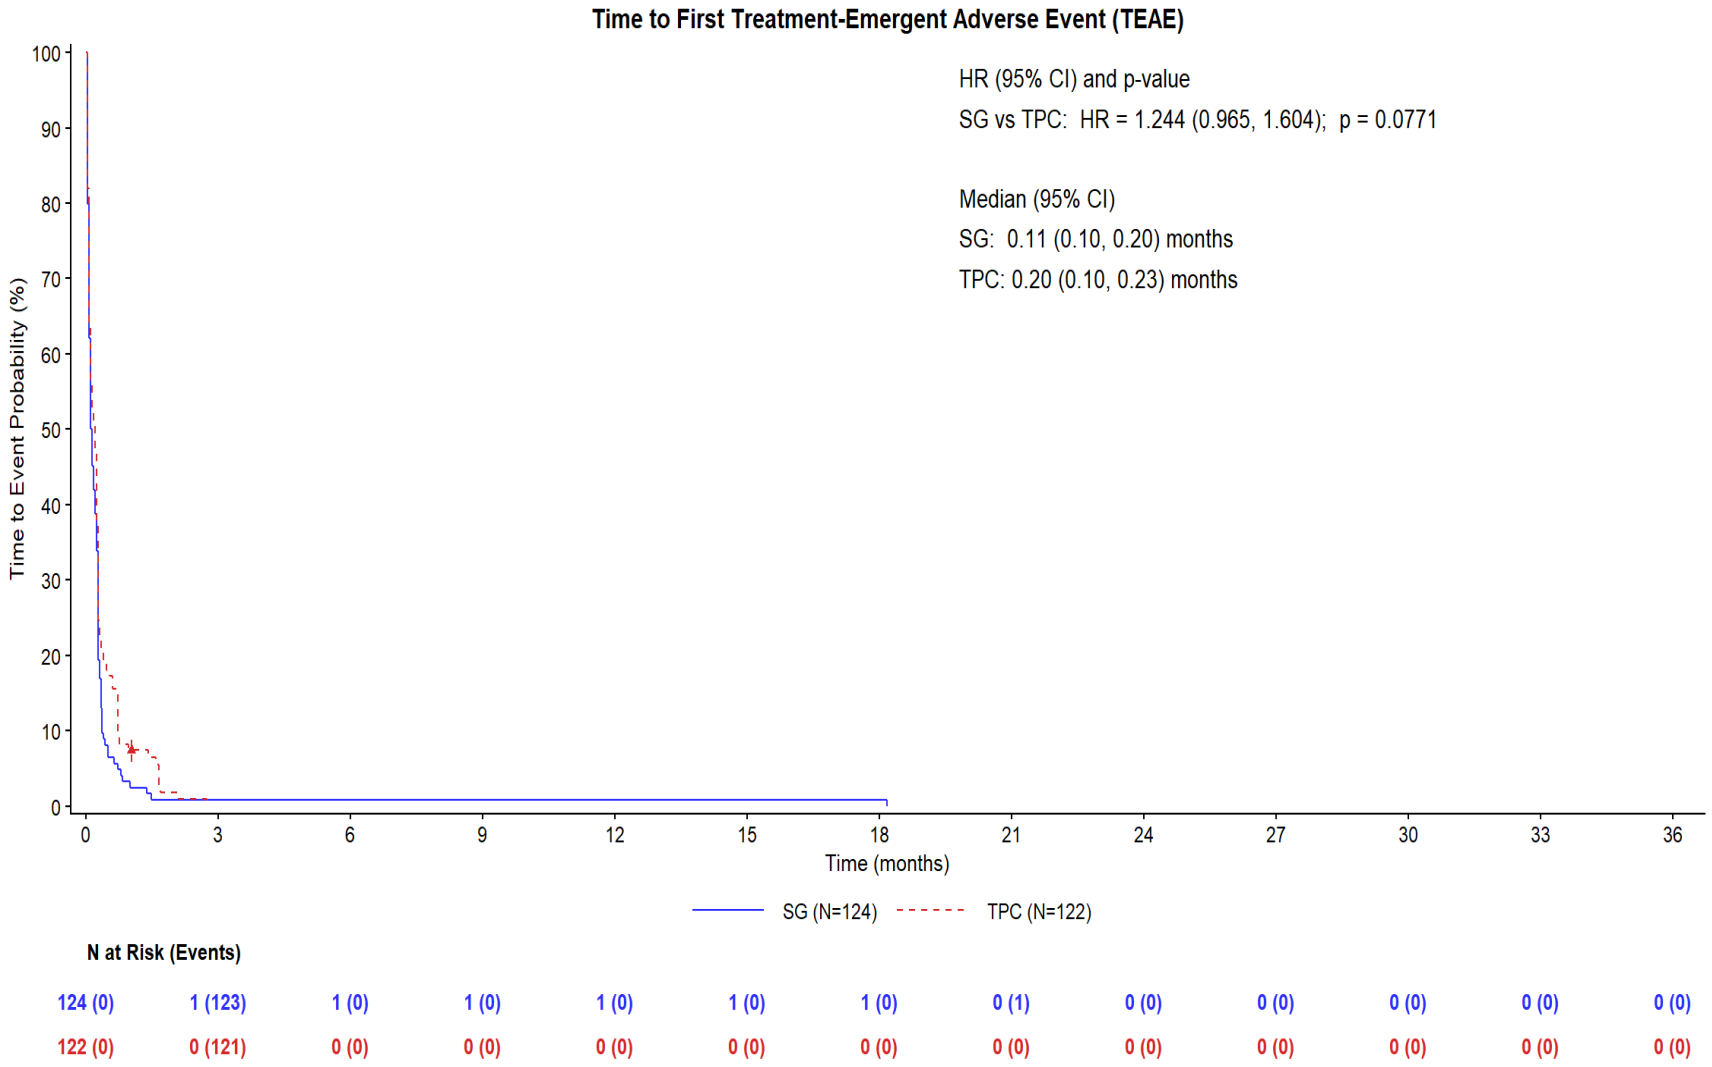


SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.4. Figure 1.1.3: Kaplan-Meier Plot of PFS on next-line therapy (PFS2) — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

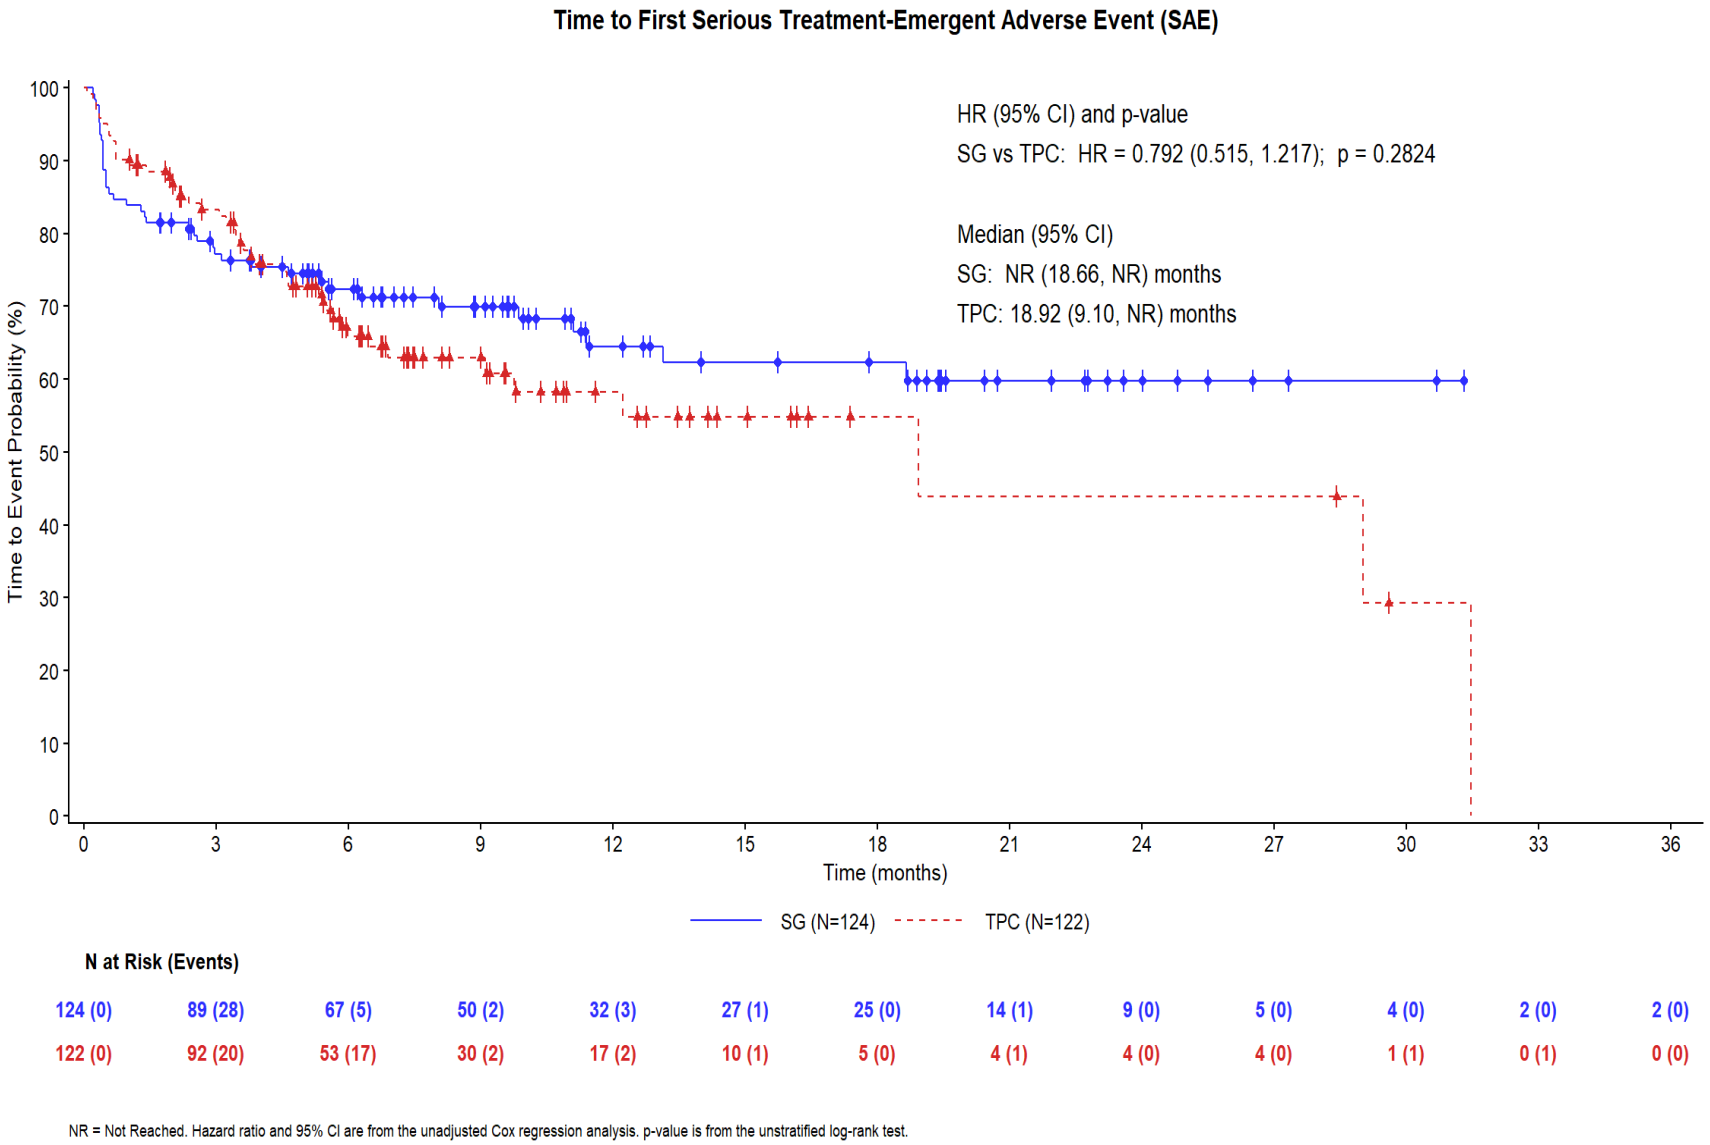
SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

7.5. Figure 1.1.4: Kaplan-Meier Curve of Time to First Subsequent Therapy (TFST) — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



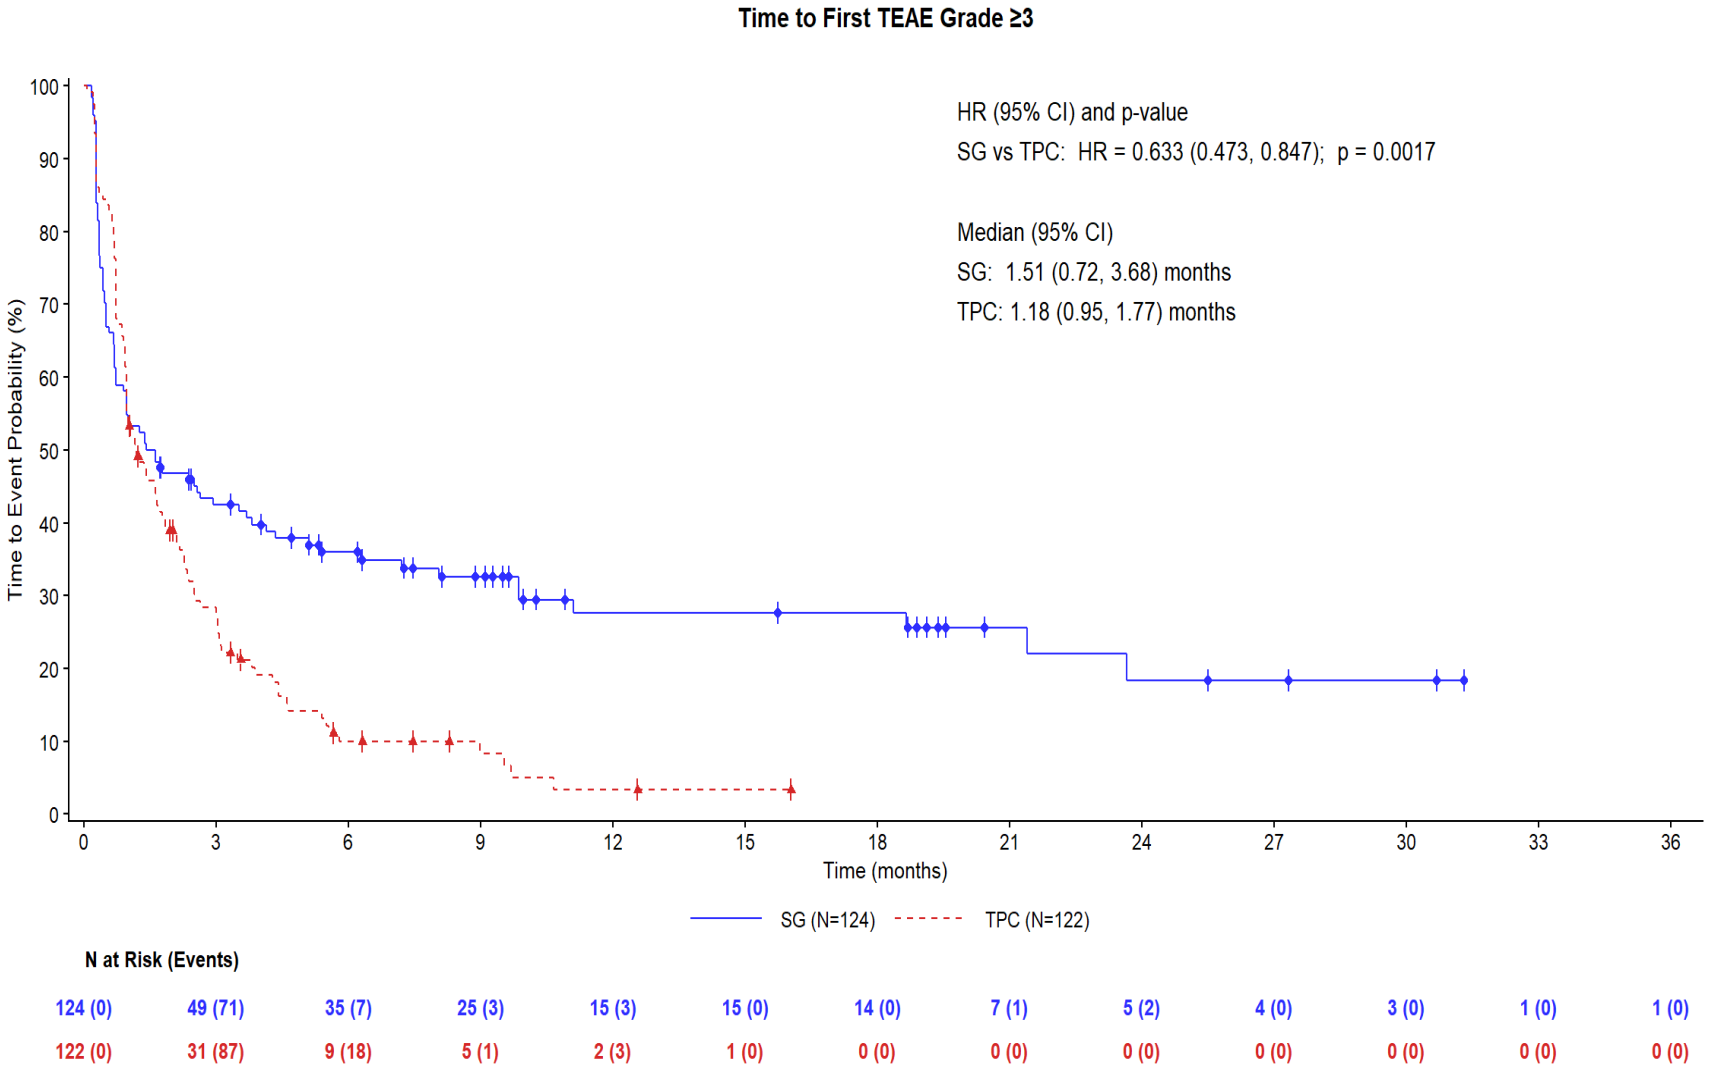
Two-sided p-value from the log-rank test stratified by the randomization stratification factors (STRAT1, STRAT2) from IWRS; hazard ratio from a Cox model adjusted for the same factors as covariates. SG = sacituzumab govitecan; TPC = treatment of physician's choice; HR = hazard ratio; CI = confidence interval; NR = Not Reached.

8. KM FIGURES — Safety



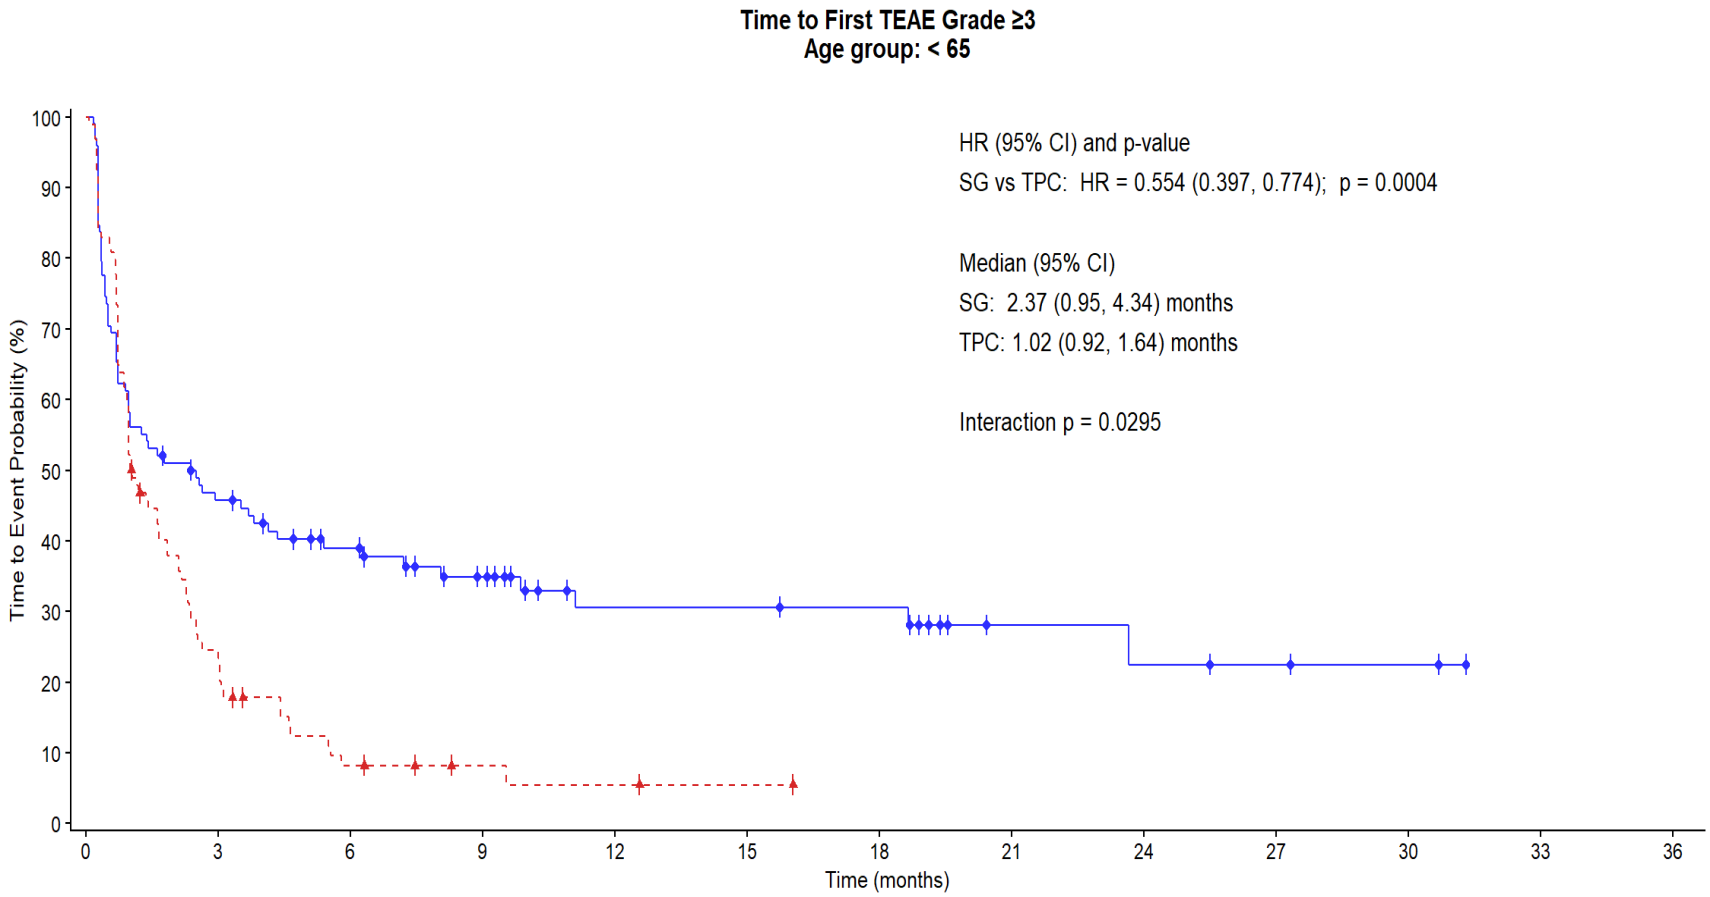
8.1. mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

8.2. Figure 1.1.1: Kaplan Meier Plot of Time to First TEAE — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



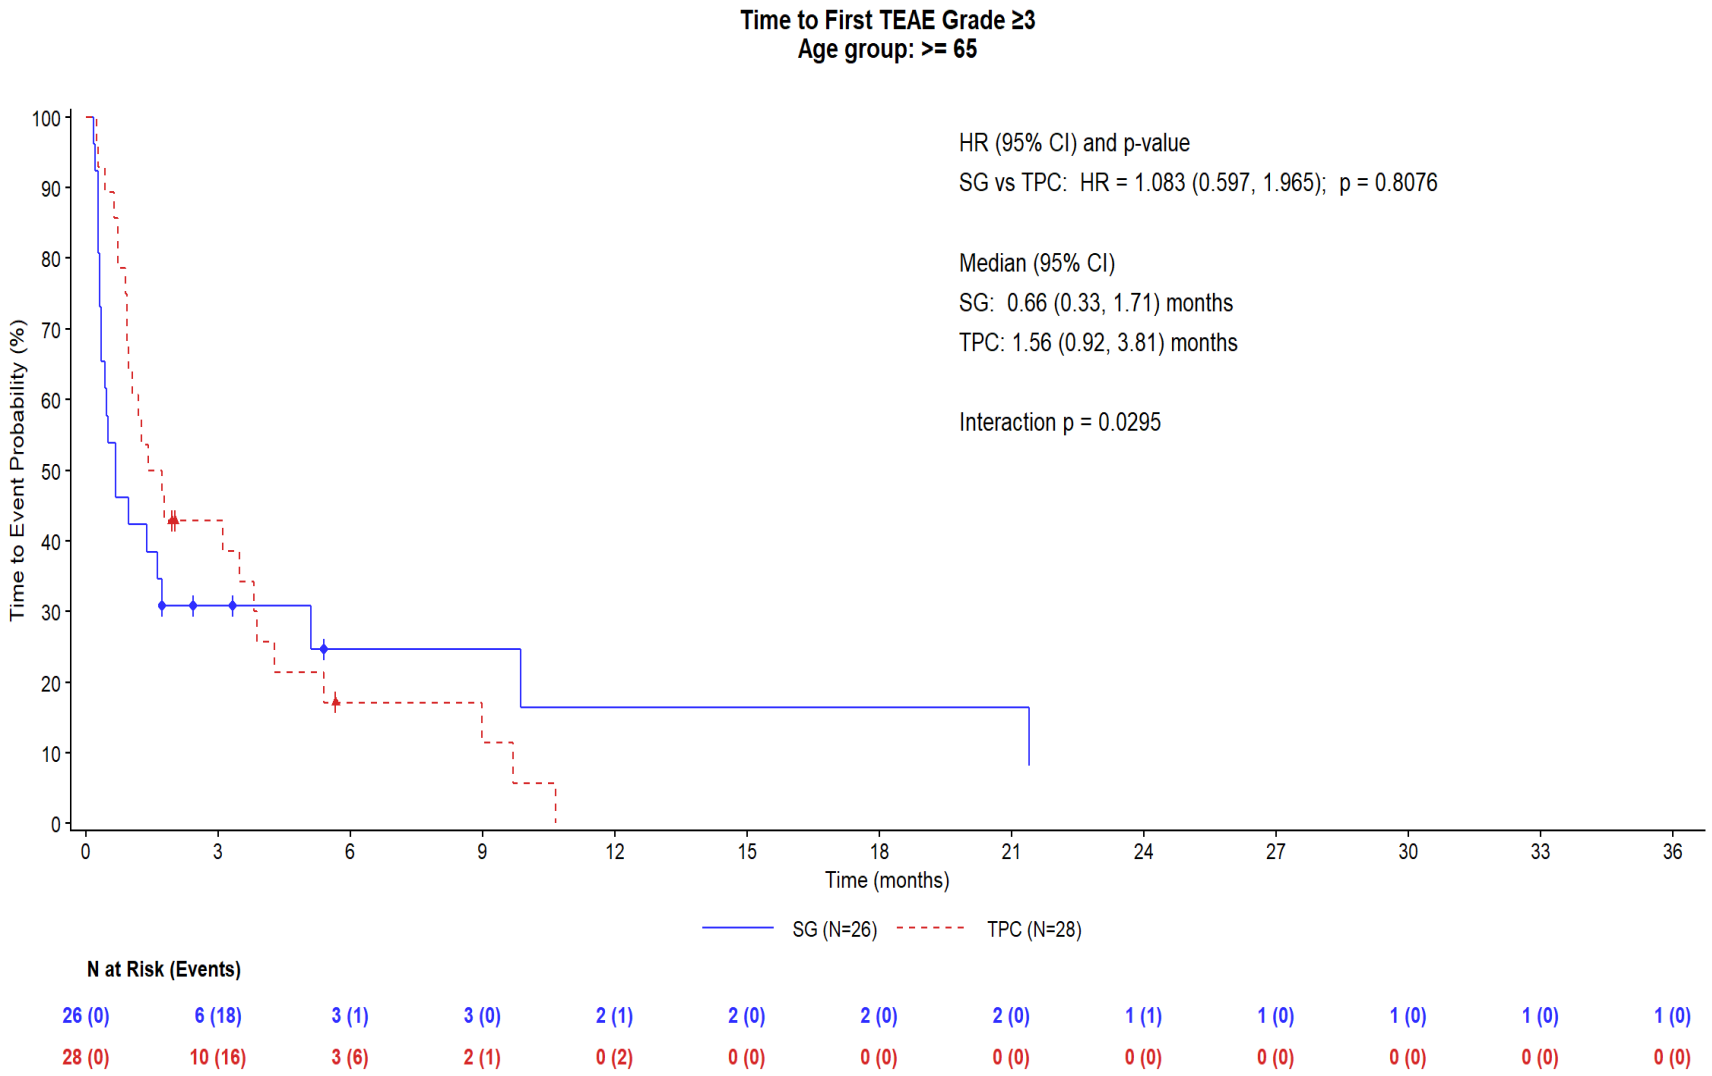
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.3. Figure 1.1.2: Kaplan Meier Plot of Time to First Serious TEAE (SAE) — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



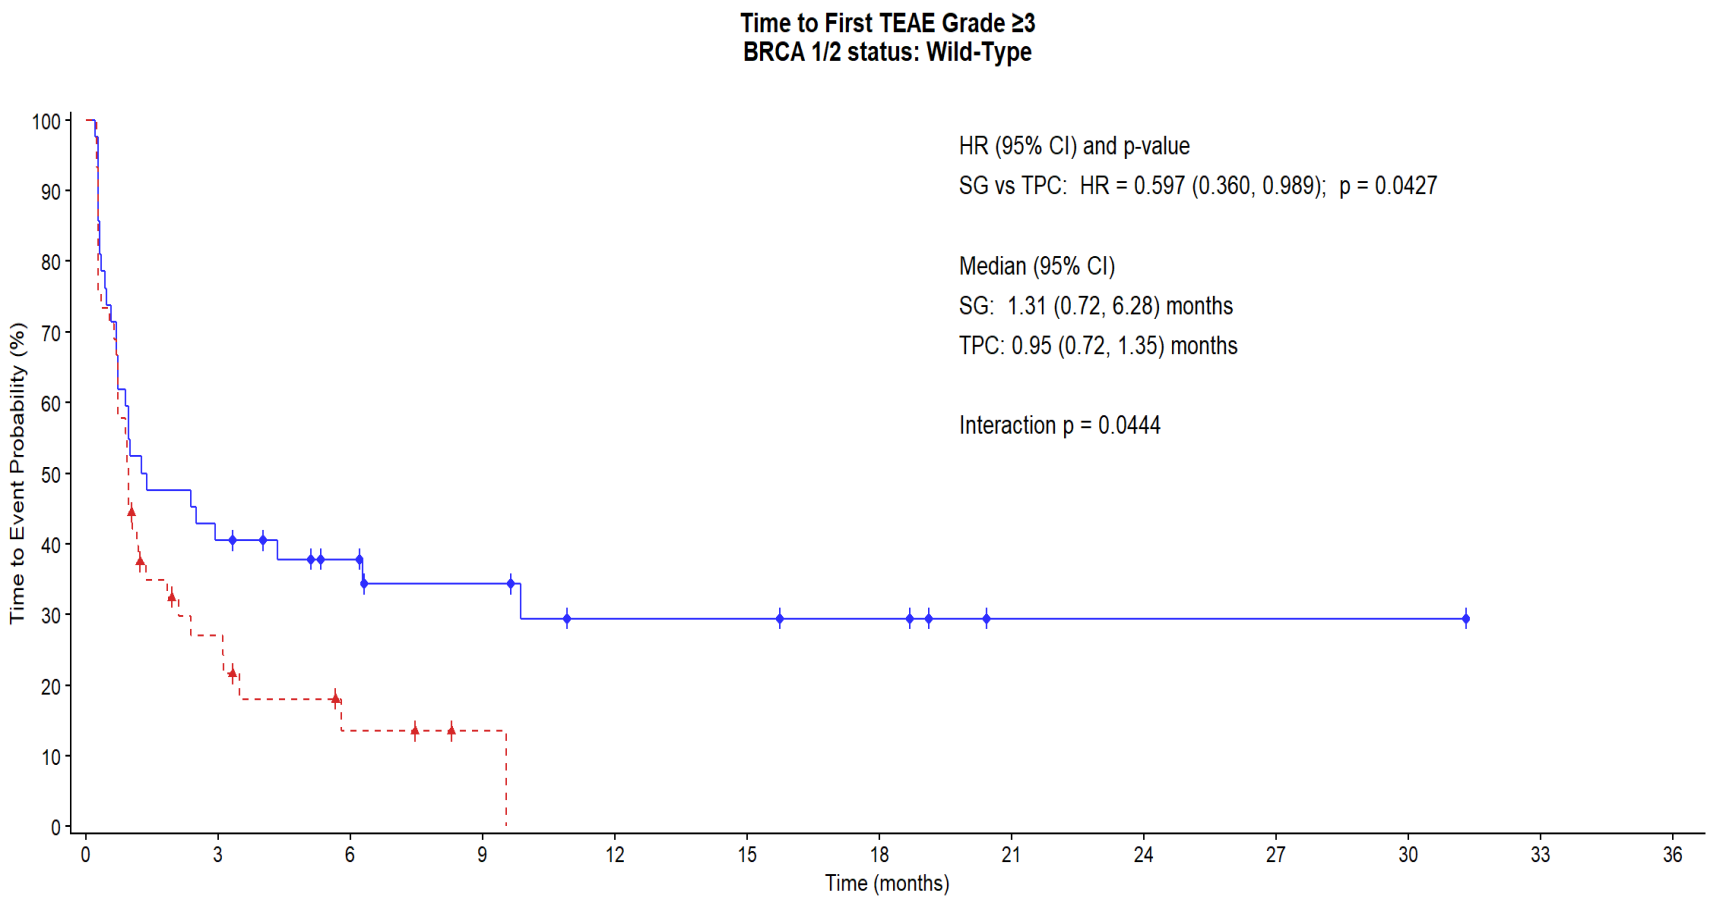
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.4. Figure 1.1.3: Kaplan Meier Plot of Time to First TEAE Grade 3 or higher — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



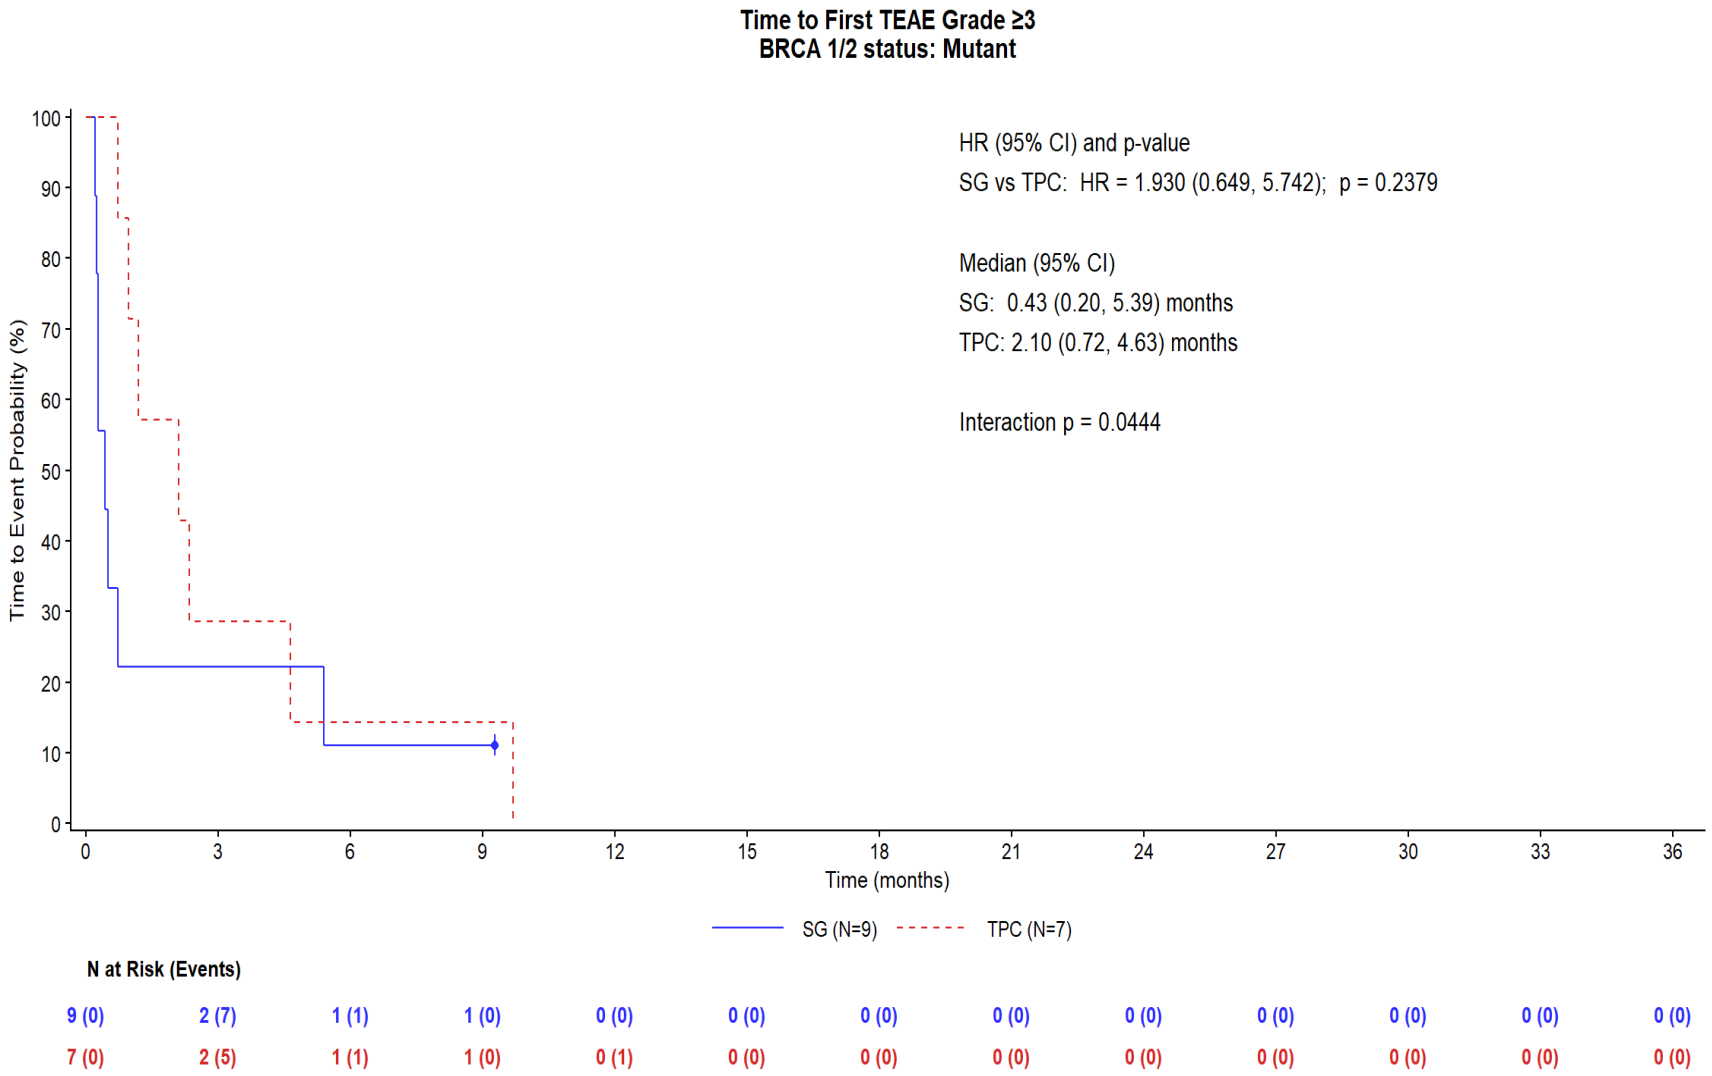
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.5. Figure 1.1.4: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) Age group less than 65 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



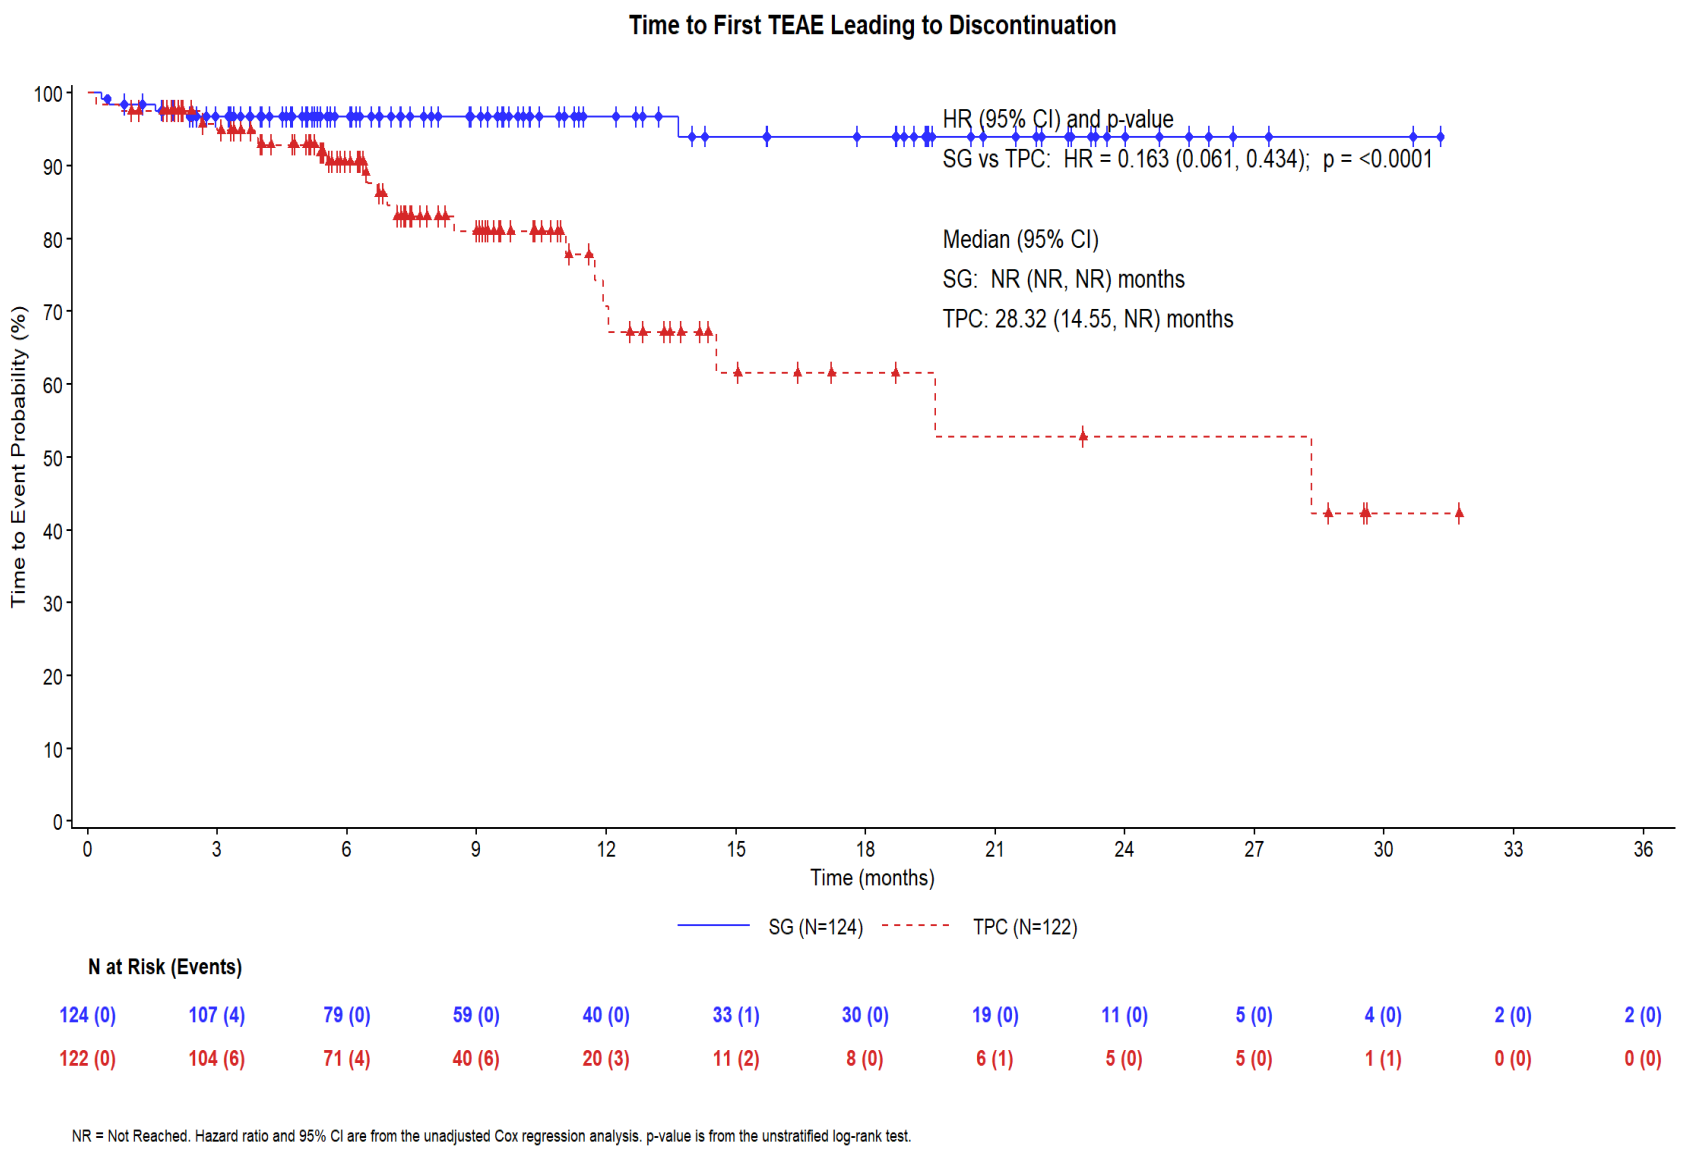
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.6. Figure 1.1.5: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) Age group greater than or equal to 65 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



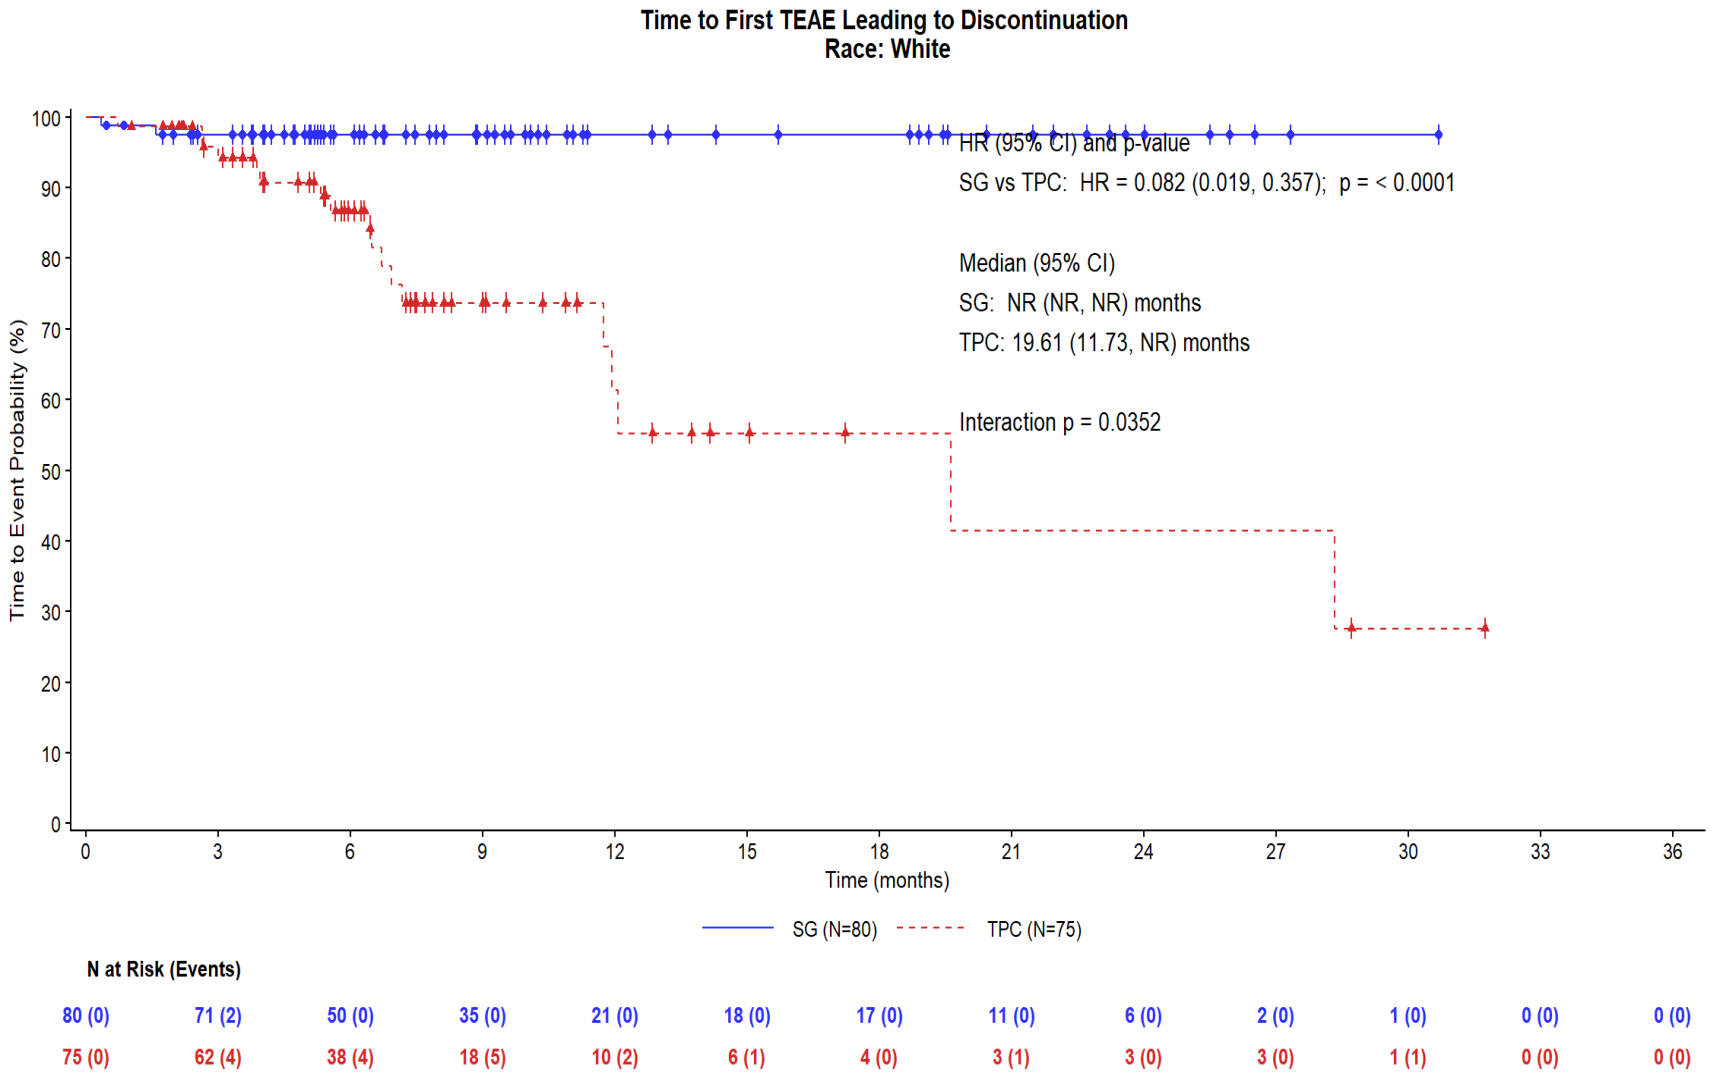
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.7. Figure 1.1.6: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) BRCA 1 2 status Wild Type — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



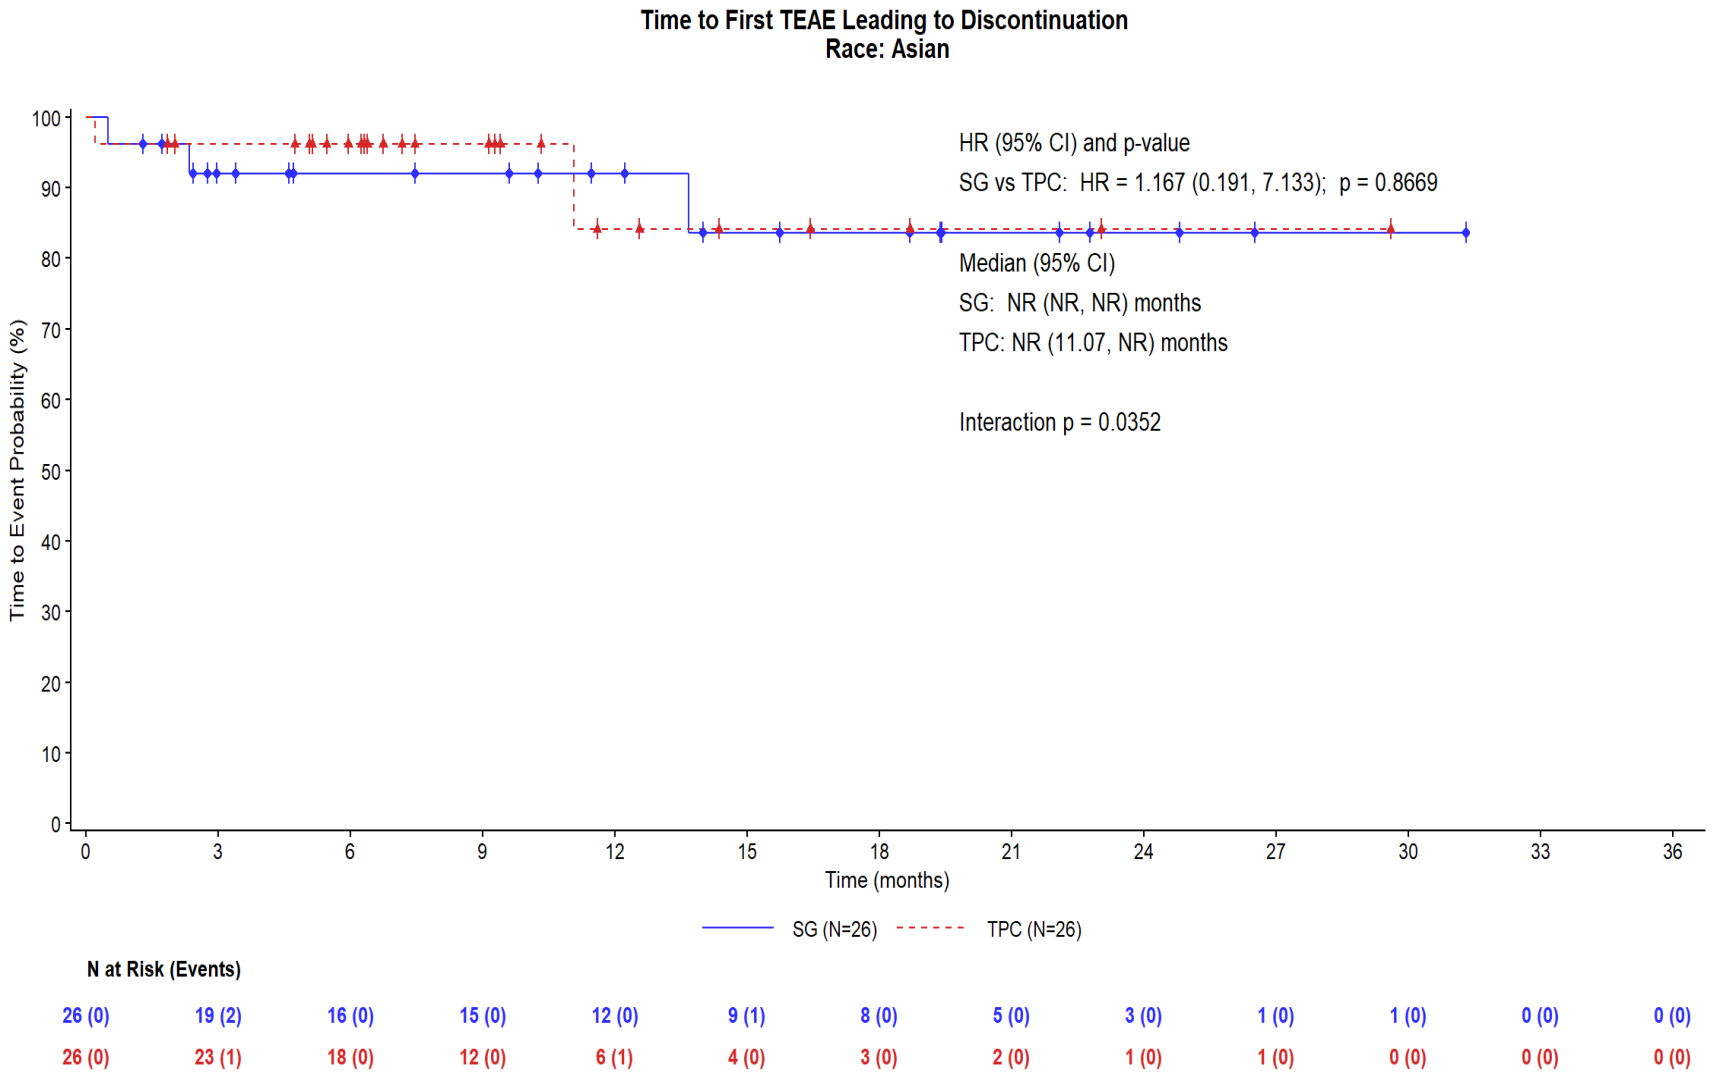
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.8. Figure 1.1.7: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) BRCA 1 2 status Mutant — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



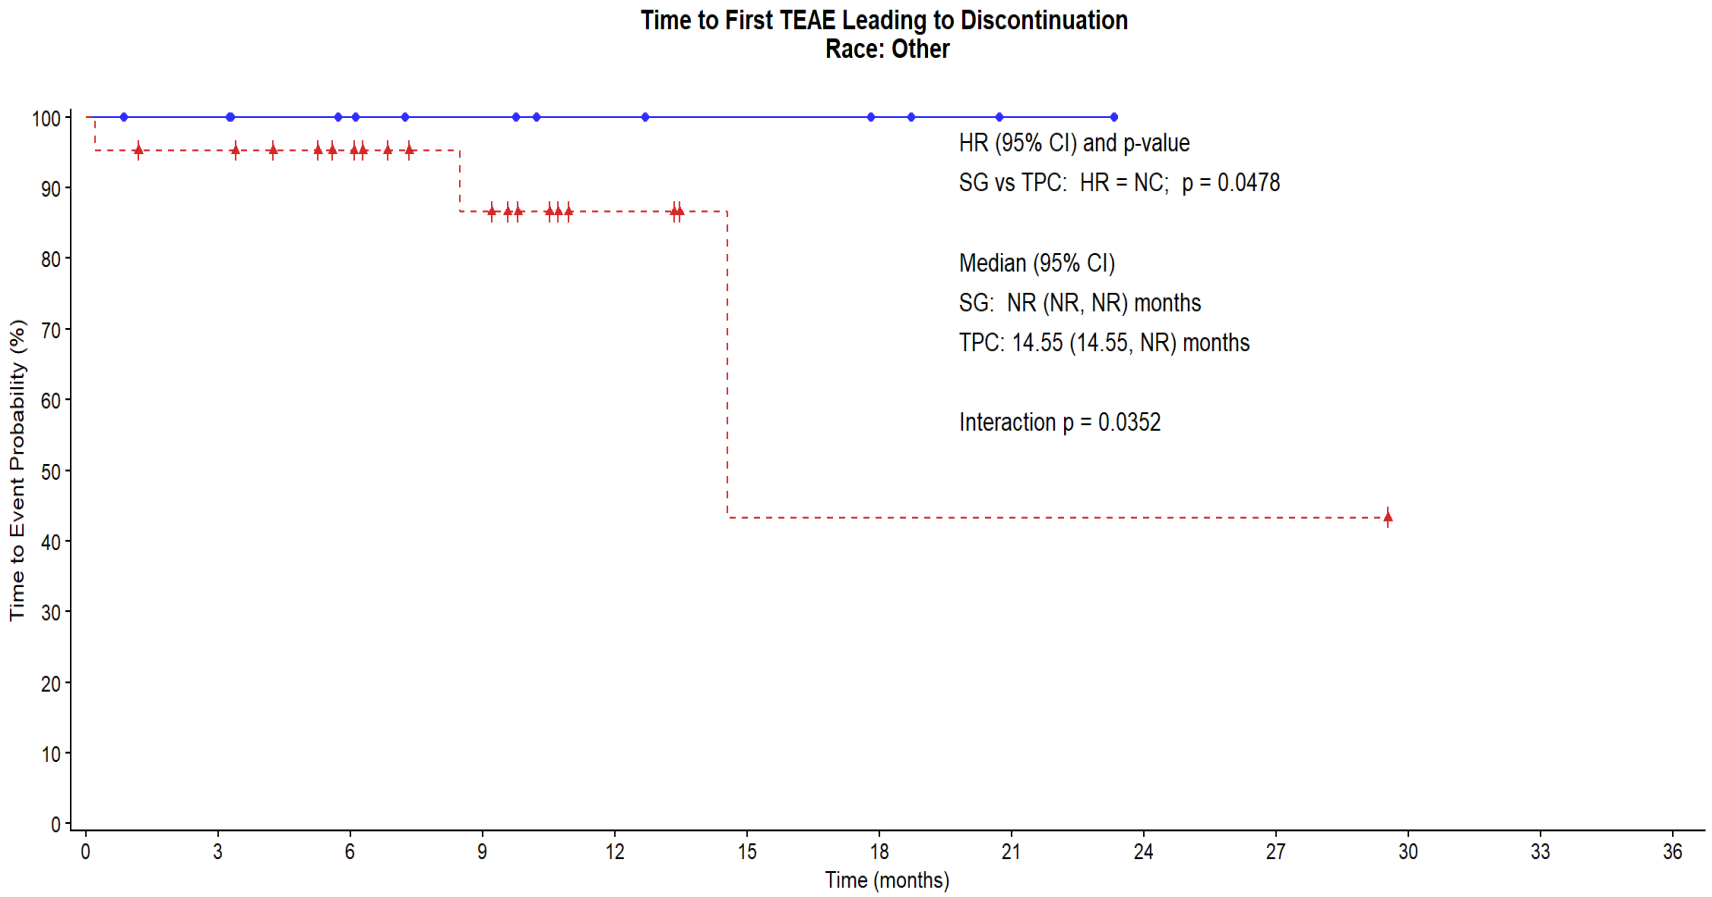
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.9. Figure 1.1.8: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



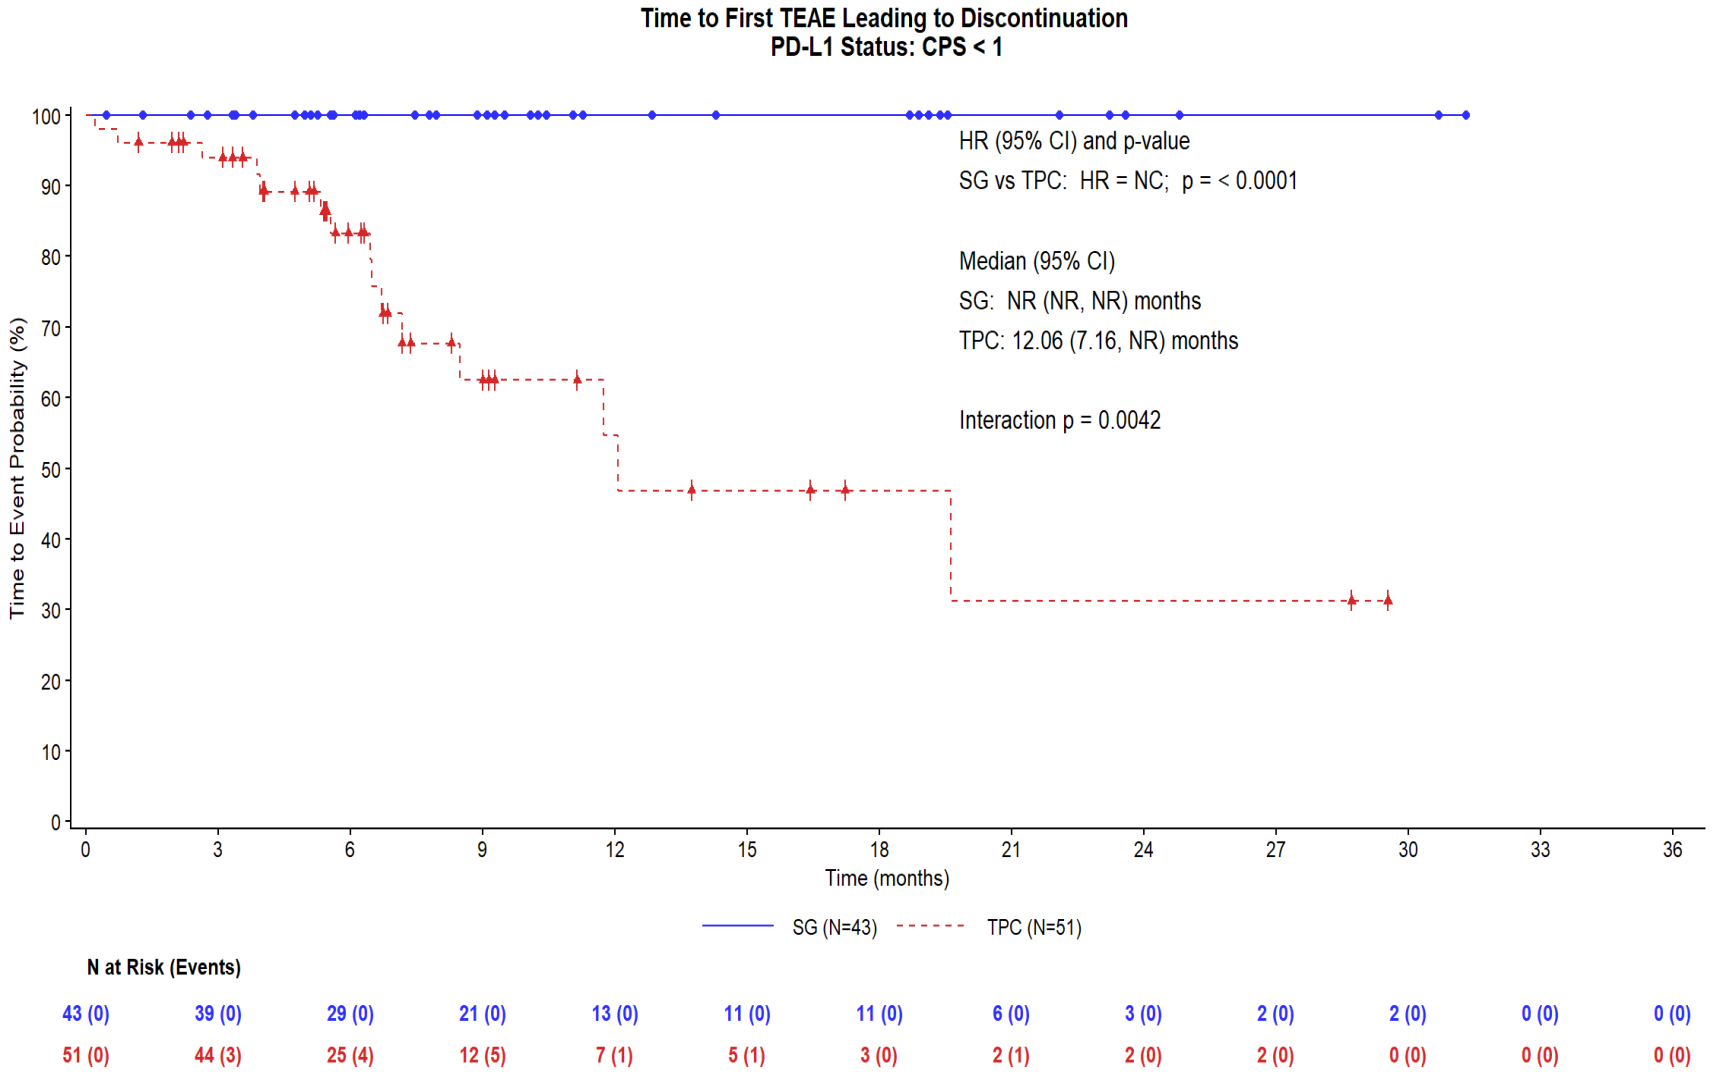
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.10. Figure 1.1.9: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation Race White — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



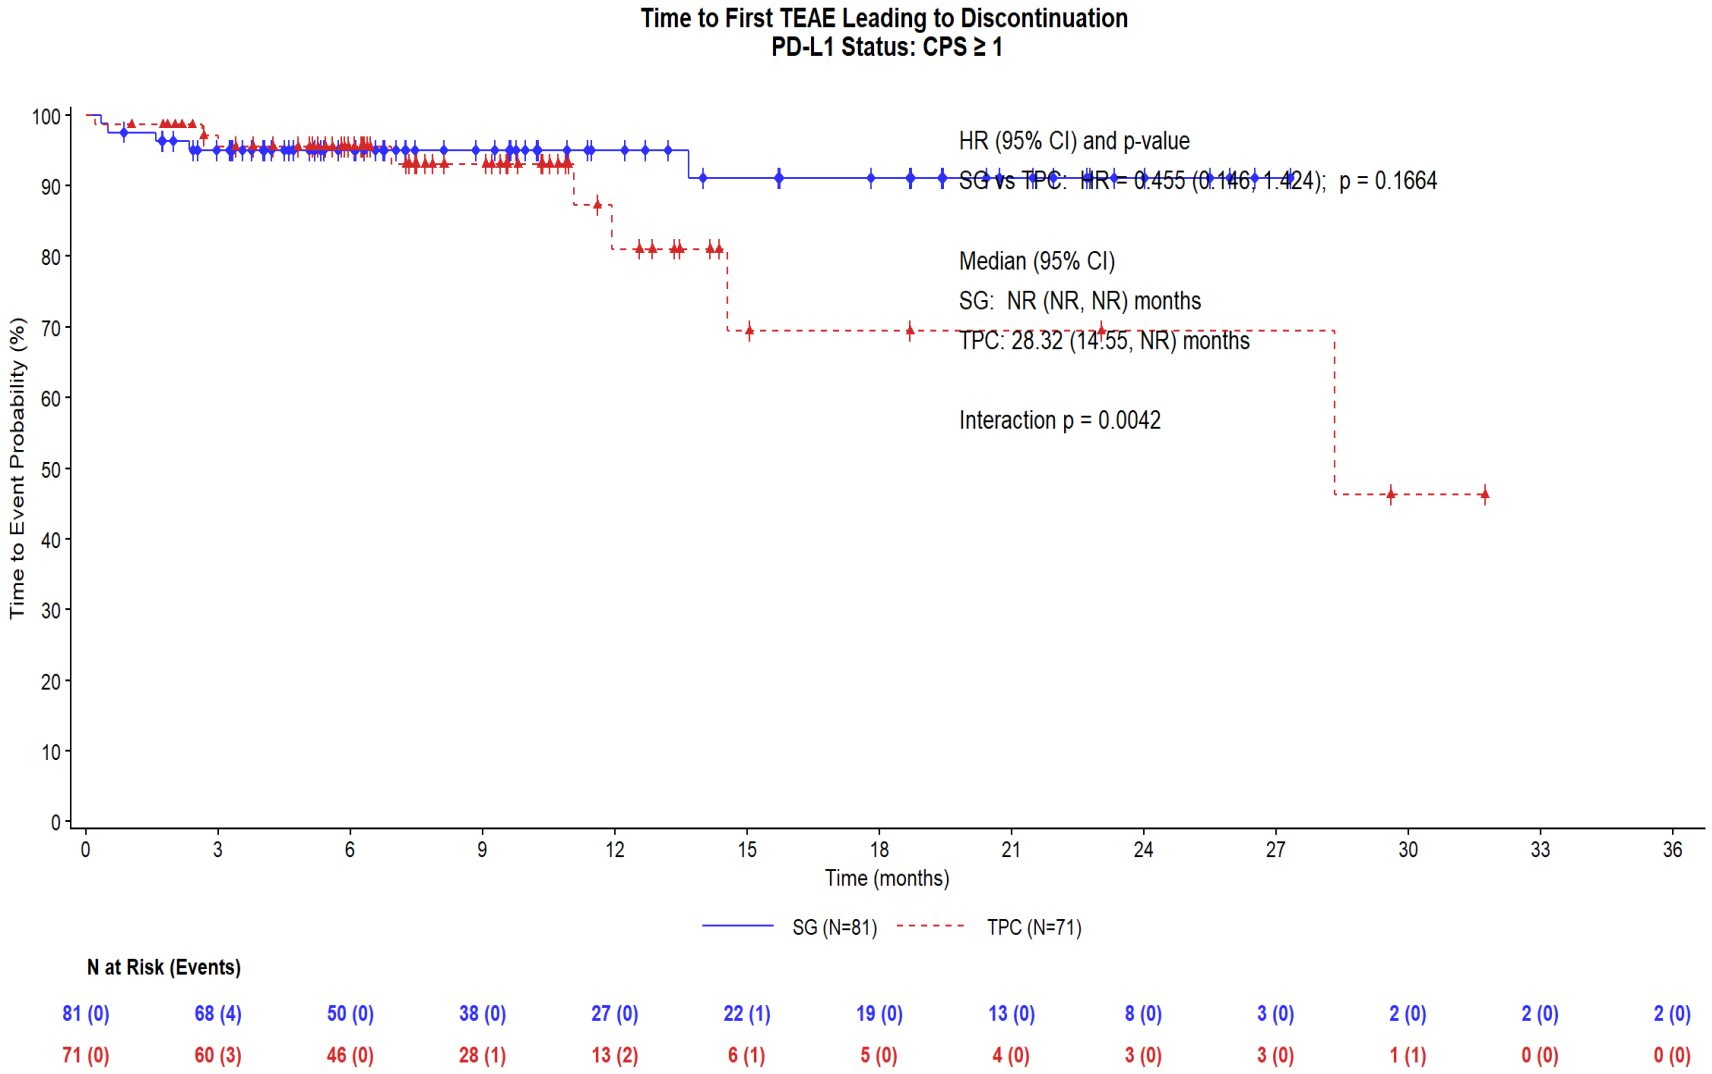
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.11. Figure 1.1.10: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation Race Asian — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



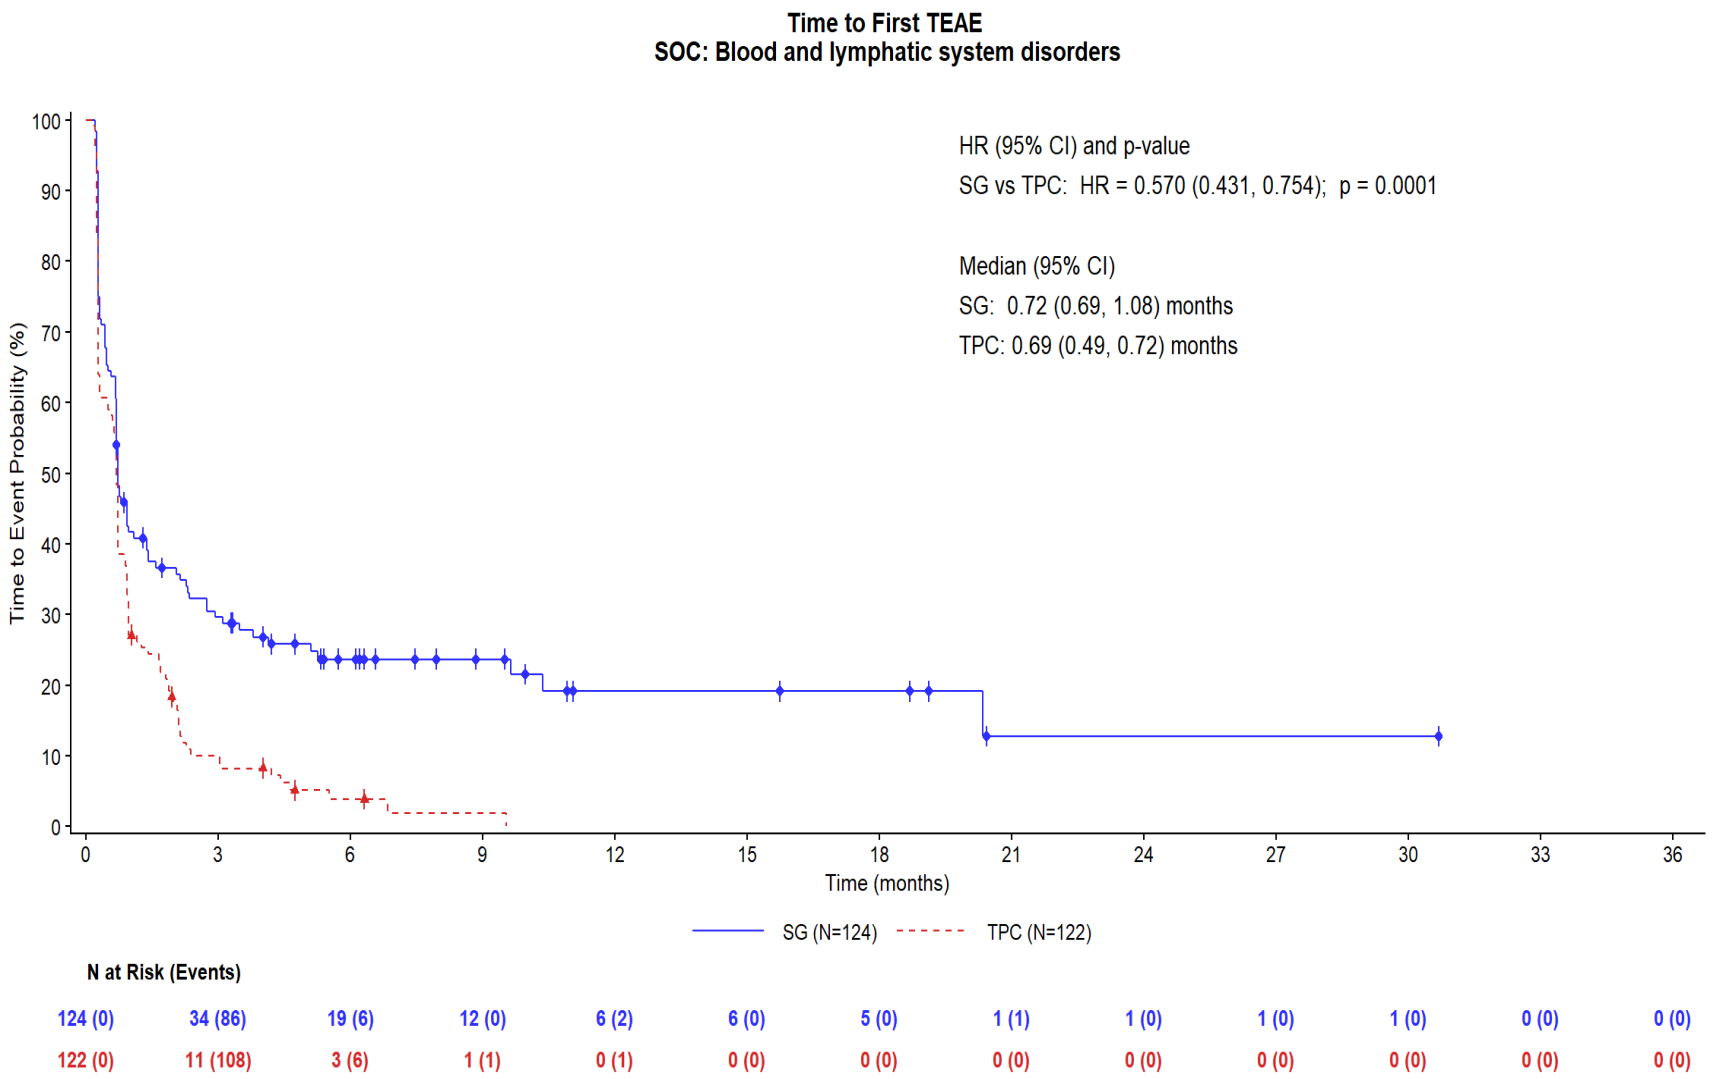
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.12. Figure 1.1.11: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation Race Other — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



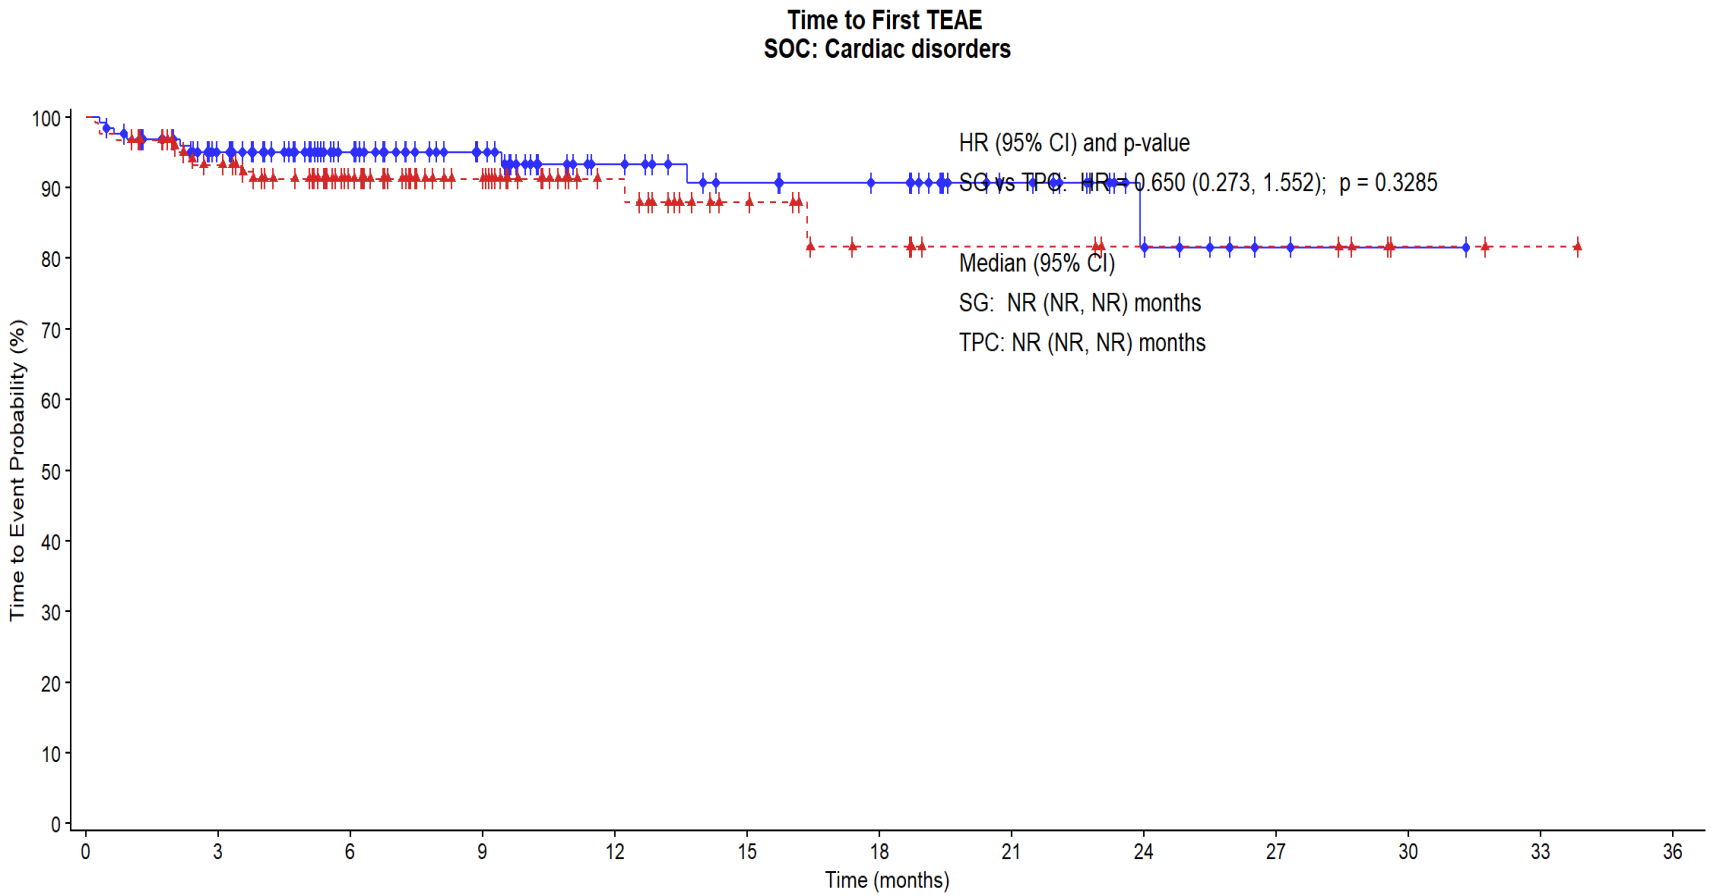
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.13. Figure 1.1.12: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation PD L1 Status CPS less than 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



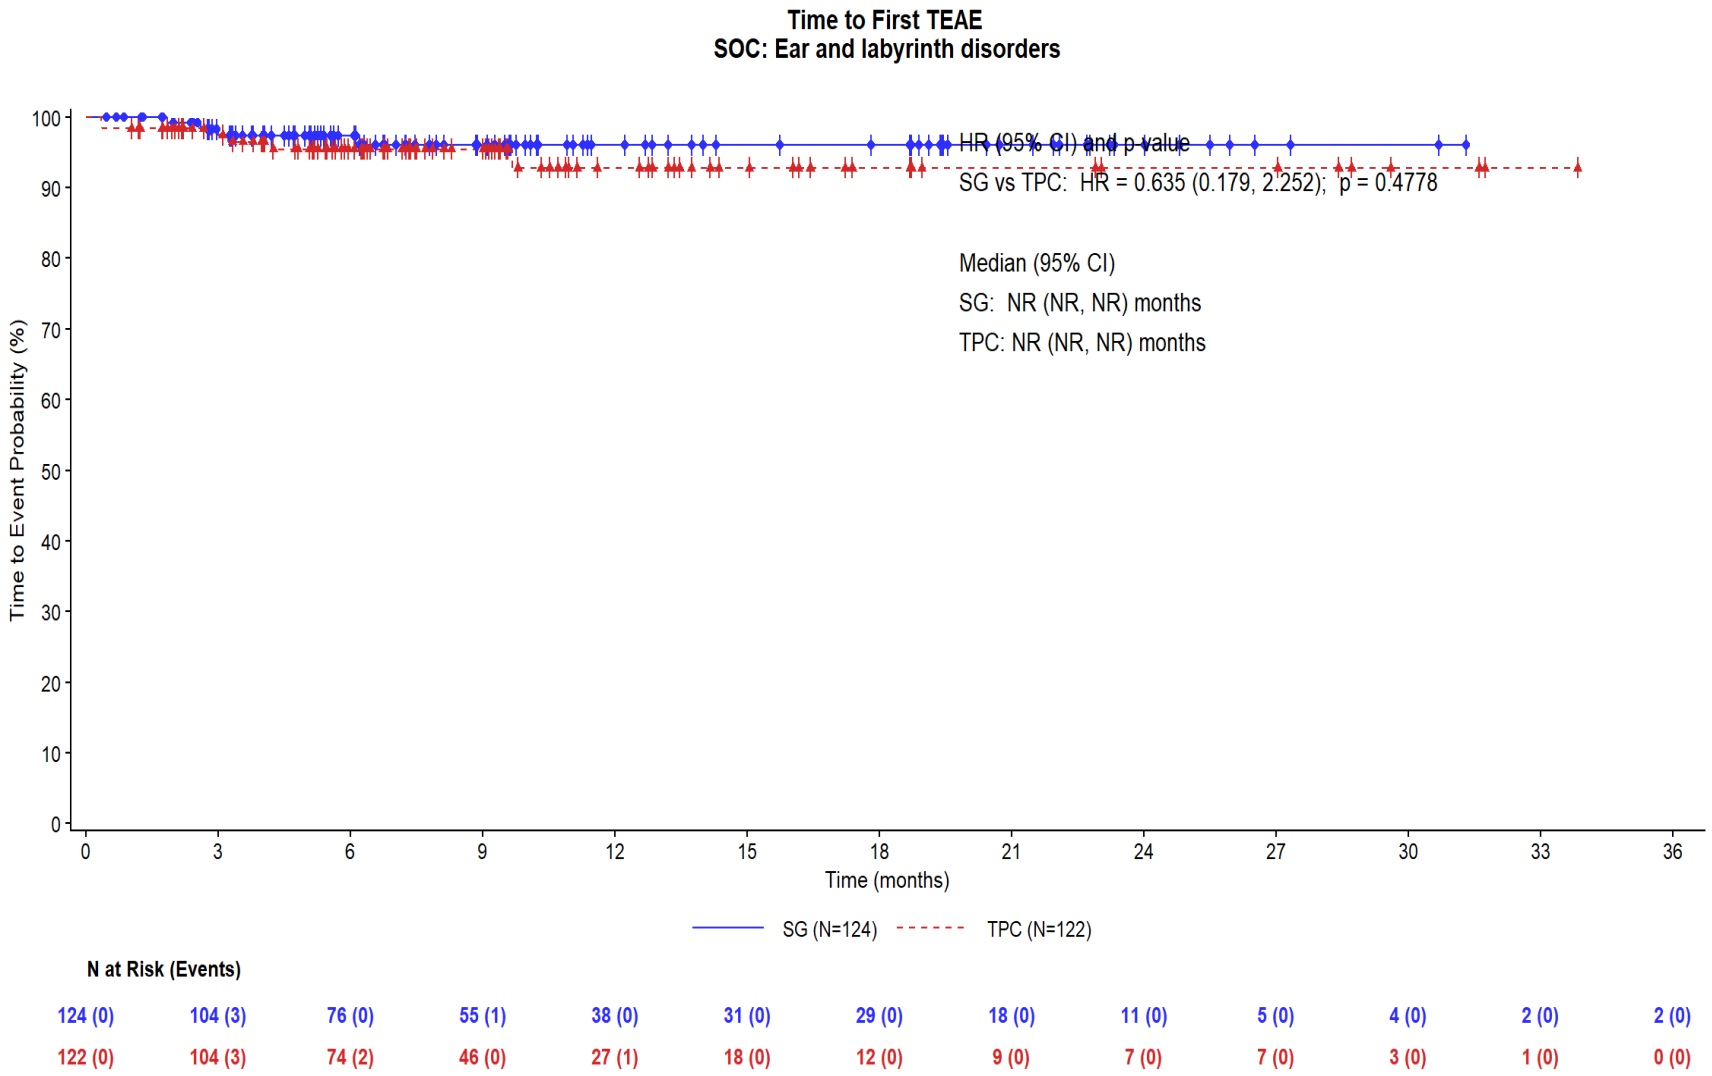
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.14. Figure 1.1.13: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation PD L1 Status CPS 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



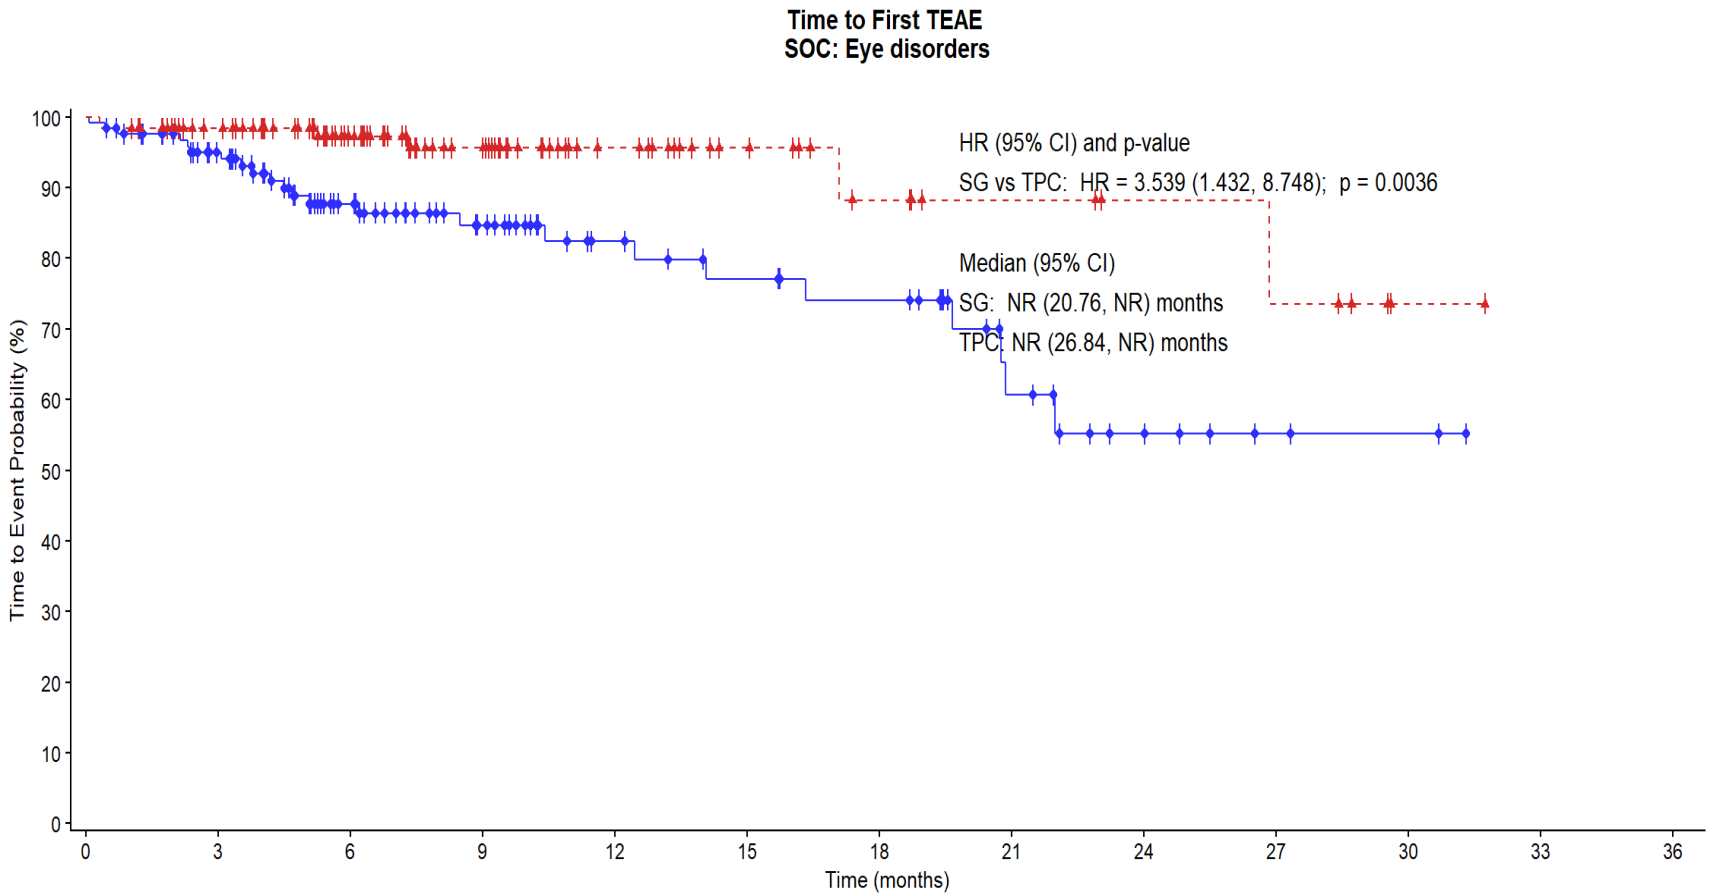
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.15. Figure 1.1.14: Kaplan Meier Plot of Time to First TEAE by SOC Blood and lymphatic system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



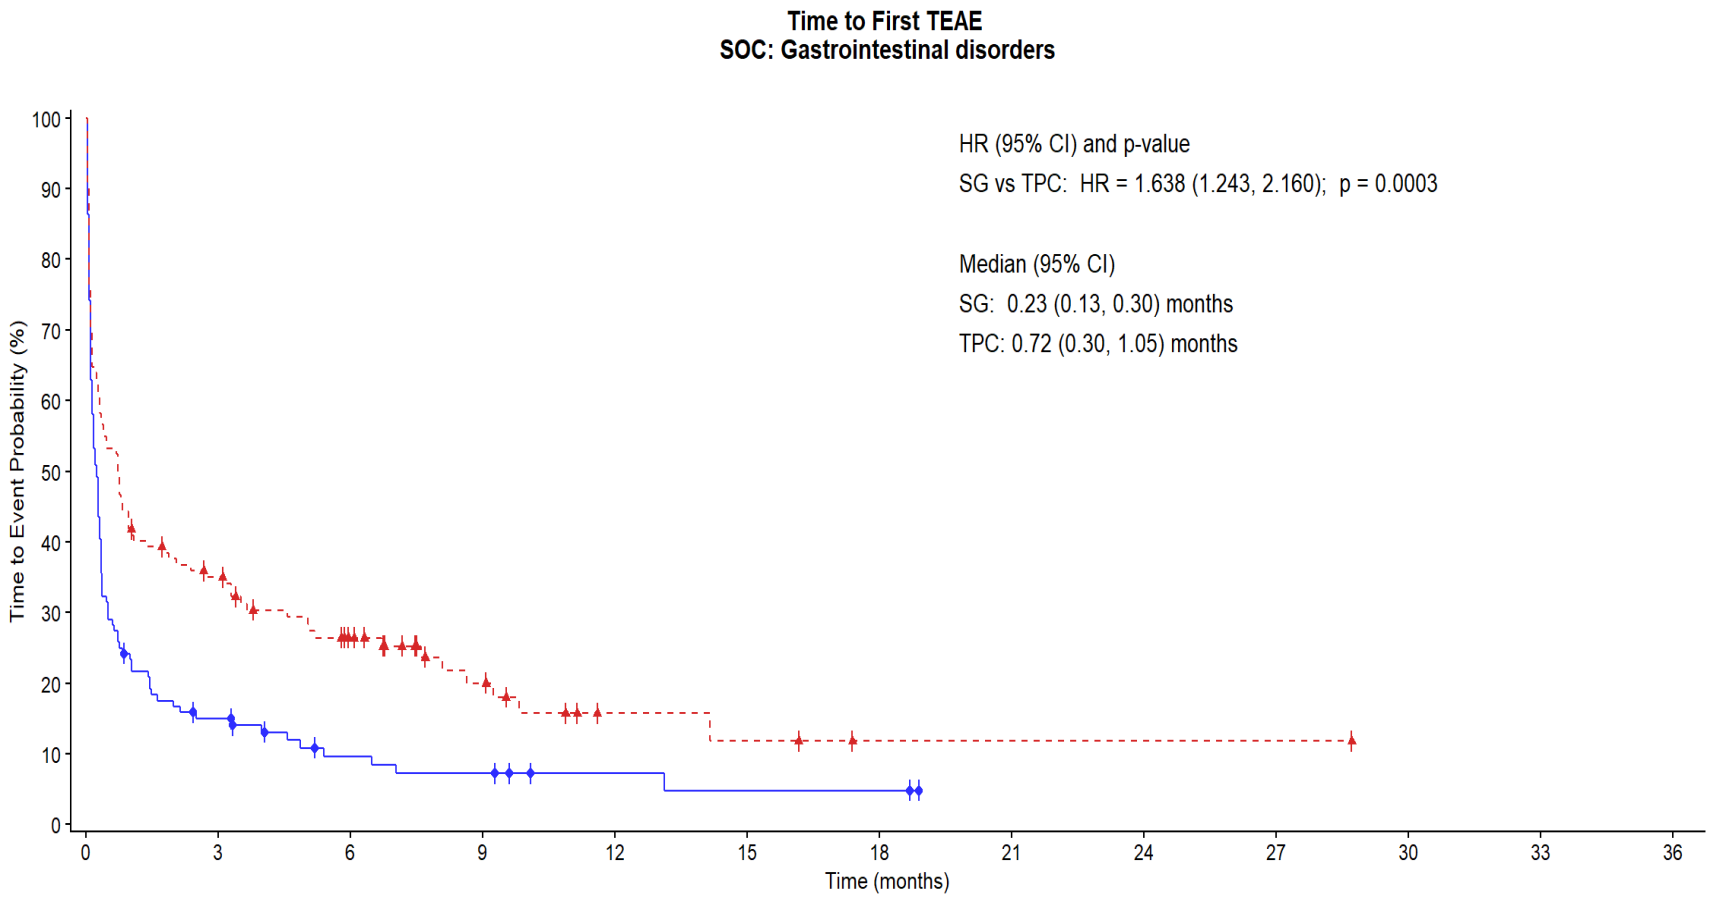
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.16. Figure 1.1.15: Kaplan Meier Plot of Time to First TEAE by SOC Cardiac disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



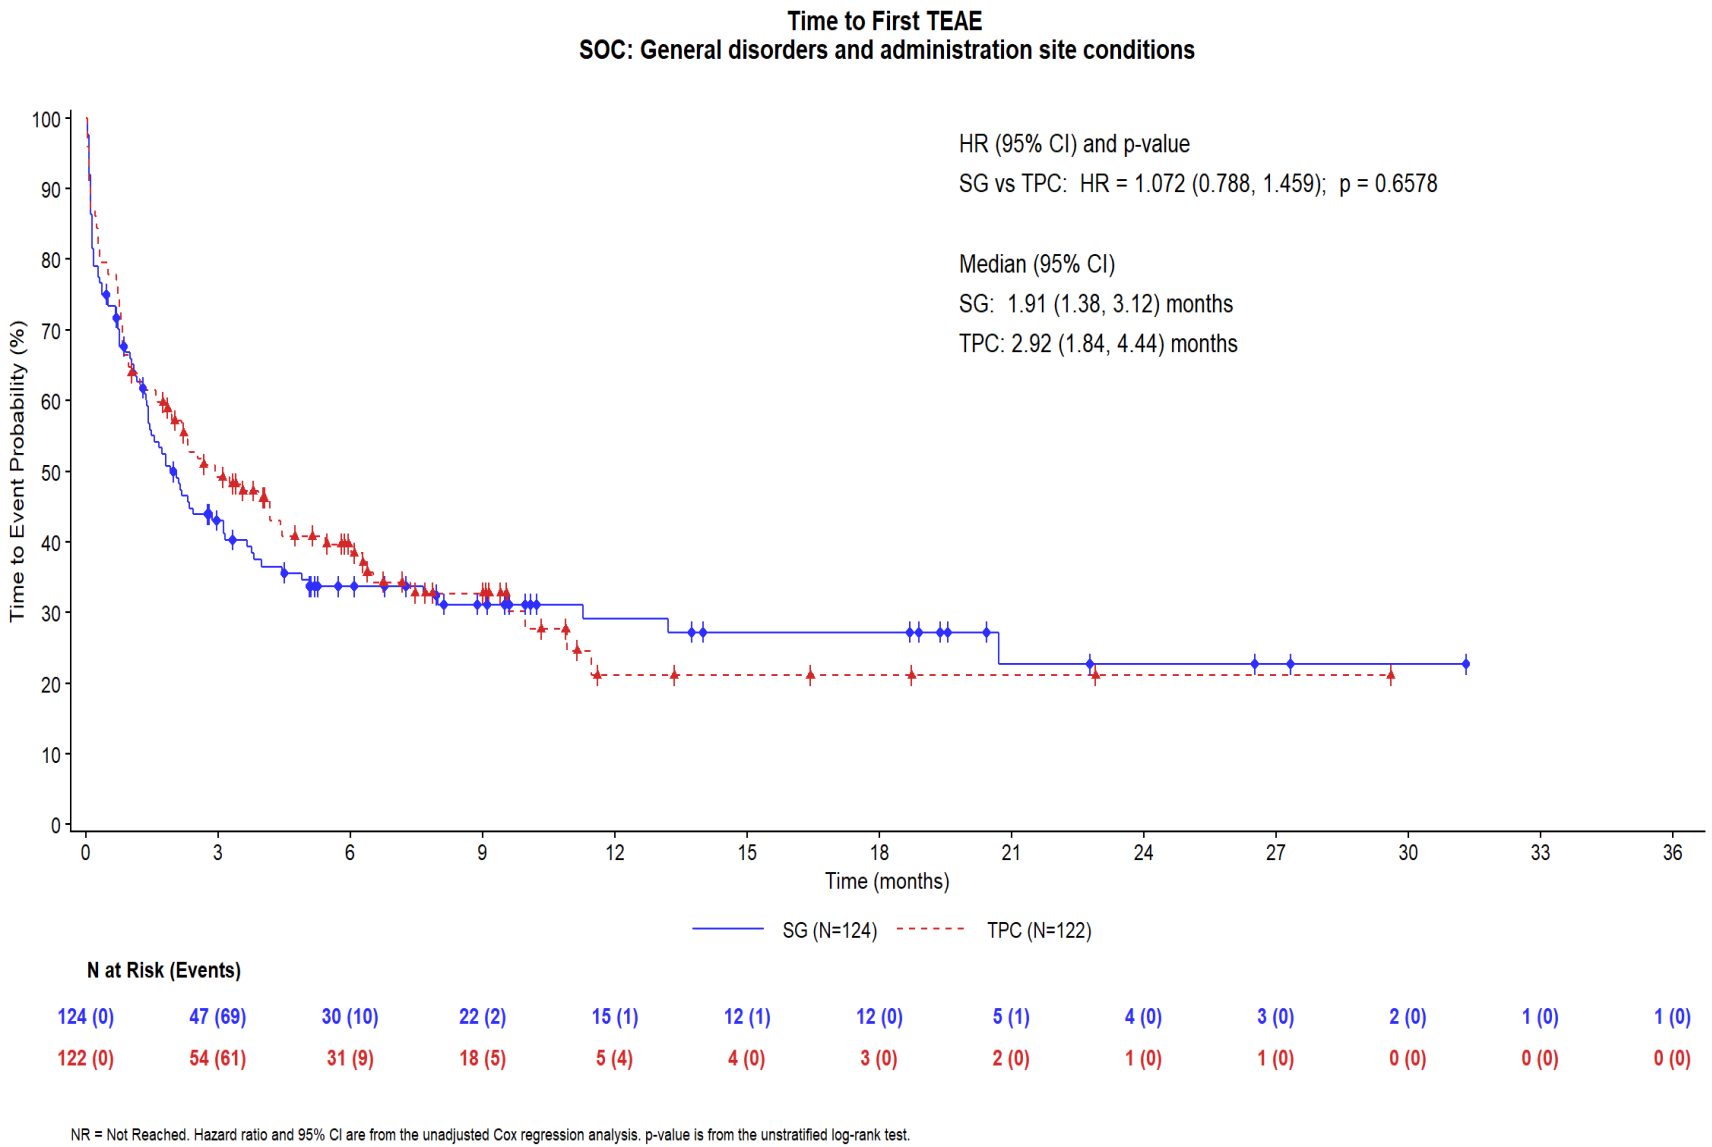
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.17. Figure 1.1.16: Kaplan Meier Plot of Time to First TEAE by SOC Ear and labyrinth disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



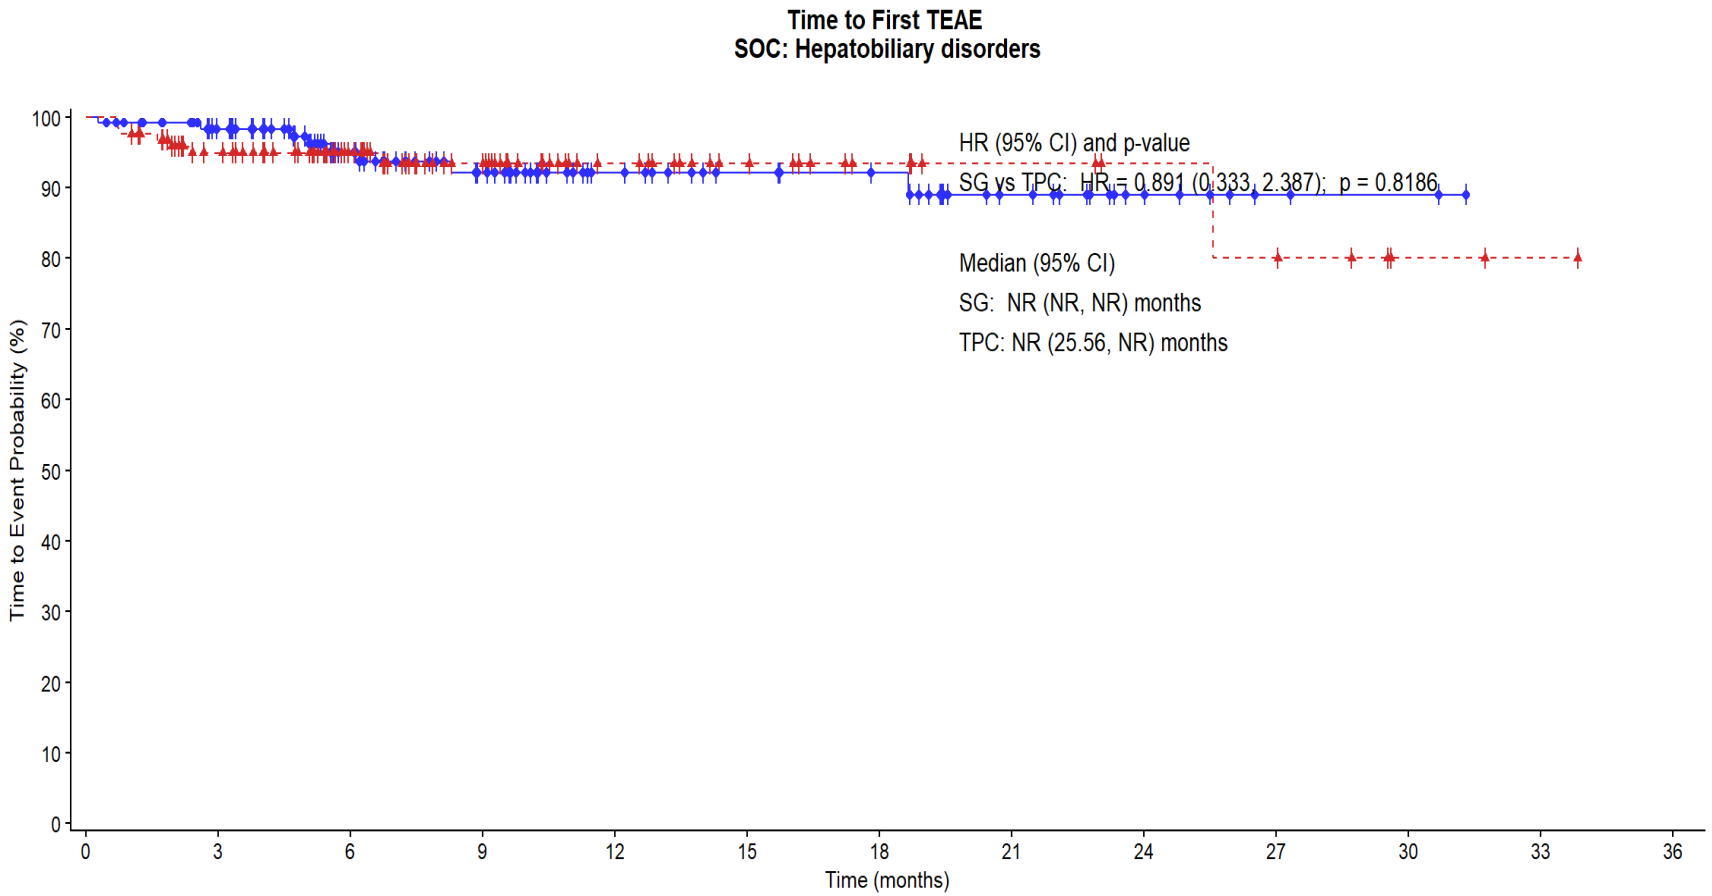
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.18. Figure 1.1.17: Kaplan Meier Plot of Time to First TEAE by SOC Eye disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



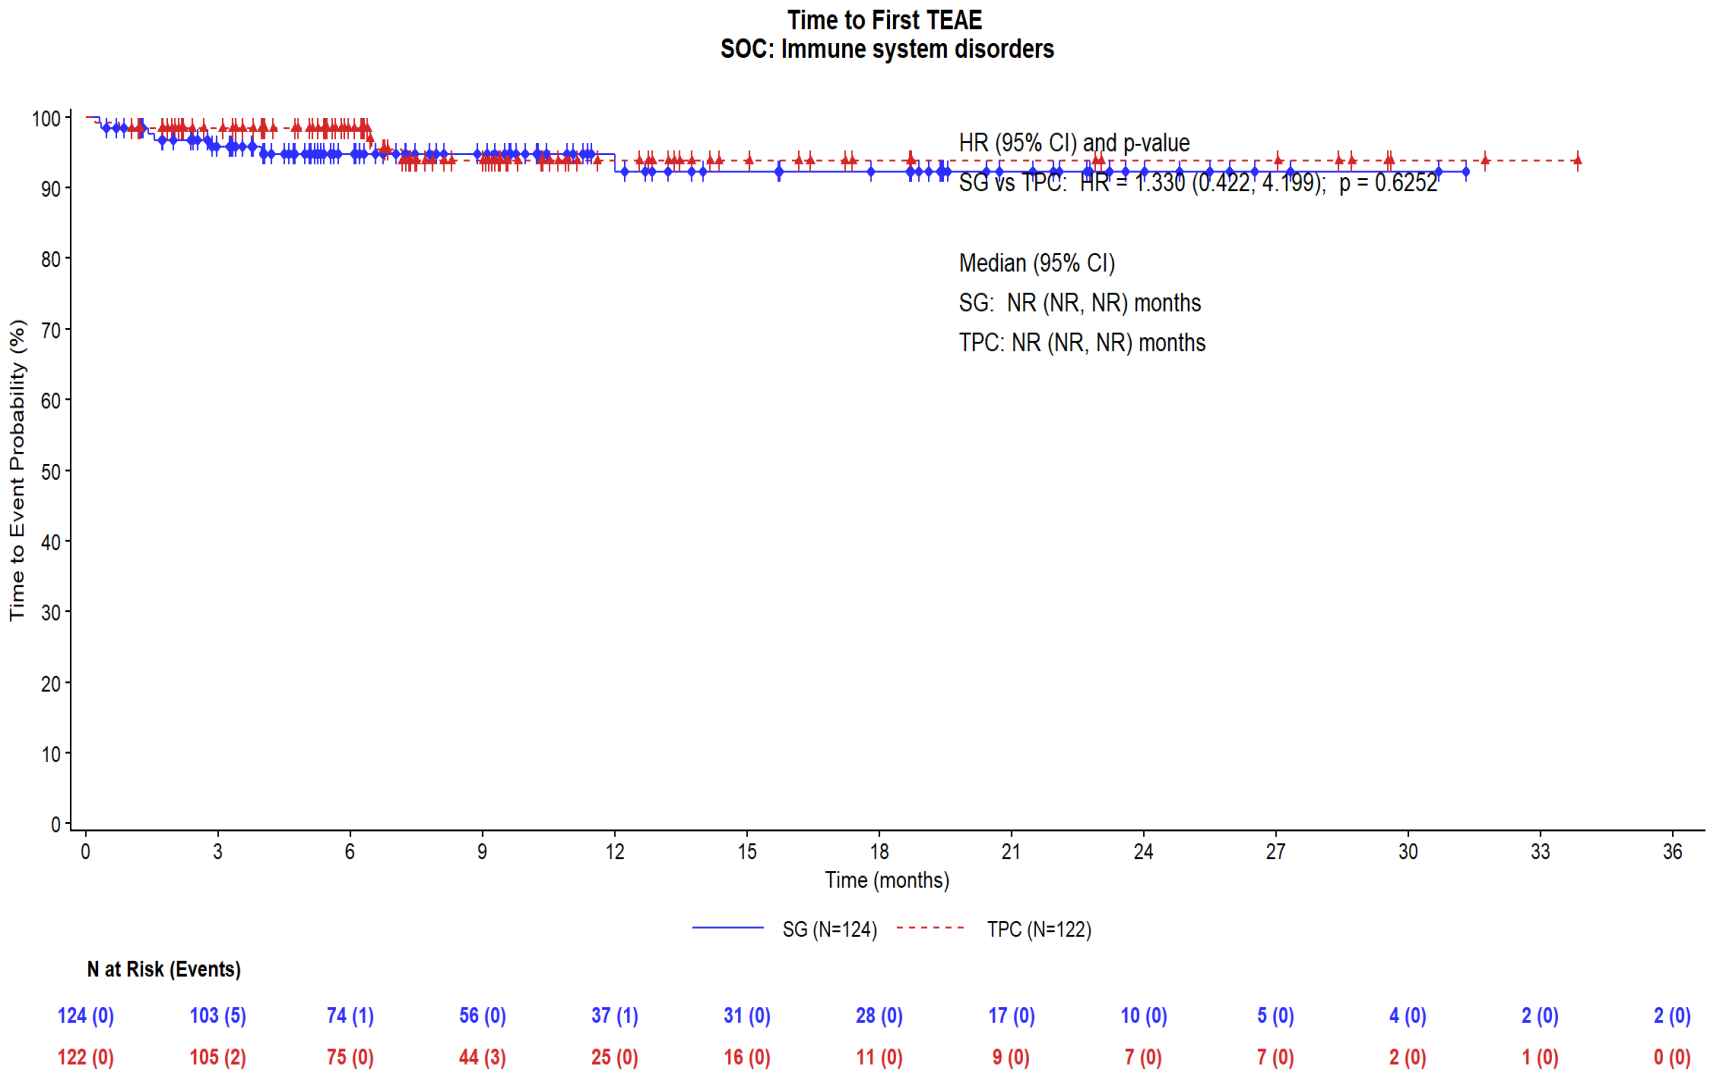
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.19. Figure 1.1.18: Kaplan Meier Plot of Time to First TEAE by SOC Gastrointestinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



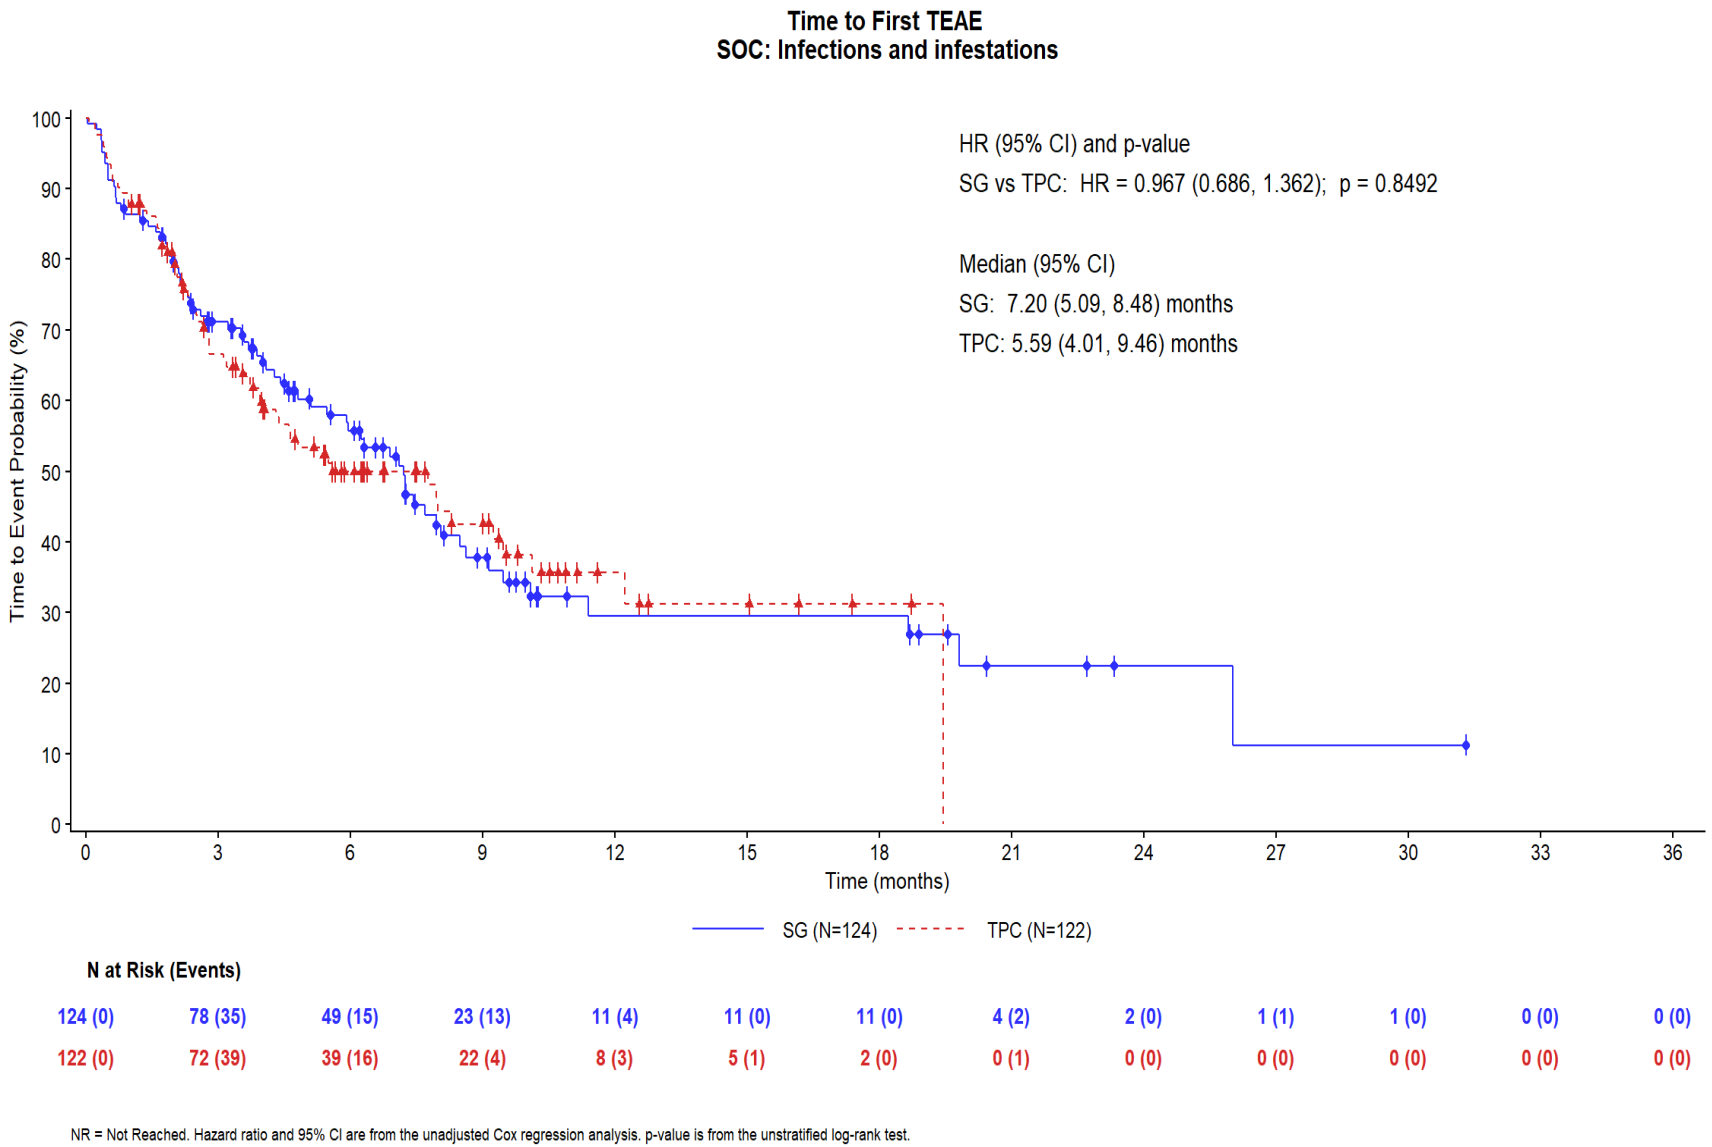
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.20. Figure 1.1.19: Kaplan Meier Plot of Time to First TEAE by SOC General disorders and administration site conditions — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



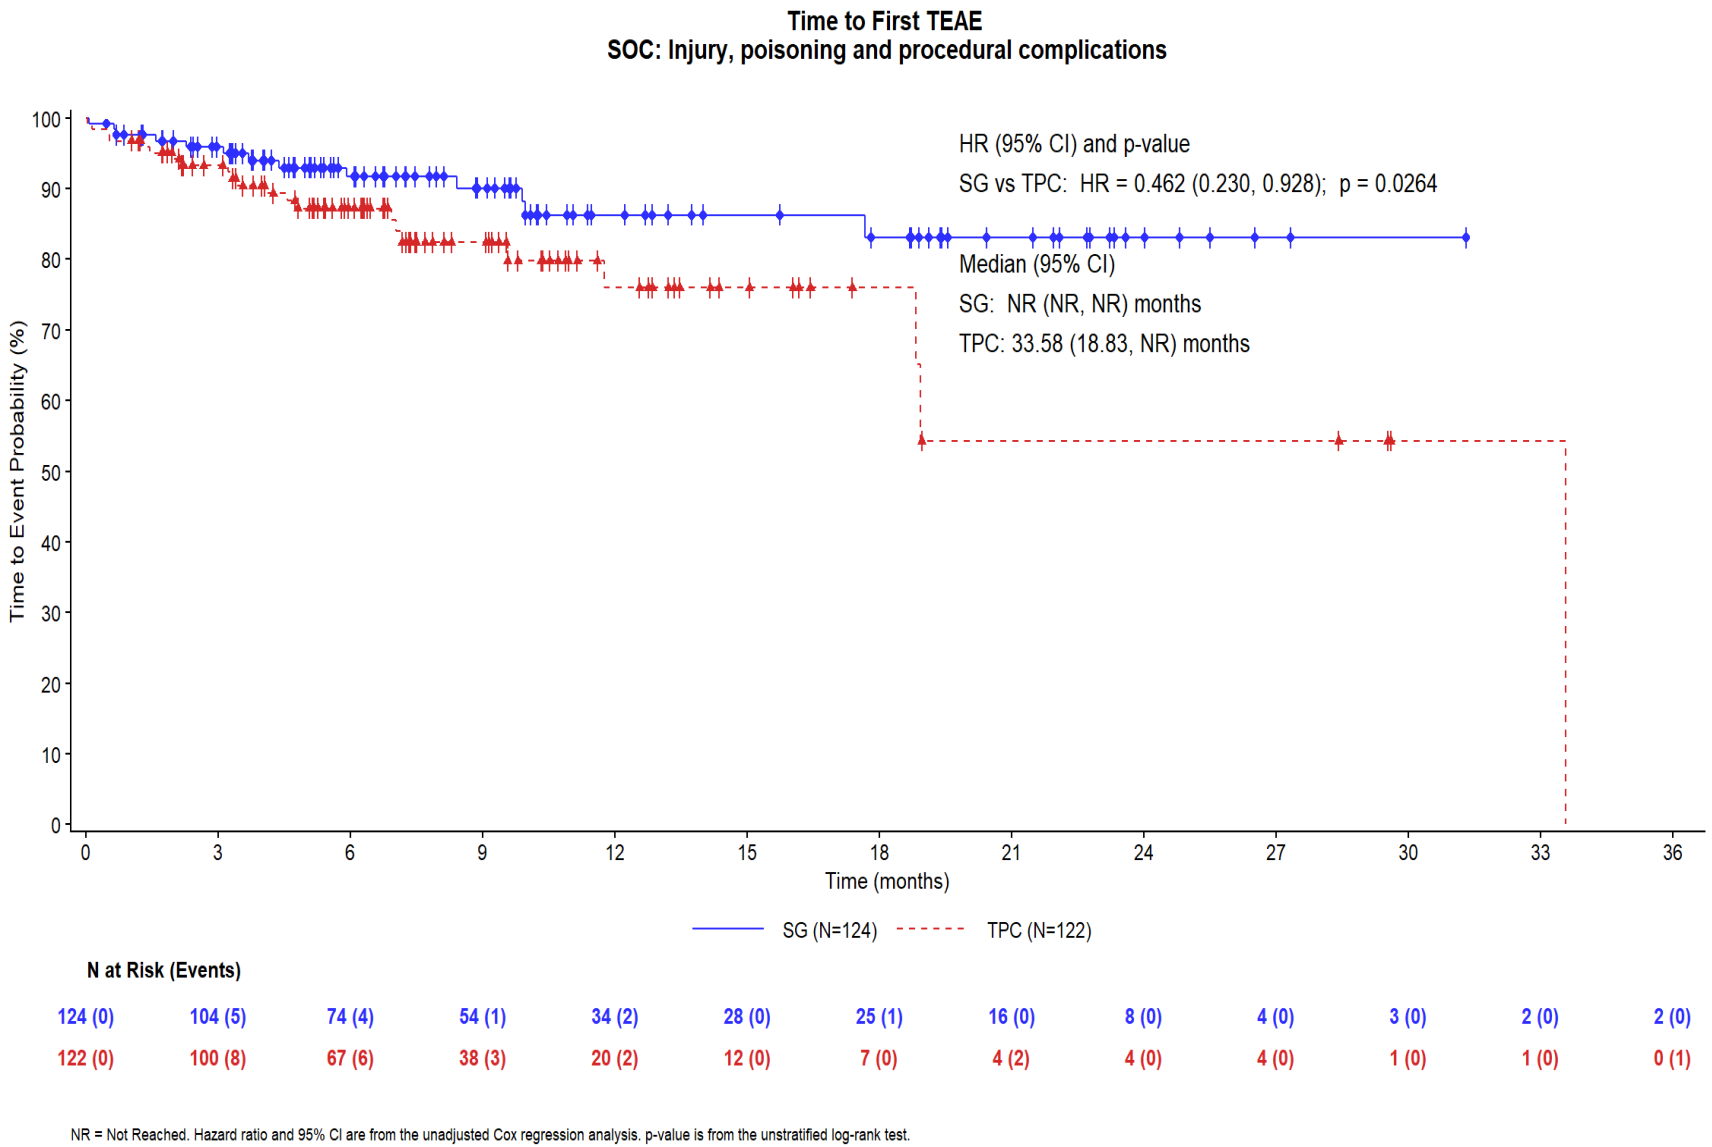
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.21. Figure 1.1.20: Kaplan Meier Plot of Time to First TEAE by SOC Hepatobiliary disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



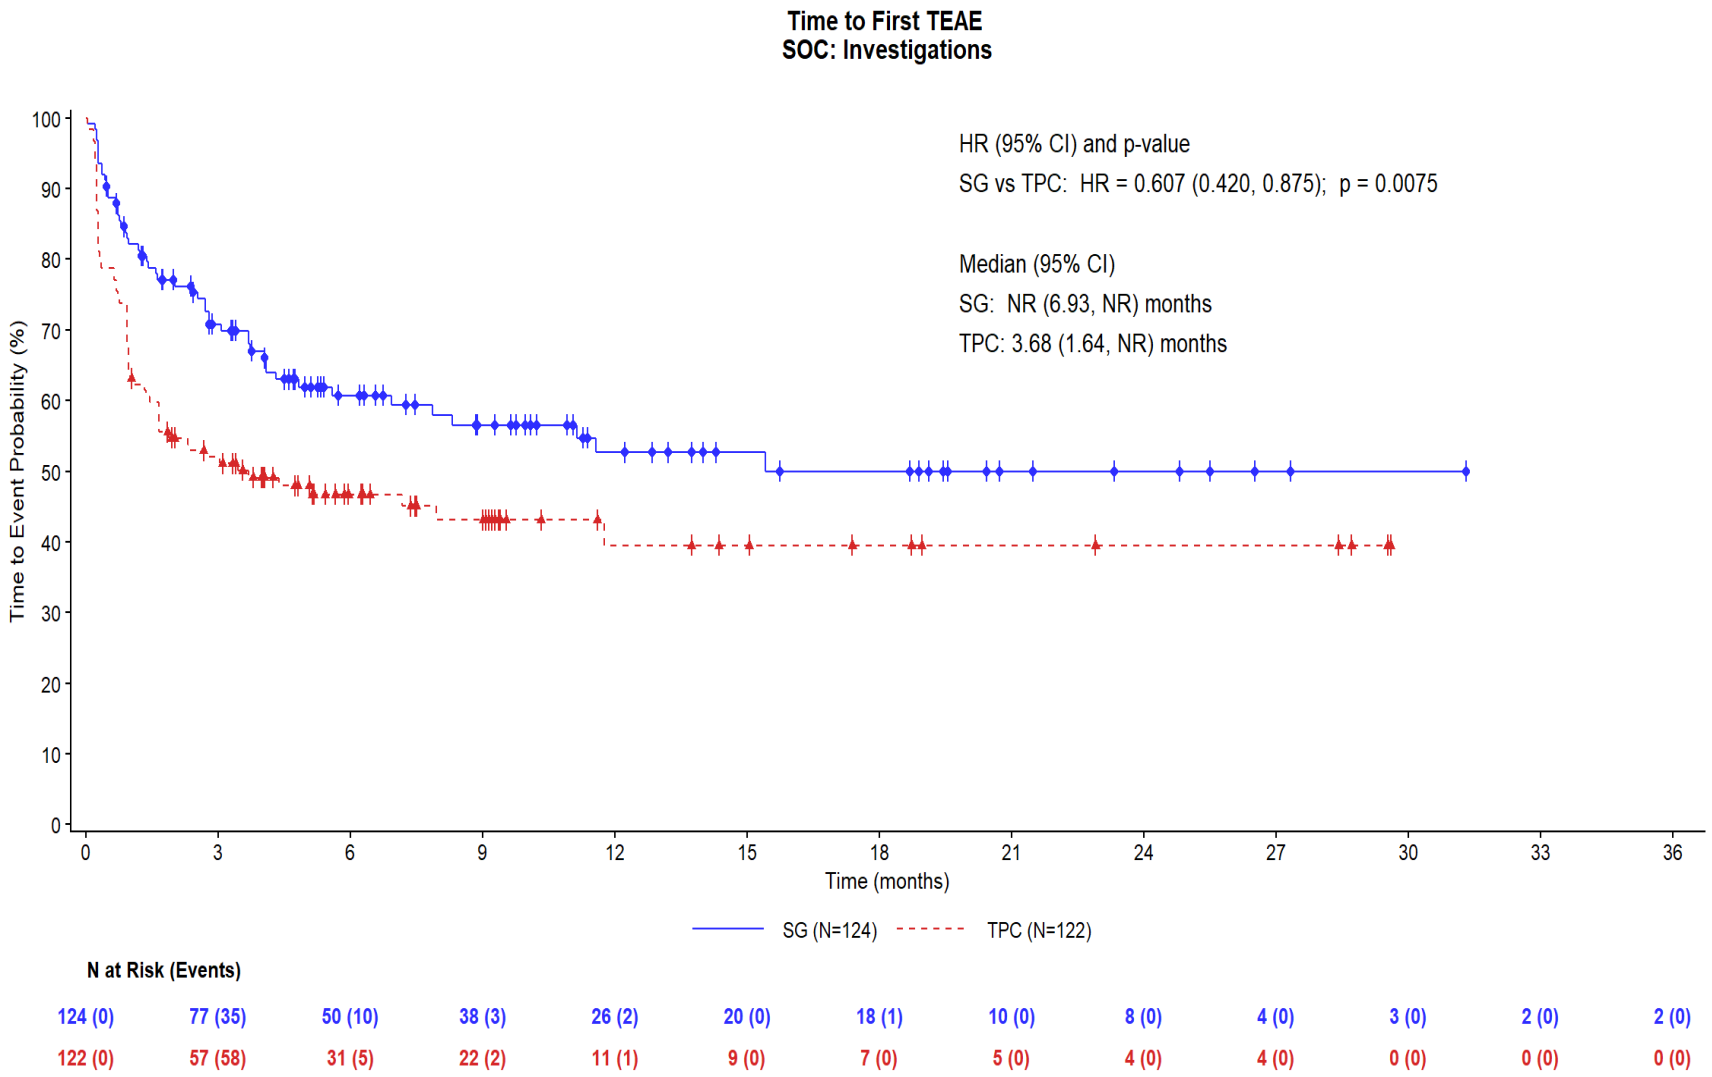
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.22. Figure 1.1.21: Kaplan Meier Plot of Time to First TEAE by SOC Immune system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



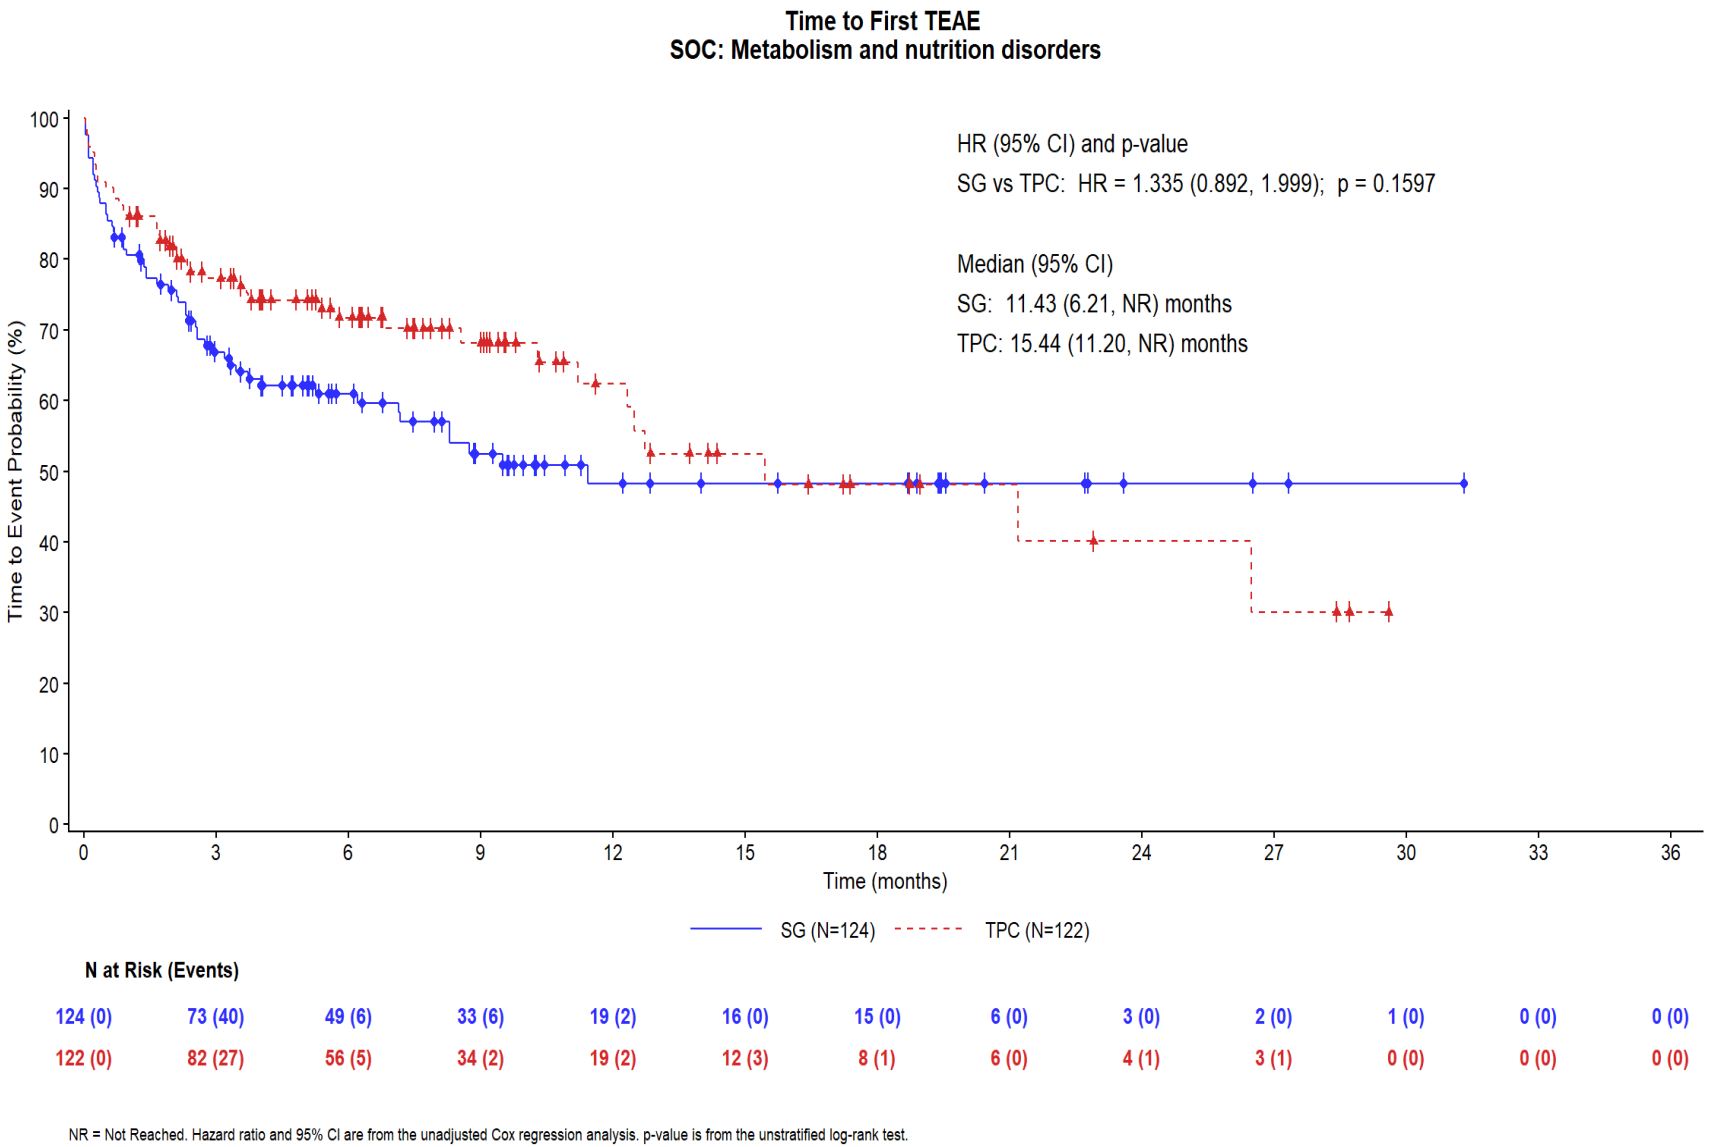
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.23. Figure 1.1.22: Kaplan Meier Plot of Time to First TEAE by SOC Infections and infestations — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



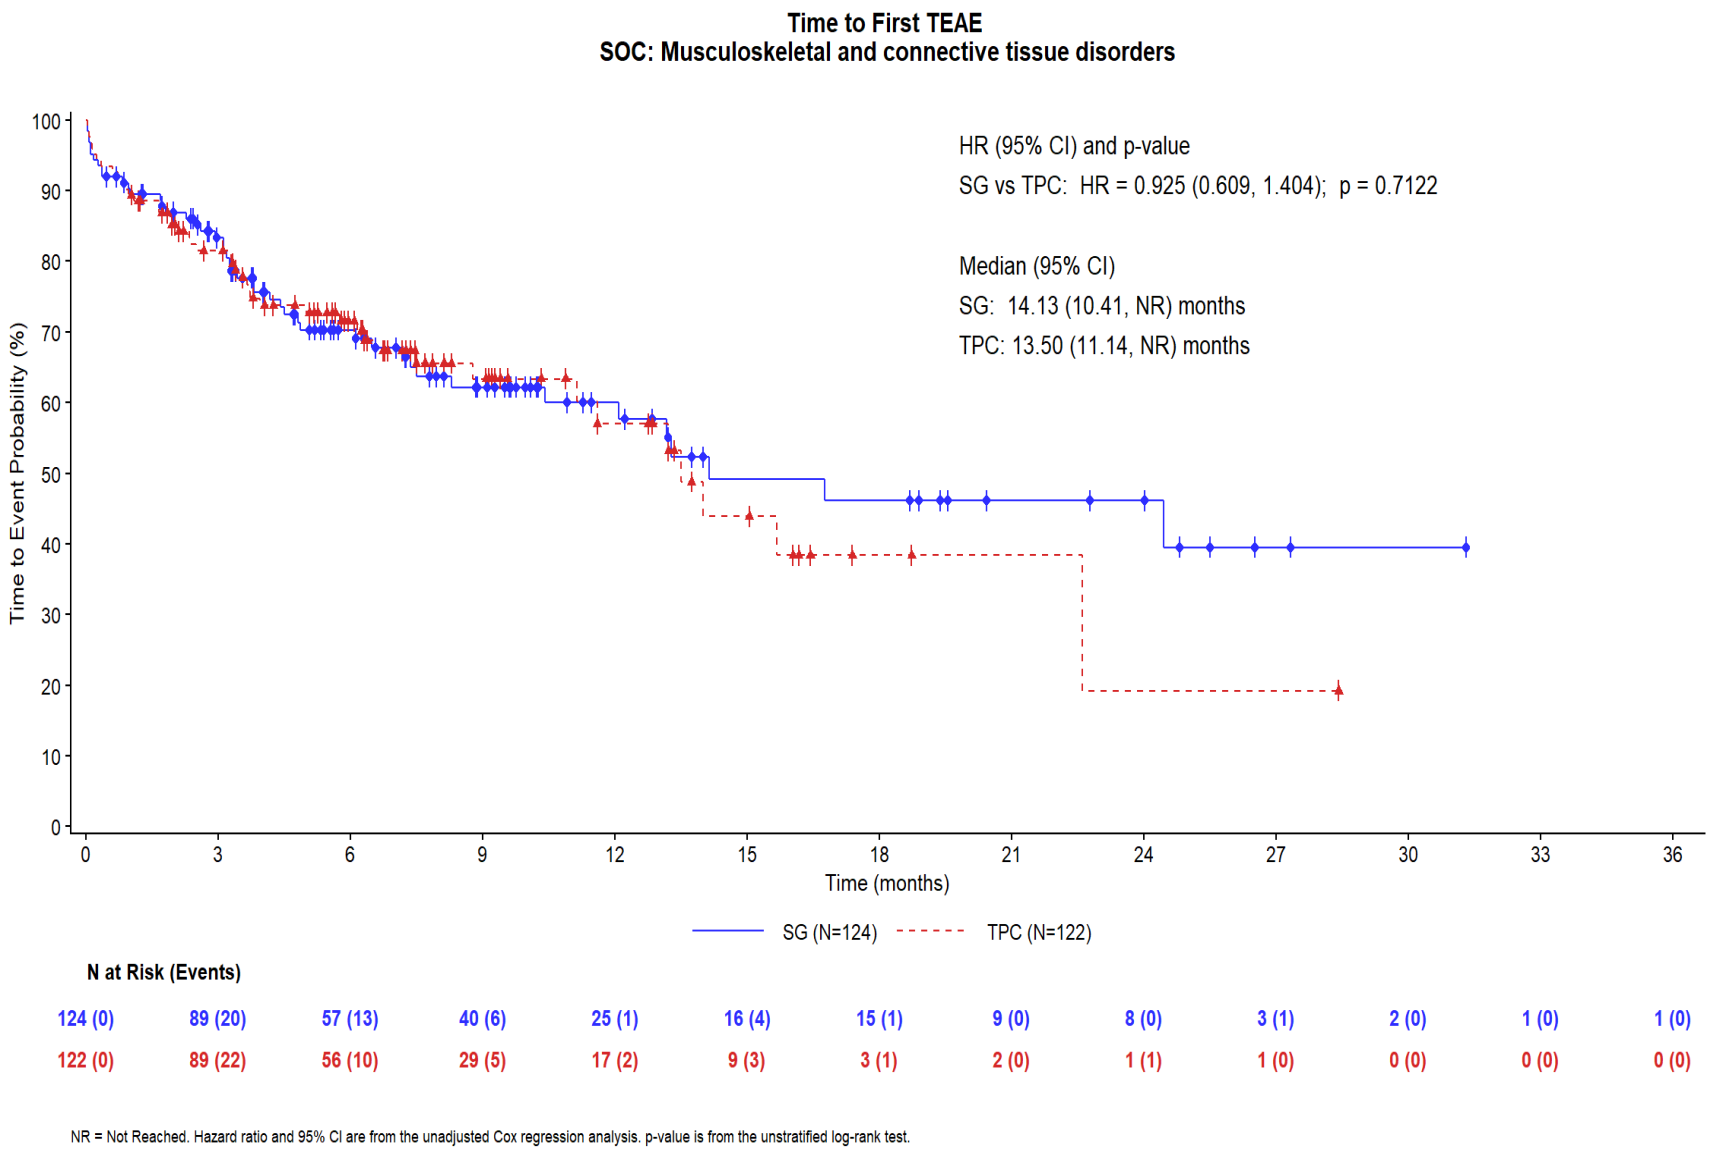
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.24. Figure 1.1.23: Kaplan Meier Plot of Time to First TEAE by SOC Injury poisoning and procedural complications — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



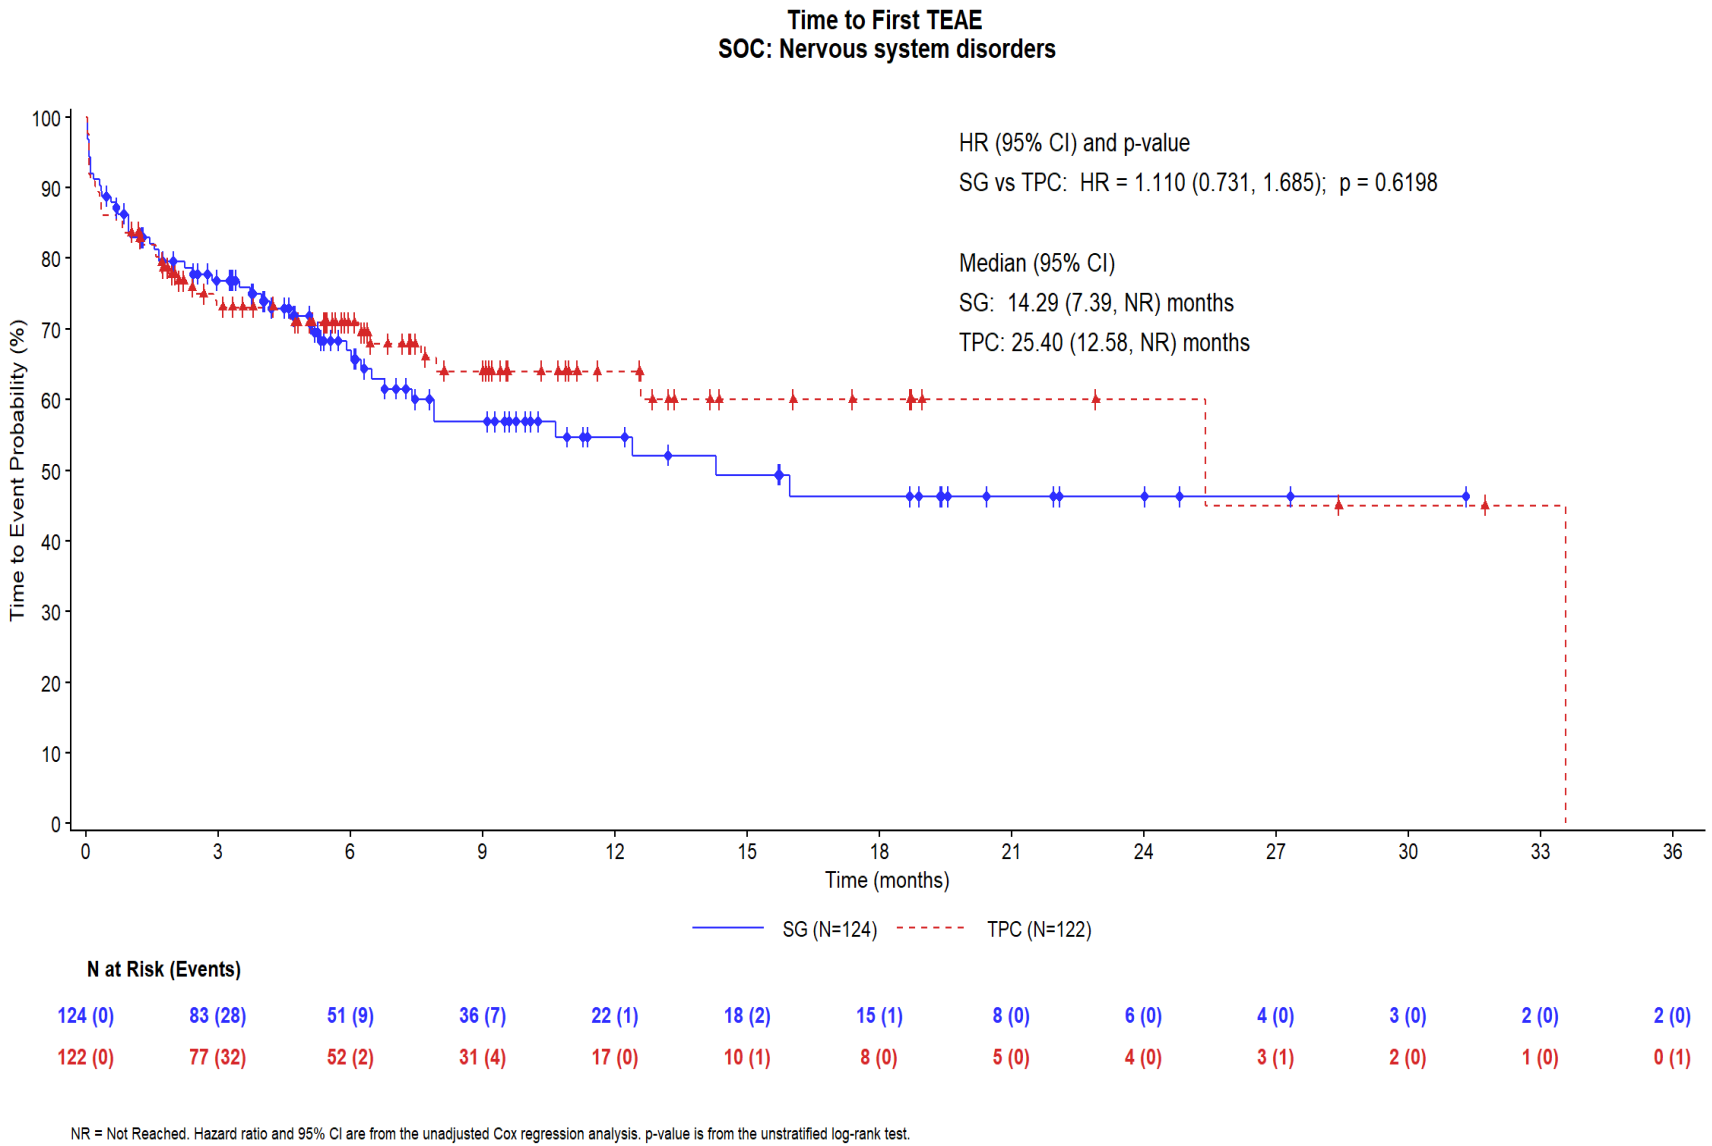
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.25. Figure 1.1.24: Kaplan Meier Plot of Time to First TEAE by SOC Investigations — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



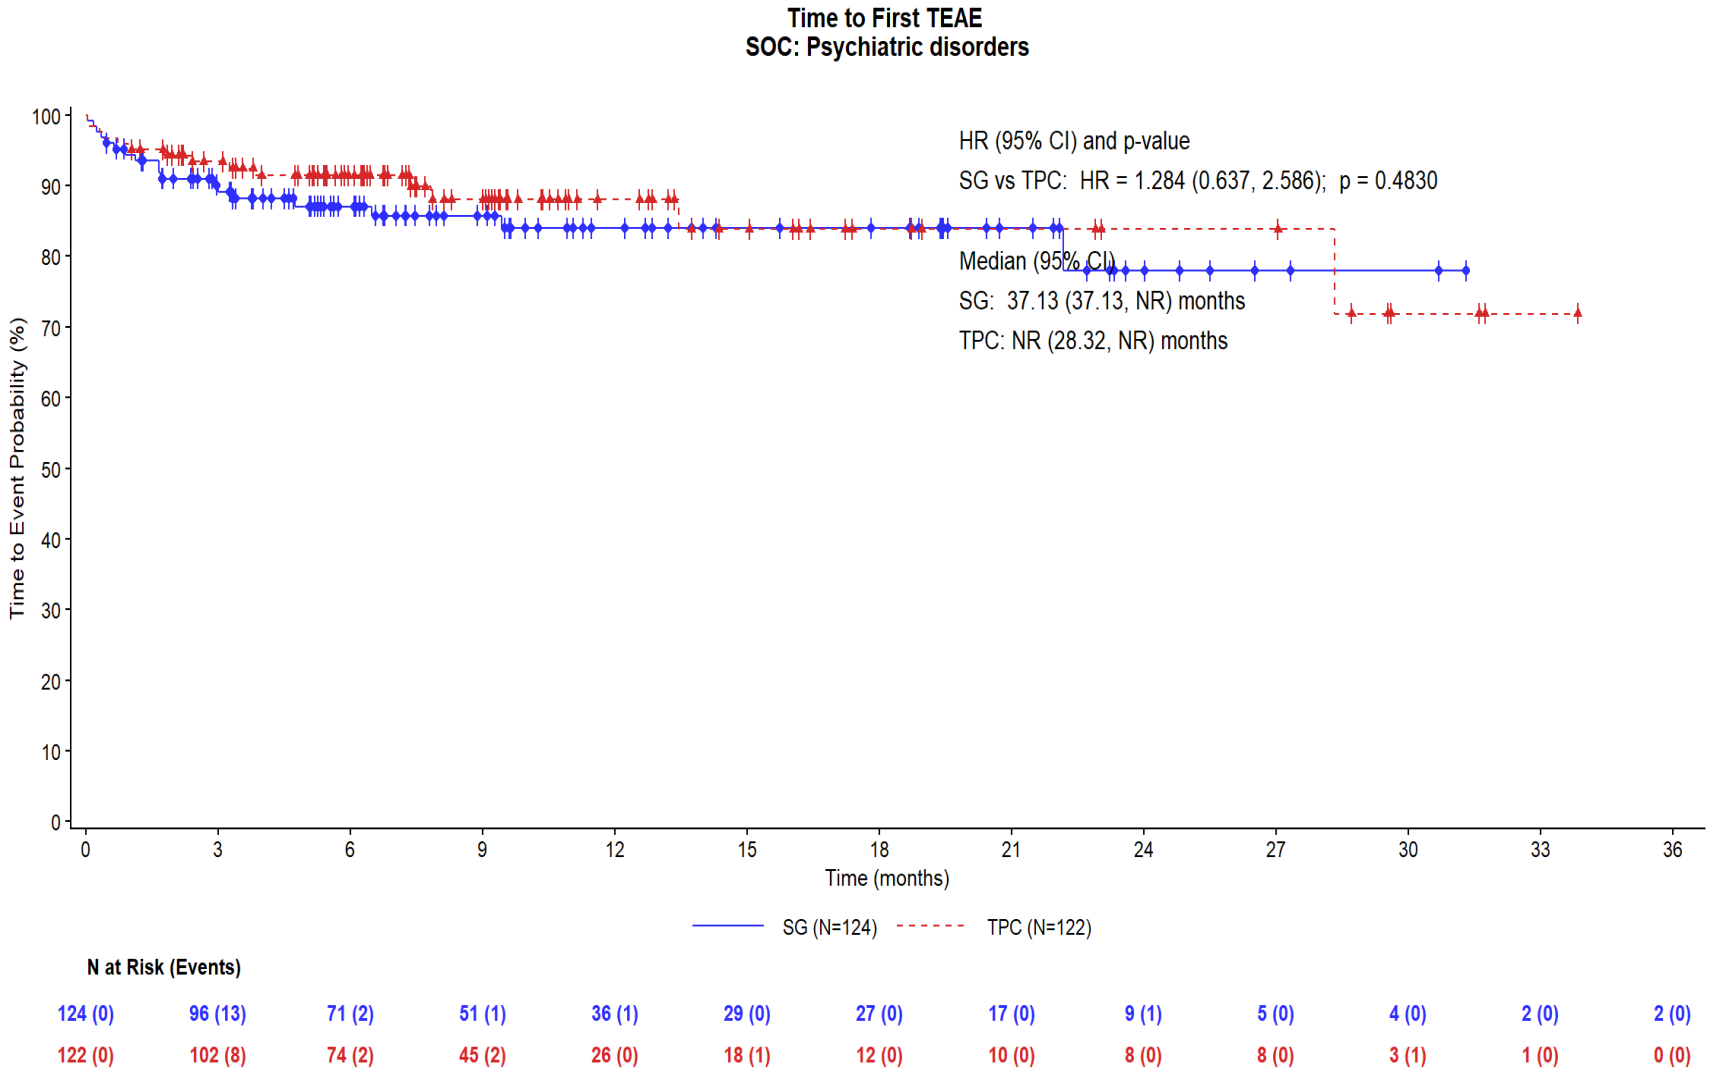
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.26. Figure 1.1.25: Kaplan Meier Plot of Time to First TEAE by SOC Metabolism and nutrition disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



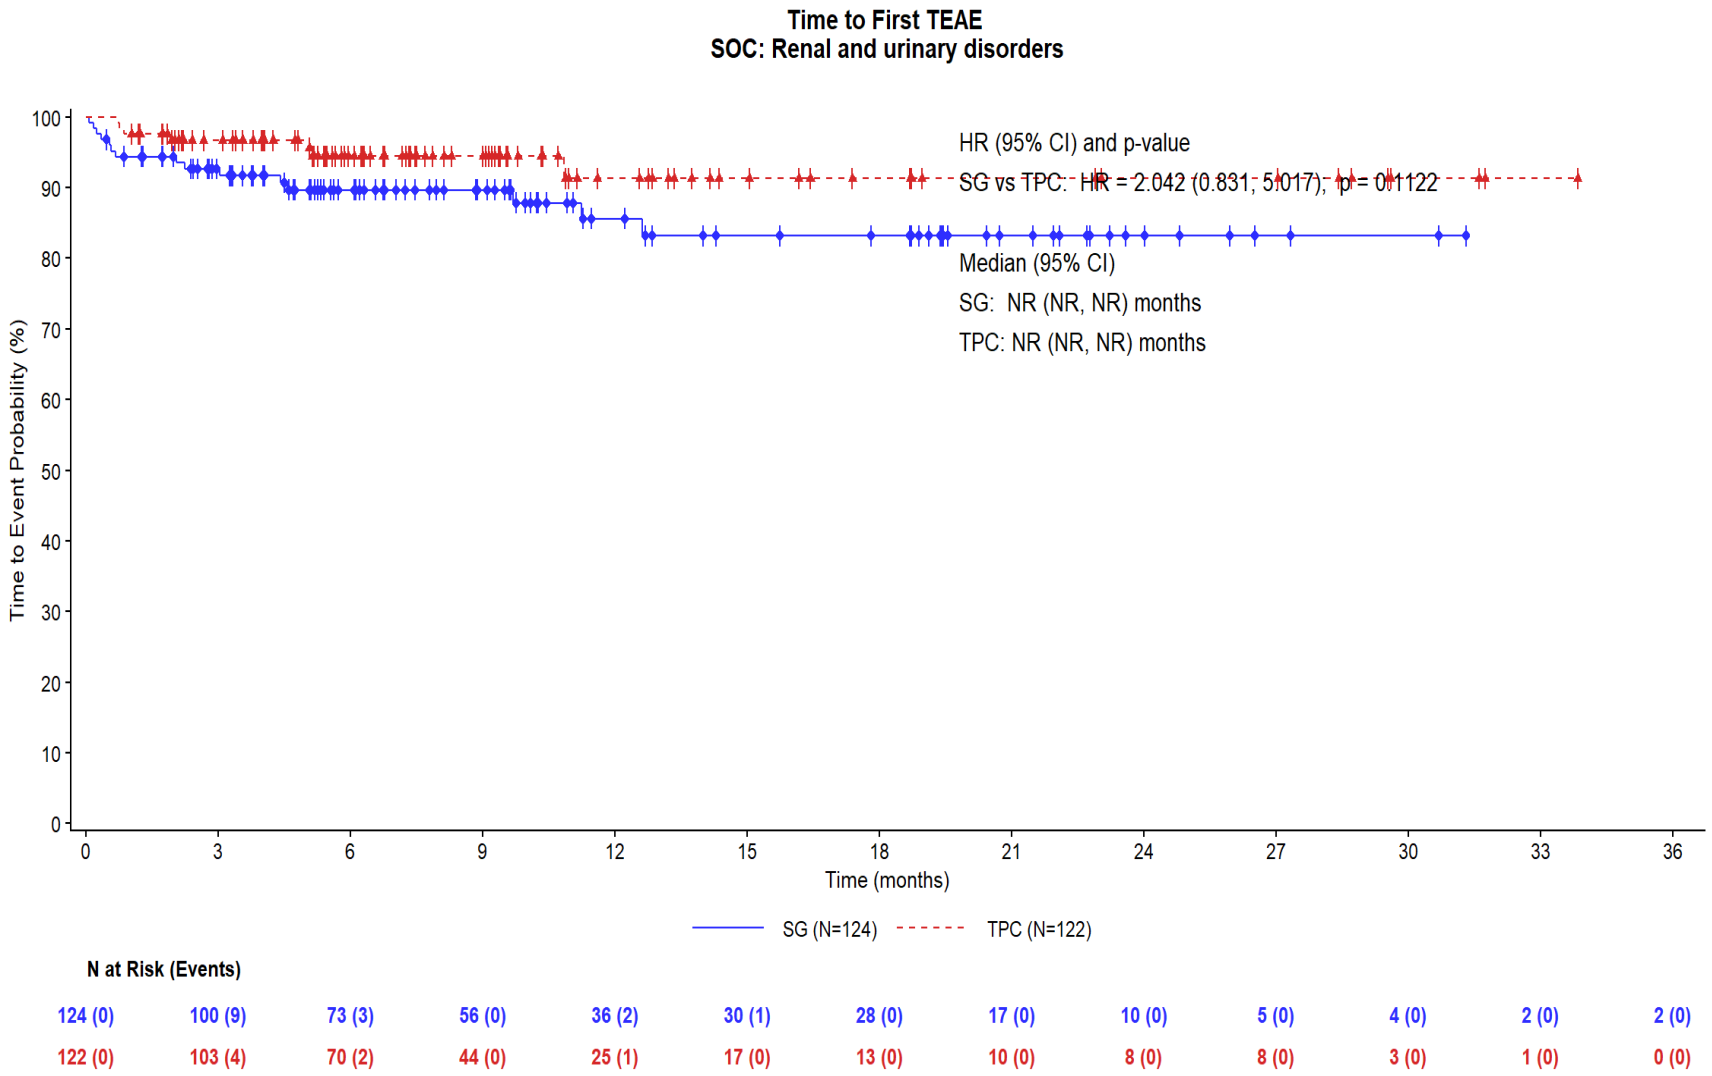
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.27. Figure 1.1.26: Kaplan Meier Plot of Time to First TEAE by SOC Musculoskeletal and connective tissue disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



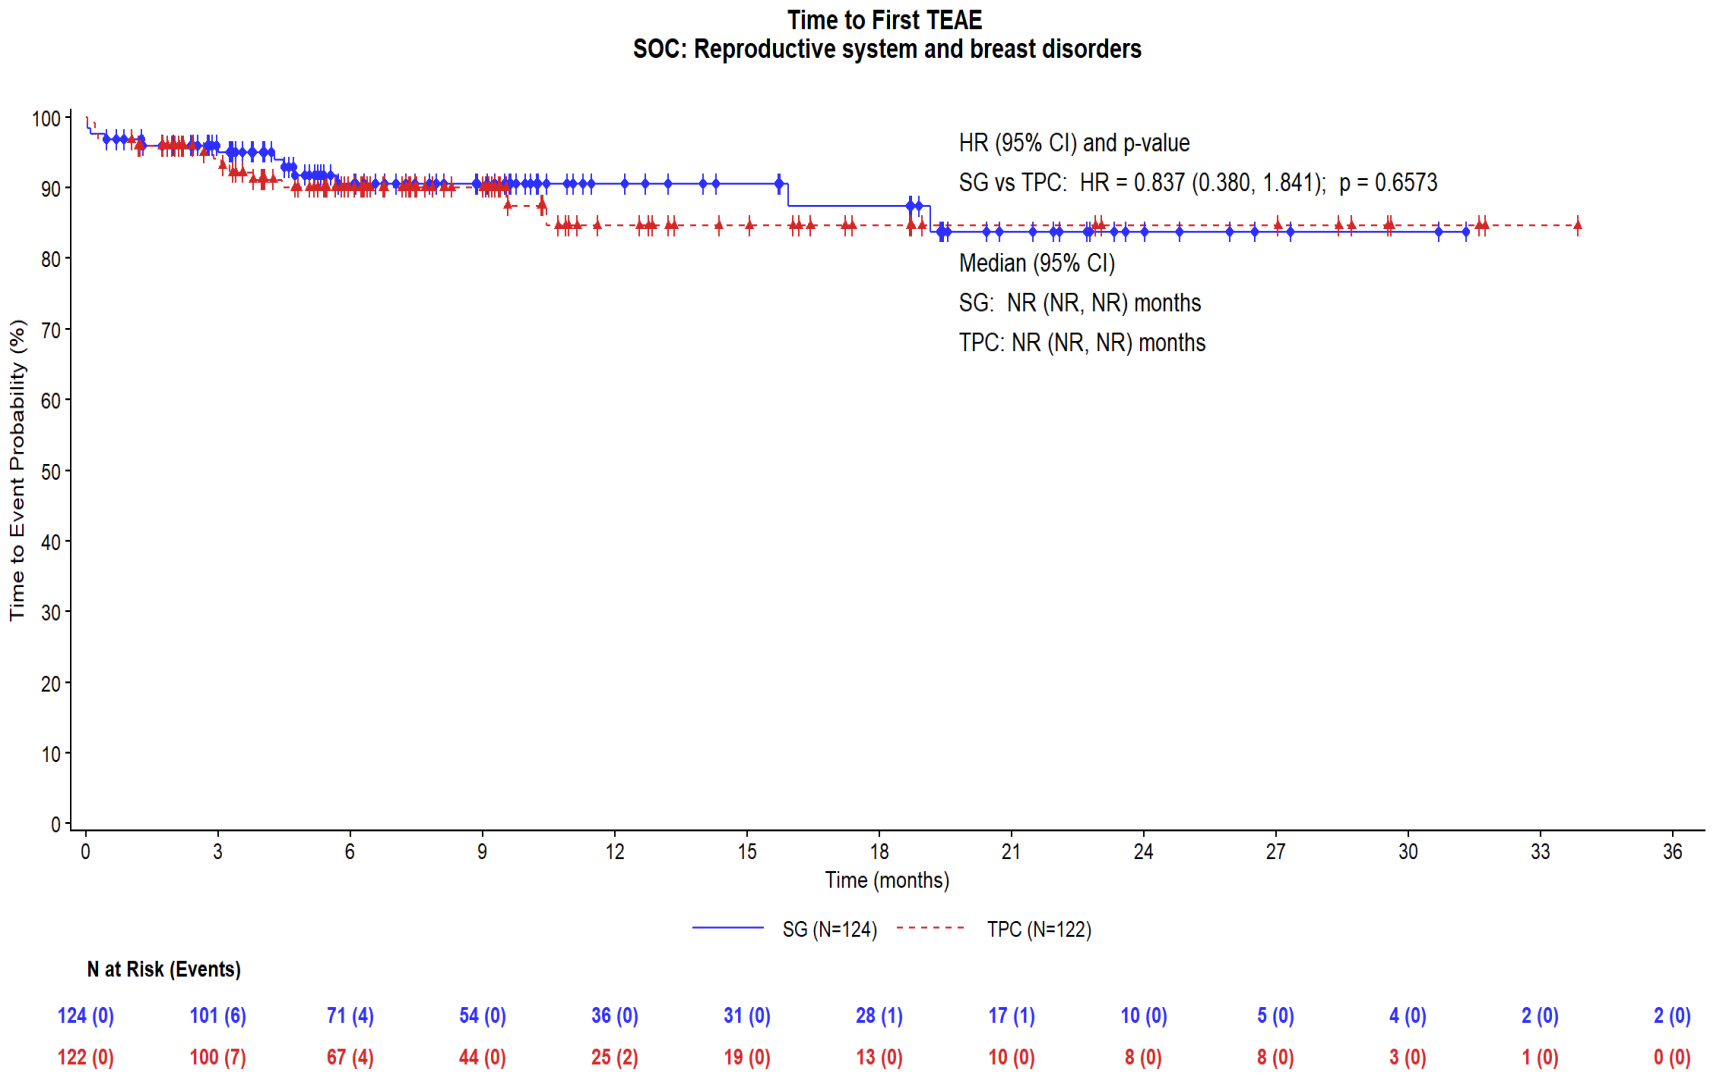
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.28. Figure 1.1.27: Kaplan Meier Plot of Time to First TEAE by SOC Nervous system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



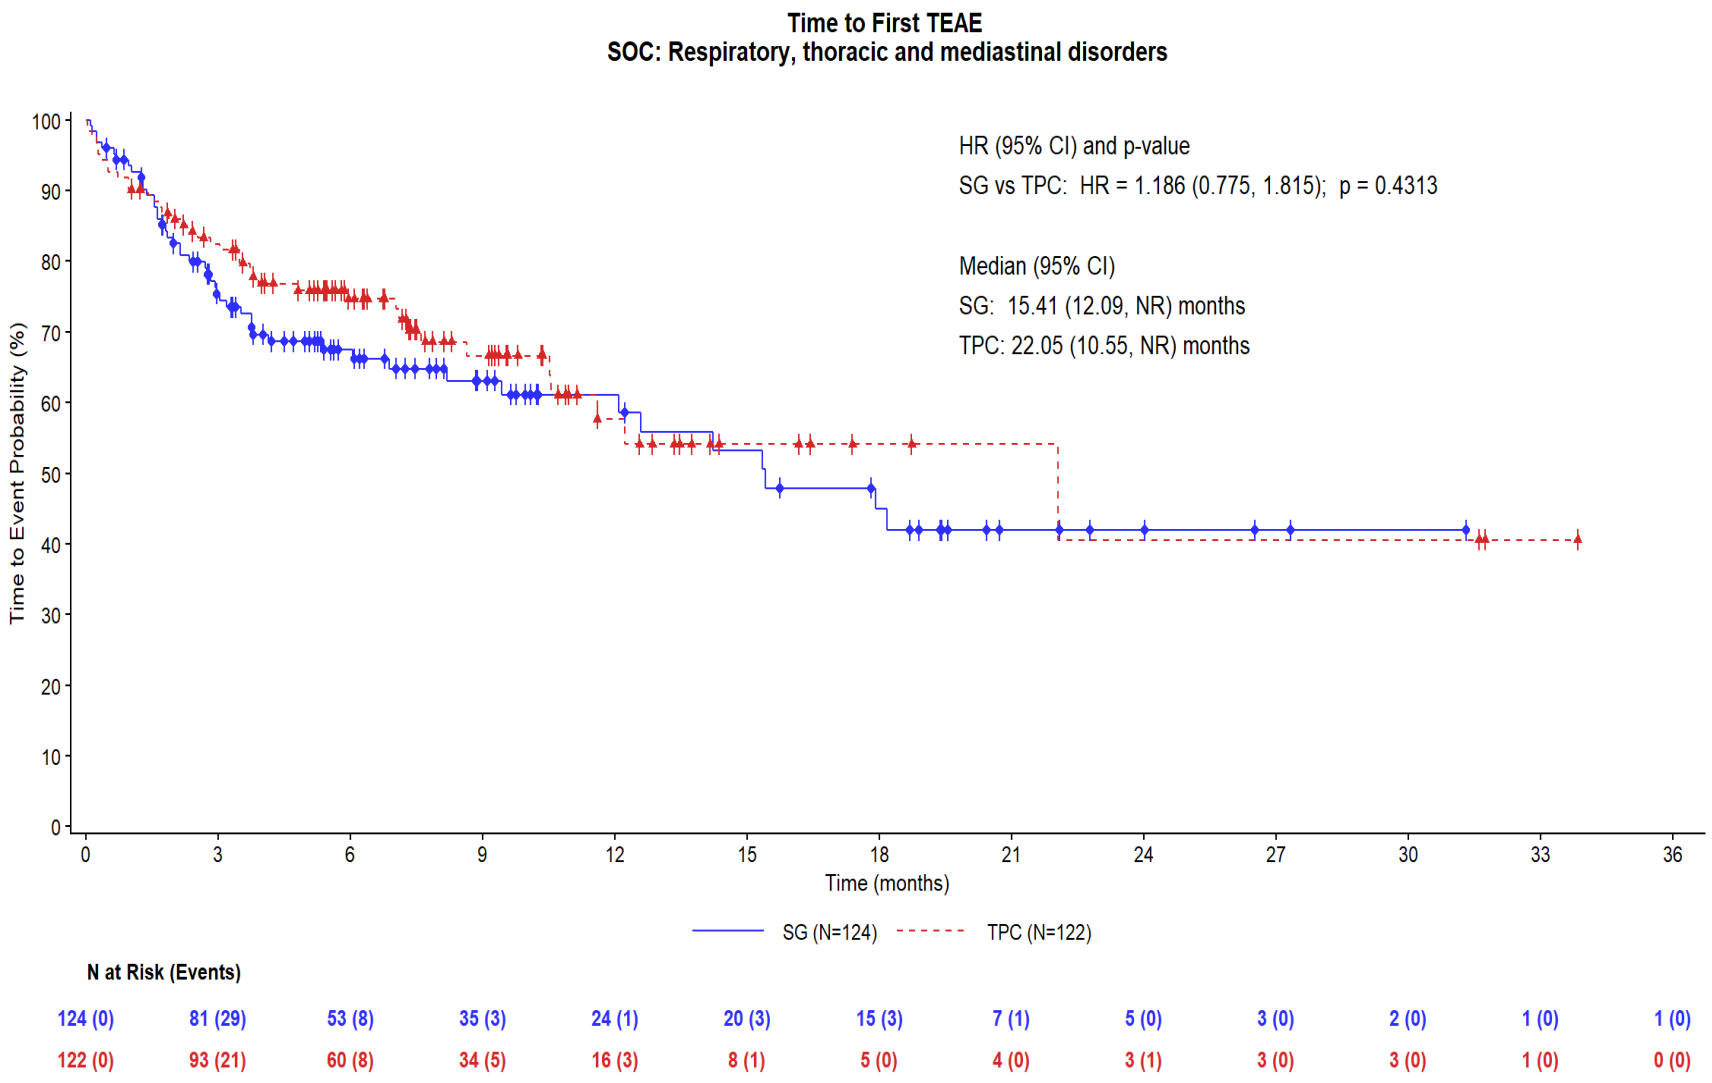
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.29. Figure 1.1.28: Kaplan Meier Plot of Time to First TEAE by SOC Psychiatric disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



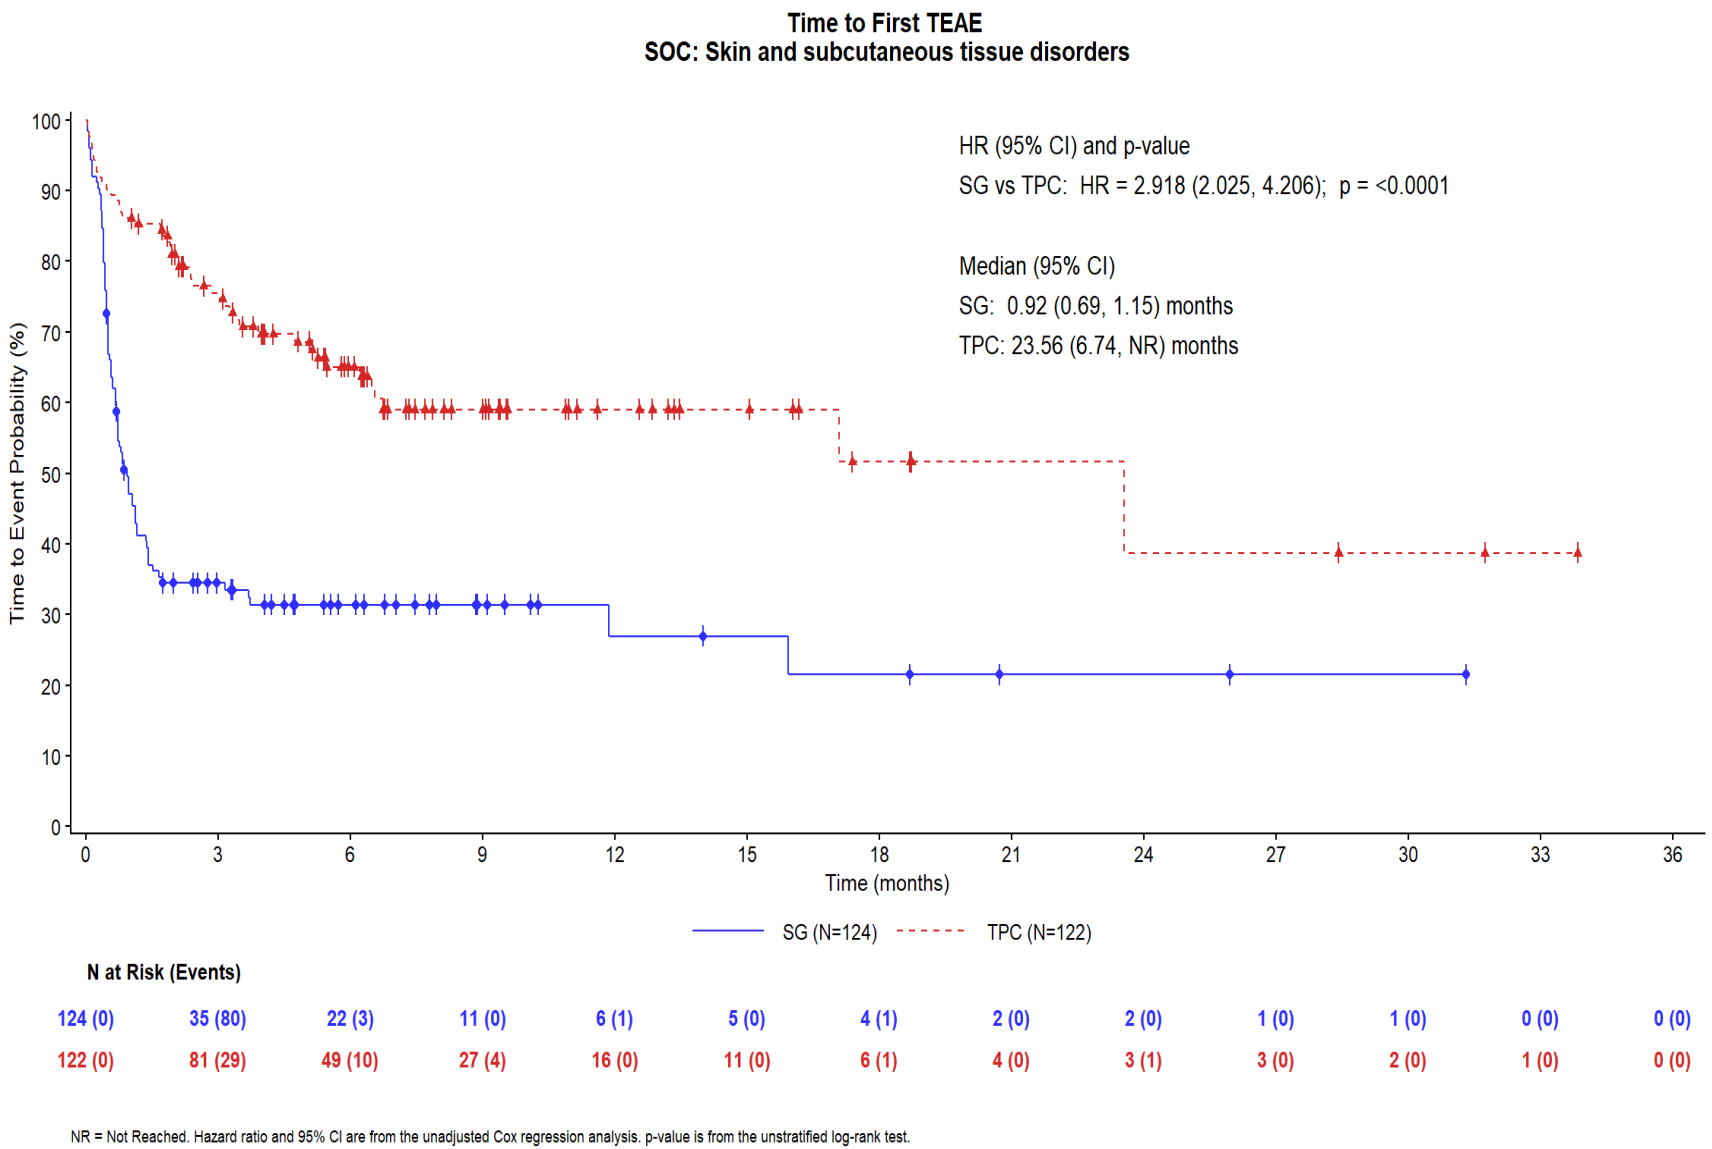
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.30. Figure 1.1.29: Kaplan Meier Plot of Time to First TEAE by SOC Renal and urinary disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



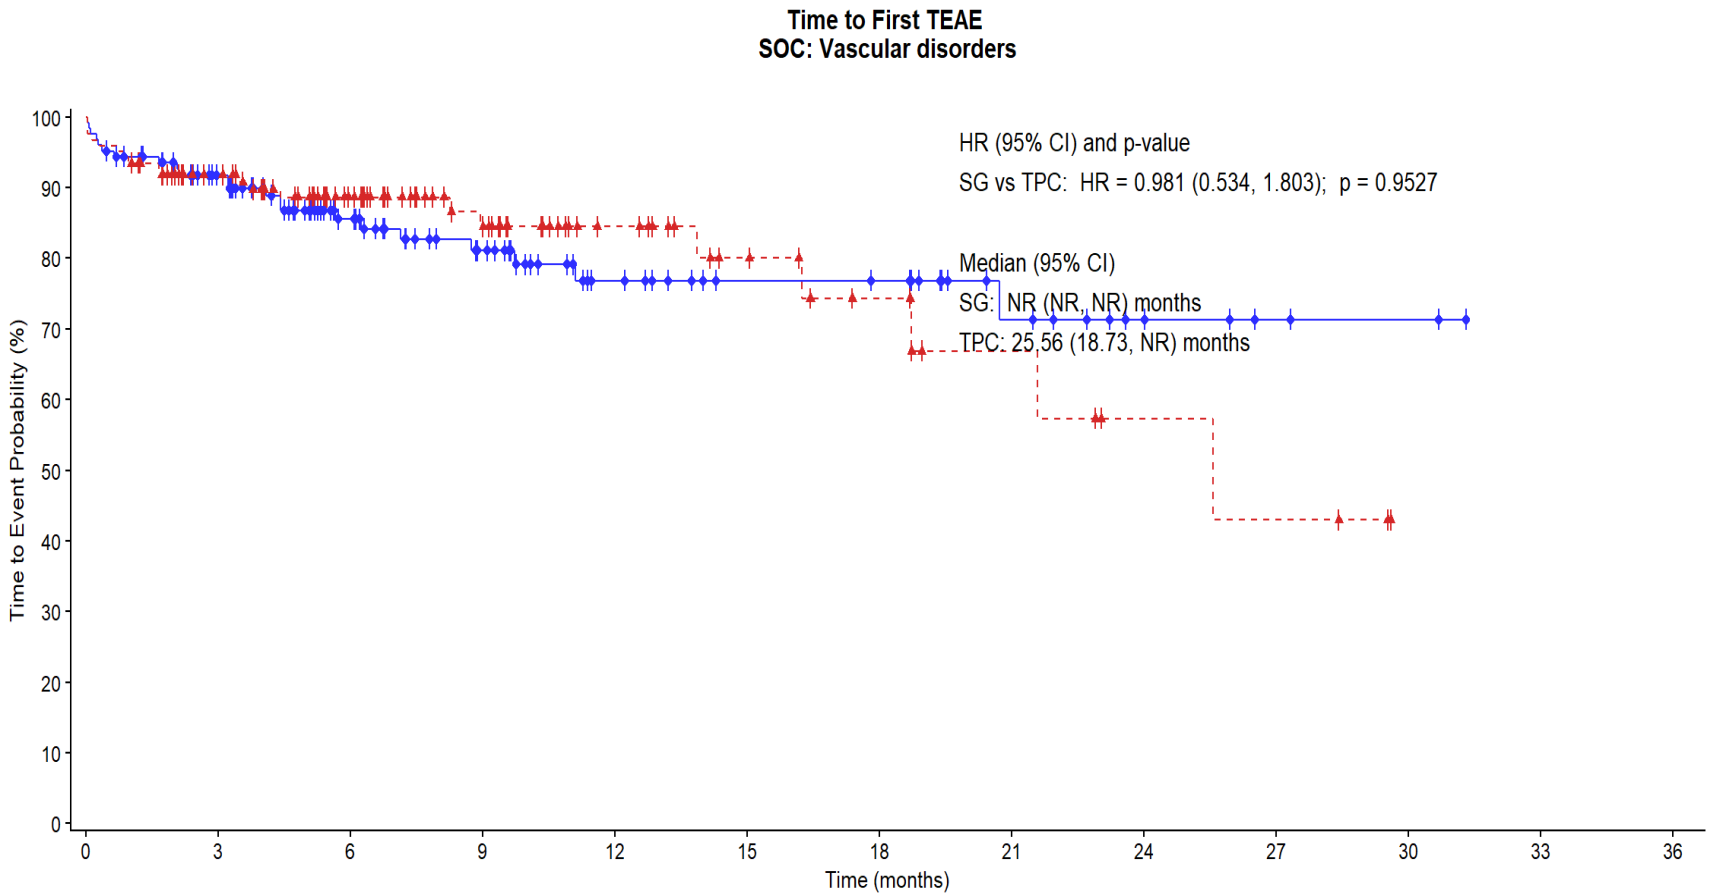
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.31. Figure 1.1.30: Kaplan Meier Plot of Time to First TEAE by SOC Reproductive system and breast disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



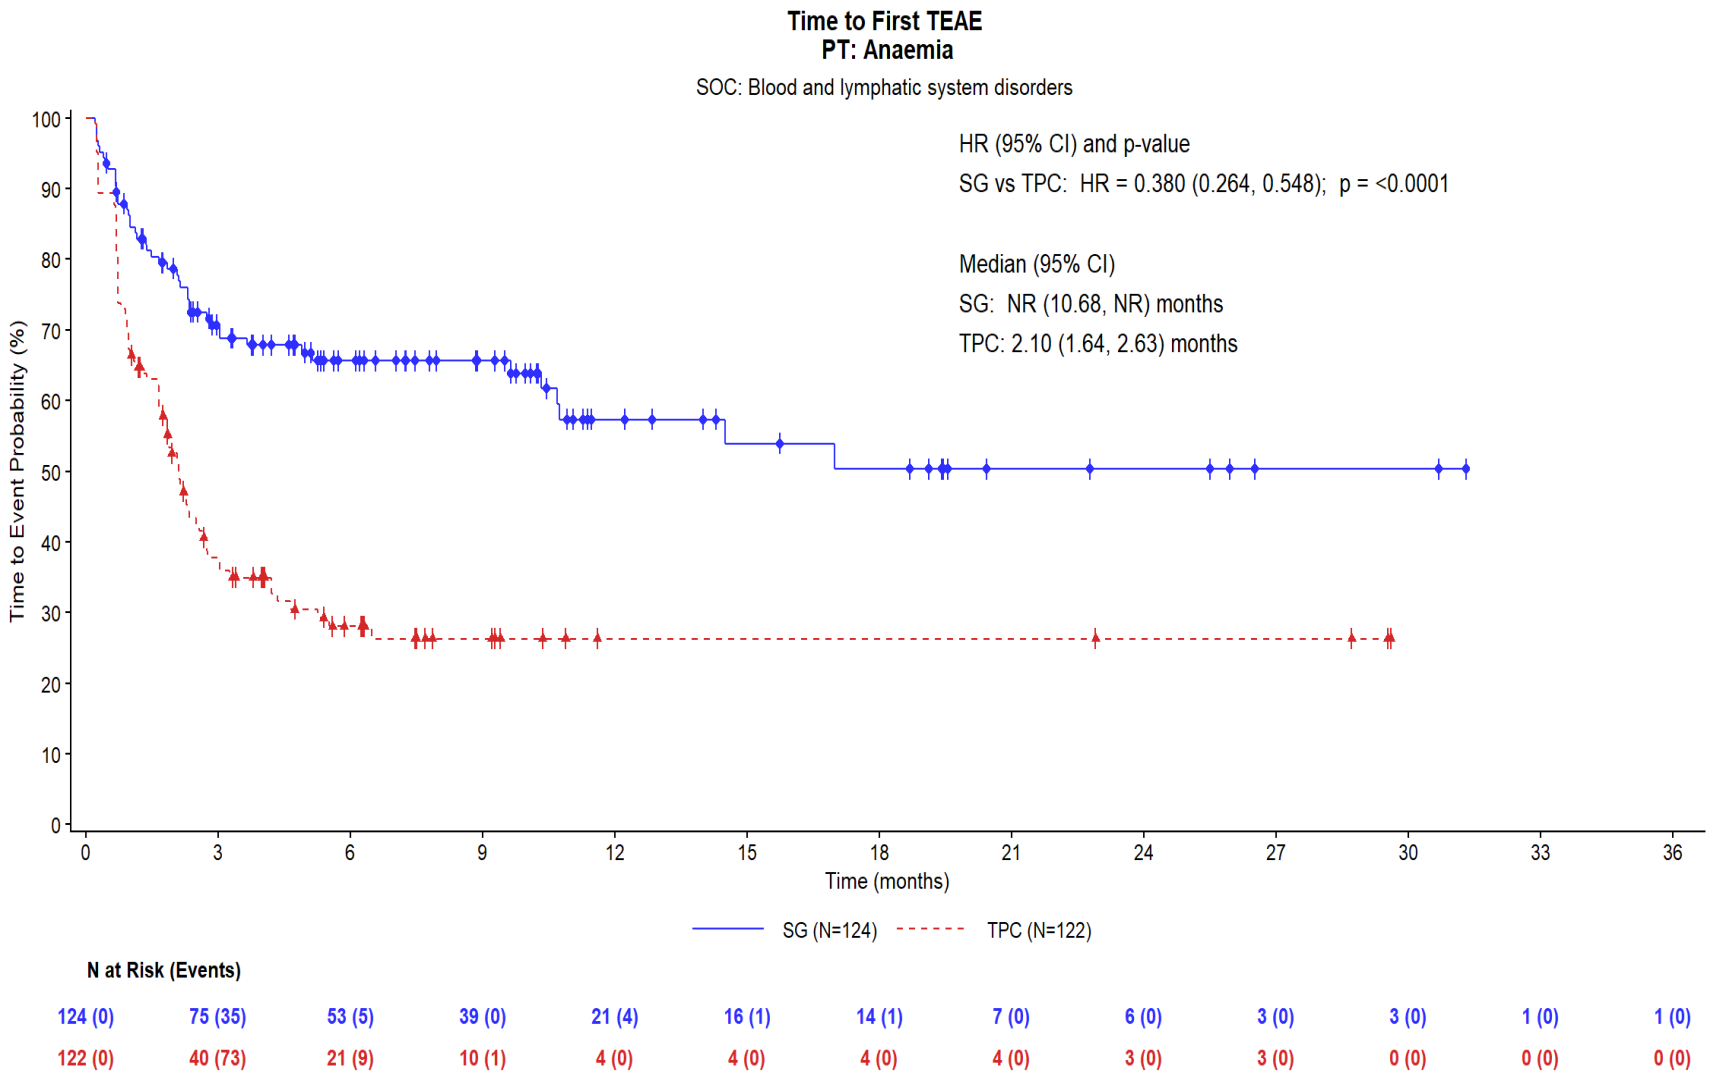
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.32. Figure 1.1.31: Kaplan Meier Plot of Time to First TEAE by SOC Respiratory thoracic and mediastinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



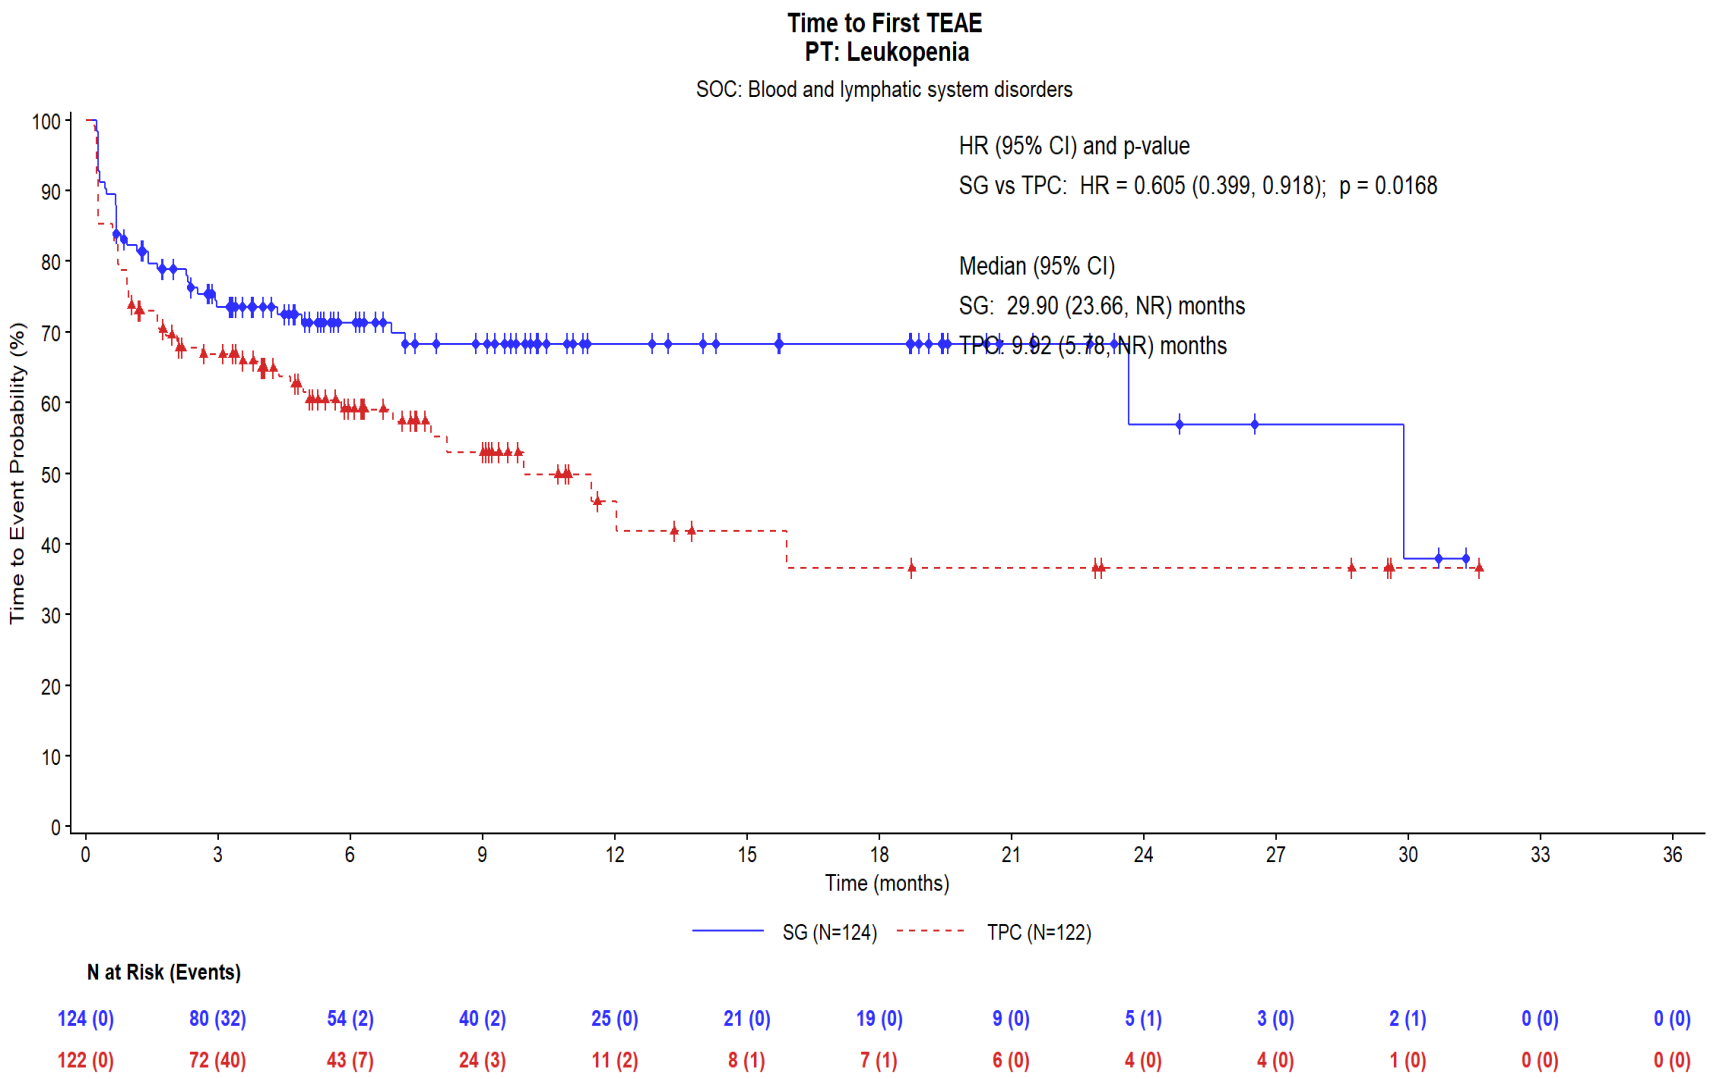
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.33. Figure 1.1.32: Kaplan Meier Plot of Time to First TEAE by SOC Skin and subcutaneous tissue disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



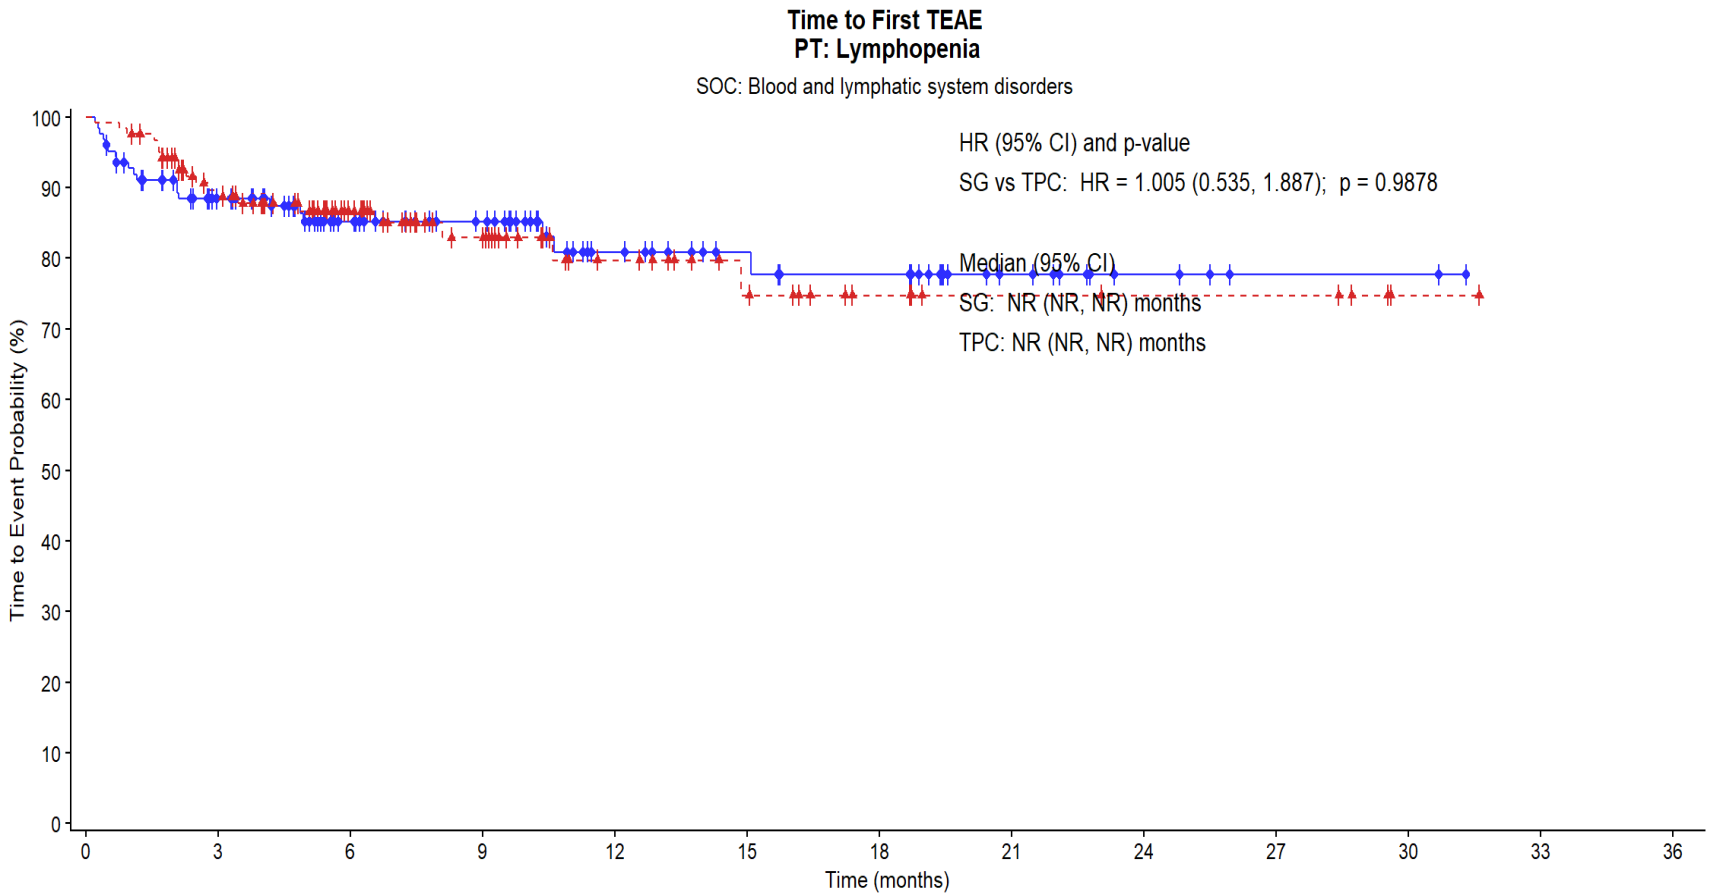
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.34. Figure 1.1.33: Kaplan Meier Plot of Time to First TEAE by SOC Vascular disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



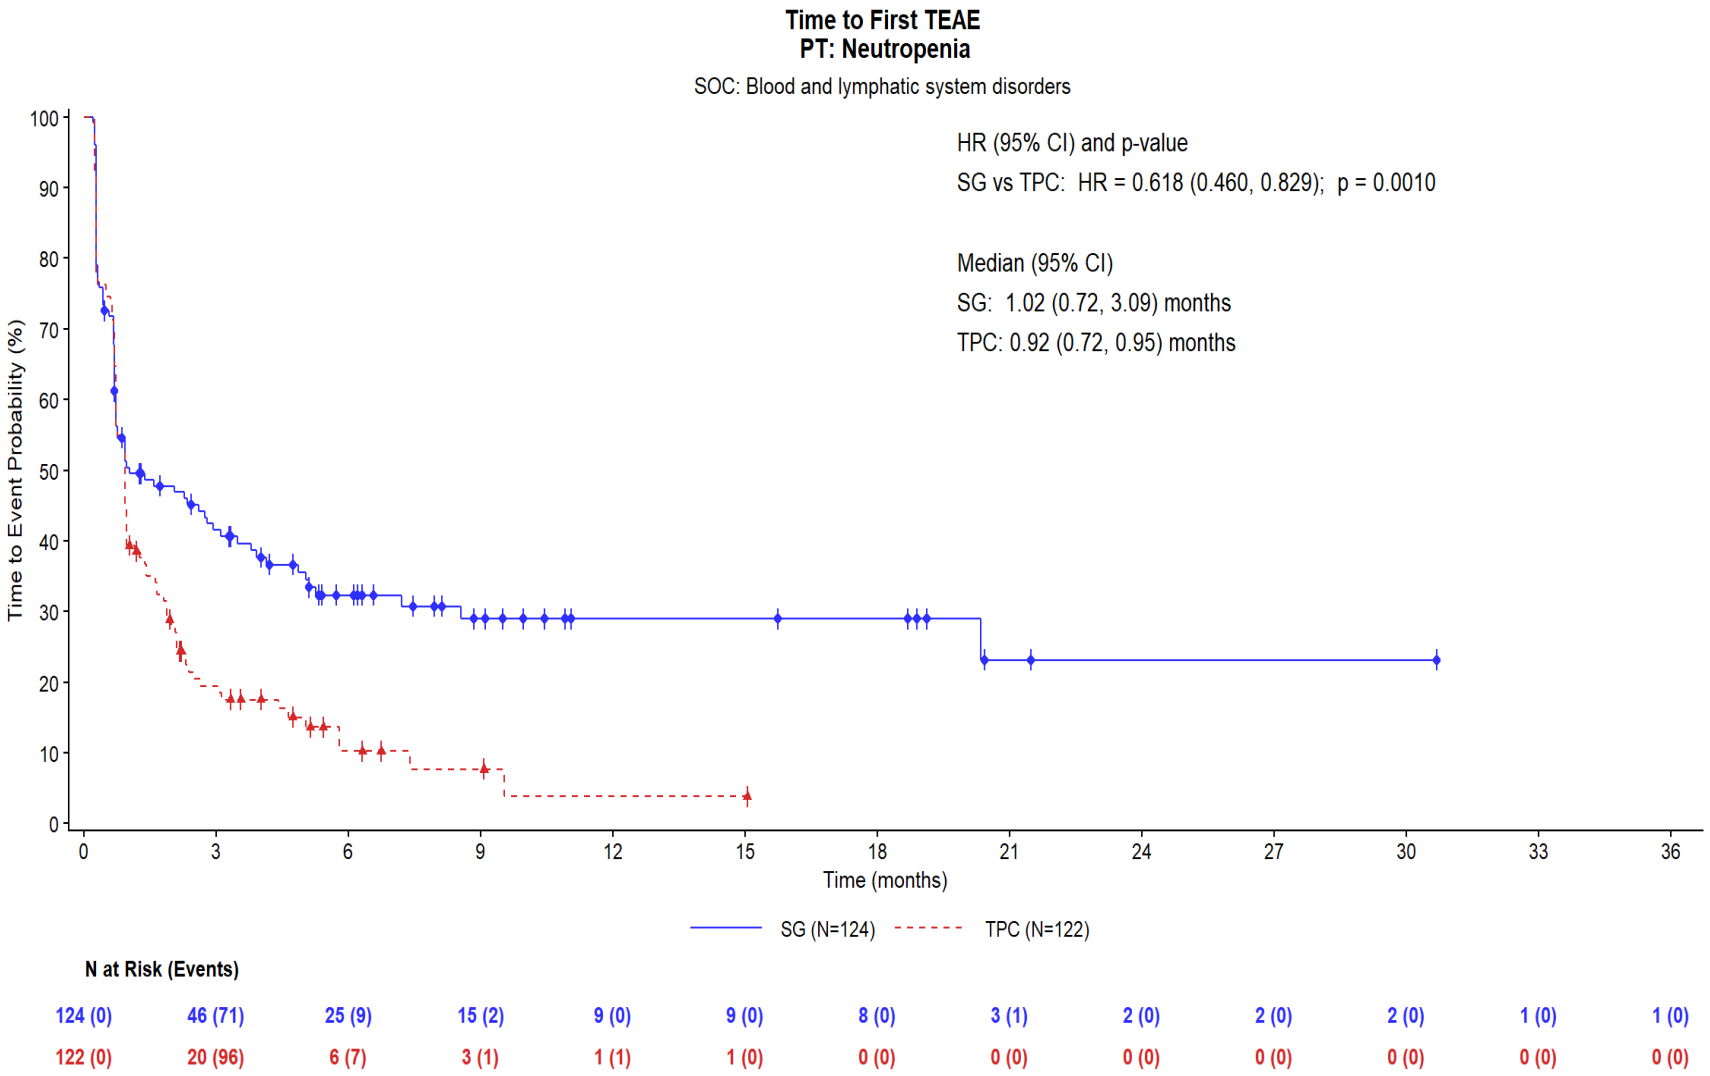
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.35. Figure 1.1.34: Kaplan Meier Plot of Time to First TEAE by PT Anaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



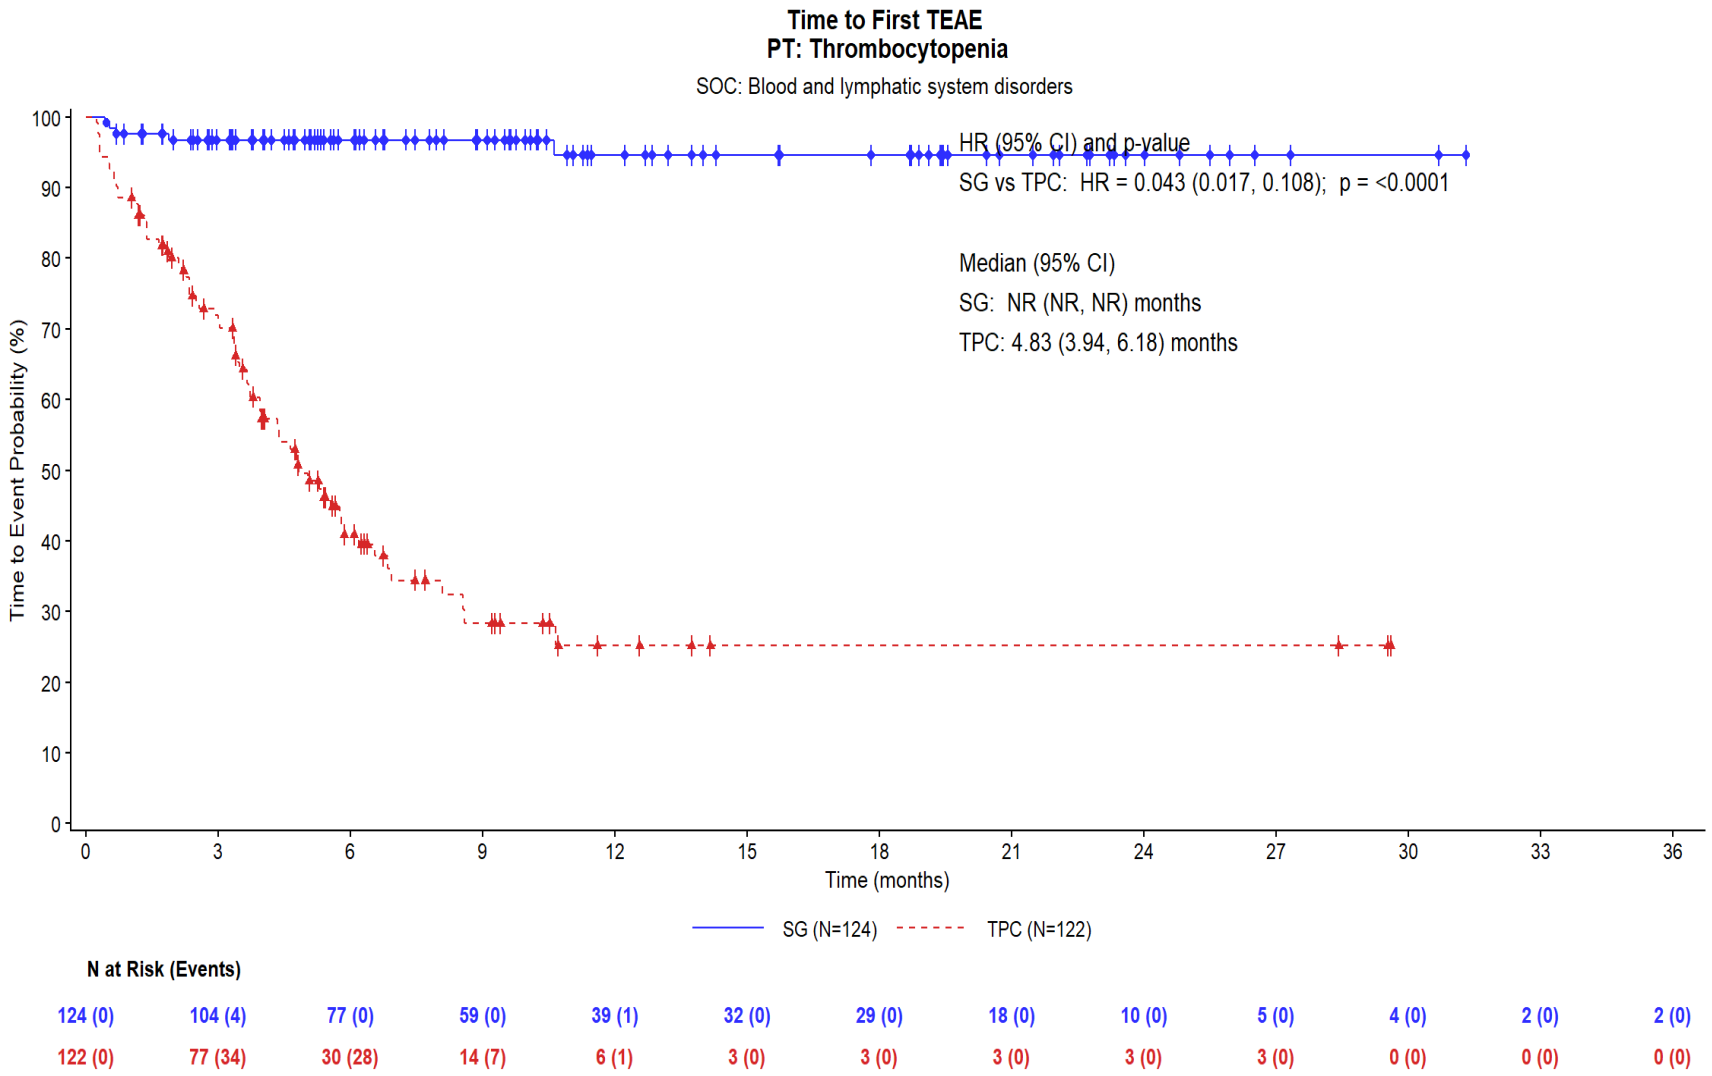
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.36. Figure 1.1.35: Kaplan Meier Plot of Time to First TEAE by PT Leukopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



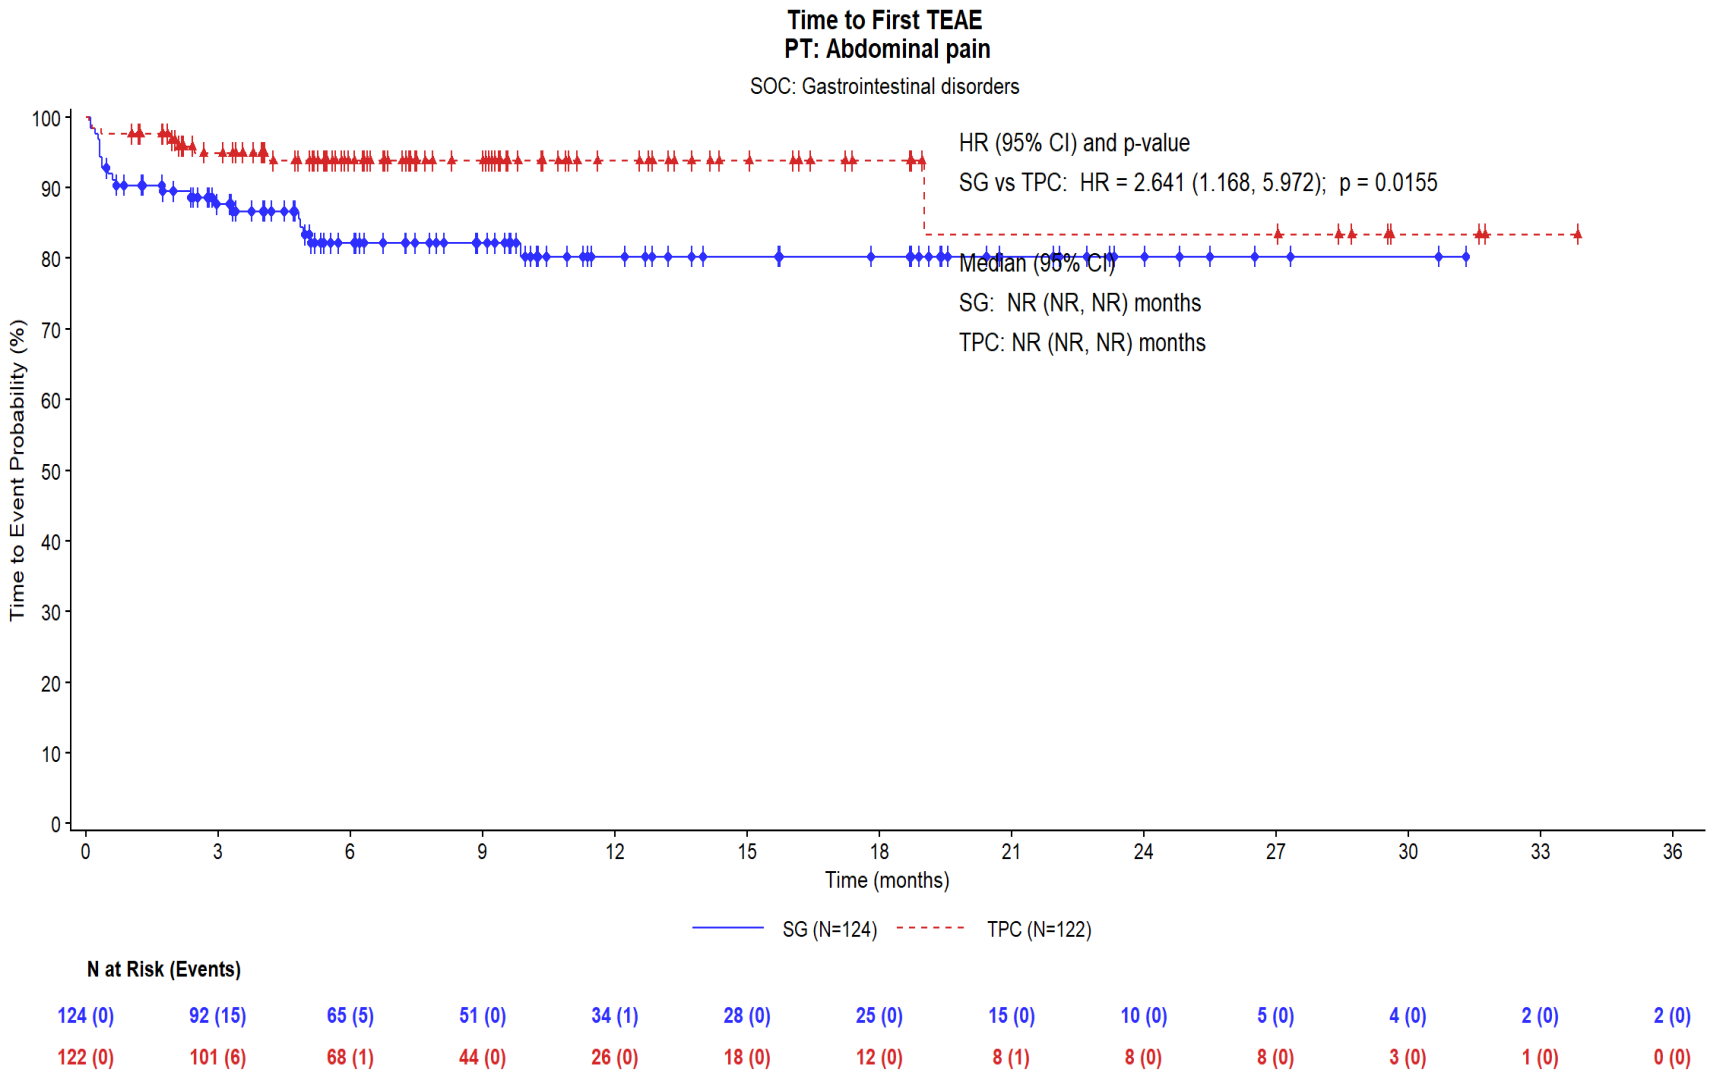
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.37. Figure 1.1.36: Kaplan Meier Plot of Time to First TEAE by PT Lymphopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



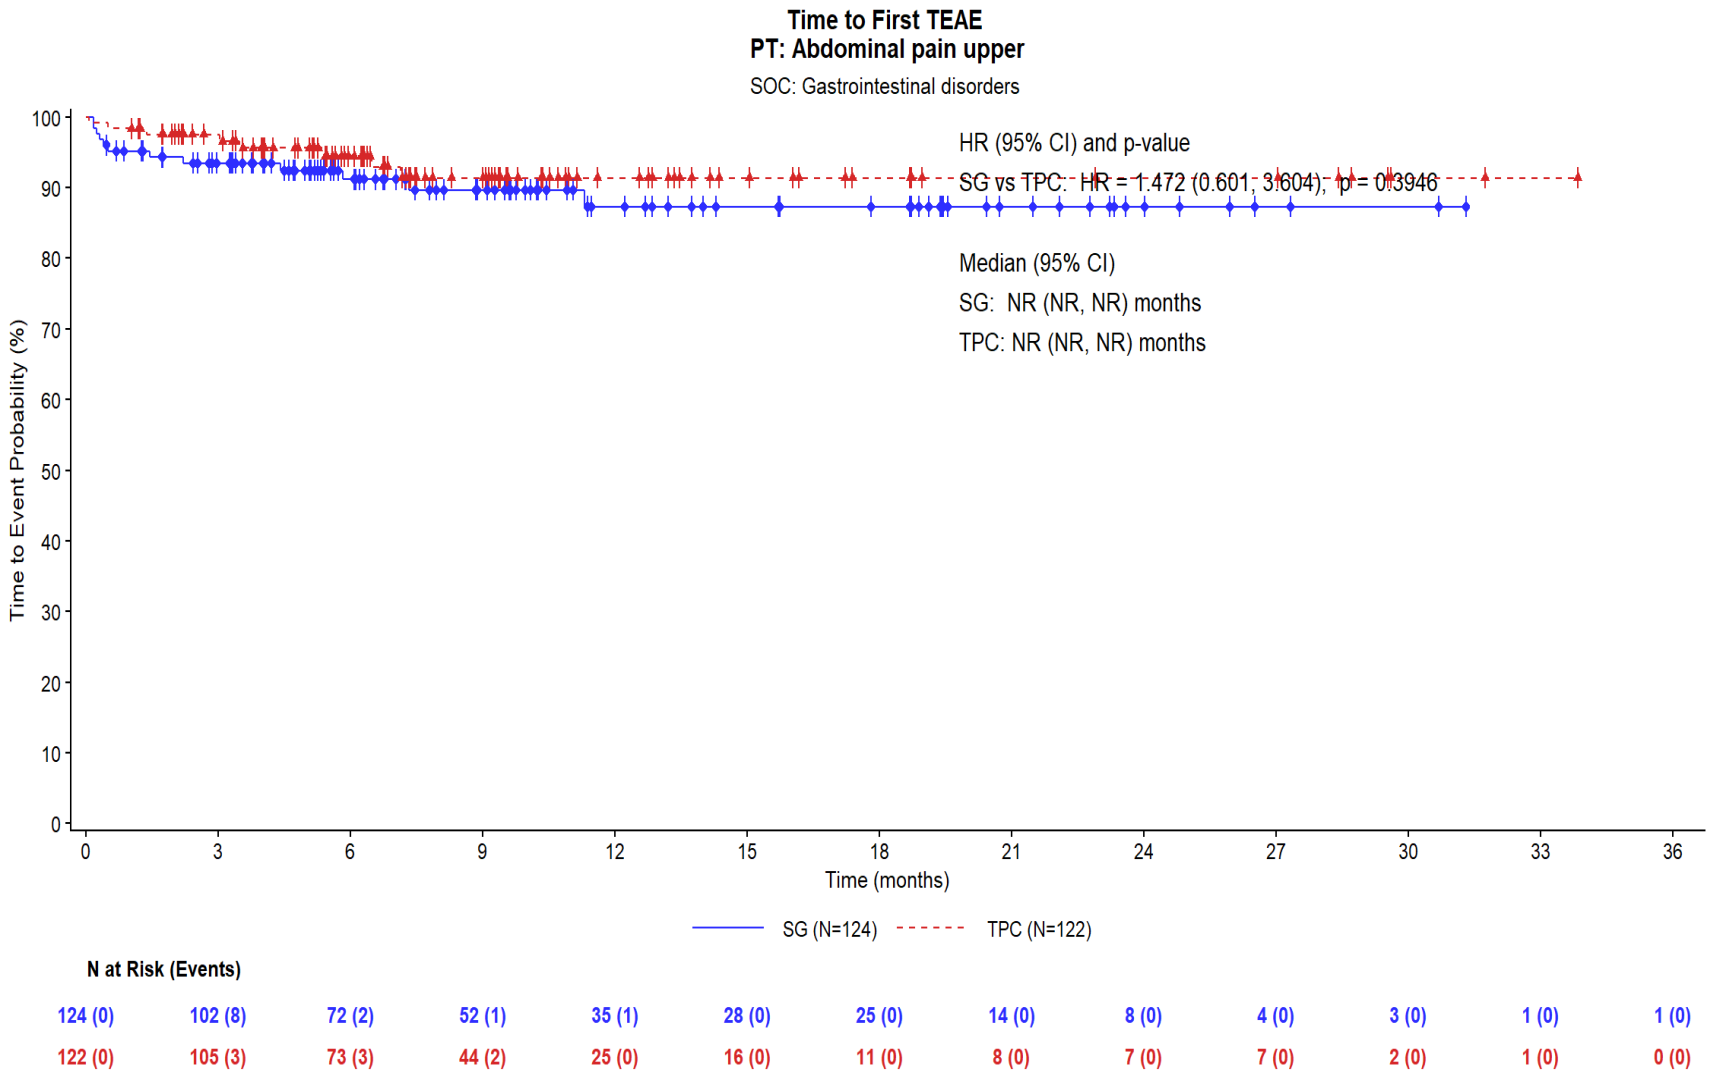
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.38. Figure 1.1.37: Kaplan Meier Plot of Time to First TEAE by PT Neutropenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



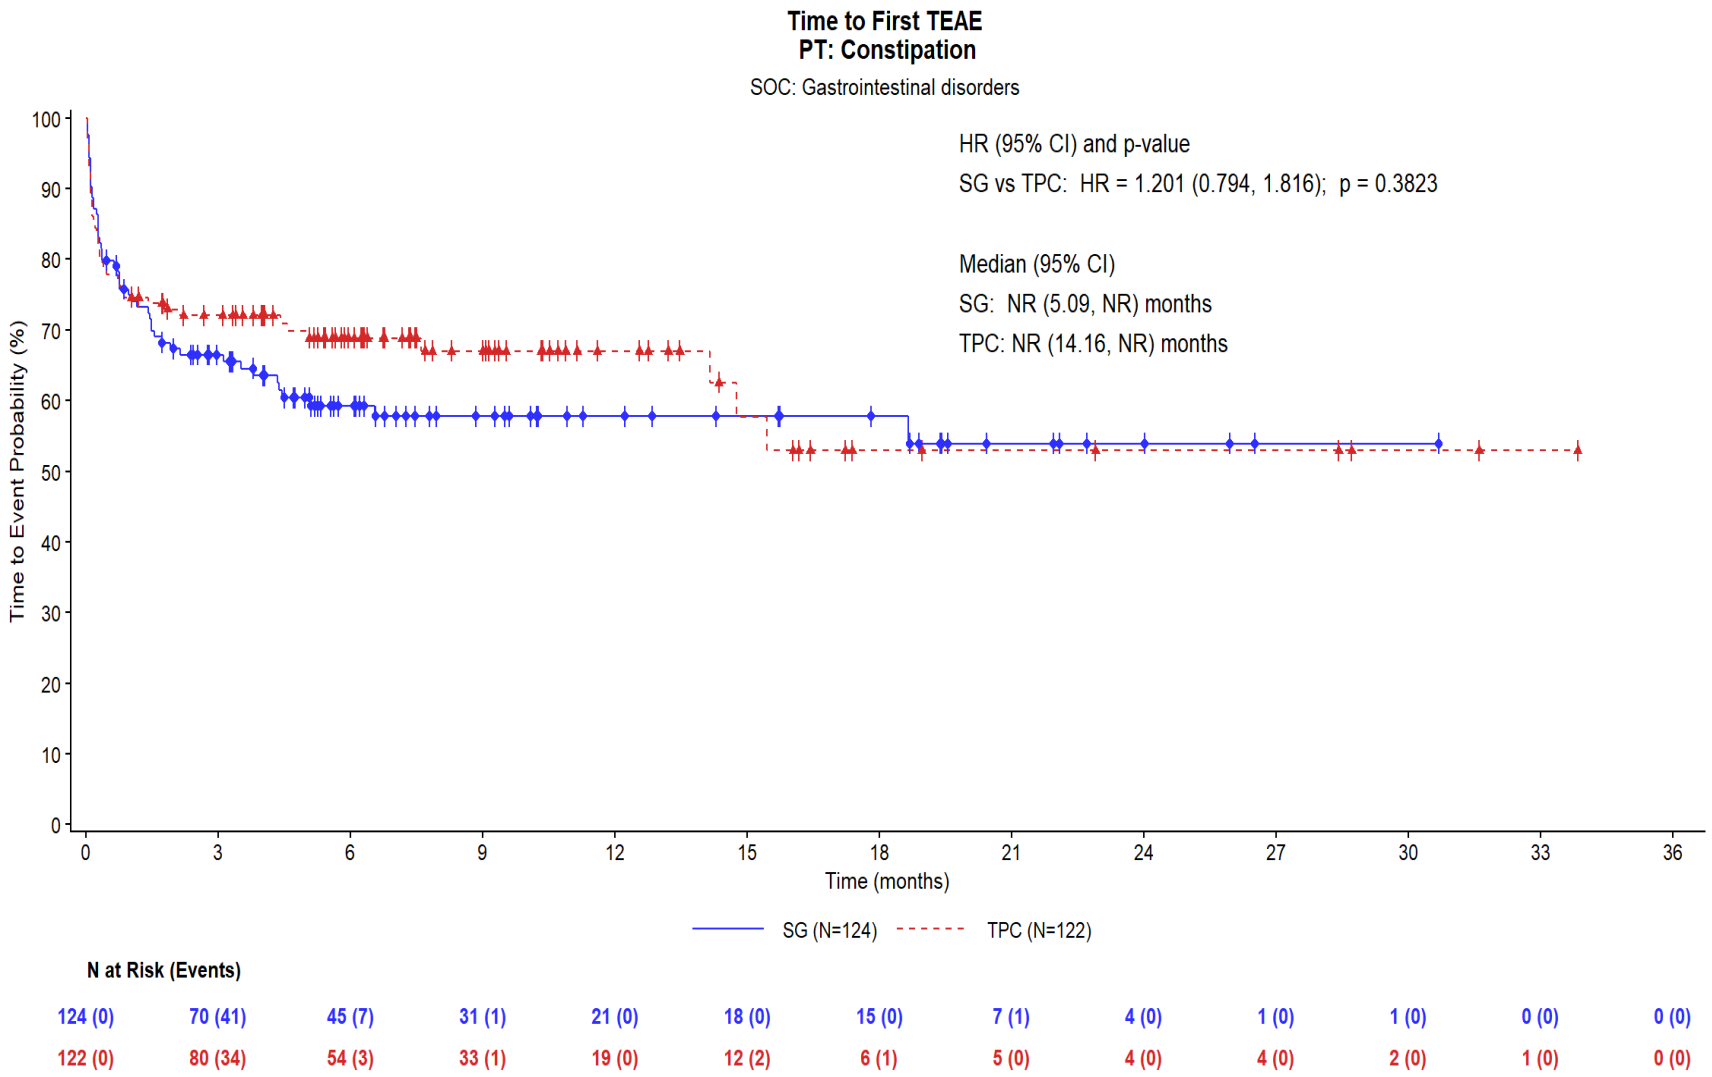
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.39. Figure 1.1.38: Kaplan Meier Plot of Time to First TEAE by PT Thrombocytopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



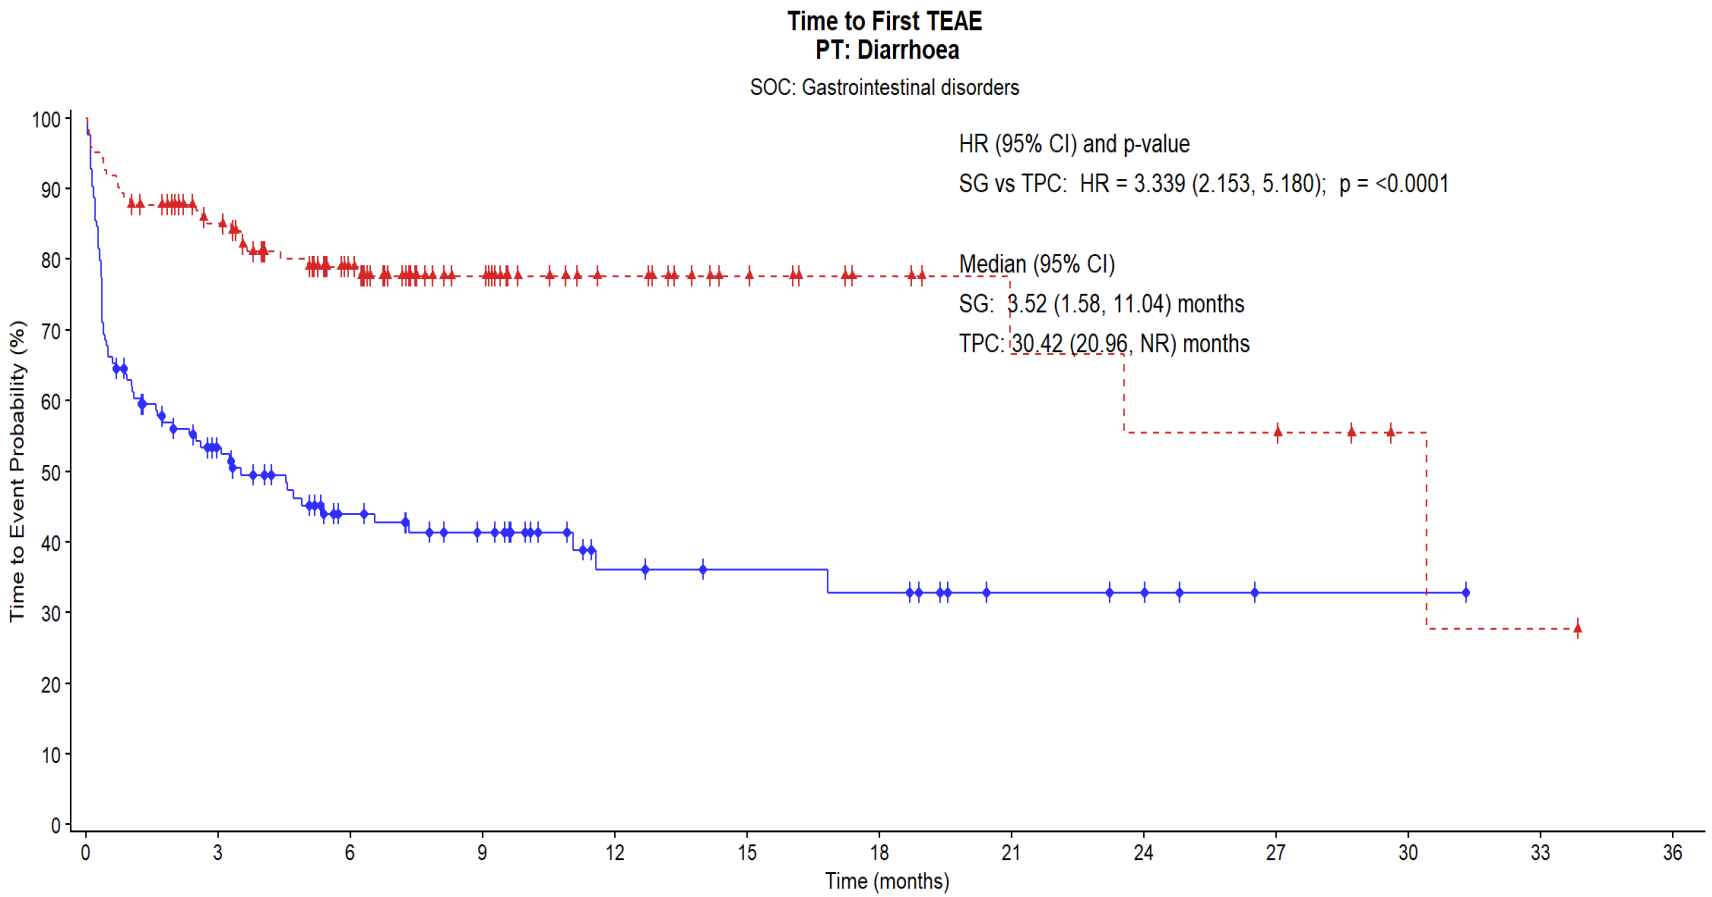
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.40. Figure 1.1.39: Kaplan Meier Plot of Time to First TEAE by PT Abdominal pain — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



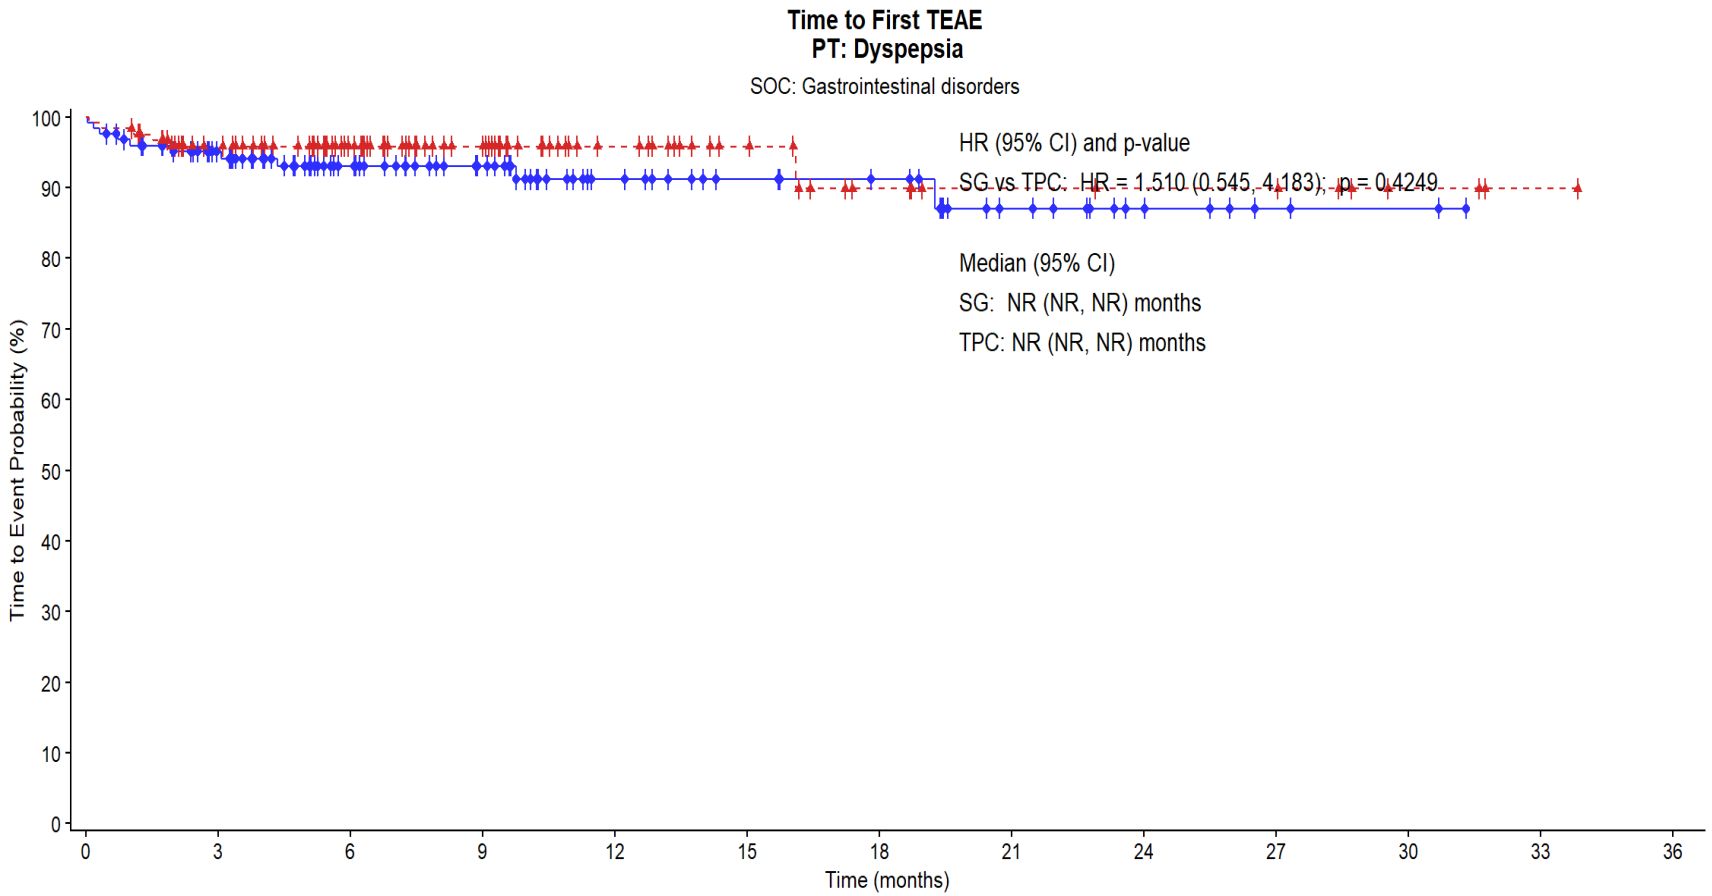
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.41. Figure 1.1.40: Kaplan Meier Plot of Time to First TEAE by PT Abdominal pain upper — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



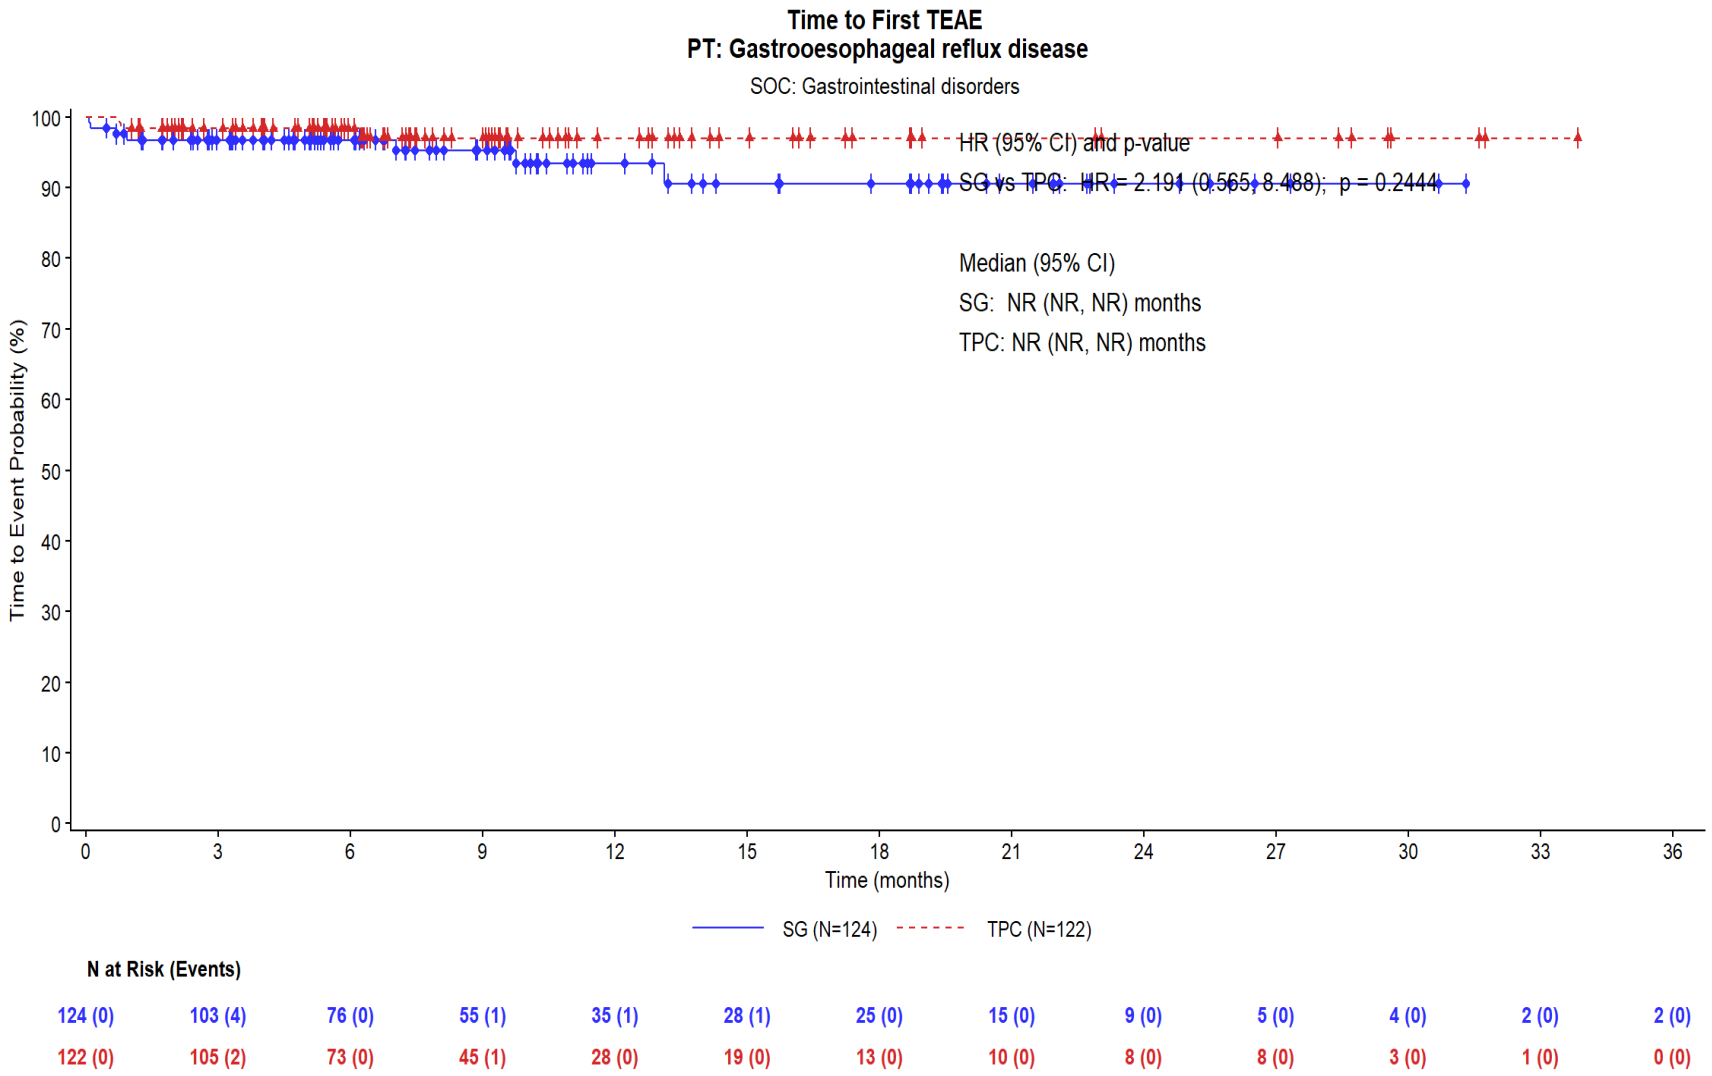
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.42. Figure 1.1.41: Kaplan Meier Plot of Time to First TEAE by PT Constipation — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



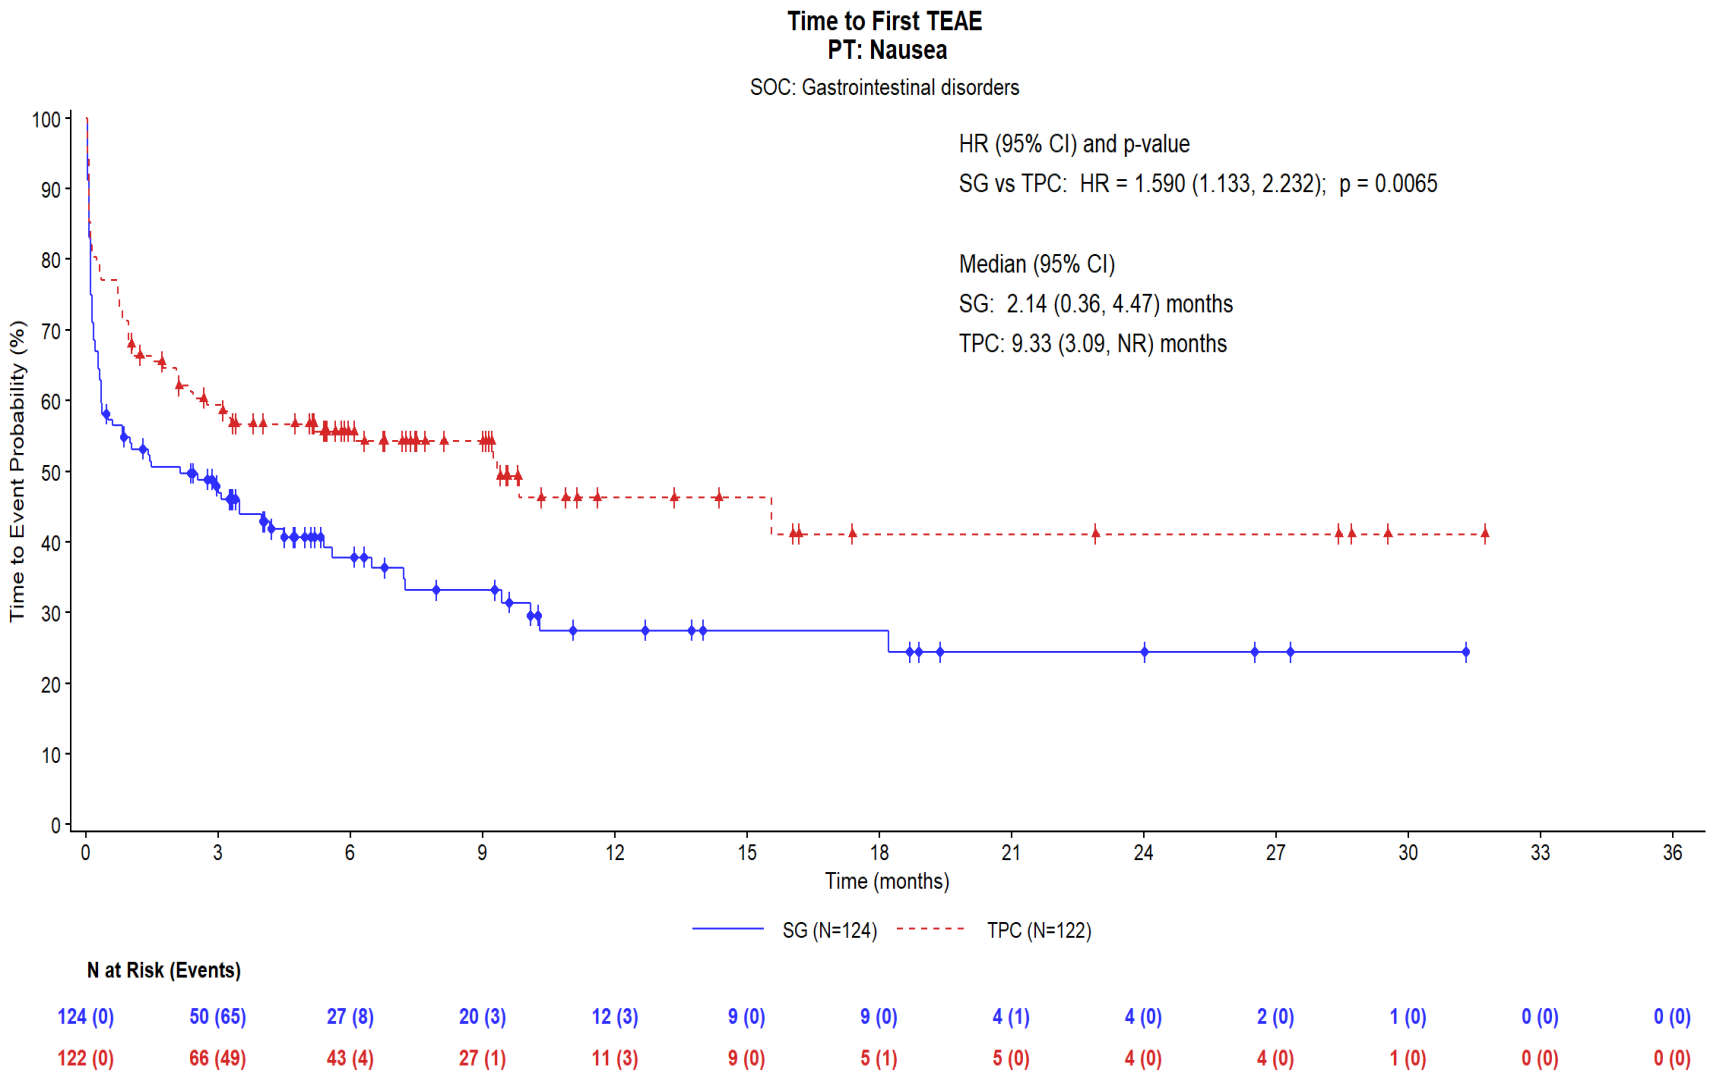
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.43. Figure 1.1.42: Kaplan Meier Plot of Time to First TEAE by PT Diarrhoea — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



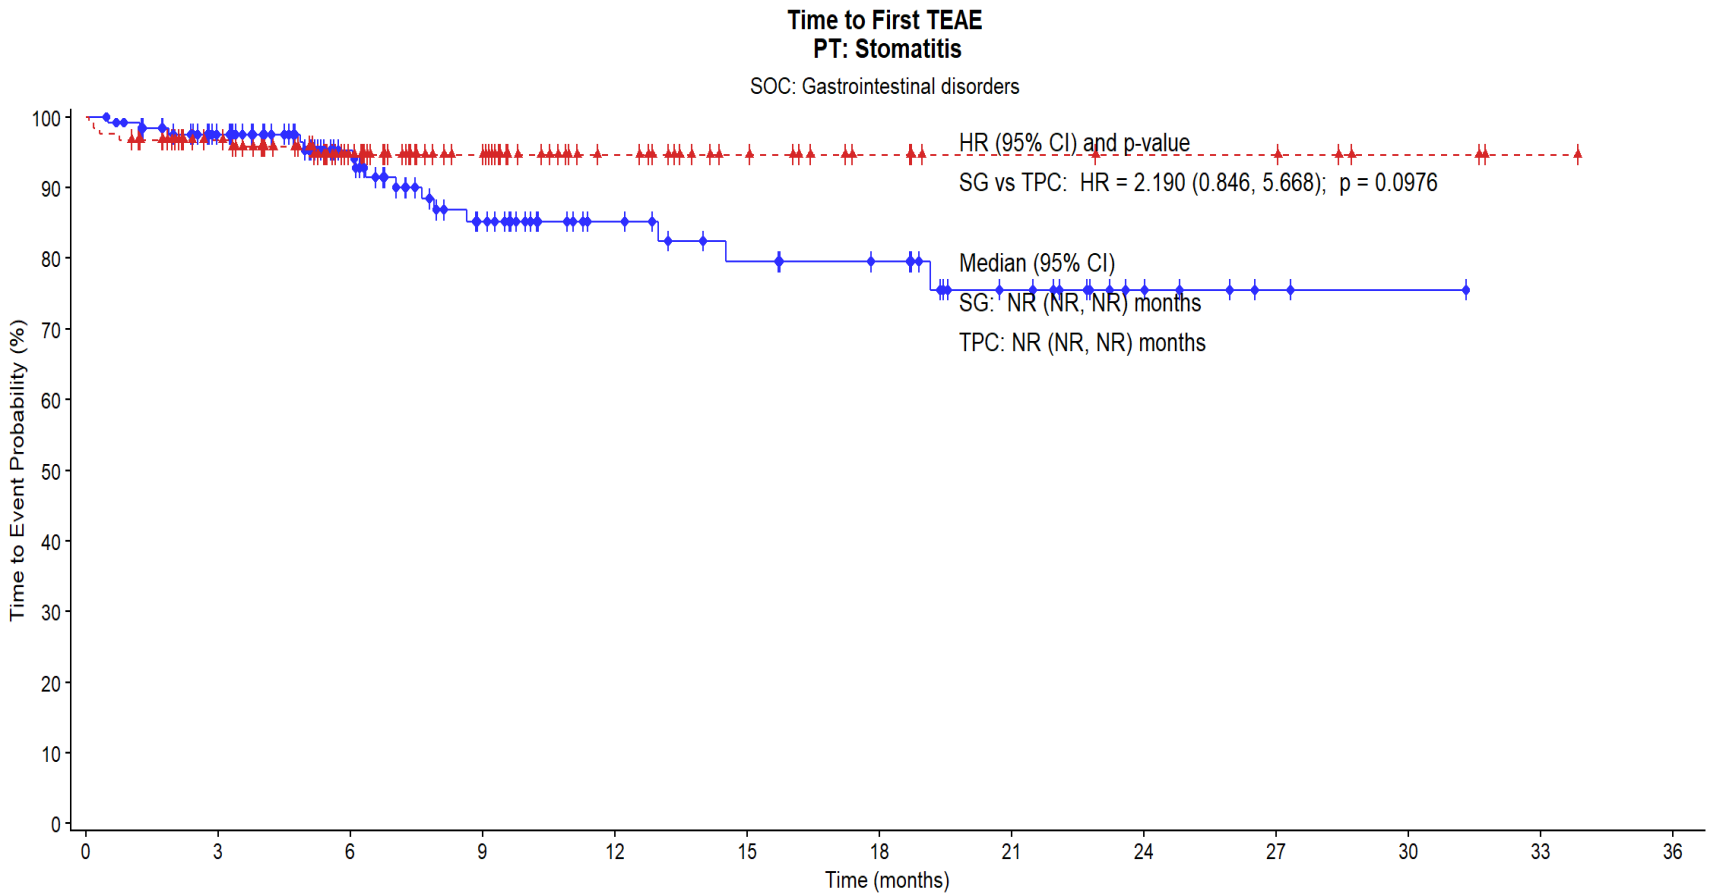
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.44. Figure 1.1.43: Kaplan Meier Plot of Time to First TEAE by PT Dyspepsia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



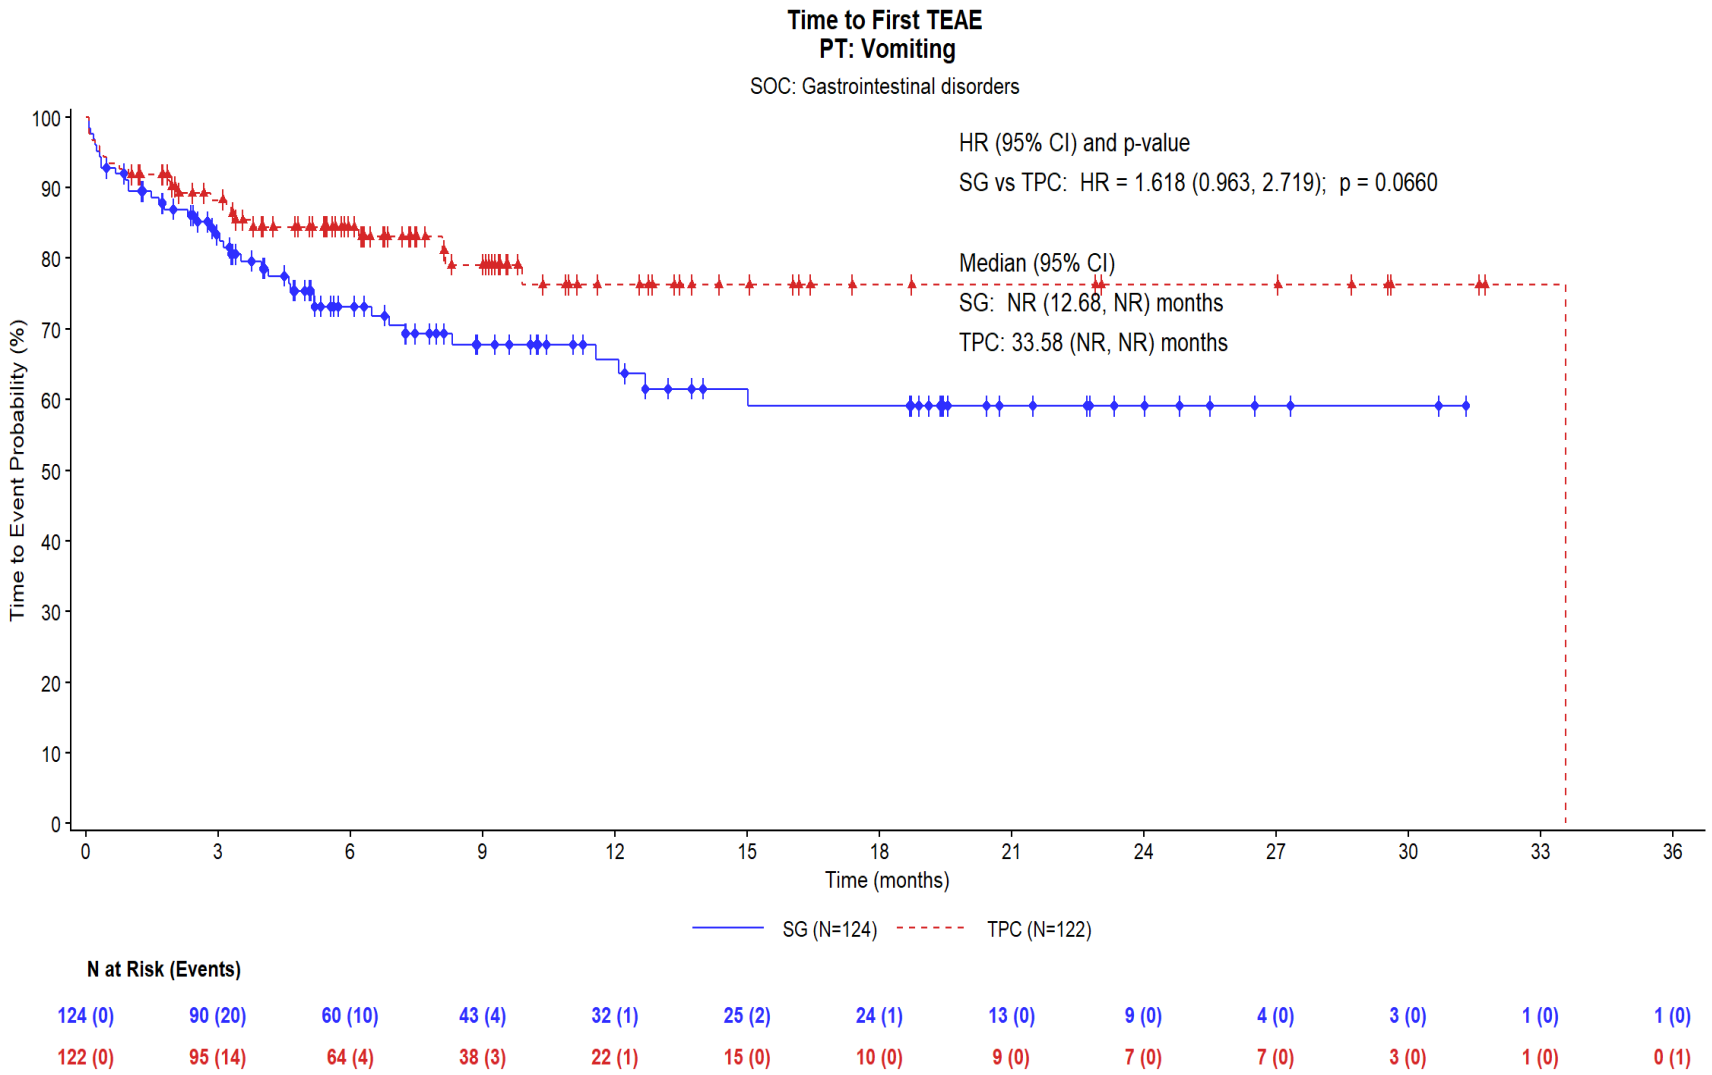
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.45. Figure 1.1.44: Kaplan Meier Plot of Time to First TEAE by PT Gastrooesophageal reflux disease — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



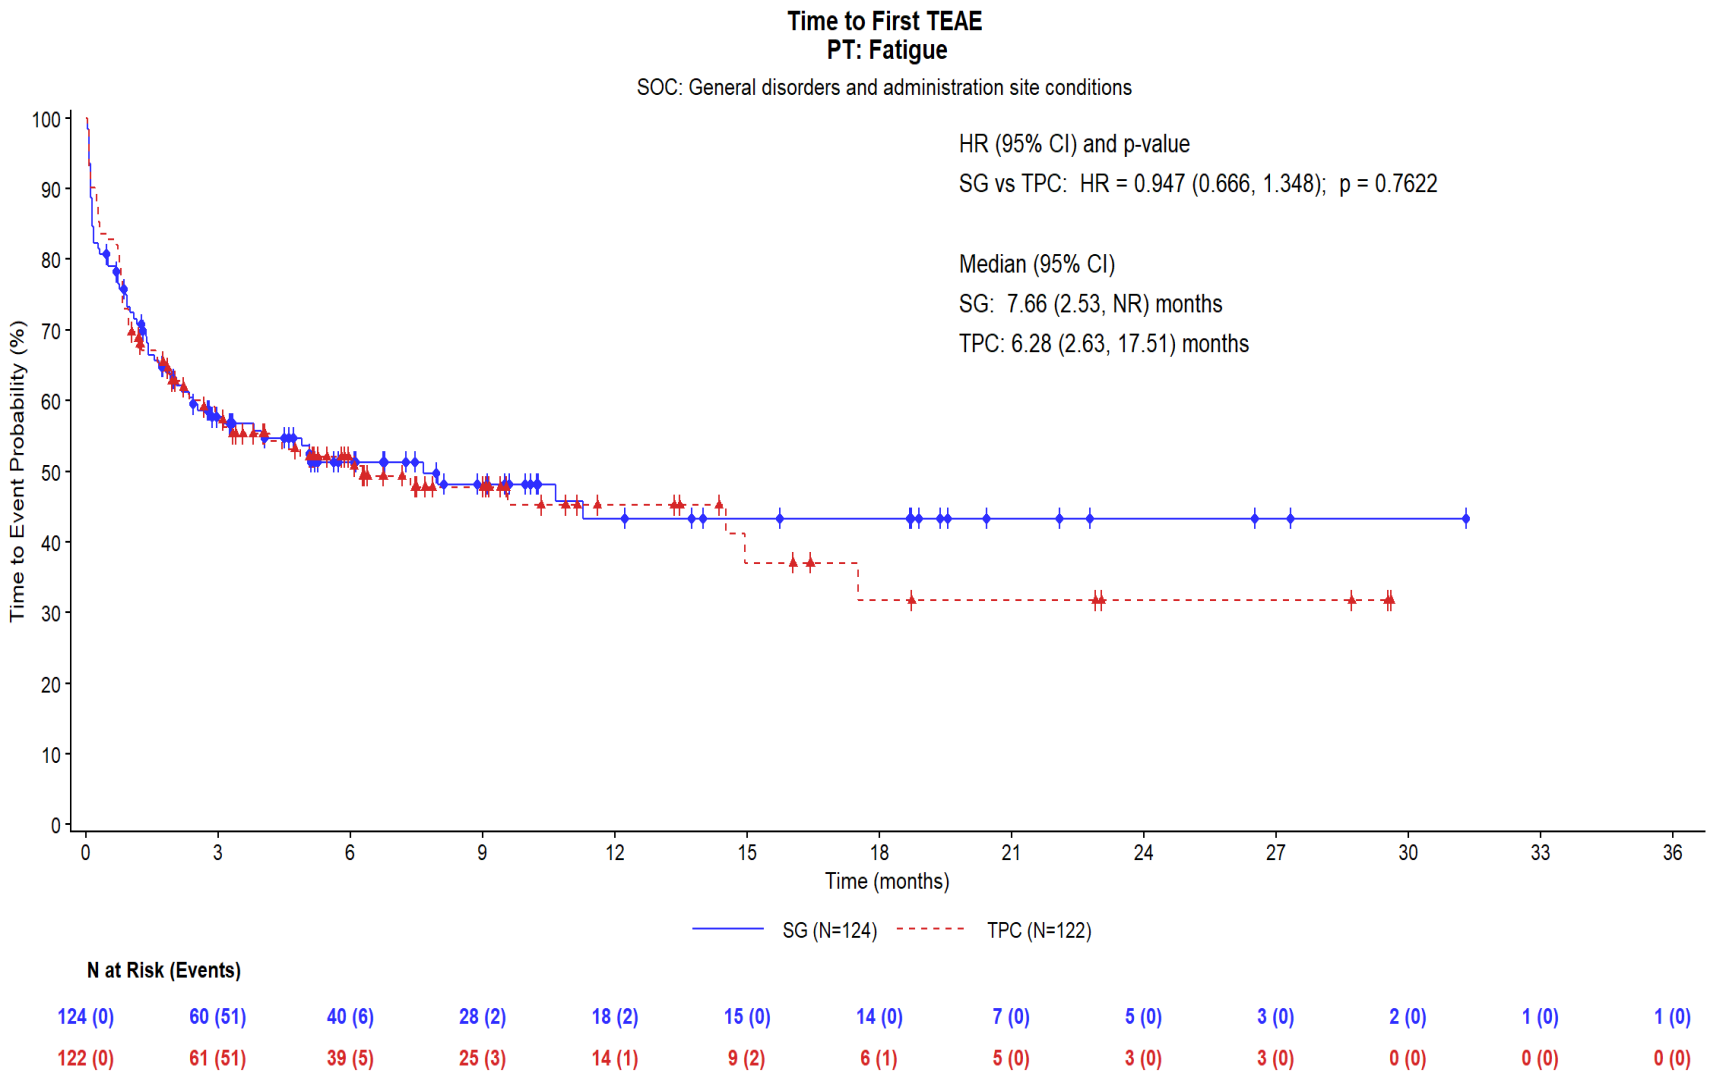
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.46. Figure 1.1.45: Kaplan Meier Plot of Time to First TEAE by PT Nausea — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



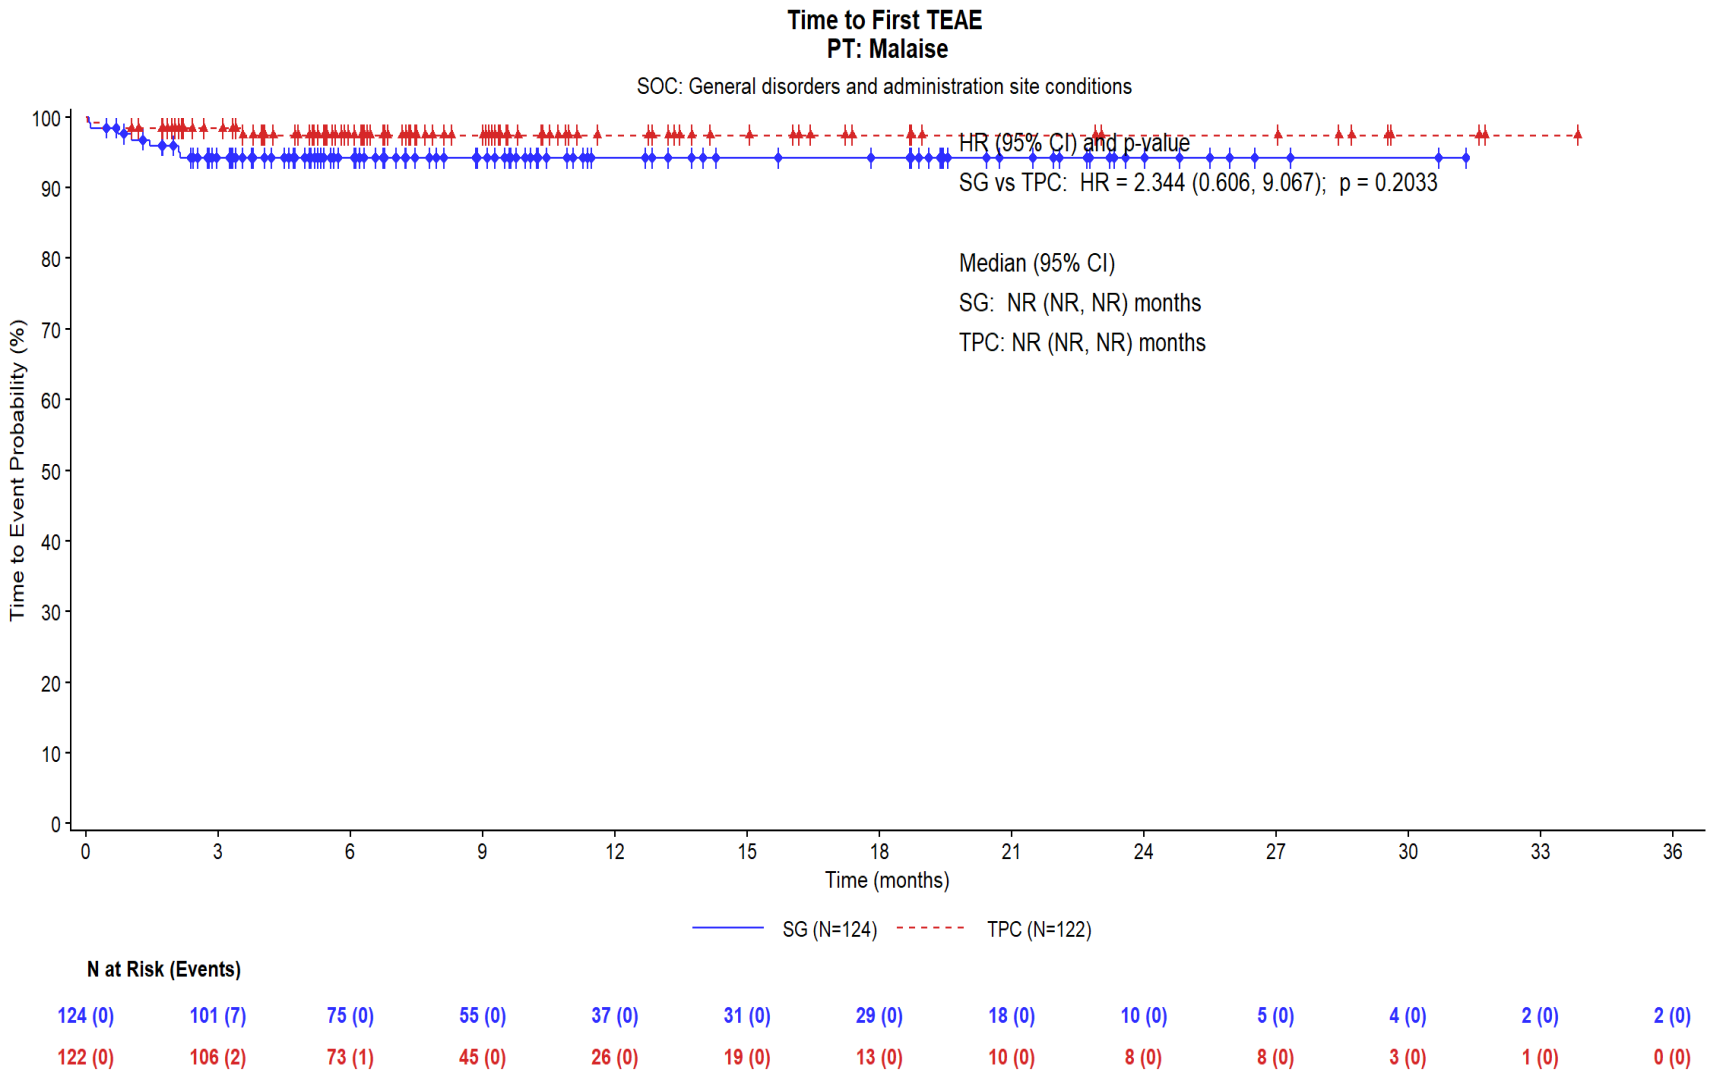
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.47. Figure 1.1.46: Kaplan Meier Plot of Time to First TEAE by PT Stomatitis — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



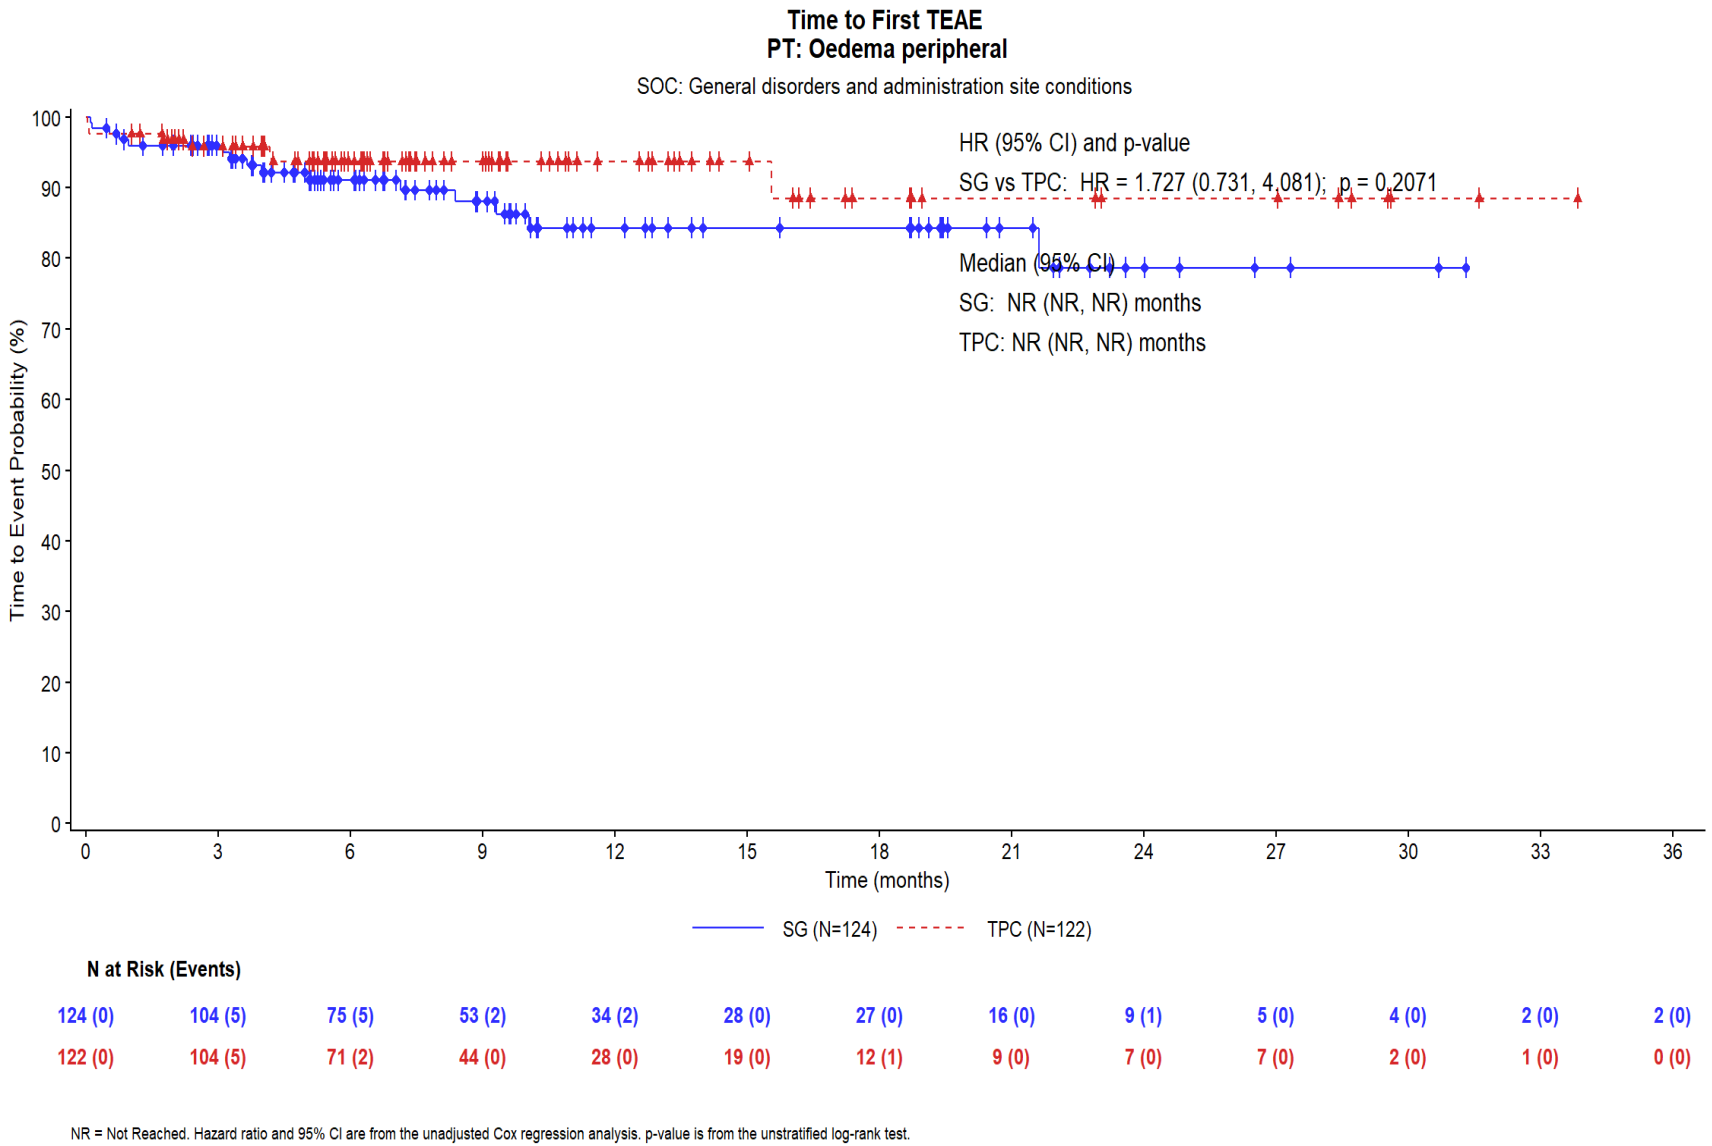
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.48. Figure 1.1.47: Kaplan Meier Plot of Time to First TEAE by PT Vomiting — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



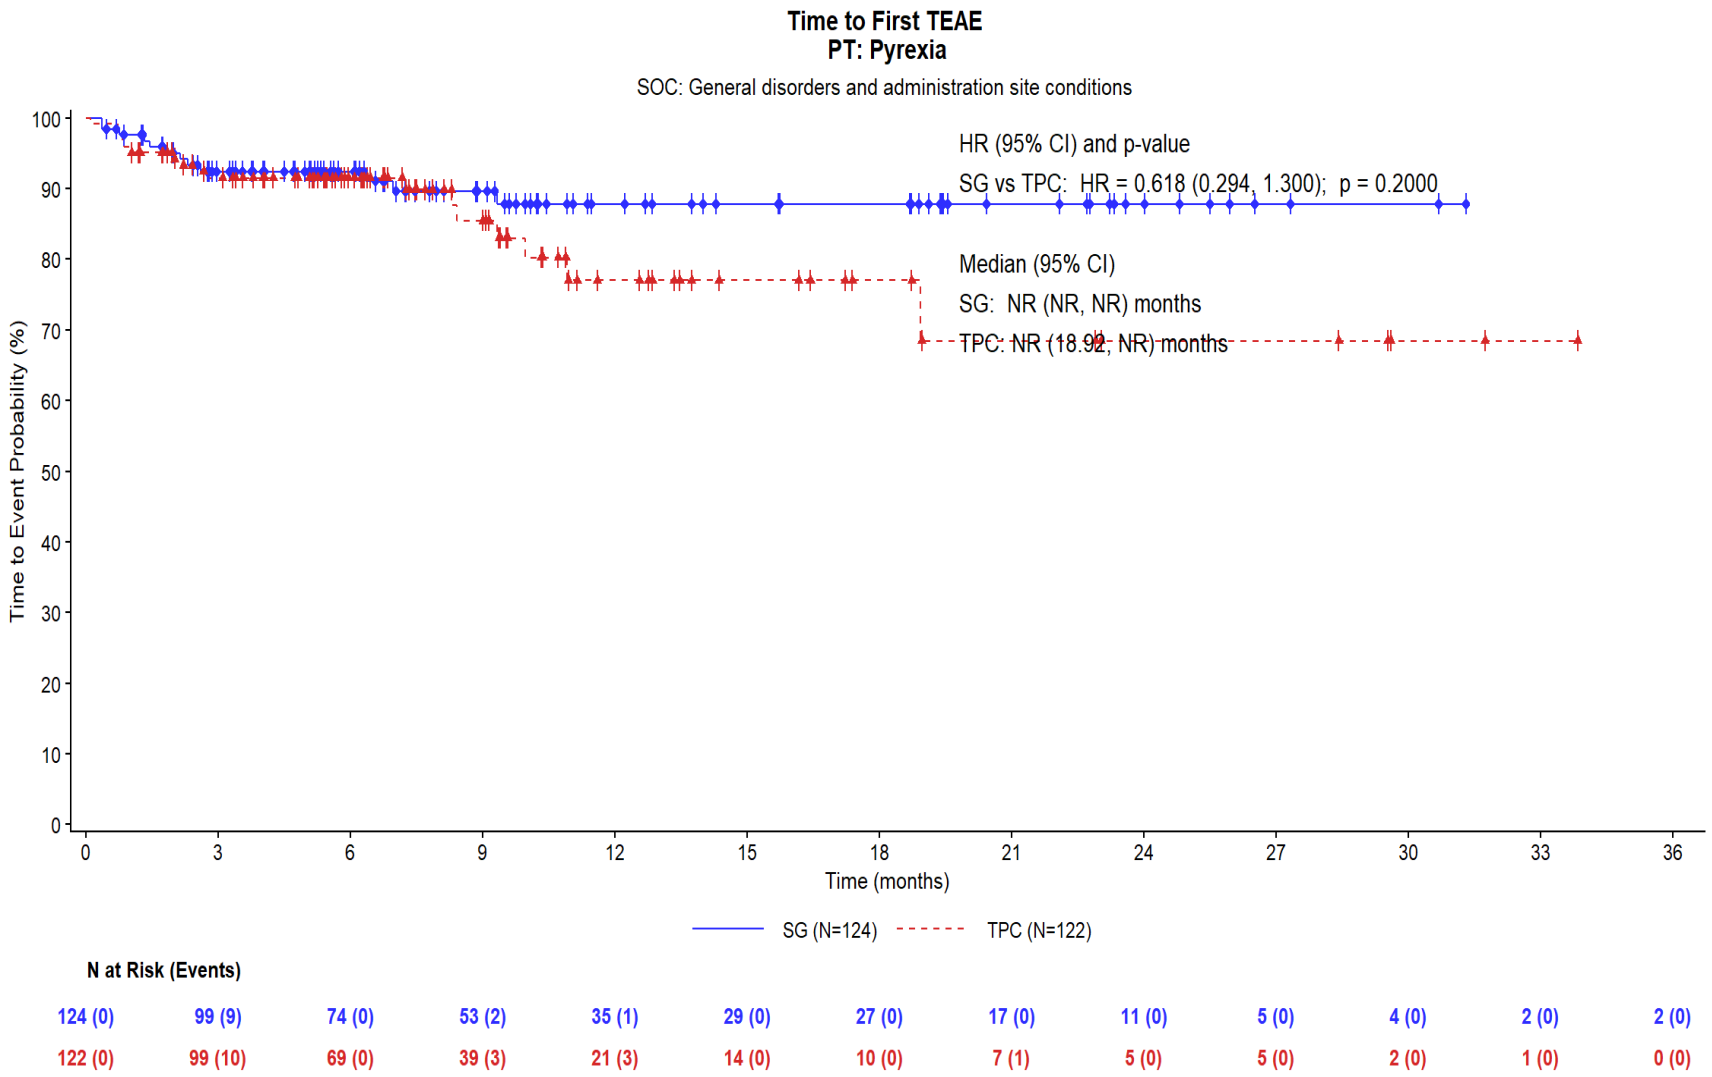
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.49. Figure 1.1.48: Kaplan Meier Plot of Time to First TEAE by PT Fatigue — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



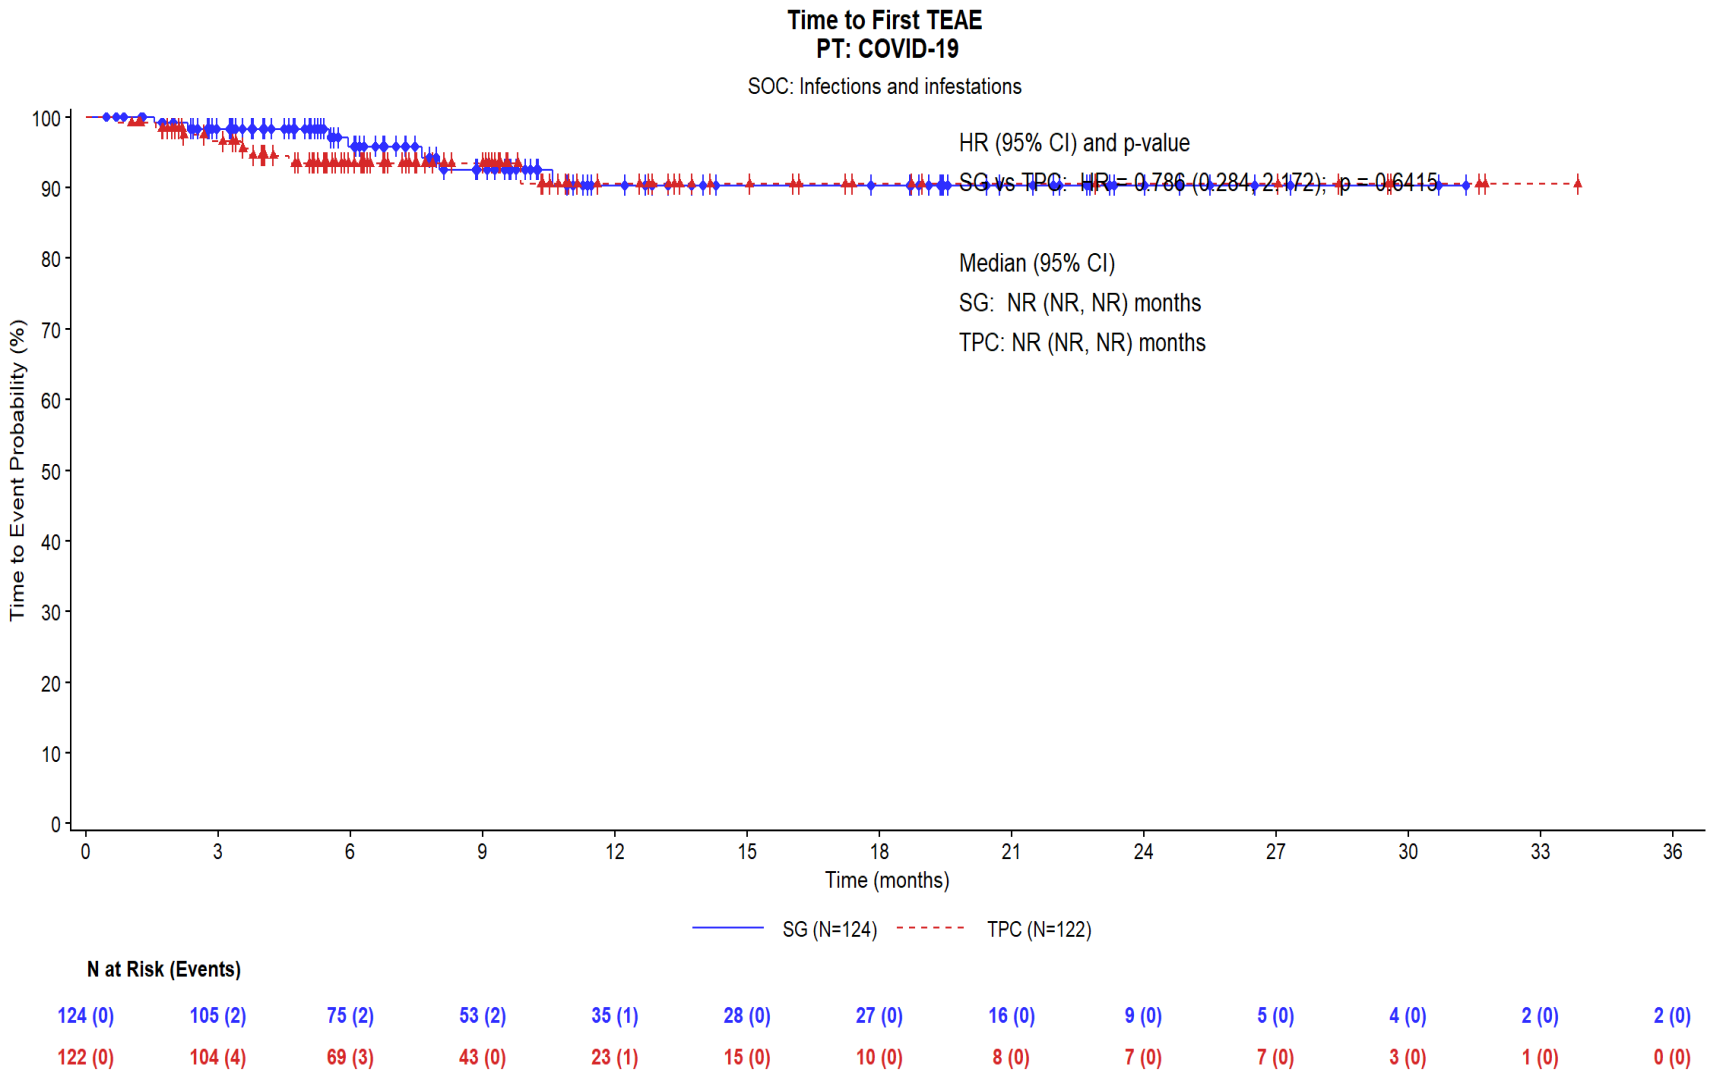
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.50. Figure 1.1.49: Kaplan Meier Plot of Time to First TEAE by PT Malaise — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



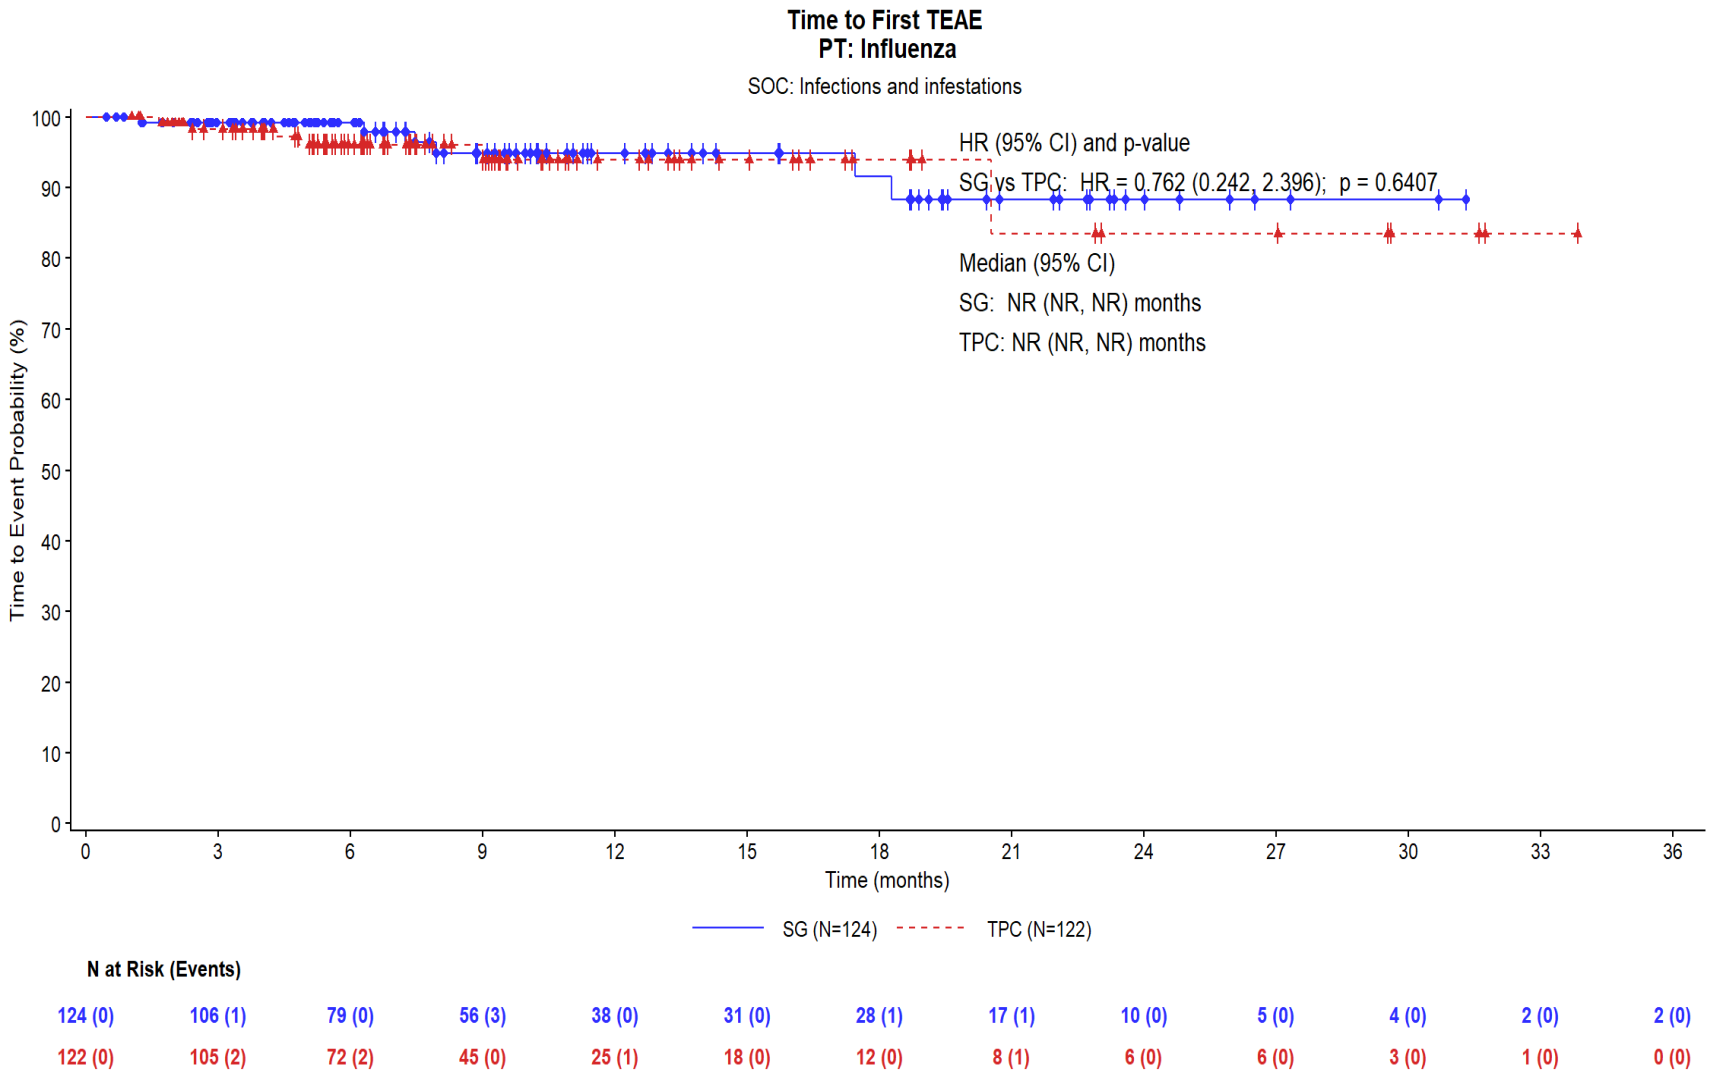
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.51. Figure 1.1.50: Kaplan Meier Plot of Time to First TEAE by PT Oedema peripheral — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



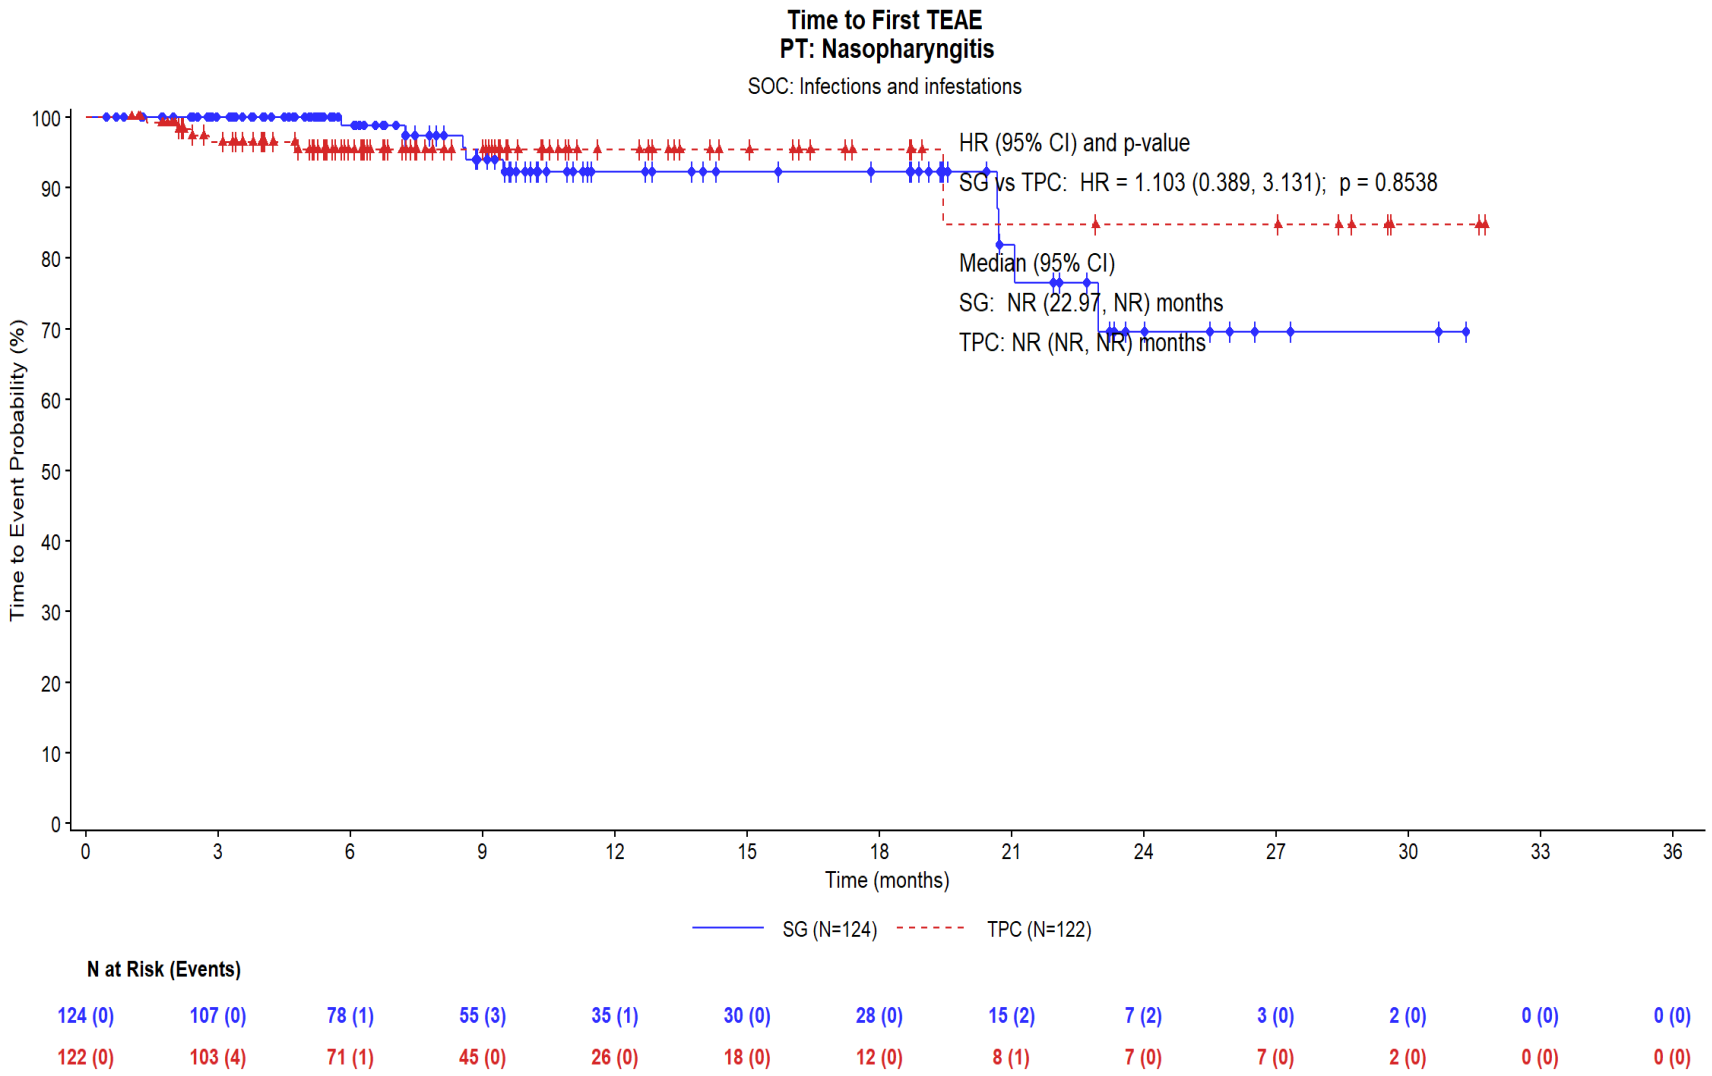
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.52. Figure 1.1.51: Kaplan Meier Plot of Time to First TEAE by PT Pyrexia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



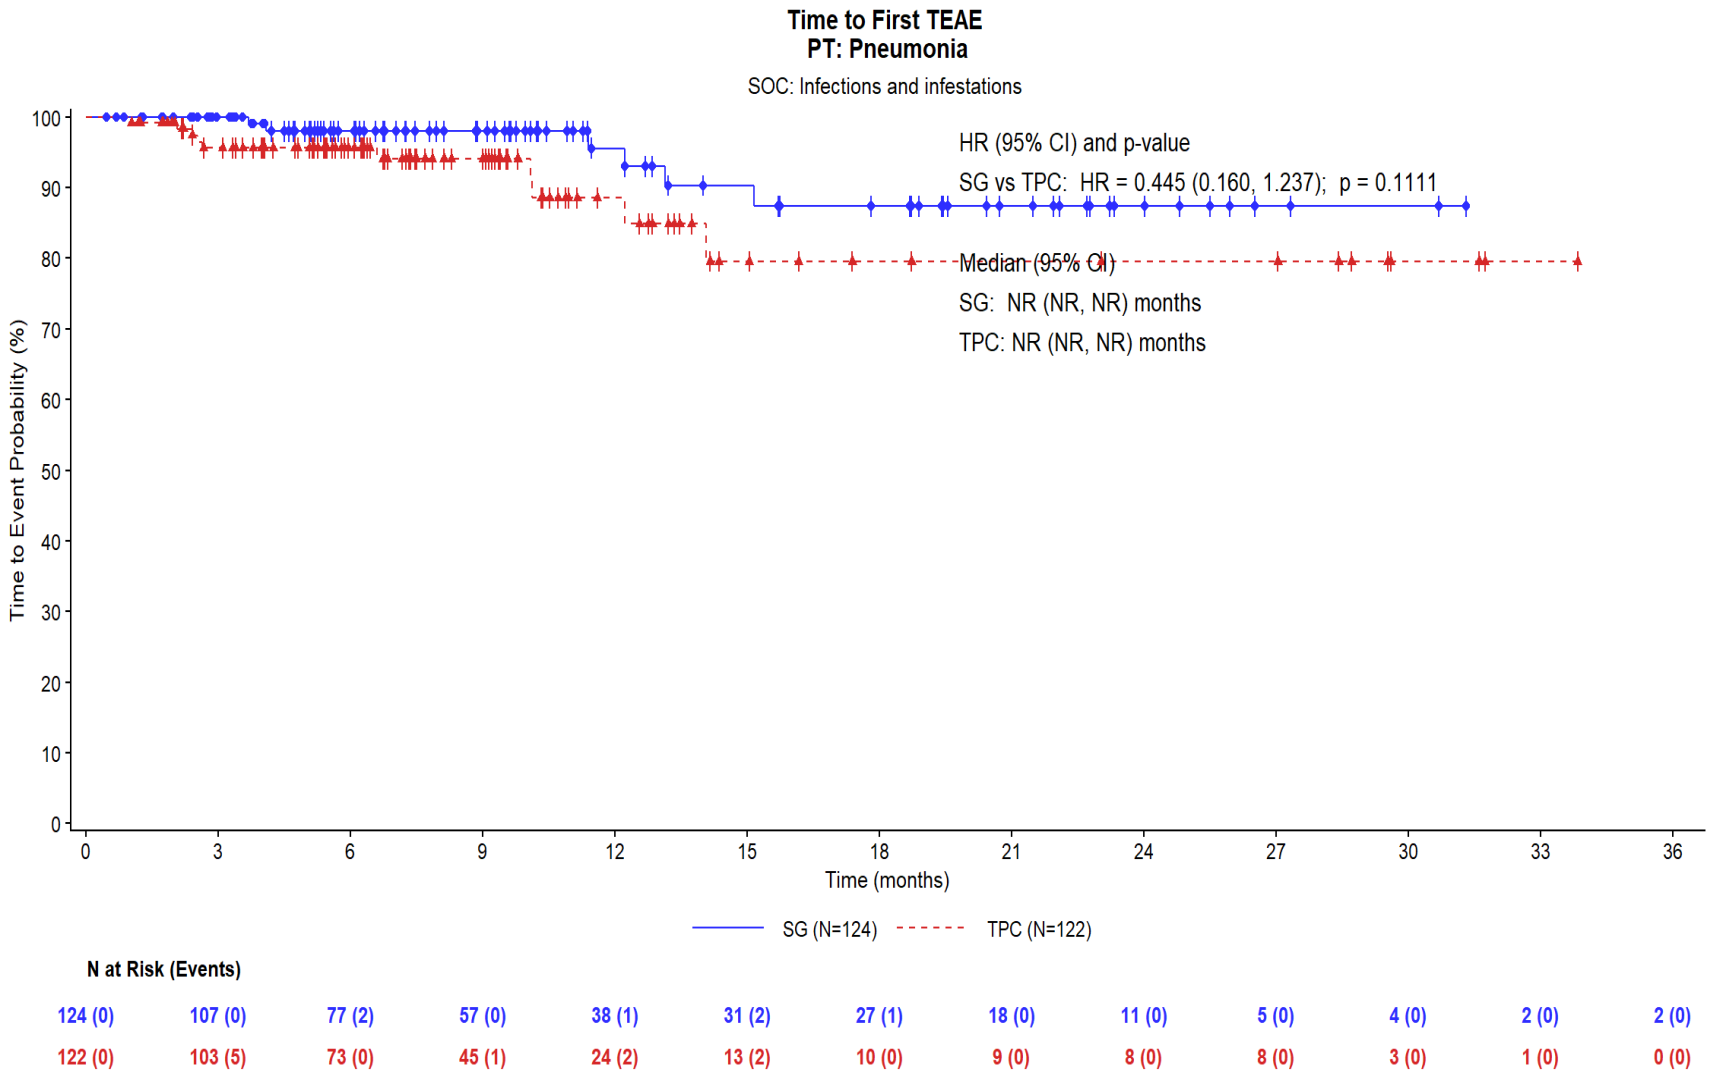
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.53. Figure 1.1.52: Kaplan Meier Plot of Time to First TEAE by PT COVID 19 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



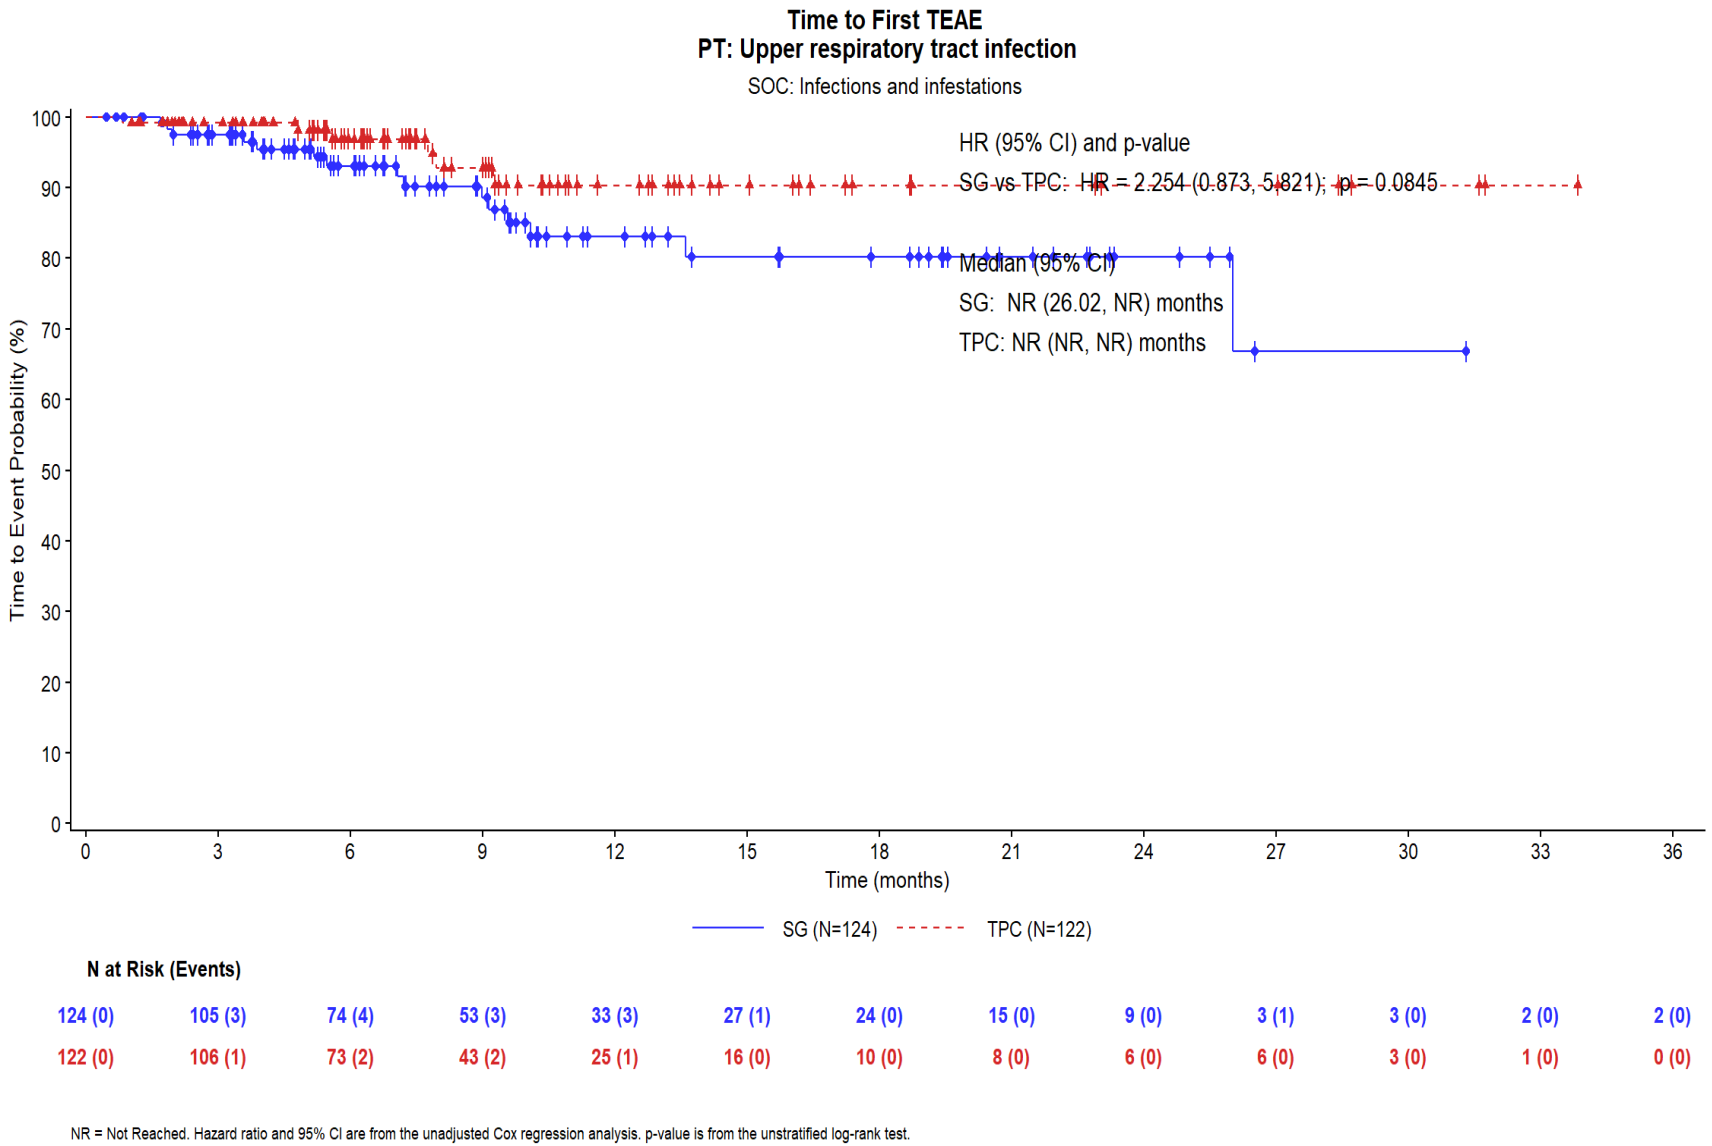
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.54. Figure 1.1.53: Kaplan Meier Plot of Time to First TEAE by PT Influenza — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



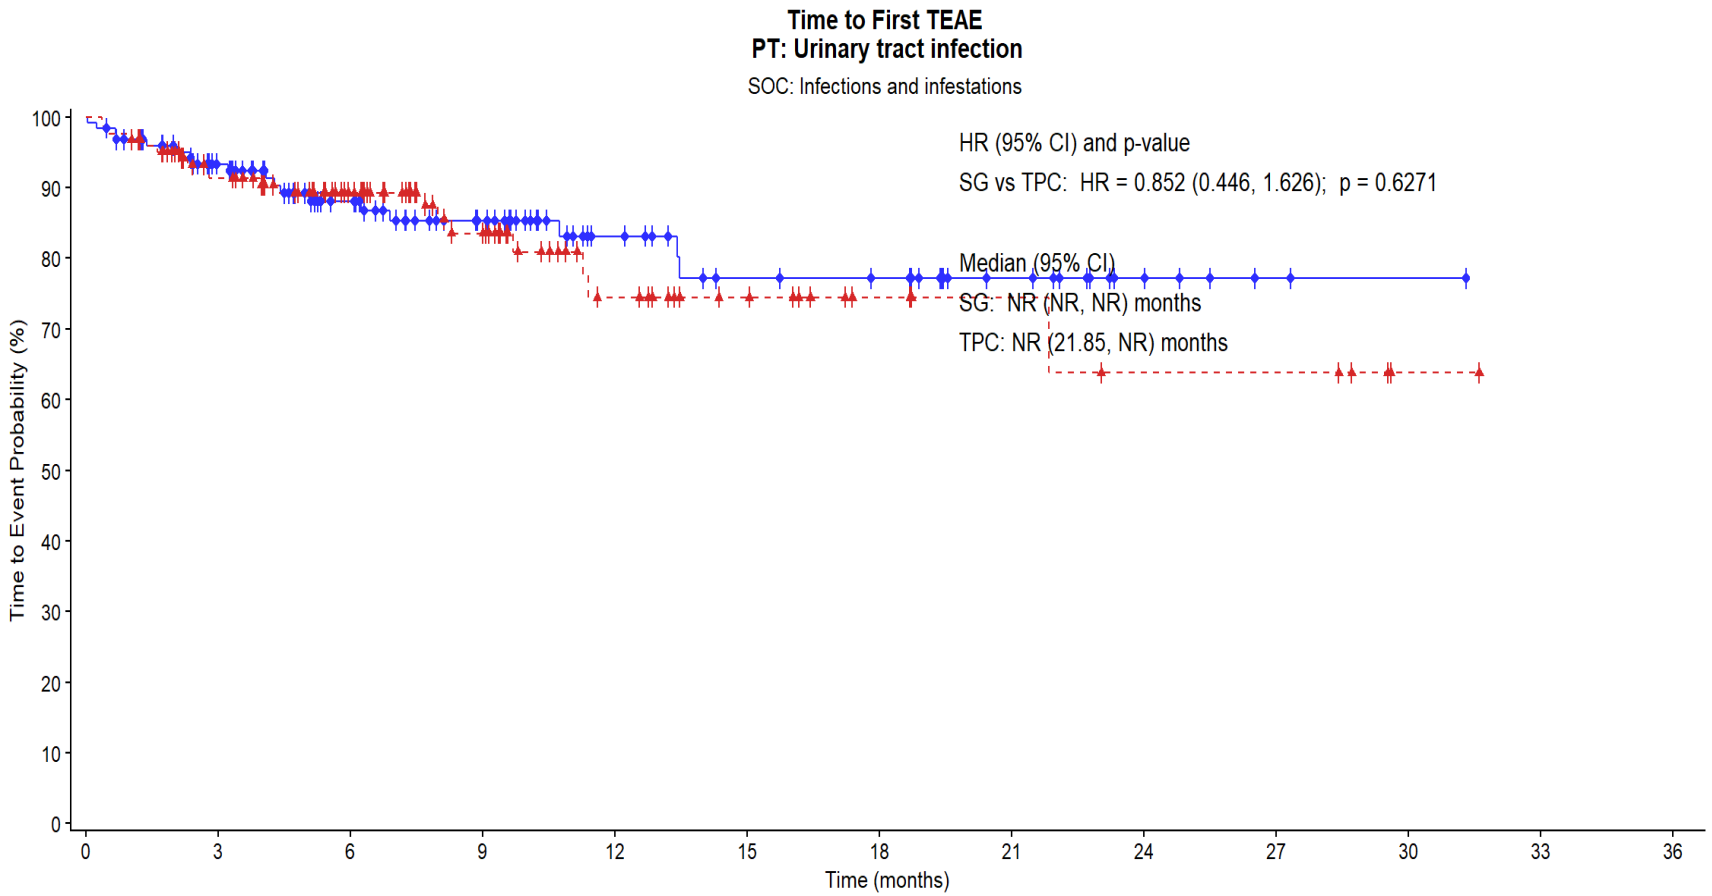
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.55. Figure 1.1.54: Kaplan Meier Plot of Time to First TEAE by PT Nasopharyngitis — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



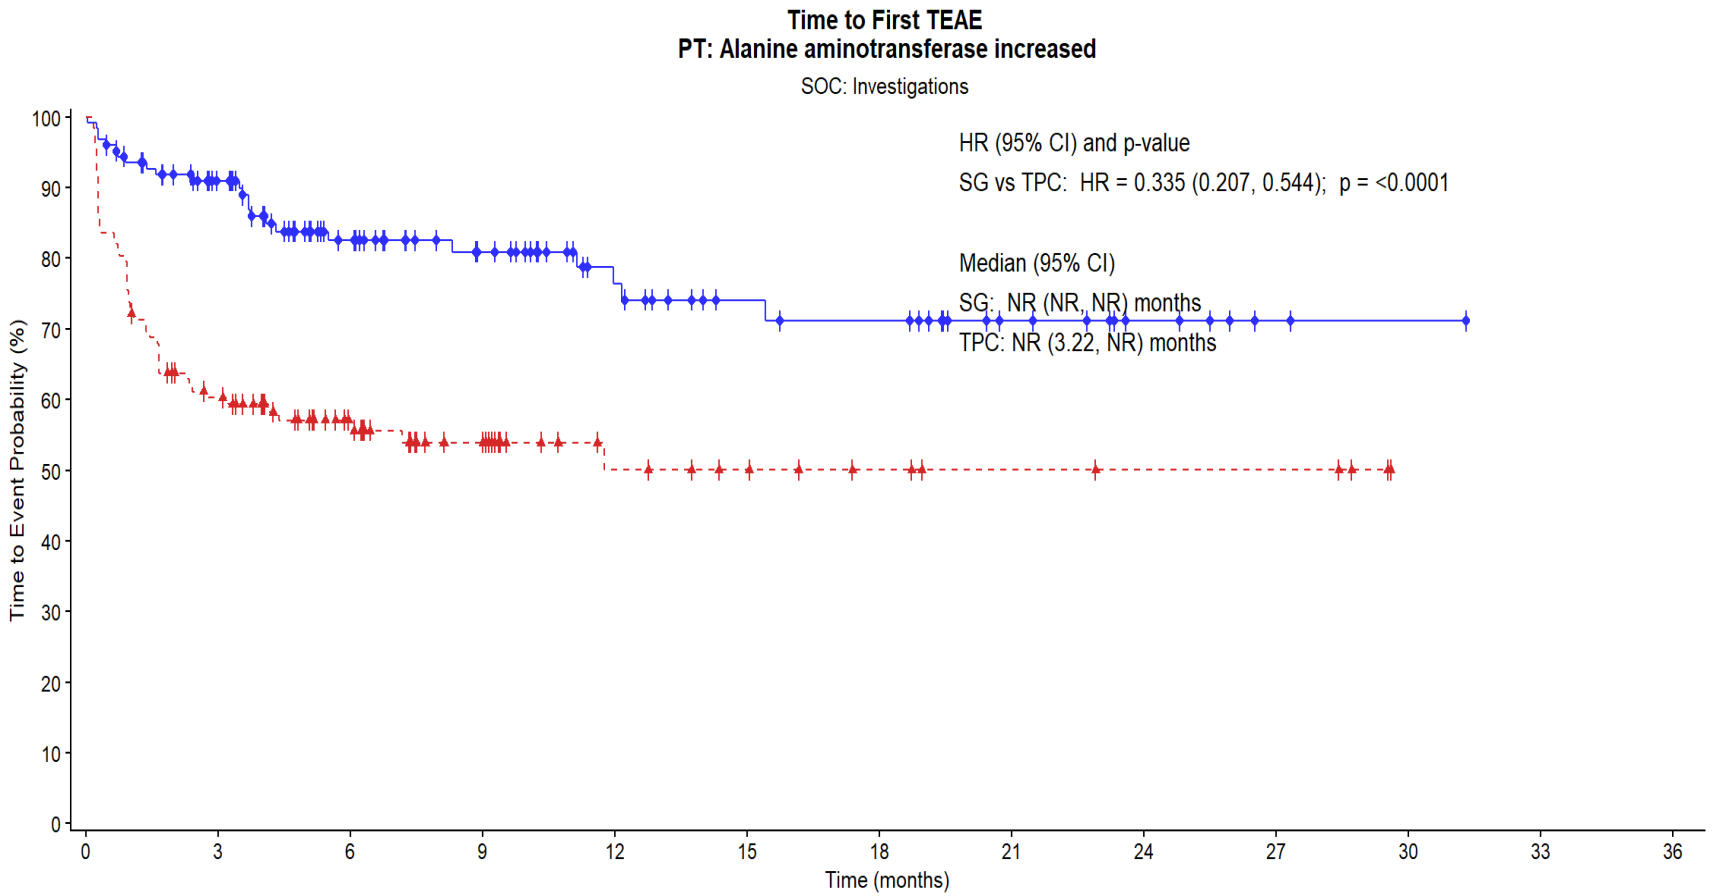
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.56. Figure 1.1.55: Kaplan Meier Plot of Time to First TEAE by PT Pneumonia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



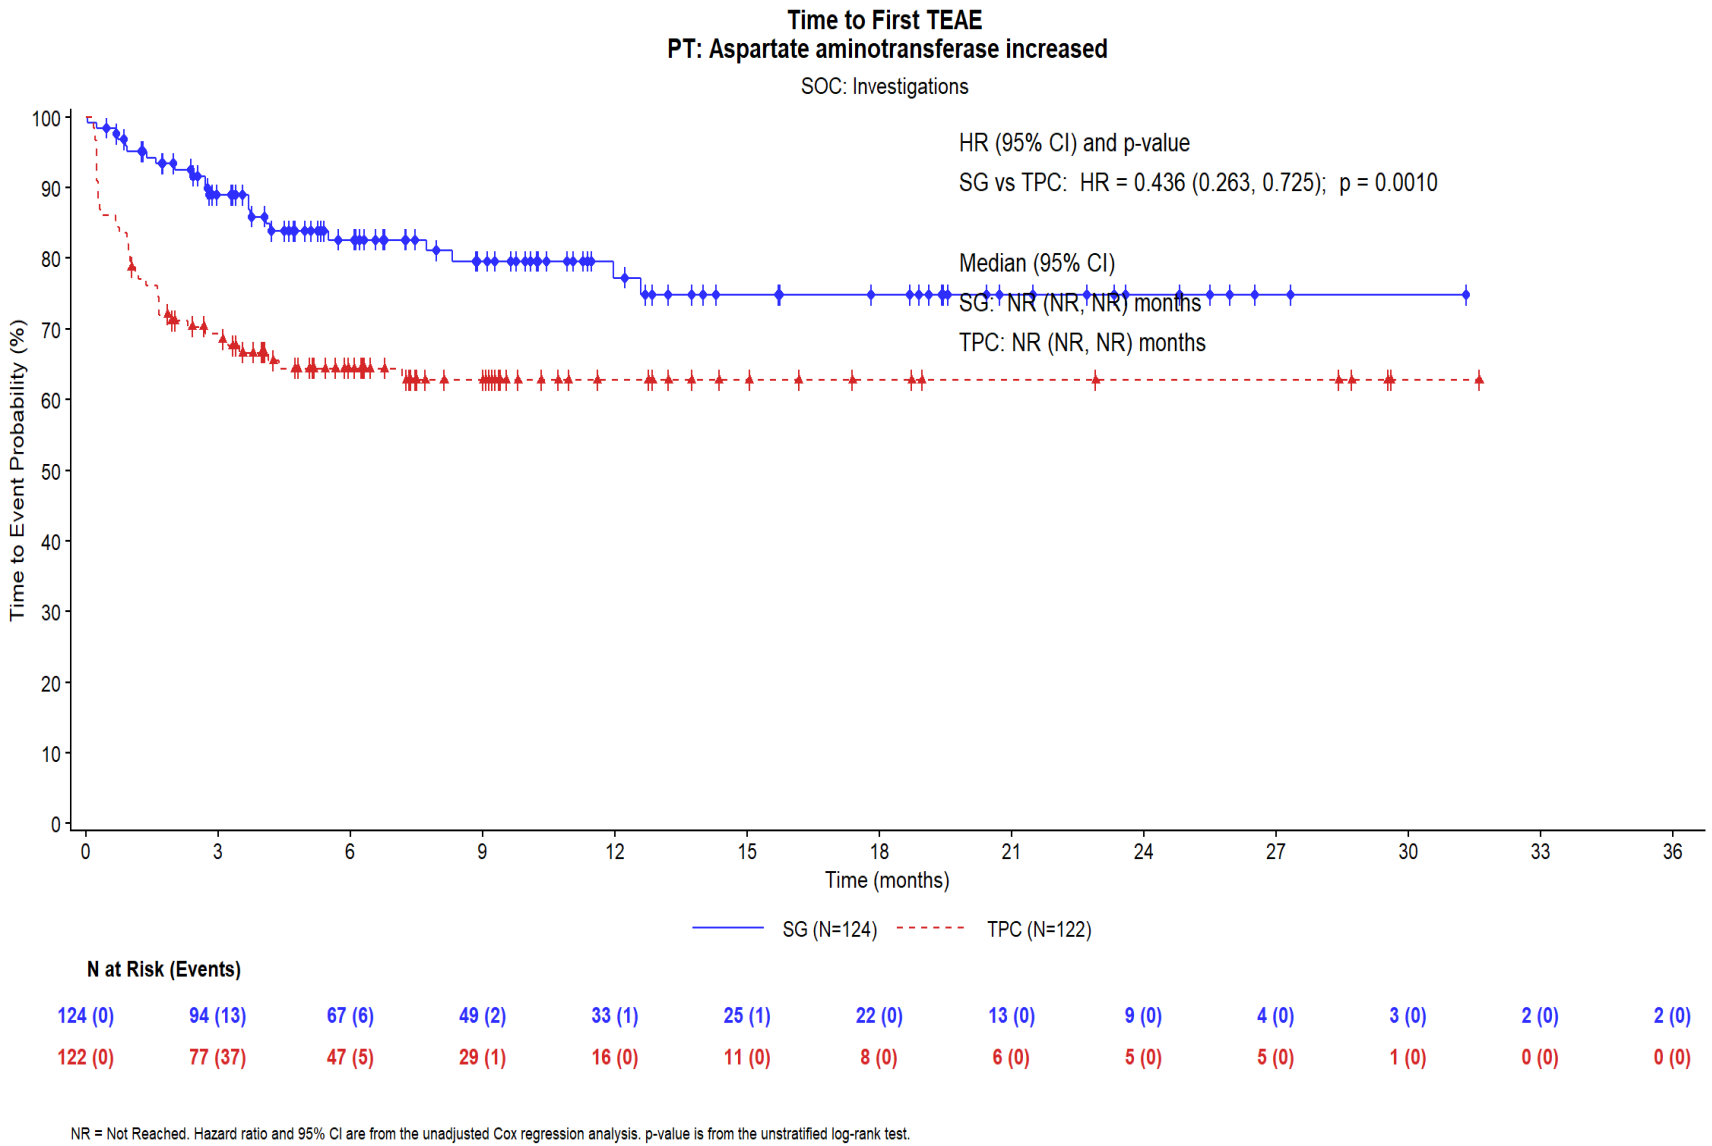
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.57. Figure 1.1.56: Kaplan Meier Plot of Time to First TEAE by PT Upper respiratory tract infection — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



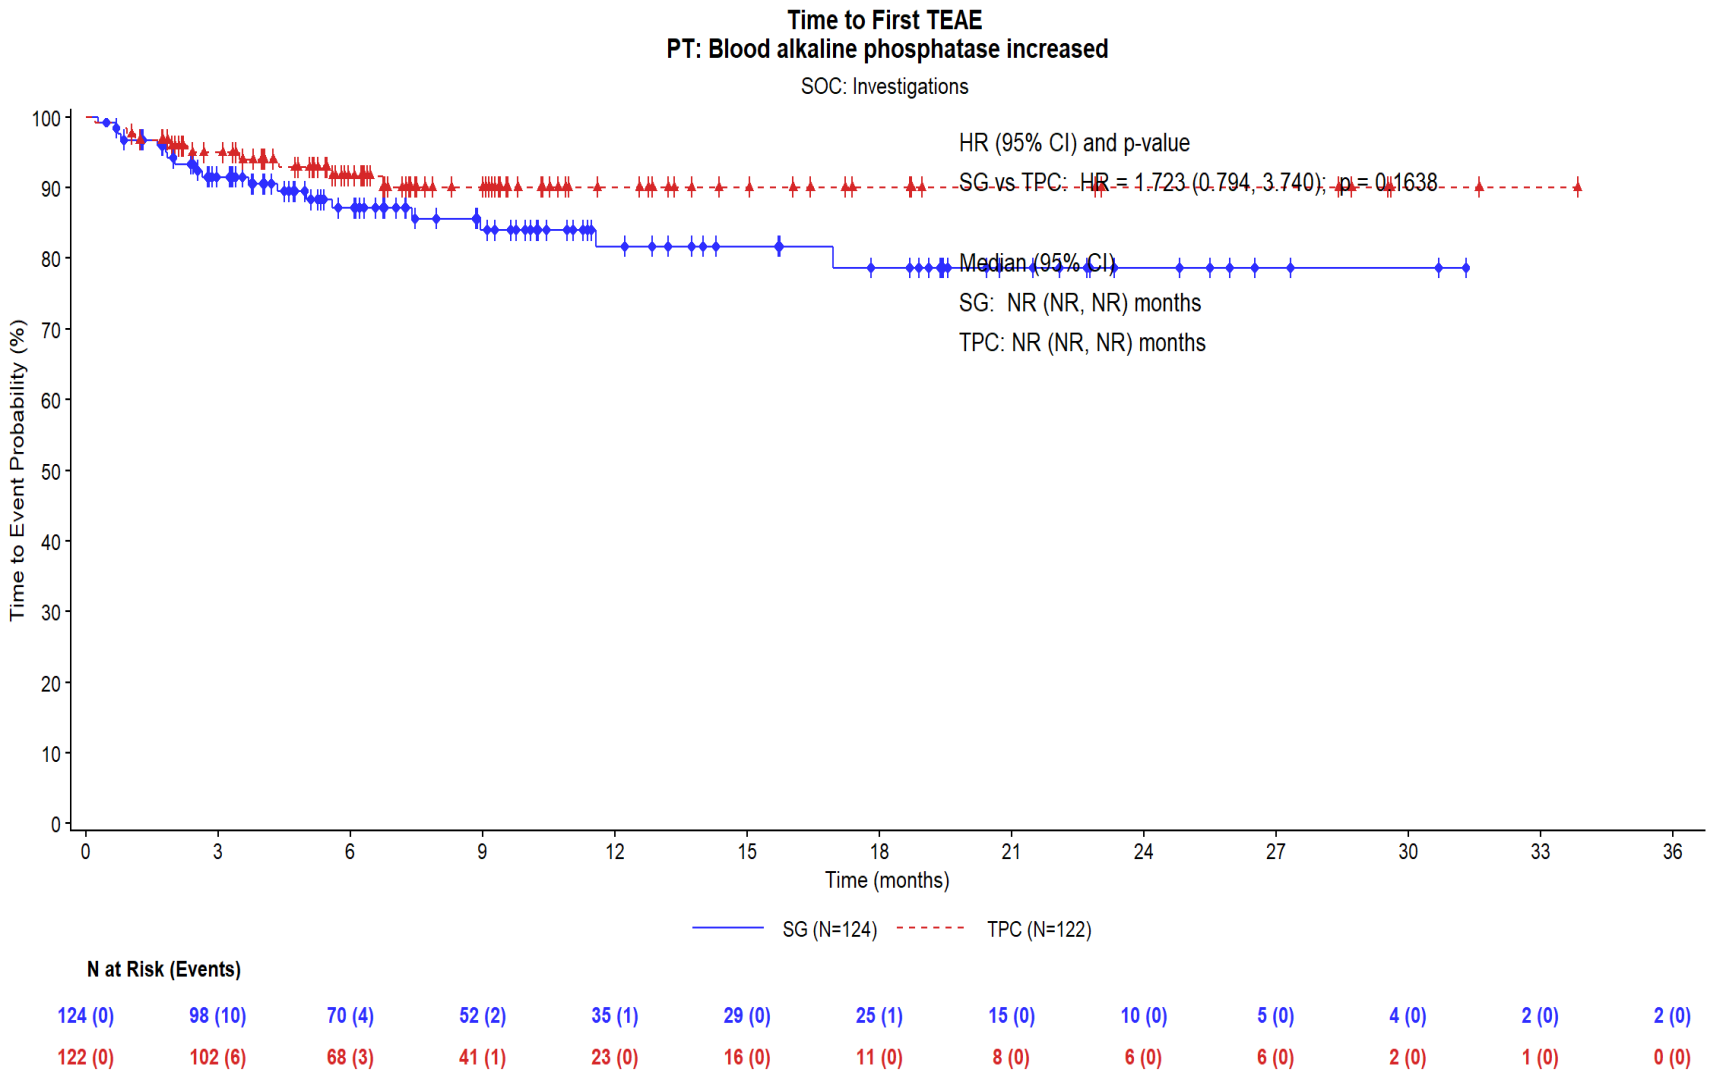
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.58. Figure 1.1.57: Kaplan Meier Plot of Time to First TEAE by PT Urinary tract infection — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



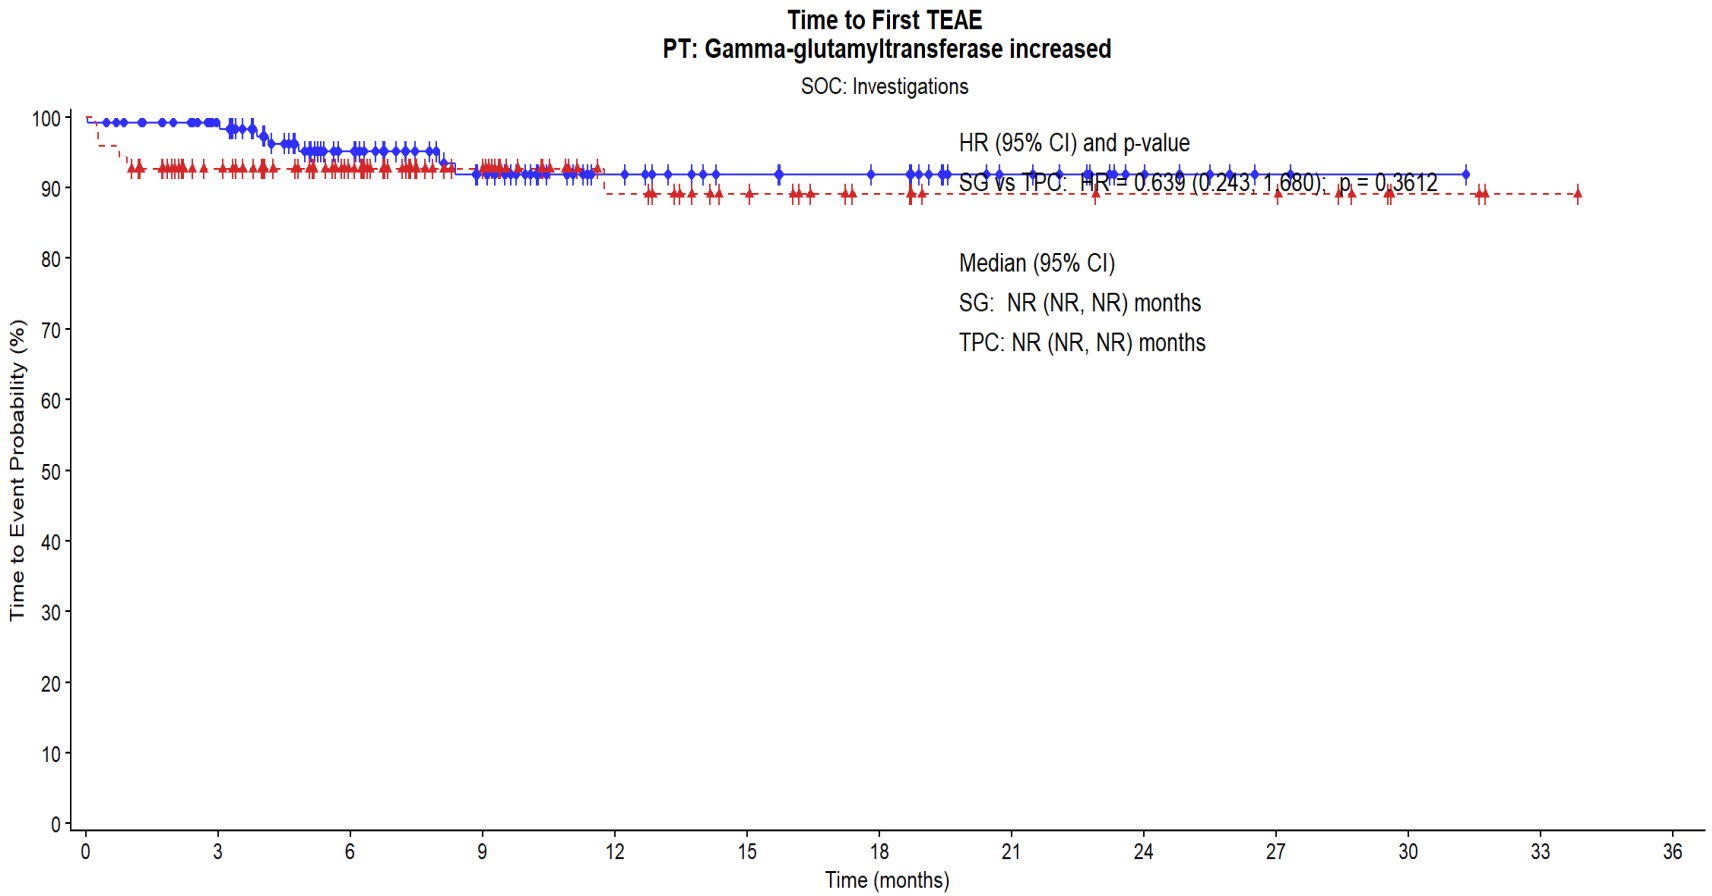
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.59. Figure 1.1.58: Kaplan Meier Plot of Time to First TEAE by PT Alanine aminotransferase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



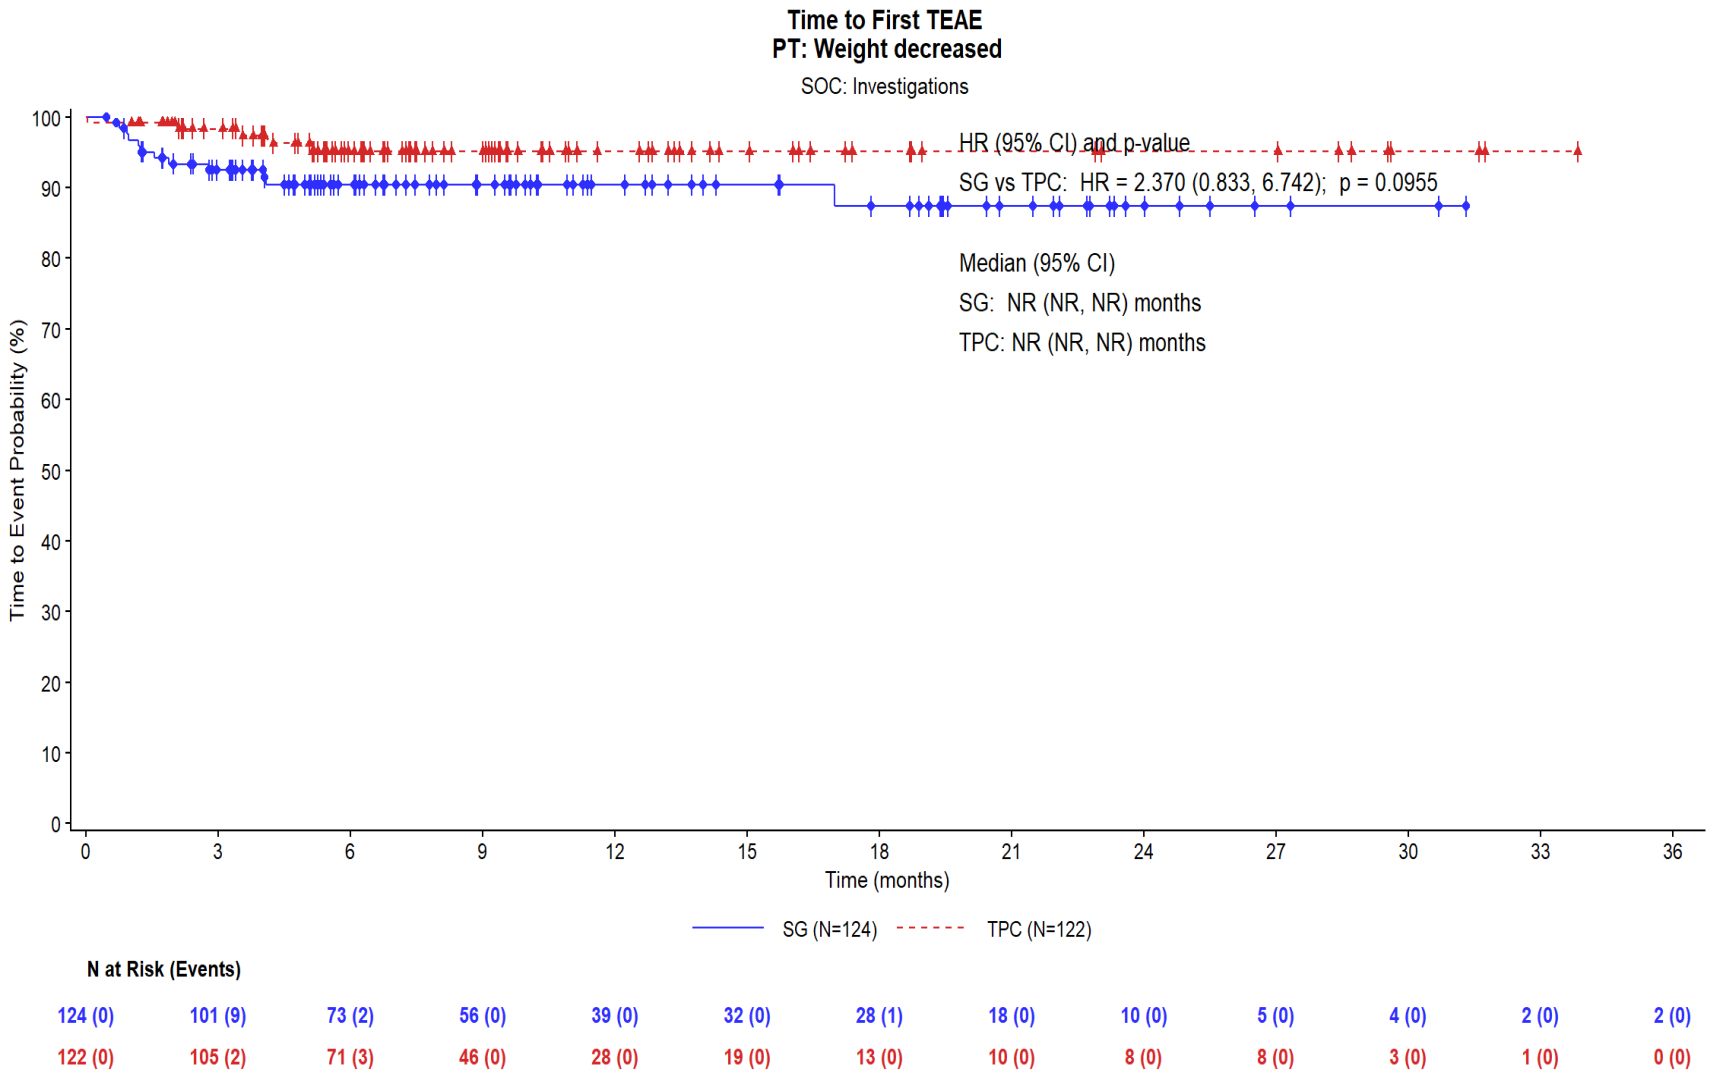
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.60. Figure 1.1.59: Kaplan Meier Plot of Time to First TEAE by PT Aspartate aminotransferase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.61. Figure 1.1.60: Kaplan Meier Plot of Time to First TEAE by PT Blood alkaline phosphatase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

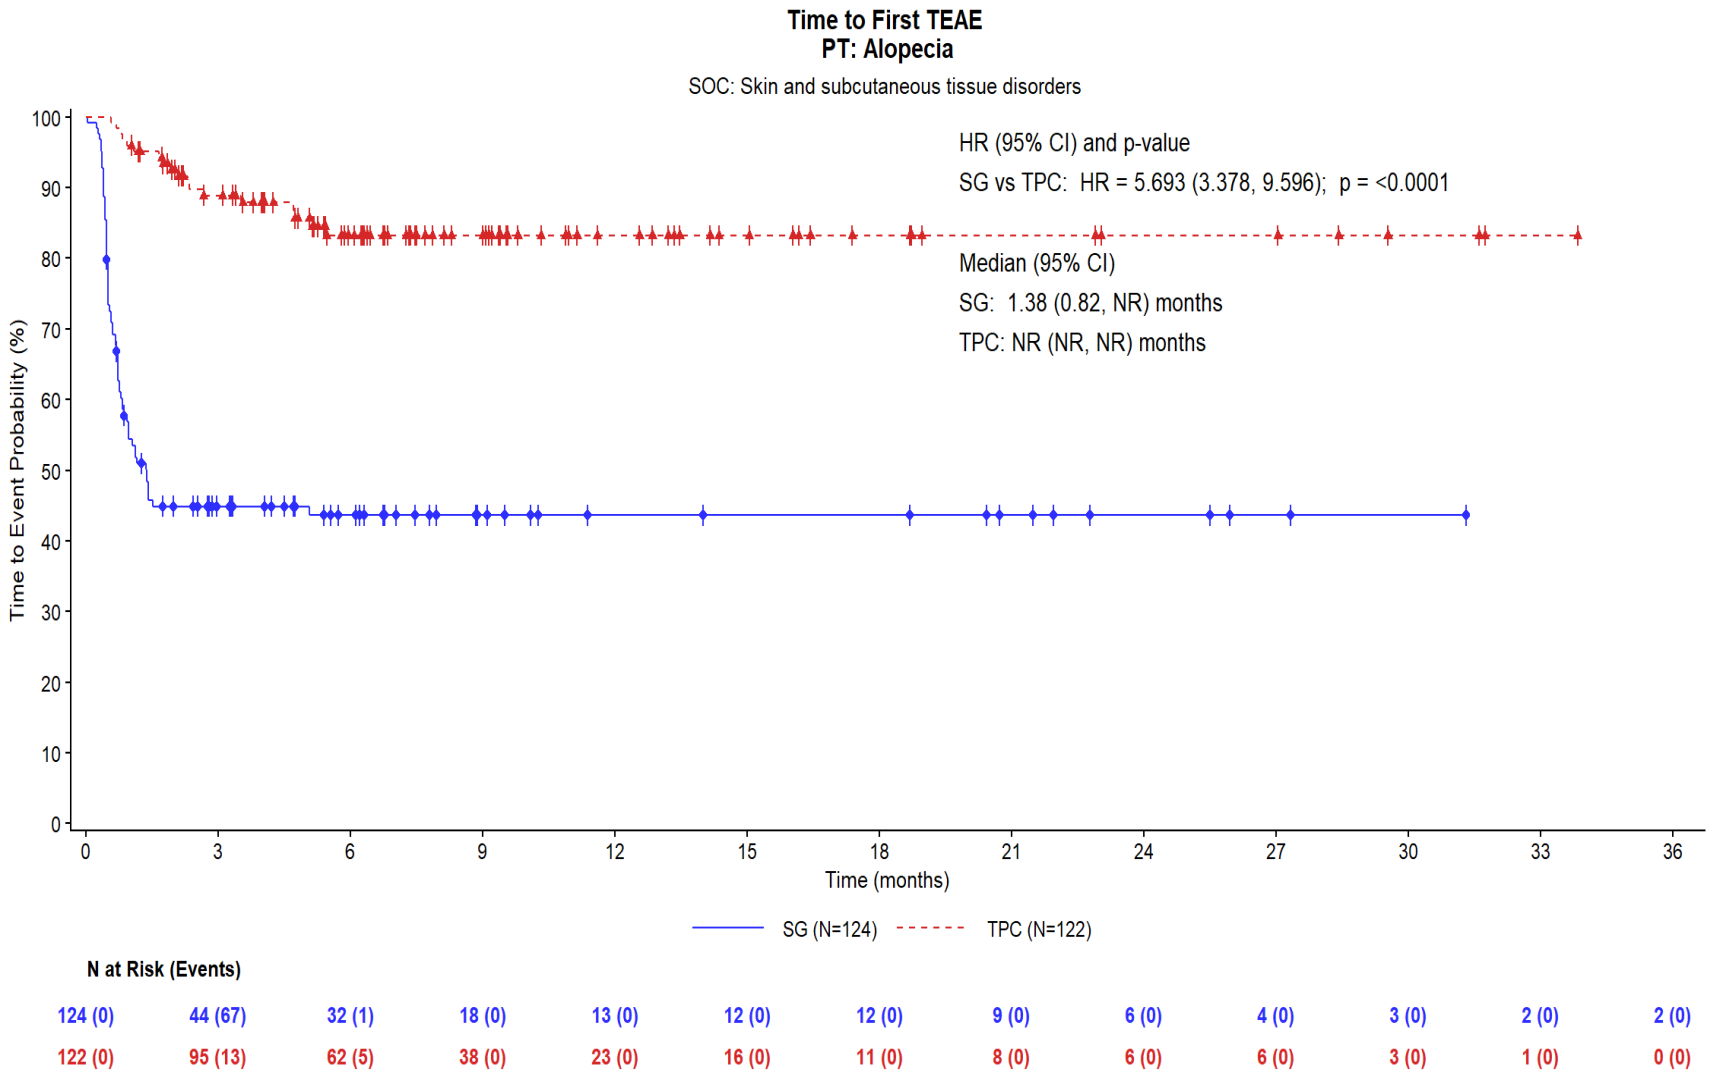
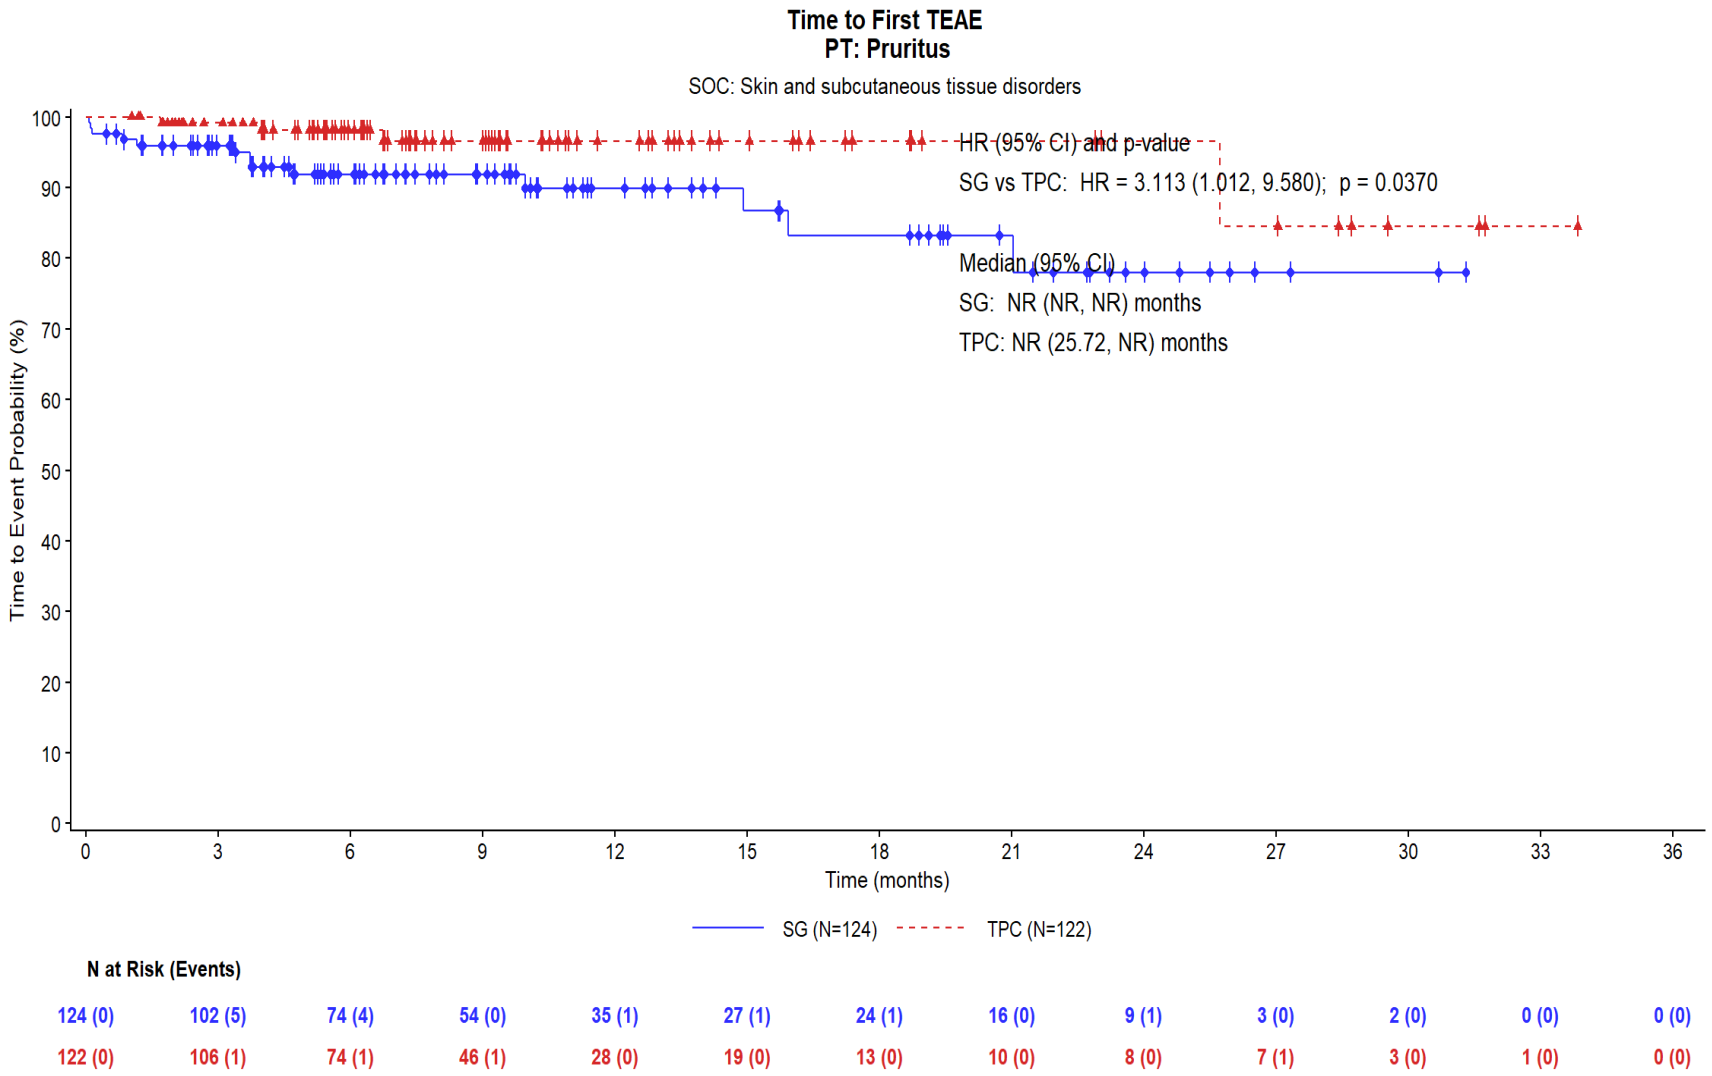
8.84. Figure 1.1.83: Kaplan Meier Plot of Time to First TEAE by PT Oropharyngeal pain — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



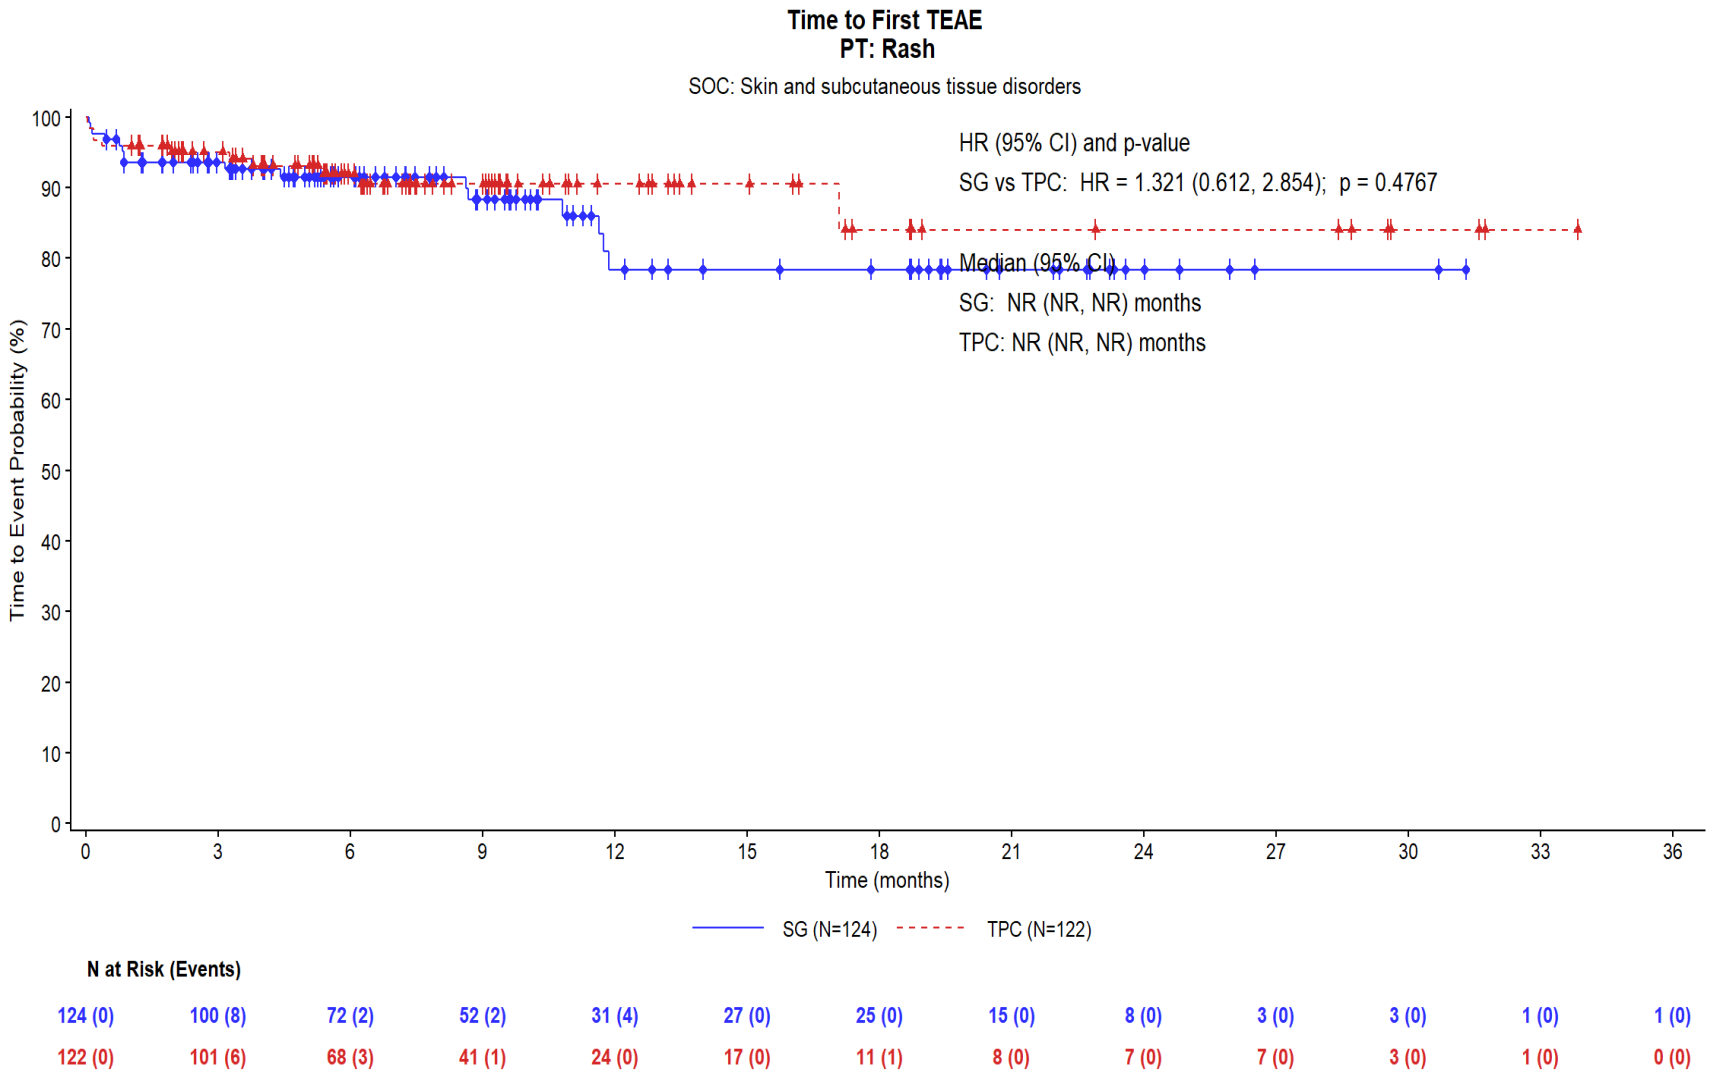
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.85. Figure 1.1.84: Kaplan Meier Plot of Time to First TEAE by PT Pulmonary embolism — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



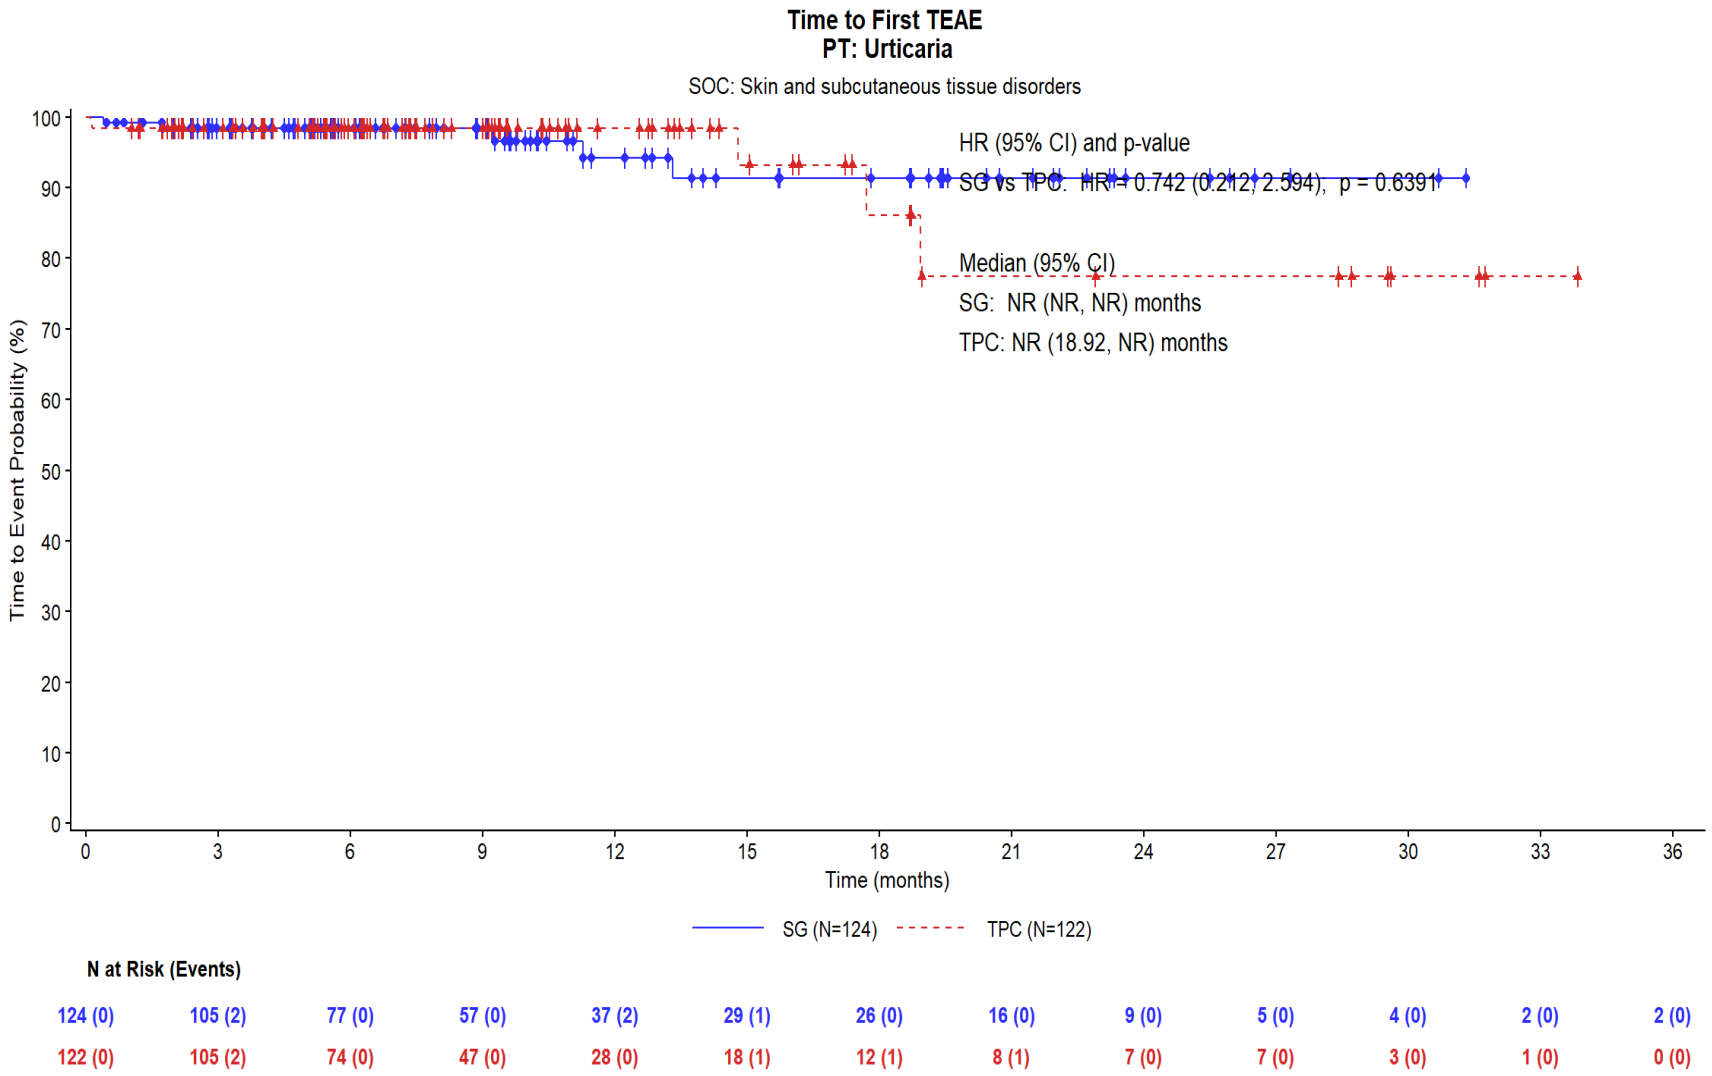
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.86. Figure 1.1.85: Kaplan Meier Plot of Time to First TEAE by PT Alopecia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



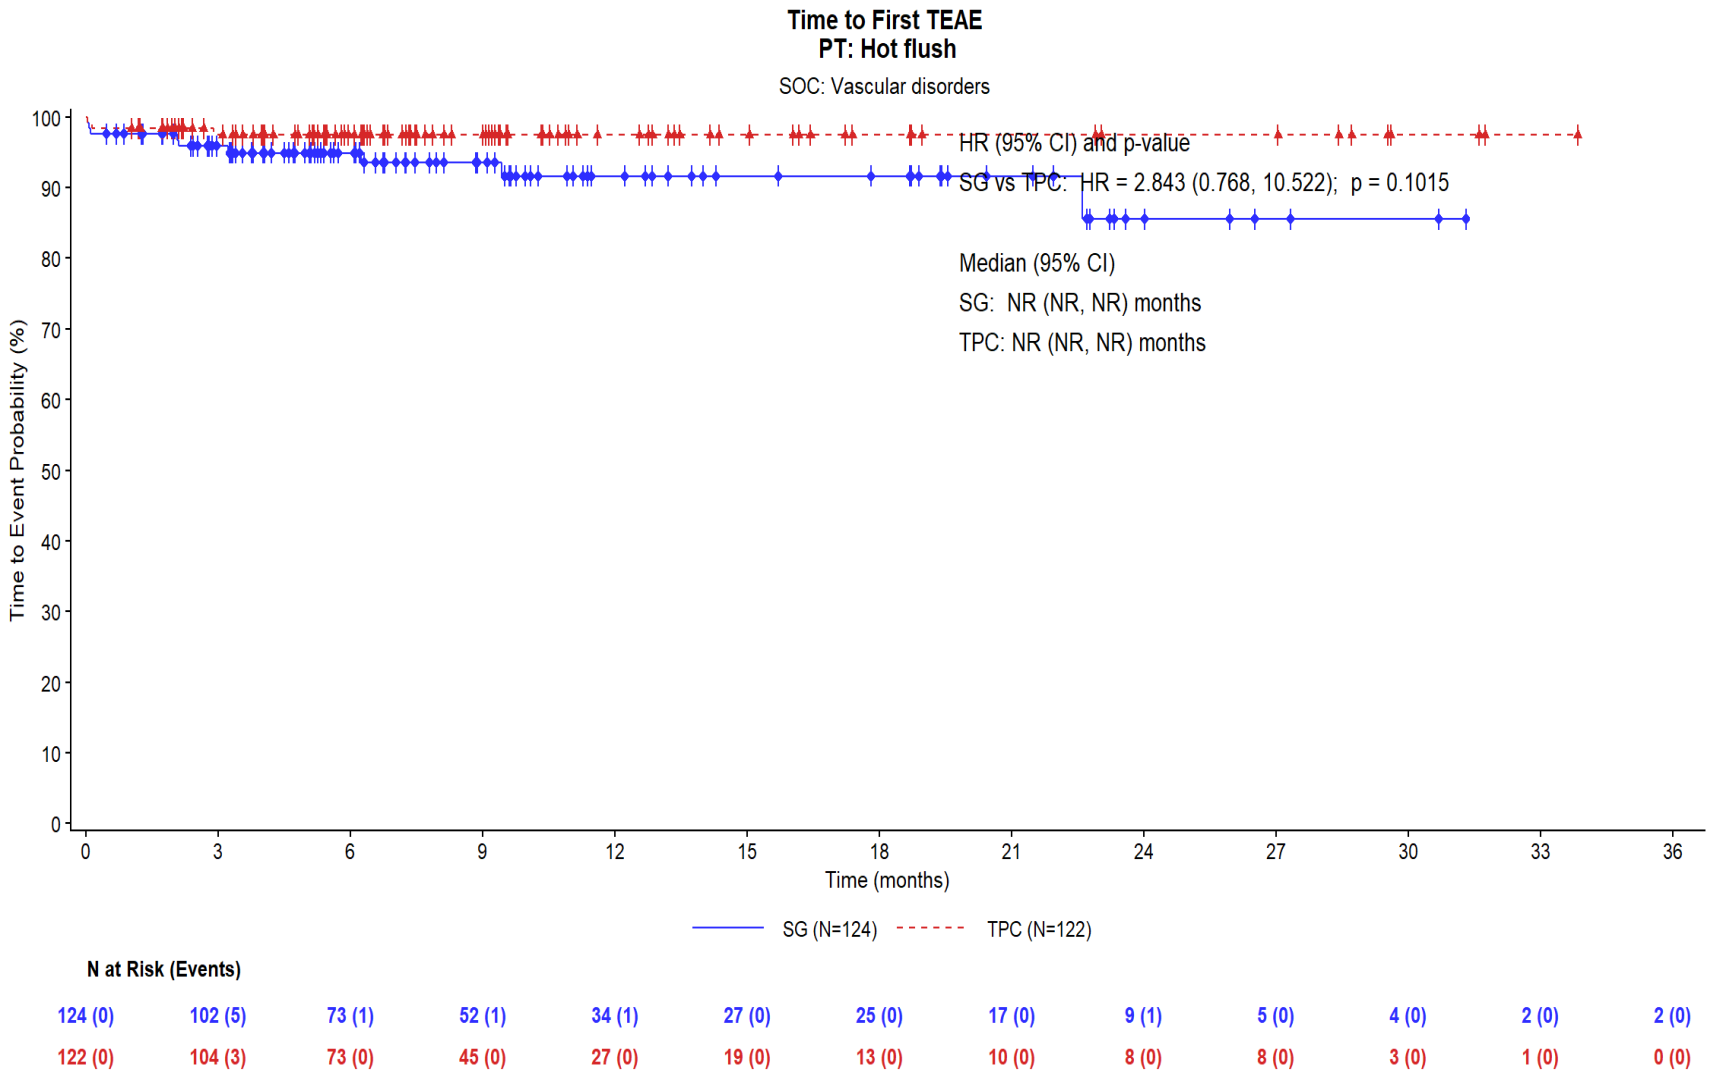
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.87. Figure 1.1.86: Kaplan Meier Plot of Time to First TEAE by PT Pruritus — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



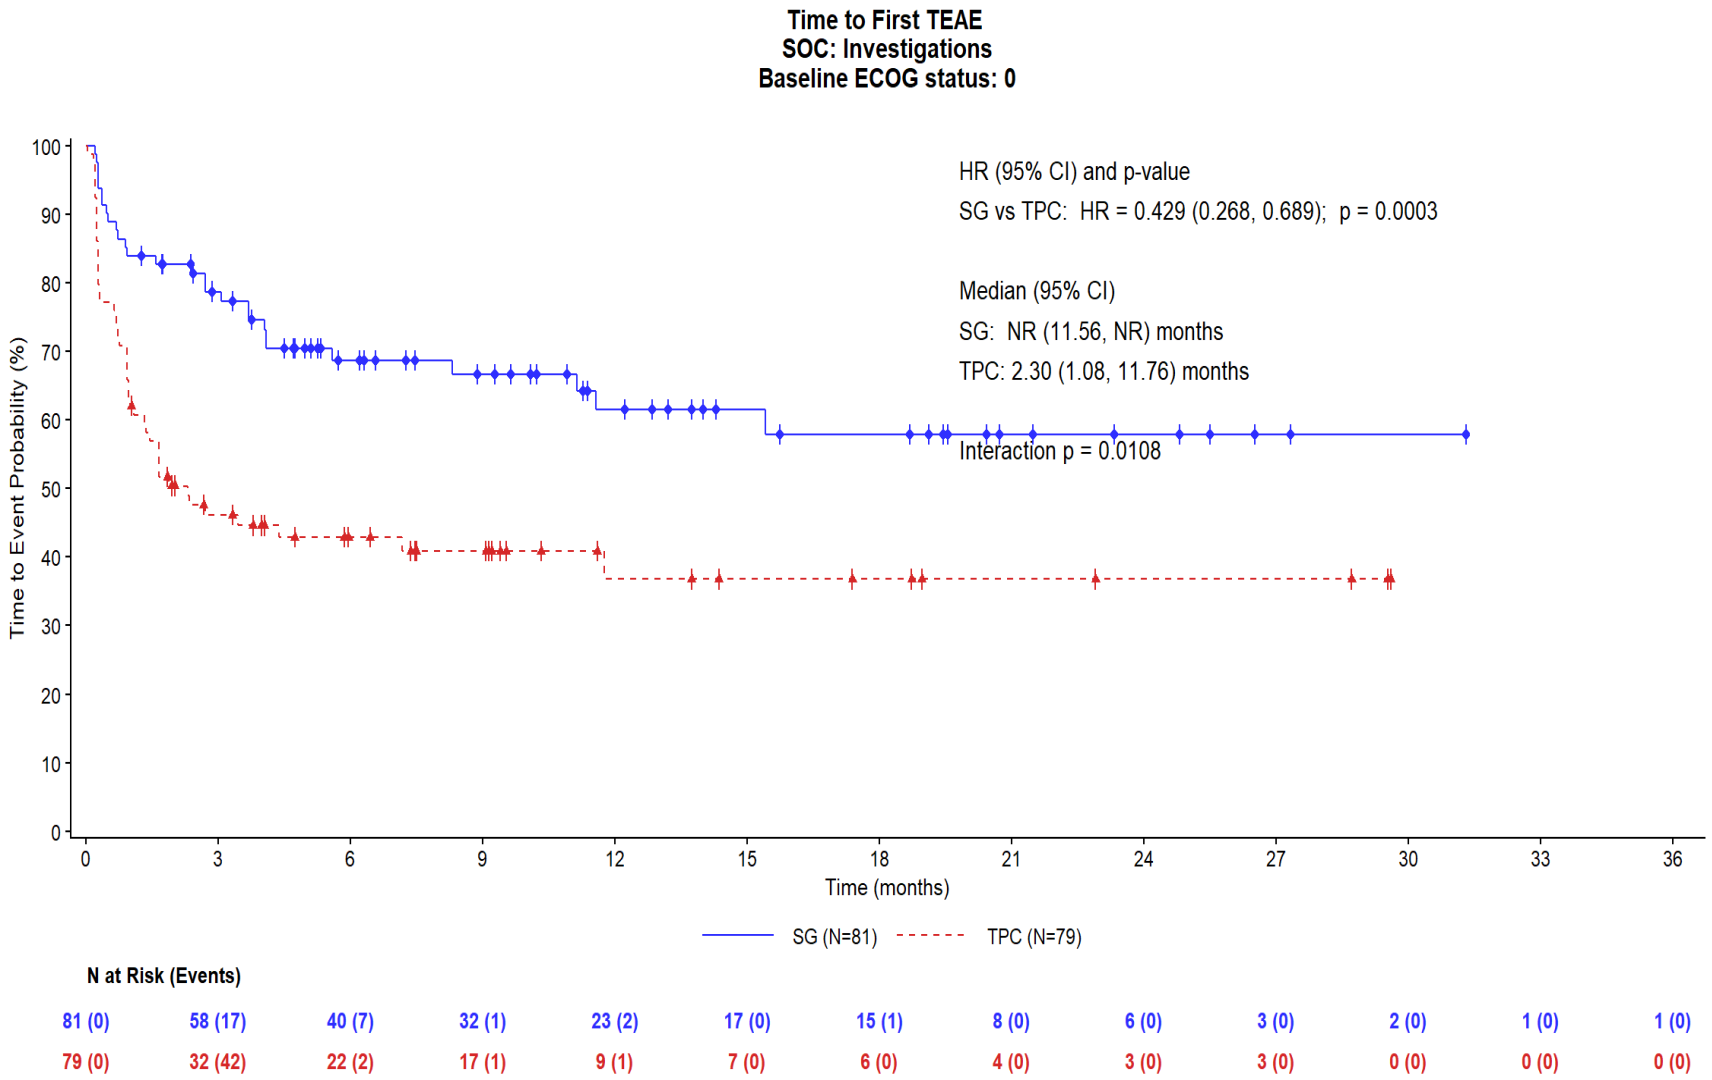
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.88. Figure 1.1.87: Kaplan Meier Plot of Time to First TEAE by PT Rash — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



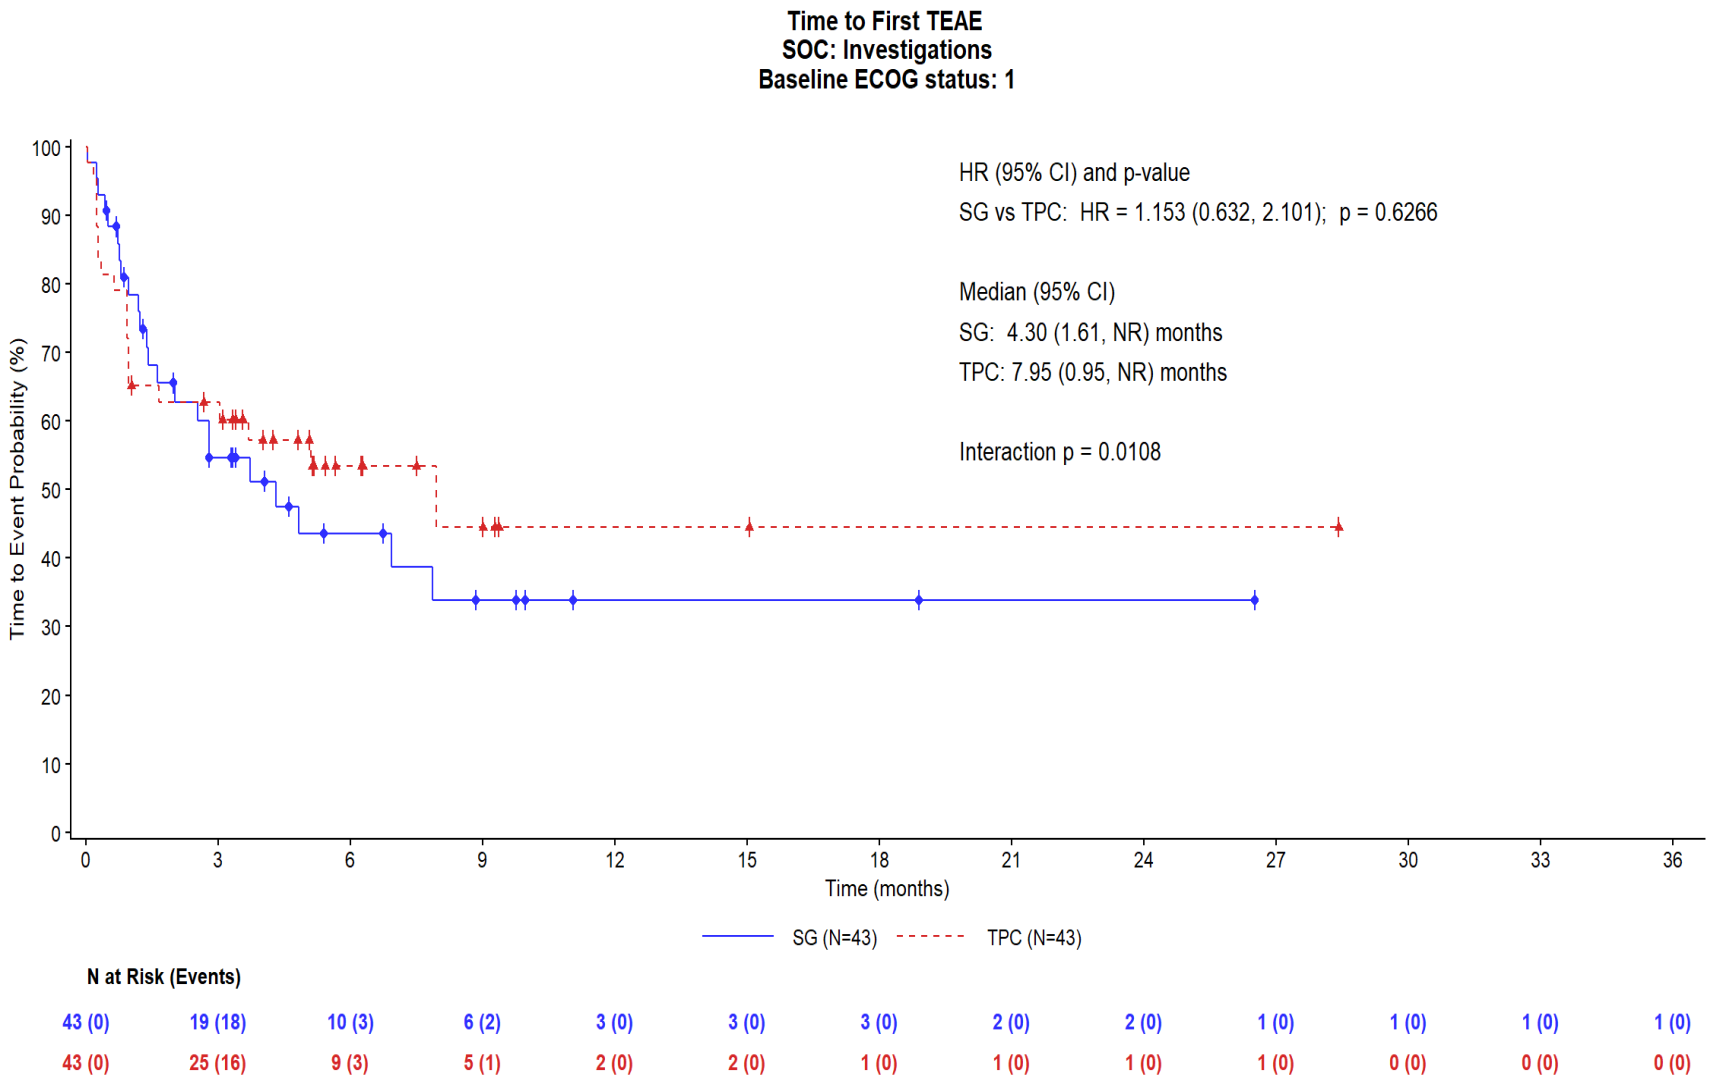
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.89. Figure 1.1.88: Kaplan Meier Plot of Time to First TEAE by PT Urticaria — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



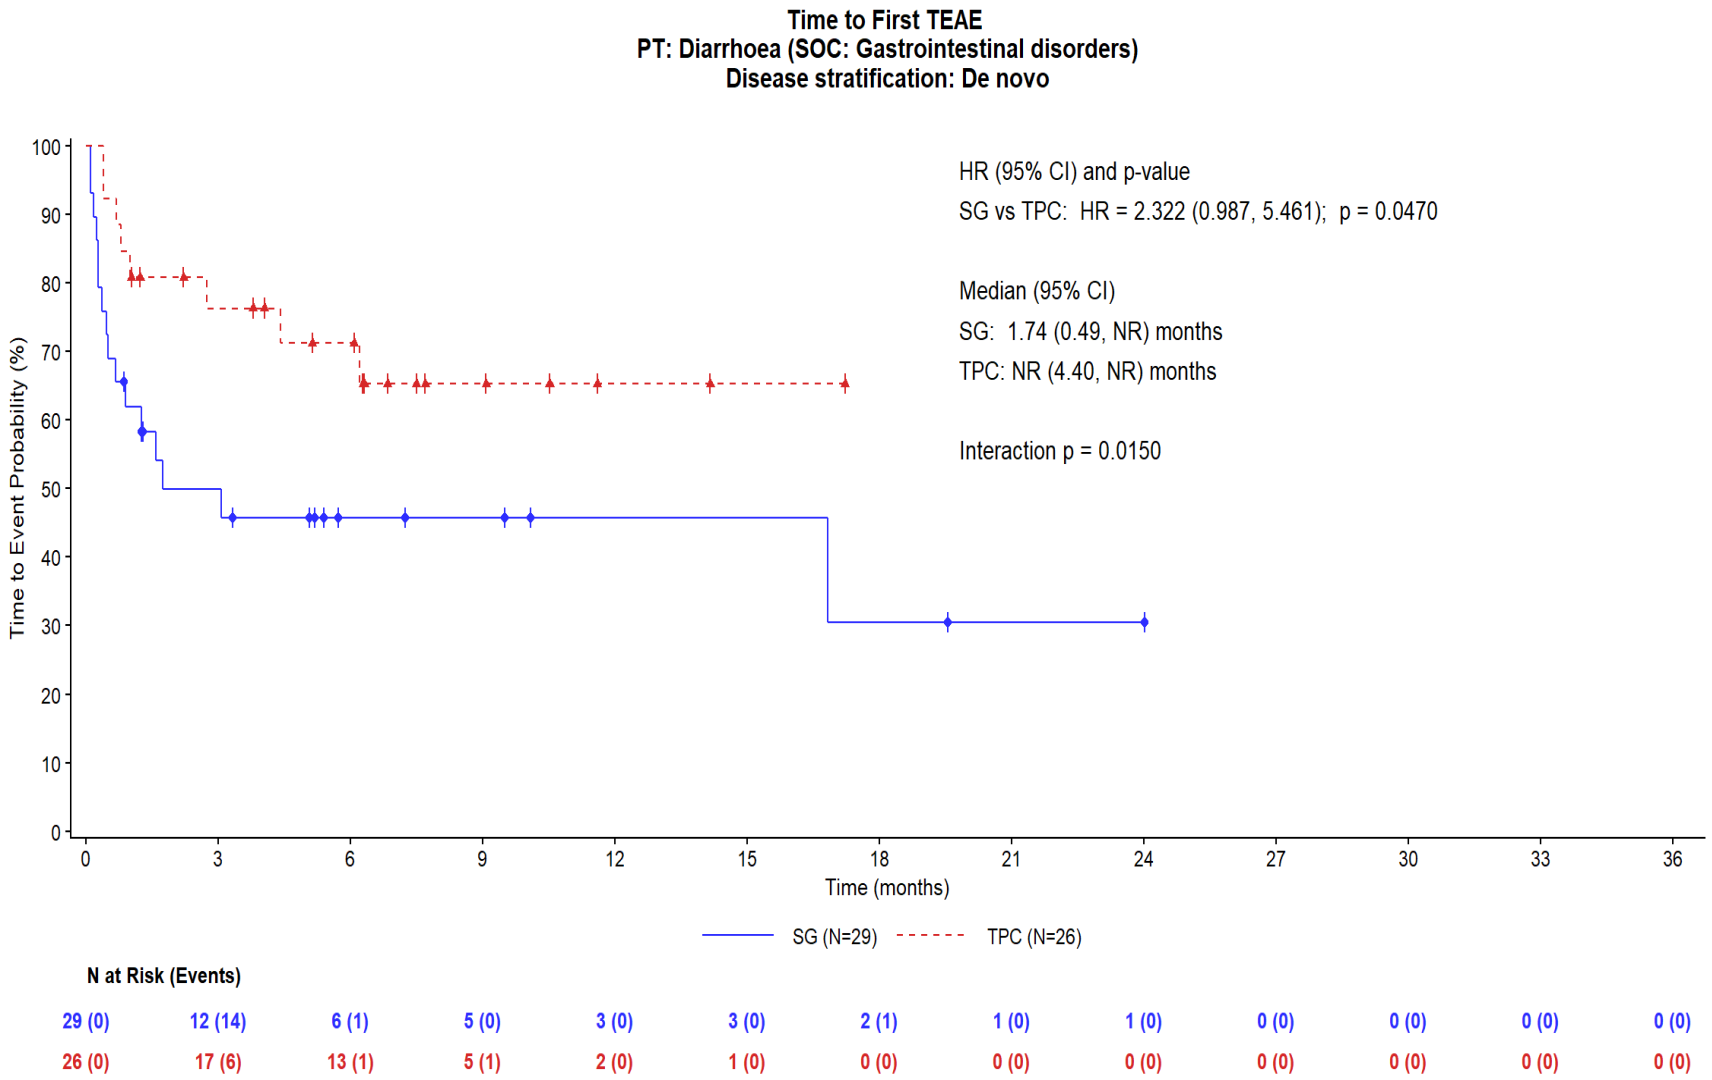
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.90. Figure 1.1.89: Kaplan Meier Plot of Time to First TEAE by PT Hot flush — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



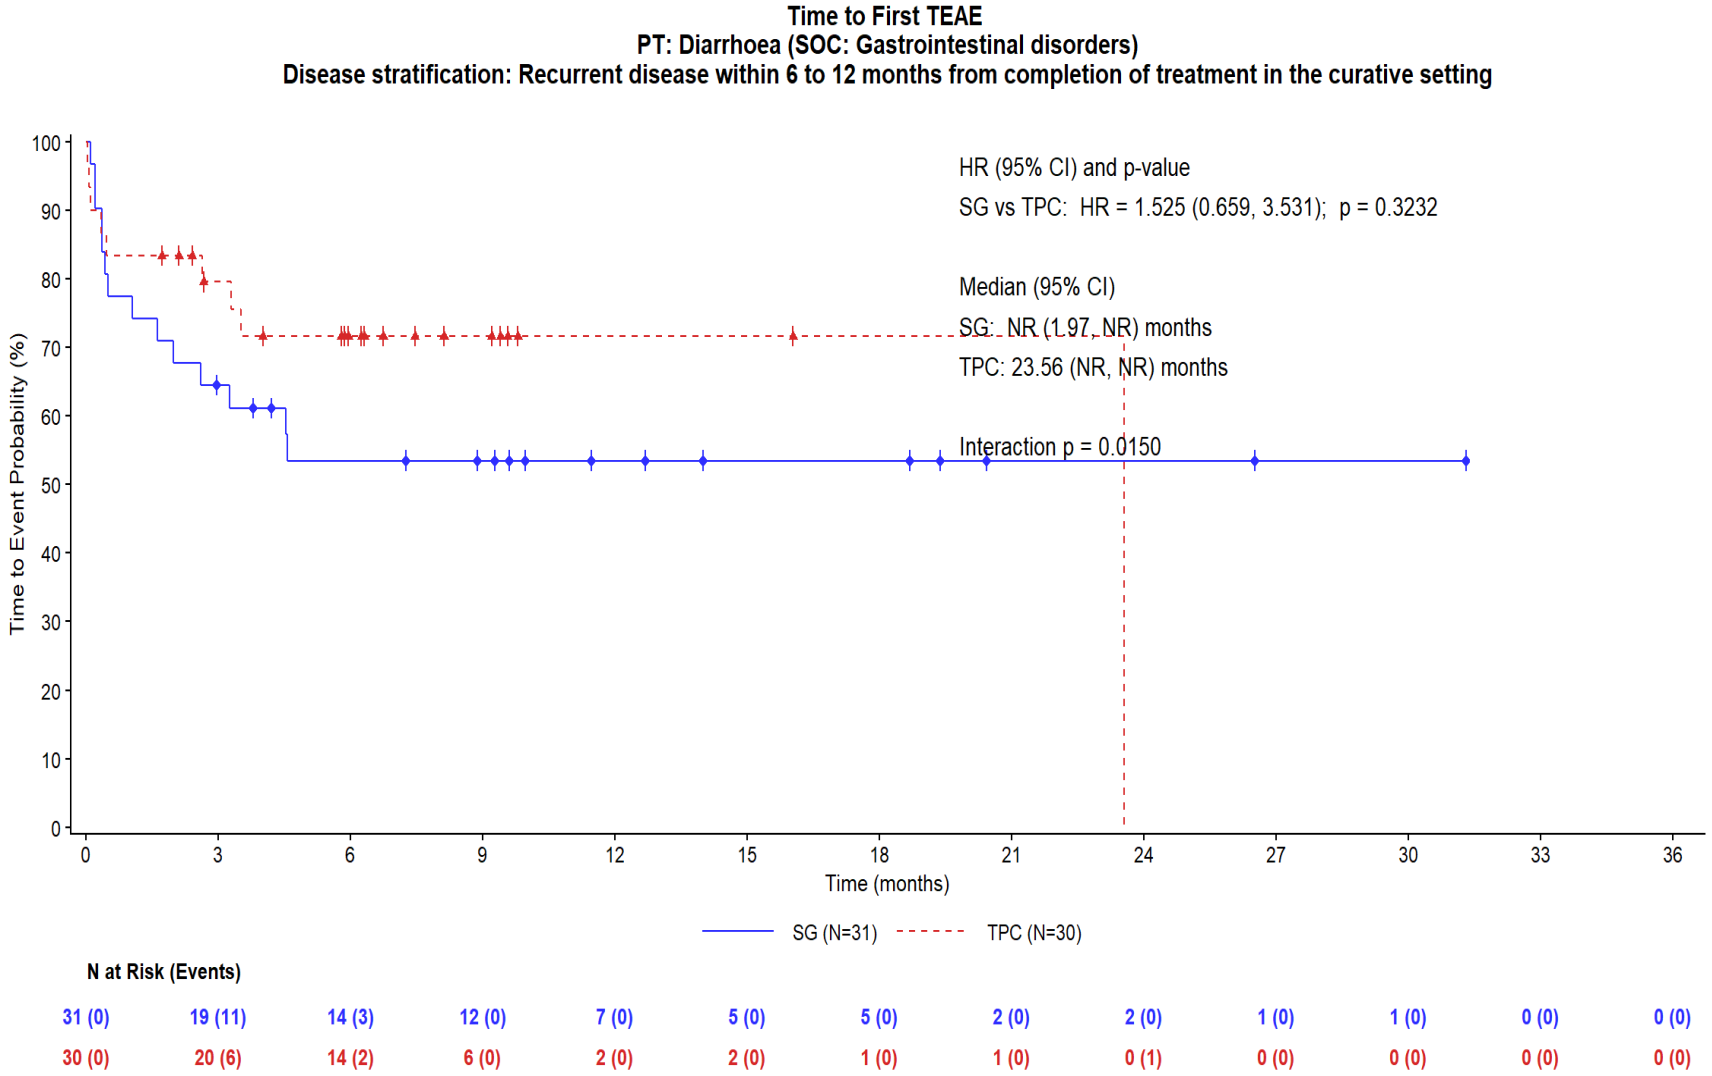
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.91. Figure 1.1.90: Kaplan Meier Plot of Time to First TEAE by SOC Investigations Baseline ECOG status 0 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



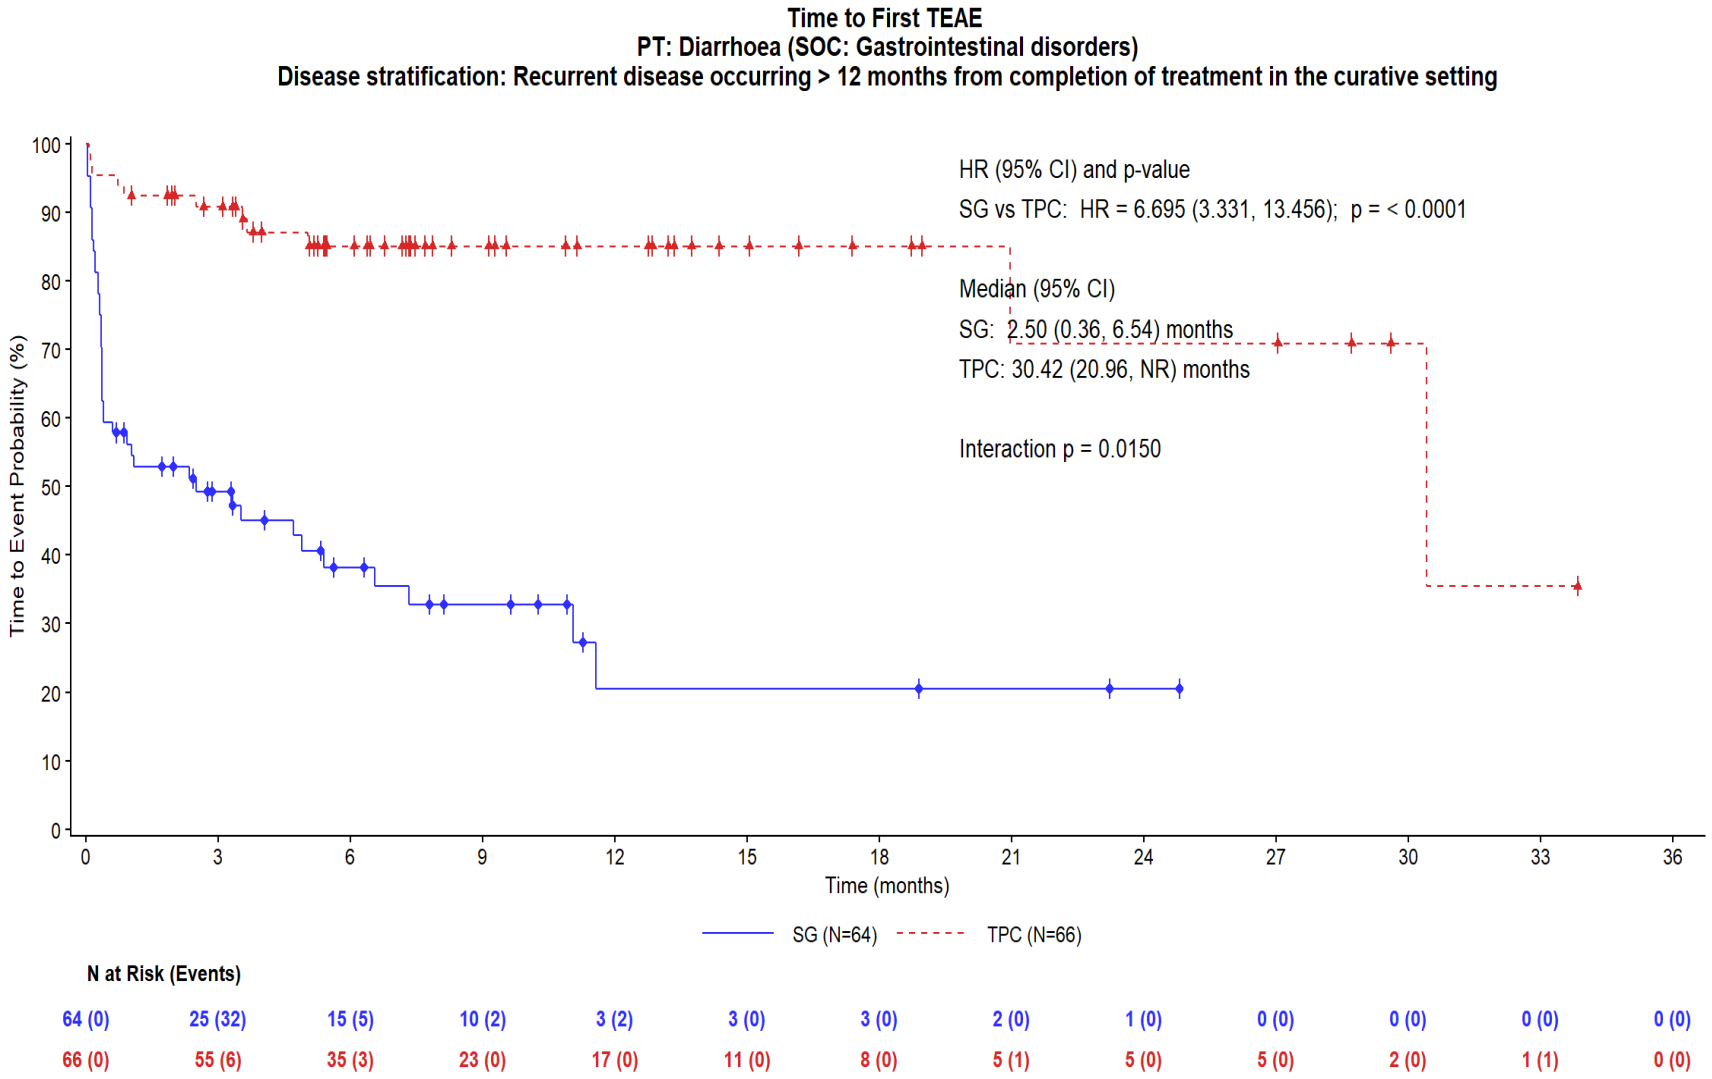
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.92. Figure 1.1.91: Kaplan Meier Plot of Time to First TEAE by SOC Investigations Baseline ECOG status 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



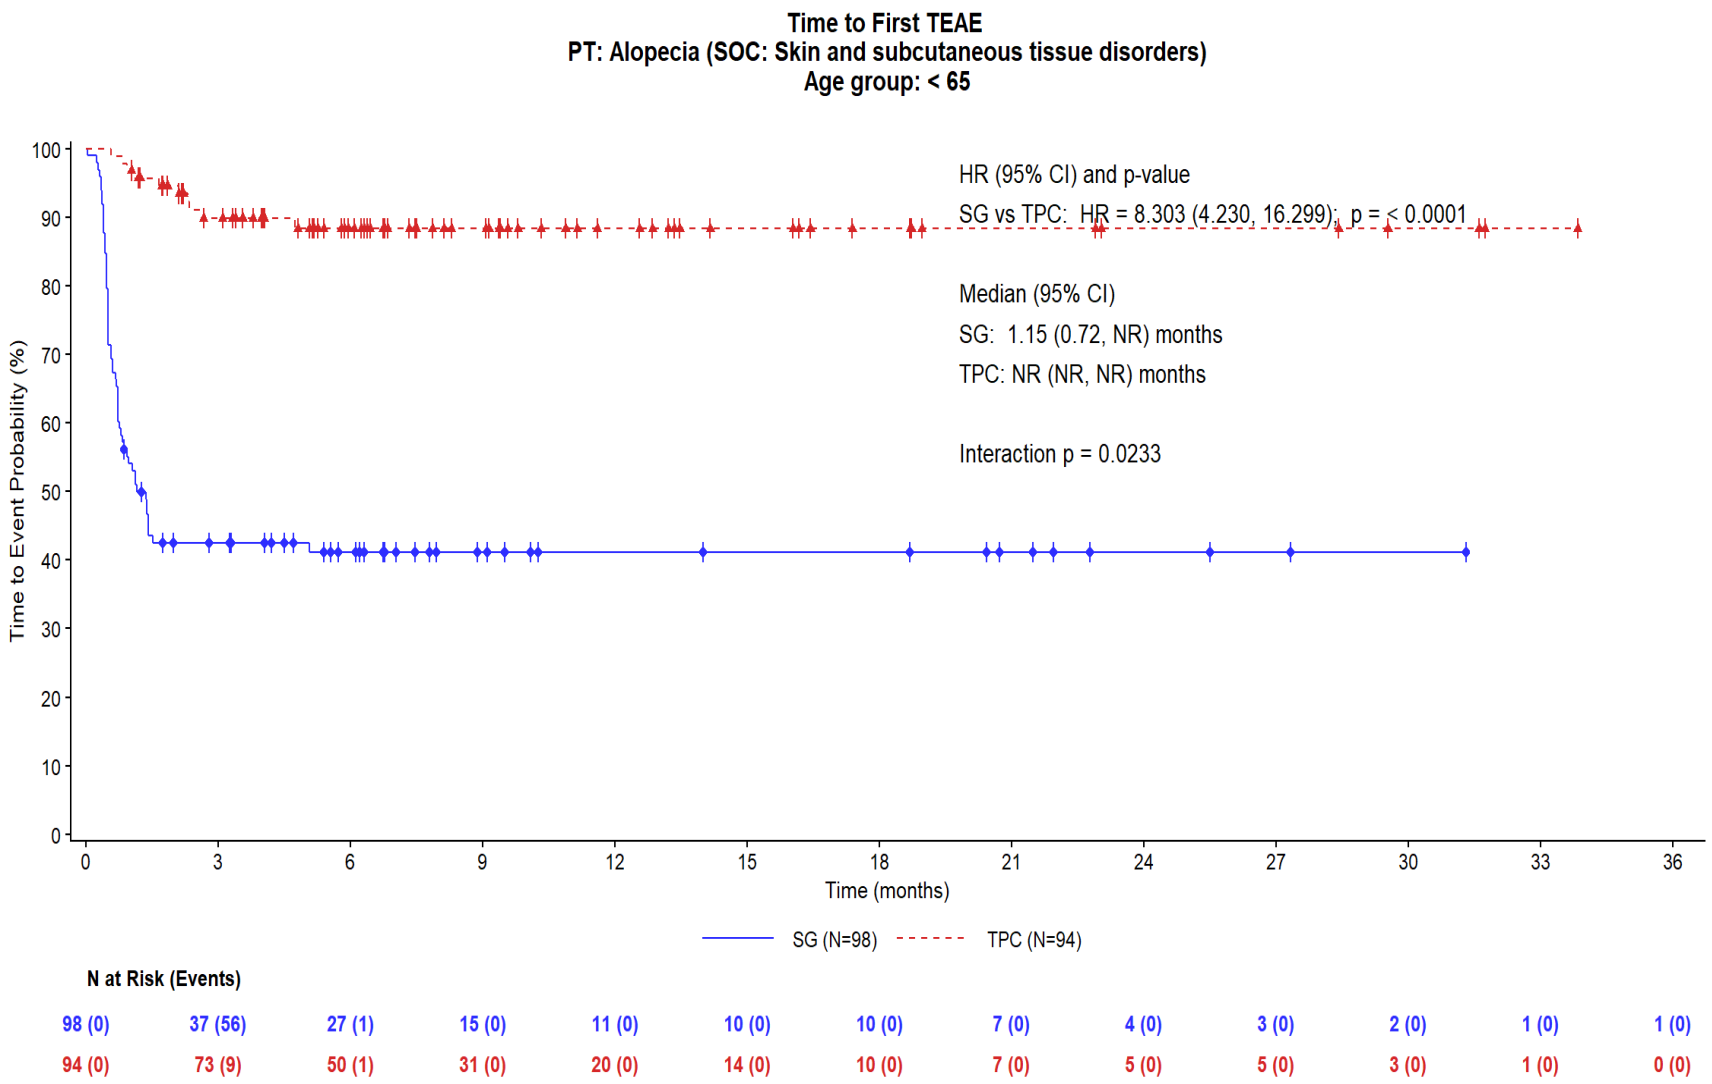
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.93. Figure 1.1.92: Kaplan Meier Plot of Time to First TEAE by PT Diarrhoea (SOC Gastrointestinal disorders) Disease stratification De novo — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



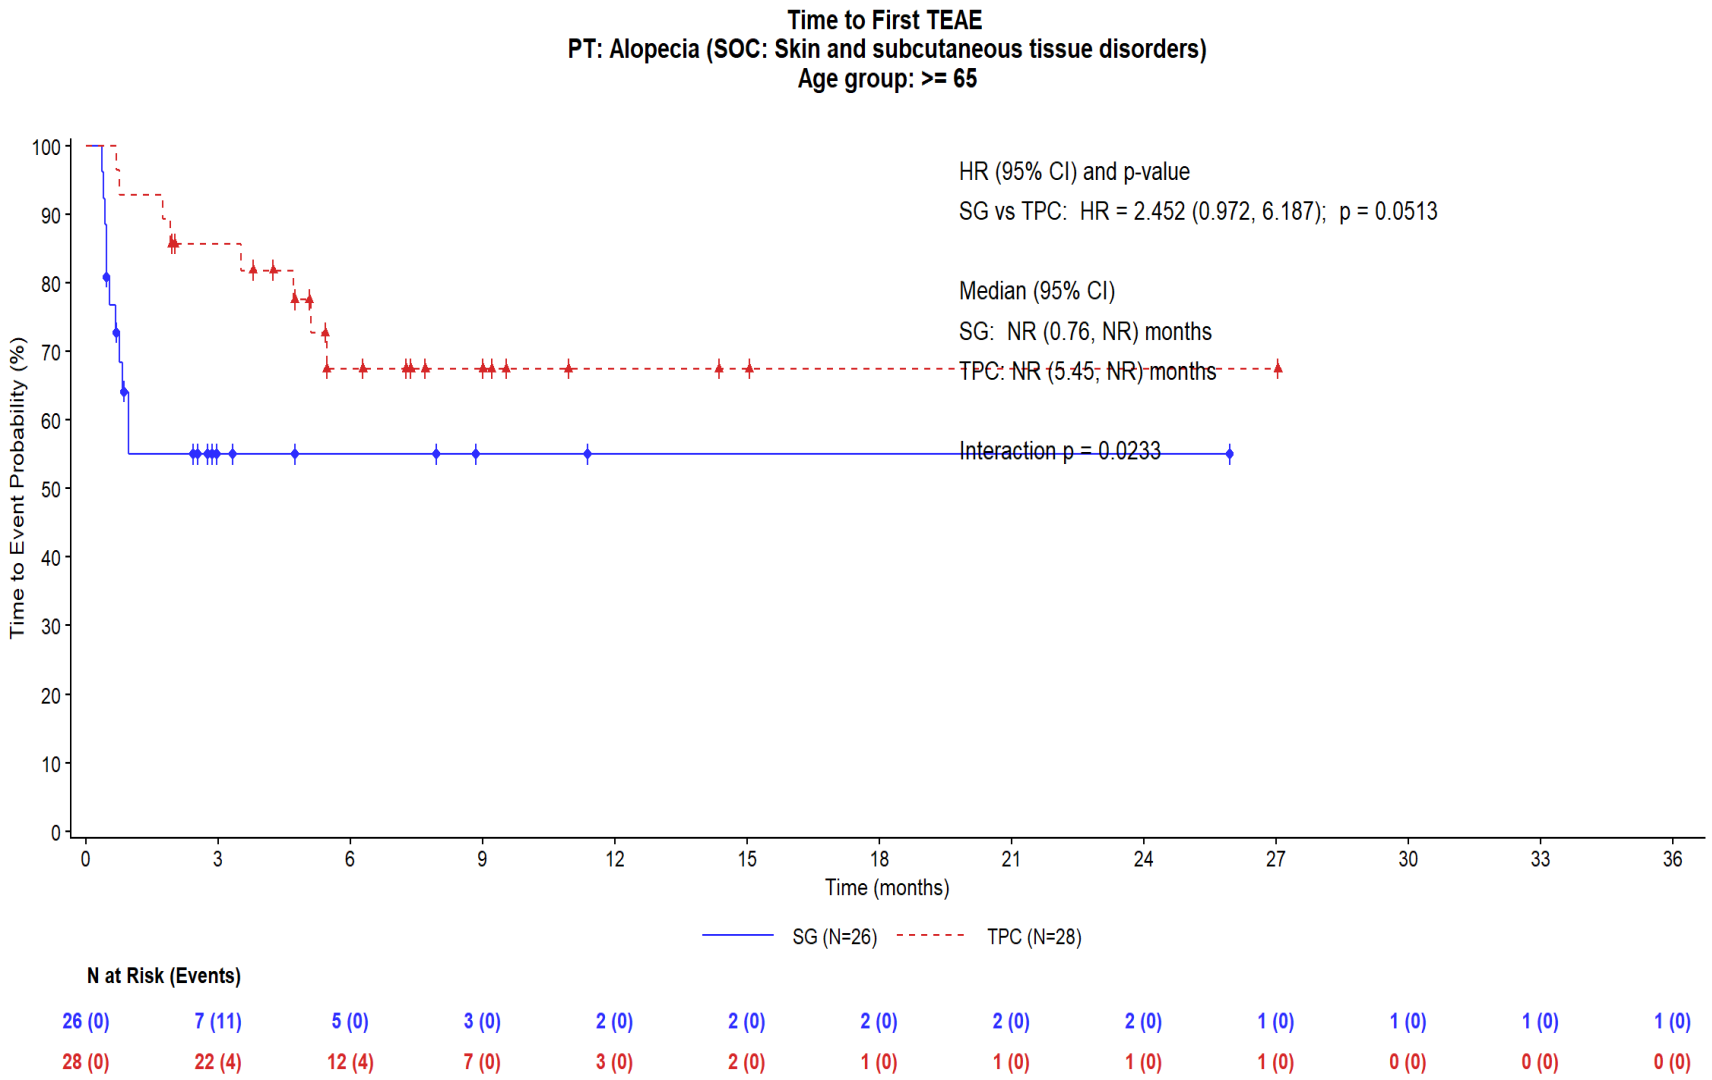
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.94. Figure 1.1.93: Kaplan Meier Plot of Time to First TEAE by PT Diarrhoea (SOC Gastrointestinal disorders) Disease stratification Recurrent disease within 6 to 12 months from completion of treatment in the curative setting — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



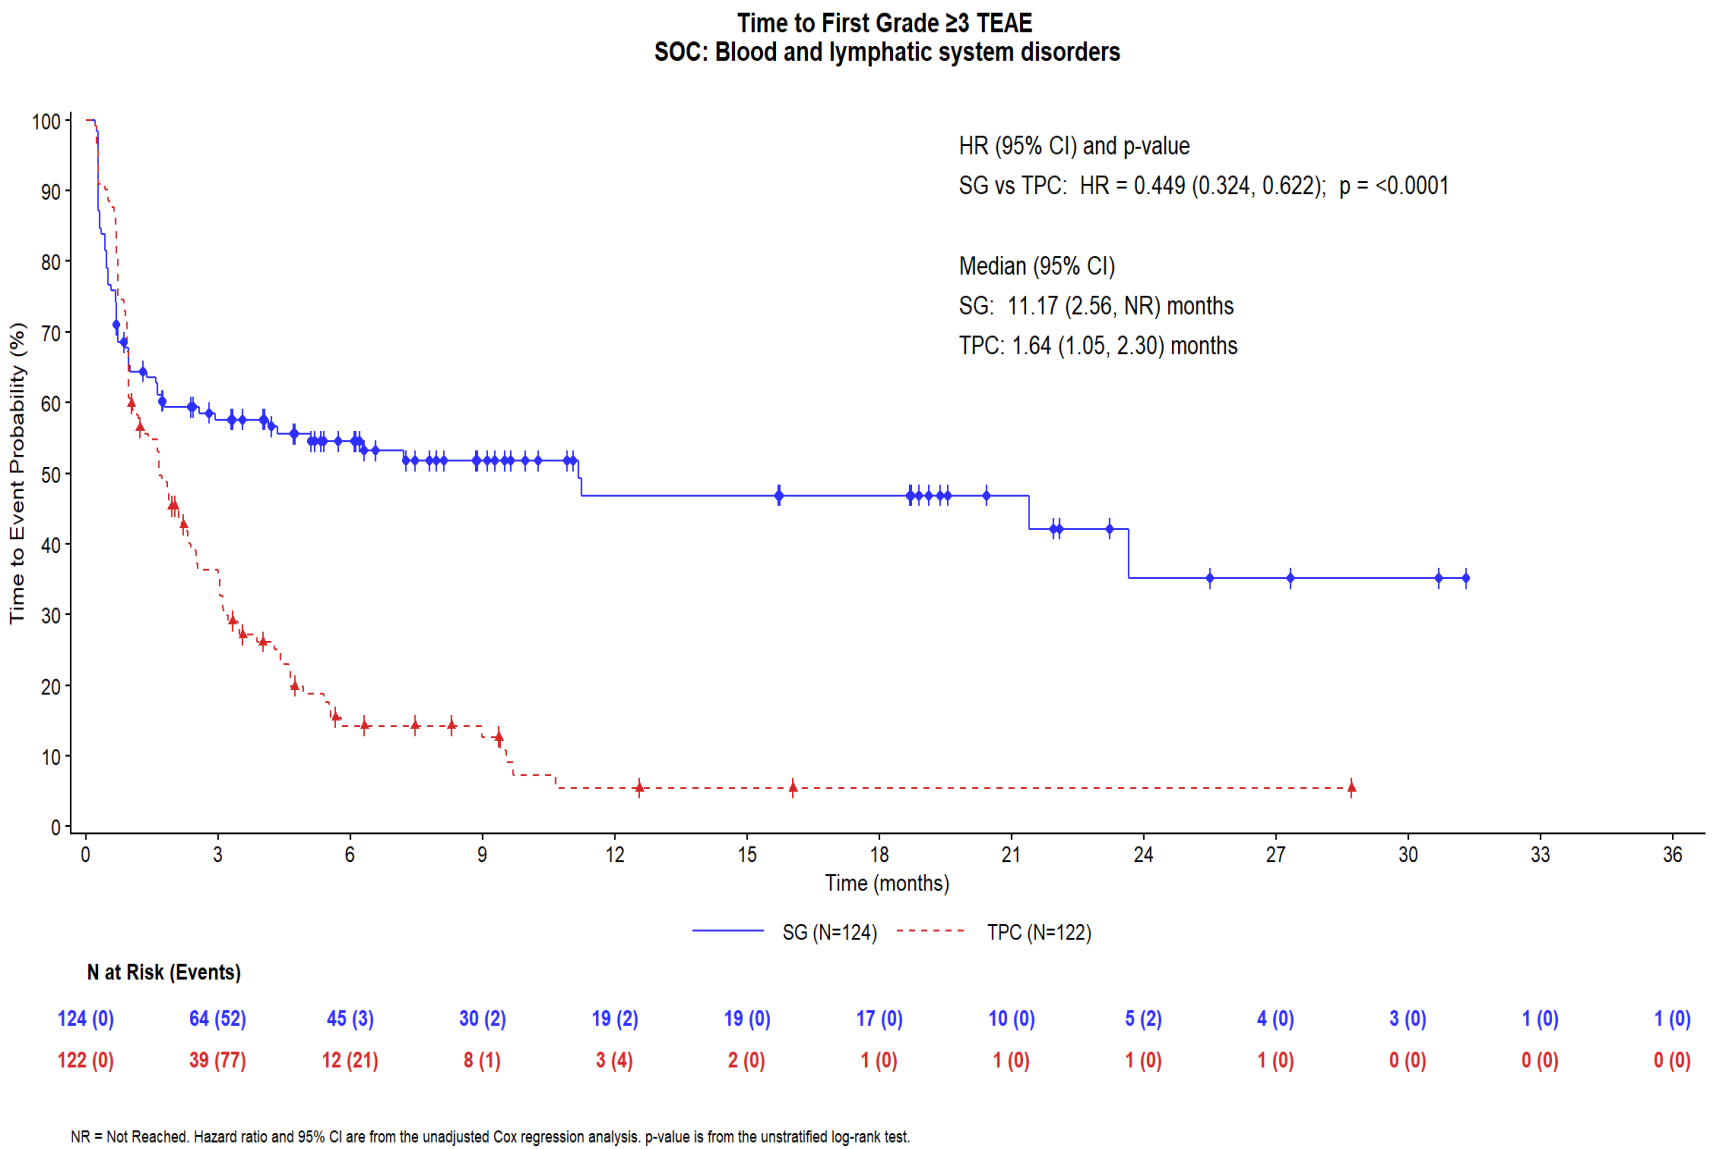
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.95. Figure 1.1.94: Kaplan Meier Plot of Time to First TEAE by PT Diarrhoea (SOC Gastrointestinal disorders) Disease stratification Recurrent disease occurring greater than 12 months from completion of treatment in the curative setting — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



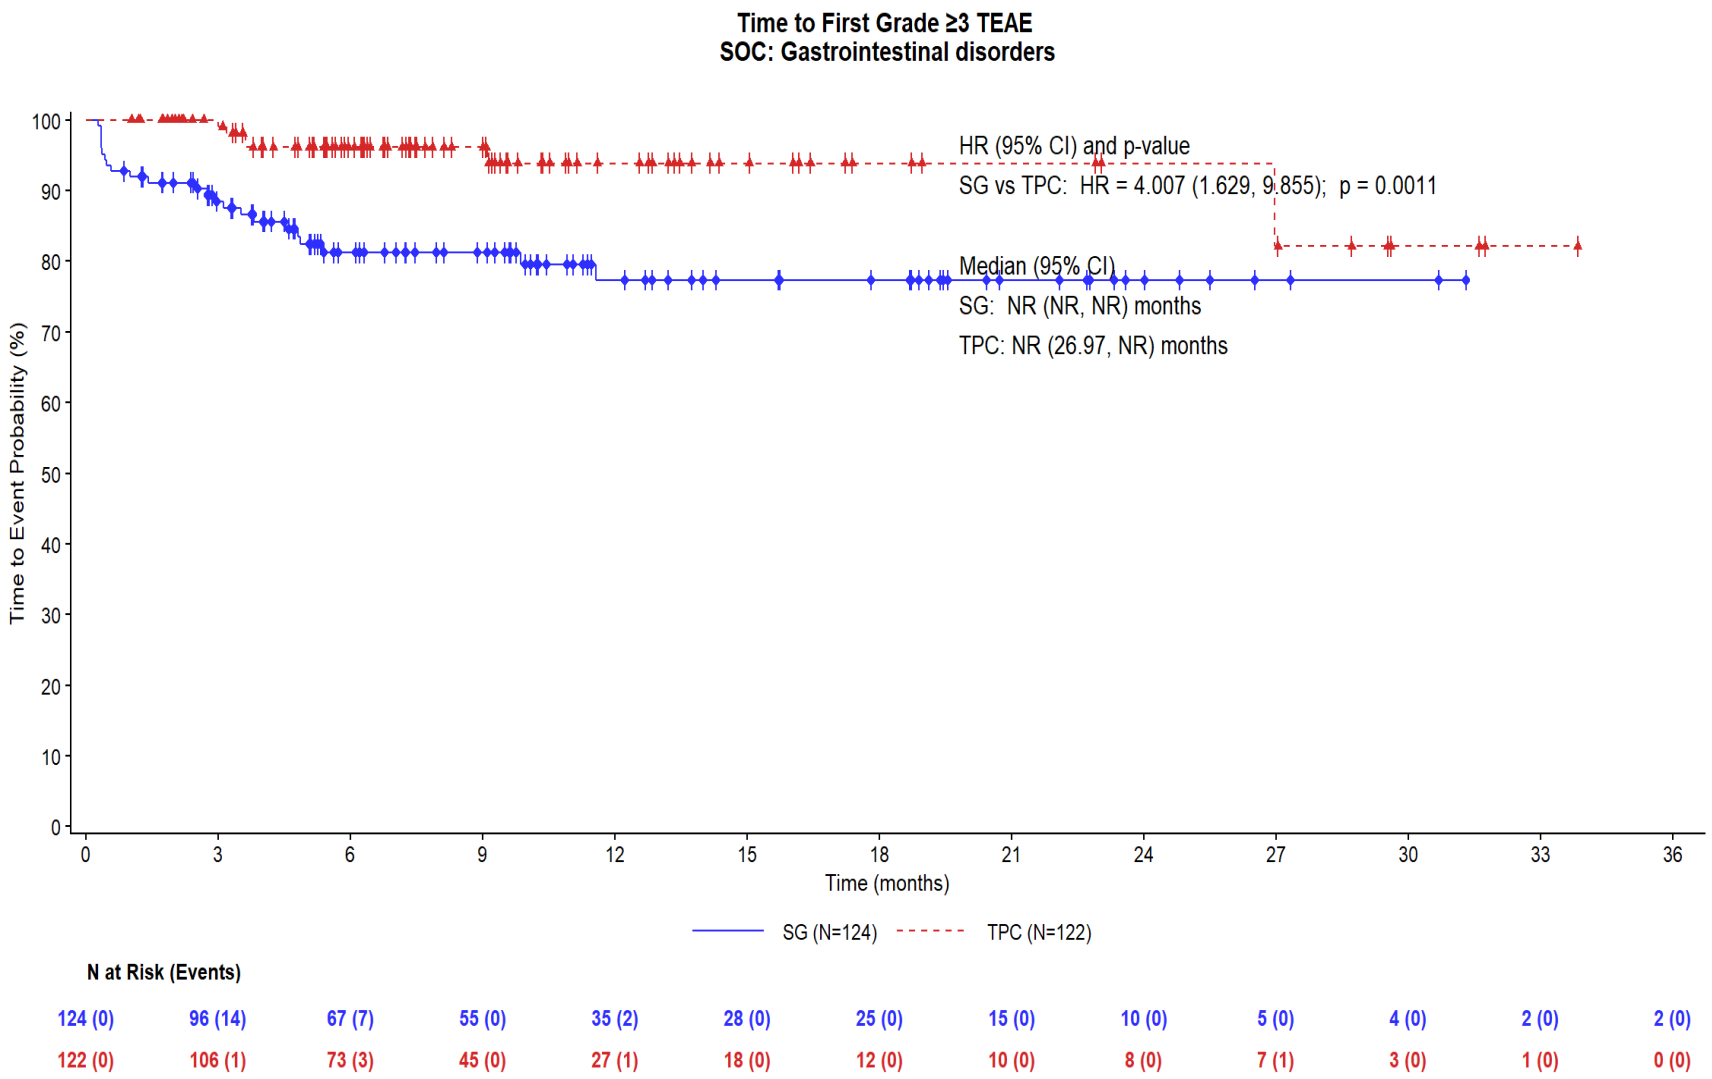
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.96. Figure 1.1.95: Kaplan Meier Plot of Time to First TEAE by PT Alopecia (SOC Skin and subcutaneous tissue disorders) Age group less than 65 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



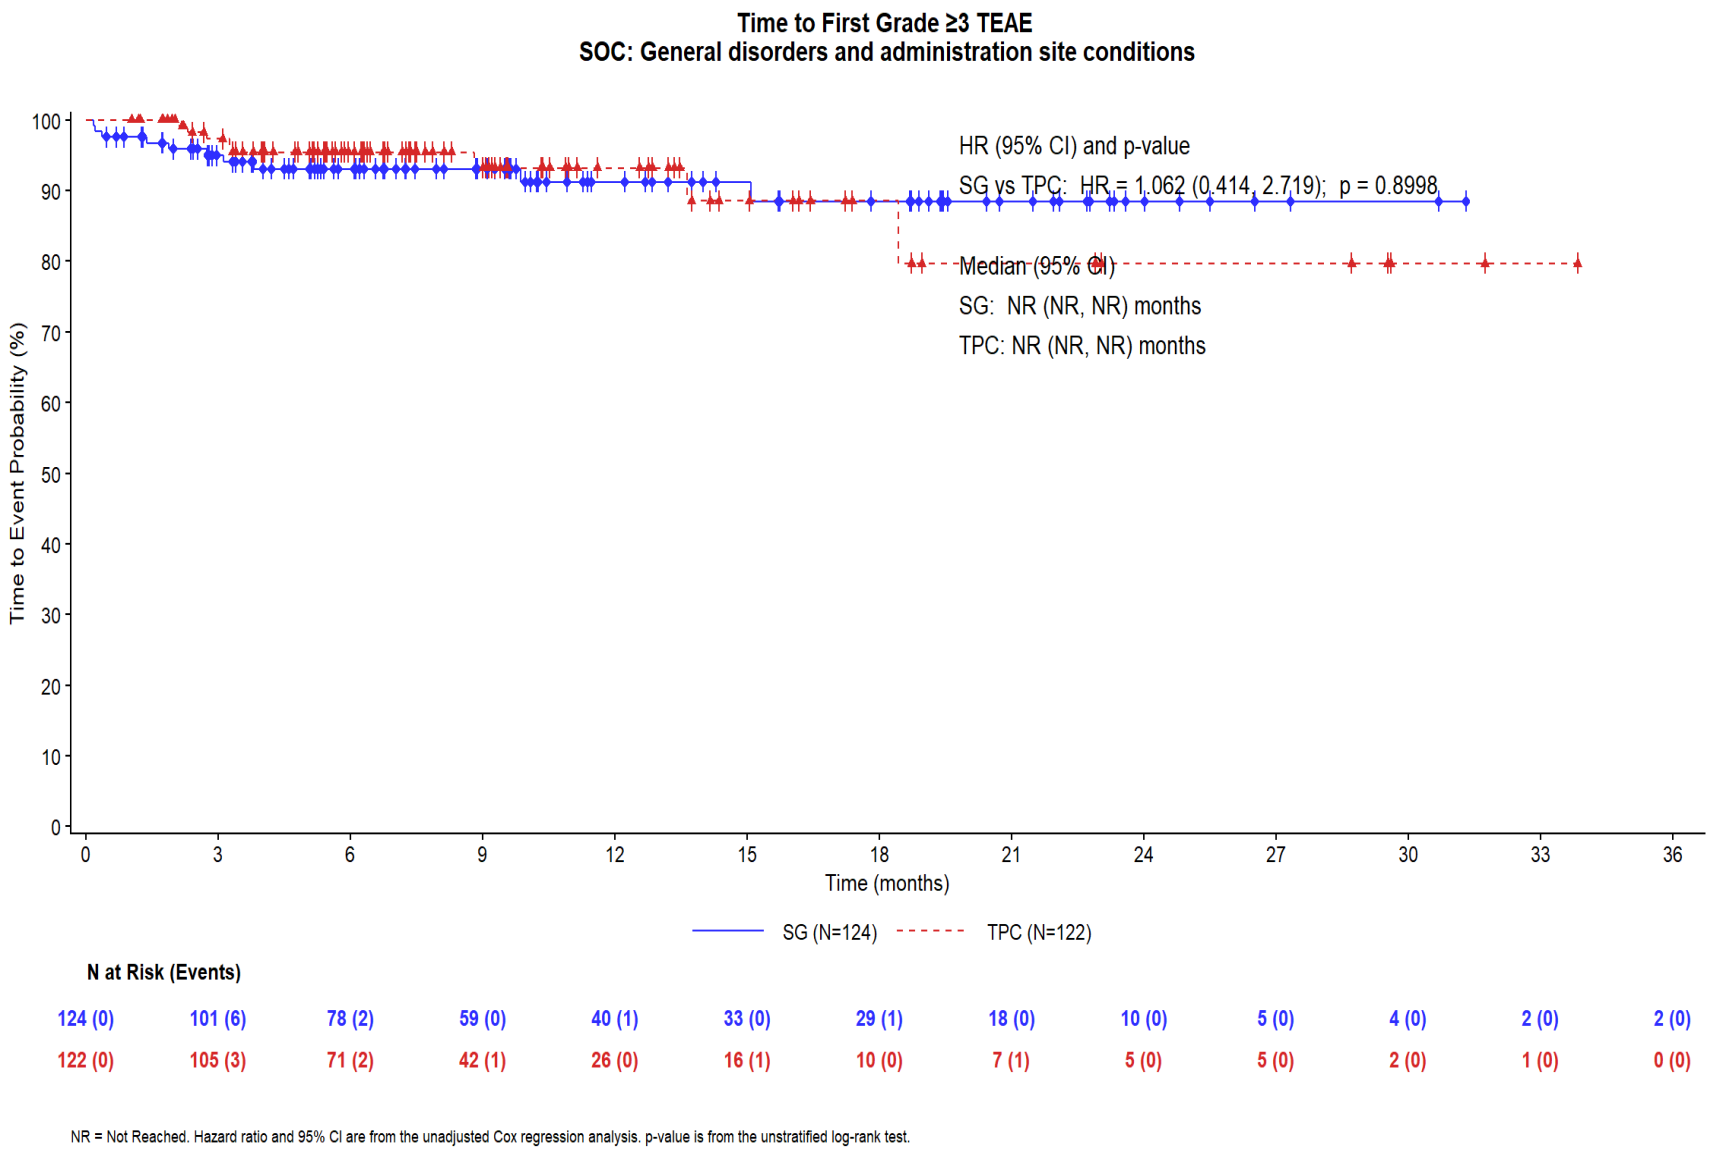
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.97. Figure 1.1.96: Kaplan Meier Plot of Time to First TEAE by PT Alopecia (SOC Skin and subcutaneous tissue disorders) Age group greater than or equal to 65 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



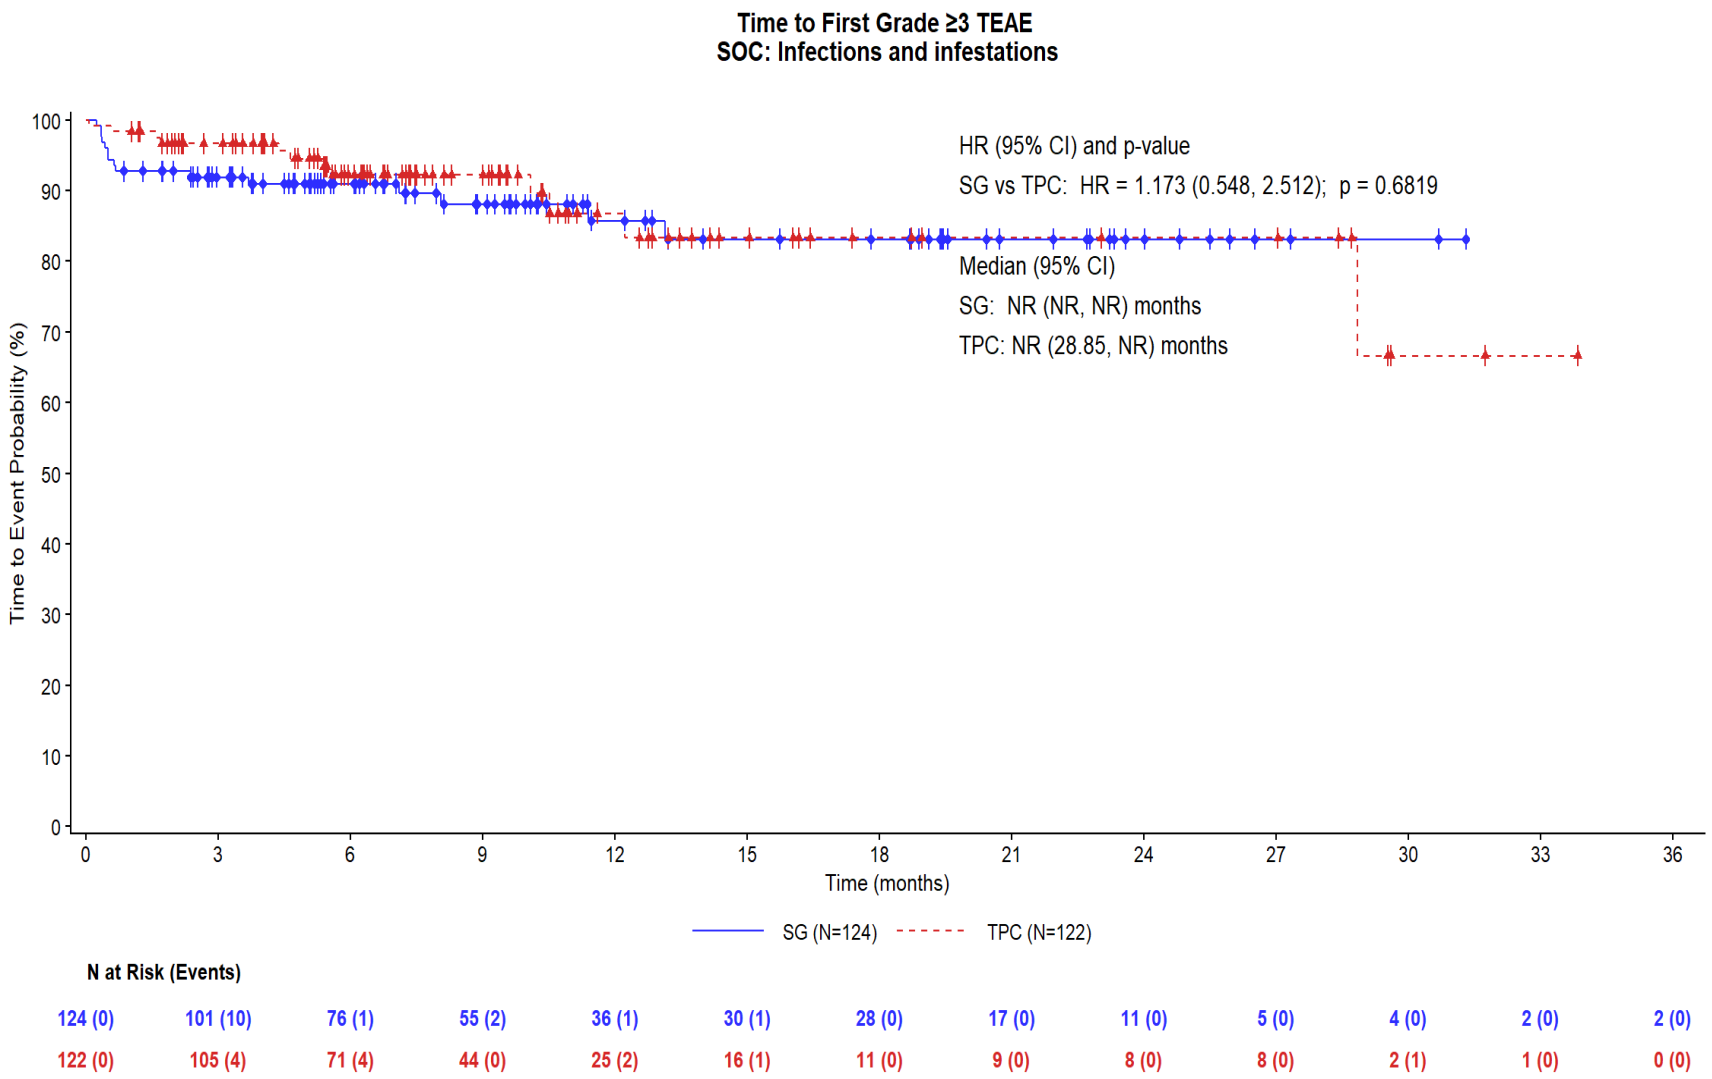
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

8.98. Figure 1.1.97: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Blood and lymphatic system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



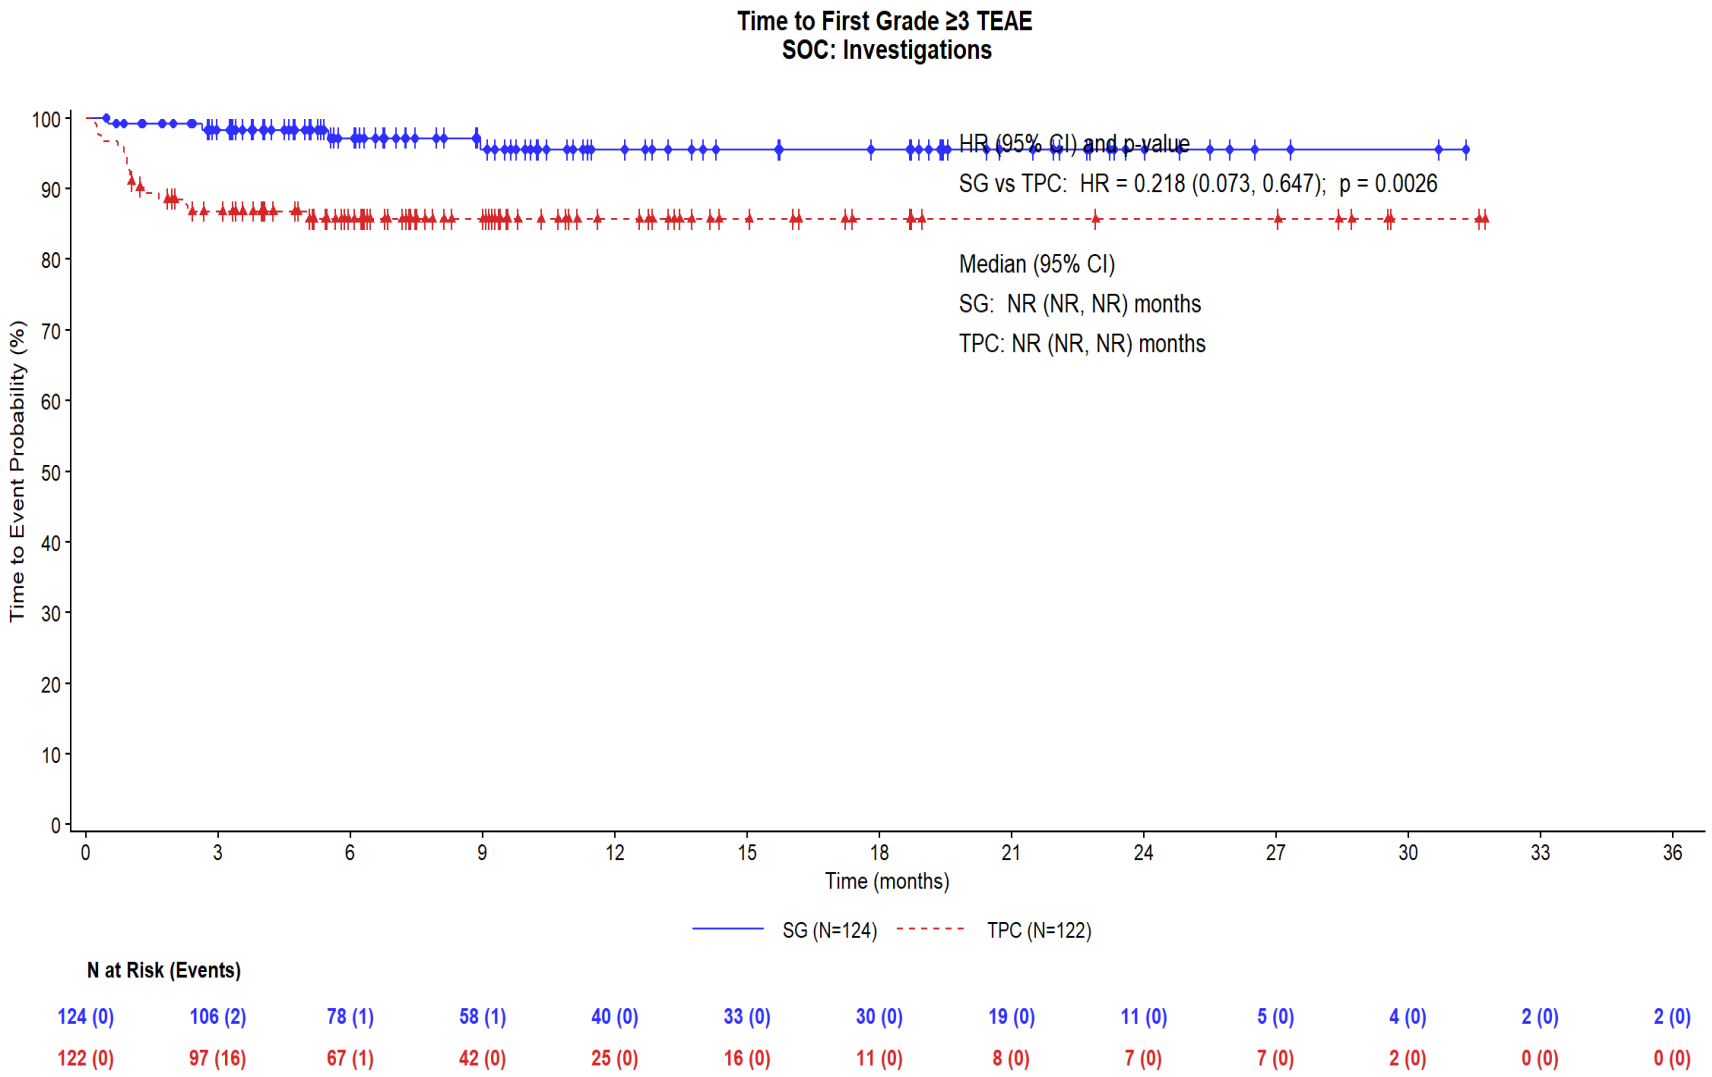
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.99. Figure 1.1.98: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Gastrointestinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



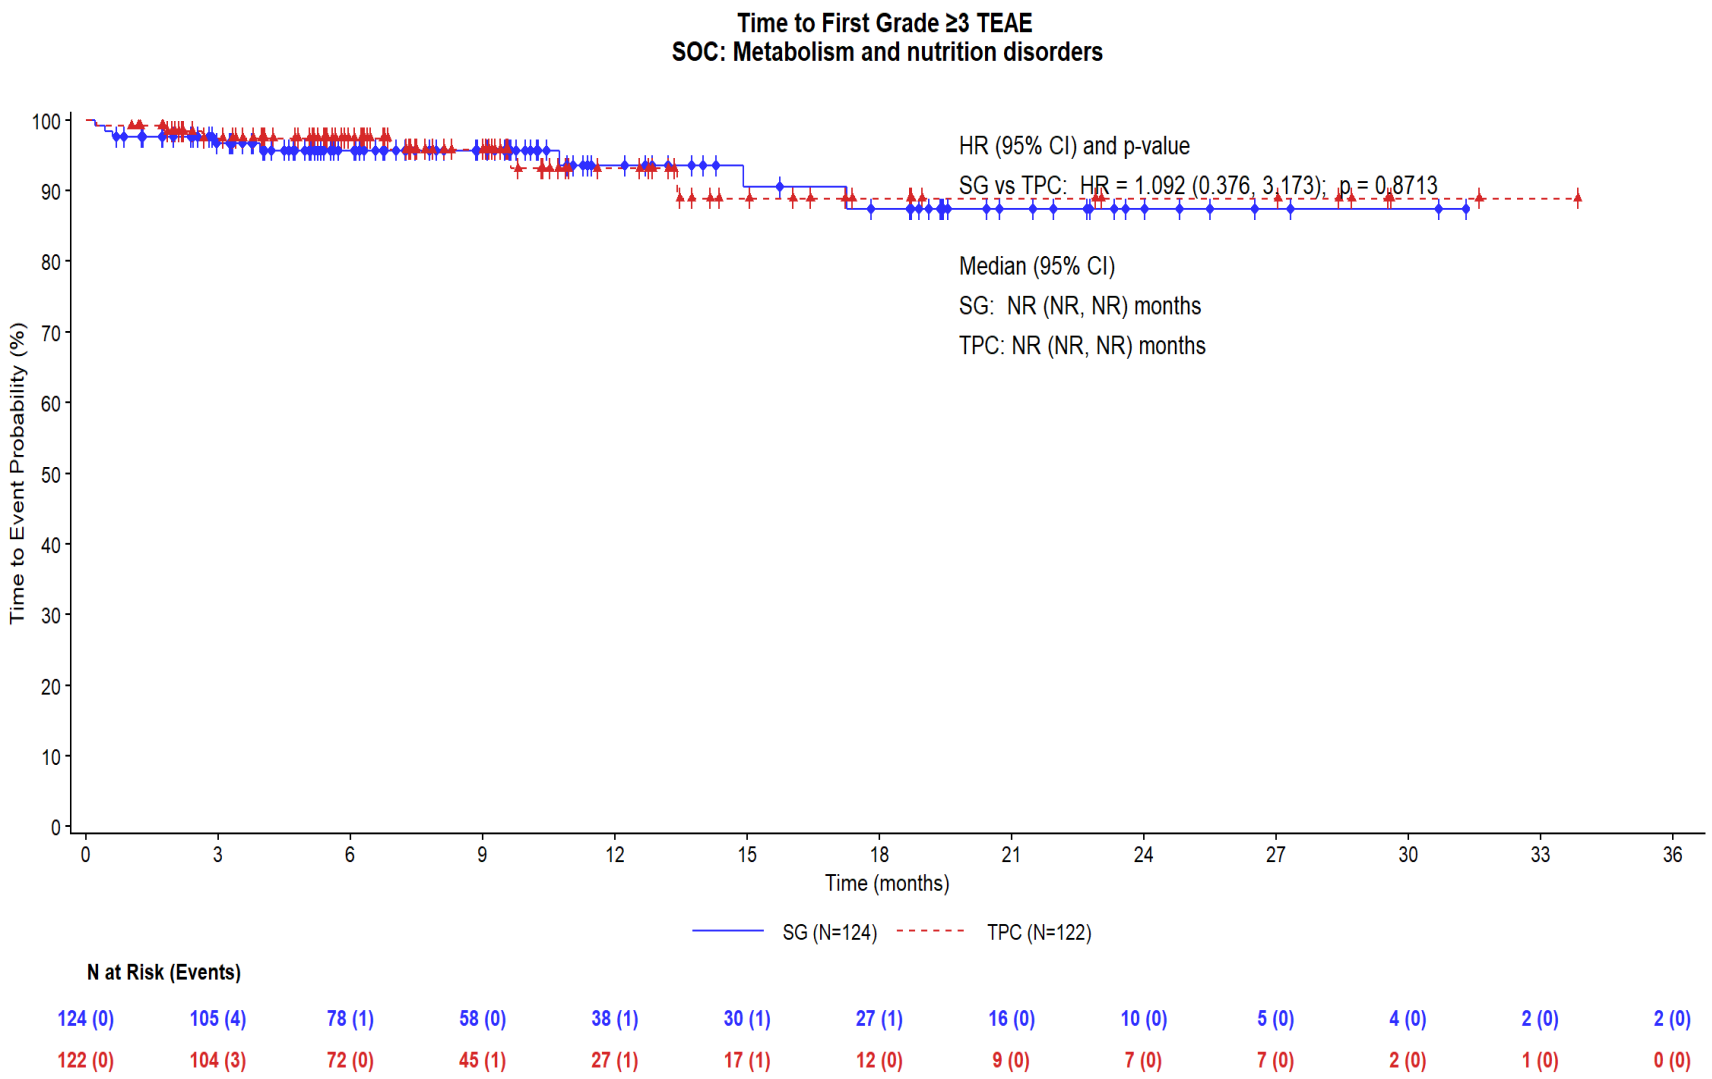
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.100. Figure 1.1.99: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC General disorders and administration site conditions — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



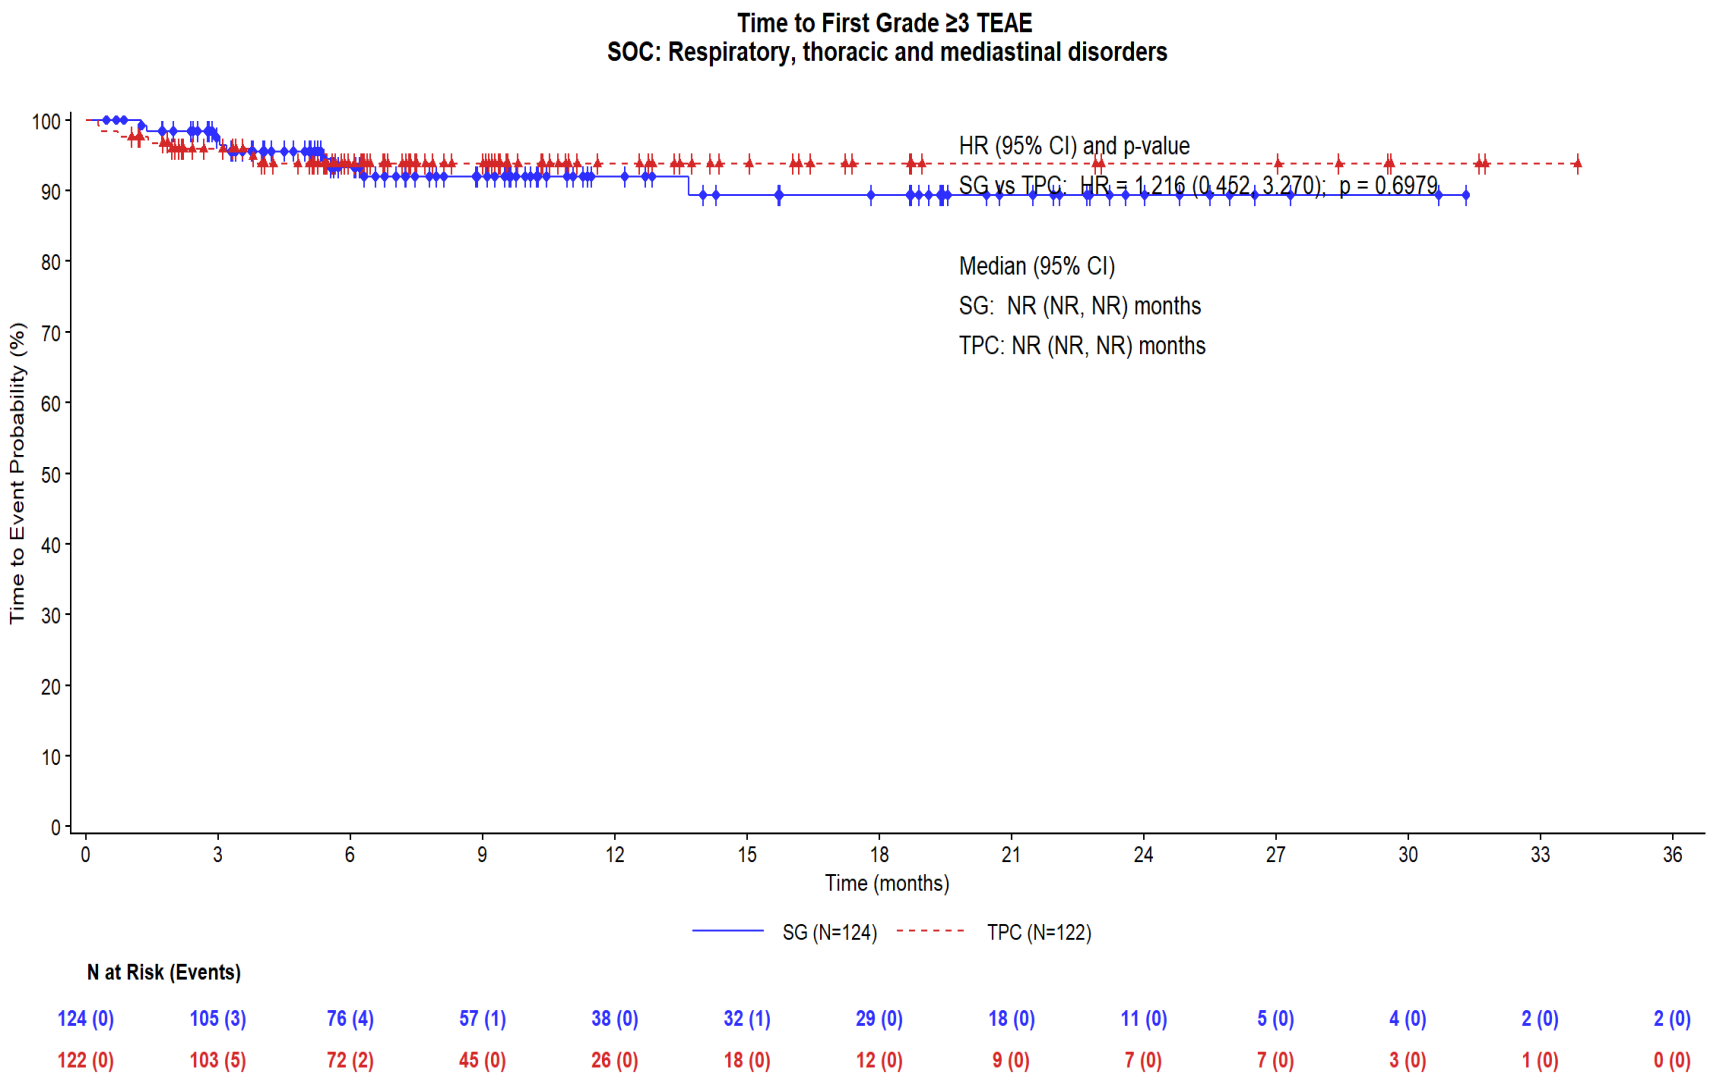
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.101. Figure 1.1.100: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Infections and infestations — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



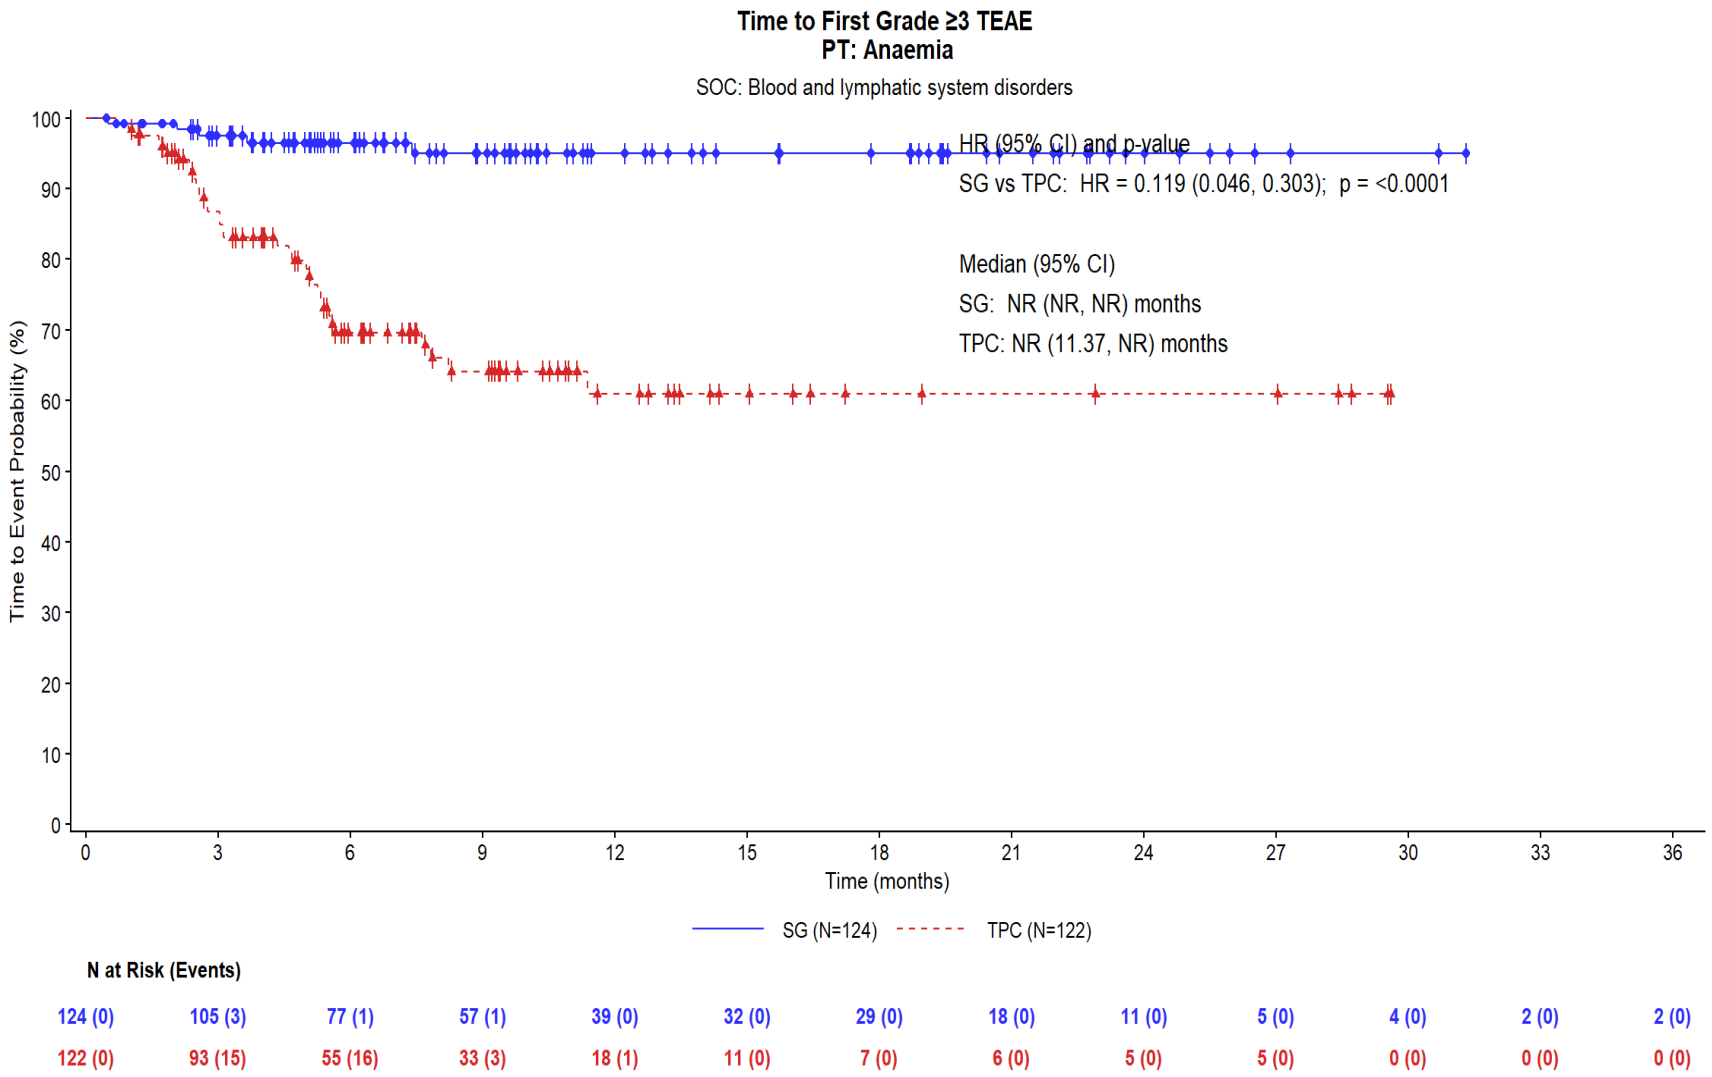
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.102. Figure 1.1.101: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Investigations — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



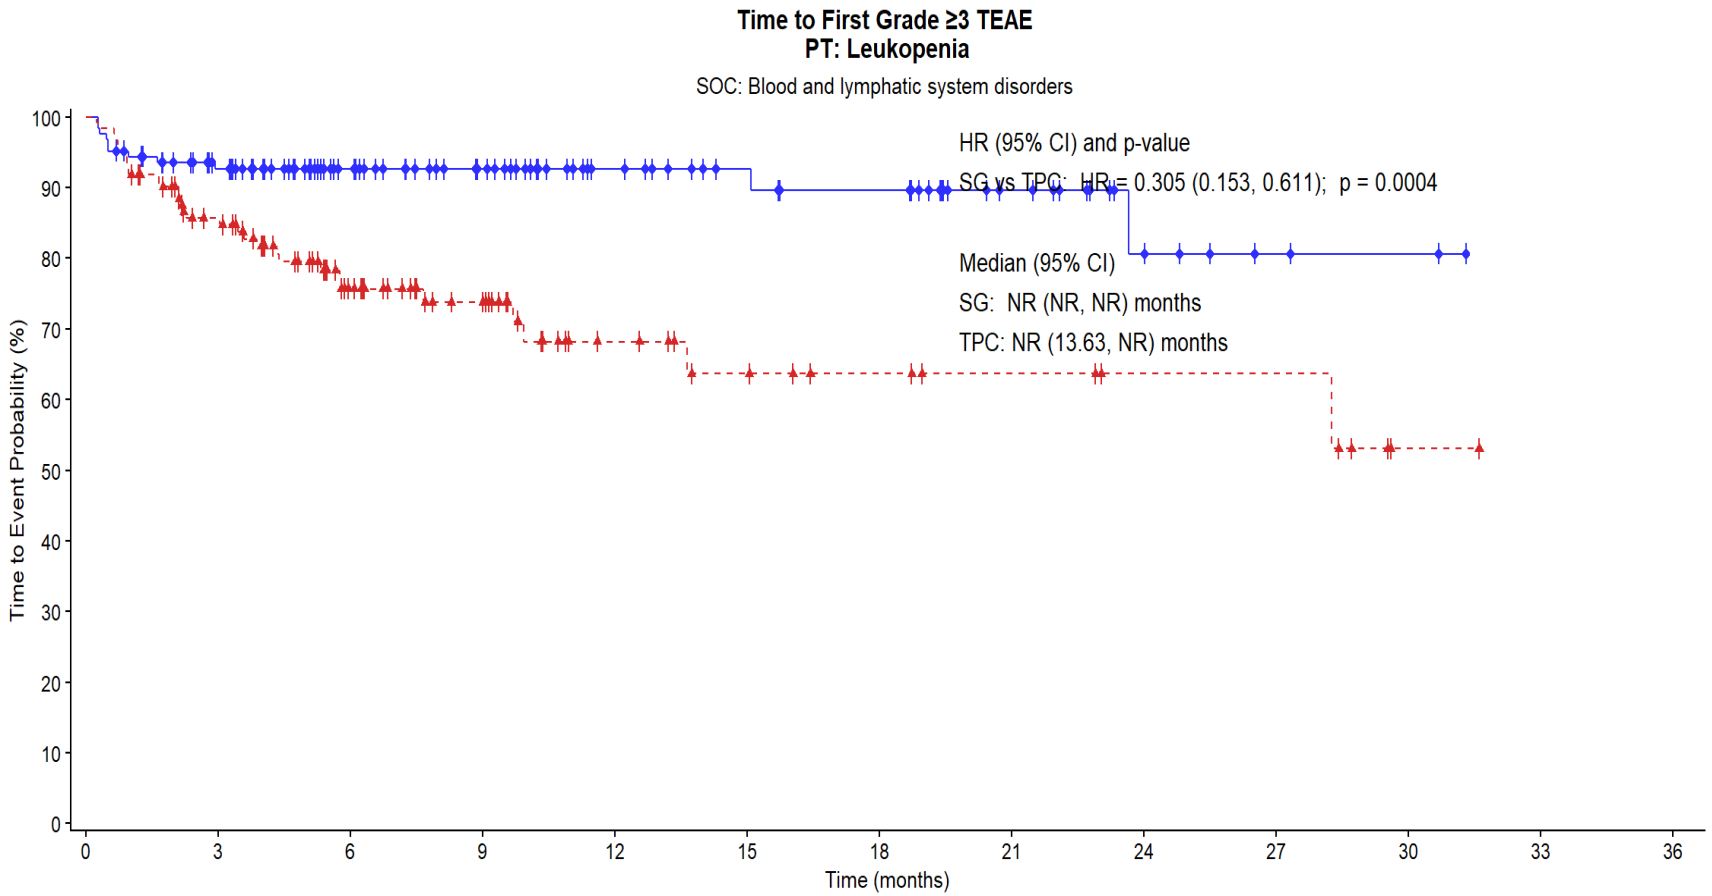
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.103. Figure 1.1.102: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Metabolism and nutrition disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



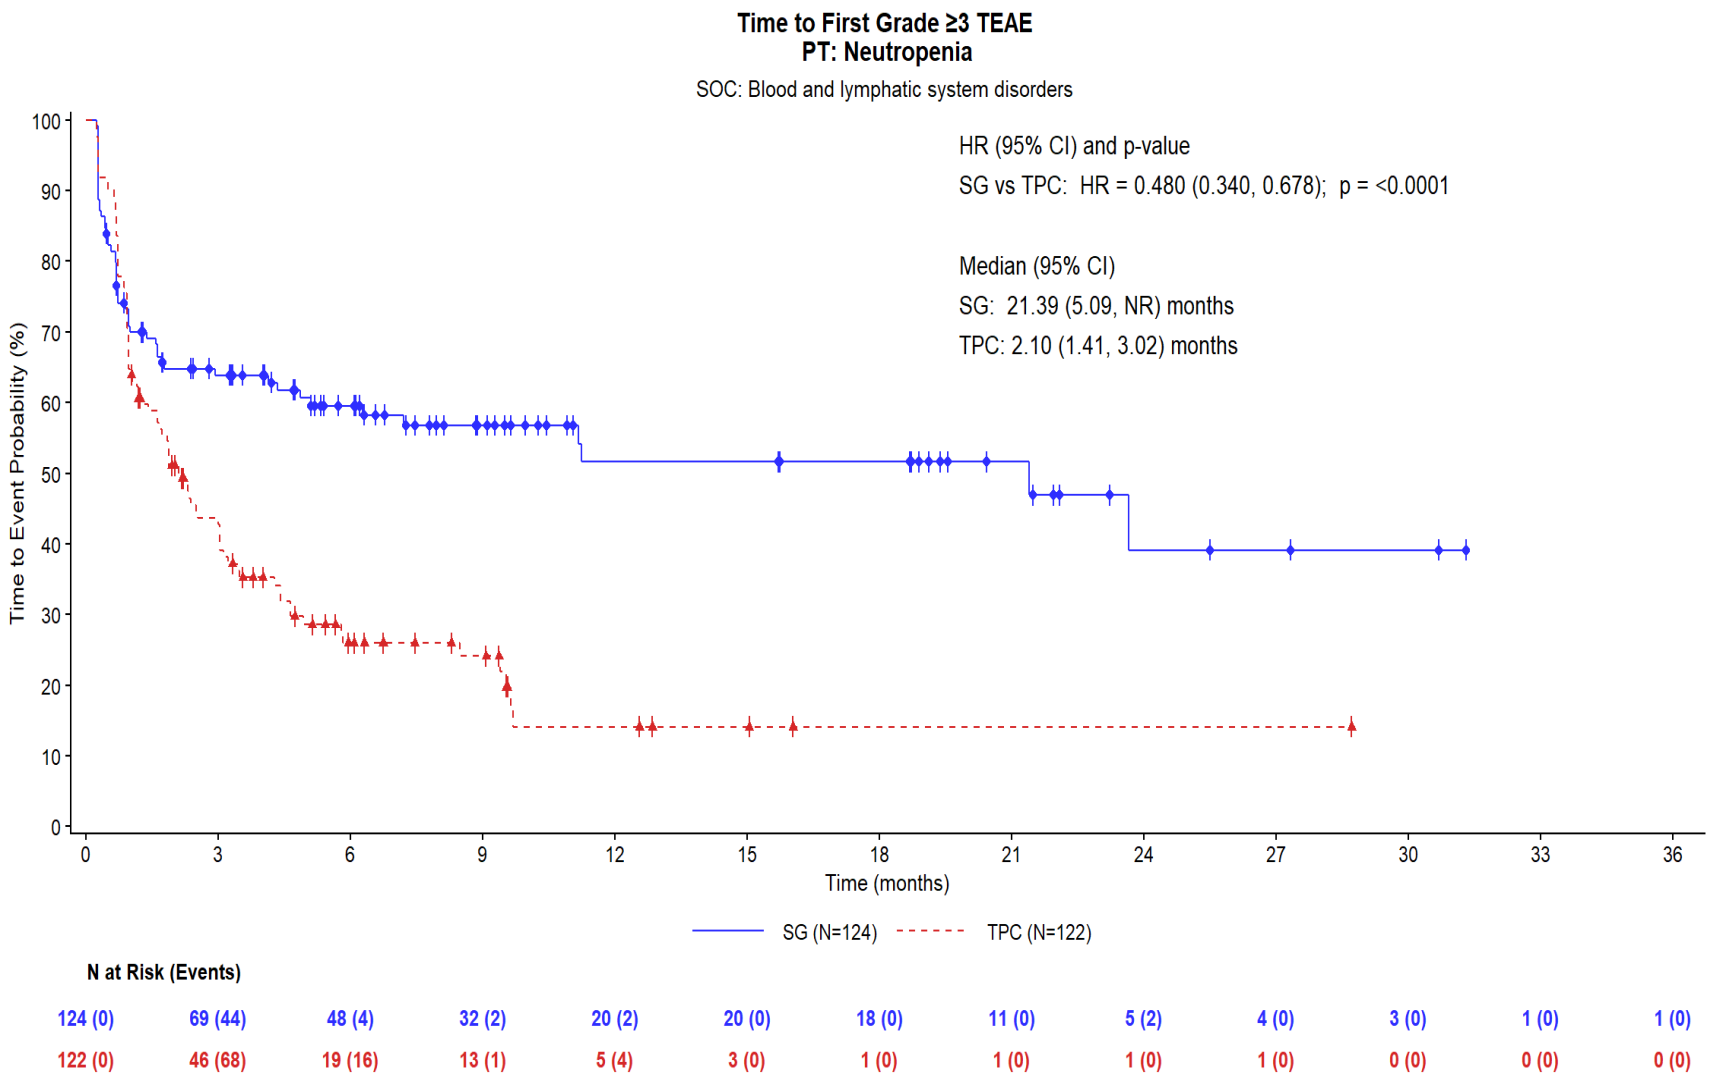
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.104. Figure 1.1.103: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Respiratory thoracic and mediastinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



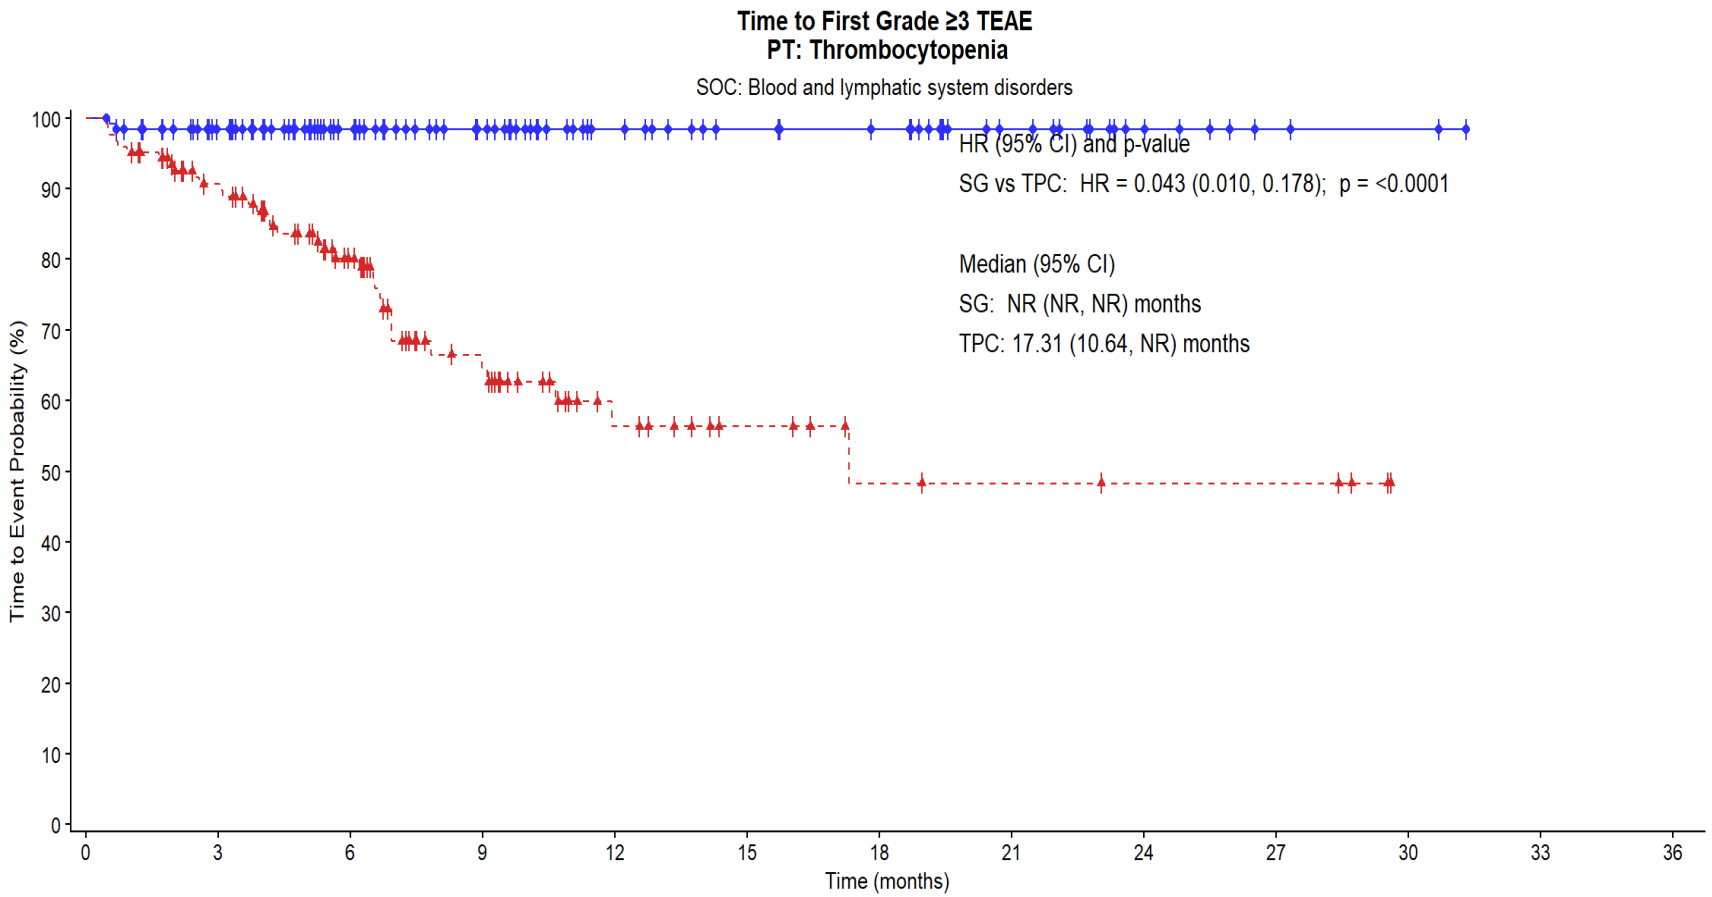
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.105. Figure 1.1.104: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Anaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



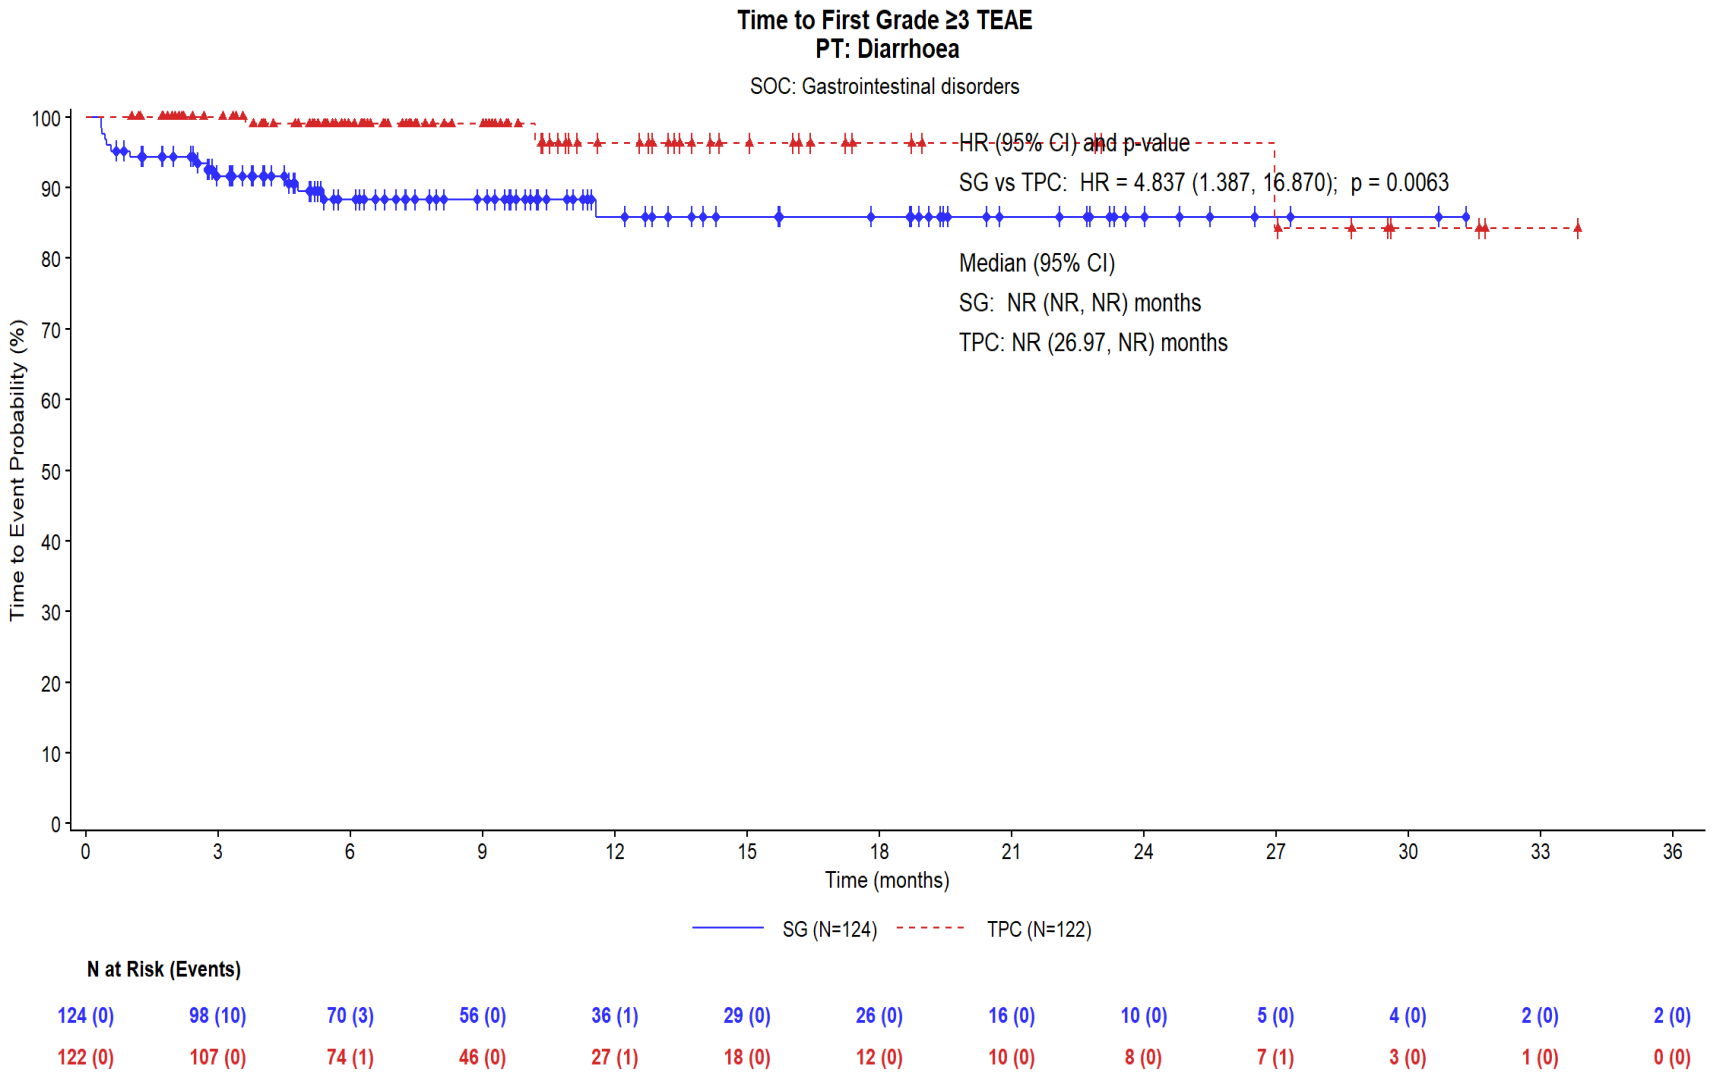
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.106. Figure 1.1.105: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Leukopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



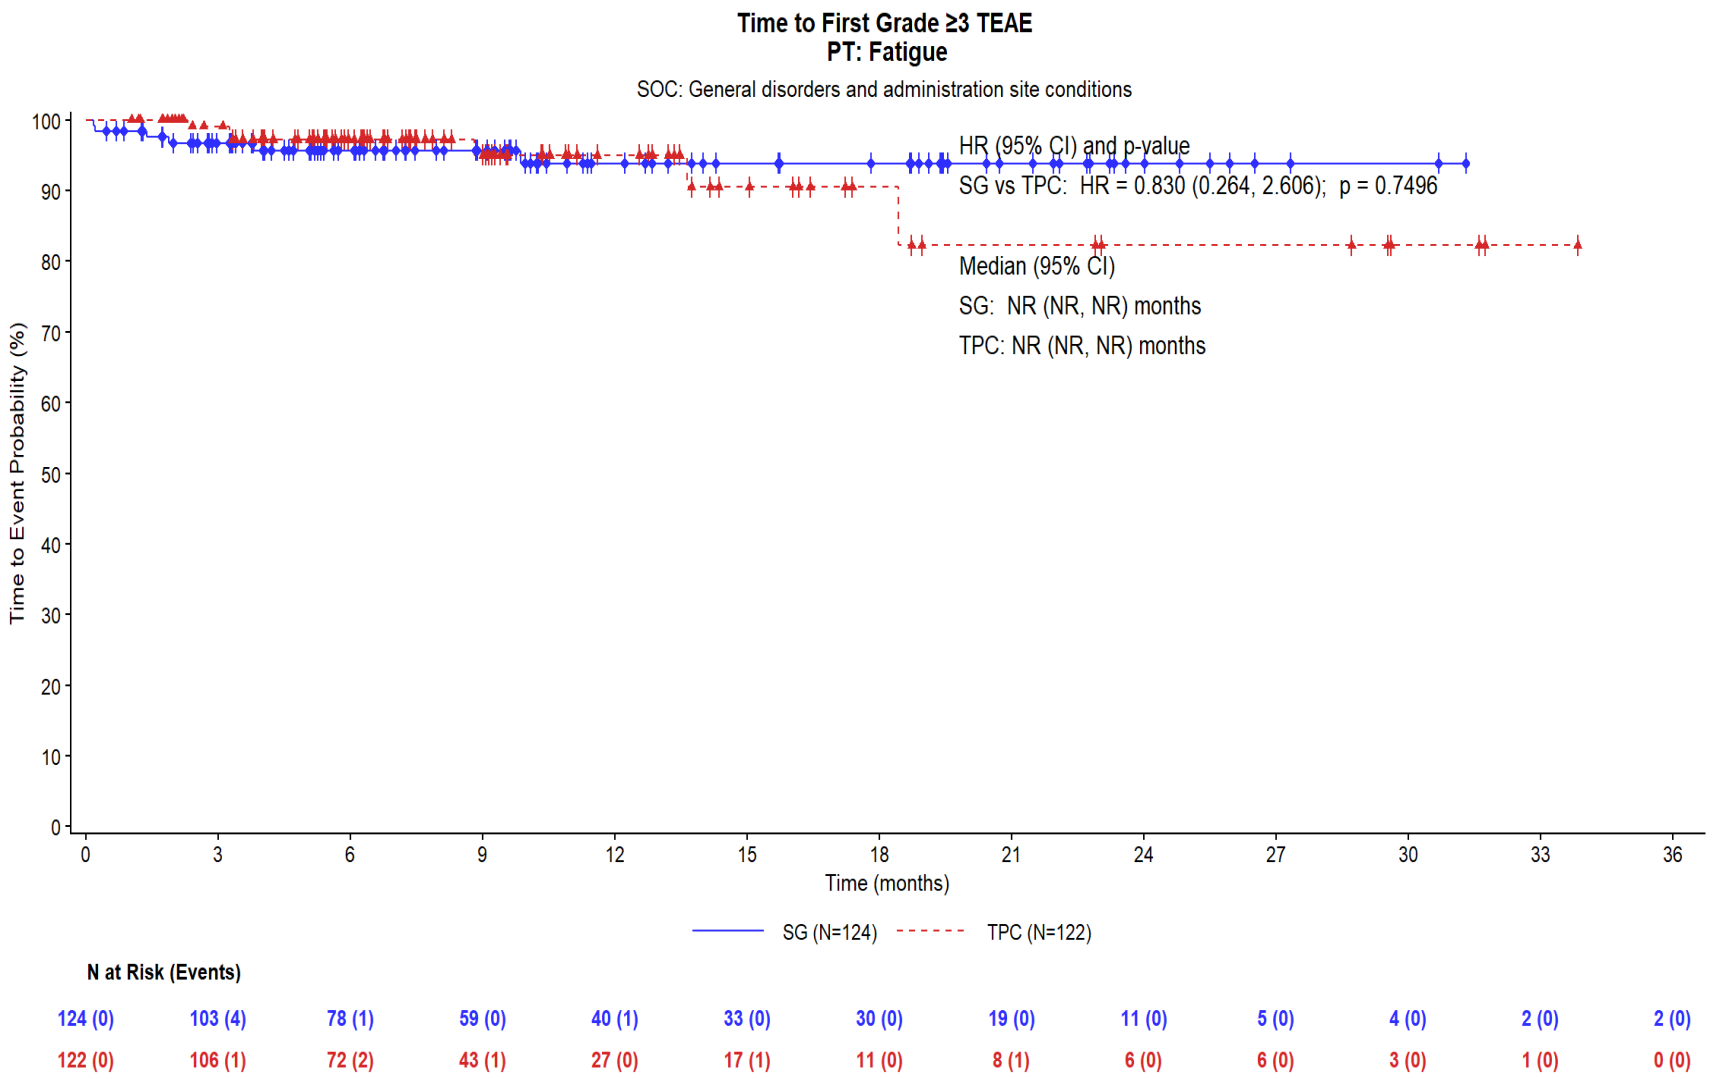
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.107. Figure 1.1.106: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Neutropenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



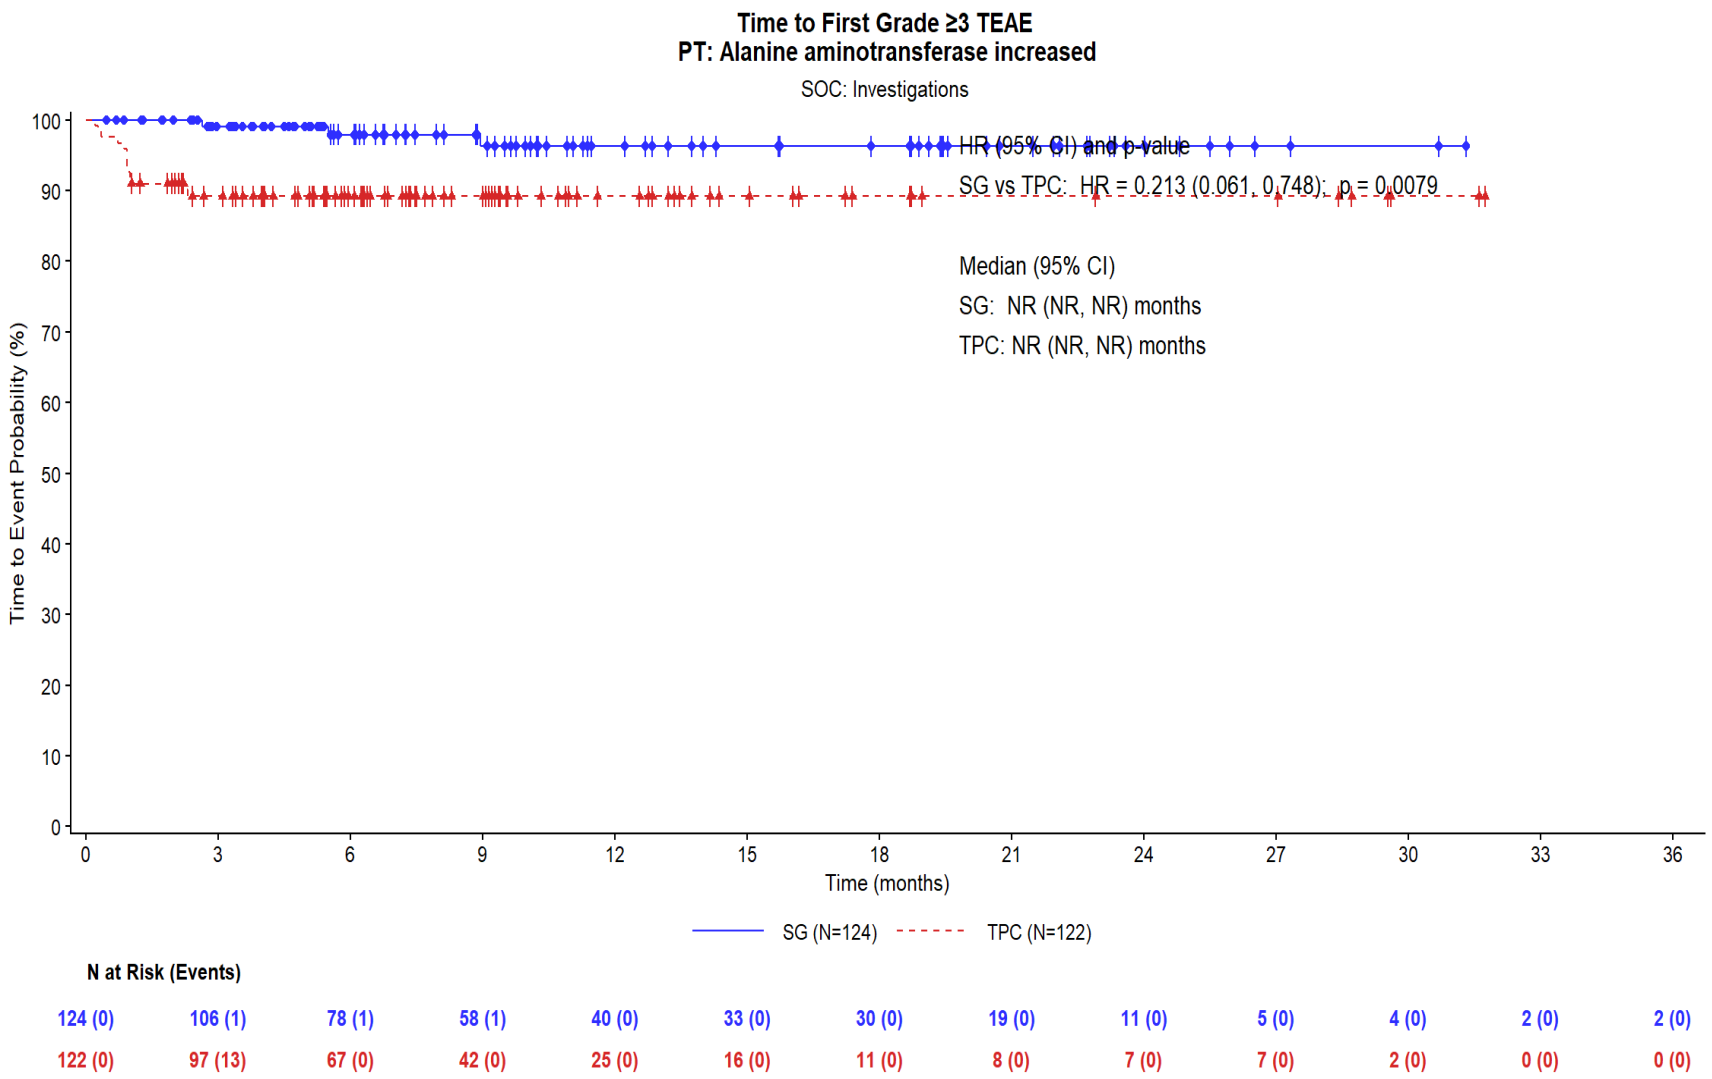
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.108. Figure 1.1.107: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Thrombocytopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



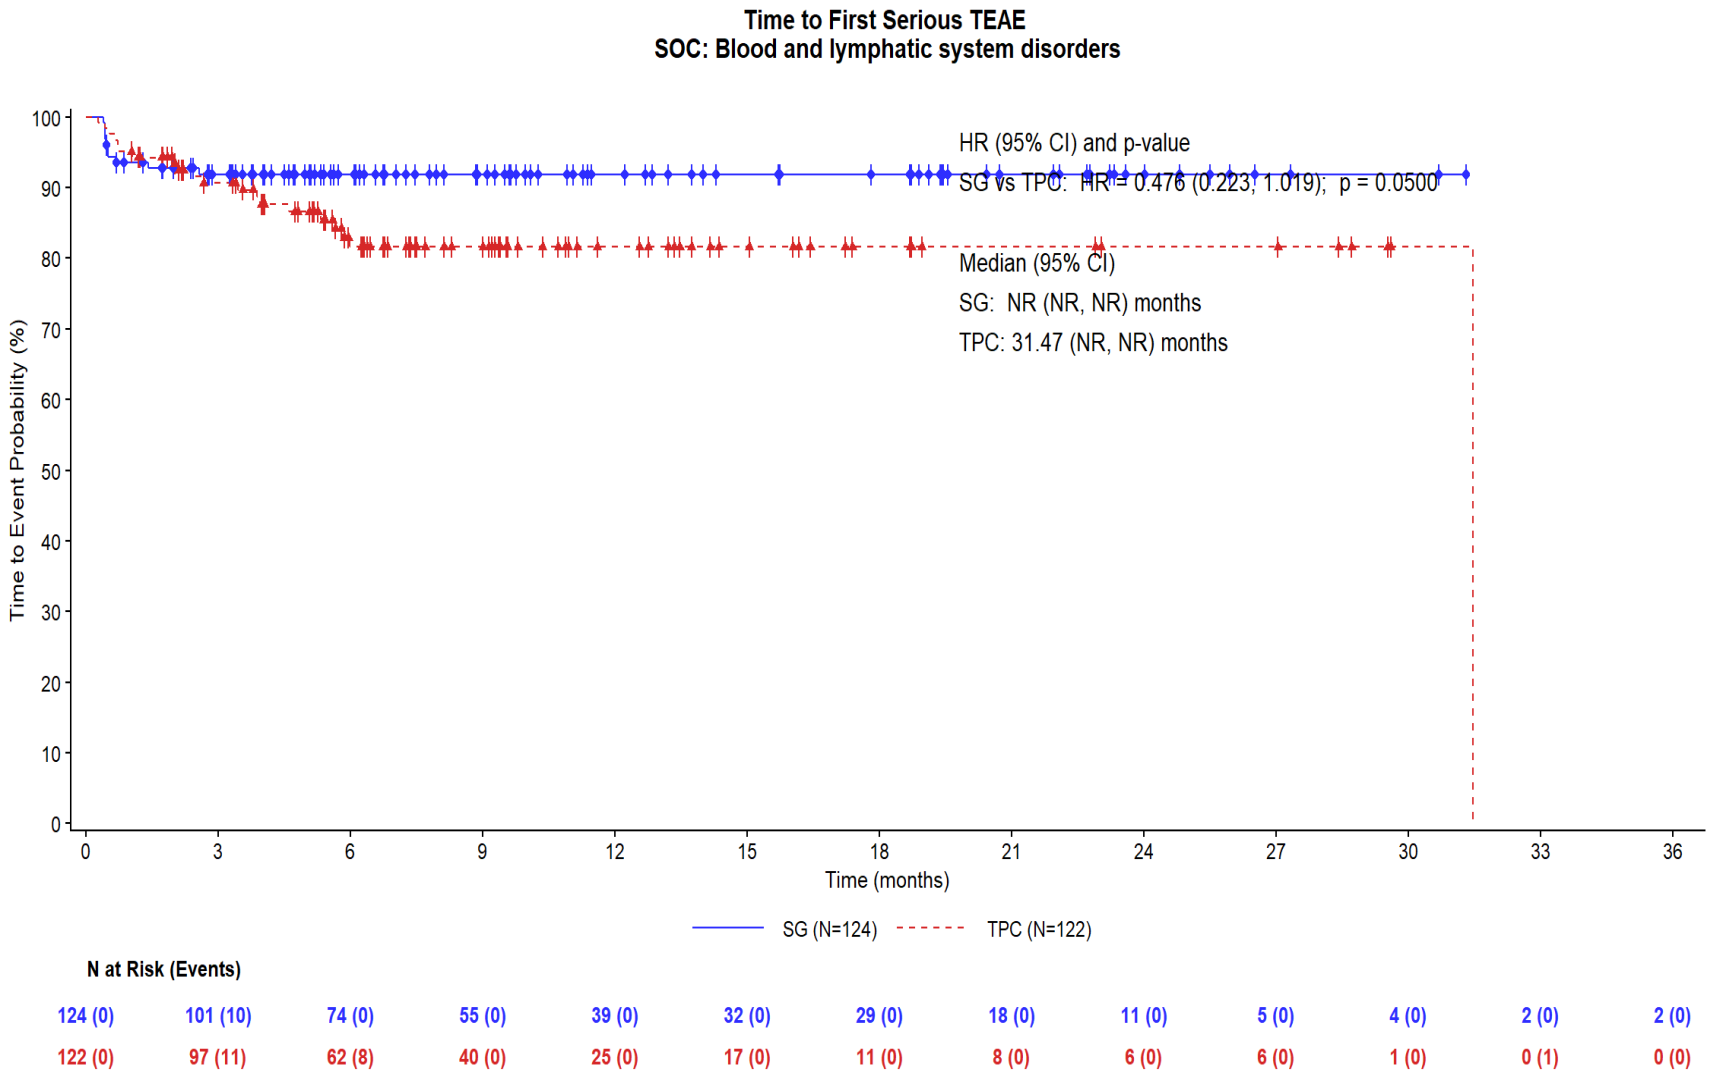
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.109. Figure 1.1.108: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Diarrhoea — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



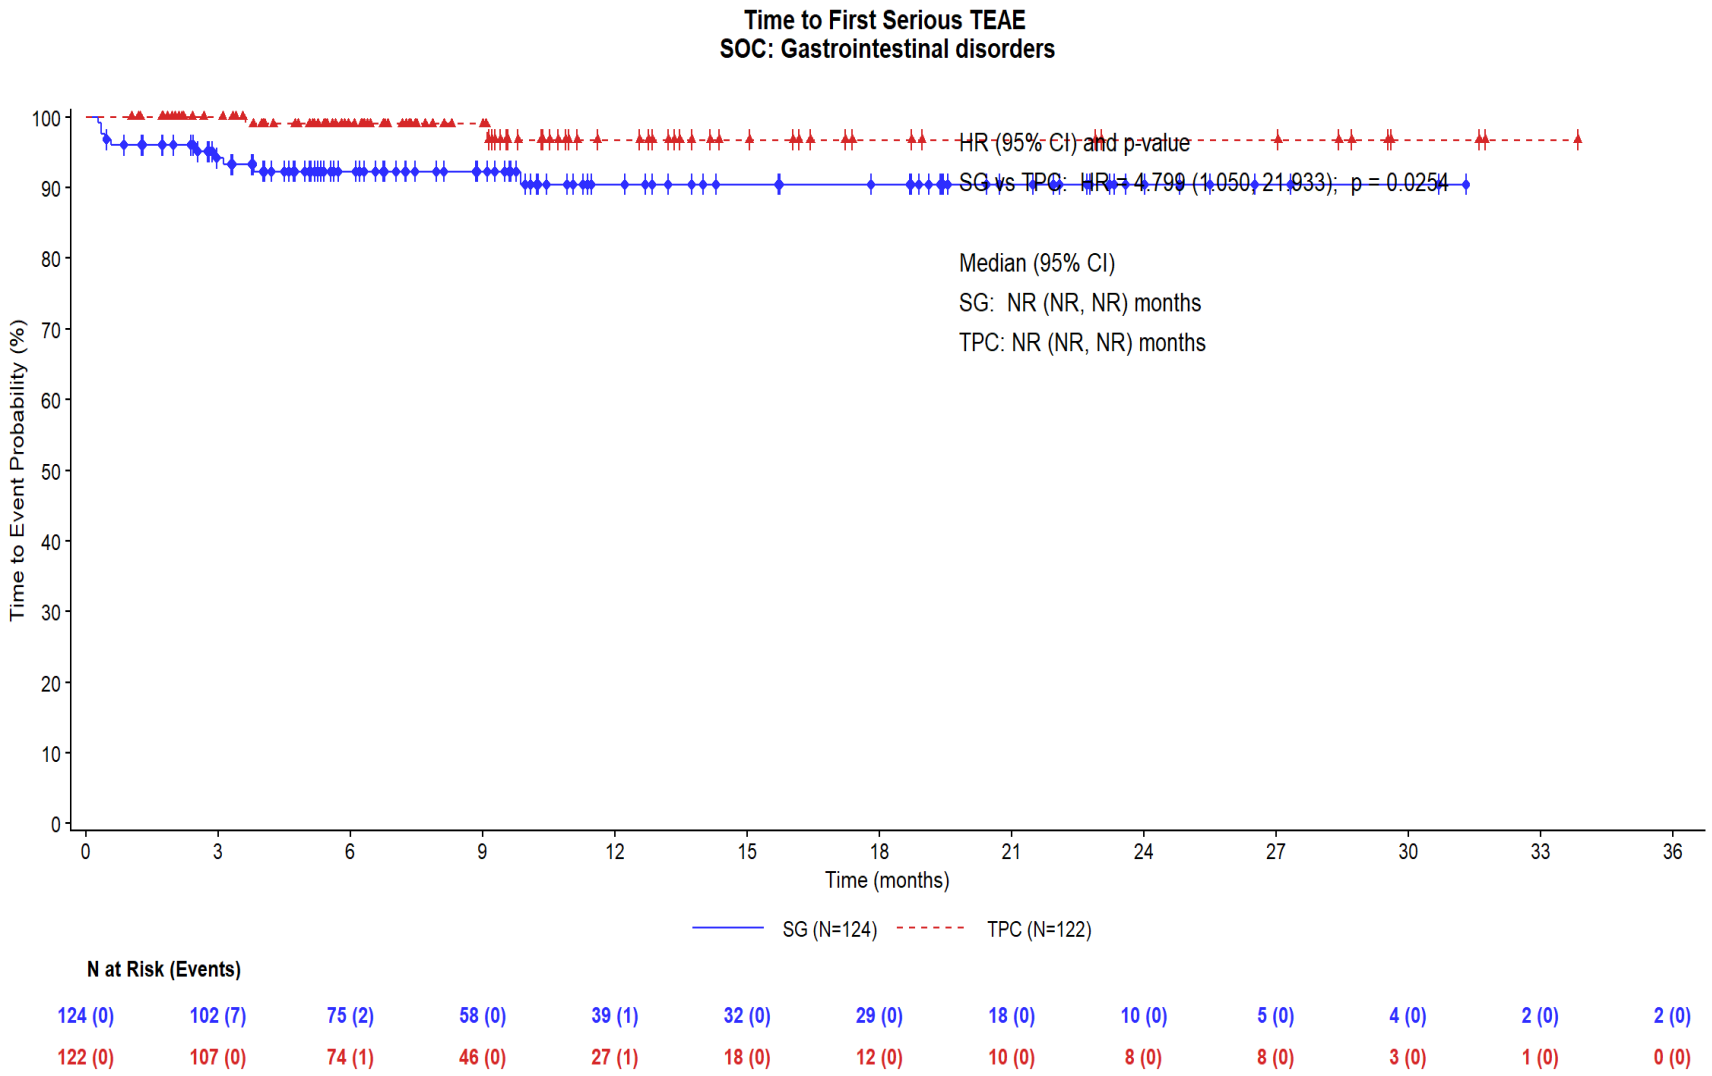
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.110. Figure 1.1.109: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Fatigue — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



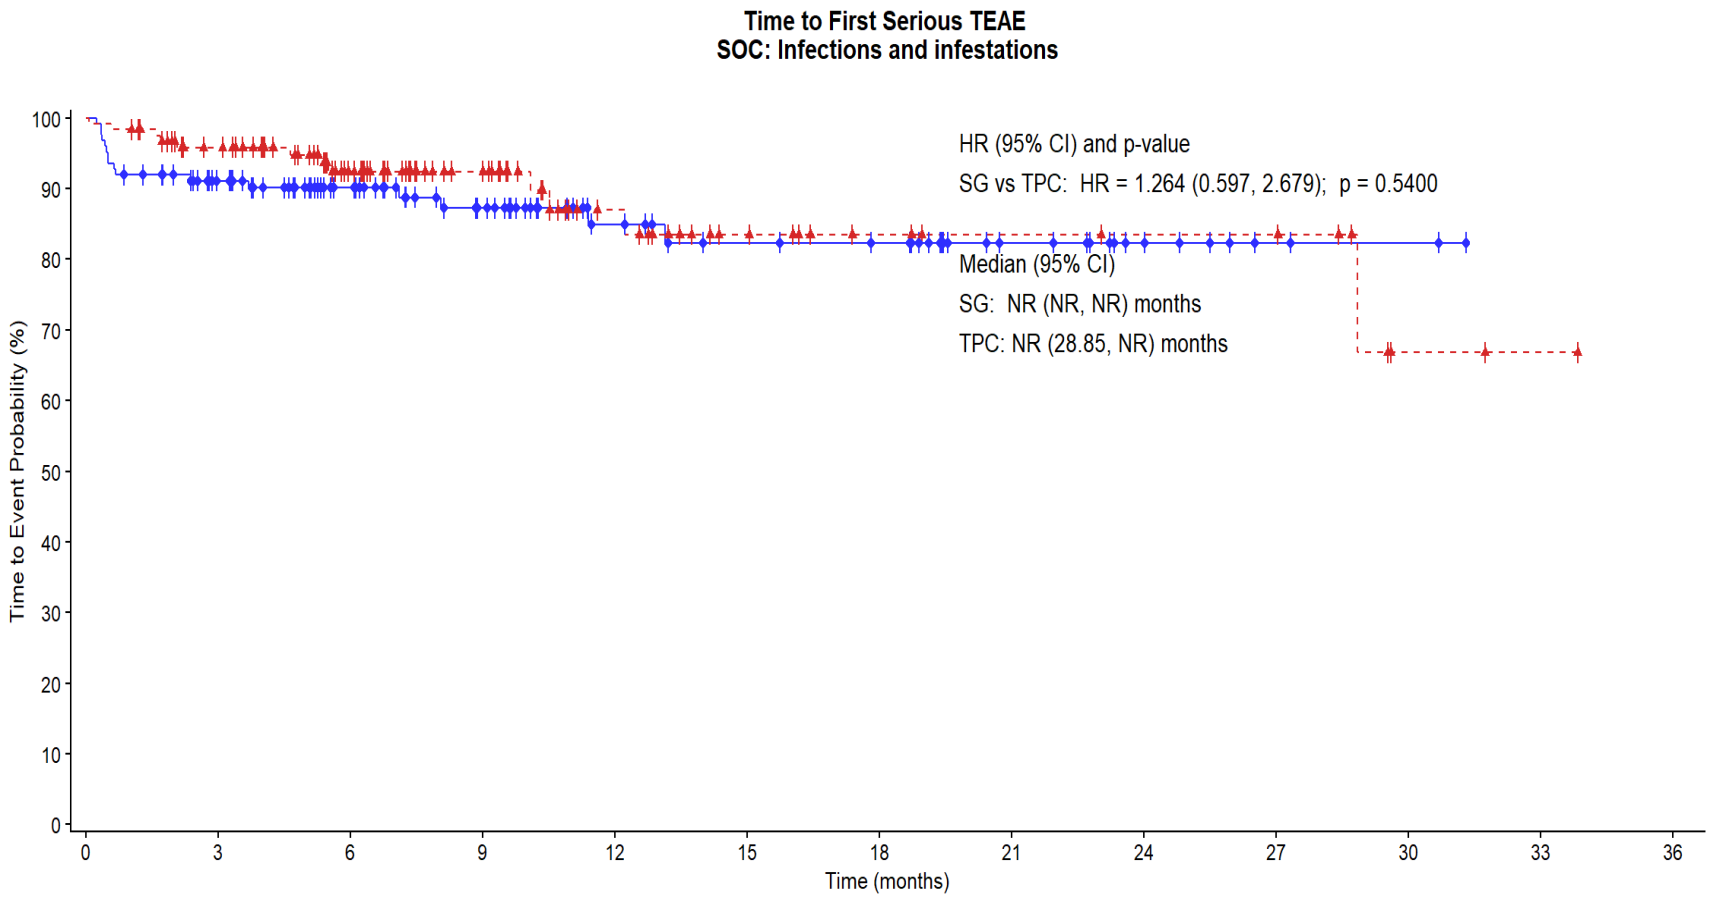
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.111. Figure 1.1.110: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Alanine aminotransferase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



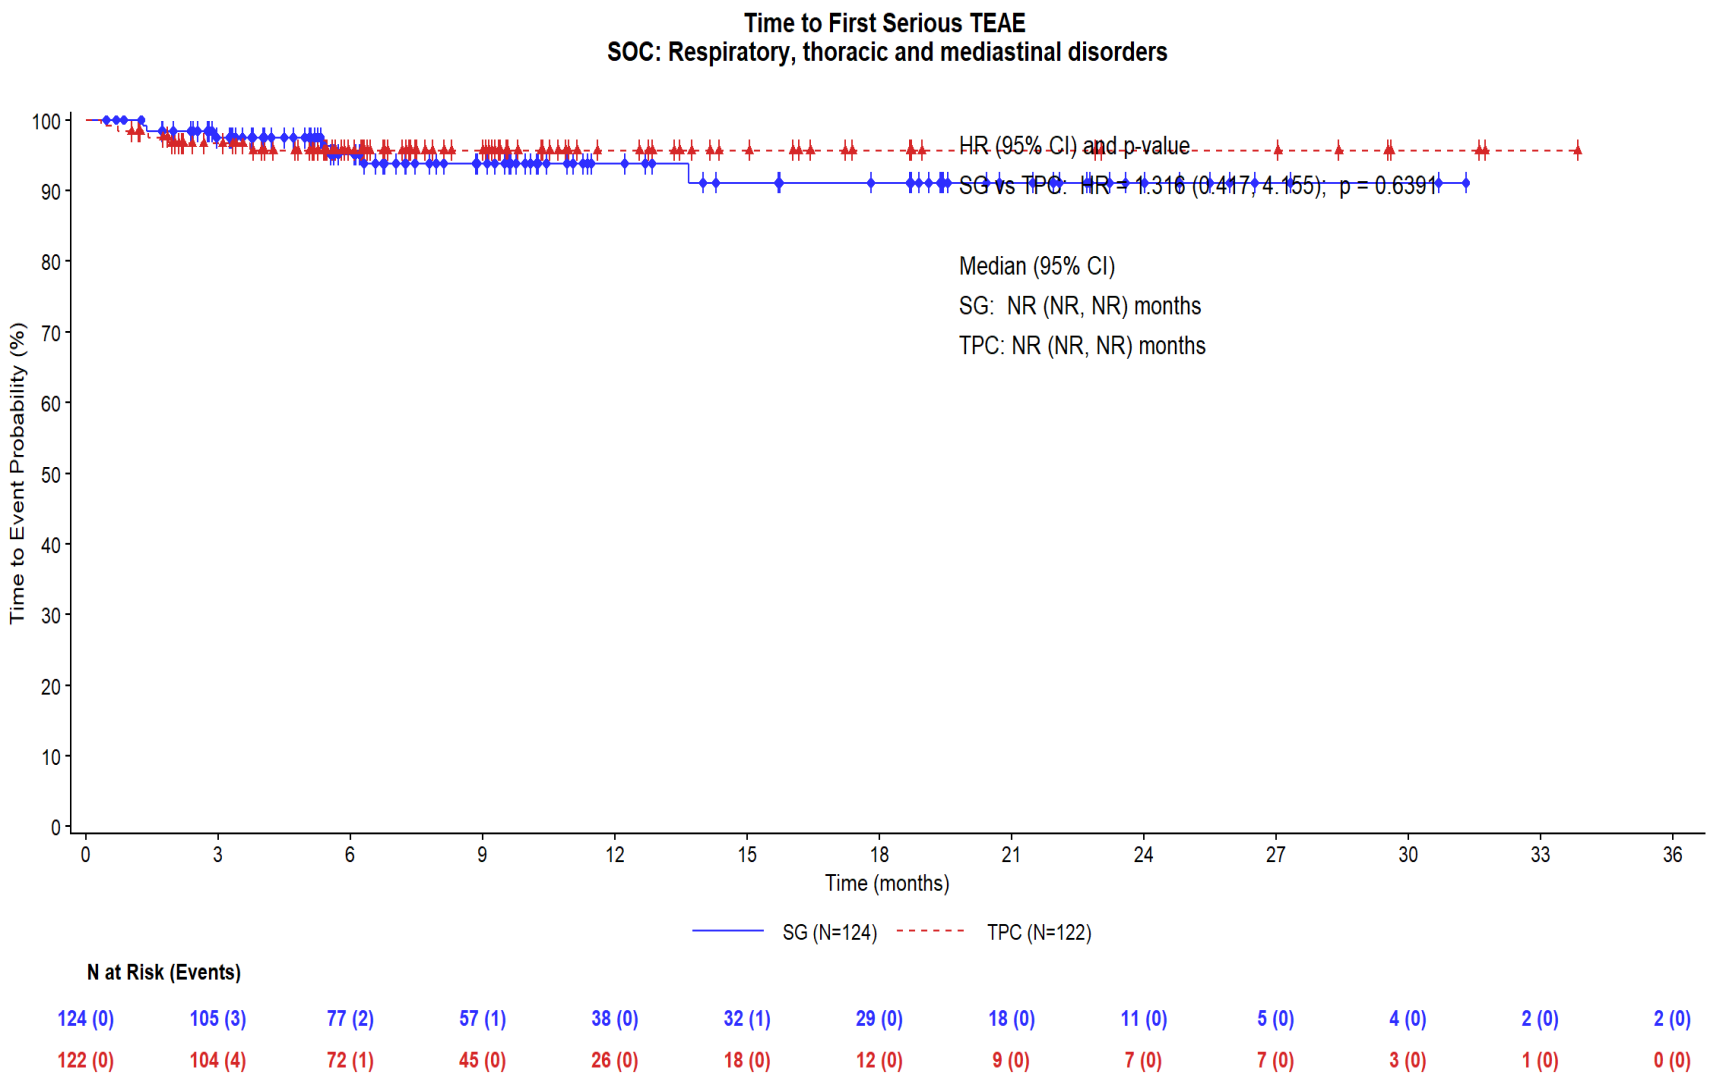
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.112. Figure 1.1.111: Kaplan Meier Plot of Time to First TEAE (SAE) by SOC Blood and lymphatic system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



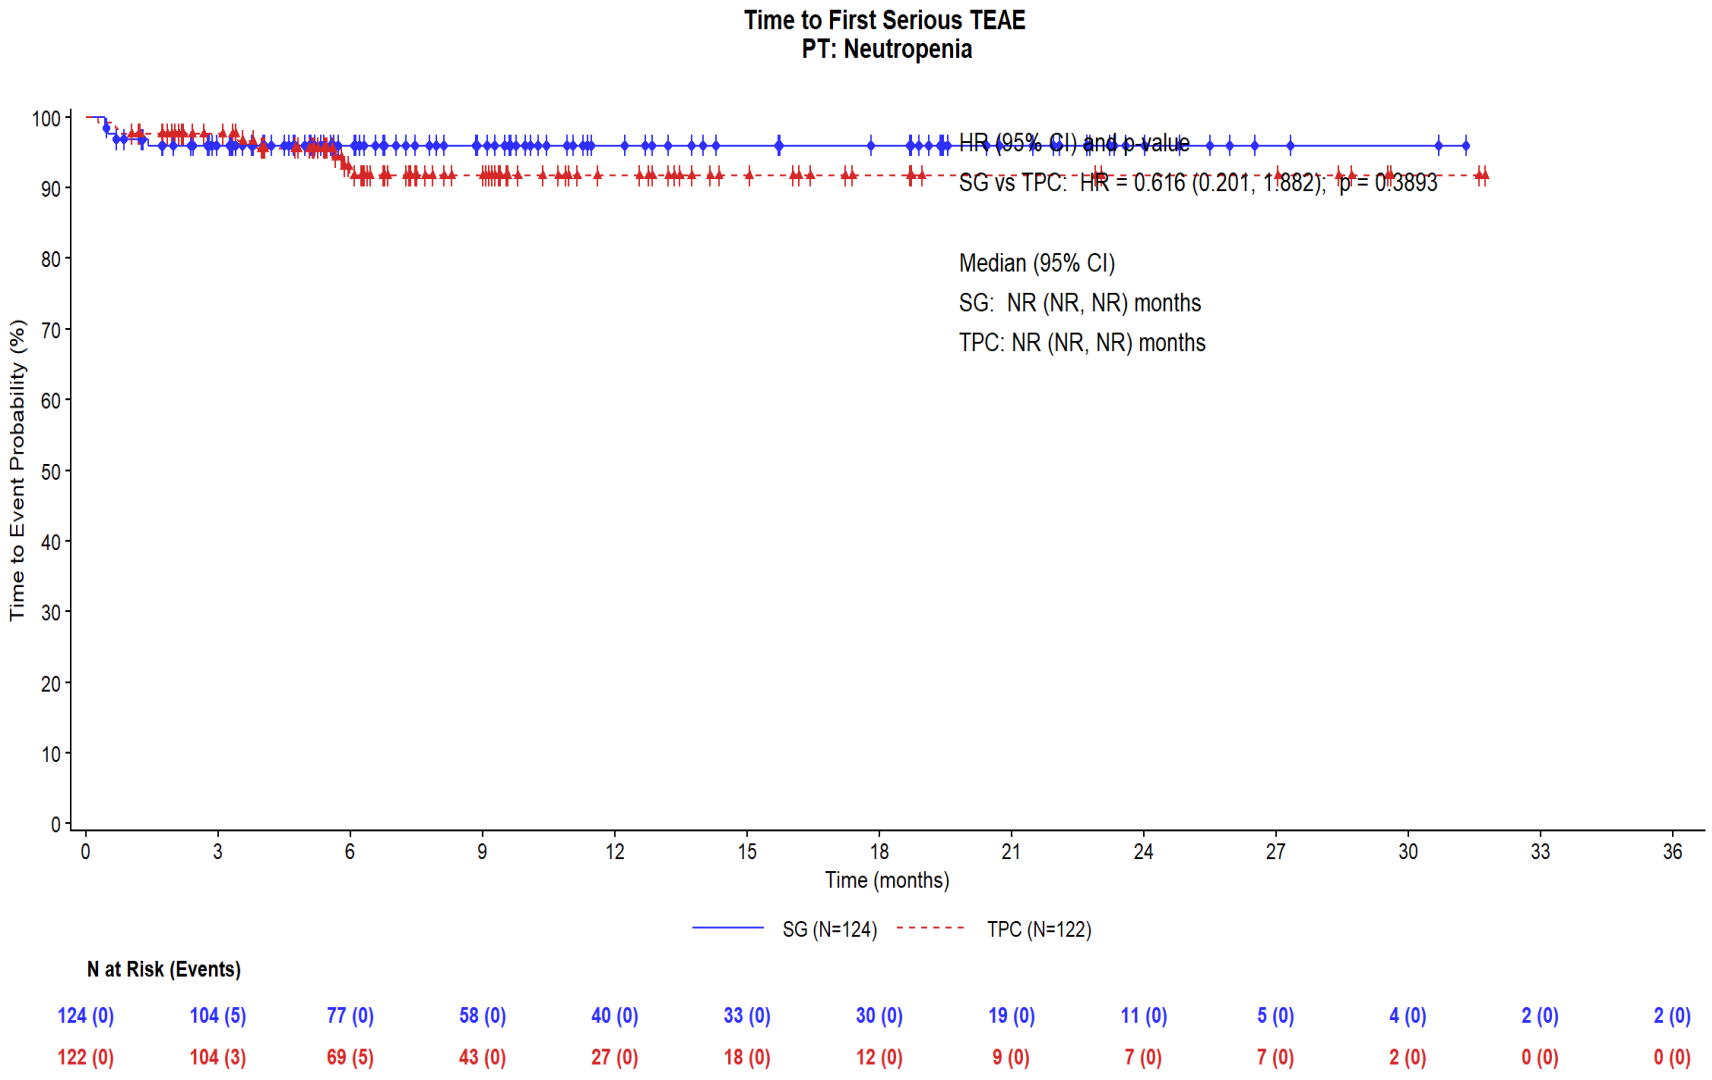
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.113. Figure 1.1.112: Kaplan Meier Plot of Time to First TEAE (SAE) by SOC Gastrointestinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



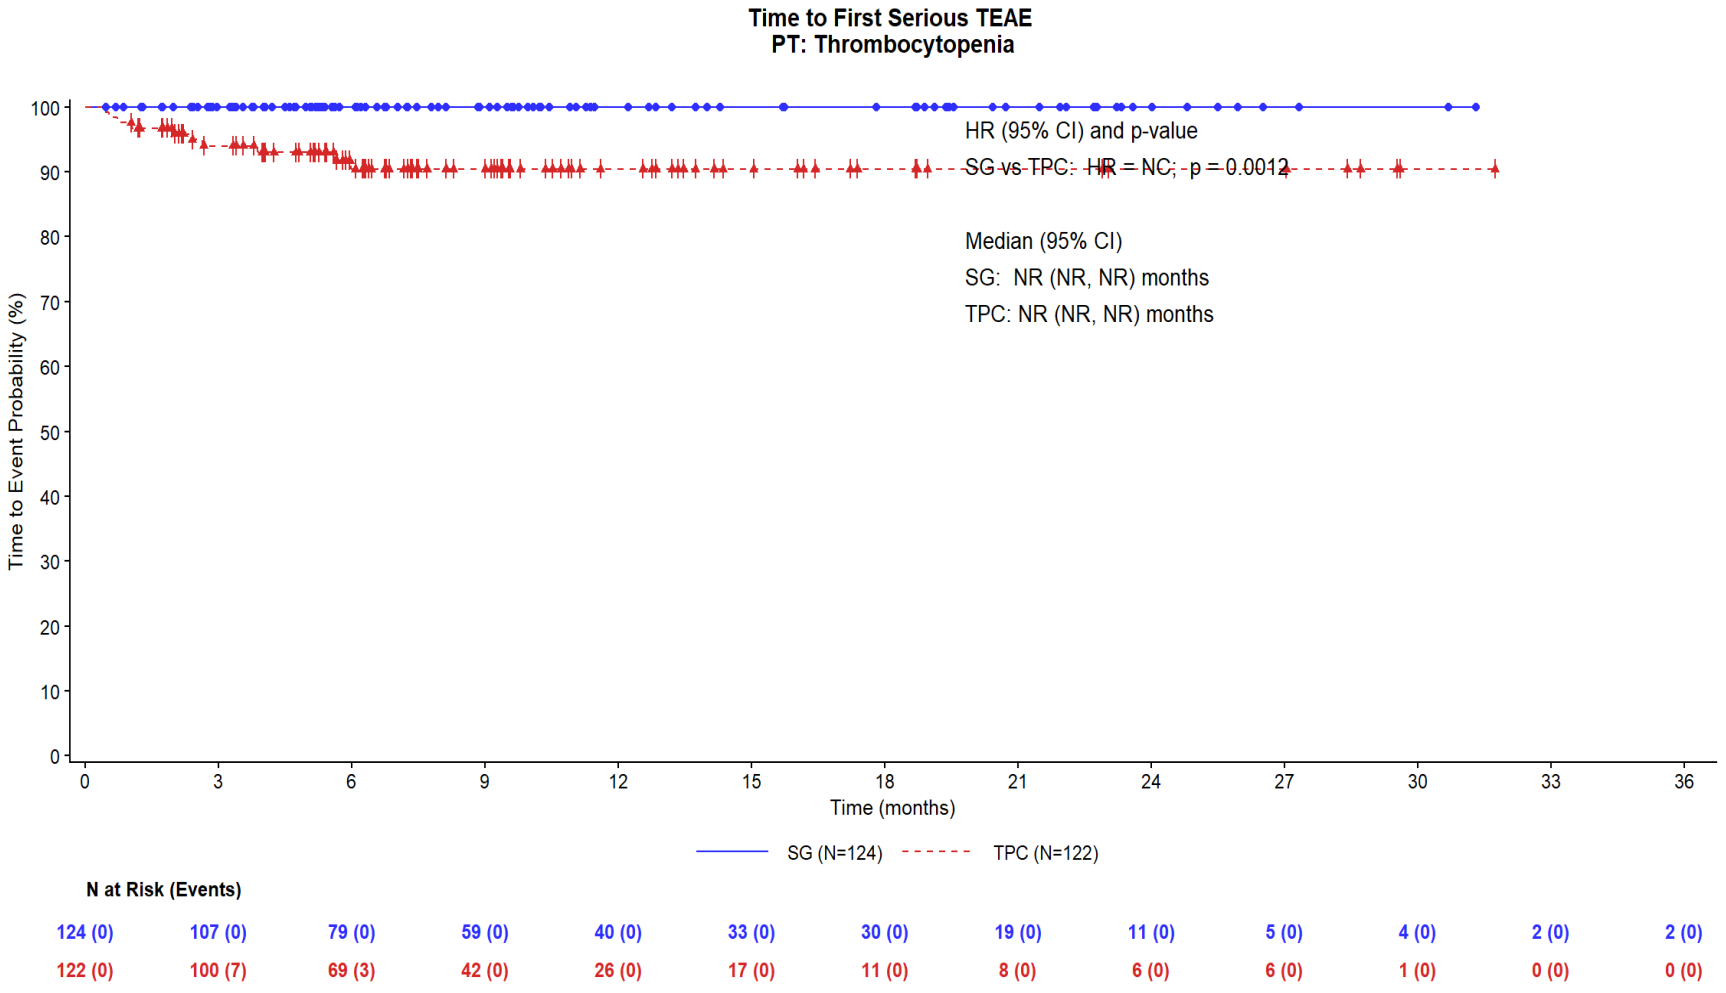
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.114. Figure 1.1.113: Kaplan Meier Plot of Time to First TEAE (SAE) by SOC Infections and infestations — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.115. Figure 1.1.114: Kaplan Meier Plot of Time to First TEAE (SAE) by SOC Respiratory thoracic and mediastinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.116. Figure 1.1.115: Kaplan Meier Plot of Time to First TEAE (SAE) by PT Neutropenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

8.117. Figure 1.1.116: Kaplan Meier Plot of Time to First TEAE (SAE) by PT Thrombocytopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

Table. Recurrence of diarrhoea TEAE — mSAF3: Excluding patients preselected to nab-paclitaxel or paclitaxel

	SG (N=124)			TPC (N=122)		
Incidence of diarrhoea TEAE	**1 event**	**2 events**	**>2 events**	**1 event**	**2 events**	**>2 events**
Grade 1	29 (23.4%)	11 (8.9%)	14 (11.3%)	21 (17.2%)	2 (1.6%)	2 (1.6%)
Grade 2	28 (22.6%)	8 (6.5%)	5 (4.0%)	8 (6.6%)	1 (0.8%)	0
Grade ≥3	14 (11.3%)	0	0	3 (2.5%)	0	0
Grade 3	14 (11.3%)	0	0	3 (2.5%)	0	0
Grade 4	0	0	0	0	0	0
Grade 5	0	0	0	0	0	0

n = number of events per patient; Data cut off:- 22 APR 2026

Descriptive Analysis of G-CSF Use Prior to First Febrile Neutropenia AE

	Febrile Neutropenia CTCAE Grade ≥3[1]			Febrile Neutropenia Serious Adverse Event (SAE)[2]		
Parameter	**SG (N=124)**	**TPC (N=122)**	**Overall (N=246)**	**SG (N=124)**	**TPC (N=122)**	**Overall (N=246)**
Total Patients in Safety Analysis Set	**124**	**122**	**246**	**124**	**122**	**246**
Patients with Febrile Neutropenia, n (%)	**5 (4.0%)**	**3 (2.5%)**	**8 (3.3%)**	**4 (3.2%)**	**2 (1.6%)**	**6 (2.4%)**
G-CSF Prophylaxis Prior to AE						
Yes	0 (0.0%)	0 (0.0%)	0 (0.0%)	0 (0.0%)	0 (0.0%)	0 (0.0%)
No	5 (100.0%)	3 (100.0%)	8 (100.0%)	4 (100.0%)	2 (100.0%)	6 (100.0%)
Patients Without Febrile Neutropenia, n (%)	**119 (96.0%)**	**119 (97.5%)**	**238 (96.7%)**	**120 (96.8%)**	**120 (98.4%)**	**240 (97.6%)**

n (%) = number of subjects and percentage of the relevant denominator.
Denominator for Total Patients, Patients with Febrile Neutropenia, and Patients without Febrile Neutropenia rows = total number of patients in each treatment arm (or overall) in the Safety Analysis Set.
Denominator for G-CSF Prophylaxis Yes/No rows = number of patients who experienced a febrile neutropenia event in the respective treatment arm or overall.
[a] Observation period is the time from first dose until the earliest of: the data cut-off (DCO) date; the date of study treatment discontinuation plus 30 days; or death; whichever occurs first and stops the collection of endpoint data. The same observation period applies to any adverse event and any serious adverse event, so the adverse-event and serious-adverse-event windows coincide. Only febrile neutropenia events with an onset date within this period are counted.
Adverse events were coded using the Medical Dictionary for Regulatory Activities (MedDRA) Version 28.1.

[1] Febrile neutropenia with CTCAE Grade ≥3: includes only febrile neutropenia events with a toxicity grade of 3 or higher and an onset date within the adverse-event observation period defined in footnote [a]. [2] Febrile neutropenia classified as a Serious Adverse Event (SAE): includes only febrile neutropenia events that met at least one seriousness criterion and had an onset date within the serious-adverse-event observation period defined in footnote [a].

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Screened Population: Participants who have signed an informed consent and participated in the screening procedures at site to assess eligibility.
Safety Analysis Set includes randomized participants who have received at least one dose of any study drug.
Denominator of percentages is the number of participants in each treatment group.
Randomized Phase excludes crossover phase when participants in TPC arm started to receive SG.
Data Cut Date: 27 October 2025.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Denominator of percentages is the number of participants in each treatment group.
Age (in years) was collected on the date of first study drug administration (Day 1) if dosed, or randomization if not dosed.
Not Permitted = local regulators did not allow collection of race or ethnicity information or participant refused to provide information.
*Body Mass Index (BMI) (kg/m^2) = [Weight (kg) / Height (cm)^2]*10,000*
Data Cut Date: 27 October 2025.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Denominator of percentages for other baseline characteristics is the number of participants in each treatment group.
[a] Mutant denotes participant is either BRCA1 or BRCA2 mutant, or both mutant. Wild type denotes participant is both BRCA1 and BRCA2 wild type. Unknown denotes participant is BRCA1 unknown and BRCA2 wild type or unknown, or participant is BRCA1 wild type or unknown and BRCA2 unknown.
PD-L1 CPS (combined positive score) and TNBC status were collected centrally.
Data Cut Date: 27 October 2025.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
Denominator of percentages is the number of participants in each treatment group.
Medical history was coded according to MedDRA Version 27.1.
Participants may report >=1 medical history per system organ class or preferred term. At each level of summarization, a participant was counted once if the participant reported 1 or more medical history.
SOCs were presented alphabetically and PTs within SOC were presented by descending order of the total frequencies.
Data Cut Date: 27 October 2025.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
The denominator of percentages is the number of participants in each treatment group.
Medications are mapped using WHODRUG dictionary version BMAR24.
Participants are counted only once for each category and preferred drug name. Participants may be counted in more than one drug category if they received multiple drugs as part of their first subsequent anti-cancer therapy. The total number of participants with any subsequent anti-cancer therapy differs by 1 from the first subsequent therapy count because one patient in the TPC arm has a missing first subsequent therapy record but has two entries recorded for the fourth subsequent therapy. This patient is therefore counted in "Participants with any subsequent anti-cancer therapy" but not in "First subsequent anti-cancer therapy"
The preferred drug name "Sacituzumab Govitecan" includes both commercial use and crossover to SG on study.
Data Cut Date: 27 October 2025.

Hazard Ratio of SG vs TPC (95% CI) from Cox Model	0.980 (0.663, 1.447)		

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
OS (months) = (date of death or censoring − date of randomisation + 1) / 30.4375. Median OS from Kaplan-Meier estimate. 95% CI based on log-log transformation.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
Log-rank test is unstratified.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Participants with unknown BRCA 1/2 status were excluded from that subgroup.
Disease stratification and geographic region are collected from IWRS.
Race subgroup Other - includes American Indian or Alaska Native, Black, Native Hawaiian or Pacific Islander and Other collected in clinical database.
[1] Interaction p-value: likelihood ratio test from Cox model with treatment + subgroup + treatment×subgroup interaction terms; shown once per subgroup variable at first category level.
Data Cut Date: 27 OCT 2025.

At 9 Months	0.466 (0.370, 0.556)	0.369 (0.275, 0.464)
At 12 Months	0.375 (0.284, 0.466)	0.299 (0.210, 0.393)
At 18 Months	0.251 (0.167, 0.343)	0.146 (0.079, 0.234)
Treatment Comparison		
Stratified Log-rank p-value of SG vs TPC [d]	0.1487	
Stratified Hazard Ratio of SG vs TPC (95% CI) [e]	0.793 (0.578, 1.087)	

SG = sacituzumab govitecan; TPC = treatment of physician's choice; IWRS = Interactive Web Response System; NR = Not Reached.
[a] Censoring due to no baseline or no postbaseline evaluable assessment does not include death events before the second scheduled postbaseline visit.
[b] PFS (months) = (date of event or censoring − date of randomisation + 1) / 30.4375. The 95% CI is based on the log-log transformation.
[c] PFS rate is the proportion of participants alive without progressive disease (PD). The 95% CI is based on the log-log transformation.
[d] The two-sided p-value is from stratified log-rank test.
[e] Hazard ratio with 95% CIs are calculated using Cox proportional hazards model, stratified for randomization stratification factors (IWRS).
Data Cut Date: 27 OCT 2025.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
Intent-to-treat (ITT) Analysis Set includes all participants who were randomised in the study.
Denominator of percentages is the number of participants in each treatment group of each subgroup.
PFS (months) = (date of events or censoring − date of randomisation + 1) / 30.4375. 95% CI based on log-log transformation. Median PFS from Kaplan-Meier estimate.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
The two-sided p-value is from Unstratified log-rank test.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Disease stratification and geographic region are collected from IWRS (Interactive Web Response System).
Race subgroup Other - includes American Indian or Alaska Native, Black, Native Hawaiian or Pacific Islander and Other collected in clinical database.
[a] Interaction p-value from a Cox model with treatment, subgroup factor, and treatment×subgroup interaction term; computed via likelihood ratio test (full vs. main-effects model). Displayed once per subgroup variable at first category level.
Data Cut Date: 27 OCT 2025.

Treatment Comparison		
Stratified Log-rank p-value of SG vs TPC [c]	0.1262	
Stratified Hazard Ratio of SG vs TPC (95% CI) [d]	0.786 (0.579, 1.067)	

SG = sacituzumab govitecan; TPC = treatment of physician's choice; IWRS = Interactive Web Response System; NR = Not Reached.
PFS2 is defined as the time from date of randomization to the first documented progression on next-line therapy based on investigator assessment of PD or death due to any cause, whichever occurs first. Next line therapy is defined as the first new systemic anti-cancer therapy (including crossover treatment) initiated after discontinuation of study treatment regardless of end of treatment reason.
[a] Quantile of PFS2 is from Kaplan-Meier estimate. The 95% CI is based on log-log transformation.
[b] PFS2 rate is the proportion of participants alive without progression at the next line of therapy. The 95% CI is based on the log-log transformation.
[c] The two-sided p-value is from stratified log-rank test.
[d] Hazard ratio with 95% CIs are calculated using Cox proportional hazards model, adjusted for randomization stratification factors (IWRS).
Data Cut Date: 27 OCT 2025.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
PFS2 is defined as the time from date of randomization to the first documented progression on next-line therapy based on investigator assessment of PD or death due to any cause, whichever occurs first.
Denominator of percentages is the number of participants in each treatment group of each subgroup.
PFS2 rate is the proportion of participants alive without progression at the next line of therapy. The 95% CI is based on the log-log transformation.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
The two-sided p-value is from an unstratified log-rank test.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Disease stratification and geographic region are collected from IWRS (Interactive Web Response System).
[1] Interaction p-value: likelihood ratio test from Cox model with treatment + subgroup + treatment×subgroup interaction terms; shown once per subgroup variable at first category level.
Data Cut Date: 27 OCT 2025.

5.9. Table 1.1.9: Analysis of Time to First Subsequent Therapy (TFST) — mITT — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

At 24 Months	0.136 (0.073, 0.219)	0.144 (0.088, 0.214)
Treatment Comparison		
Log-rank p-value of SG vs TPC [c]	0.0684	
Hazard Ratio of SG vs TPC (95% CI) [d]	0.770 (0.581, 1.020)	

SG = sacituzumab govitecan; TPC = treatment of physician's choice; IWRS = Interactive Web Response System; NR = Not Reached.
Time to first subsequent therapy is defined as the time from randomization to the start date of the first subsequent anti-cancer therapy after discontinuation of randomized treatment, or death due to any cause.
[a] Quantile of TFST is from Kaplan-Meier estimate. The 95% CI is based on log-log transformation.
[b] TFST rate is the proportion of participants alive without any subsequent therapy. The 95% CI is based on the log-log transformation.
[c] The two-sided p-value is from stratified log-rank test.
[d] Hazard ratio with 95% CIs are calculated using Cox proportional hazards model, adjusted for randomization stratification factors from Interactive Web Response System (IWRS).
Data Cut Date: 27 OCT 2025.

SG = sacituzumab govitecan; TPC = treatment of physician's choice; NEst = Not Estimable; NR = Not Reached.
Time to first subsequent therapy is defined as the time from randomisation to the start date of the first subsequent anti-cancer therapy after discontinuation of randomised treatment, or death due to any cause.
TFST rate is the proportion of participants alive without any subsequent therapy.
Hazard ratio and 95% CIs calculated using unstratified Cox proportional hazards model. Efron method used to handle ties. Reference arm = TPC.
Log-rank p-value is from an unstratified log-rank test.
[1] Interaction p-value: likelihood ratio test from Cox model with treatment + subgroup + treatment×subgroup interaction terms; shown once per subgroup variable at first category level.
Only subgroups where all categories contain ≥ 10 patients (both arms combined) are presented.
Data Cut Date: 27 OCT 2025.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, Gem = gemcitabine, Carbo = carboplatin.
Safety Analysis Set includes randomized participants who have received at least one dose of any study drug. Taxane includes participants who have received Paclitaxel. TPC column includes participants who have received any of Gem, Carbo or Paclitaxel.
Duration of exposure to study drug (months) = (last dosing date − first dosing date + 1)/30.4375.

6.2. Table 1.1.2: Observation Period (Months) for Safety — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

	SG (N=124)	TPC (N=122)	Total (N=246)

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if all categories contain ≥10 patients across both arms combined.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
NC = Not Calculable: the hazard ratio and 95% CI are not estimable by the Cox model.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if all categories contain ≥10 patients across both arms combined.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.

SG = sacituzumab govitecan, TPC = treatment of physician's choice.
NR = Not Reached. NC = Not Calculable (HR is NC when one treatment arm has zero events; log-rank p-value remains valid).
Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if all categories contain ≥10 patients across both arms combined.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.
NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Rule 1 = Events occurring in ≥10% of subjects in at least one arm; Rule 2 = Events occurring in ≥10 subjects overall (SG + TPC combined) and ≥1% in at least one arm. SOC and PT meeting Rule 1 OR Rule 2 are shown.

	SG (N=124)	TPC (N=122)	Interaction p-value[1]

NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.
Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.

NR = Not Reached. Duration (months) = (date of event/censoring − date of first dose + 1)/30.4375.
[1]Interaction p-value from likelihood ratio test: Cox model with treatment + subgroup + treatment×subgroup interaction vs treatment + subgroup only.

	SG (N=124)	TPC (N=122)	Interaction p-value[1]

Subgroup presented only if p-value from the Cox model is <0.05 and subgroups with ≥10 events (excluding censored) in at least one category of the subgroup over both arms.
Median Time-to-Event is from Kaplan-Meier estimate. 95% CI is computed using the Brookmeyer-Crowley method.
Hazard ratio and 95% CIs were calculated by unstratified Cox proportional hazards model without any adjustment. Efron method was used to handle ties.
p-value from unstratified log-rank test.
Denominator of percentages is the number of participants in each treatment arm.
Adverse events were coded according to MedDRA Version 28.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.

Respiratory, thoracic and mediastinal disorders	2 (1.6%)	1 (0.8%)

	SG (N=124)	TPC (N=122)
Interstitial lung disease	1 (0.8%)	0
Pneumonitis	1 (0.8%)	0
Pulmonary embolism	0	1 (0.8%)
Skin and subcutaneous tissue disorders	0	1 (0.8%)
Eczema	0	1 (0.8%)

SG = sacituzumab govitecan, TPC = treatment of physician's choice, SOC = System Organ Class, PT = Preferred Term.
Adverse events were coded according to MedDRA Version 27.1.
Treatment-emergent adverse event (AE) defined as any AE occurring on or after the first dose date of study drug, and up to and including 30 days after last dose date of study drug or the day prior to initiation of subsequent anticancer therapy (including crossover treatment), whichever occurs first.
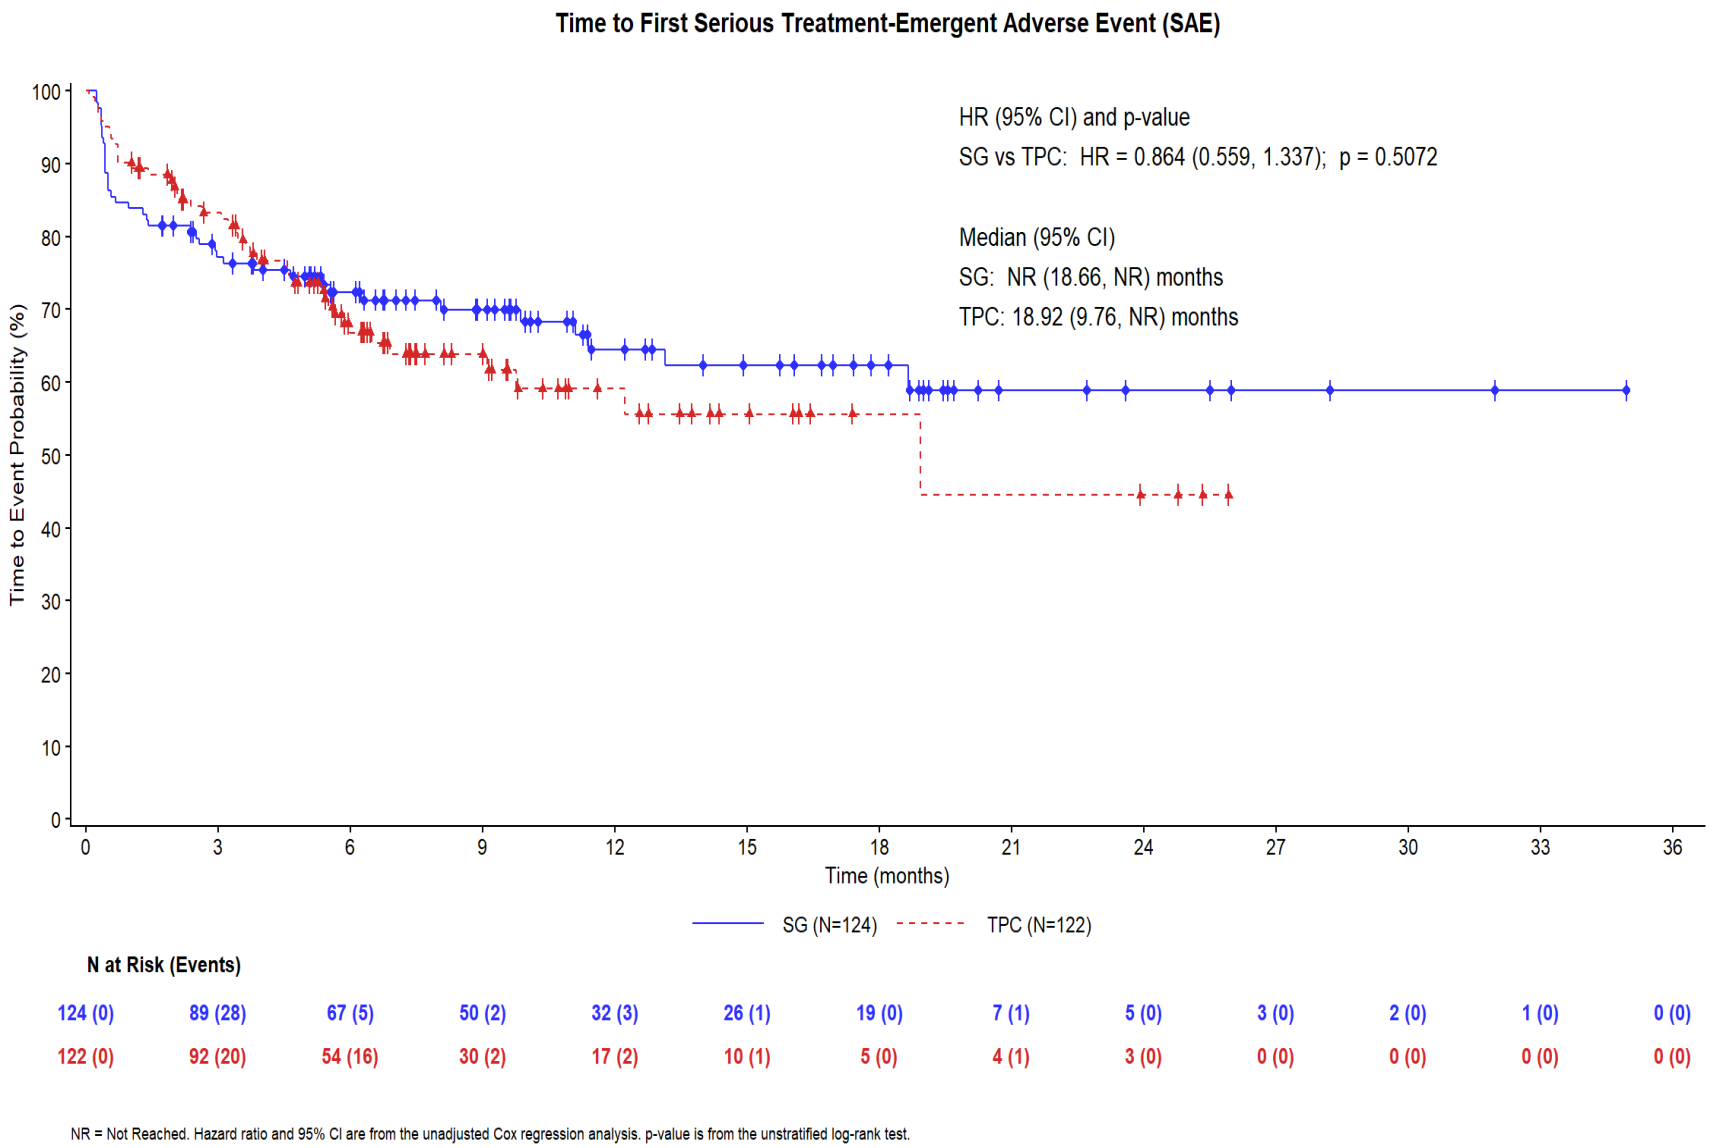
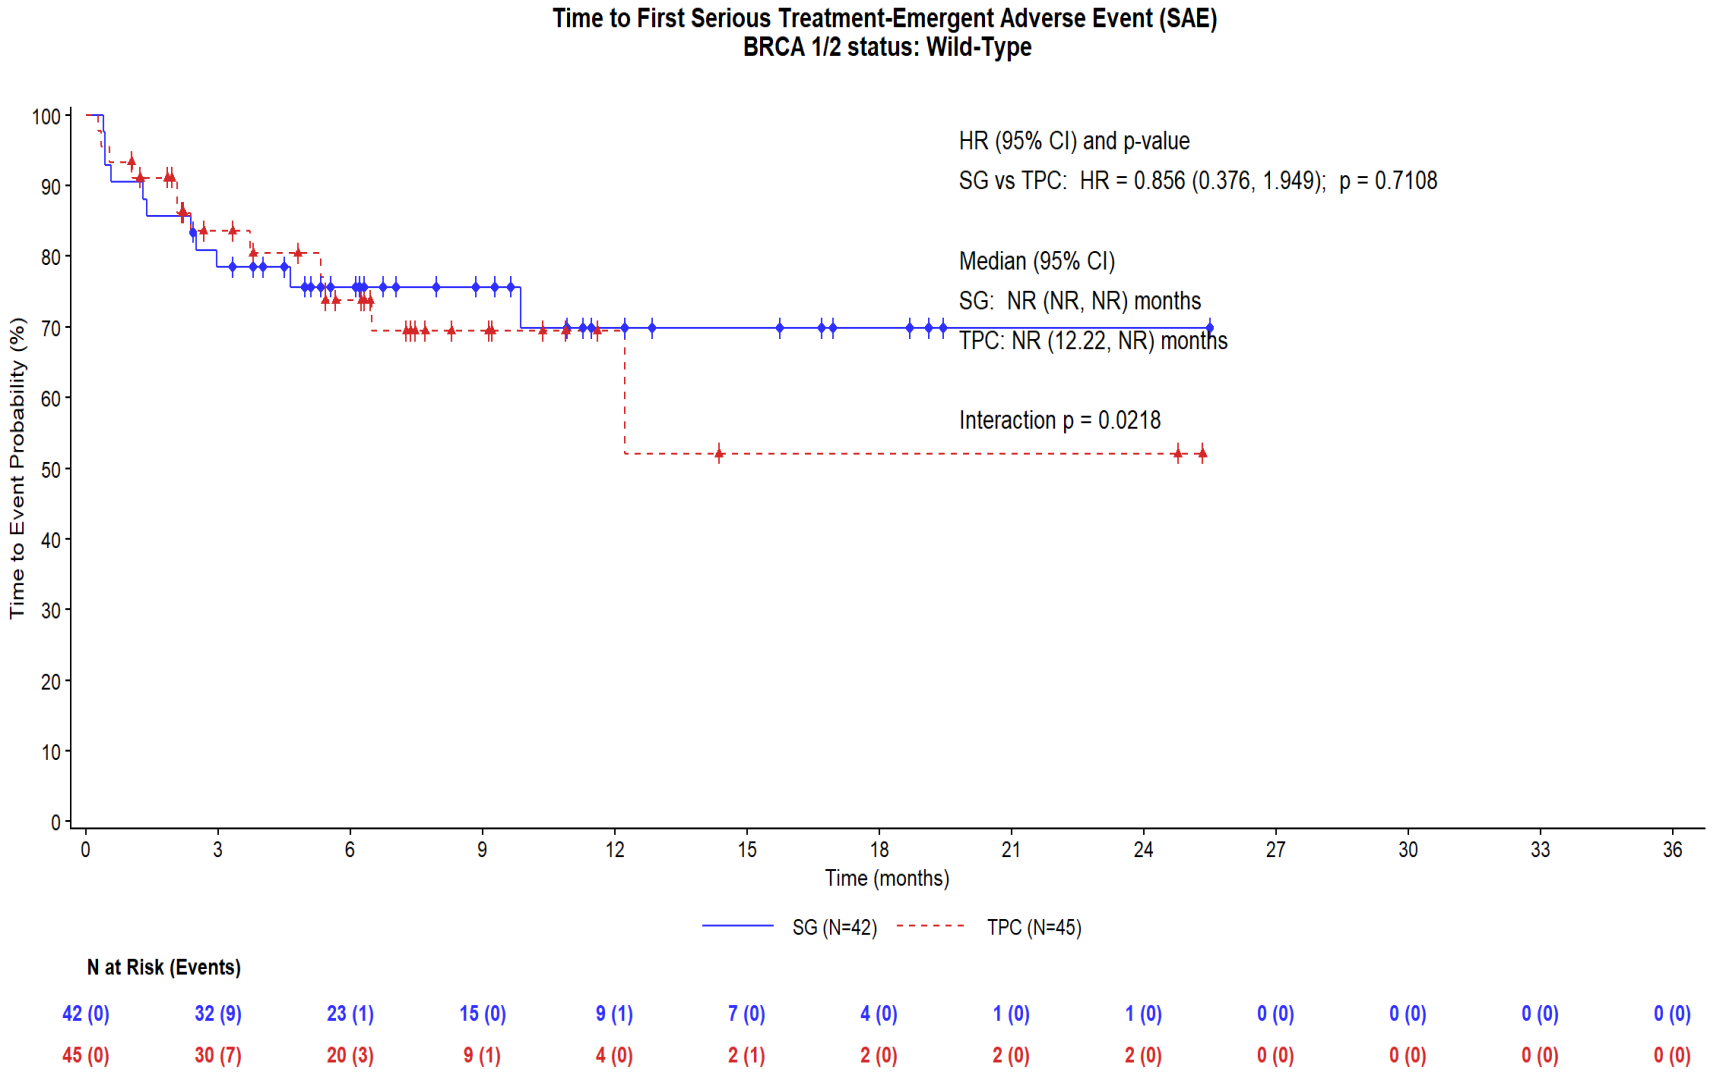
SOCs were presented alphabetically and PTs within SOC were presented by descending order of the total frequencies.
The following terms are mapped: Neutrophil count decreased → Neutropenia, White blood cell count decreased → Leukopenia, Lymphocyte count decreased → Lymphopenia, Haemoglobin decreased → Anaemia, Red blood cell count decreased → Anaemia, Platelet count decreased → Thrombocytopenia, Asthenia → Fatigue, Typhlitis → Neutropenic colitis, Dyspnoea exertional → Dyspnoea.



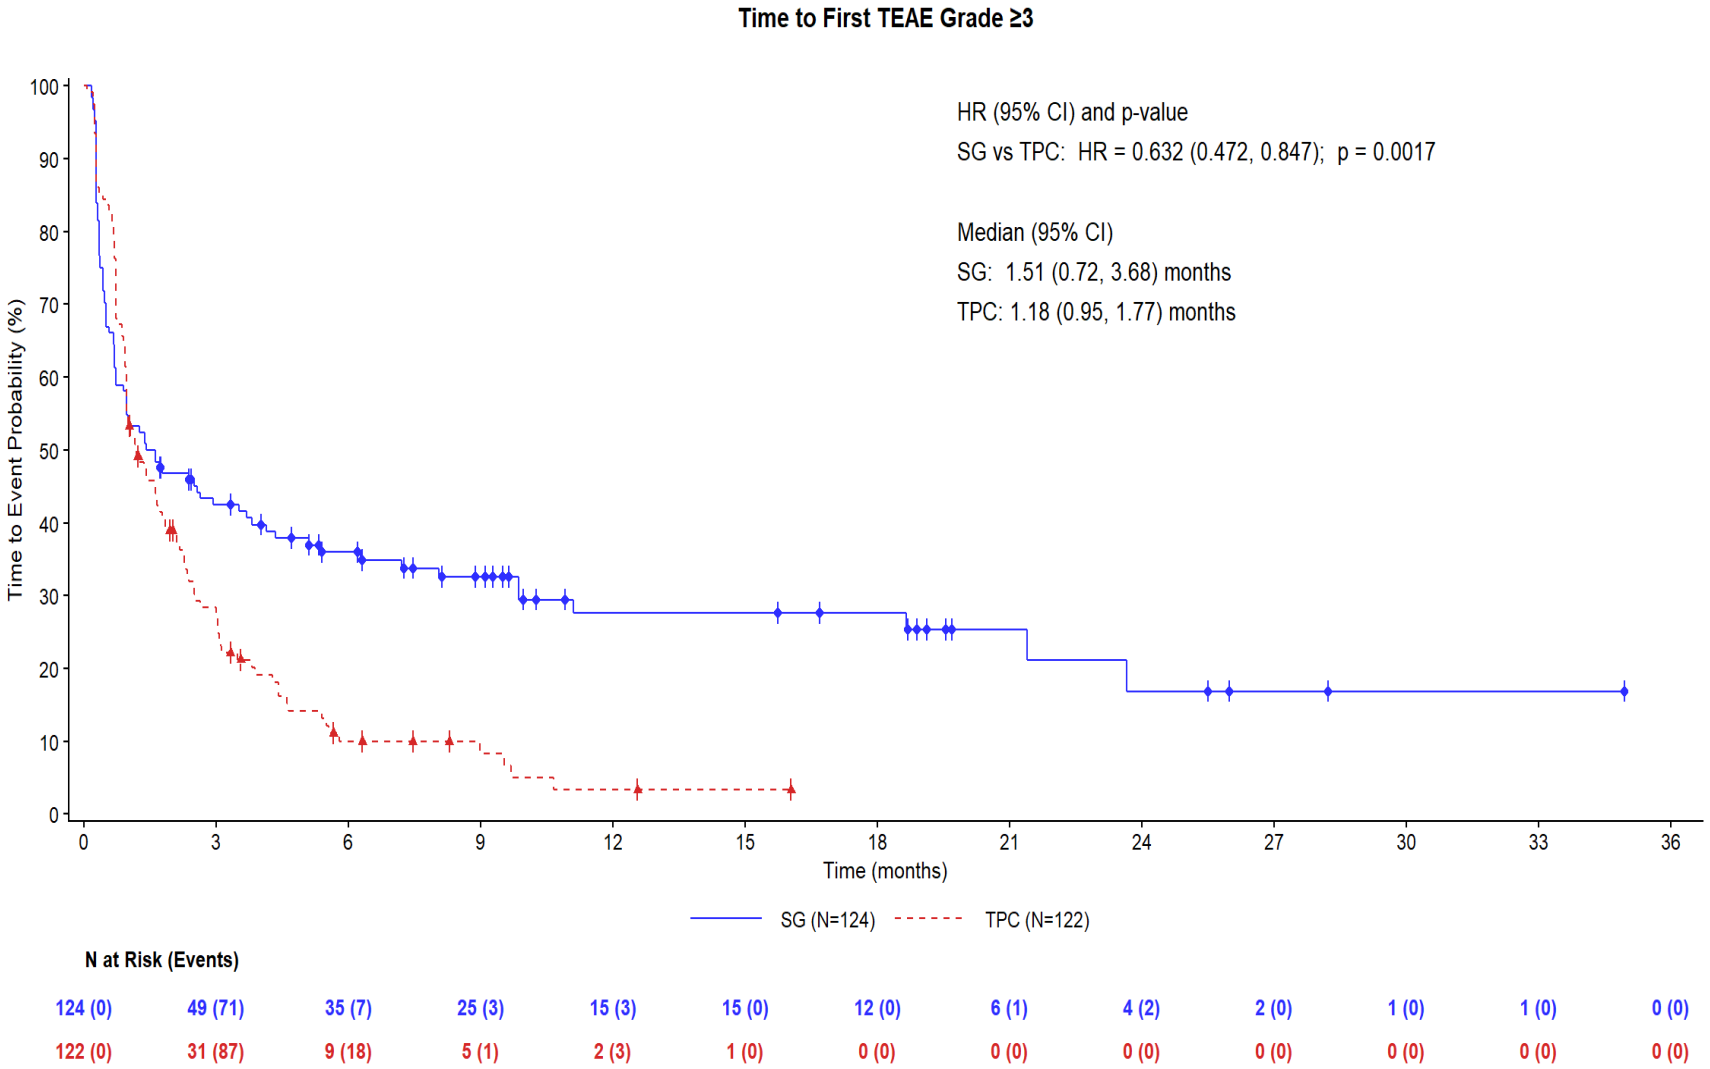
7. Safety - KM FIGURES — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel

7.1. Figure 1.1.1: Kaplan Meier Plot of Time to First TEAE — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



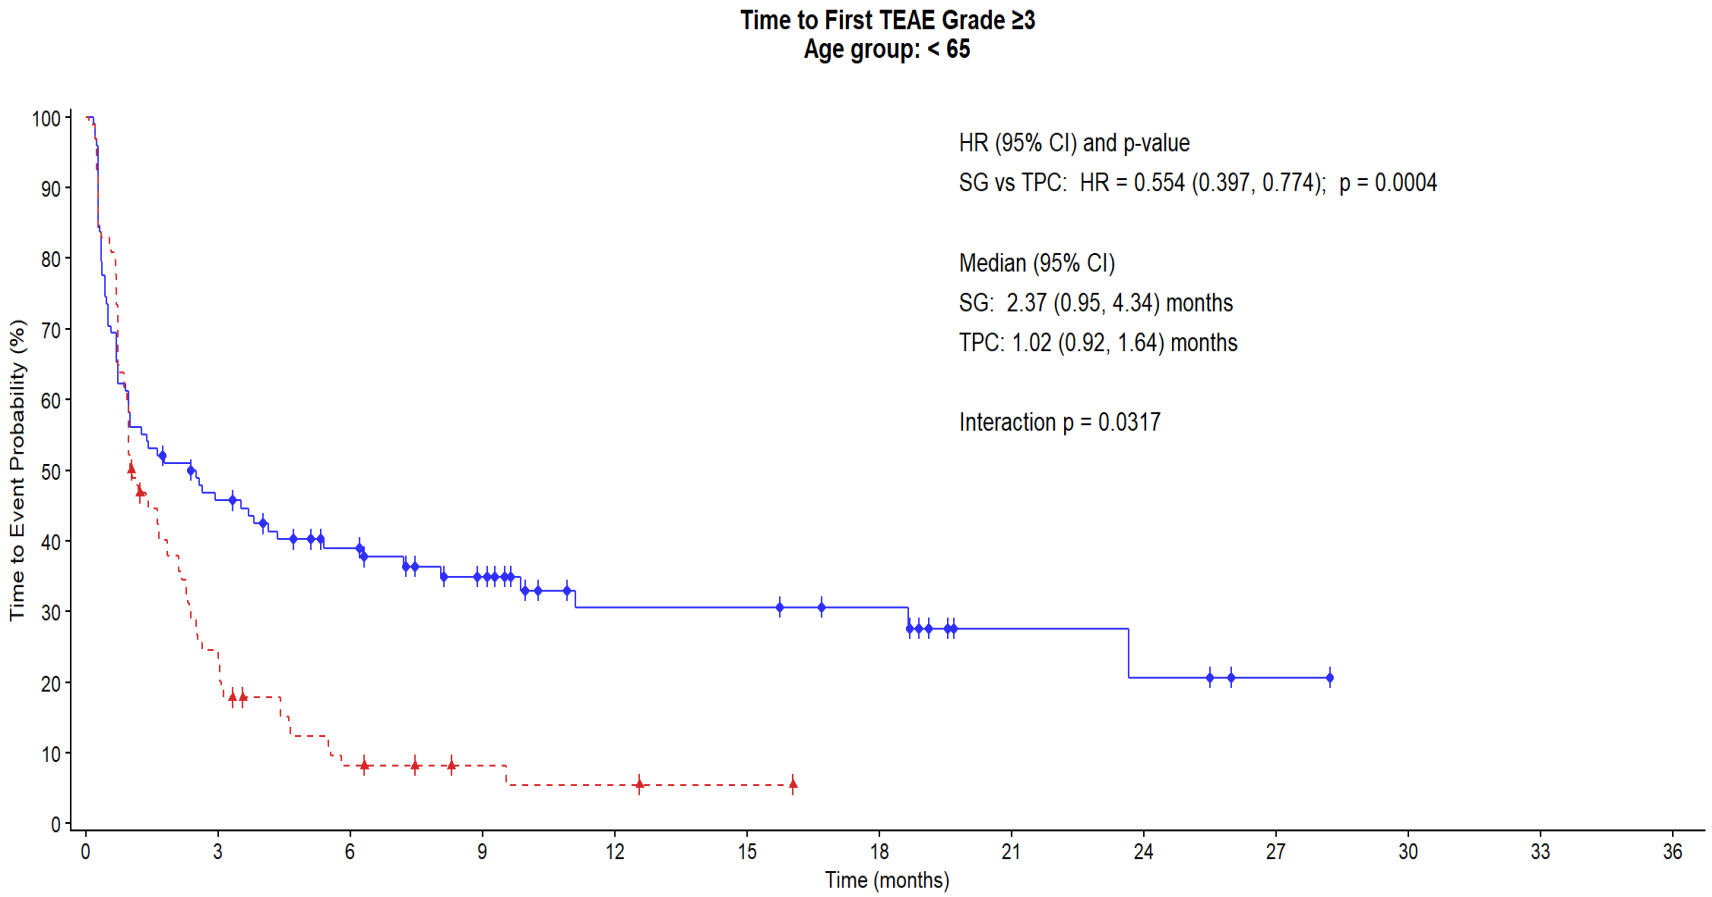
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.2. Figure 1.1.2: Kaplan Meier Plot of Time to First Serious TEAE (SAE) — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



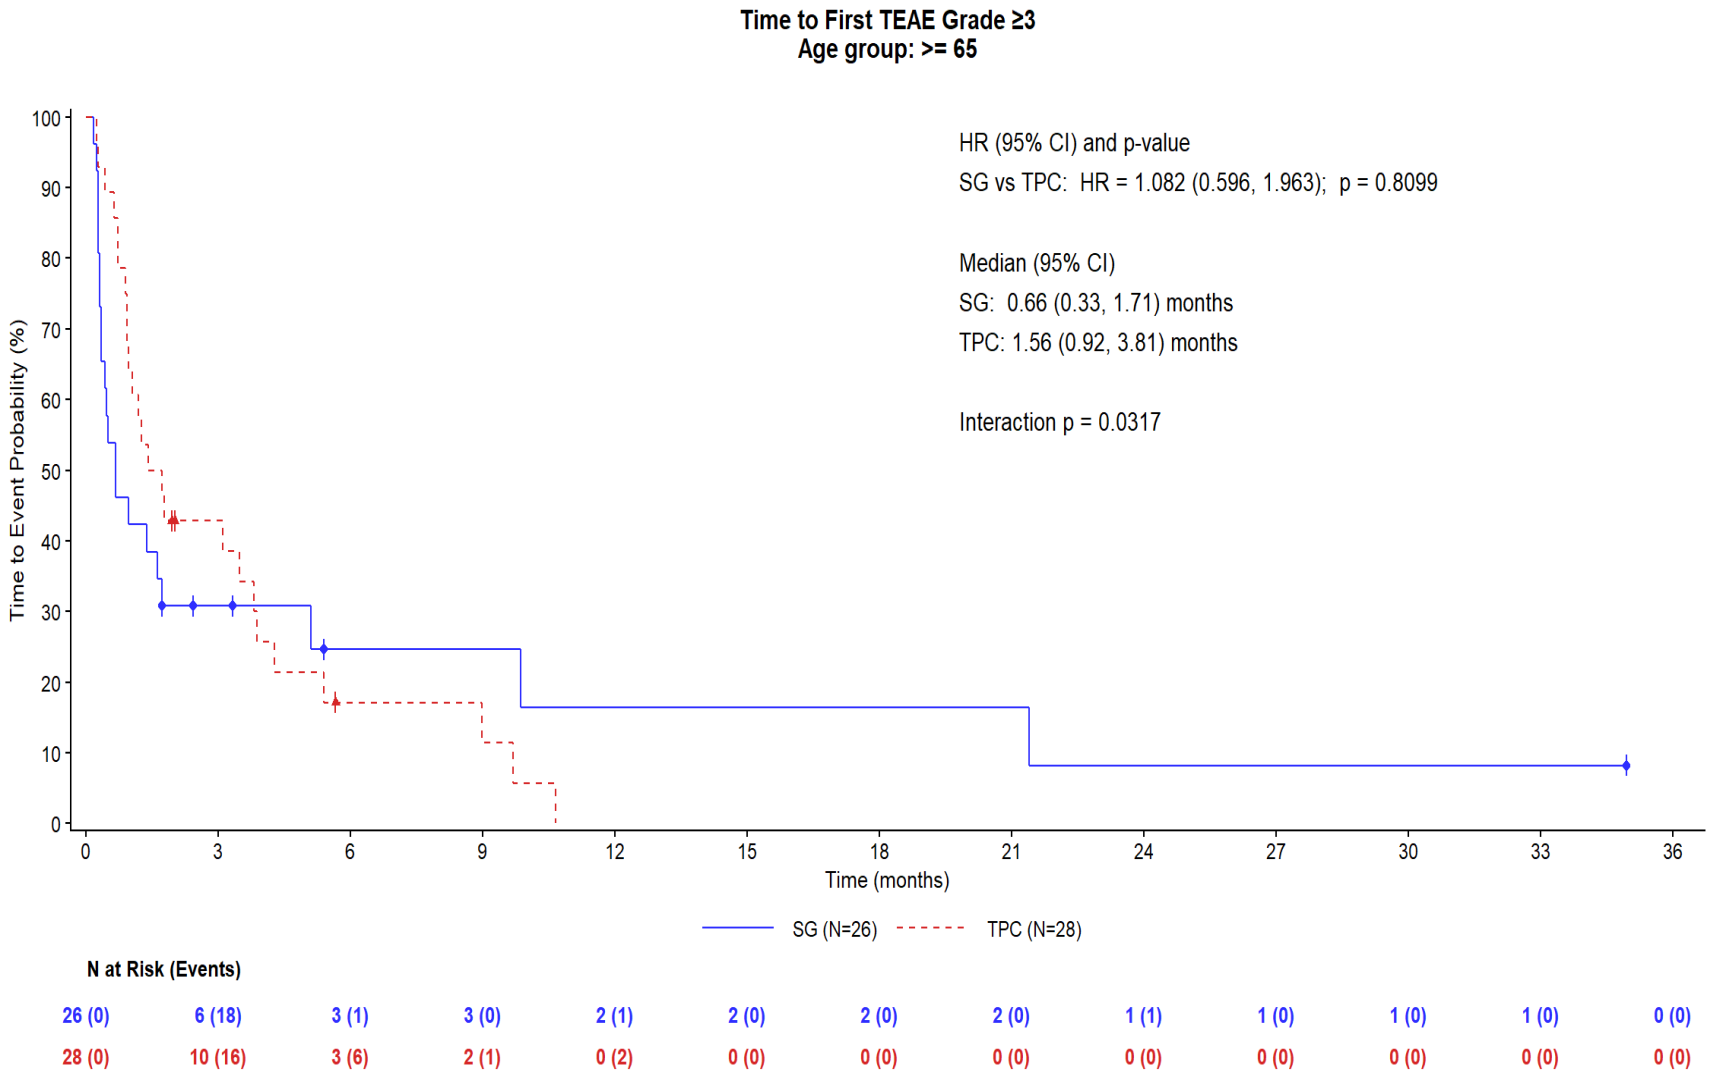
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.3. Figure 1.1.3: Kaplan Meier Plot of Time to First Serious TEAE (SAE) BRCA 1 2 status Wild Type — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



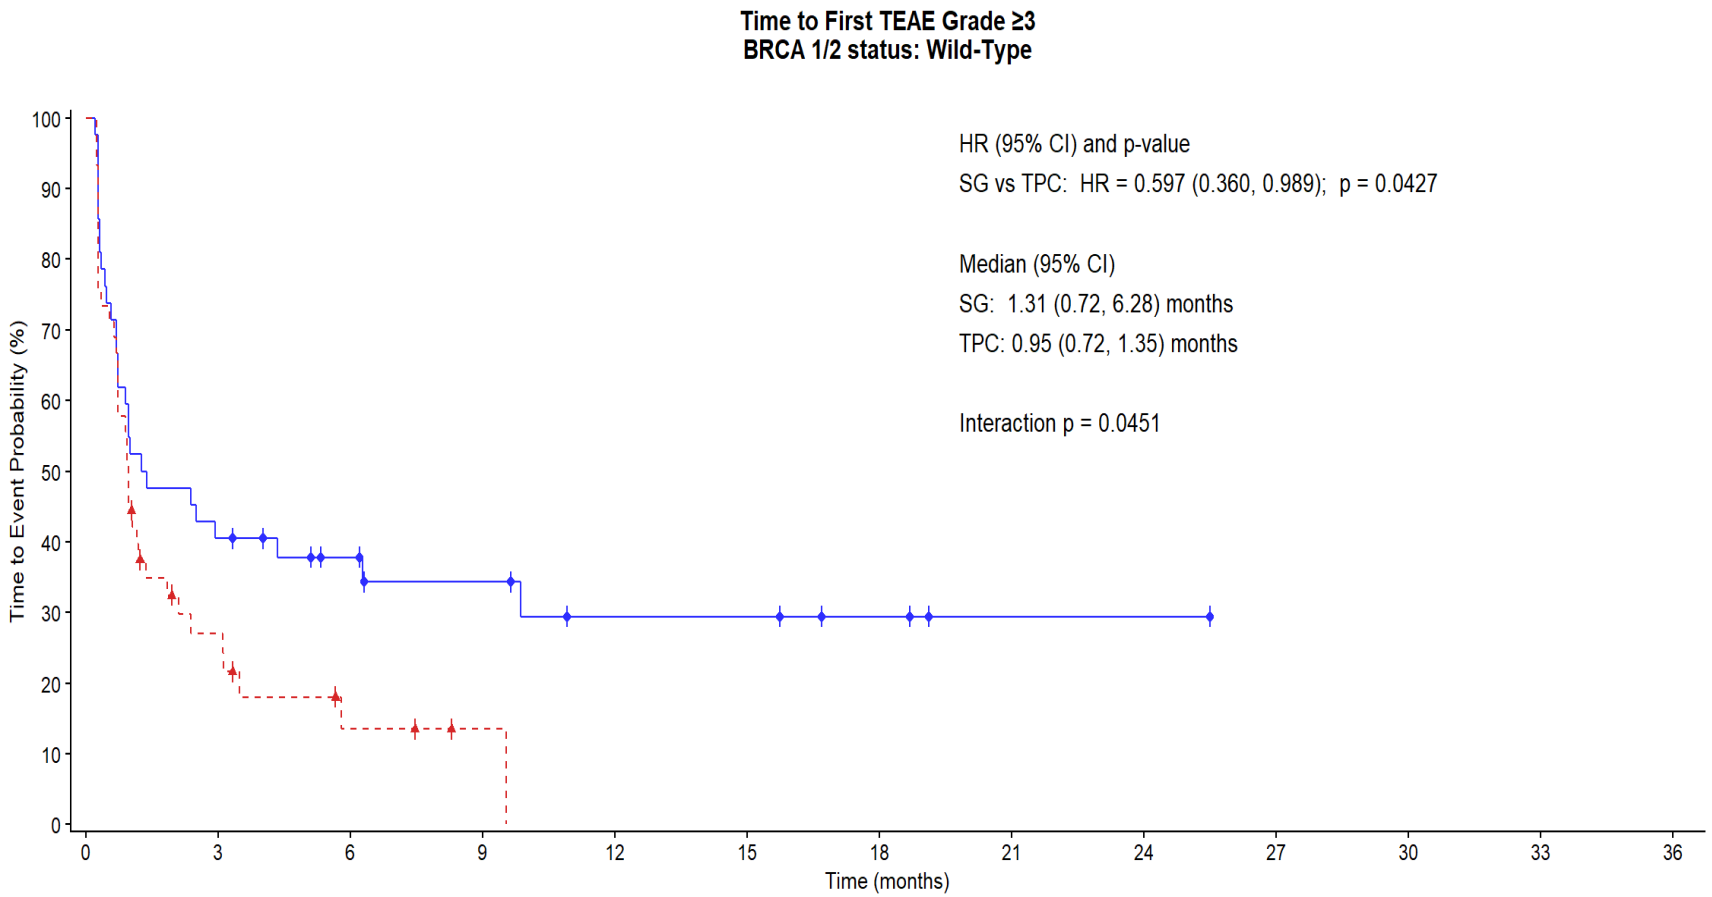
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.4. Figure 1.1.4: Kaplan Meier Plot of Time to First TEAE Grade 3 or higher — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



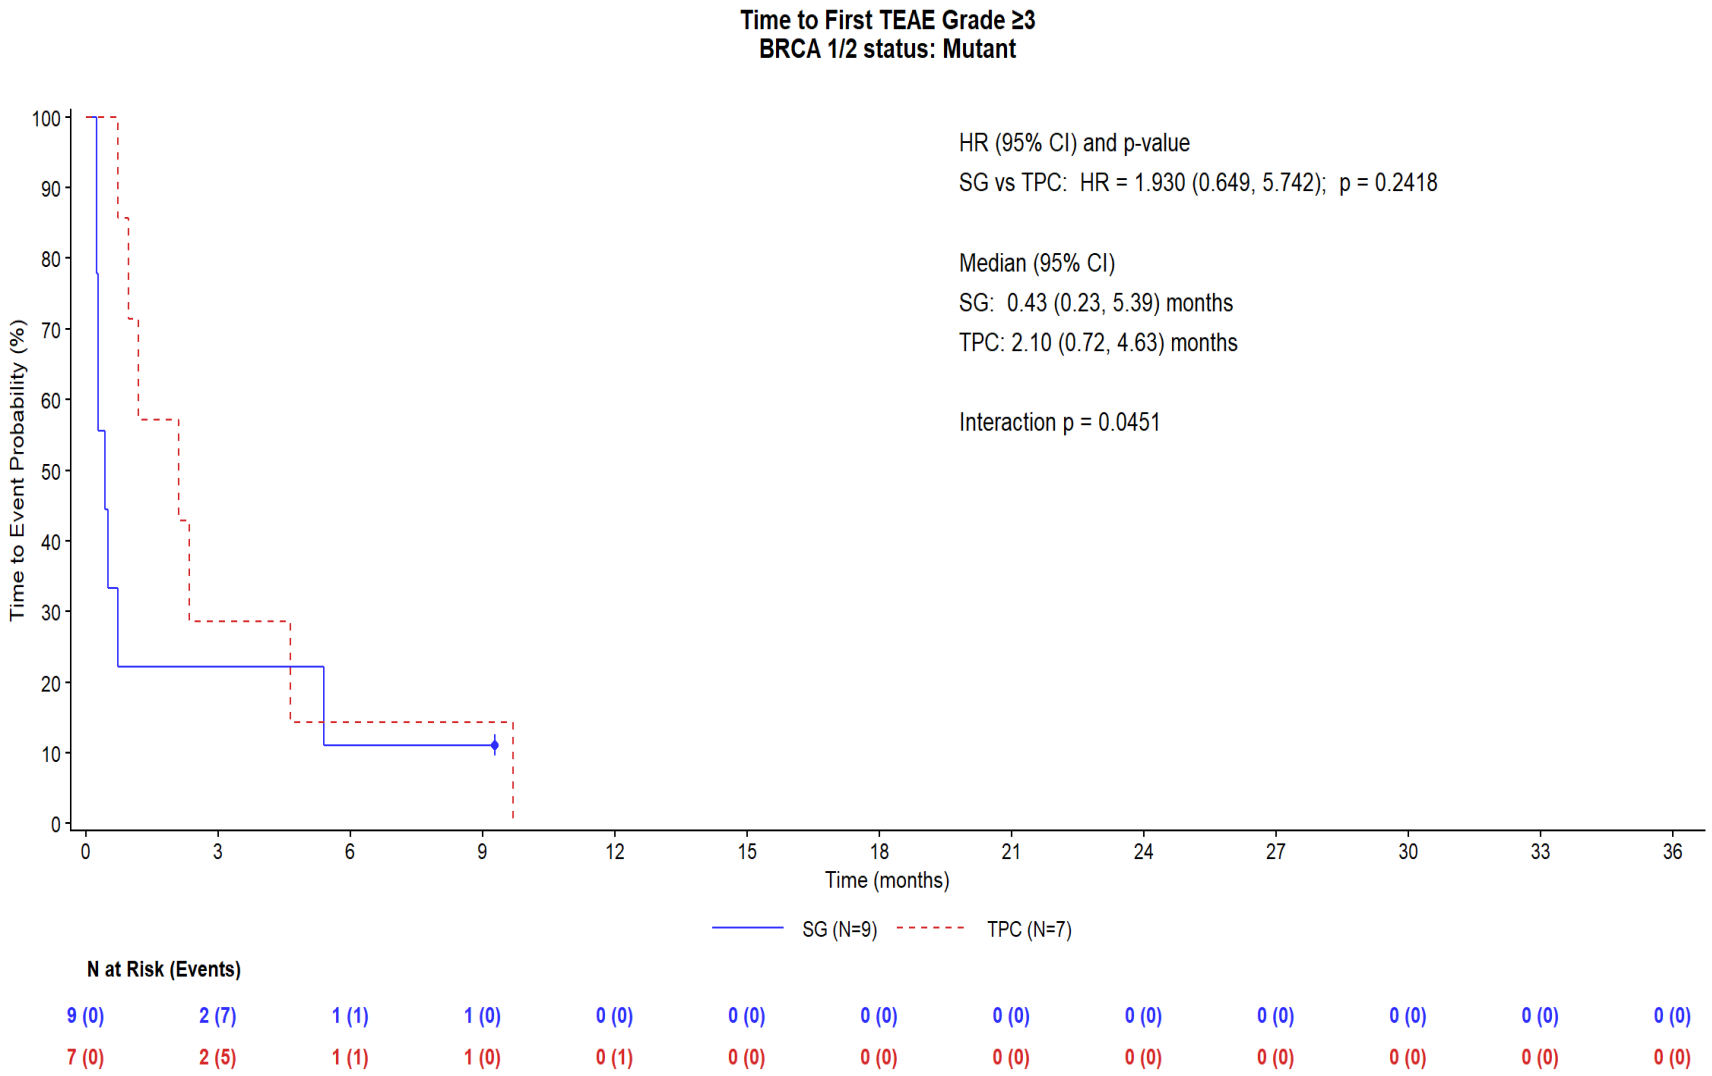
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.5. Figure 1.1.5: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) Age group less than 65 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



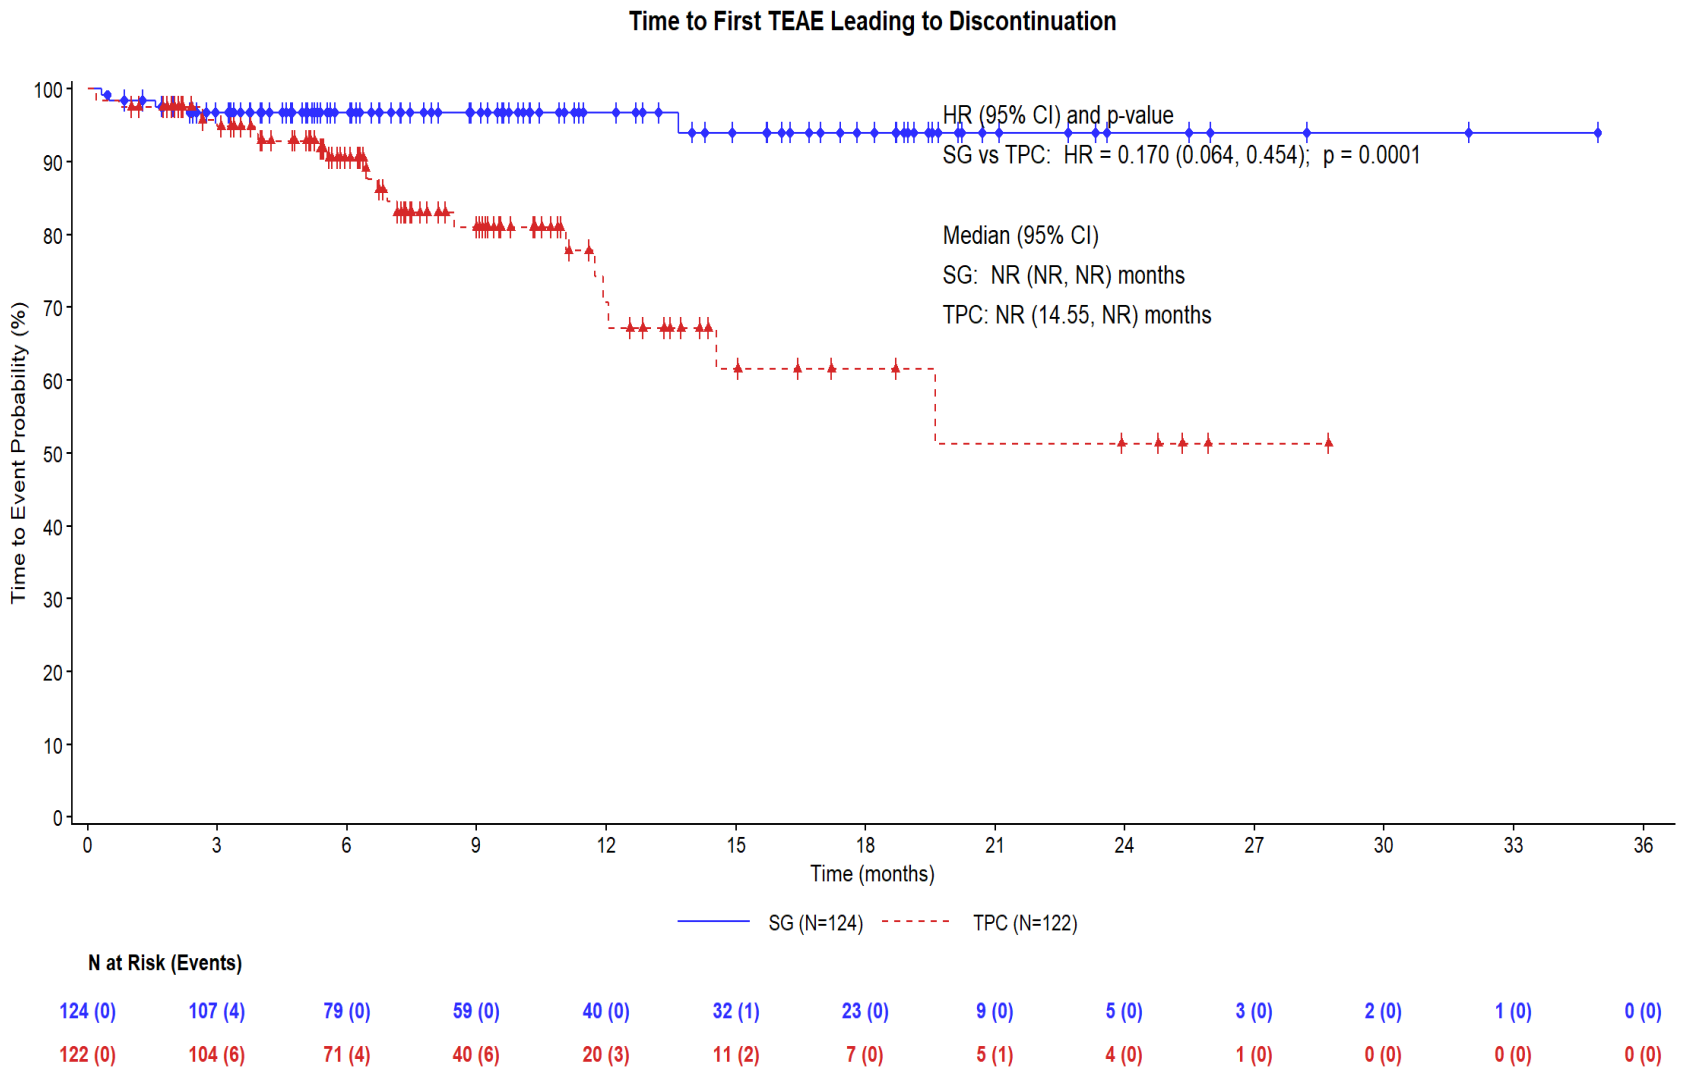
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.6. Figure 1.1.6: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) Age group greater than or equal to 65 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



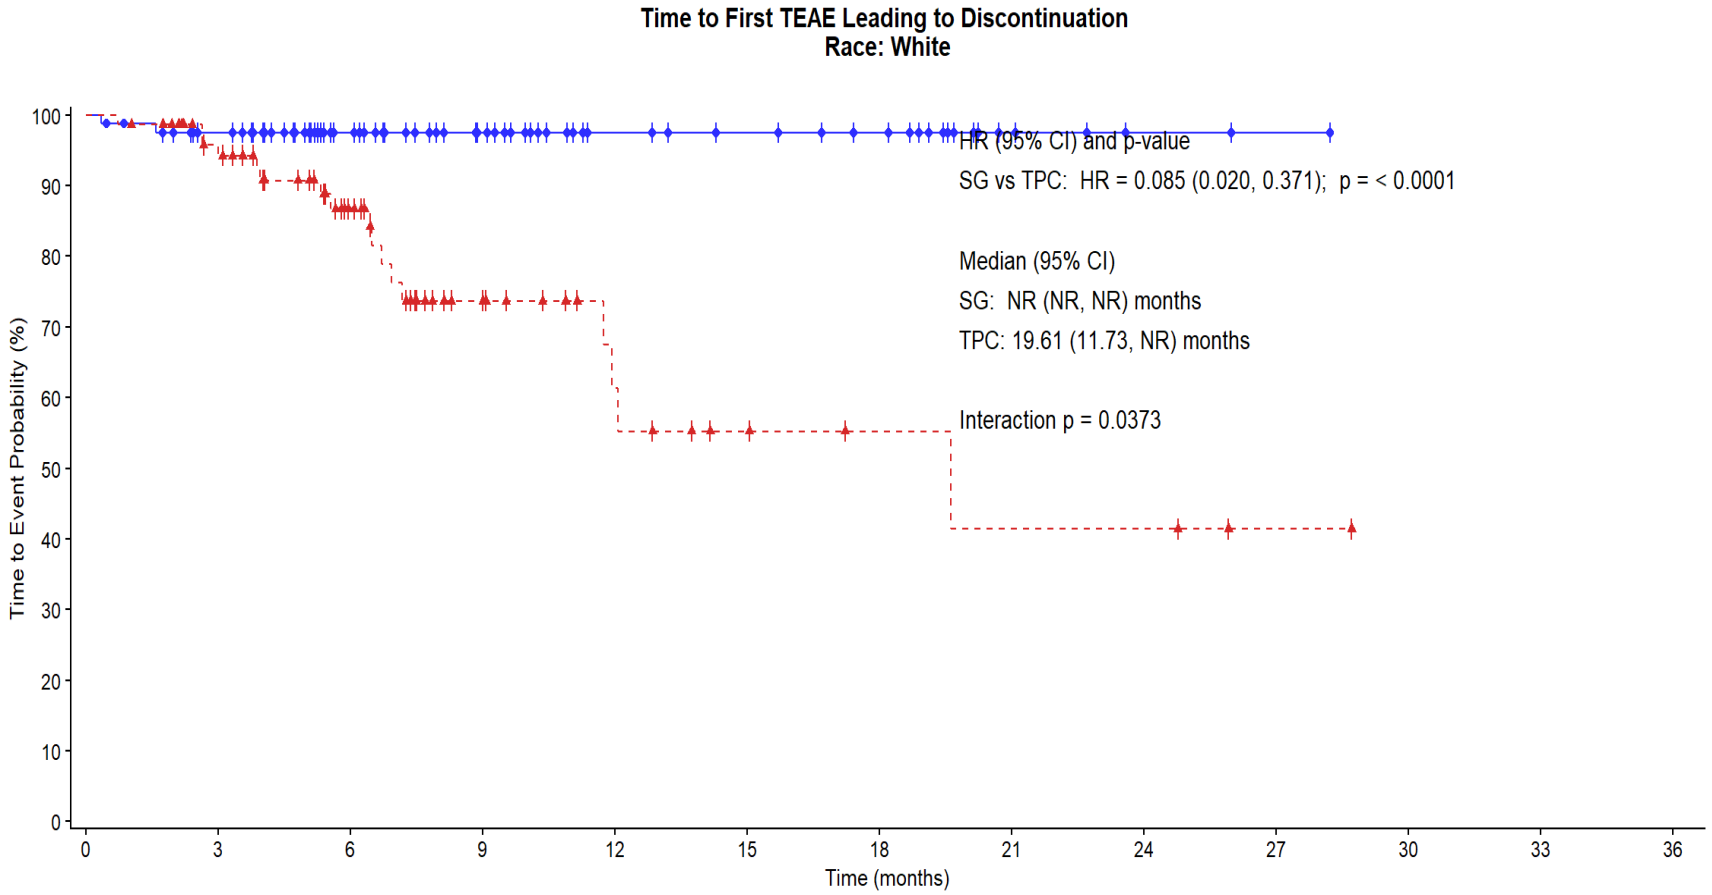
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.7. Figure 1.1.7: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) BRCA 1 2 status Wild Type — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



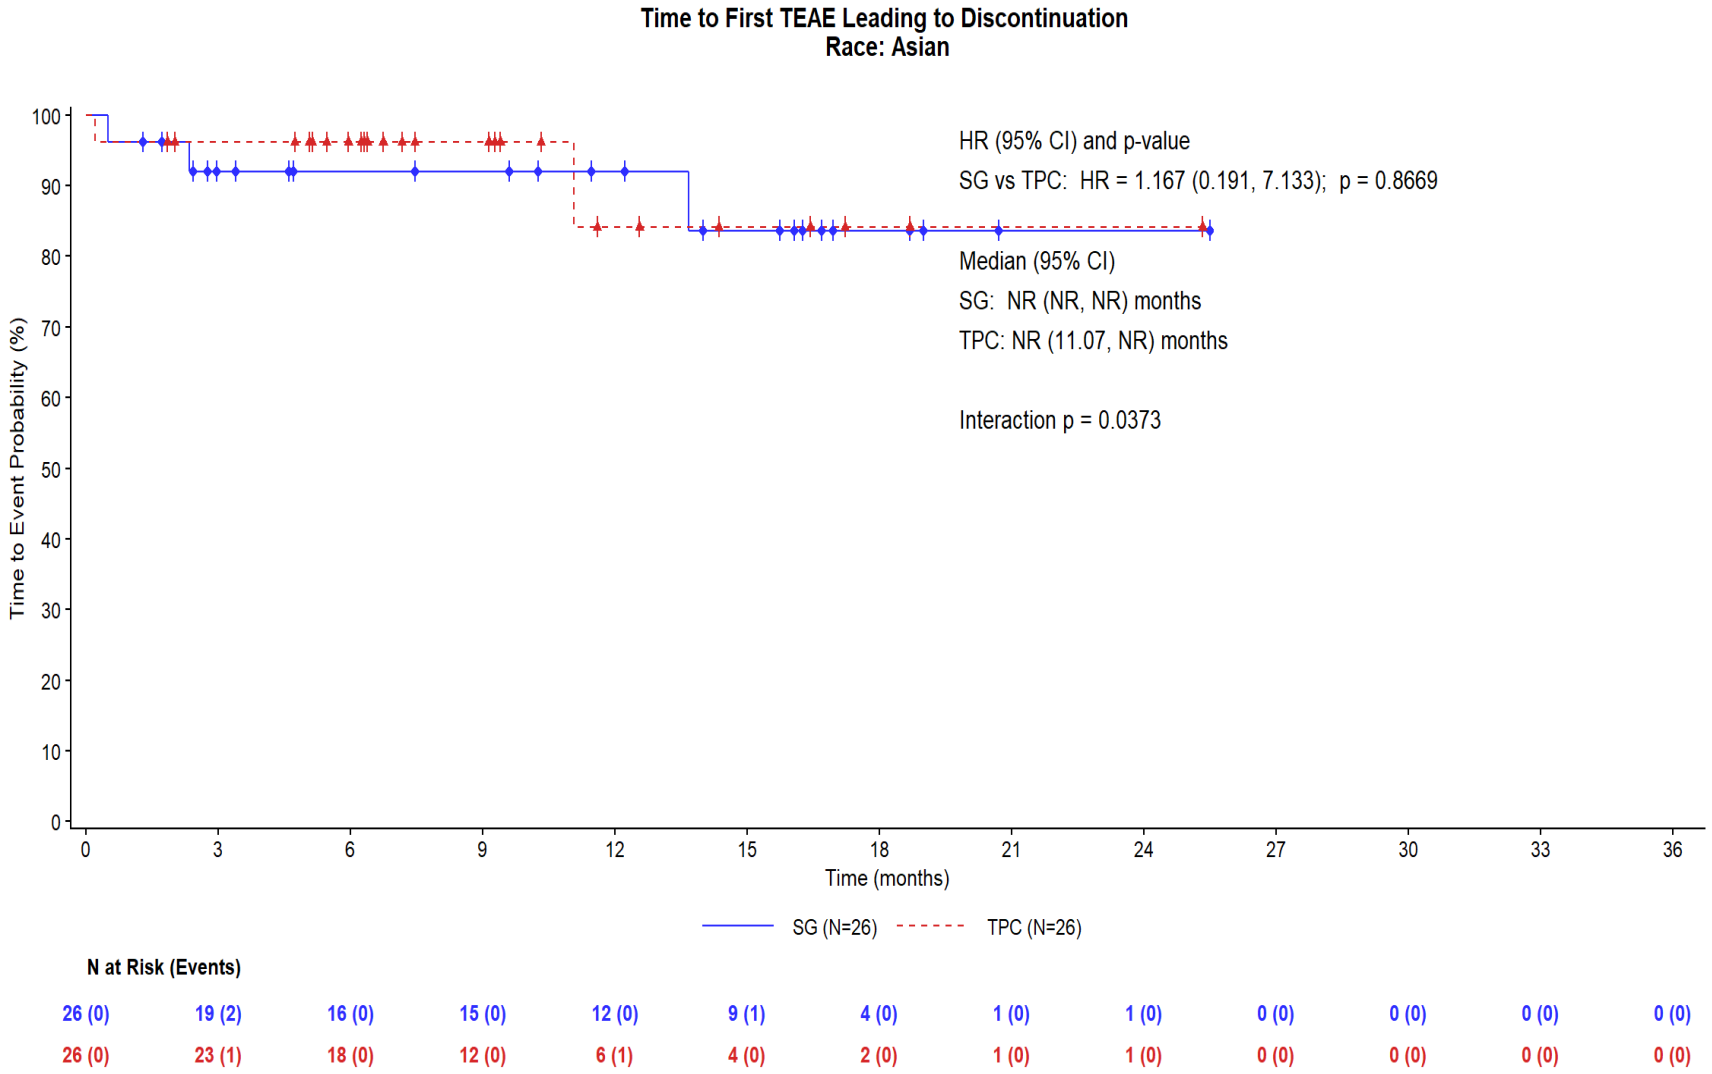
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.8. Figure 1.1.8: Kaplan Meier Plot of Time to First Severe TEAE (CTCAE Grade 3 and above) BRCA 1 2 status Mutant — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



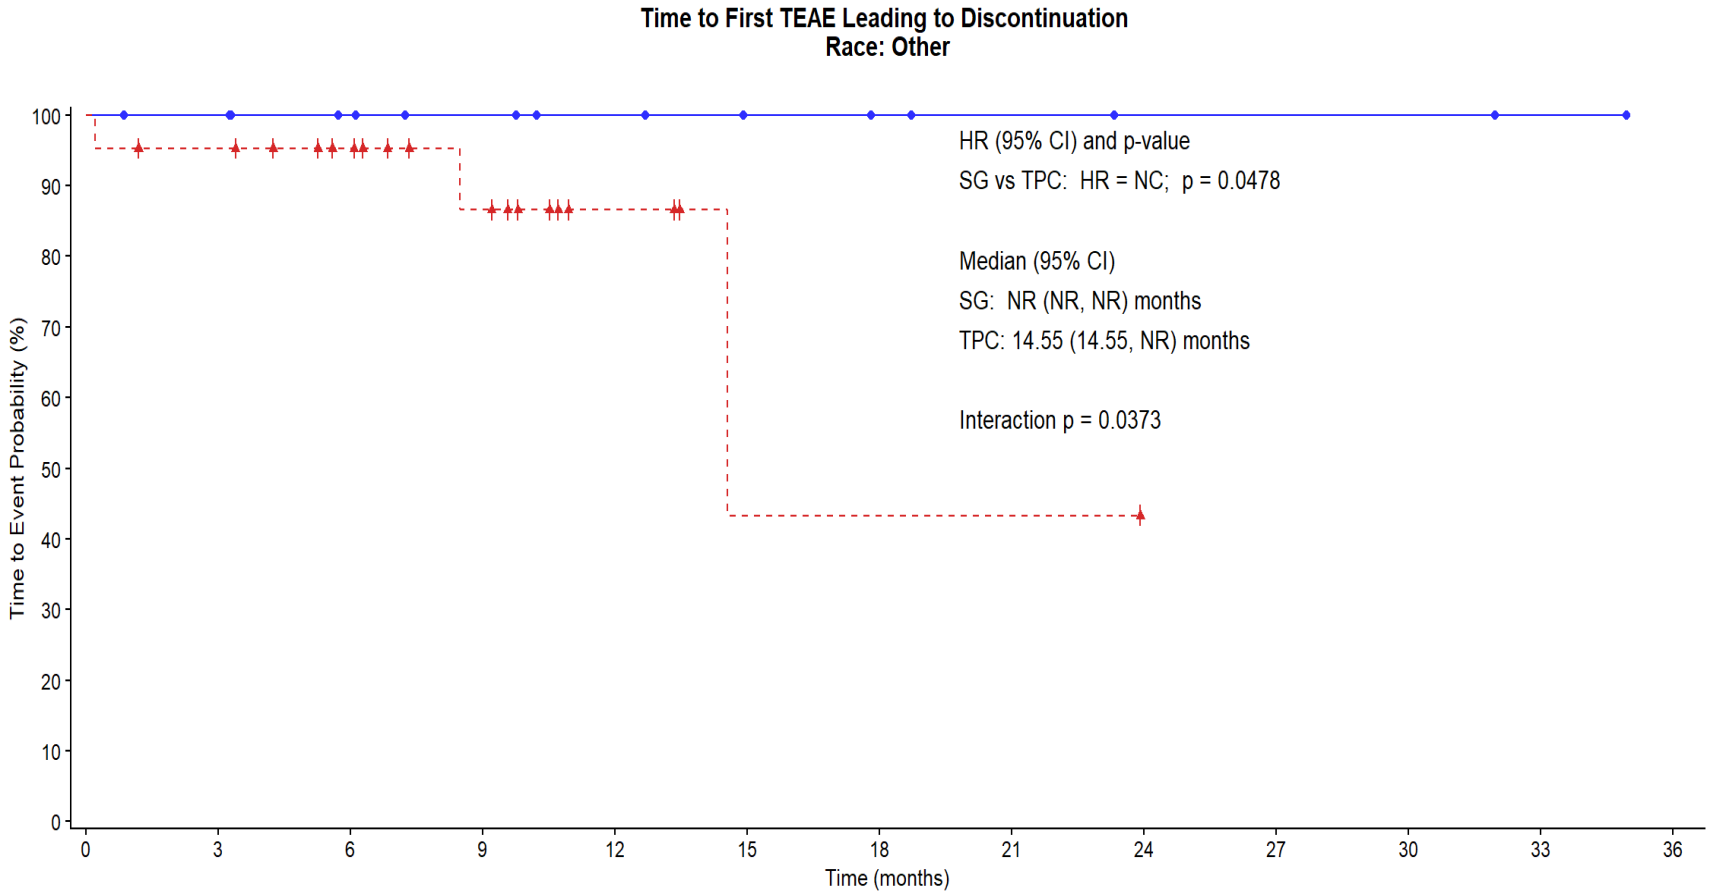
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.9. Figure 1.1.9: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



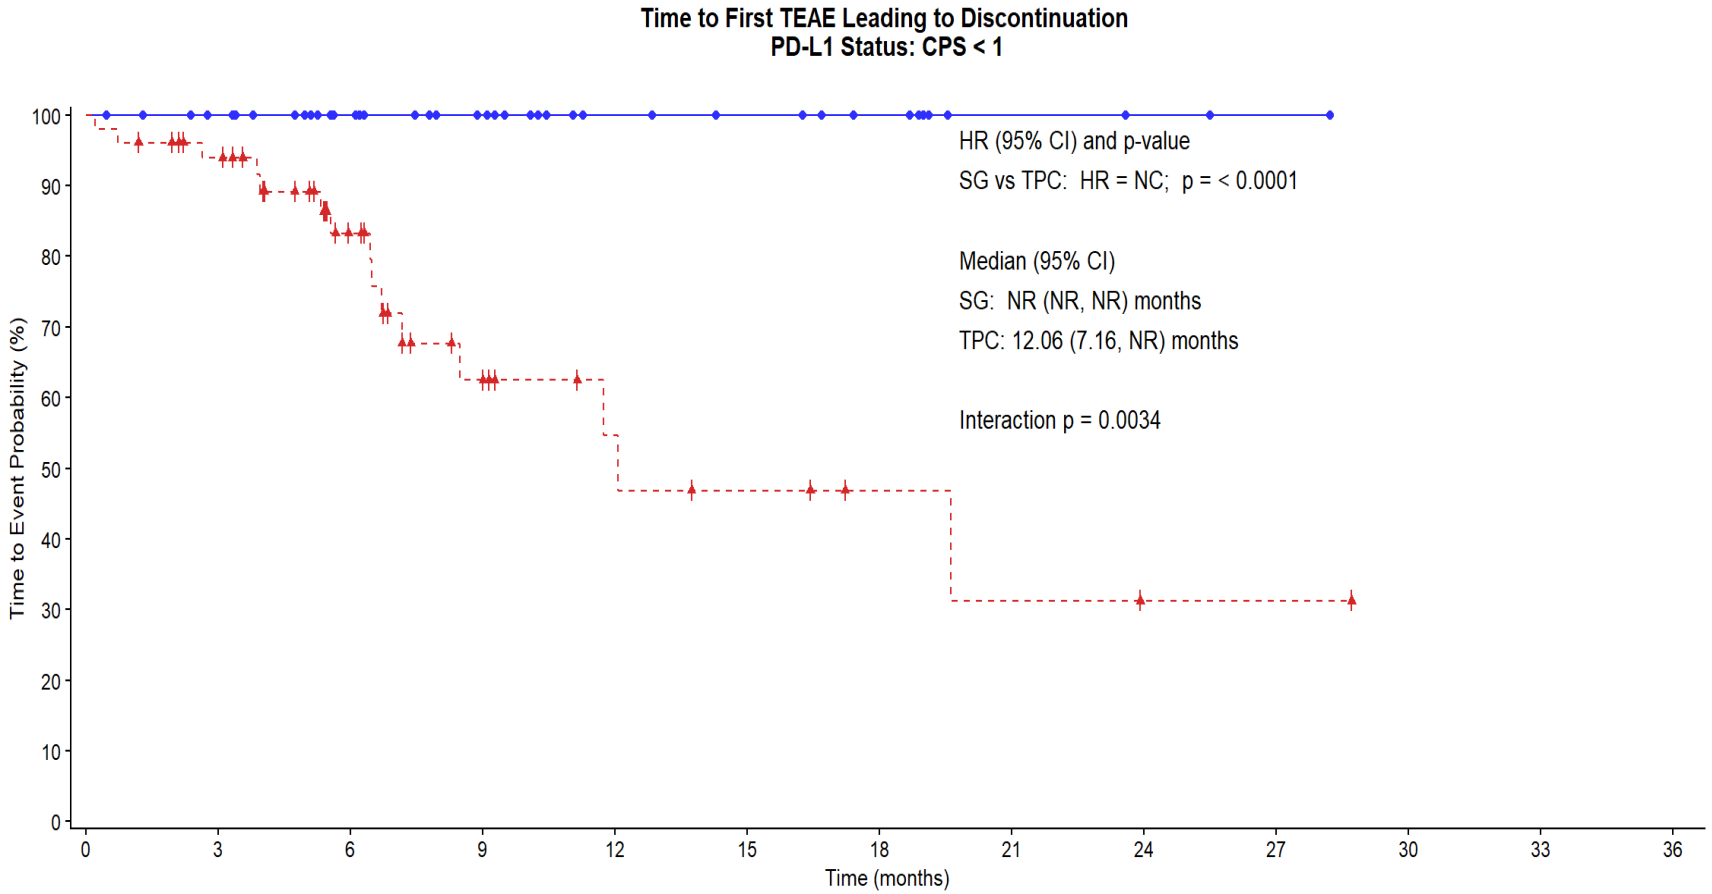
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.10. Figure 1.1.10: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation Race White — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



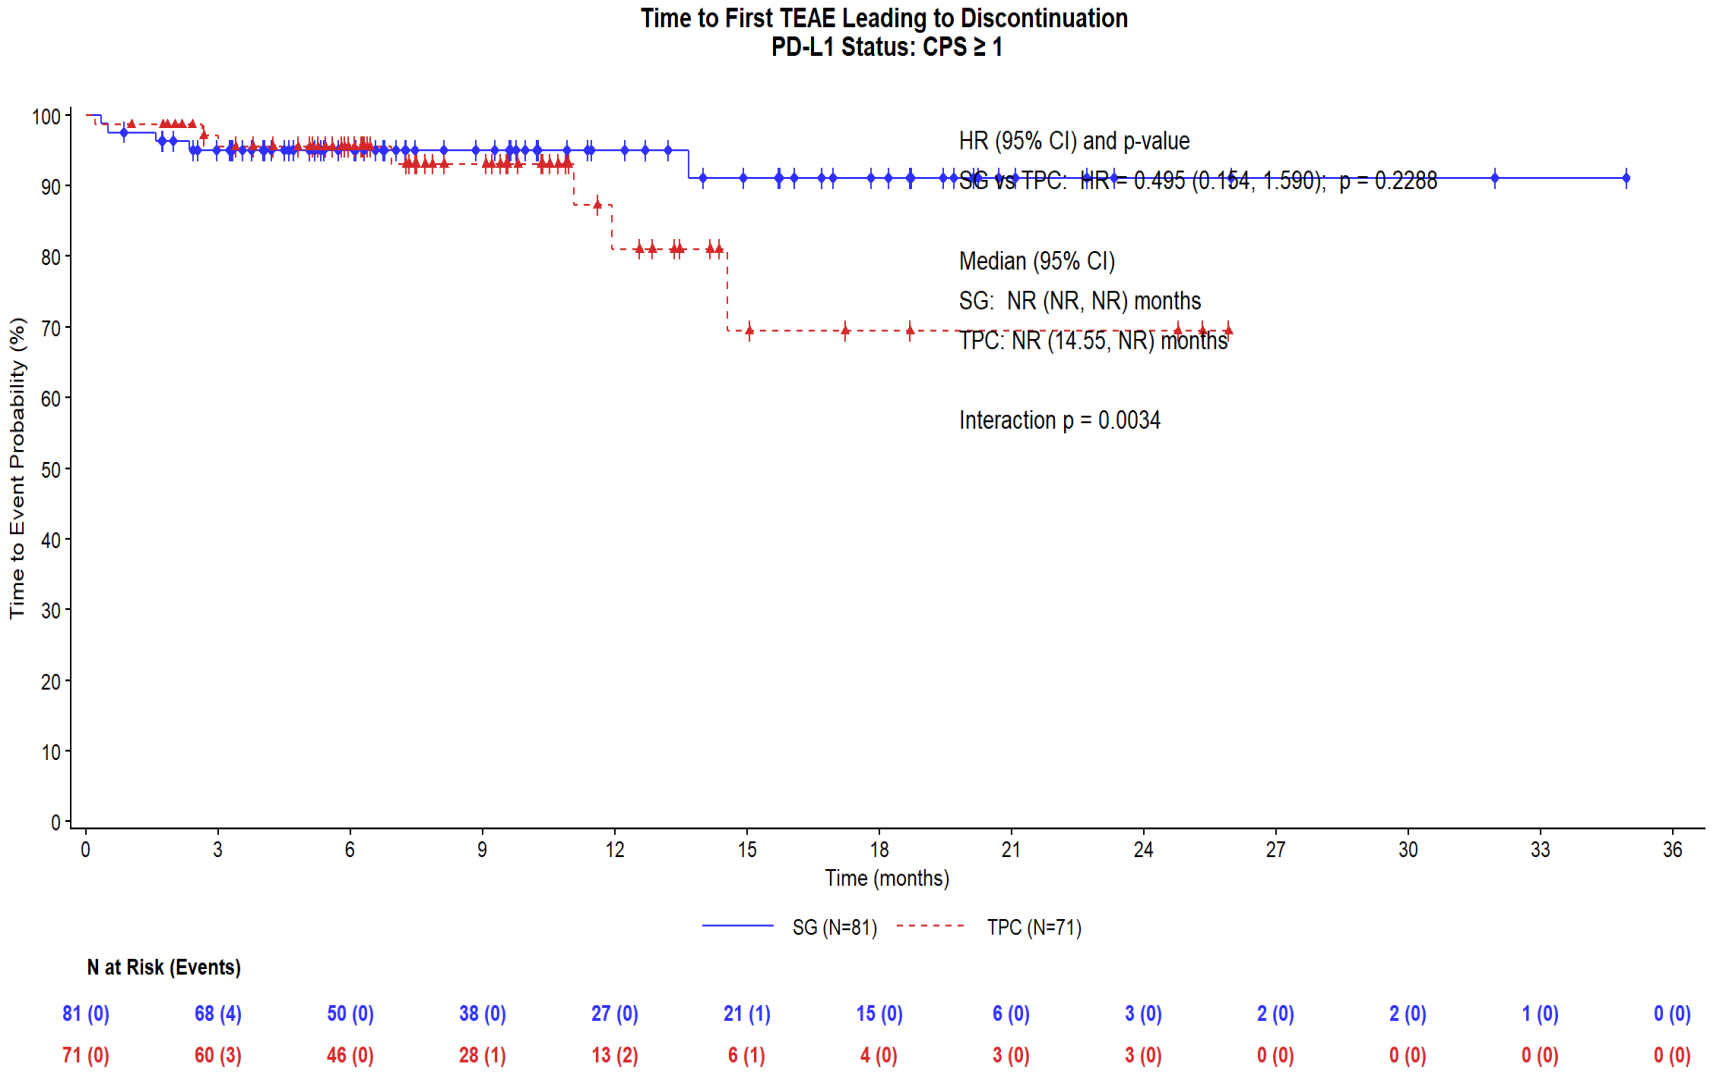
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.11. Figure 1.1.11: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation Race Asian — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



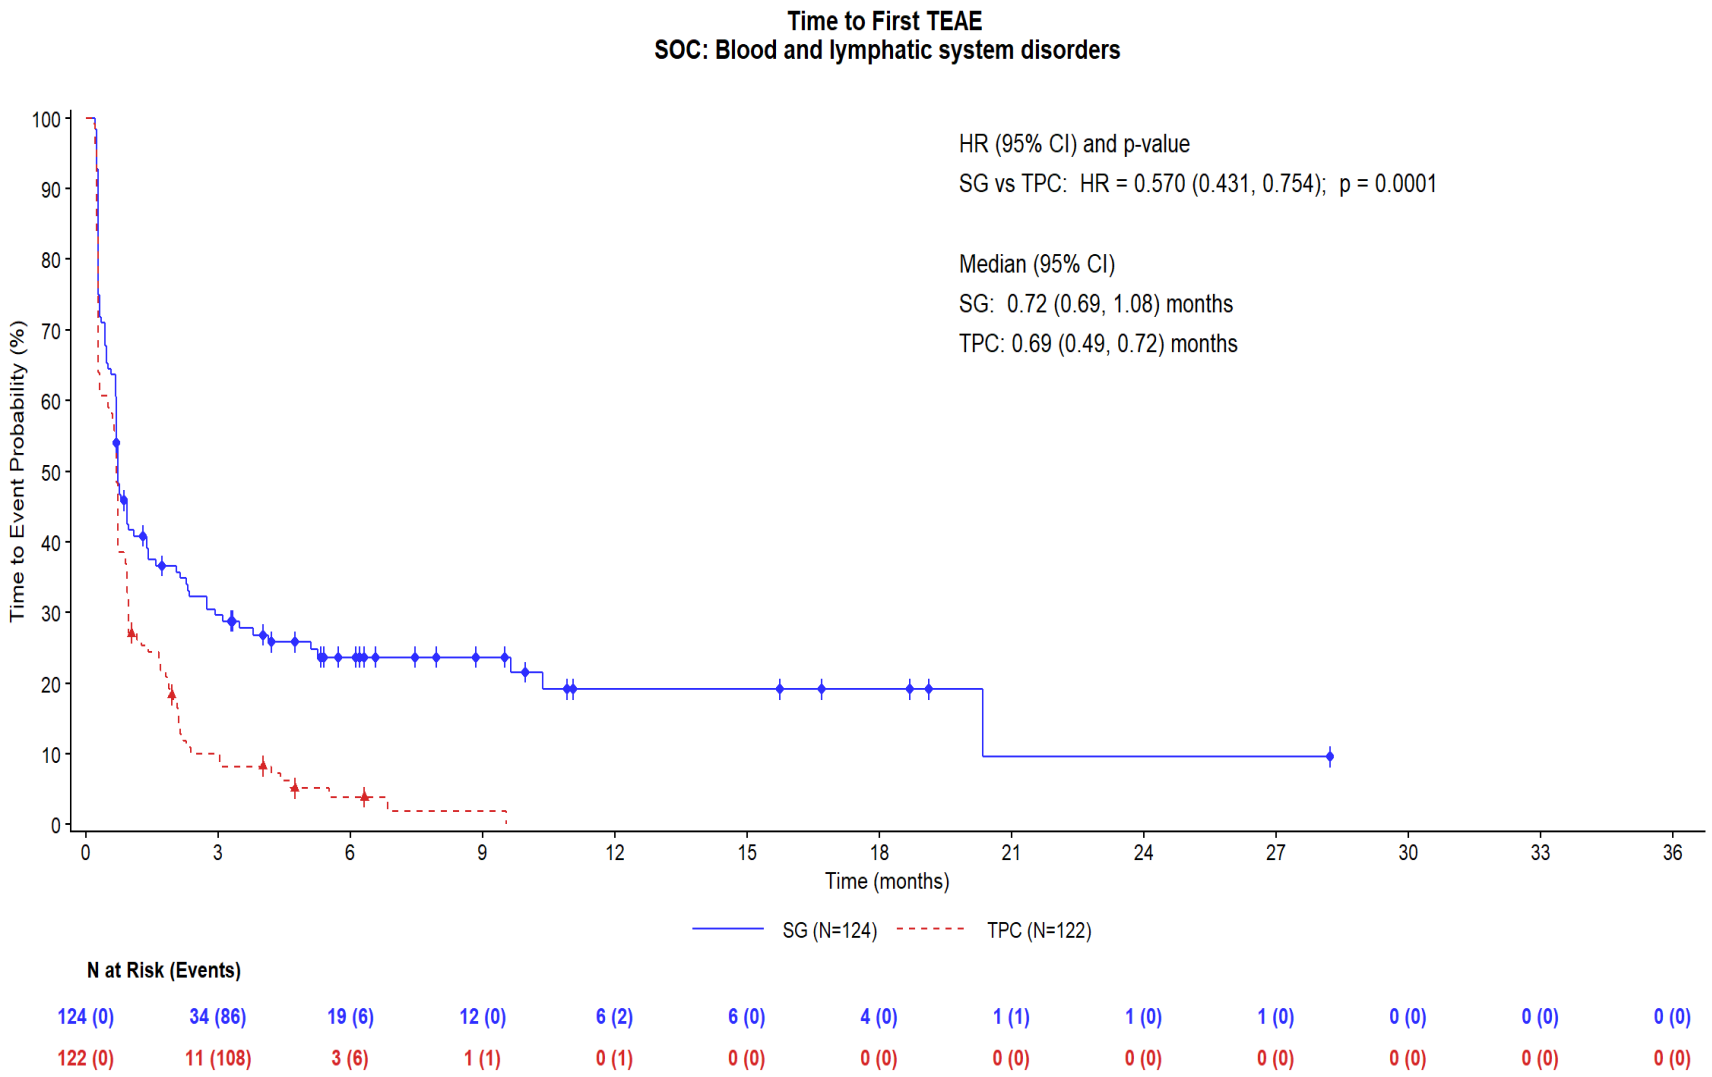
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.12. Figure 1.1.12: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation Race Other — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



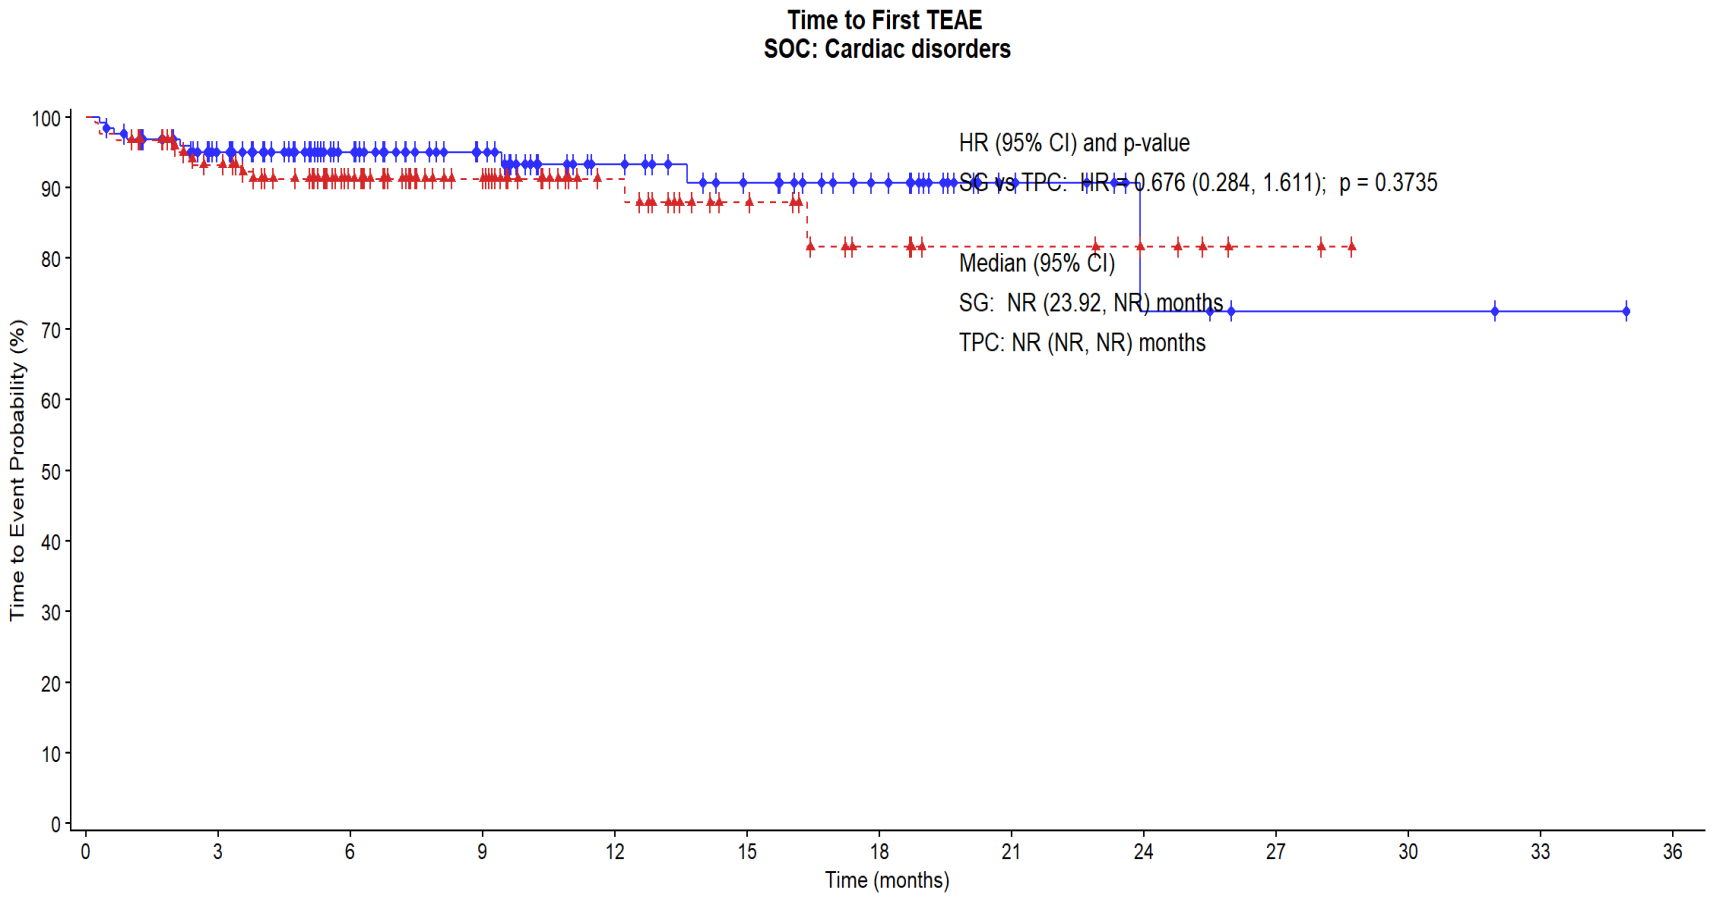
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.13. Figure 1.1.13: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation PD L1 Status CPS less than 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



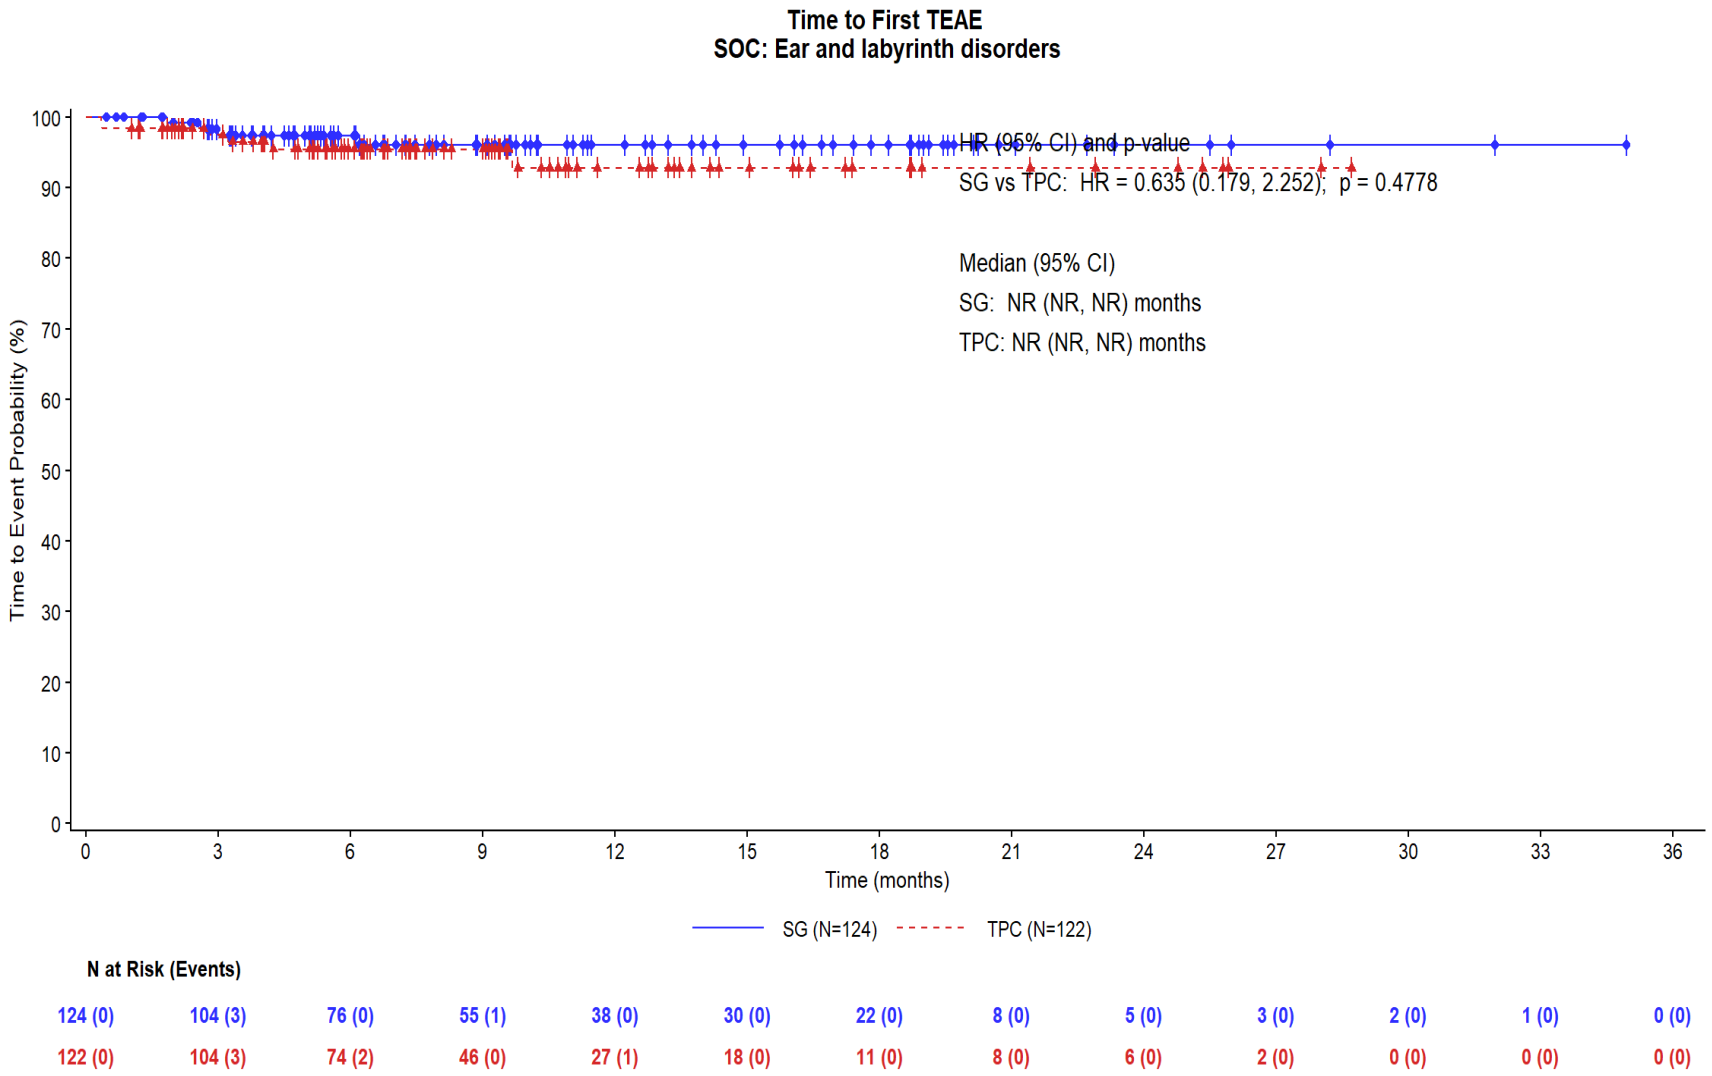
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.14. Figure 1.1.14: Kaplan Meier Plot of Time to First TEAE Leading to Discontinuation PD L1 Status CPS >= 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



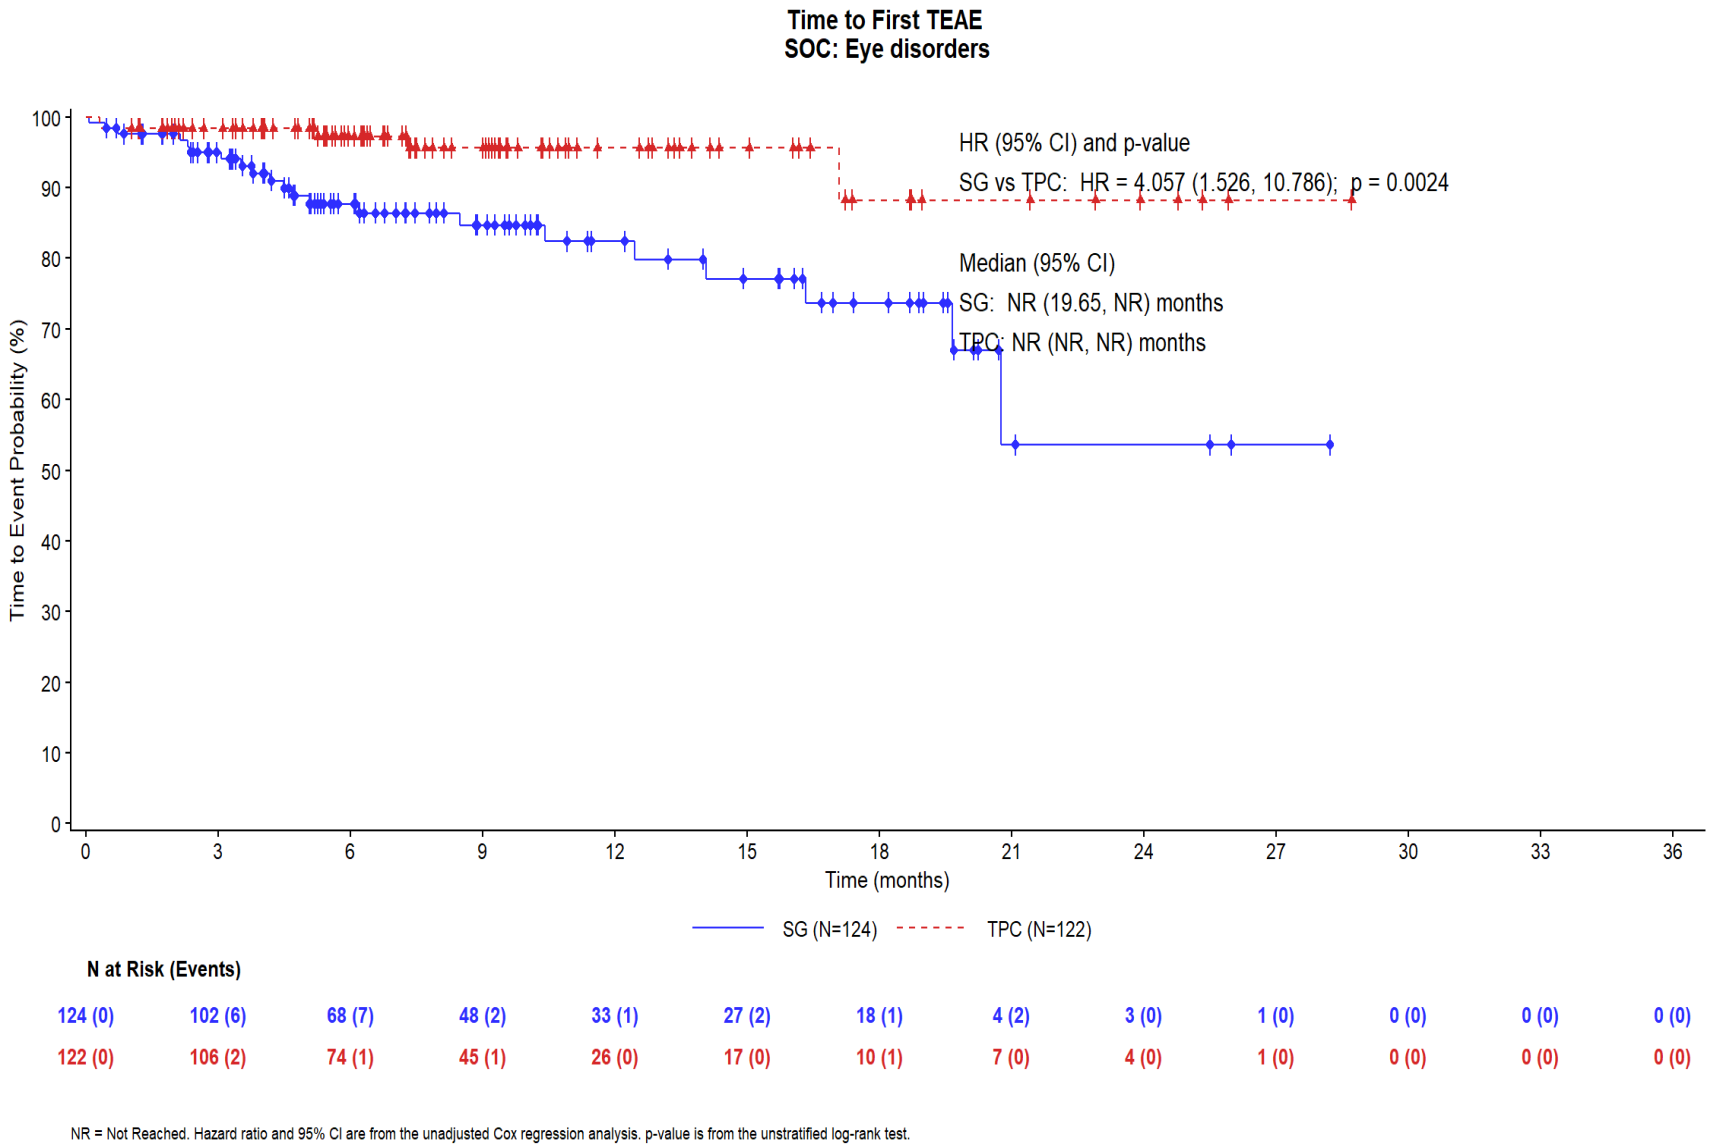
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.15. Figure 1.1.15: Kaplan Meier Plot of Time to First TEAE by SOC Blood and lymphatic system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



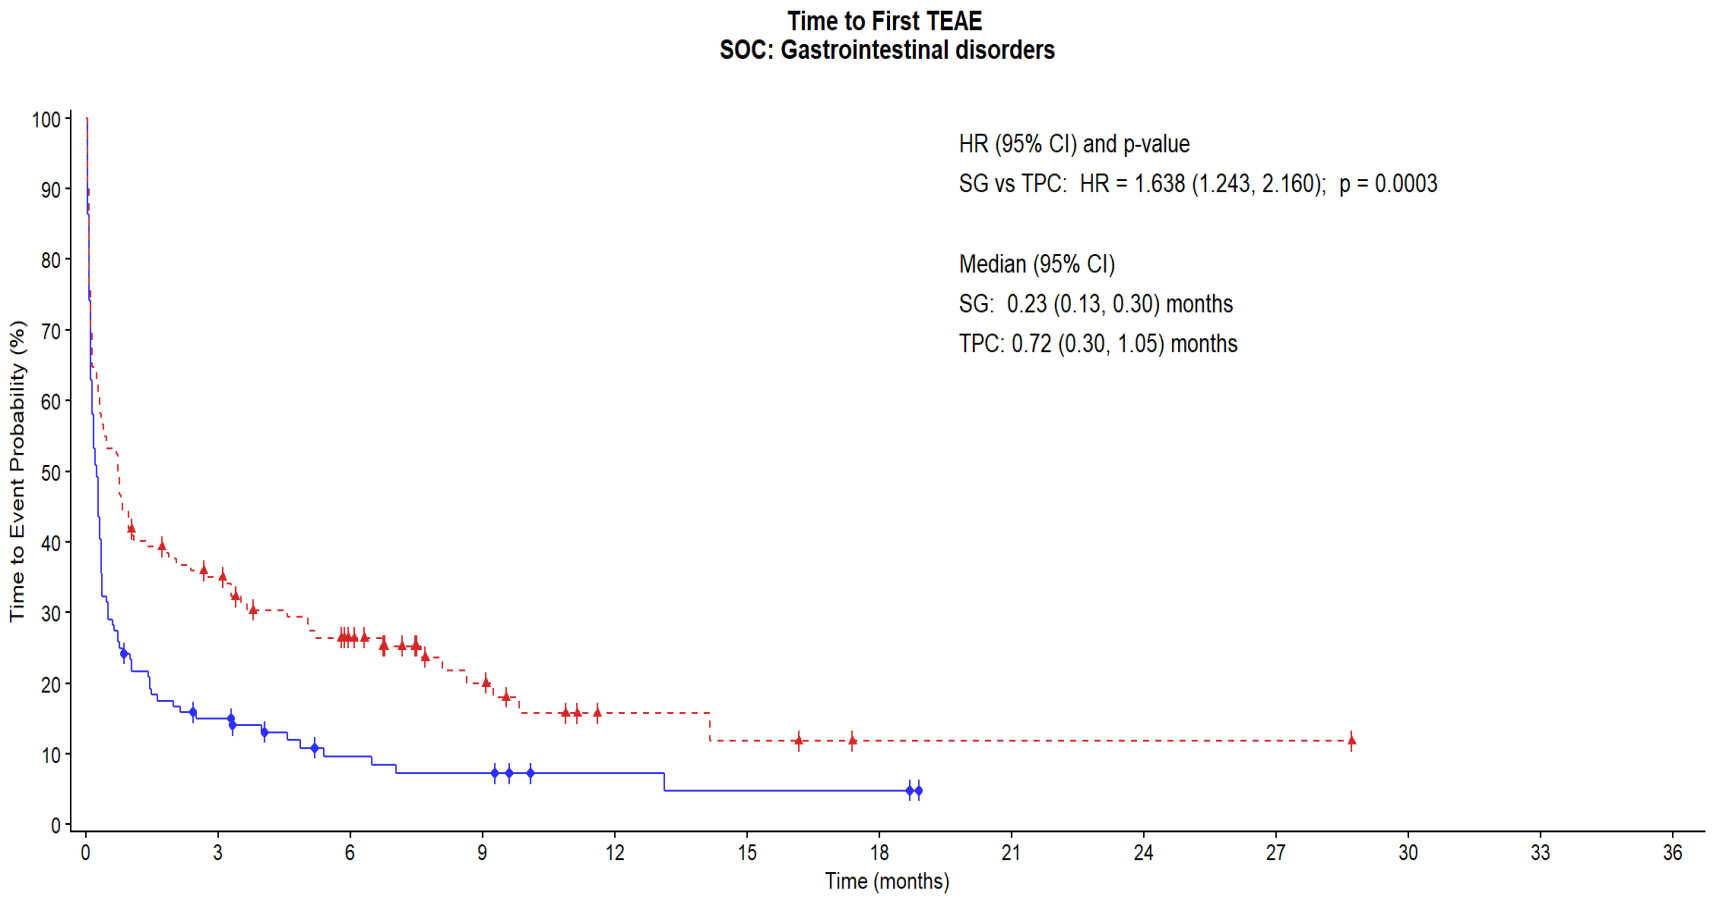
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.16. Figure 1.1.16: Kaplan Meier Plot of Time to First TEAE by SOC Cardiac disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



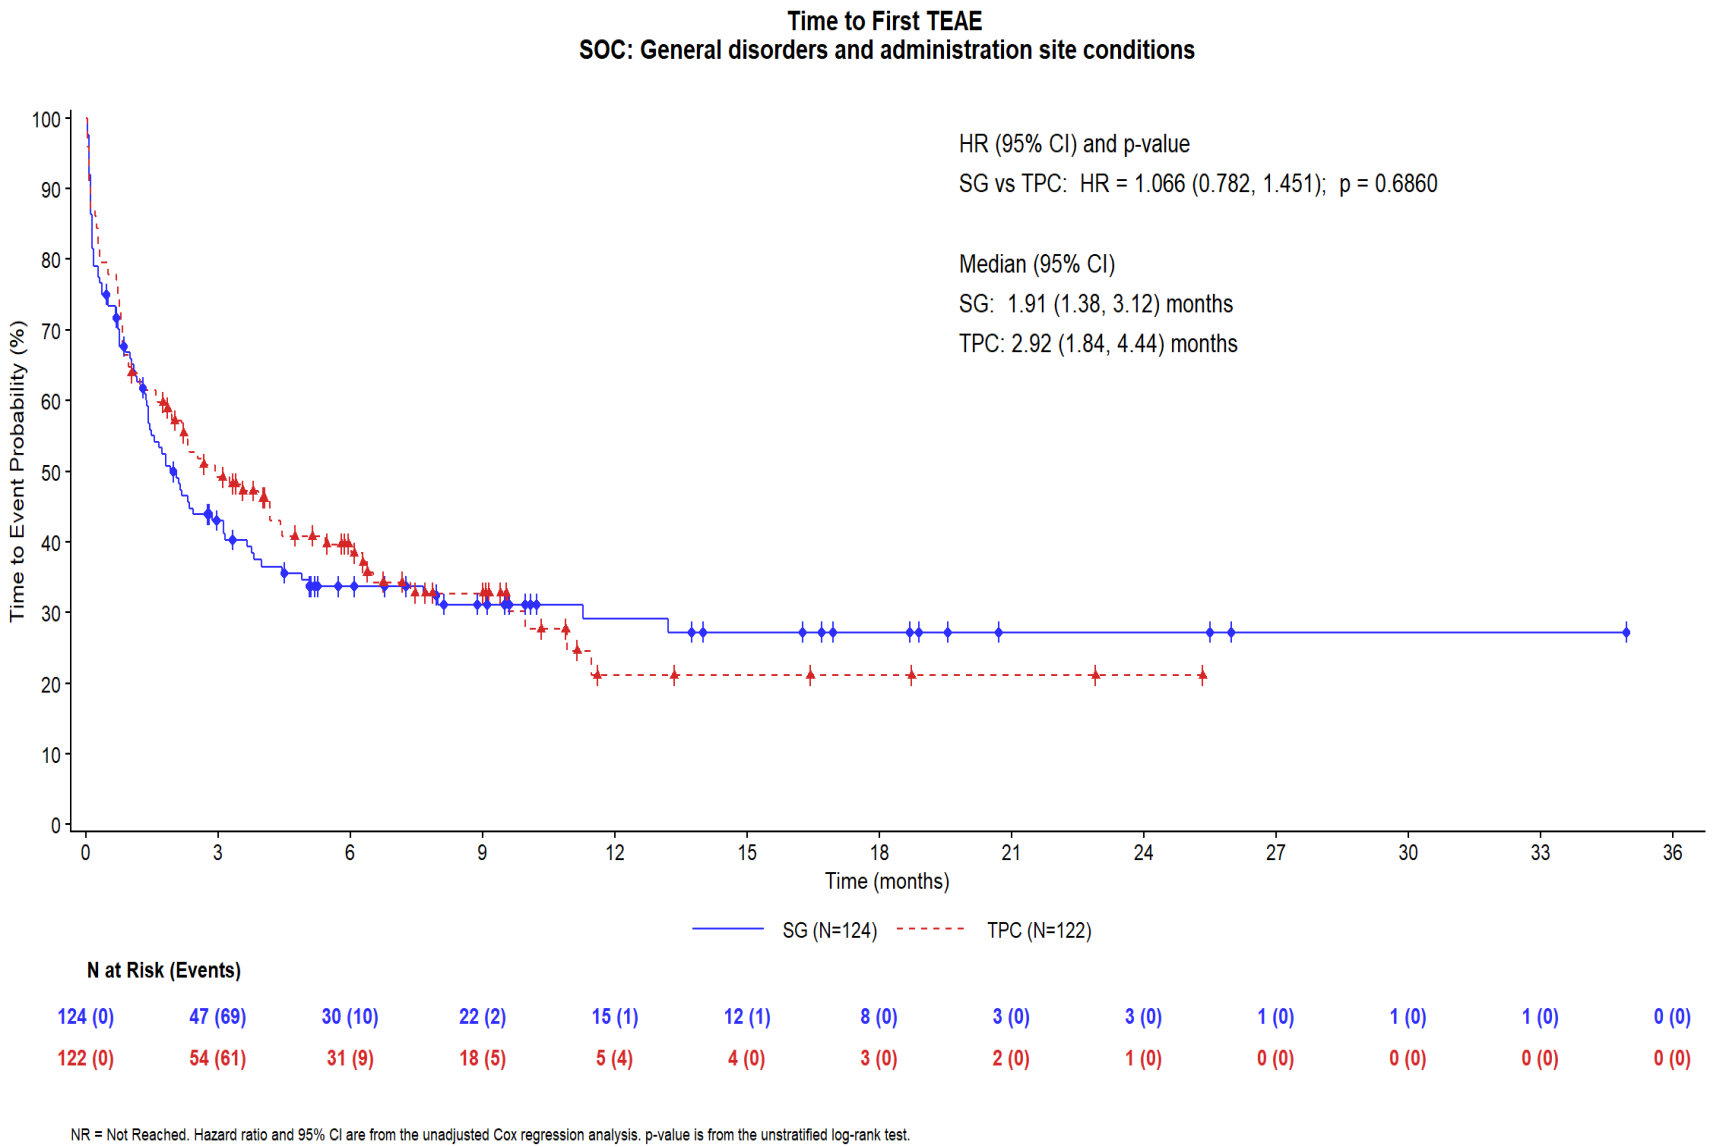
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.17. Figure 1.1.17: Kaplan Meier Plot of Time to First TEAE by SOC Ear and labyrinth disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



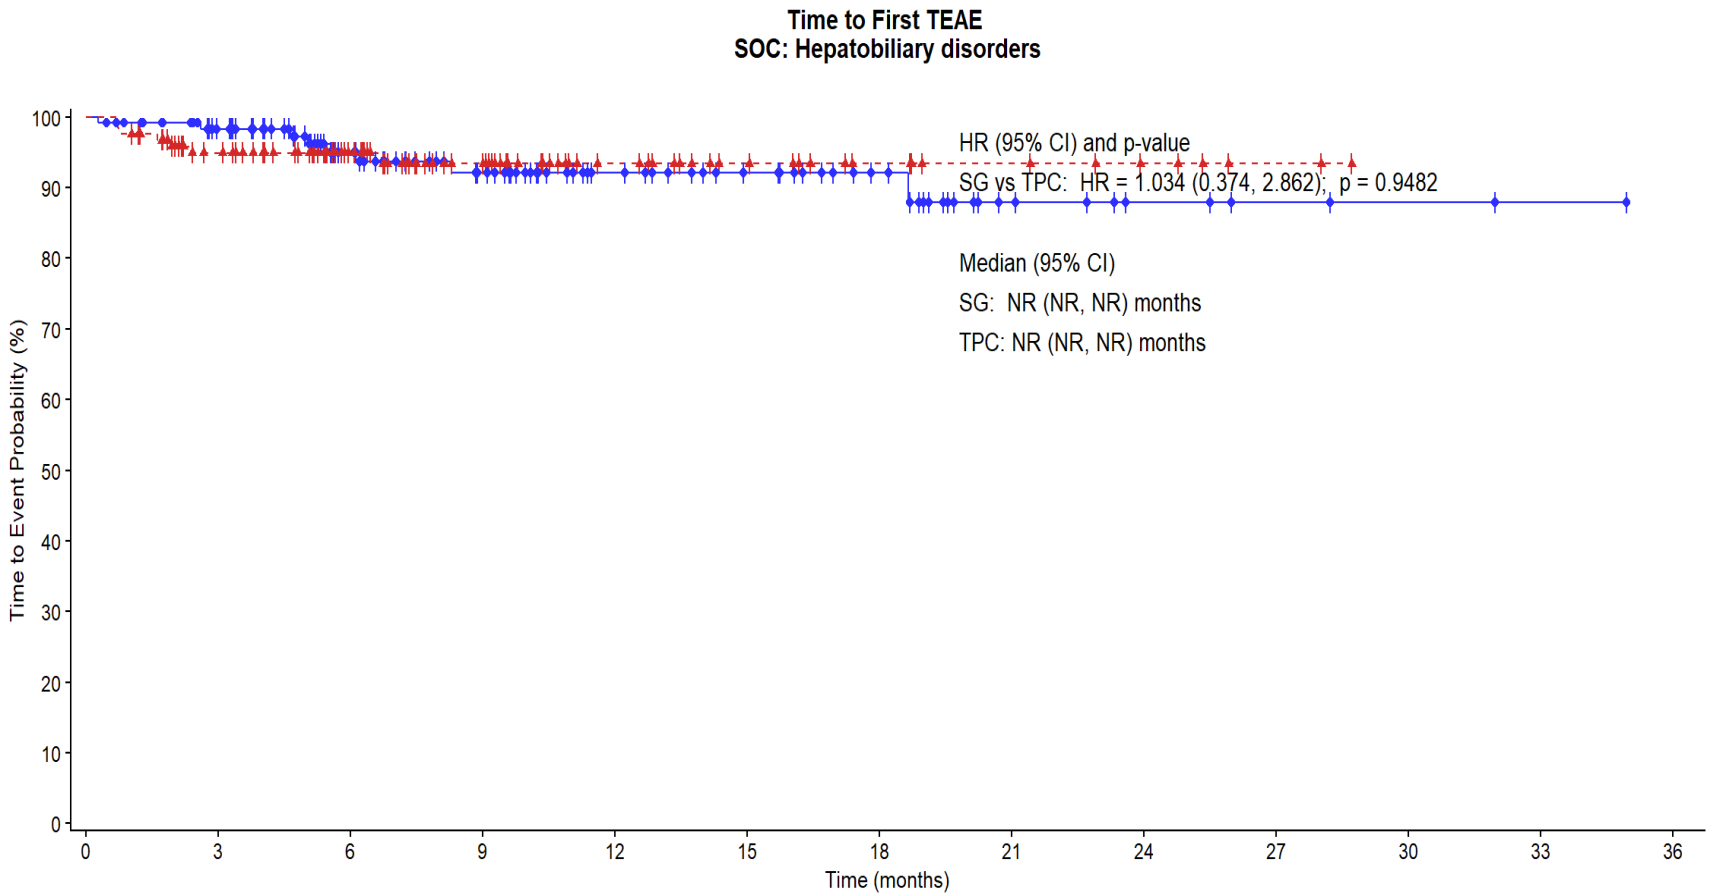
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.18. Figure 1.1.18: Kaplan Meier Plot of Time to First TEAE by SOC Eye disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



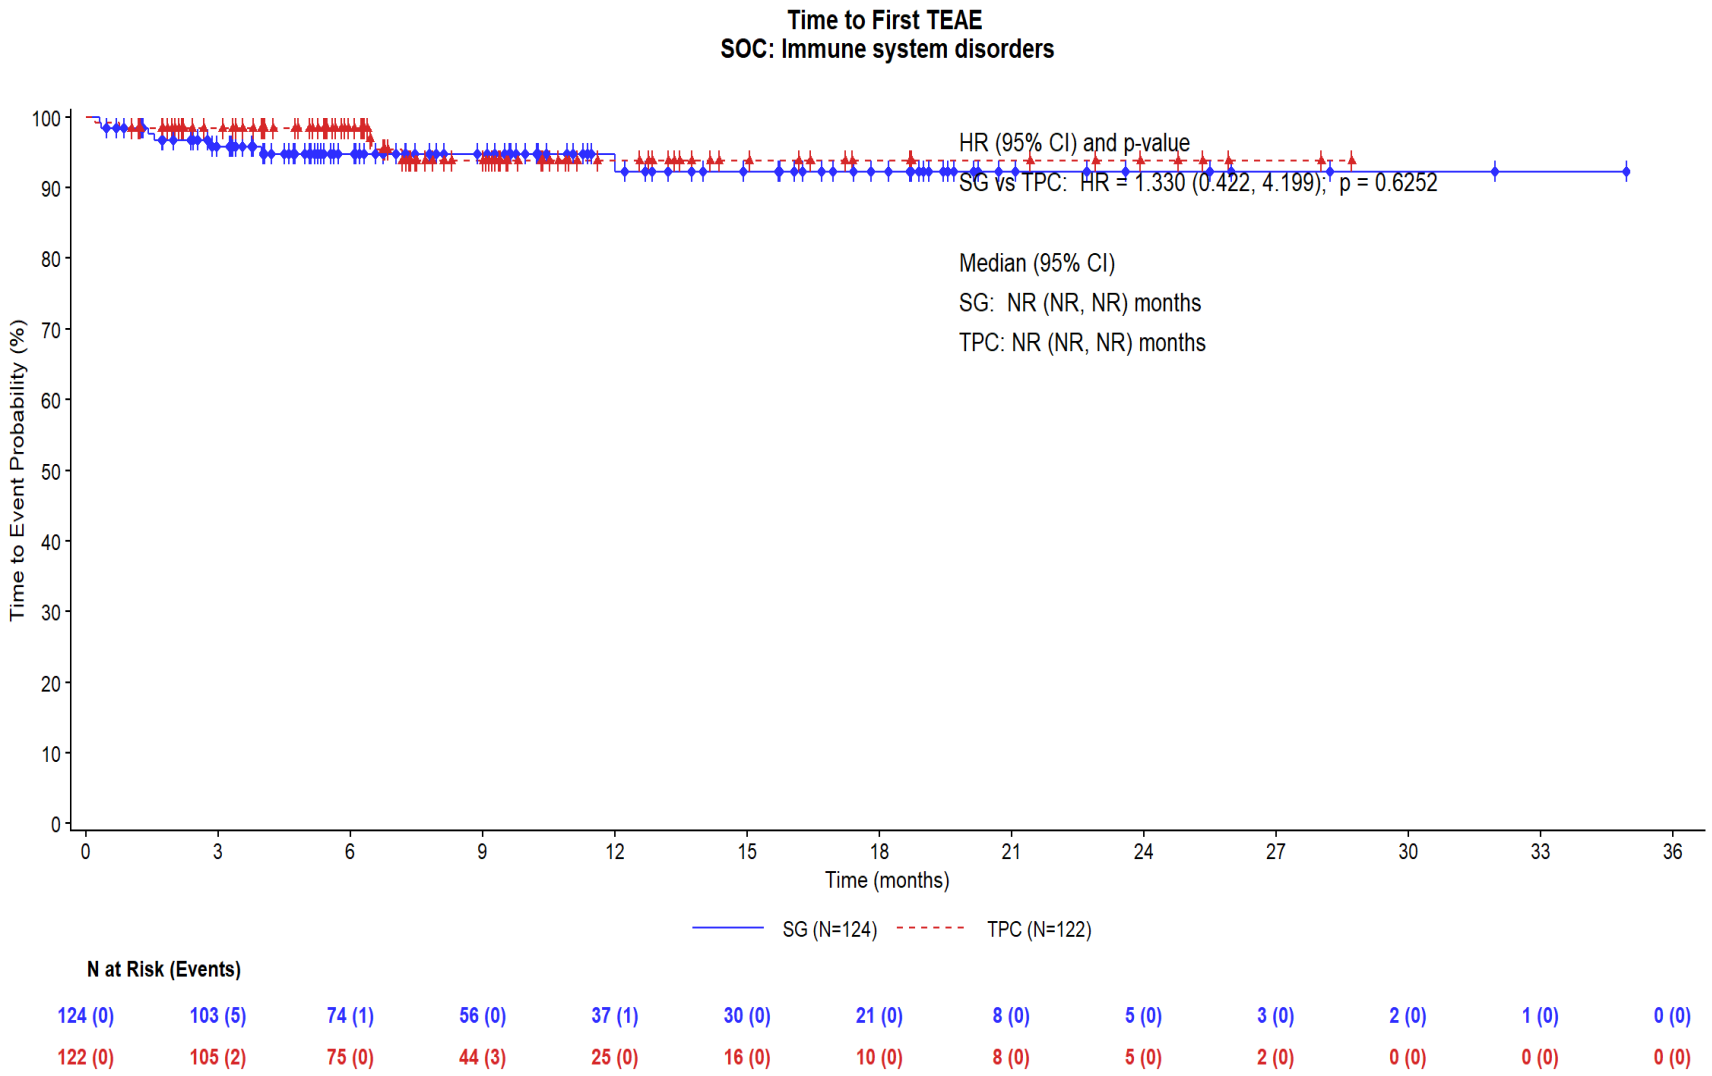
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.19. Figure 1.1.20: Kaplan Meier Plot of Time to First TEAE by SOC Gastrointestinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



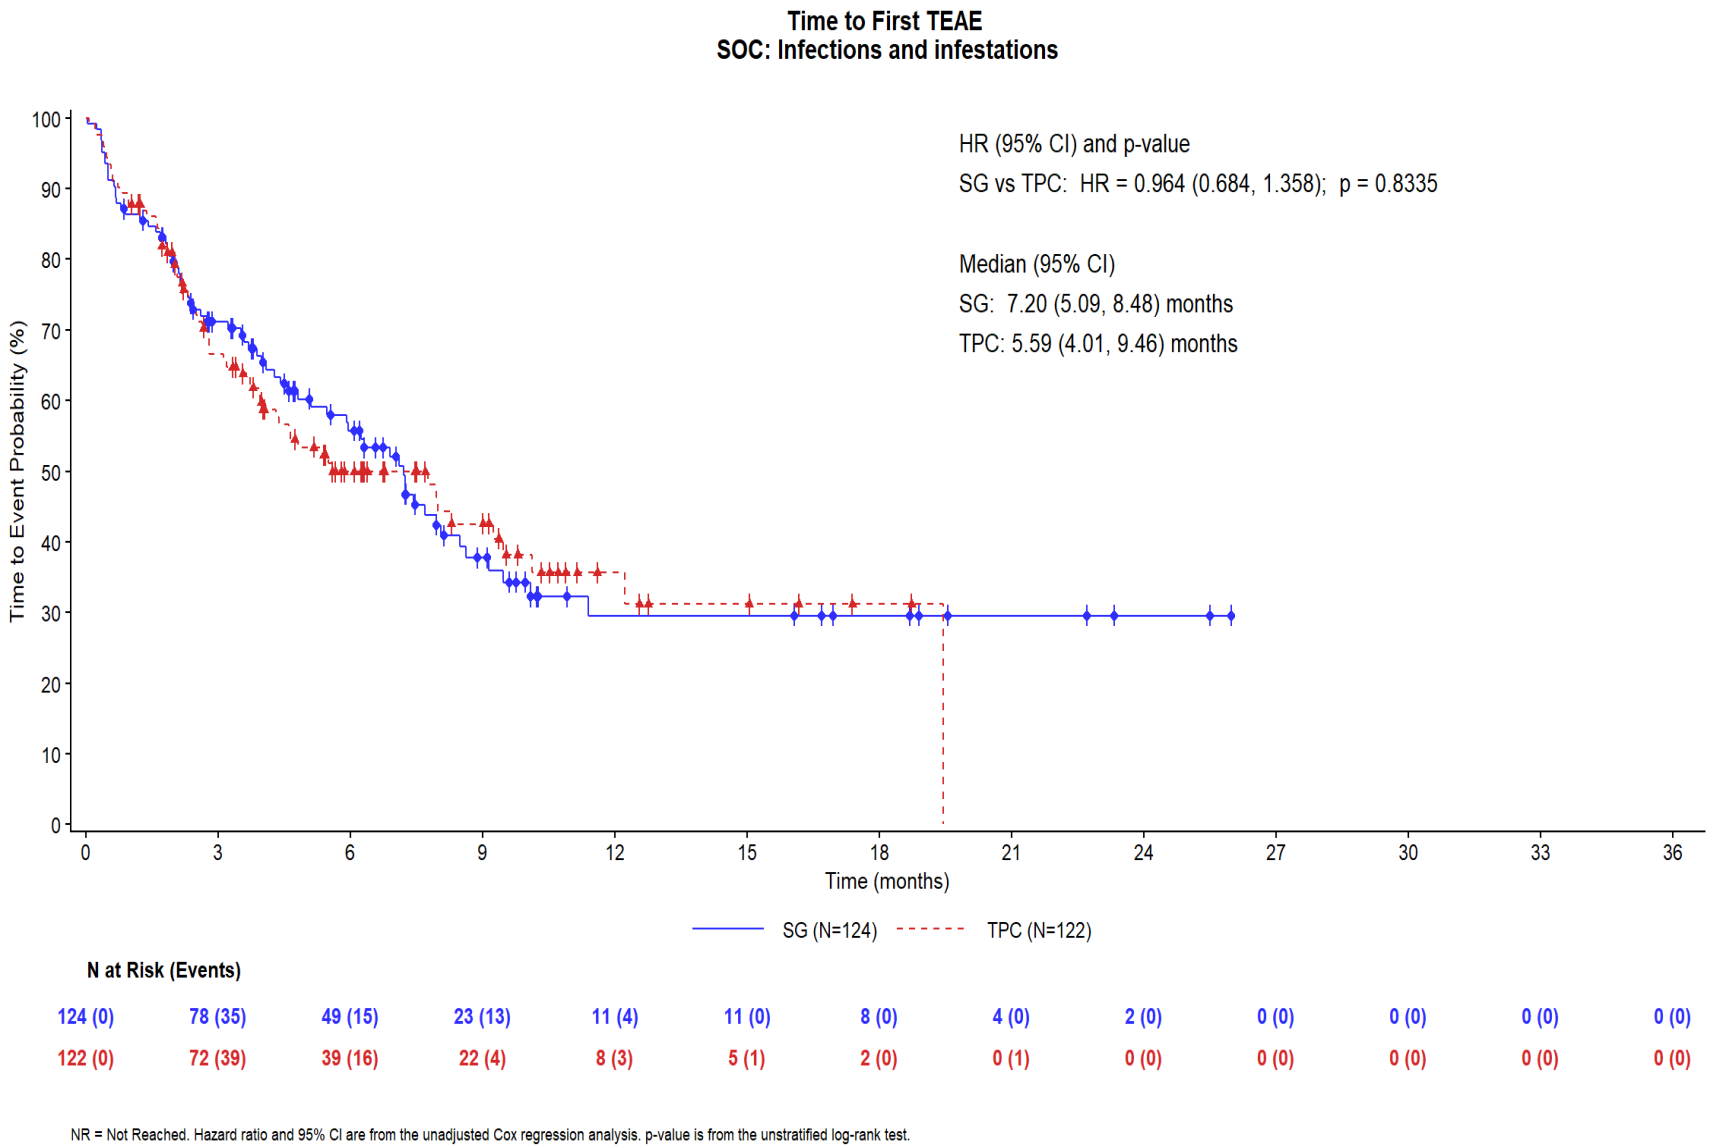
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.20. Figure 1.1.21: Kaplan Meier Plot of Time to First TEAE by SOC General disorders and administration site conditions — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



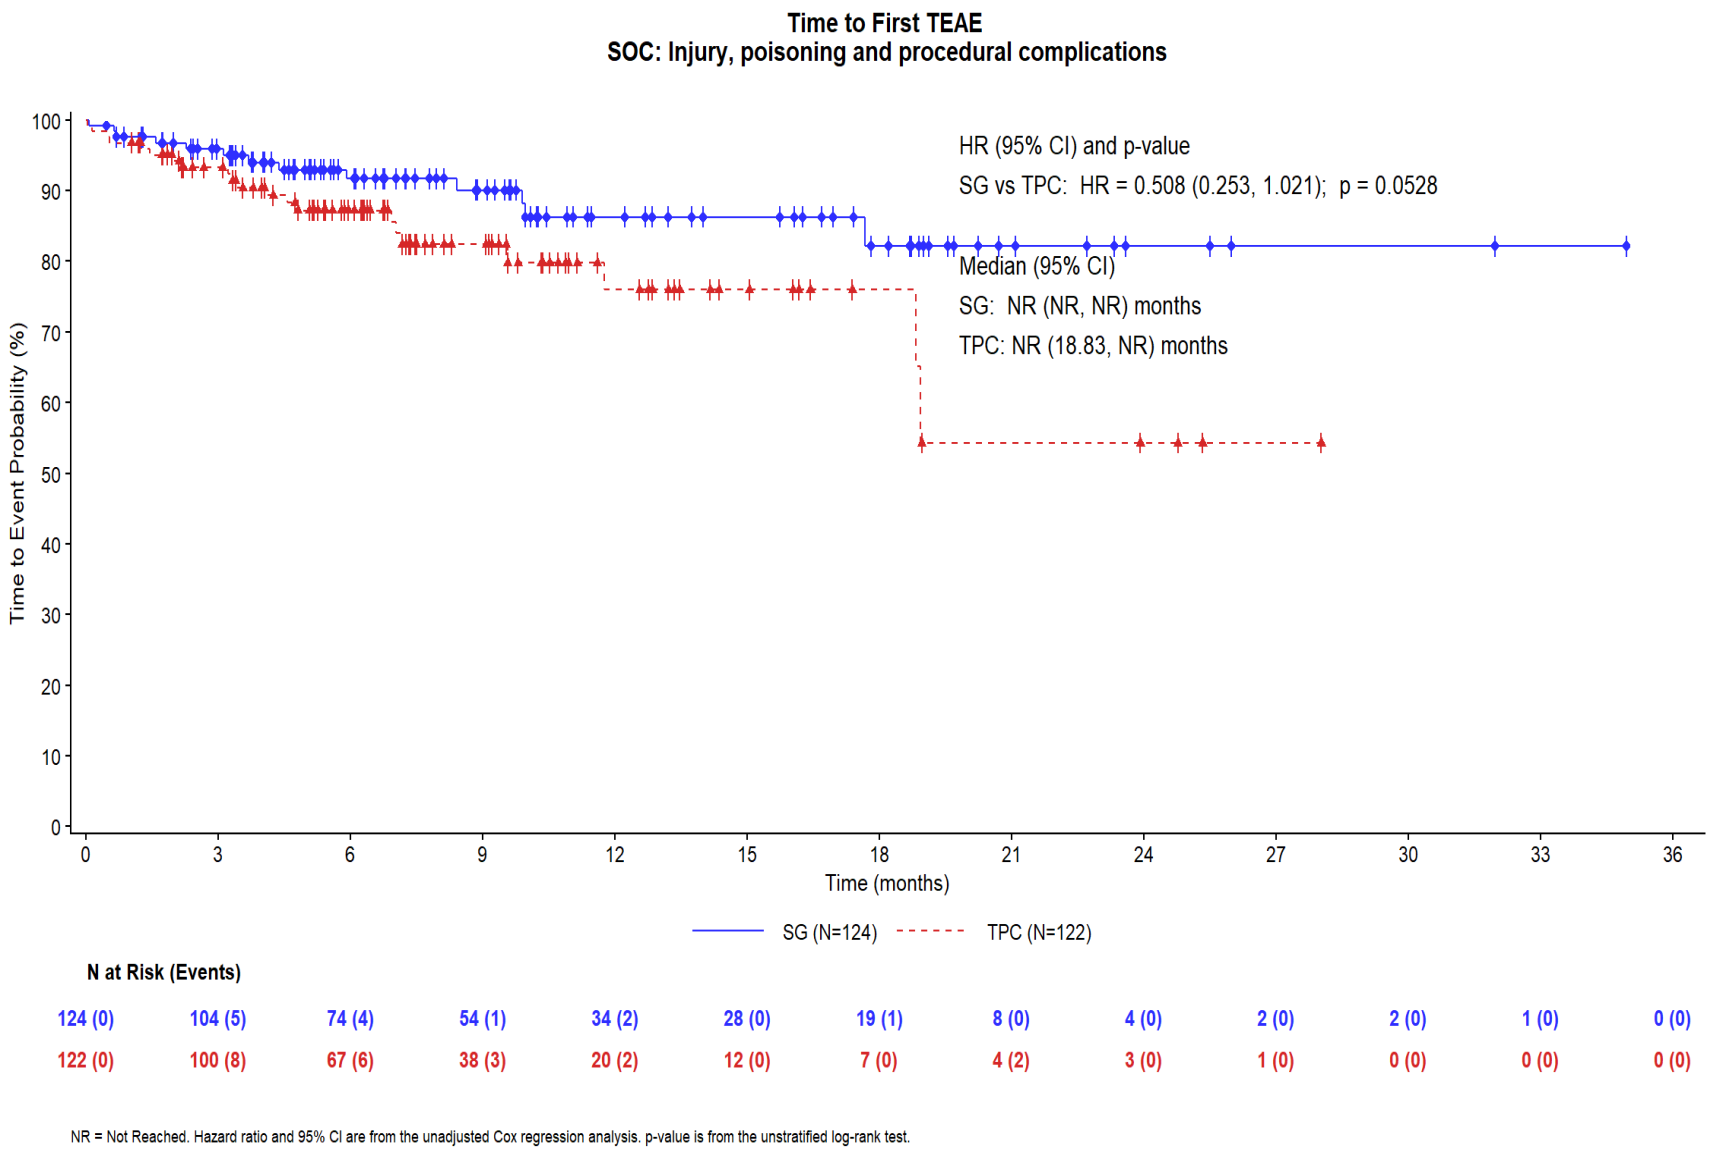
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.21. Figure 1.1.22: Kaplan Meier Plot of Time to First TEAE by SOC Hepatobiliary disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



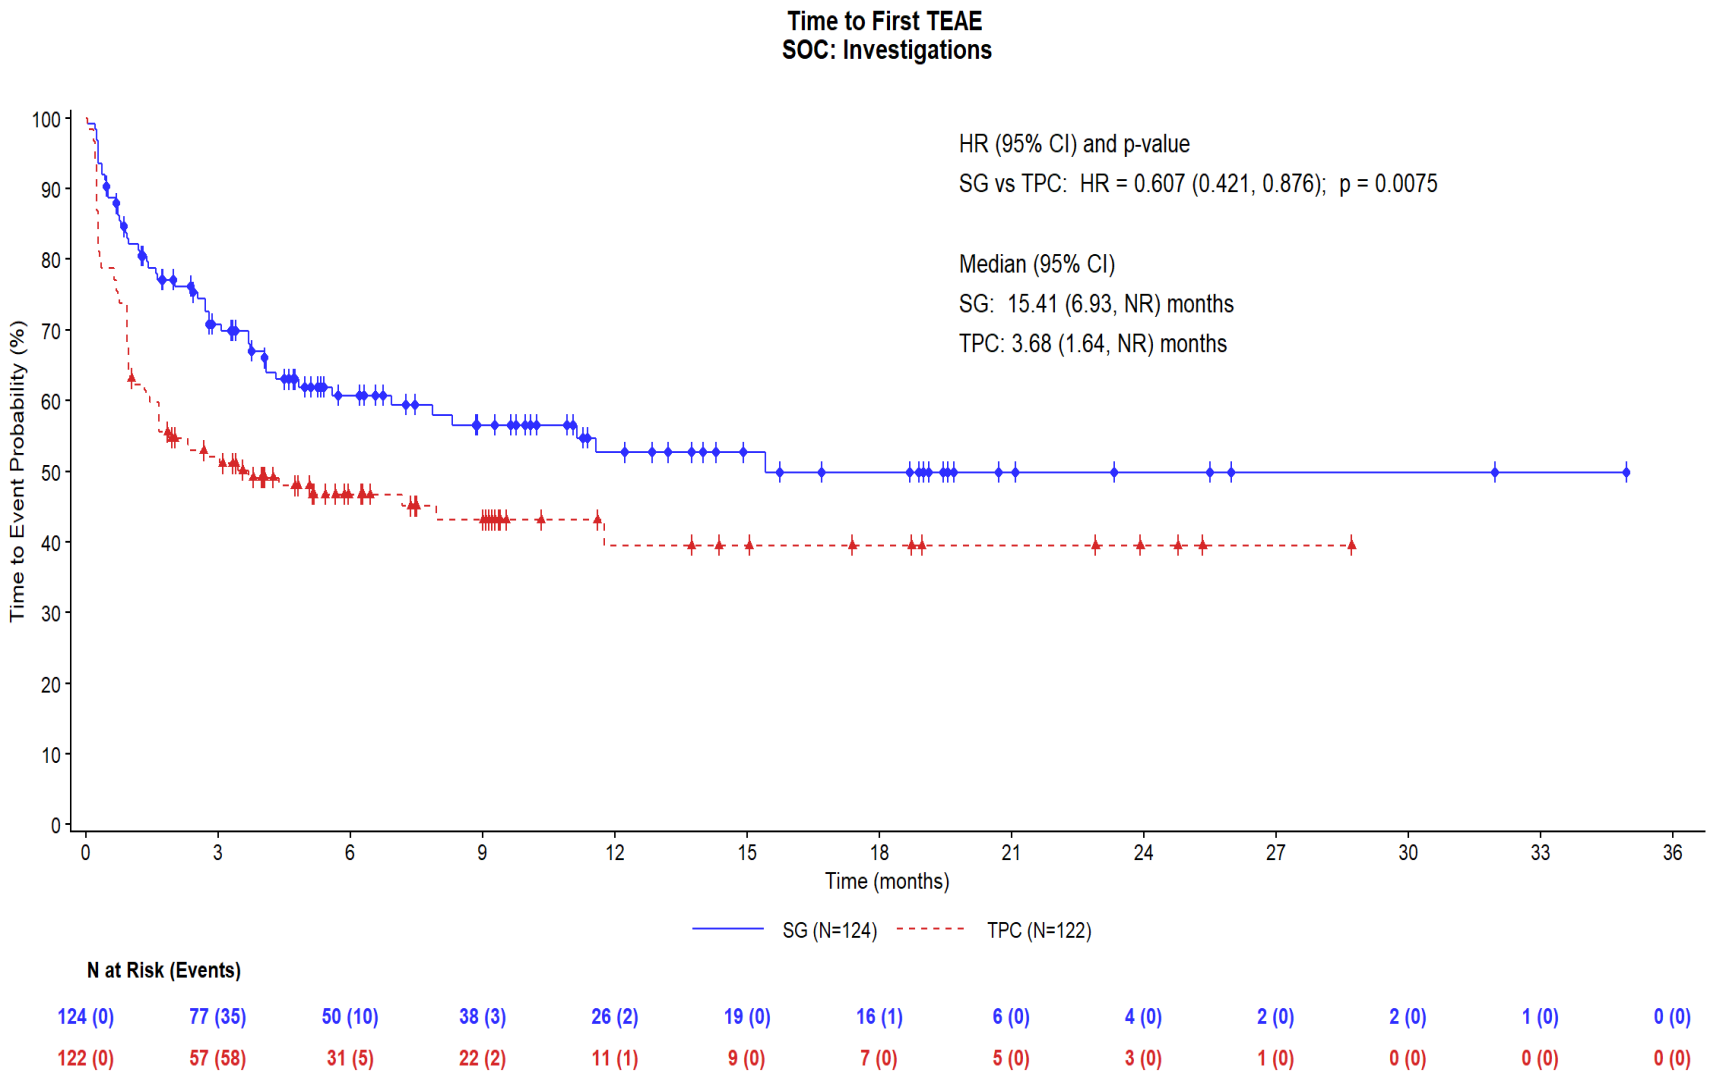
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.22. Figure 1.1.23: Kaplan Meier Plot of Time to First TEAE by SOC Immune system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



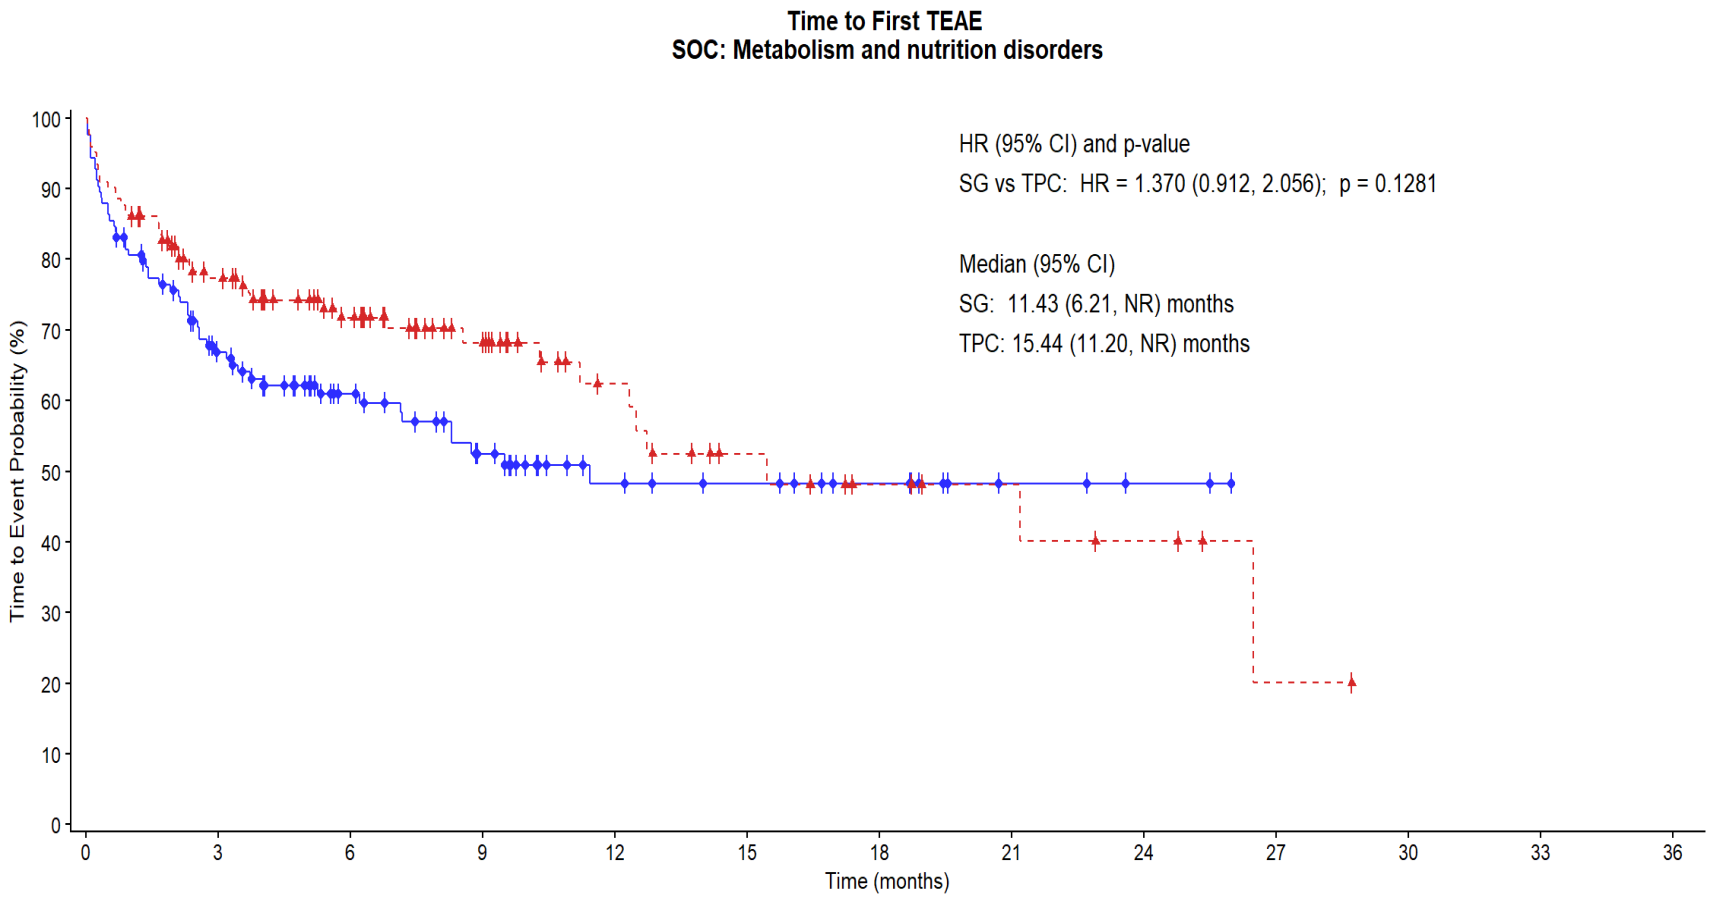
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.23. Figure 1.1.24: Kaplan Meier Plot of Time to First TEAE by SOC Infections and infestations — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



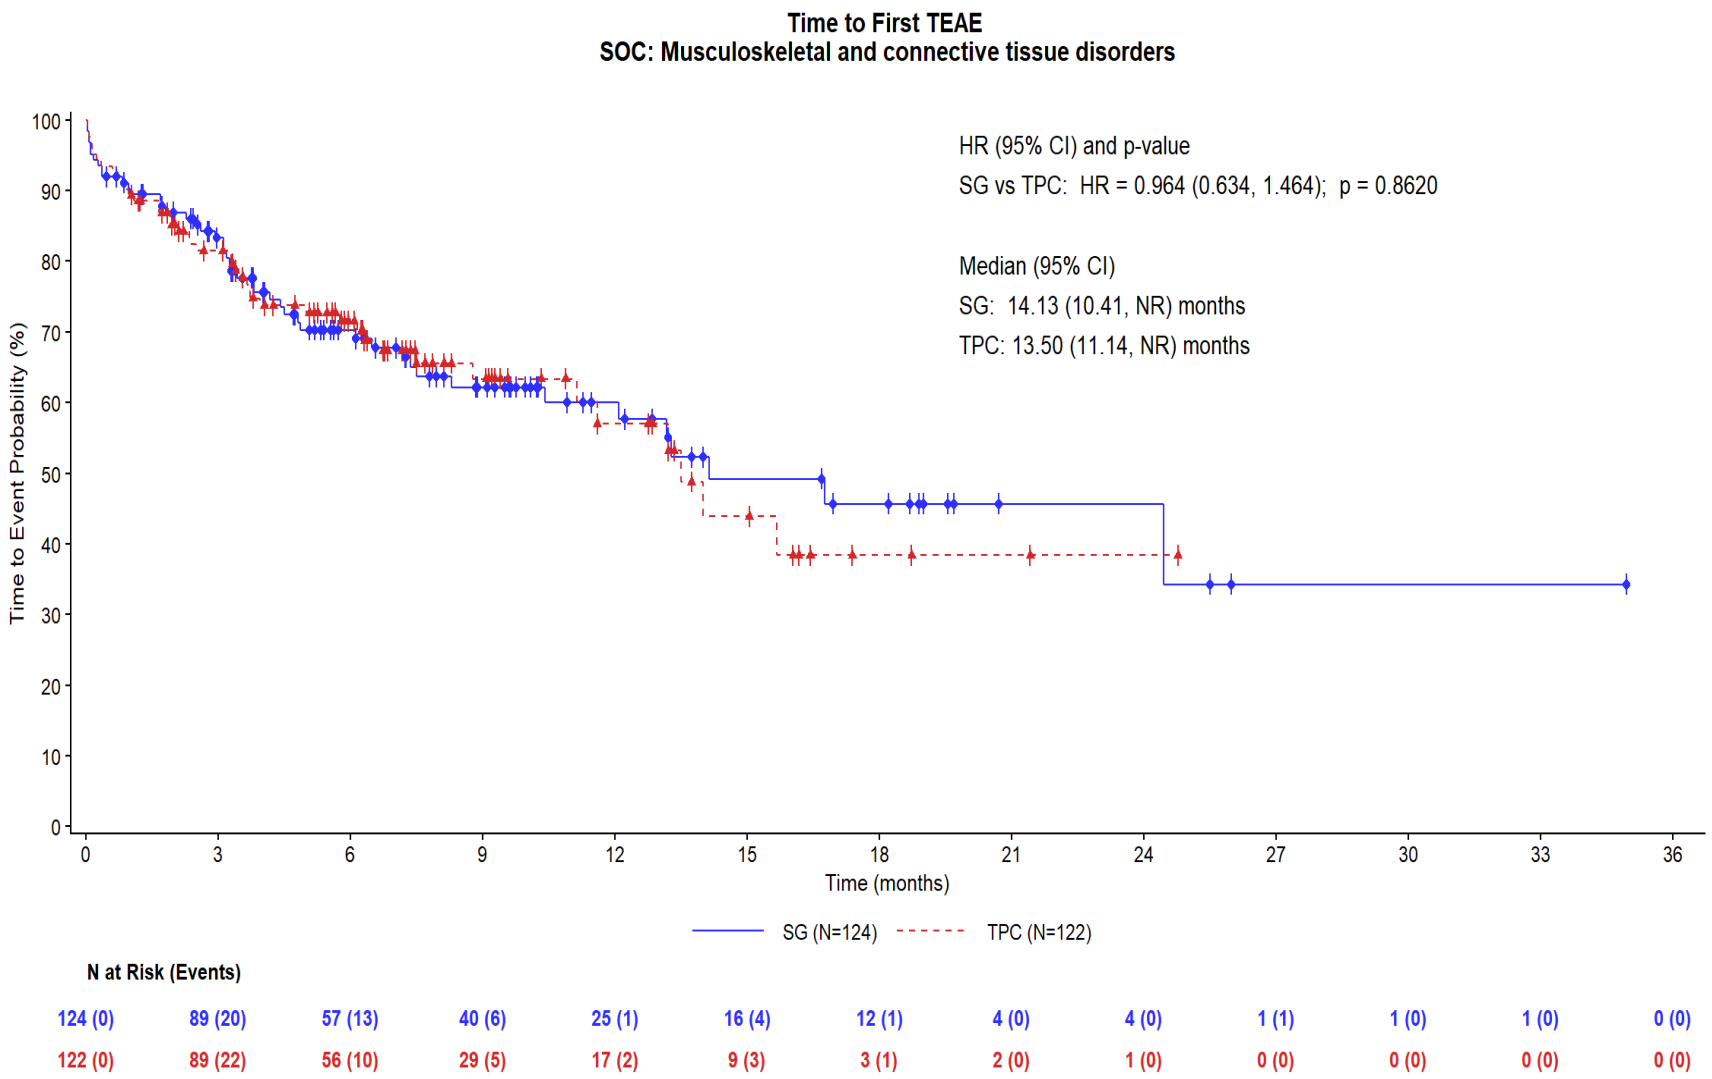
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.24. Figure 1.1.25: Kaplan Meier Plot of Time to First TEAE by SOC Injury poisoning and procedural complications — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



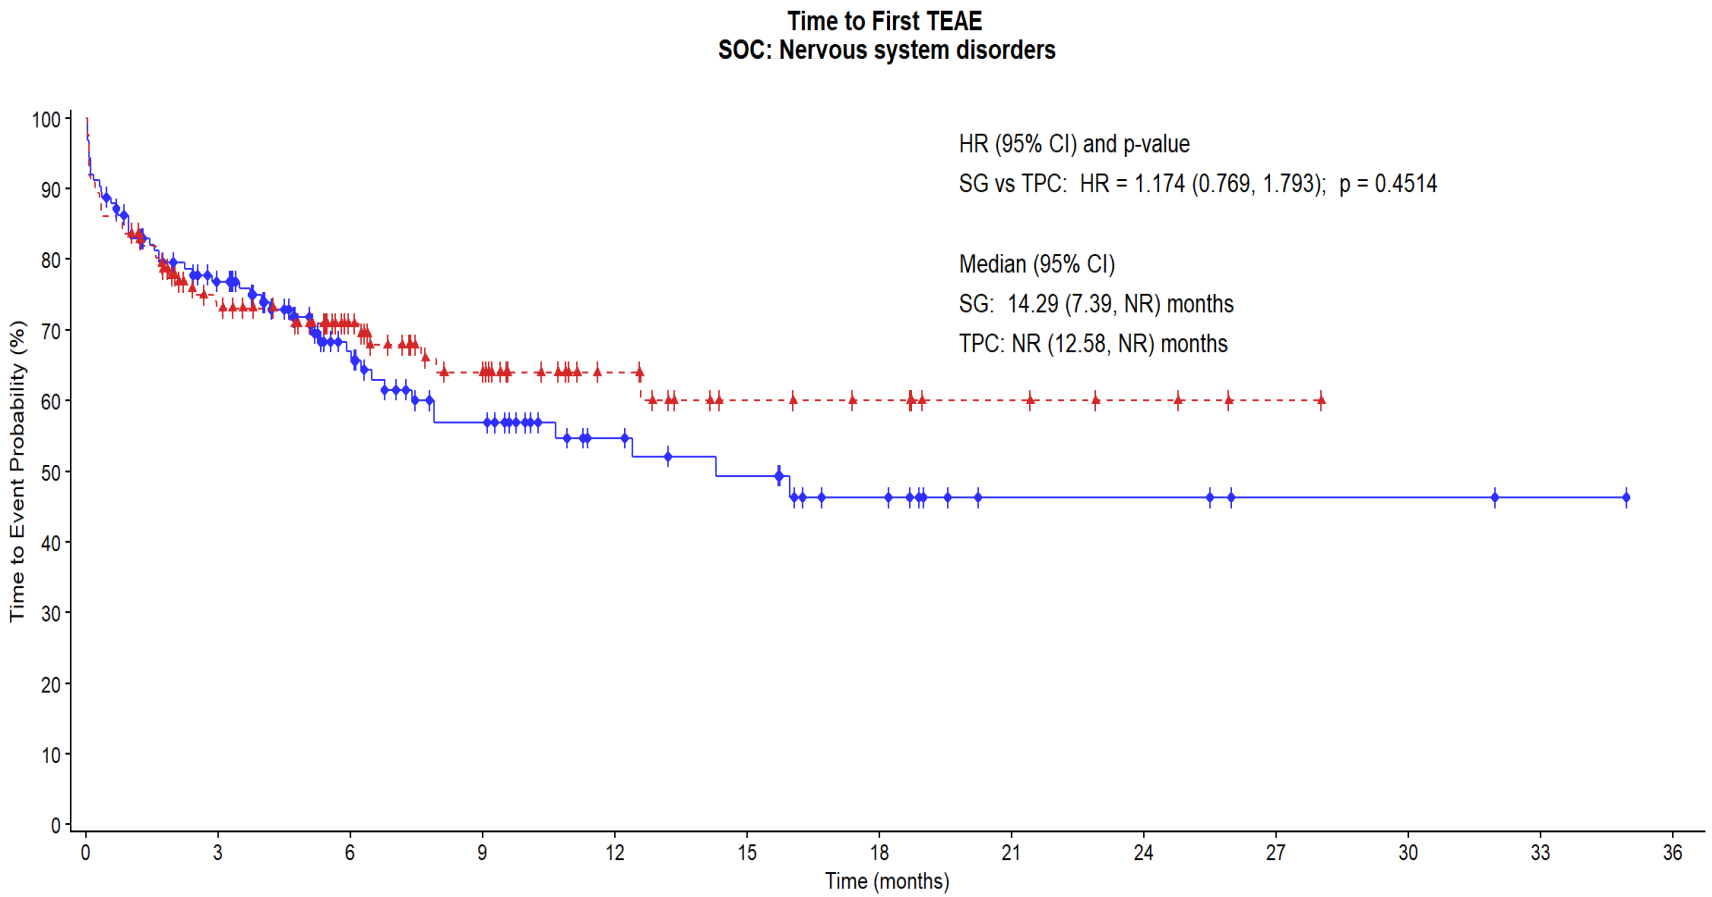
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.25. Figure 1.1.26: Kaplan Meier Plot of Time to First TEAE by SOC Investigations — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



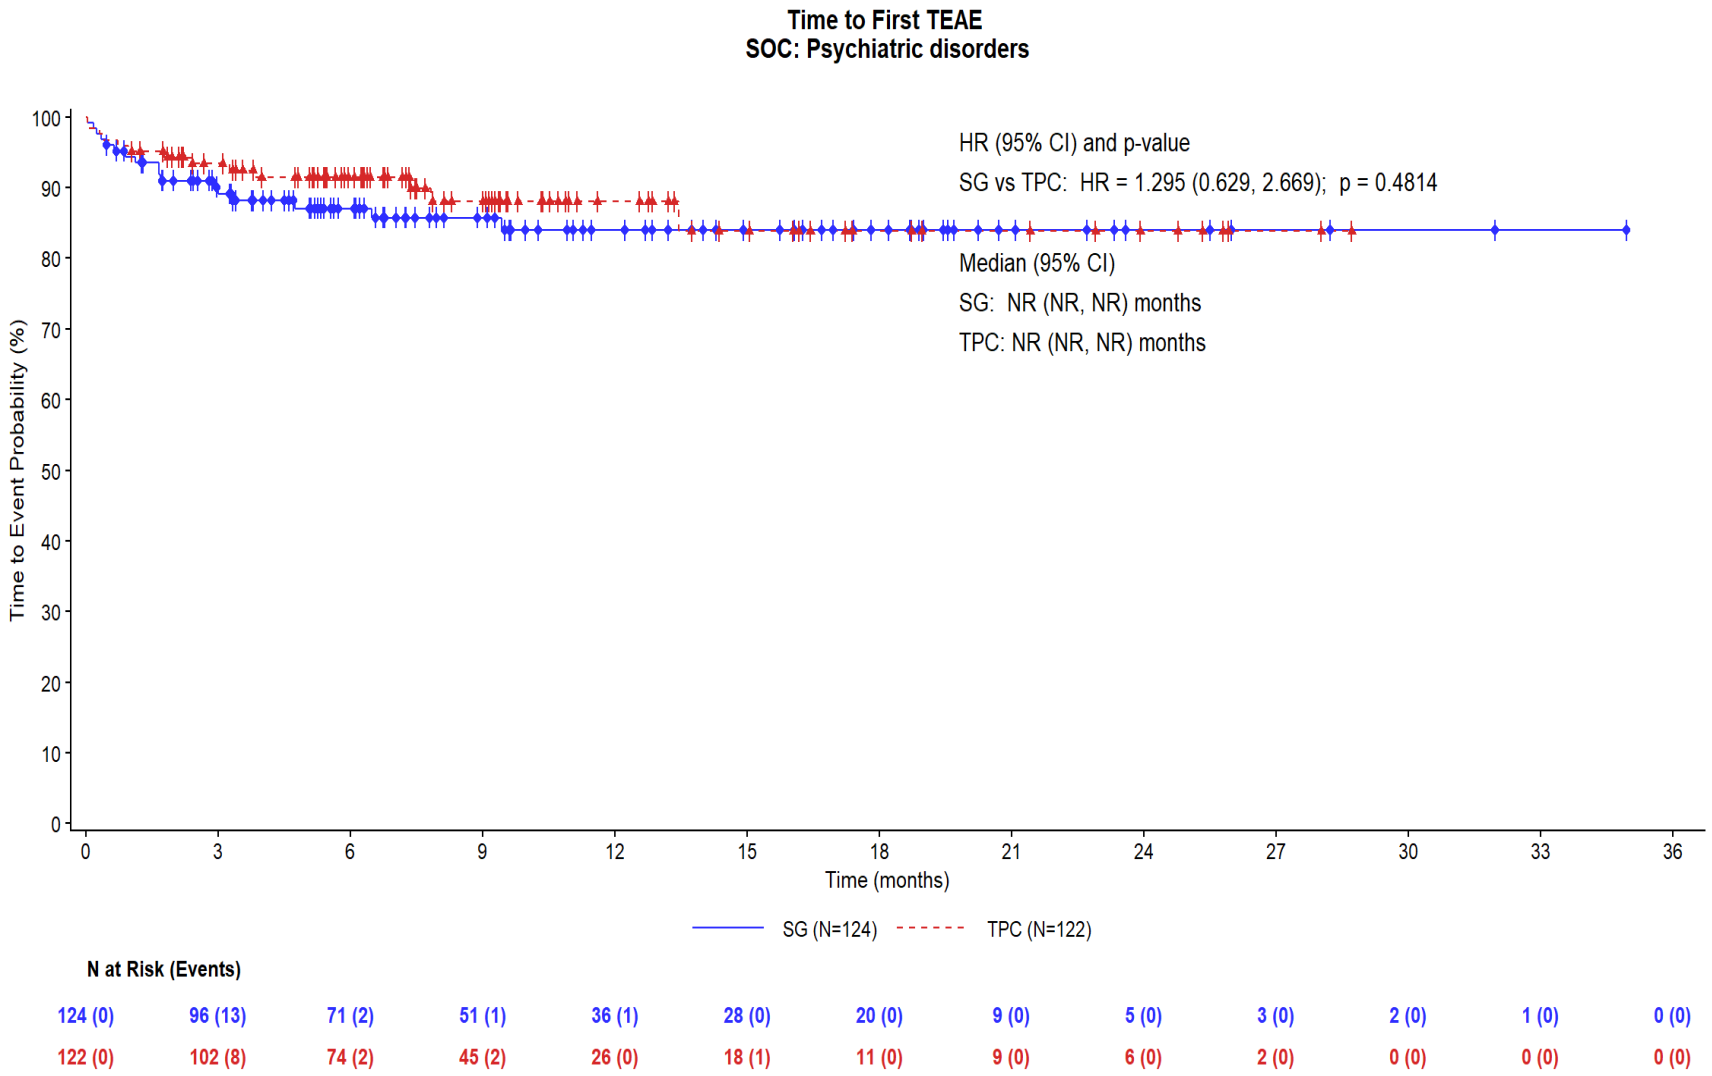
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.26. Figure 1.1.27: Kaplan Meier Plot of Time to First TEAE by SOC Metabolism and nutrition disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



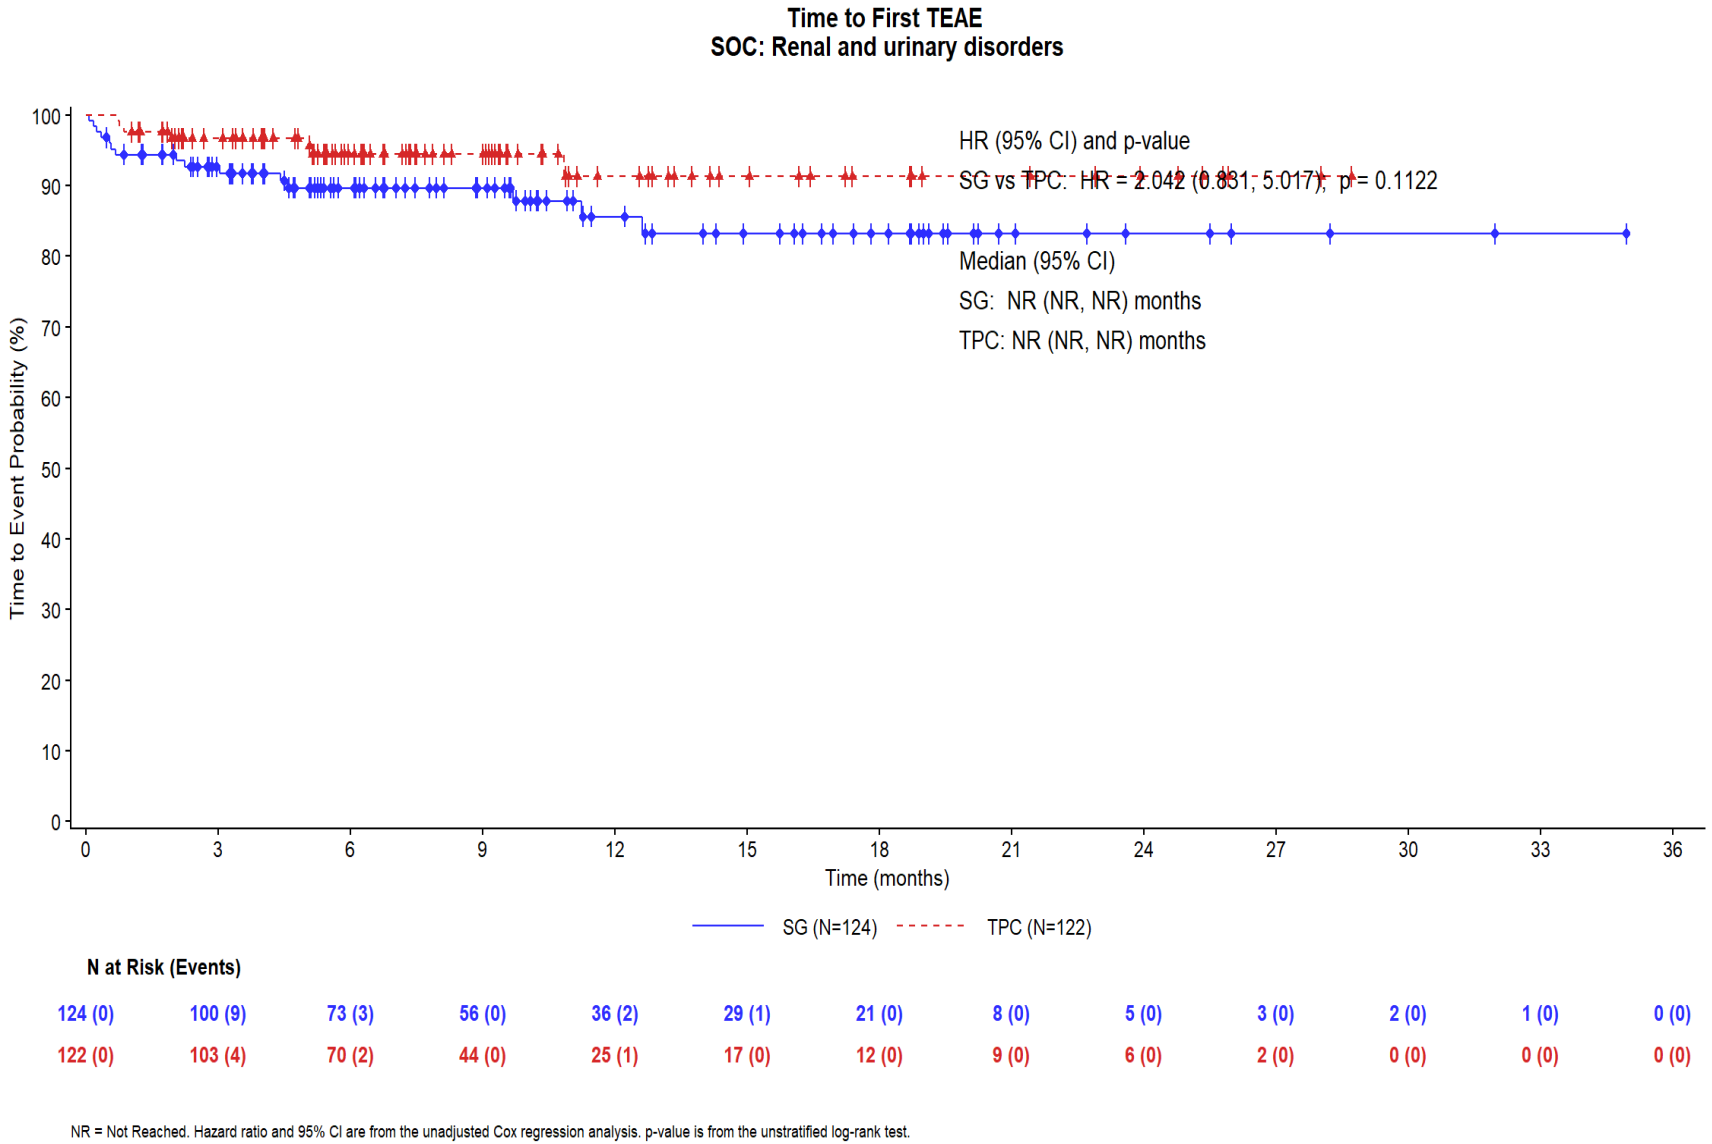
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.27. Figure 1.1.28: Kaplan Meier Plot of Time to First TEAE by SOC Musculoskeletal and connective tissue disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



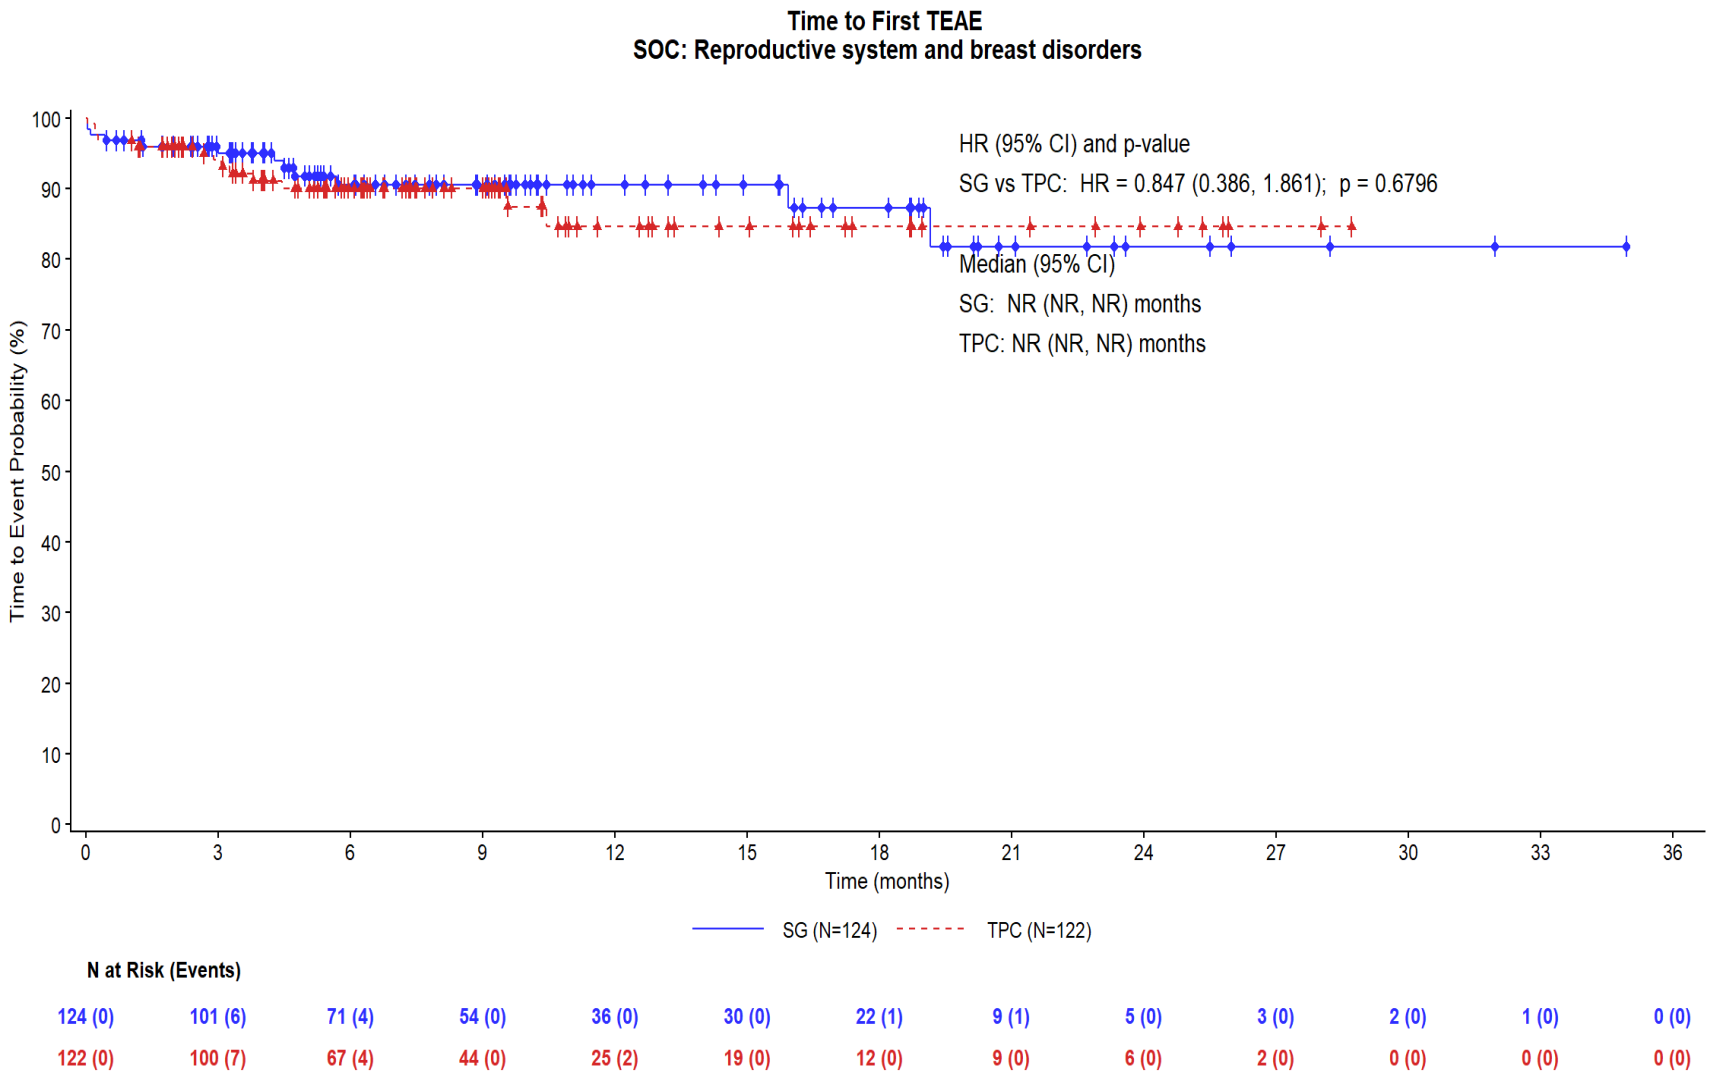
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.28. Figure 1.1.29: Kaplan Meier Plot of Time to First TEAE by SOC Nervous system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



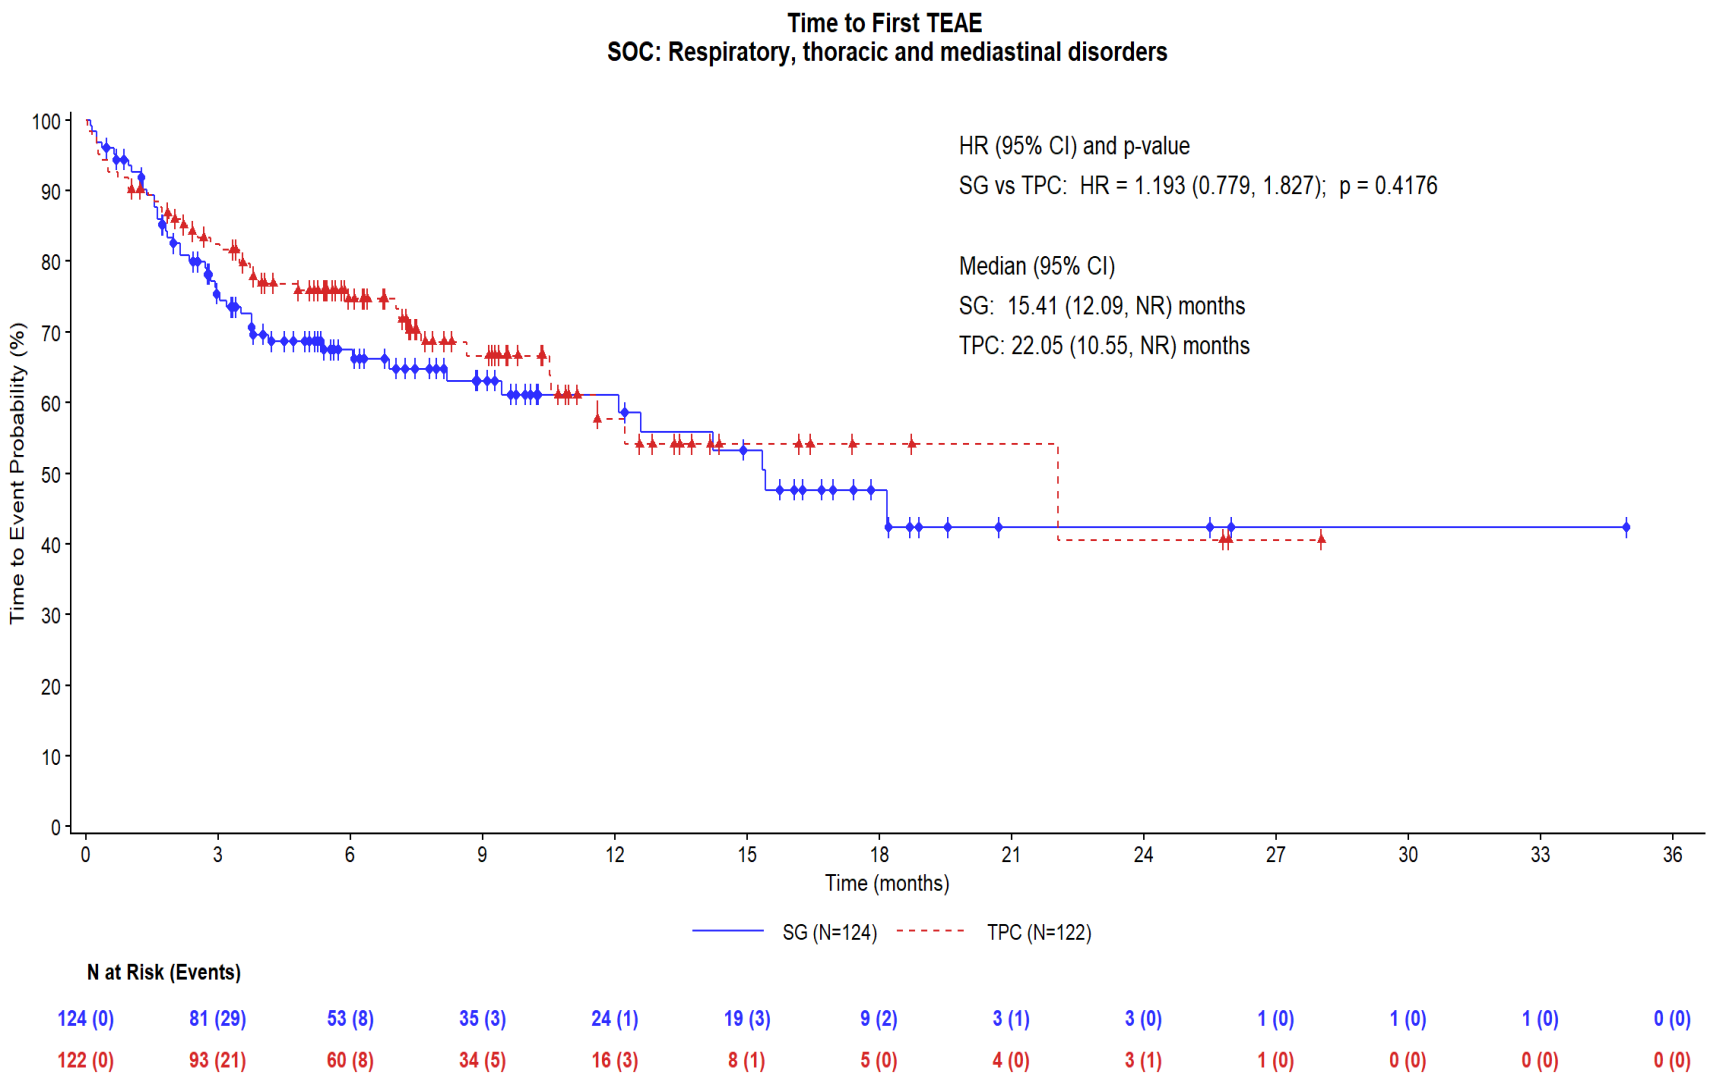
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.29. Figure 1.1.30: Kaplan Meier Plot of Time to First TEAE by SOC Psychiatric disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



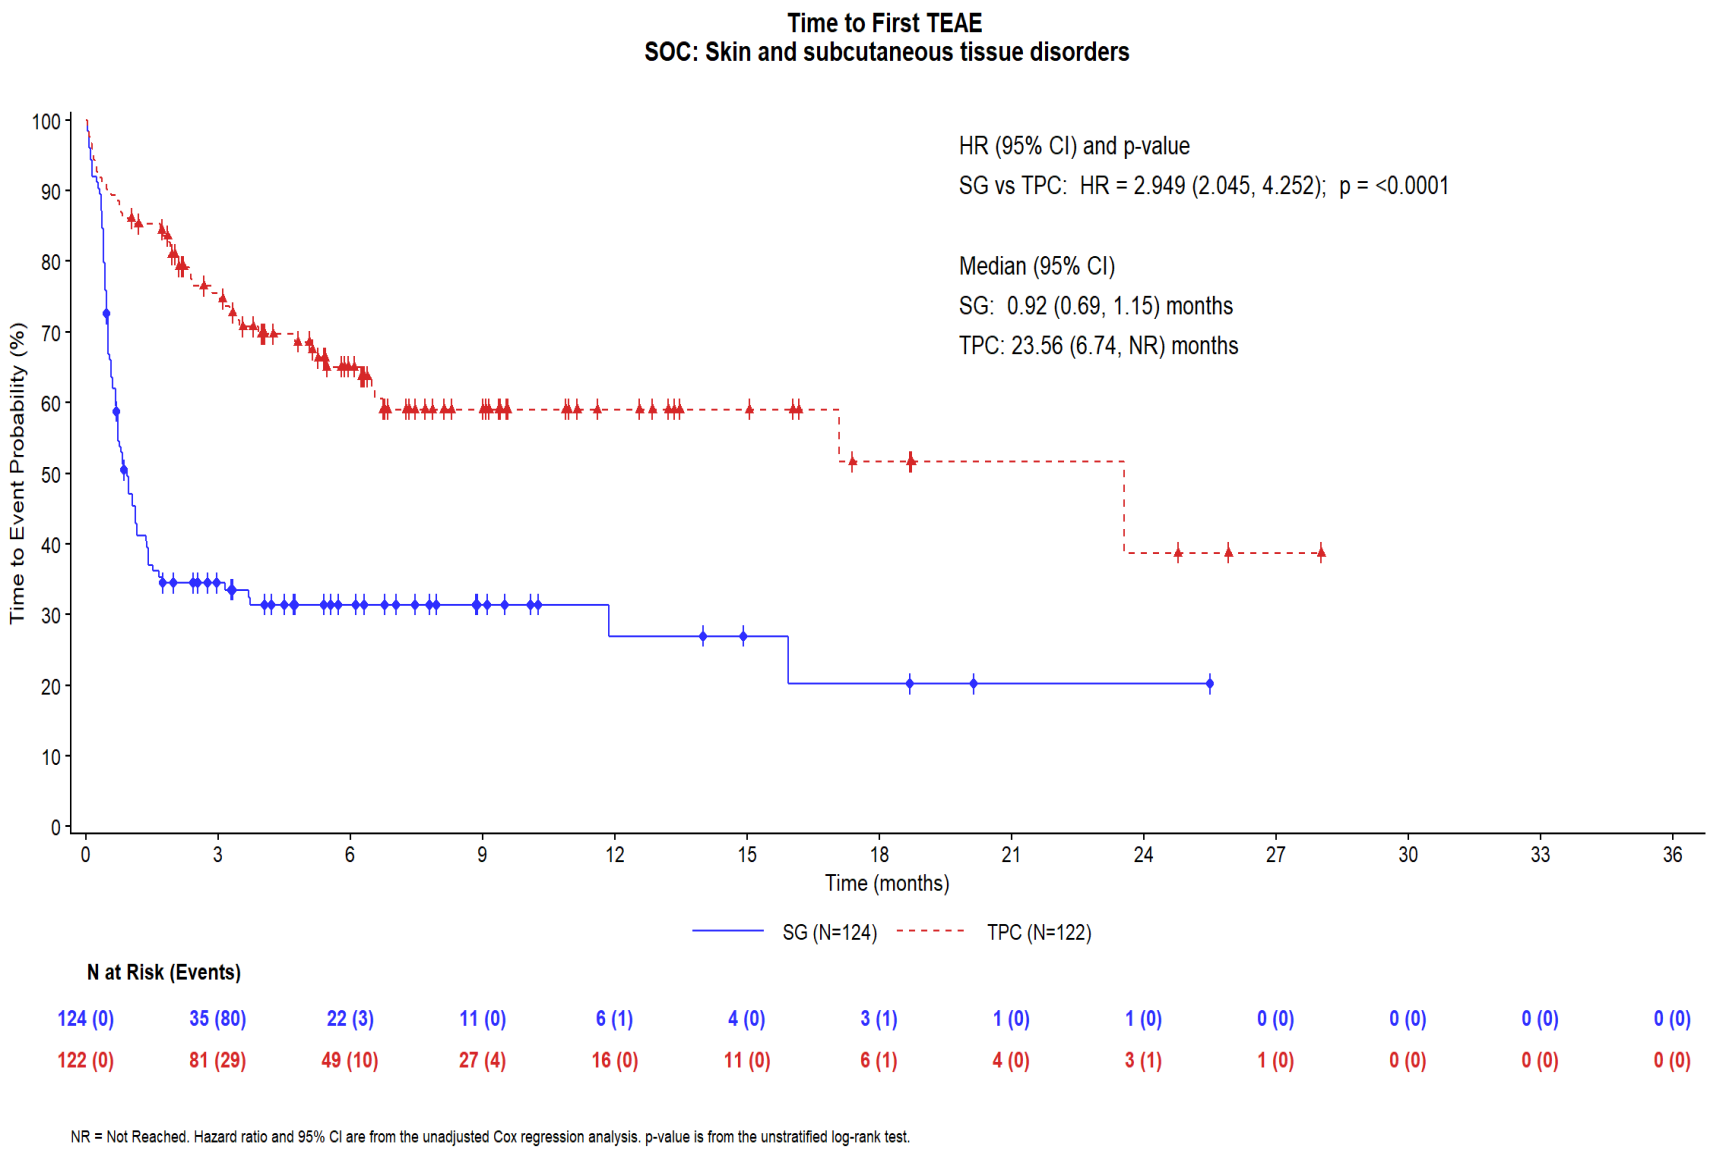
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.30. Figure 1.1.31: Kaplan Meier Plot of Time to First TEAE by SOC Renal and urinary disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



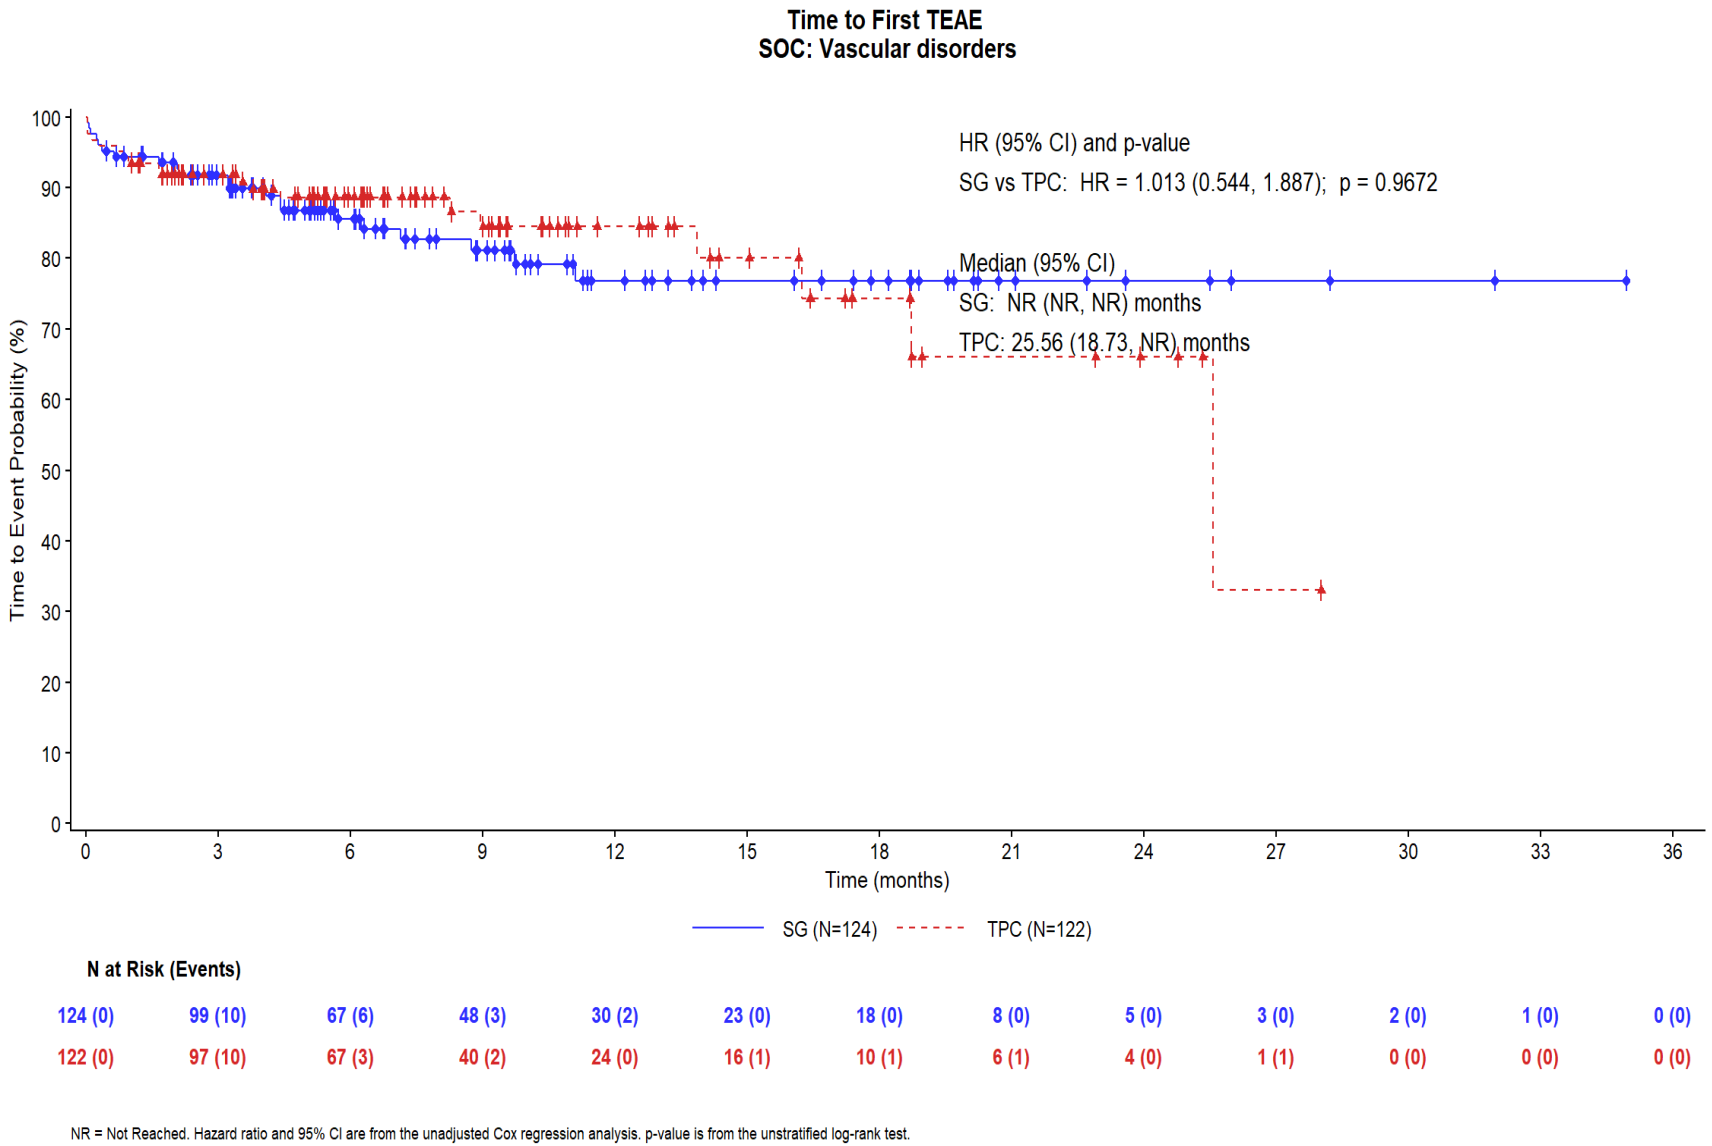
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.31. Figure 1.1.32: Kaplan Meier Plot of Time to First TEAE by SOC Reproductive system and breast disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



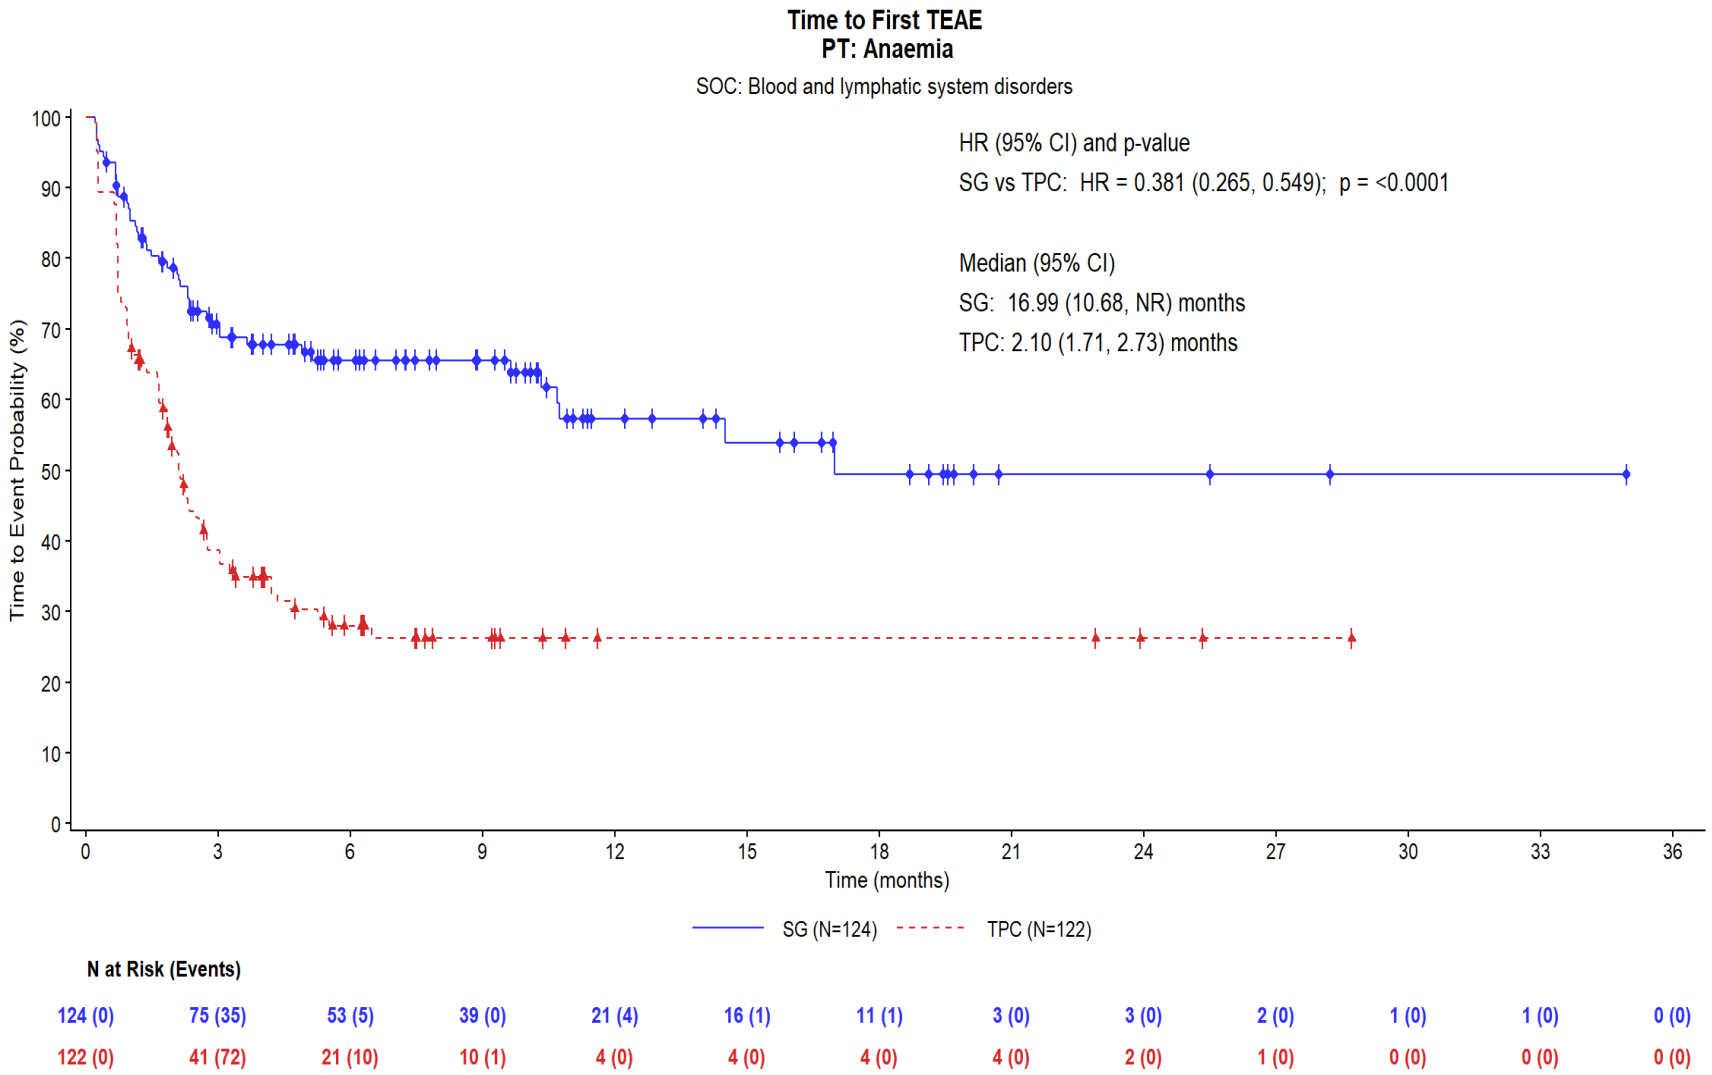
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.32. Figure 1.1.33: Kaplan Meier Plot of Time to First TEAE by SOC Respiratory thoracic and mediastinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



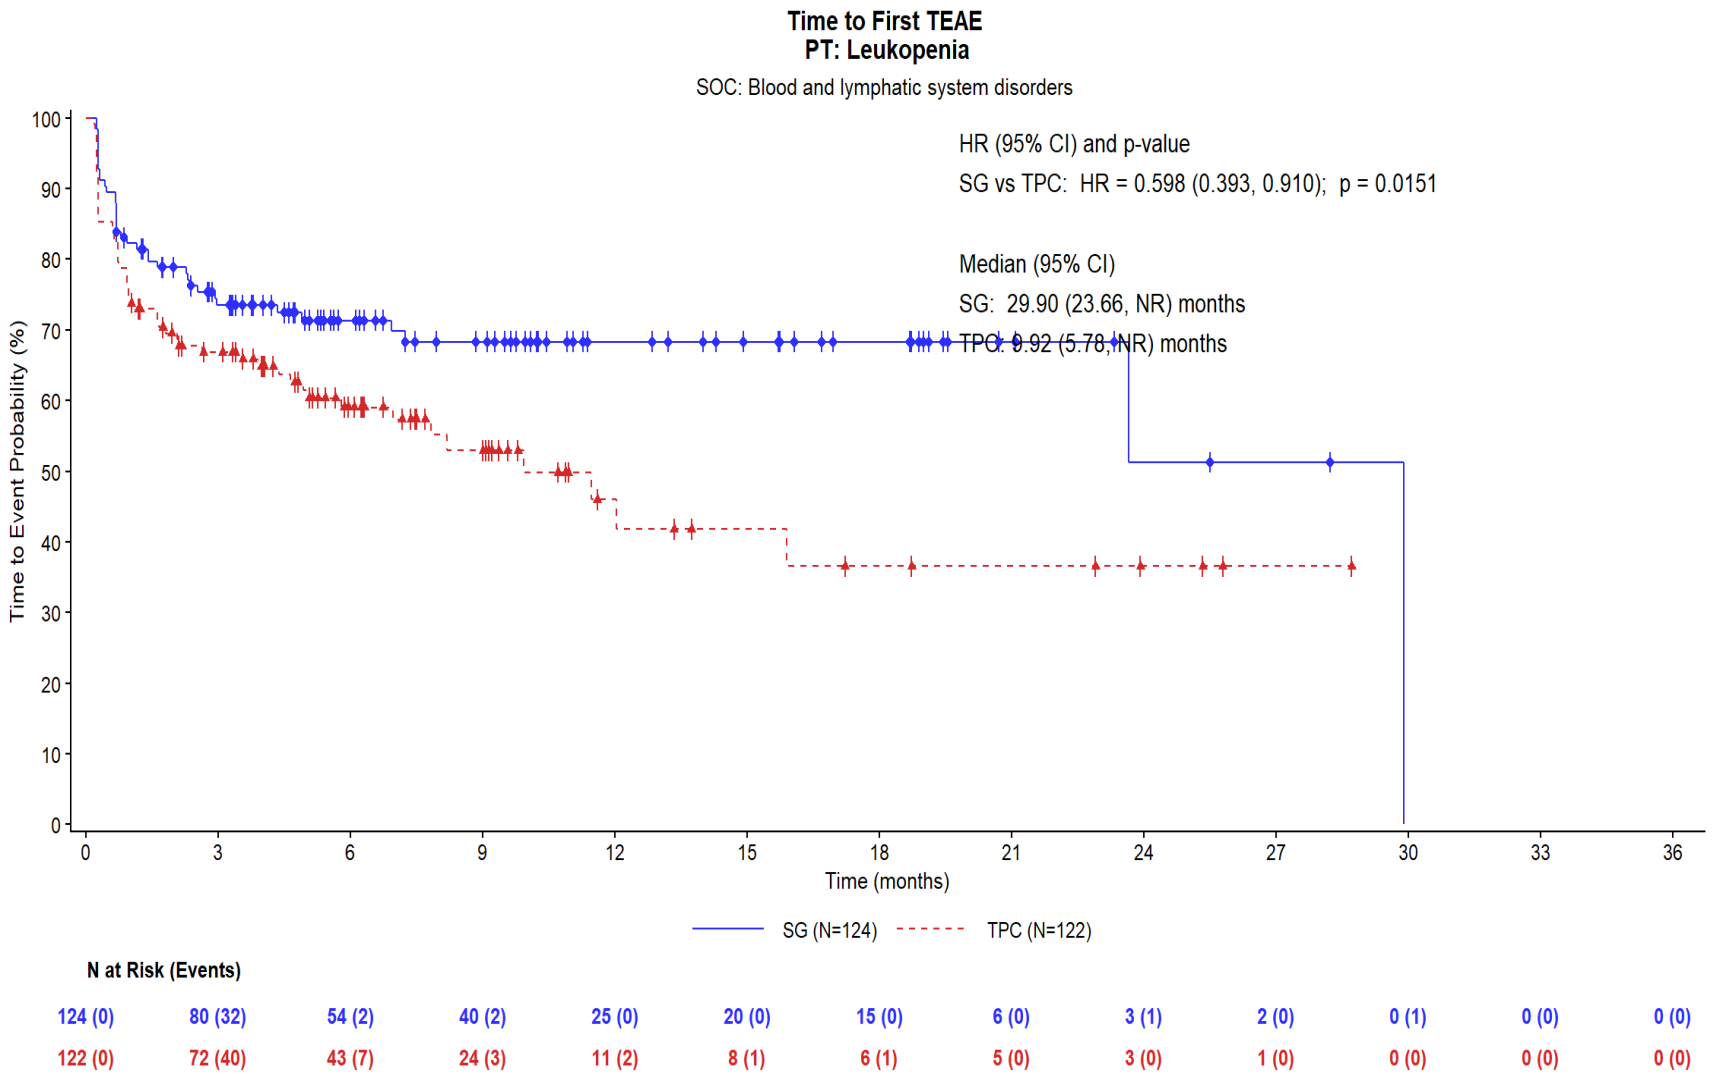
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.33. Figure 1.1.34: Kaplan Meier Plot of Time to First TEAE by SOC Skin and subcutaneous tissue disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



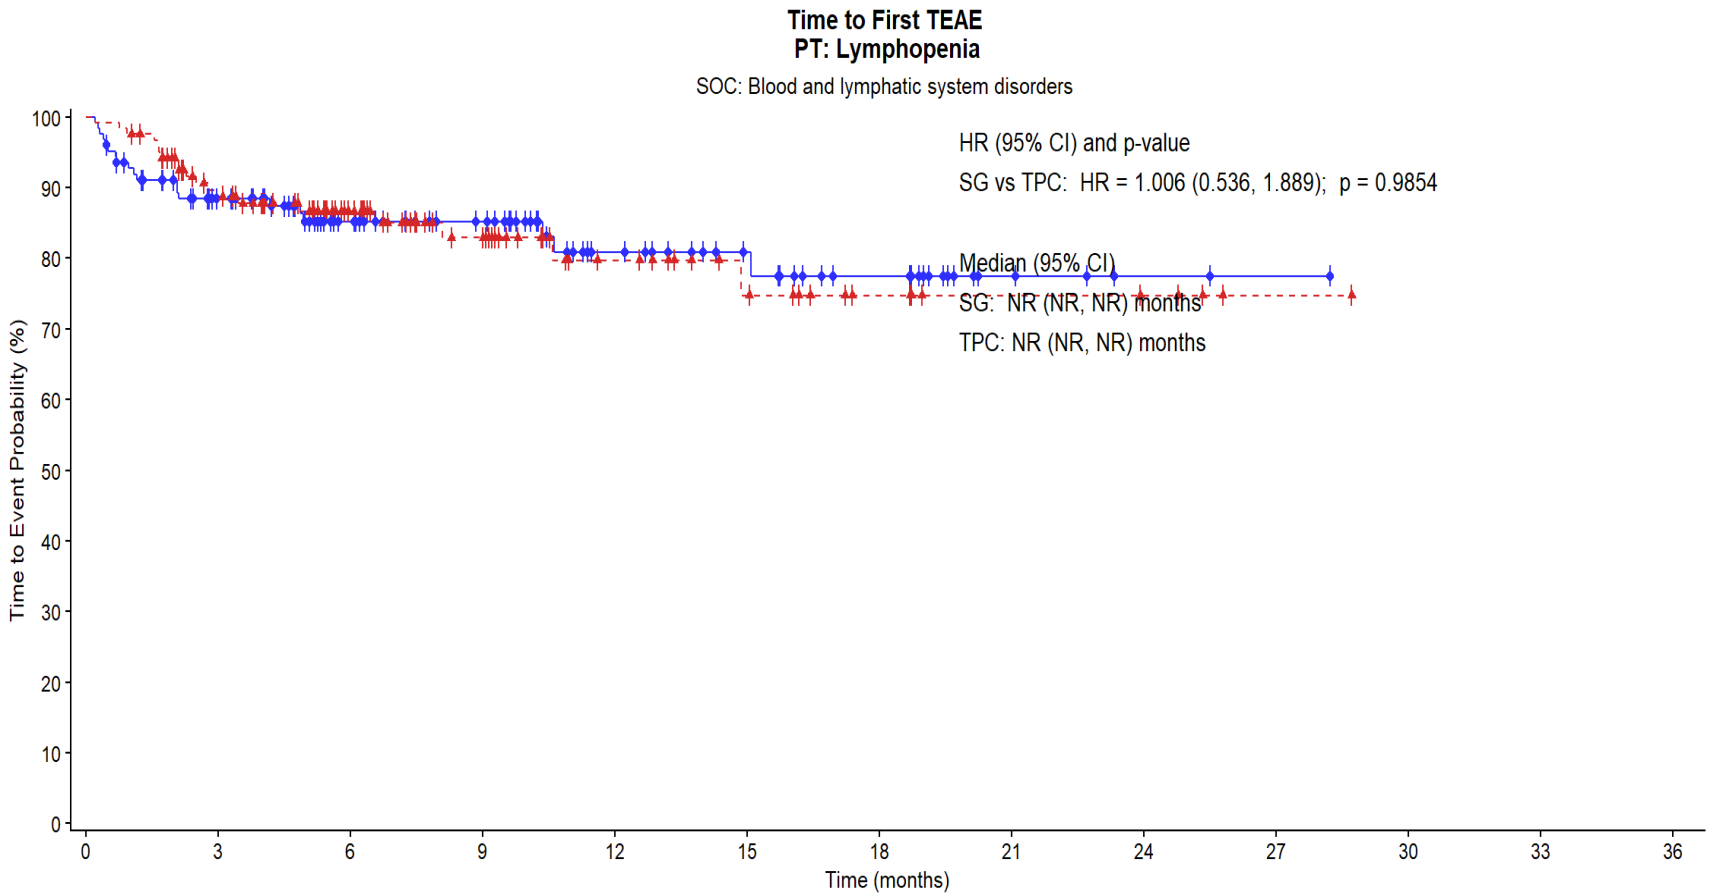
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.34. Figure 1.1.35: Kaplan Meier Plot of Time to First TEAE by SOC Vascular disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



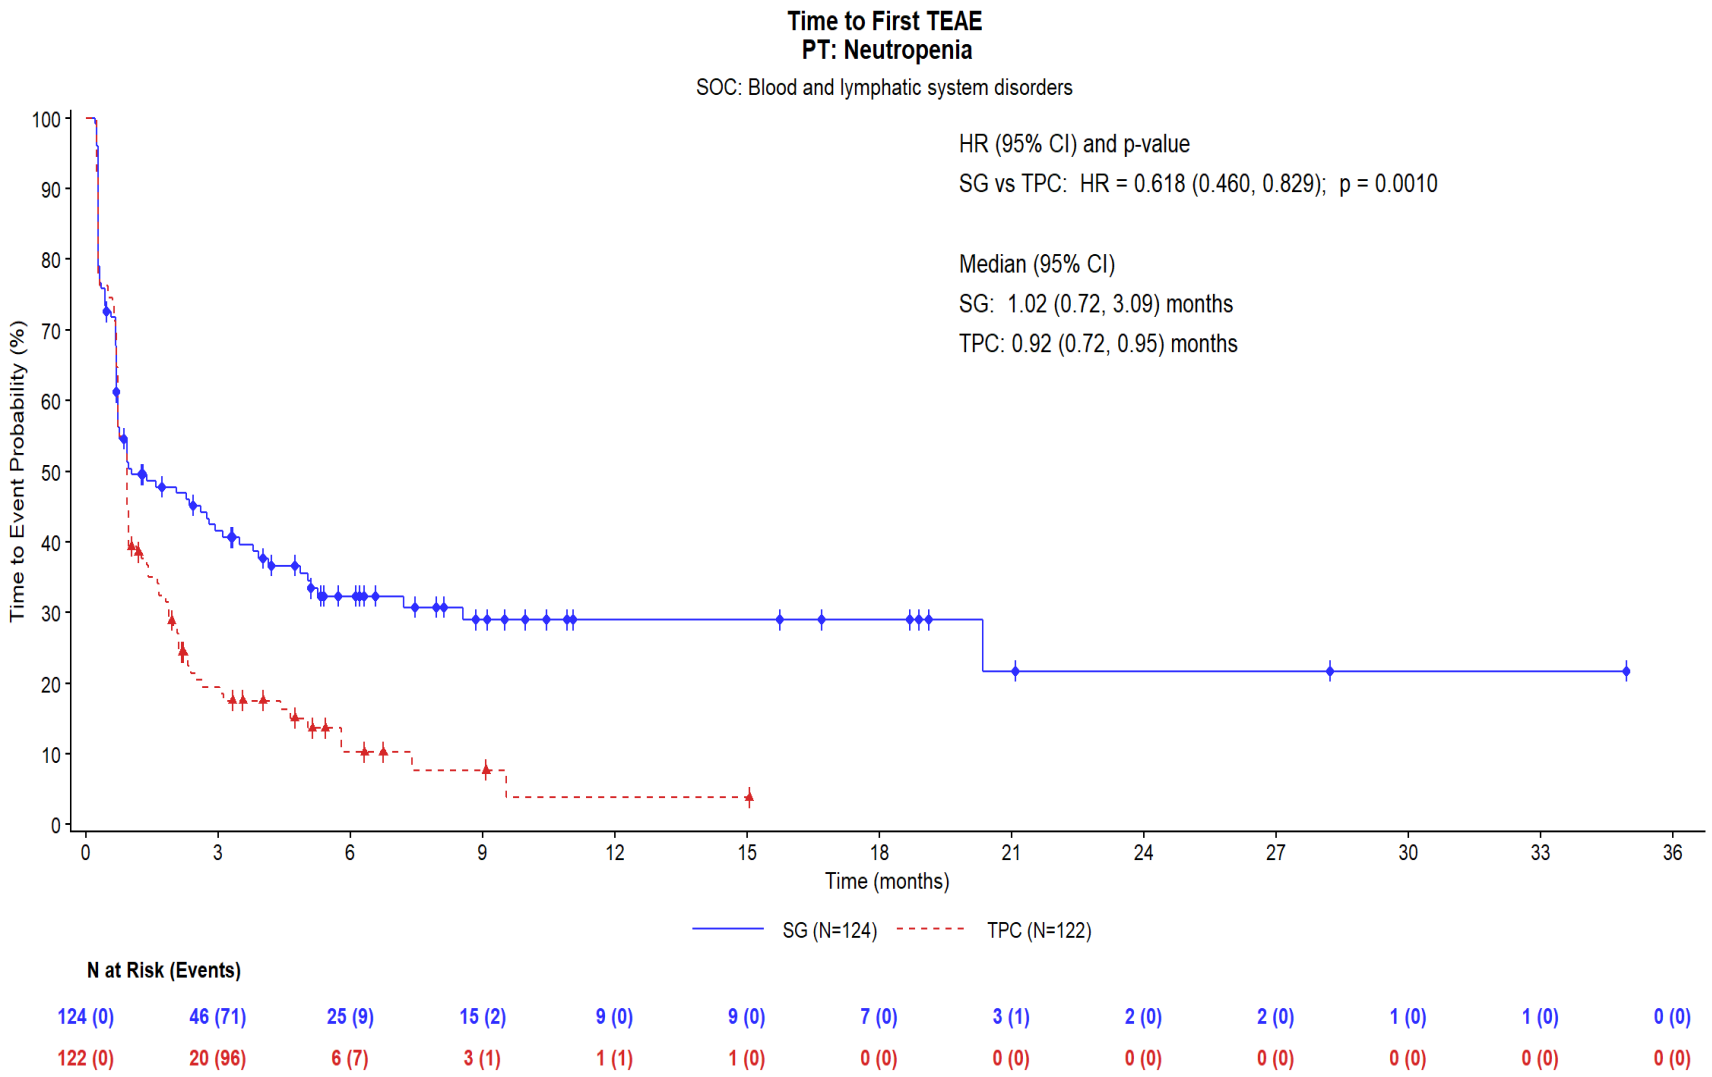
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.35. Figure 1.1.36: Kaplan Meier Plot of Time to First TEAE by PT Anaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



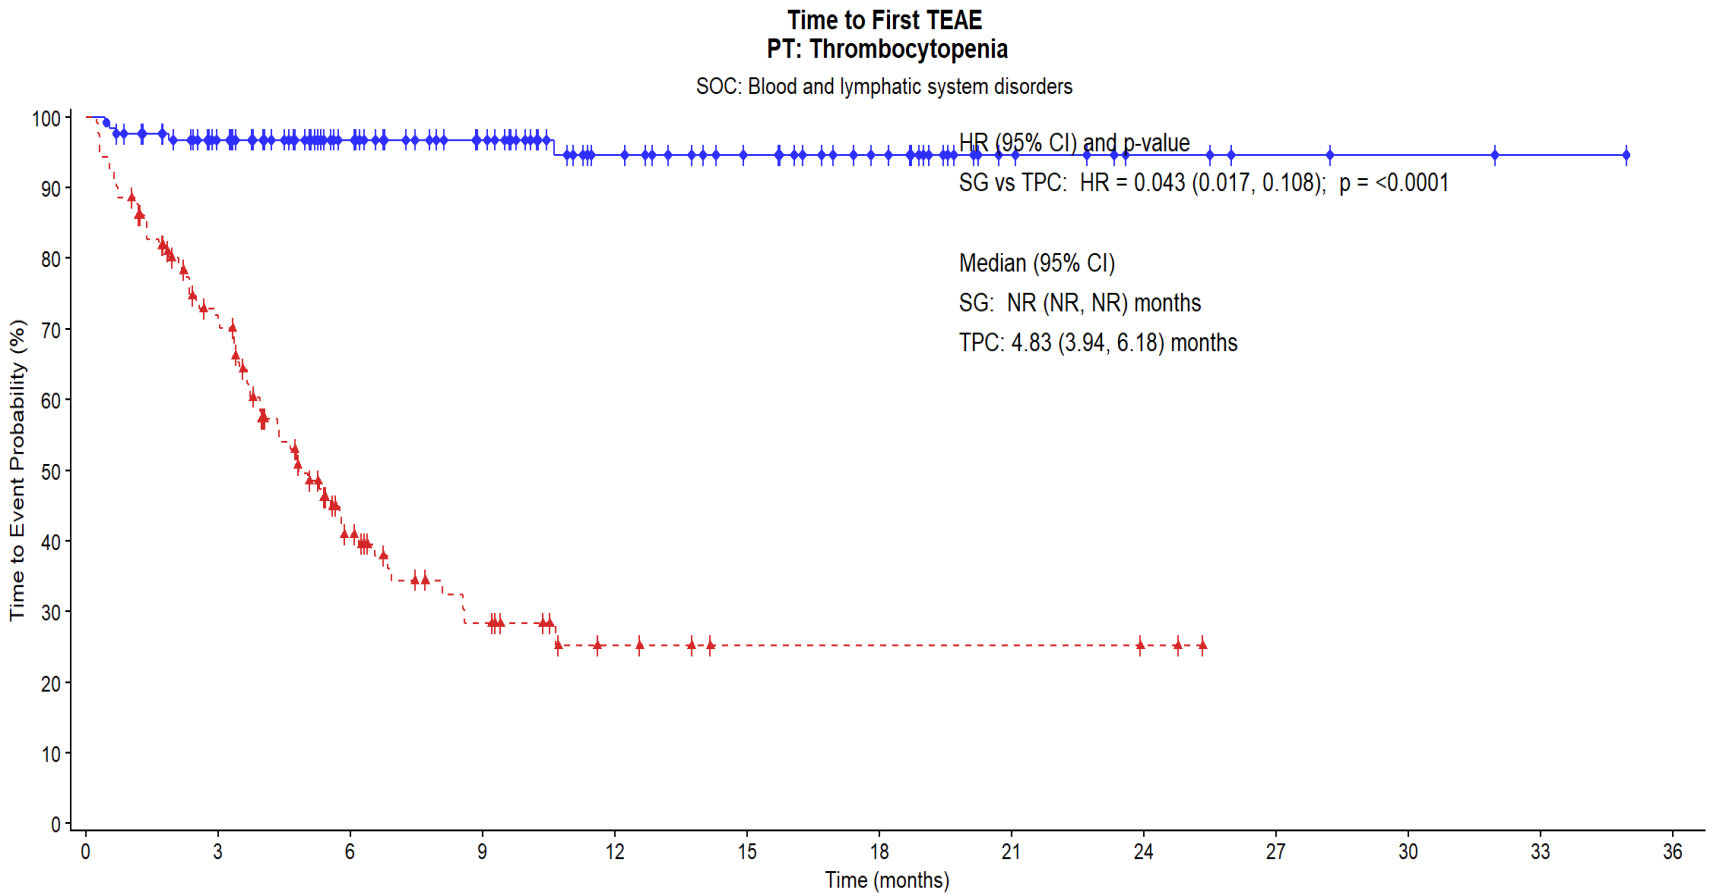
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.36. Figure 1.1.37: Kaplan Meier Plot of Time to First TEAE by PT Leukopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



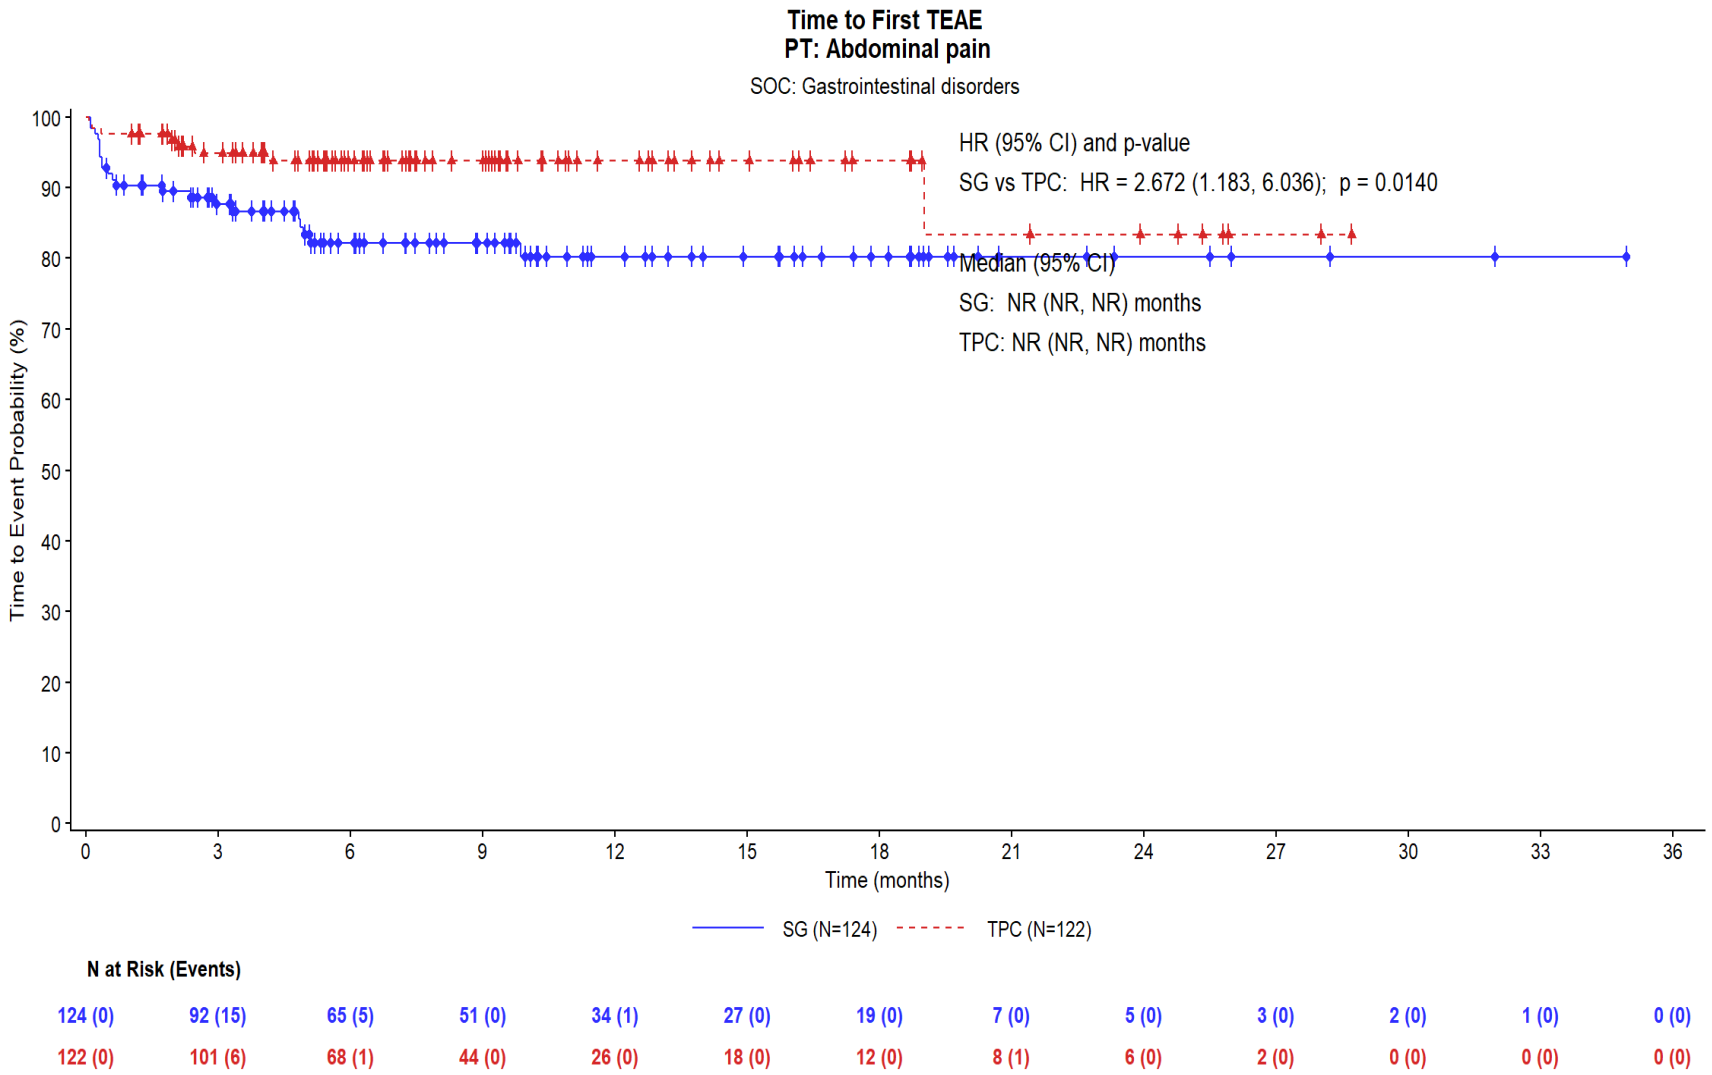
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.37. Figure 1.1.38: Kaplan Meier Plot of Time to First TEAE by PT Lymphopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



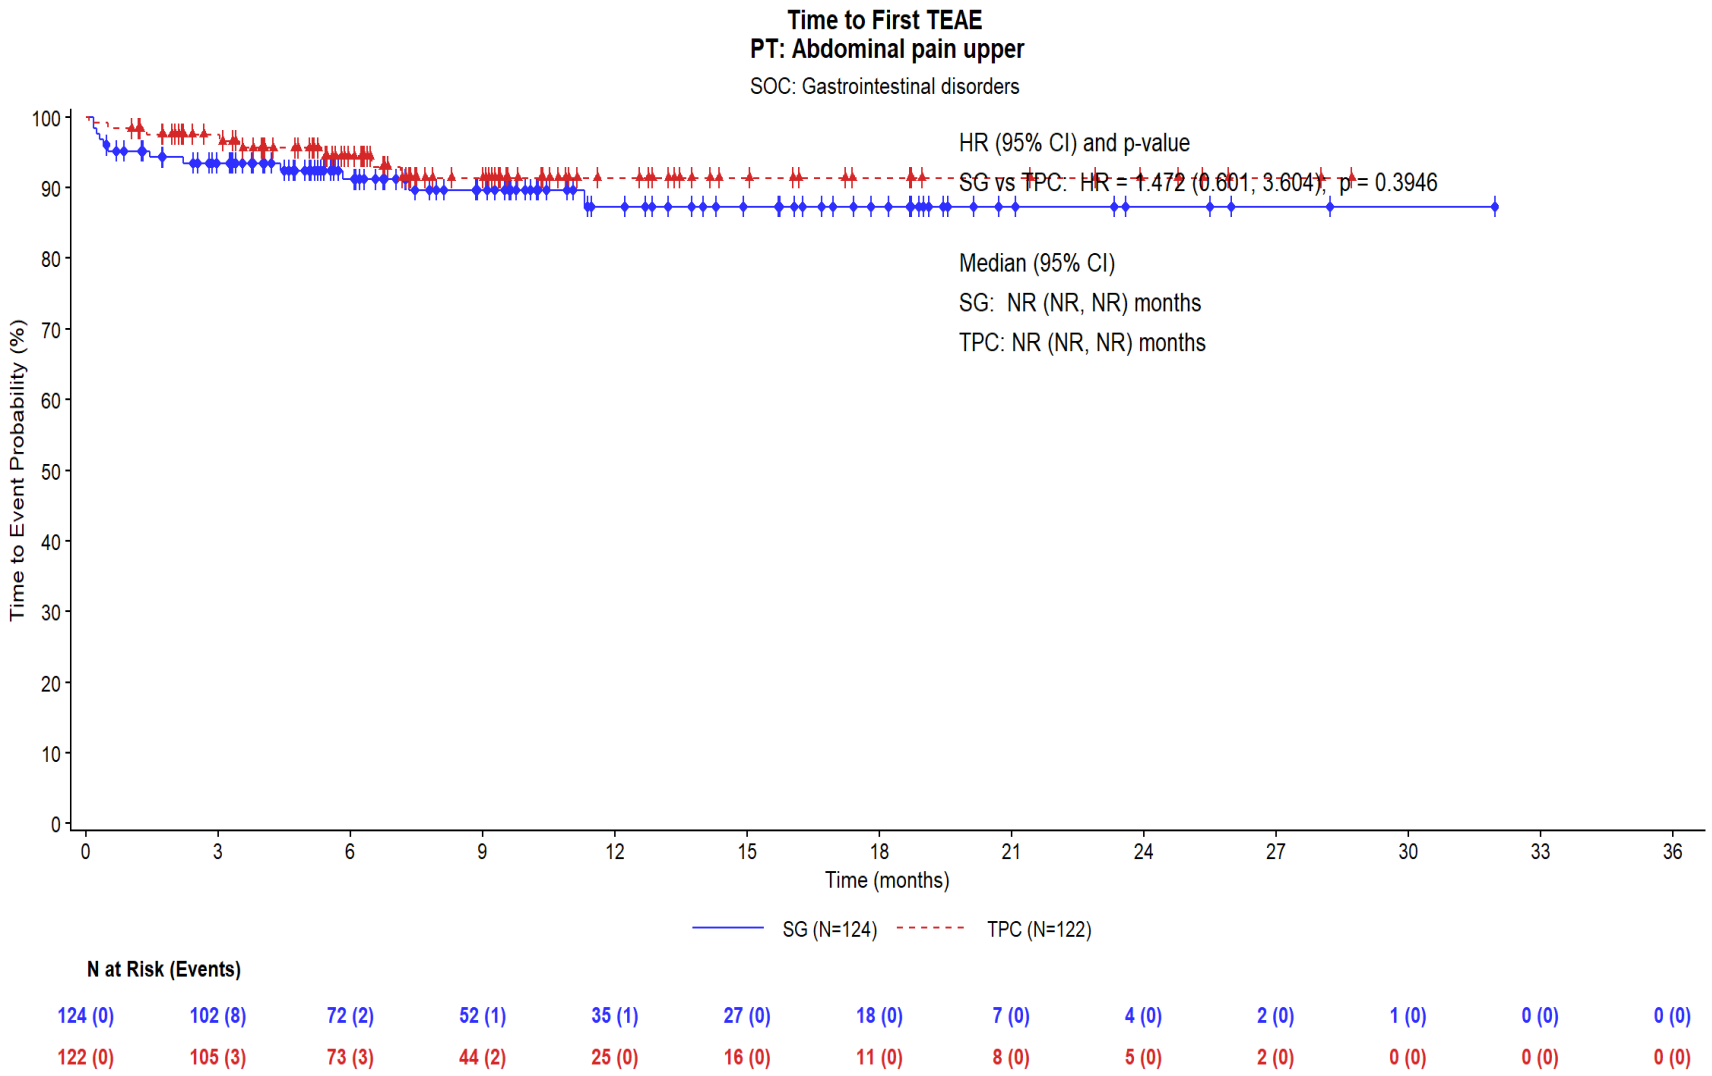
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.38. Figure 1.1.39: Kaplan Meier Plot of Time to First TEAE by PT Neutropenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



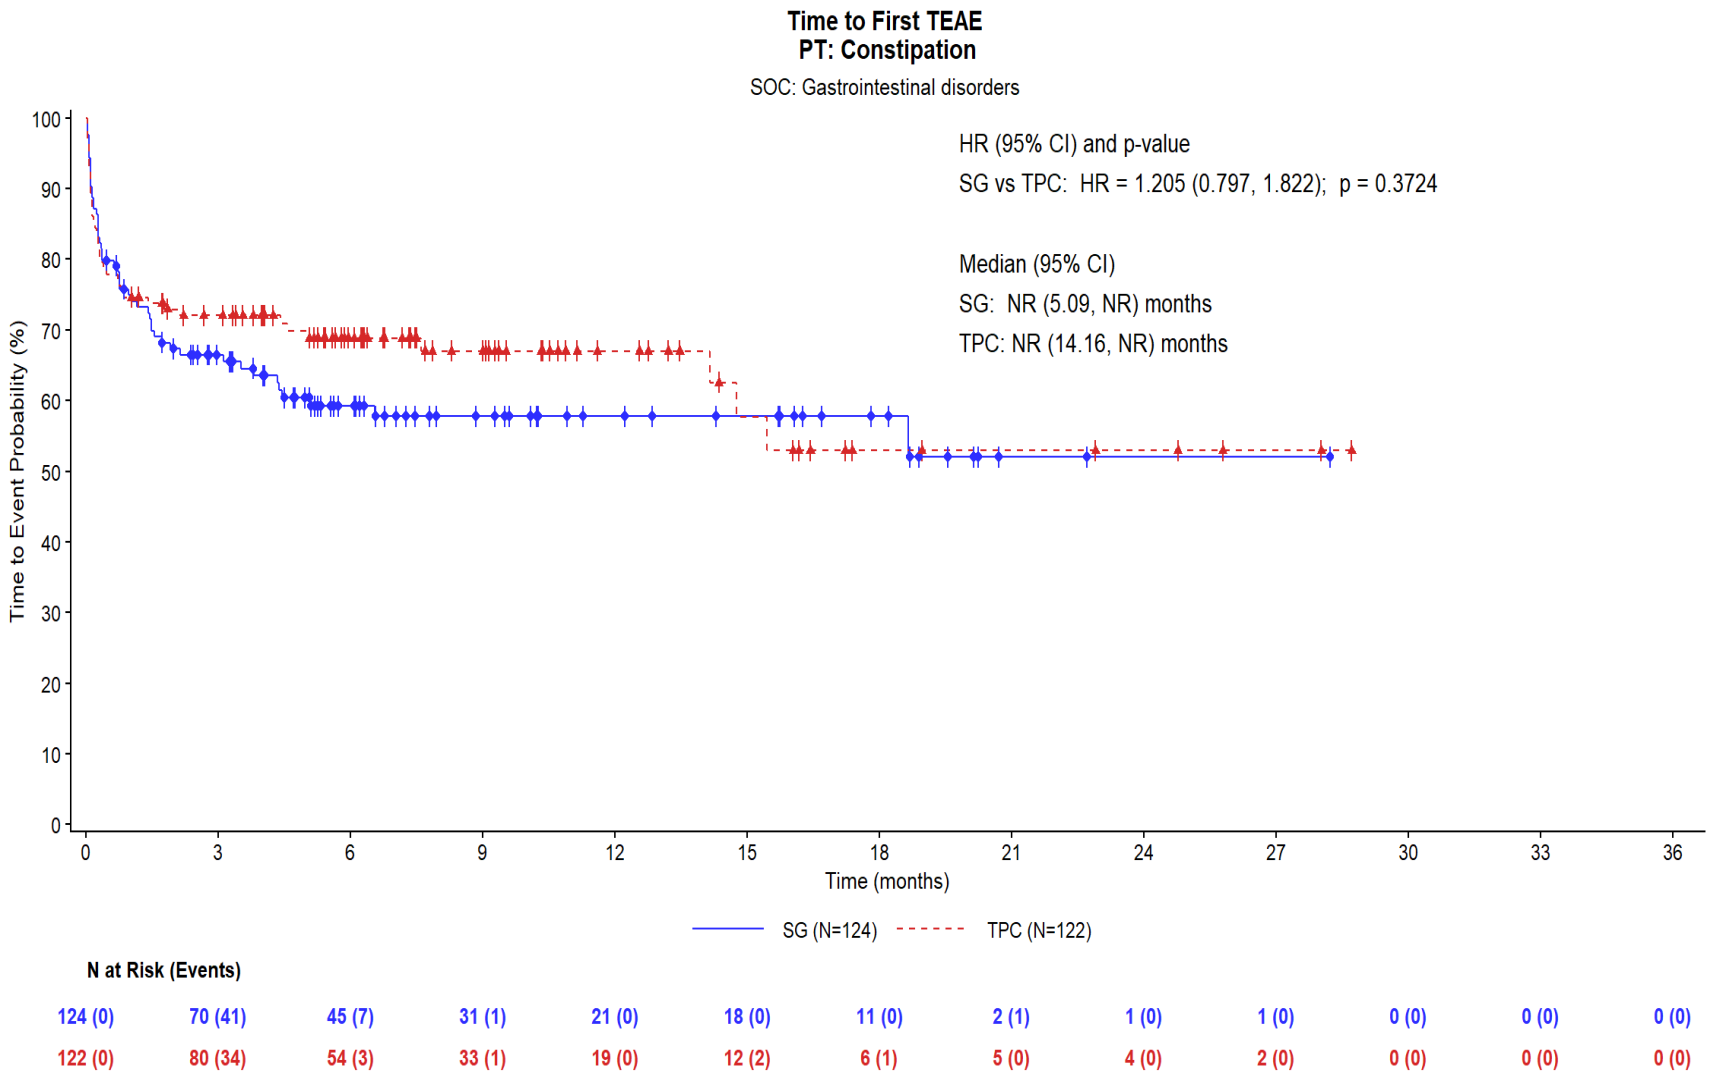
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.39. Figure 1.1.40: Kaplan Meier Plot of Time to First TEAE by PT Thrombocytopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



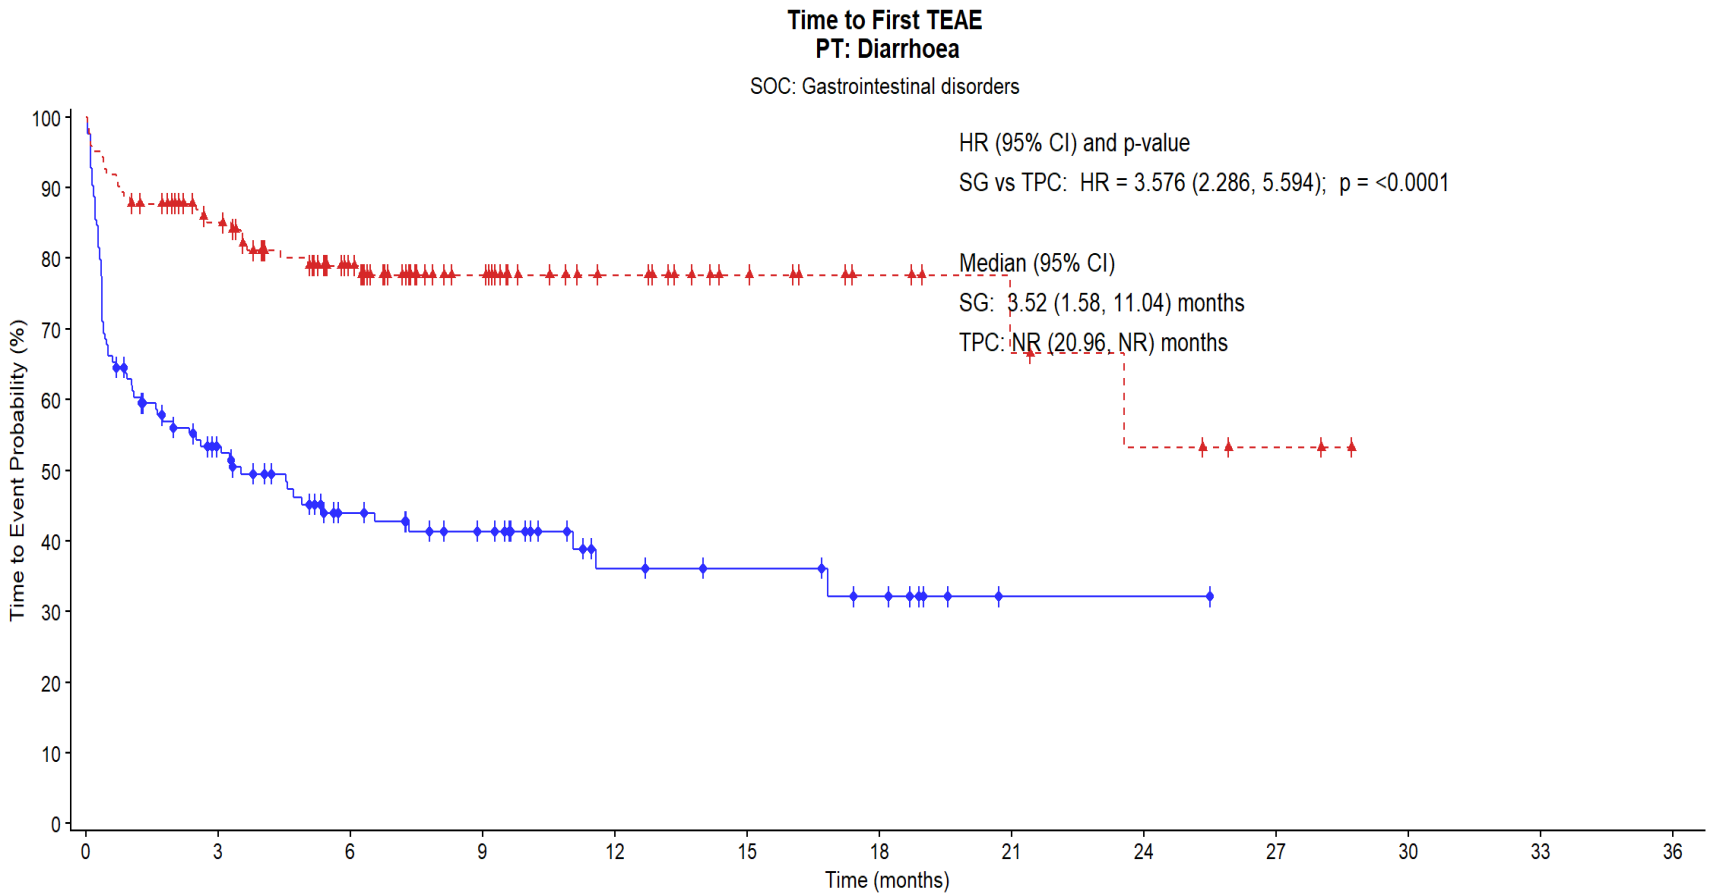
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.40. Figure 1.1.41: Kaplan Meier Plot of Time to First TEAE by PT Abdominal pain — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



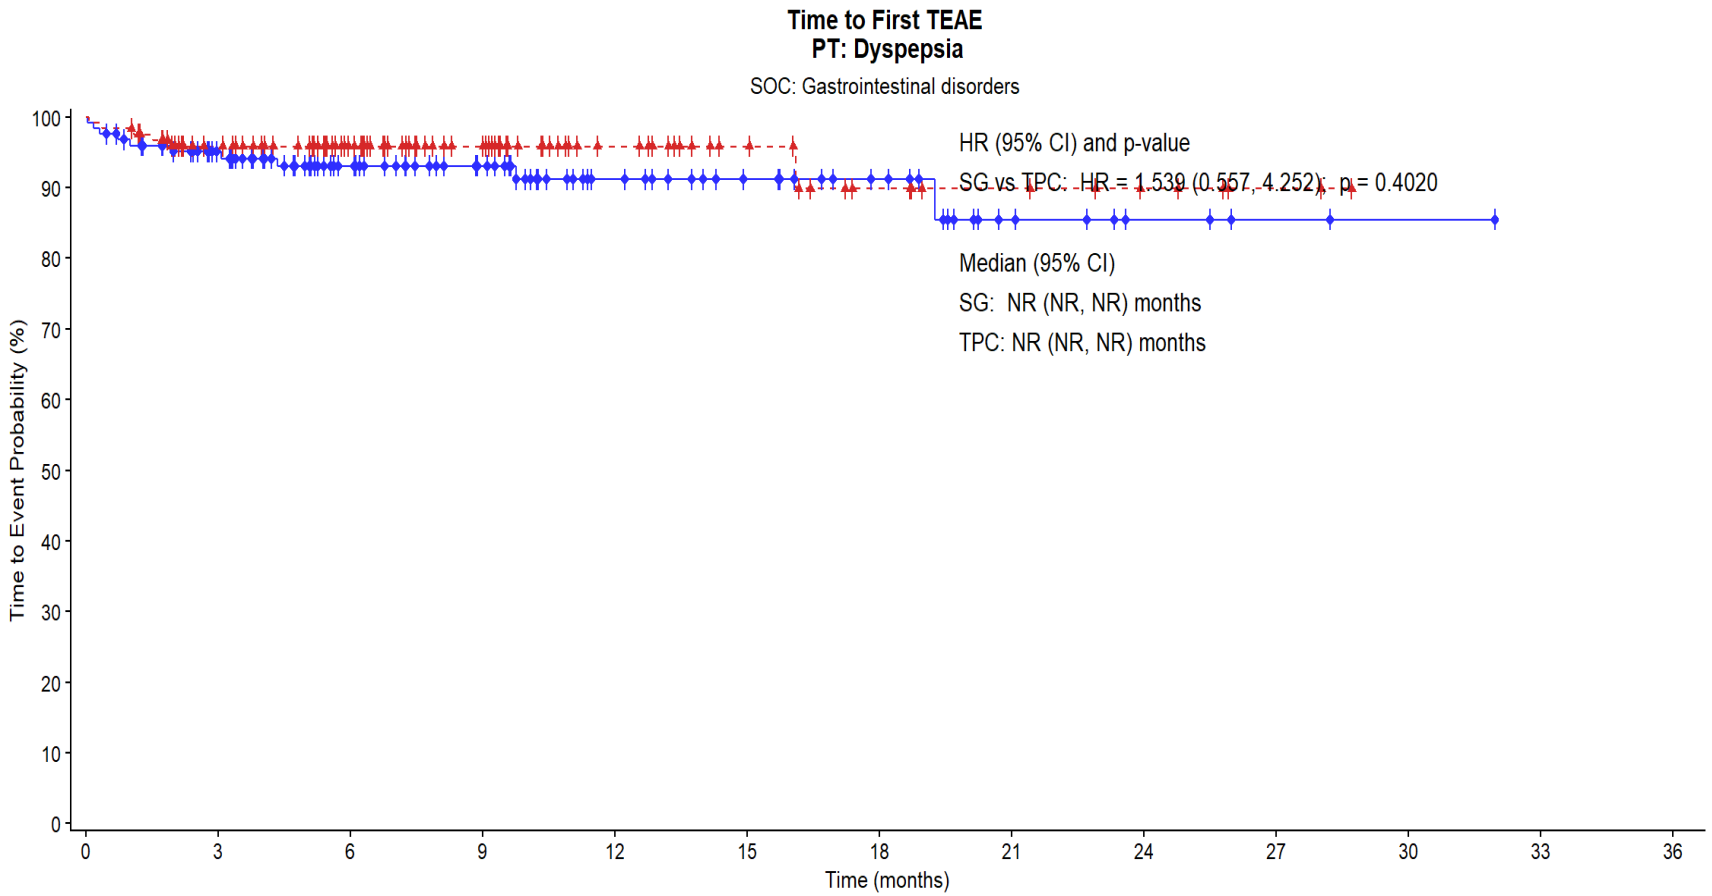
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.41. Figure 1.1.42: Kaplan Meier Plot of Time to First TEAE by PT Abdominal pain upper — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



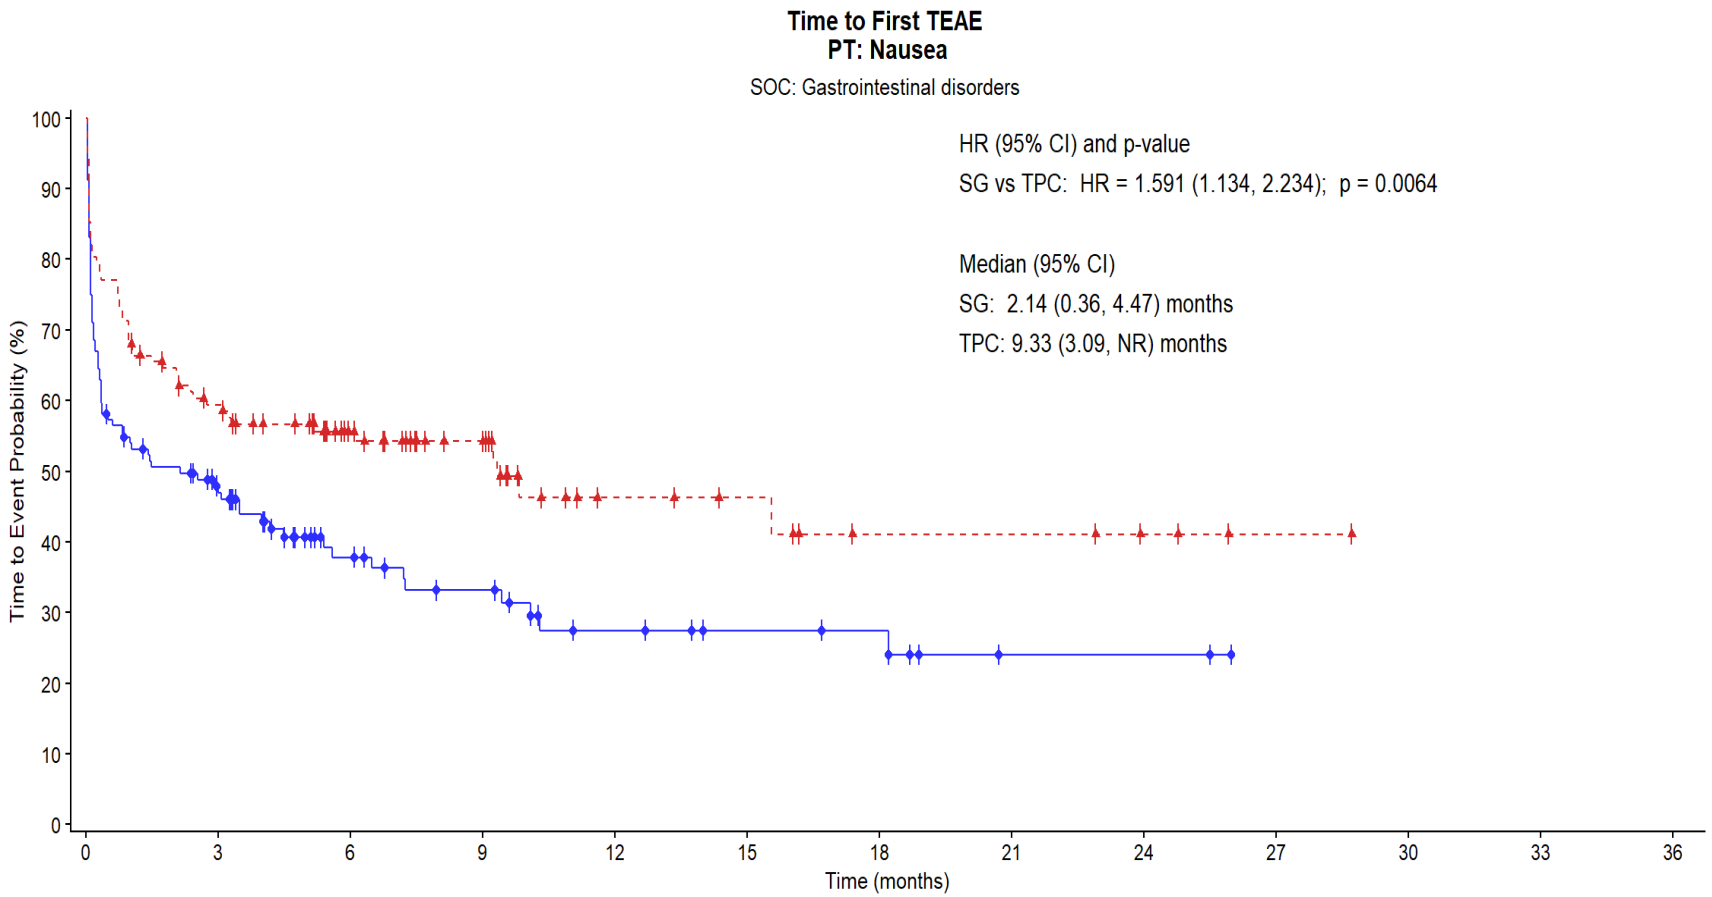
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.42. Figure 1.1.43: Kaplan Meier Plot of Time to First TEAE by PT Constipation — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



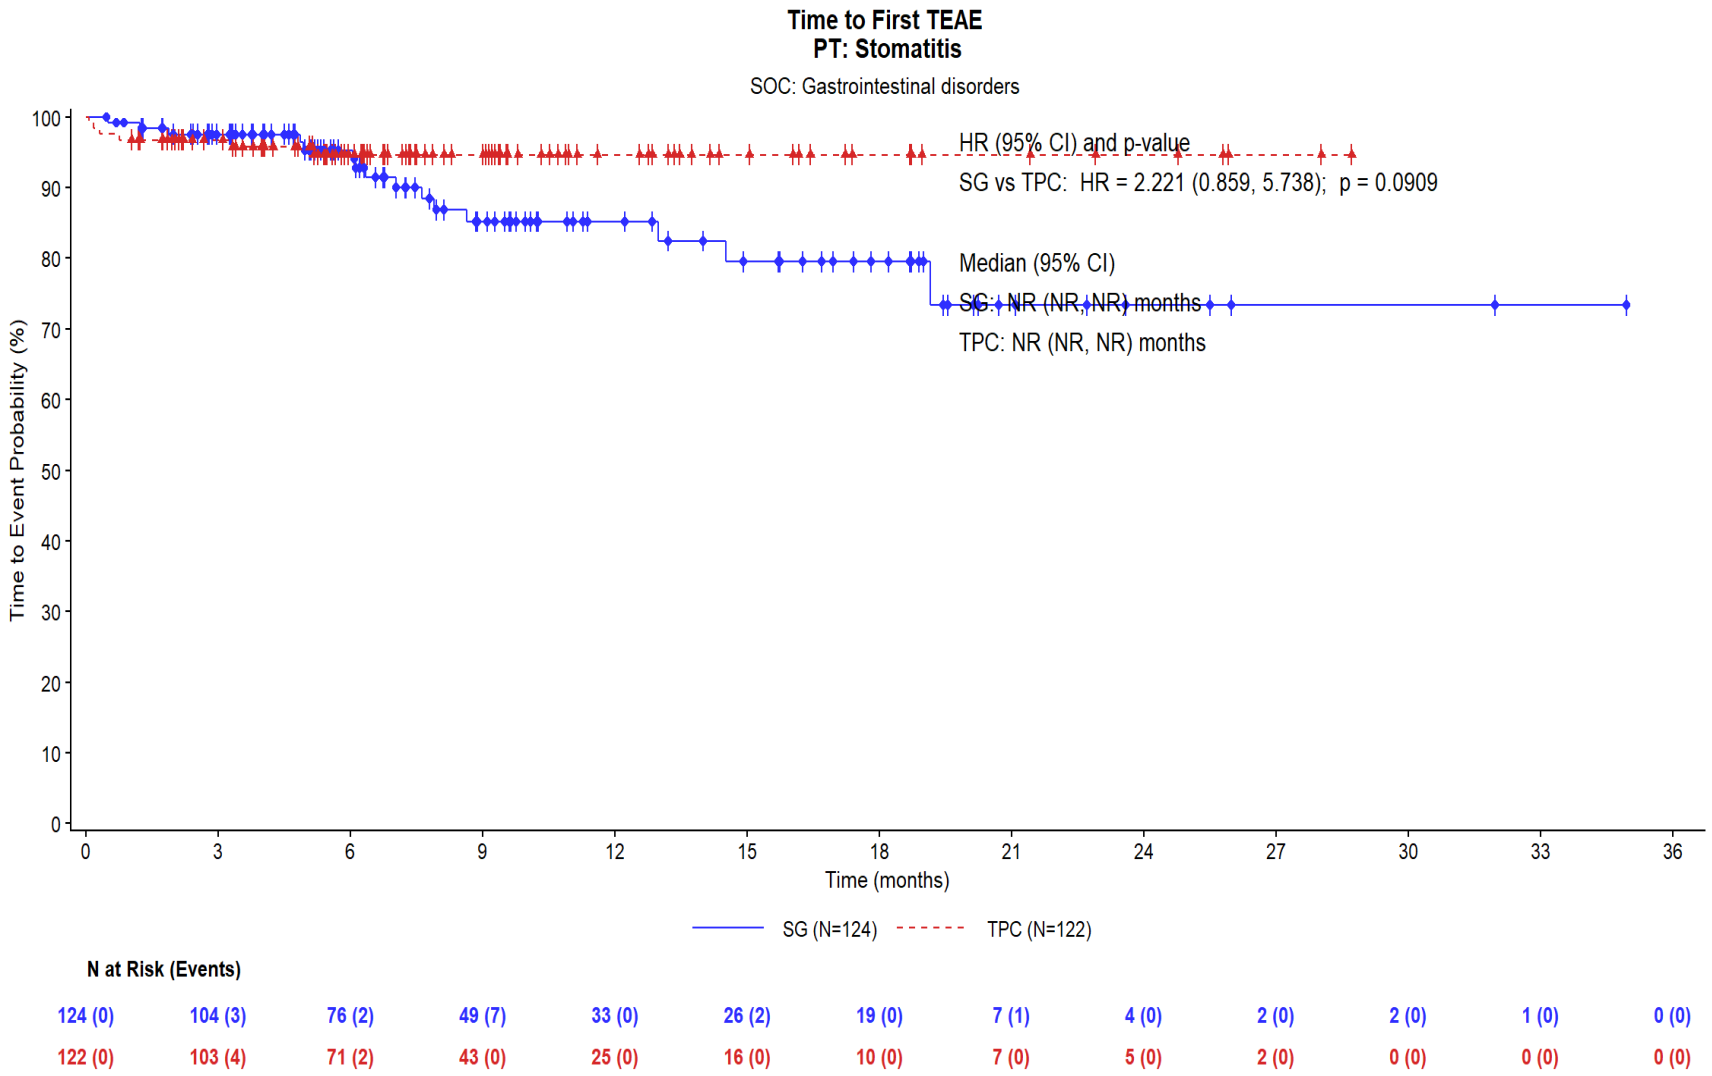
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.43. Figure 1.1.44: Kaplan Meier Plot of Time to First TEAE by PT Diarrhoea — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



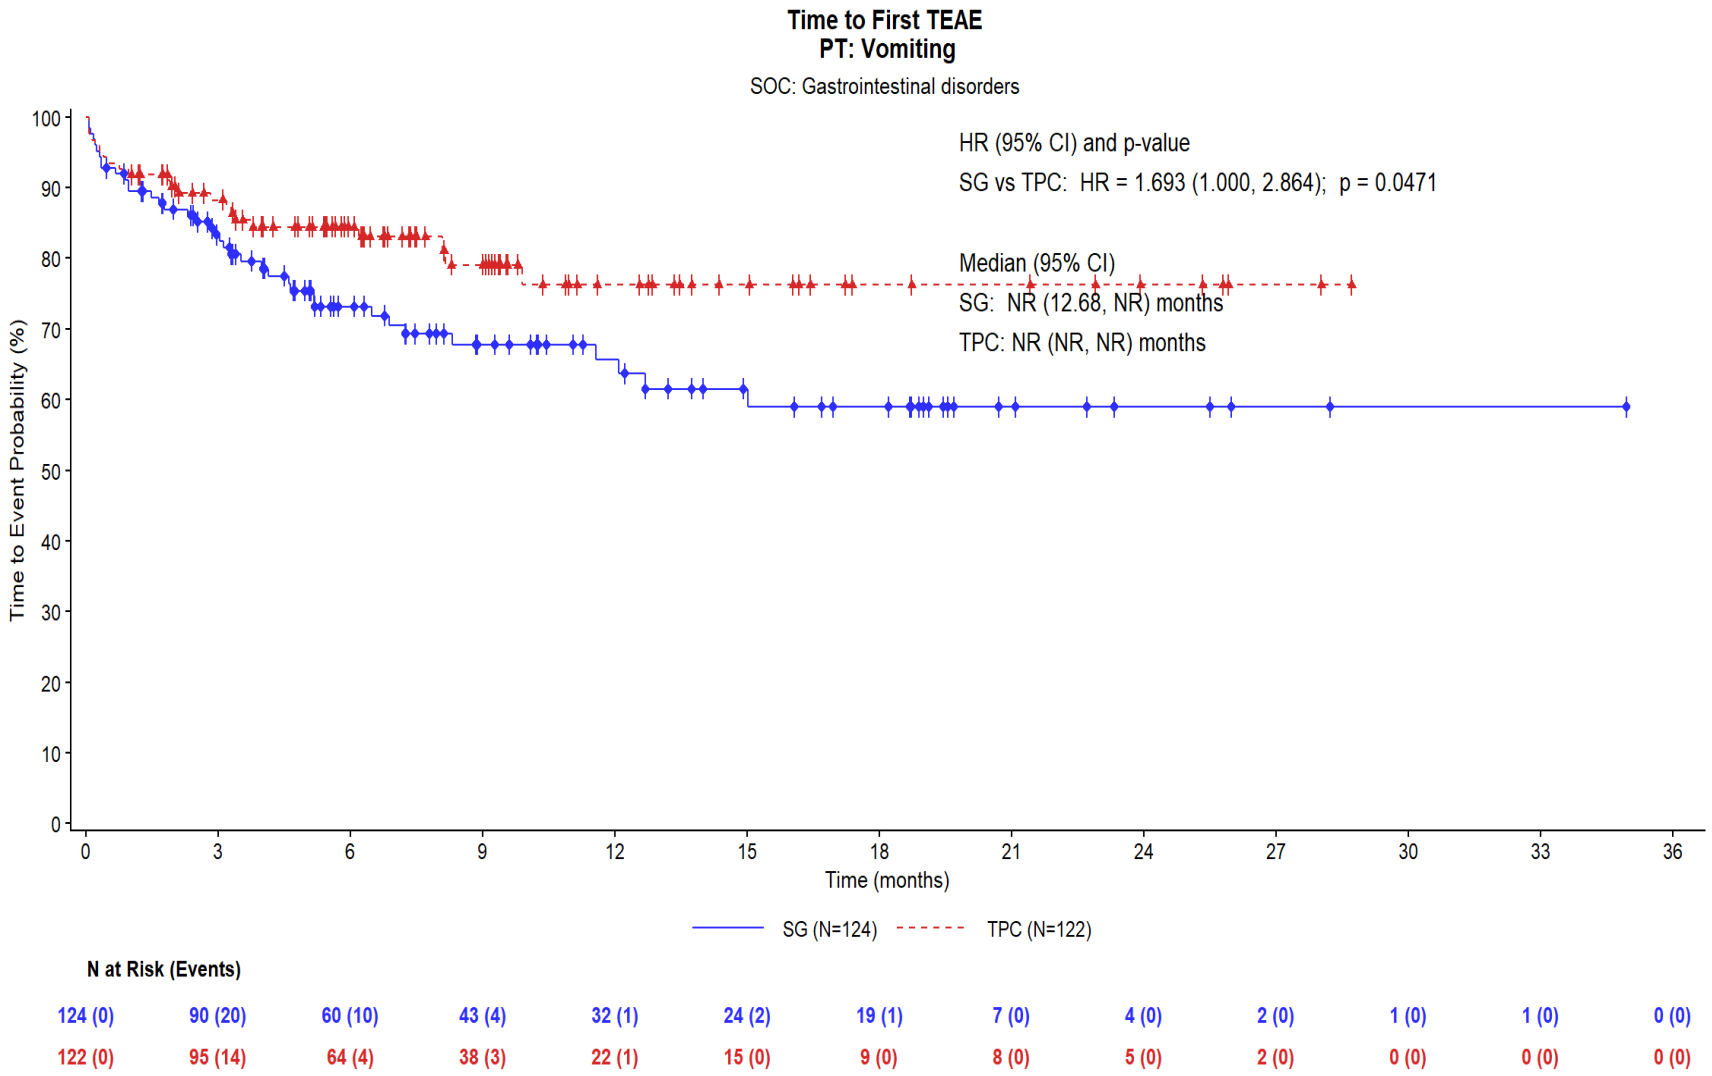
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.44. Figure 1.1.45: Kaplan Meier Plot of Time to First TEAE by PT Dyspepsia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



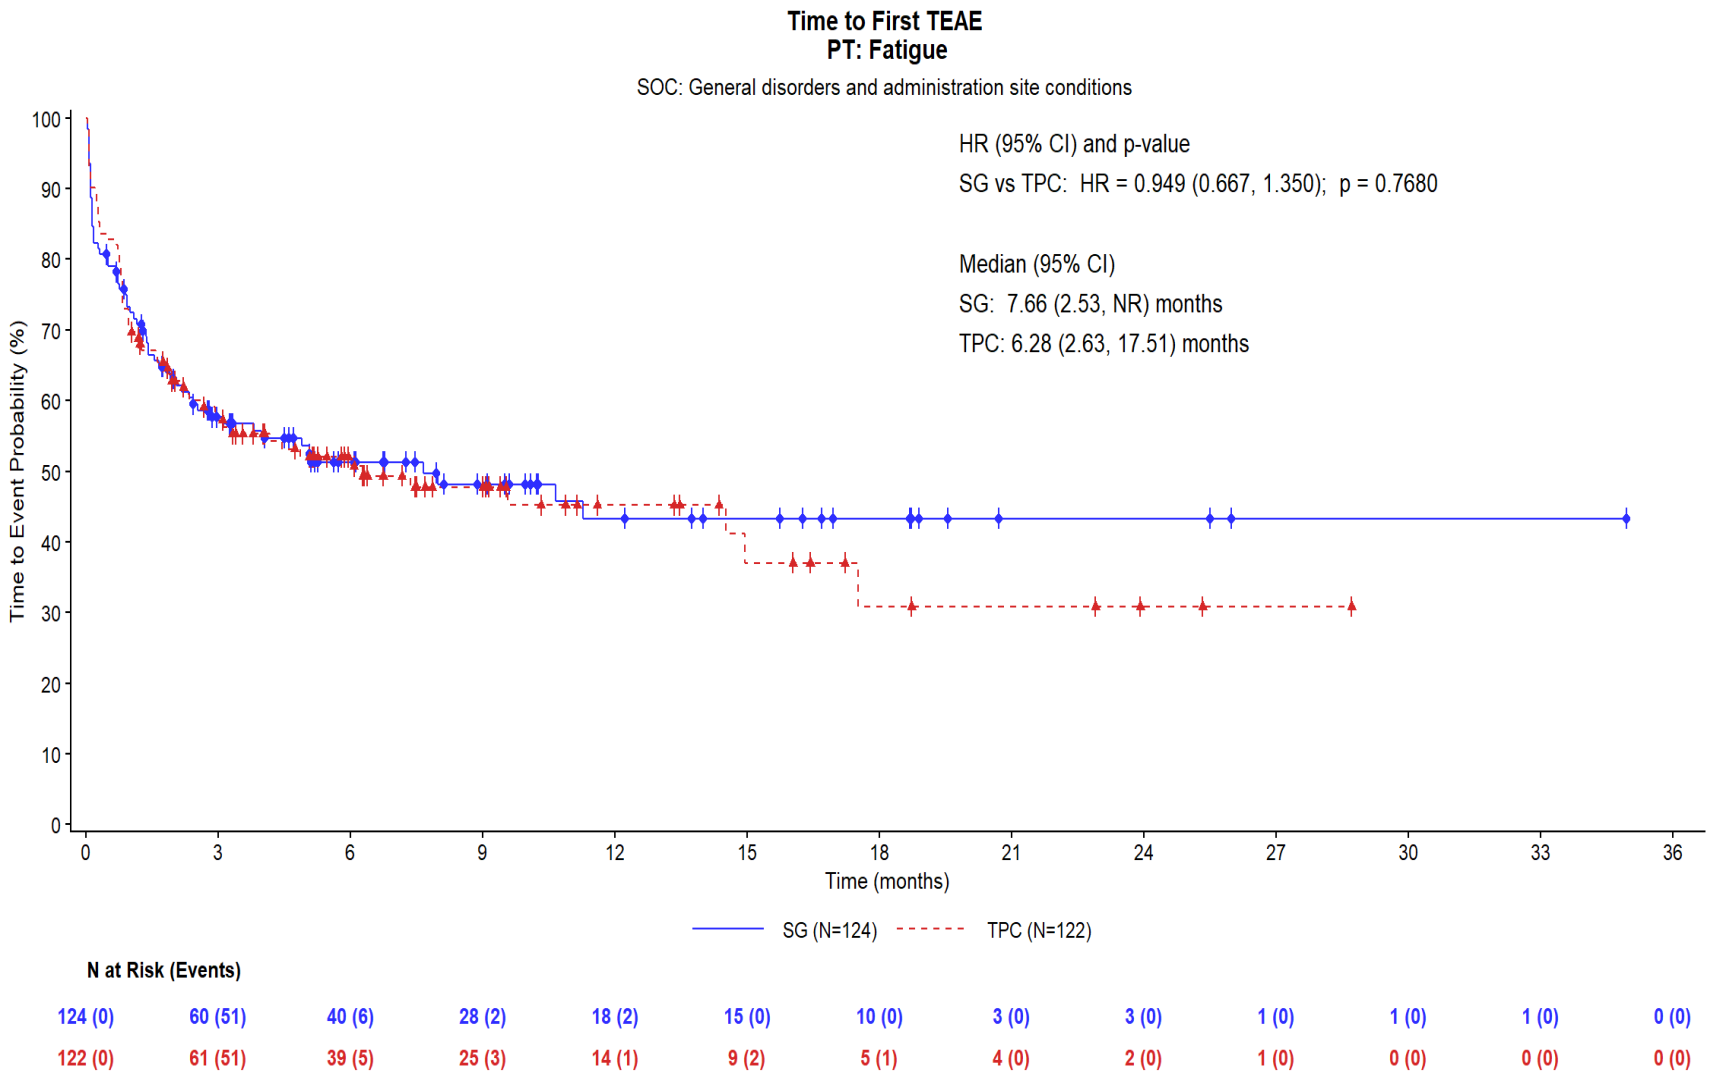
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.45. Figure 1.1.46: Kaplan Meier Plot of Time to First TEAE by PT Nausea — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



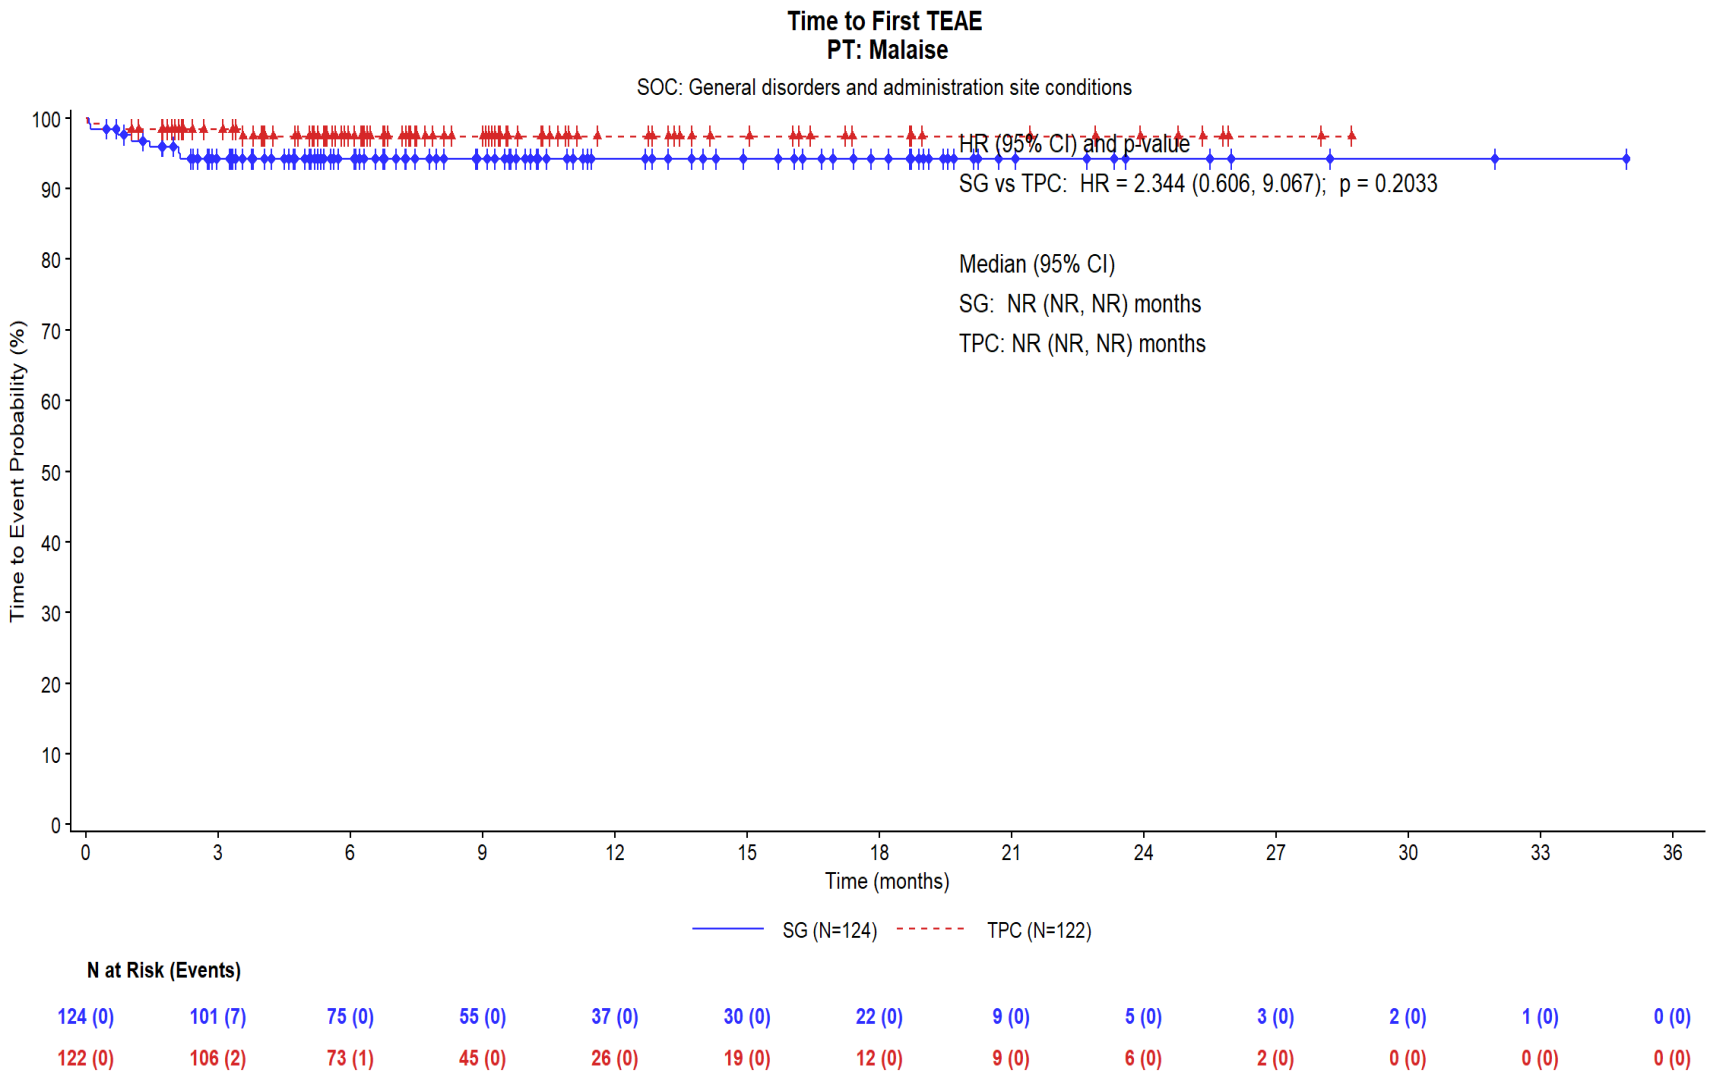
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.46. Figure 1.1.47: Kaplan Meier Plot of Time to First TEAE by PT Stomatitis — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



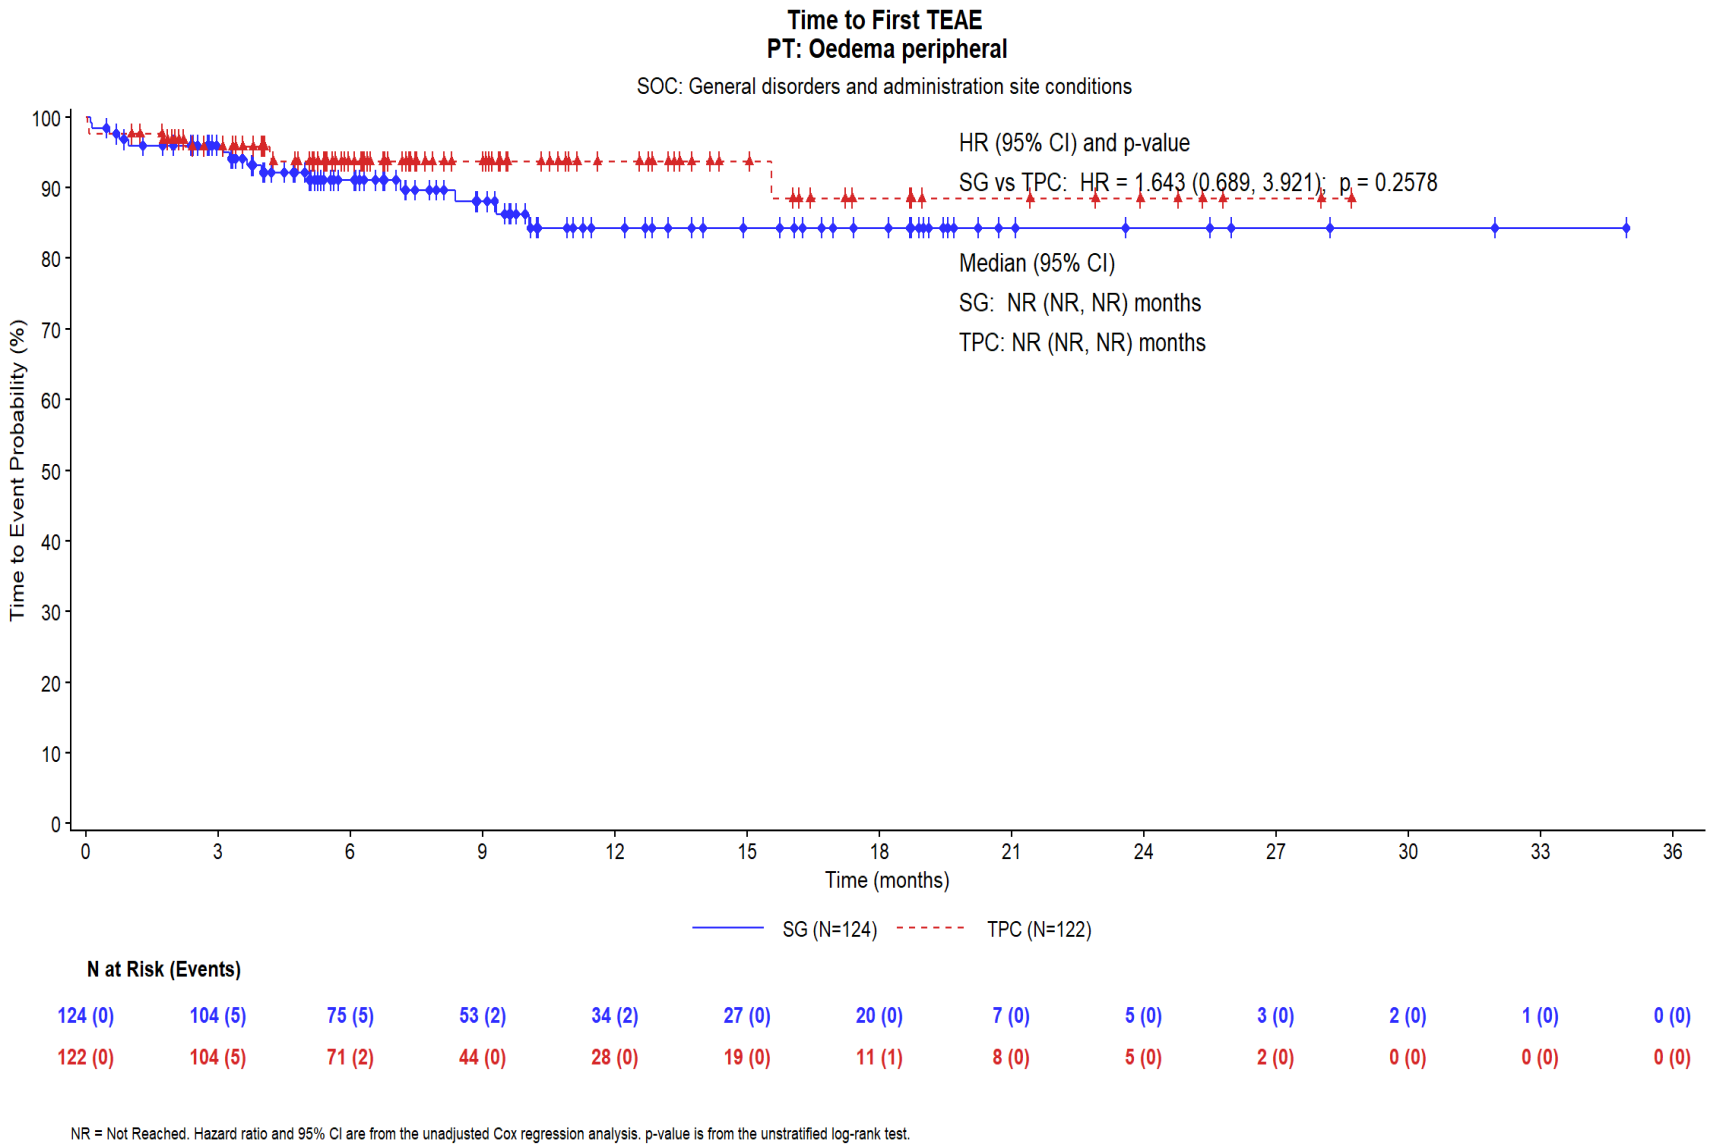
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.47. Figure 1.1.48: Kaplan Meier Plot of Time to First TEAE by PT Vomiting — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



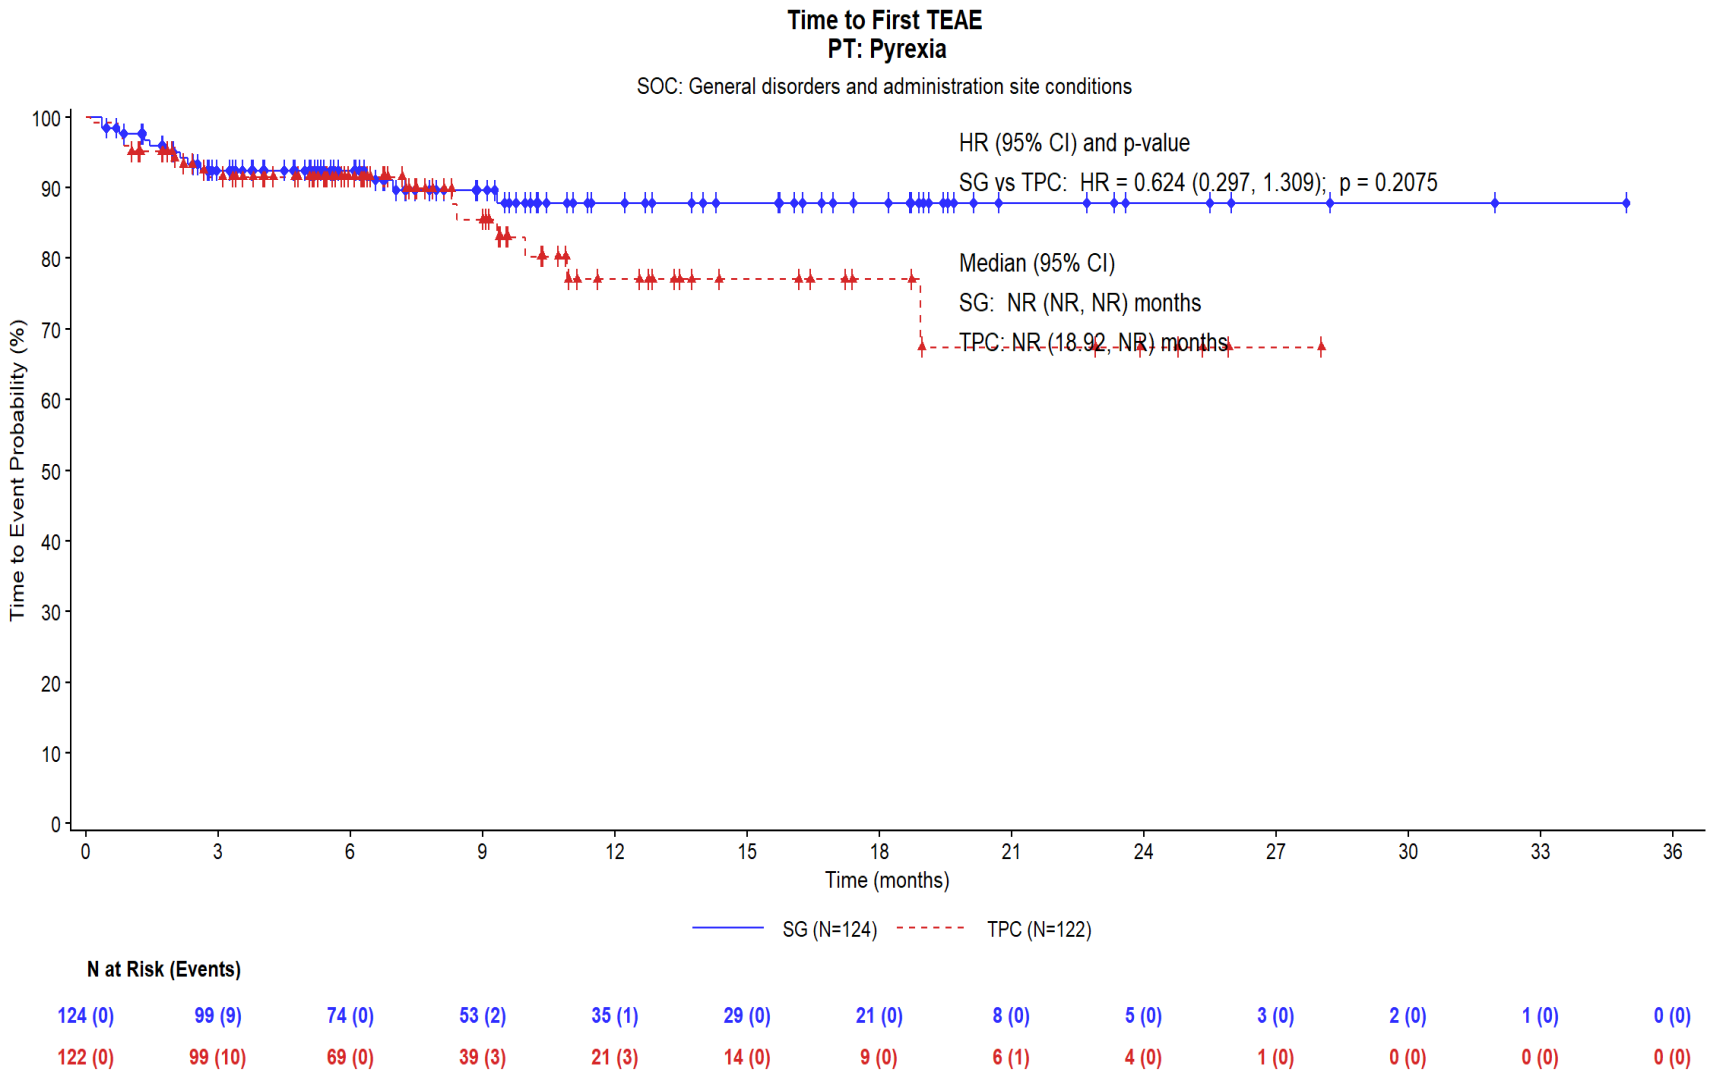
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.48. Figure 1.1.49: Kaplan Meier Plot of Time to First TEAE by PT Fatigue — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



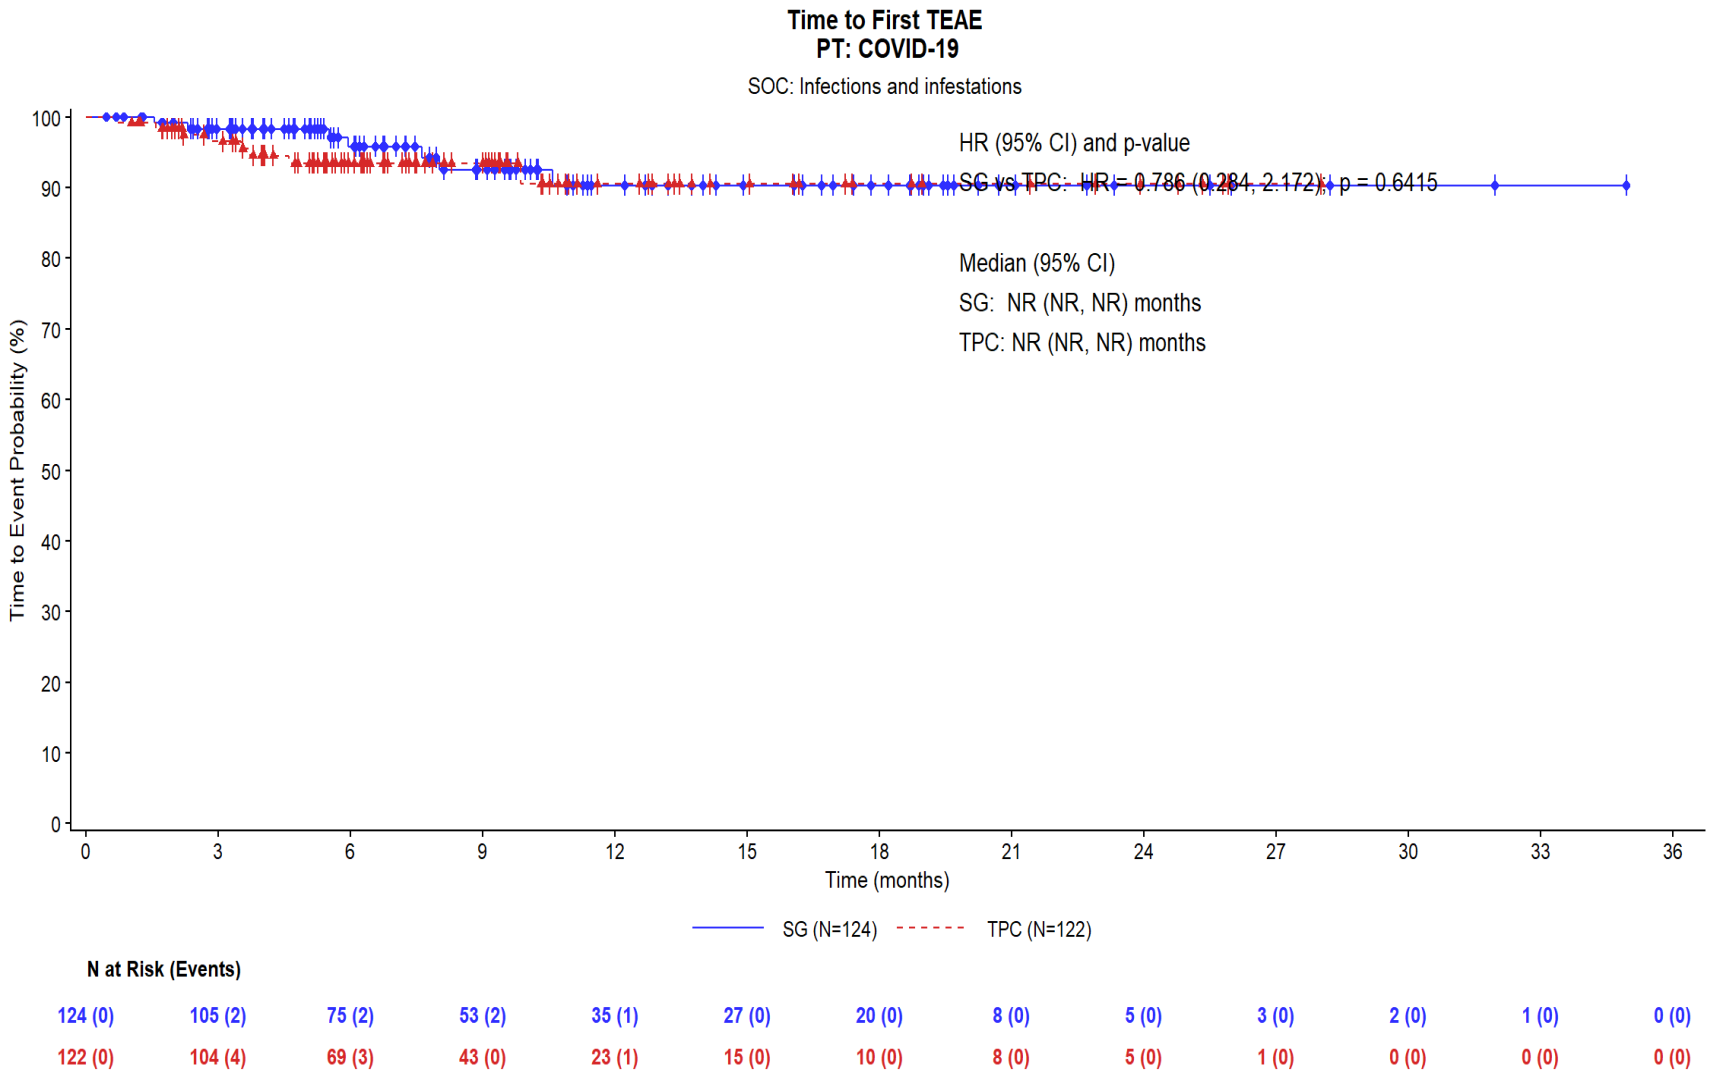
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.49. Figure 1.1.50: Kaplan Meier Plot of Time to First TEAE by PT Malaise — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



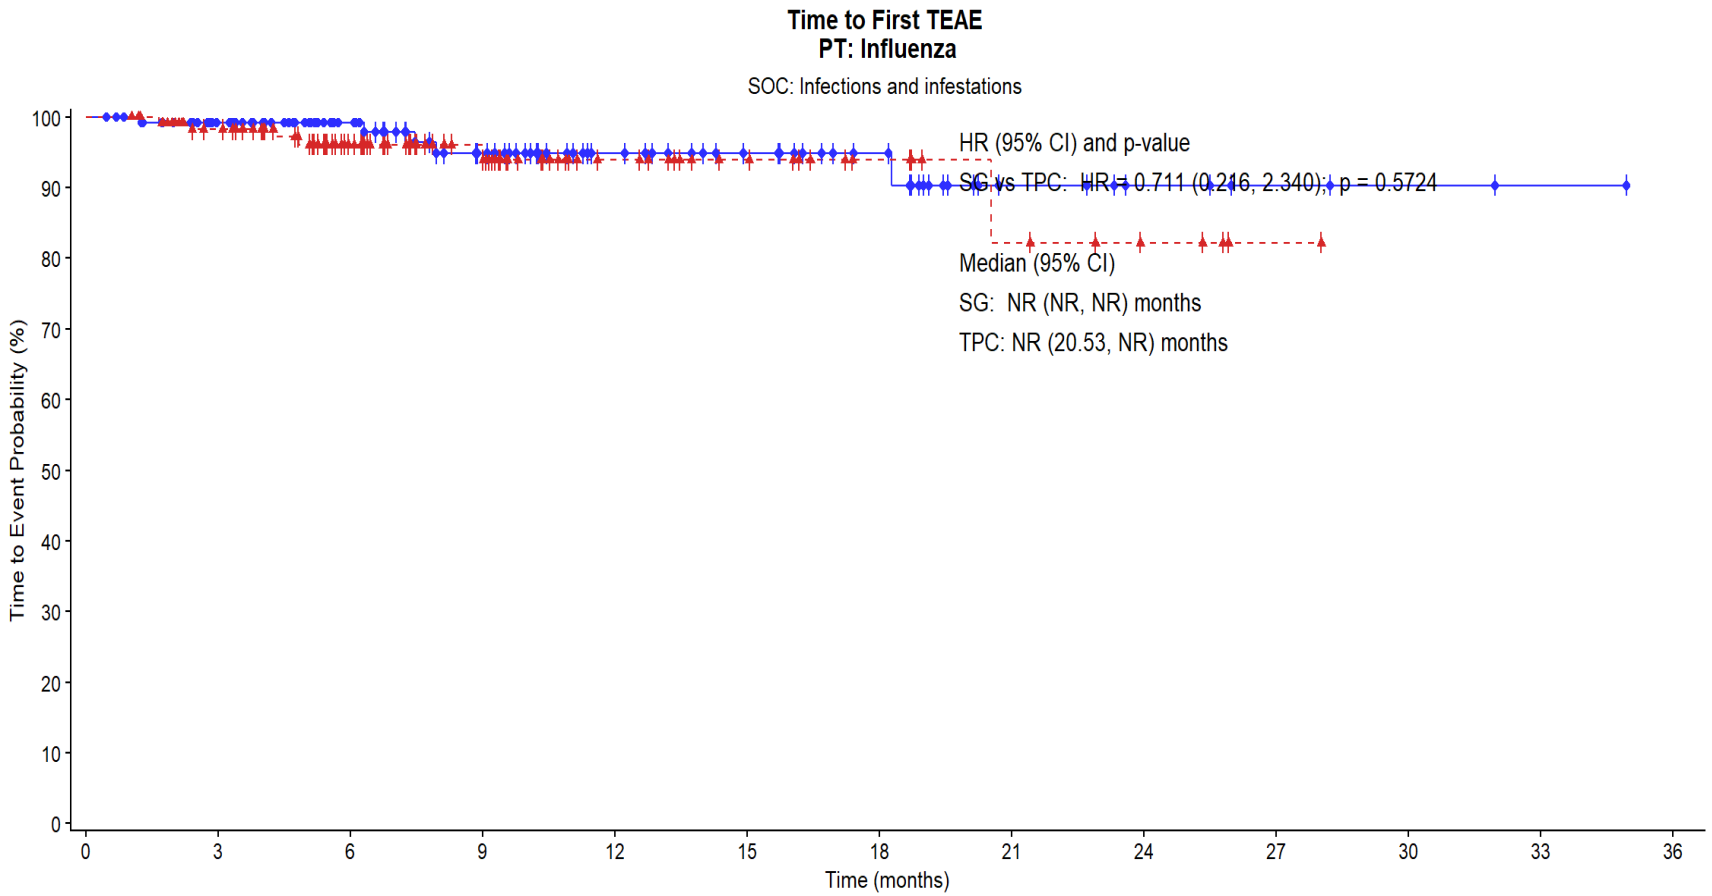
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.50. Figure 1.1.51: Kaplan Meier Plot of Time to First TEAE by PT Oedema peripheral — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



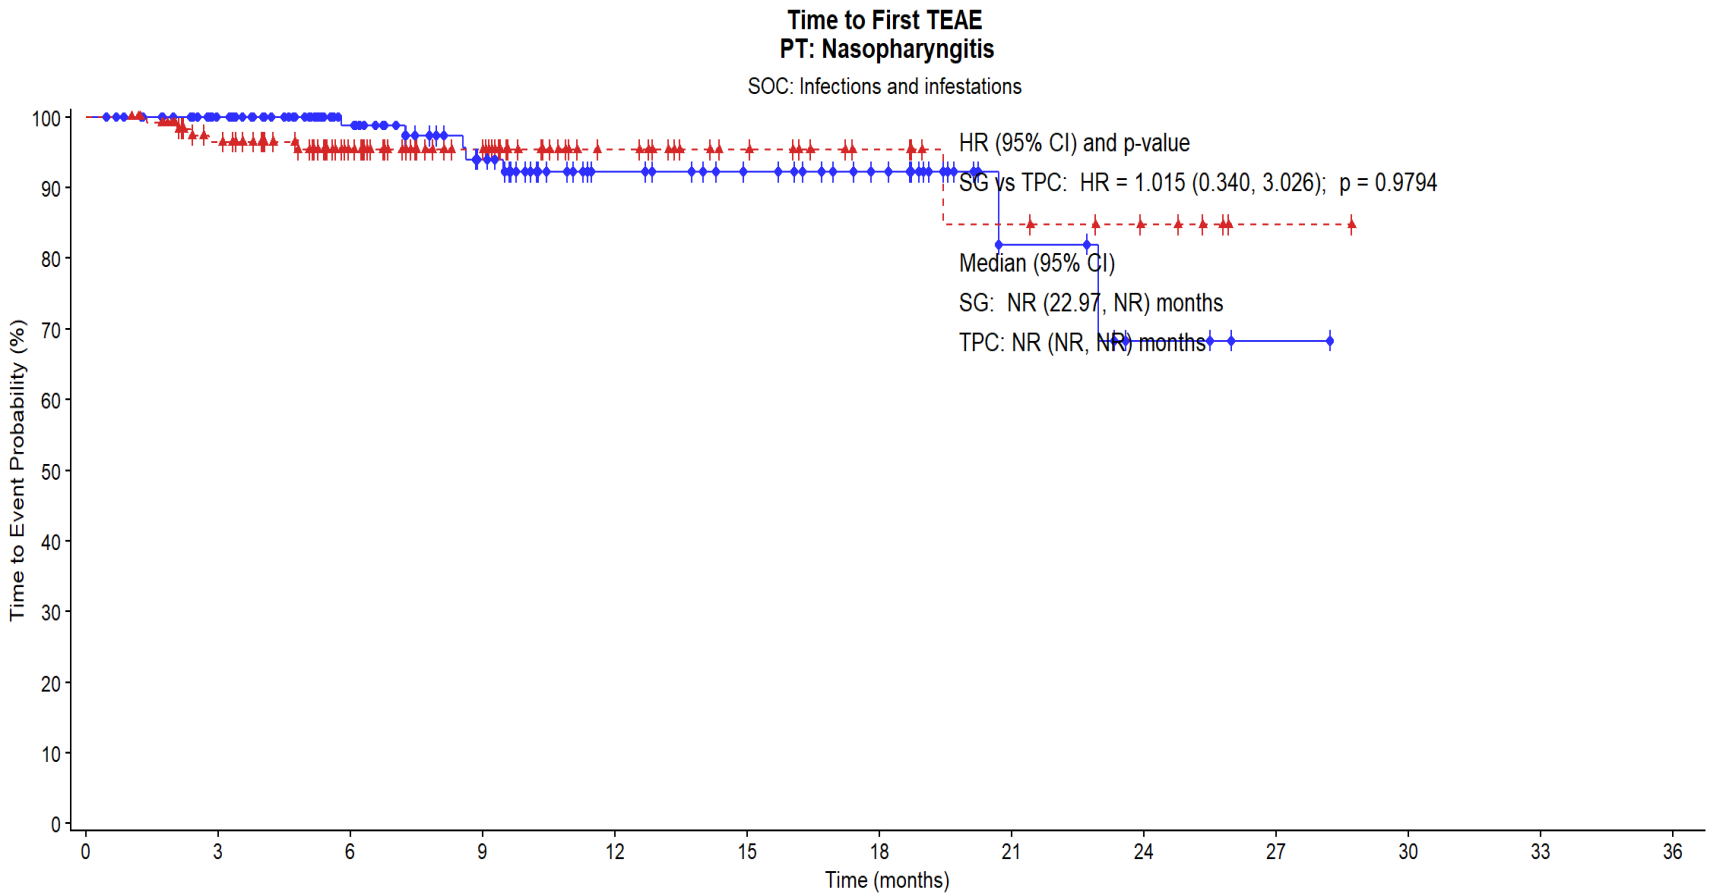
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.51. Figure 1.1.52: Kaplan Meier Plot of Time to First TEAE by PT Pyrexia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



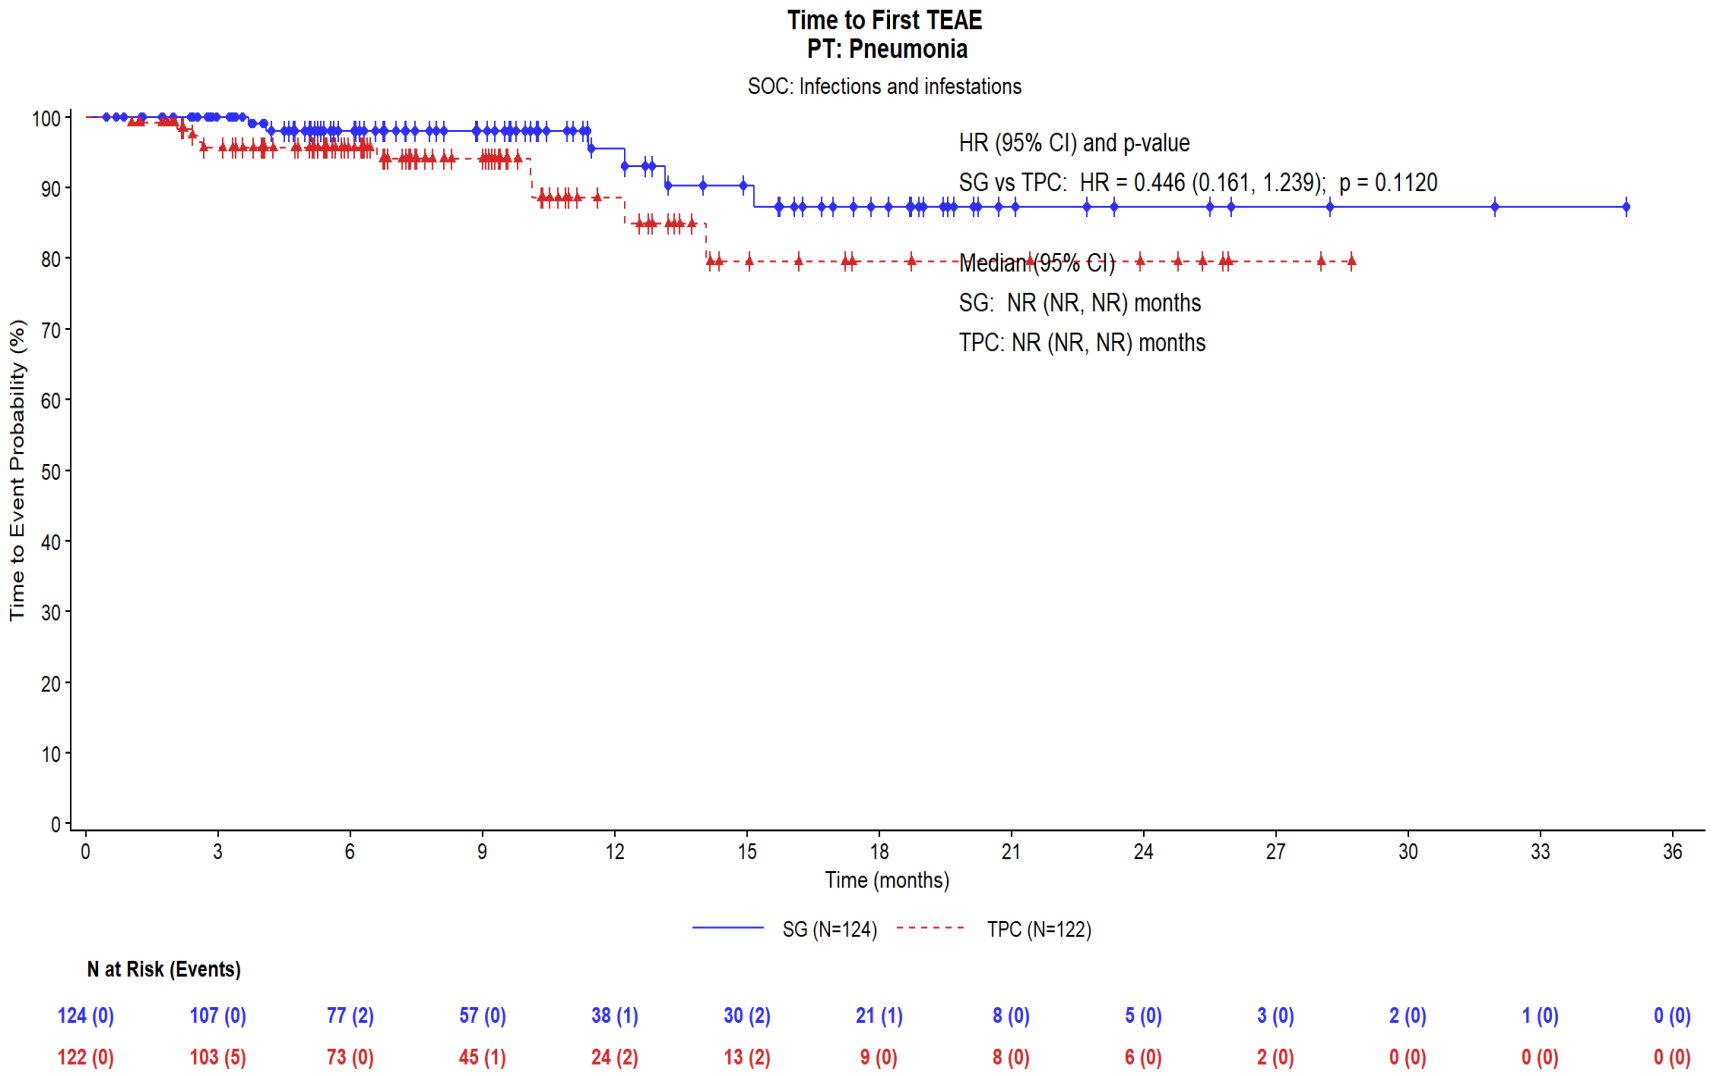
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.52. Figure 1.1.53: Kaplan Meier Plot of Time to First TEAE by PT COVID 19 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



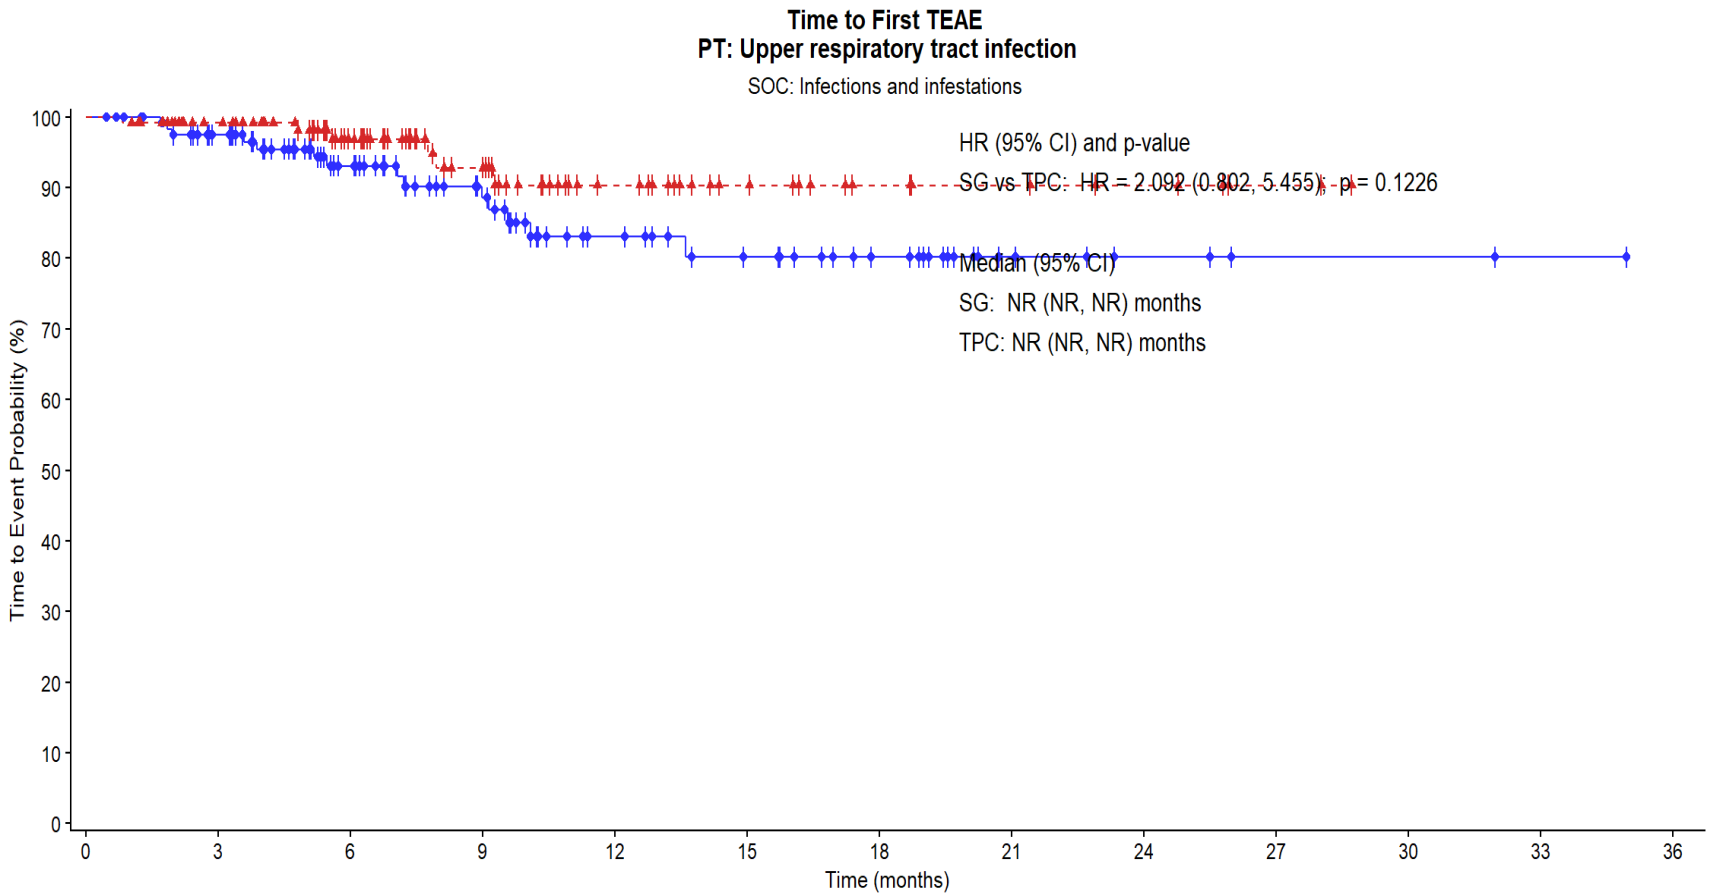
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.53. Figure 1.1.54: Kaplan Meier Plot of Time to First TEAE by PT Influenza — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



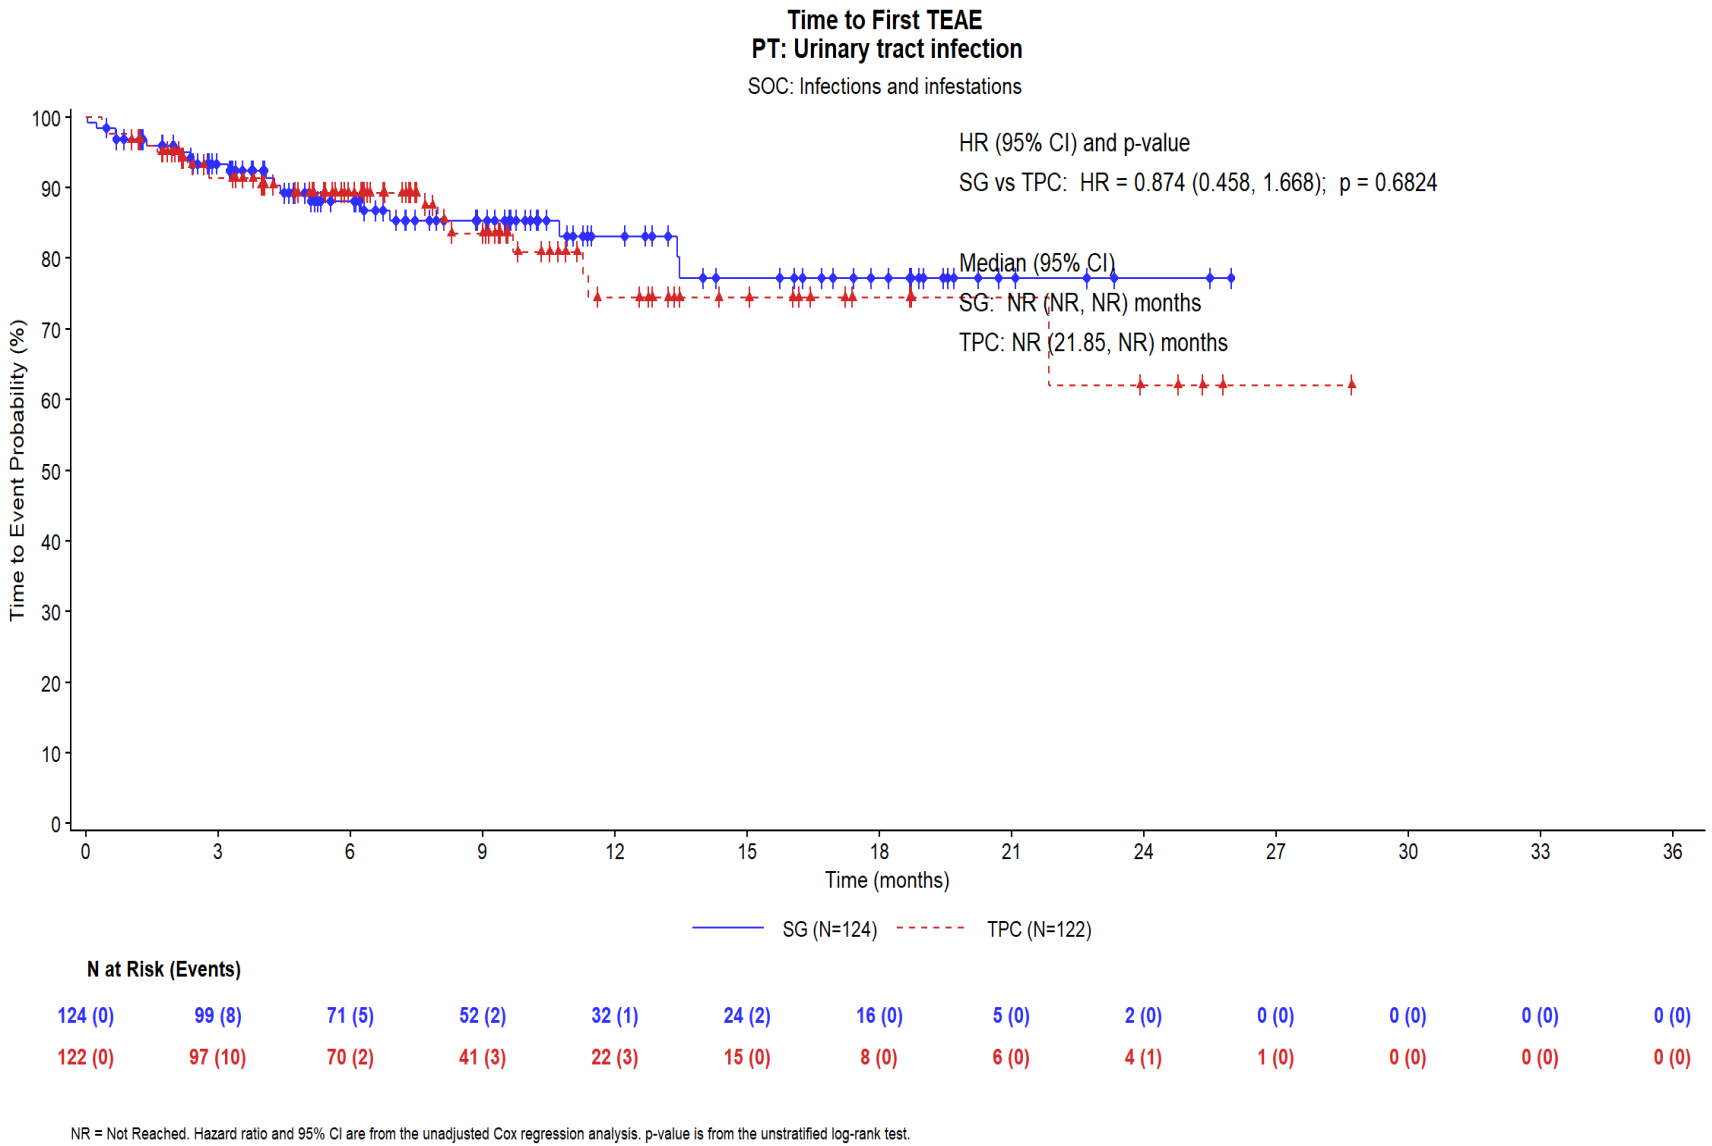
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.54. Figure 1.1.55: Kaplan Meier Plot of Time to First TEAE by PT Nasopharyngitis — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



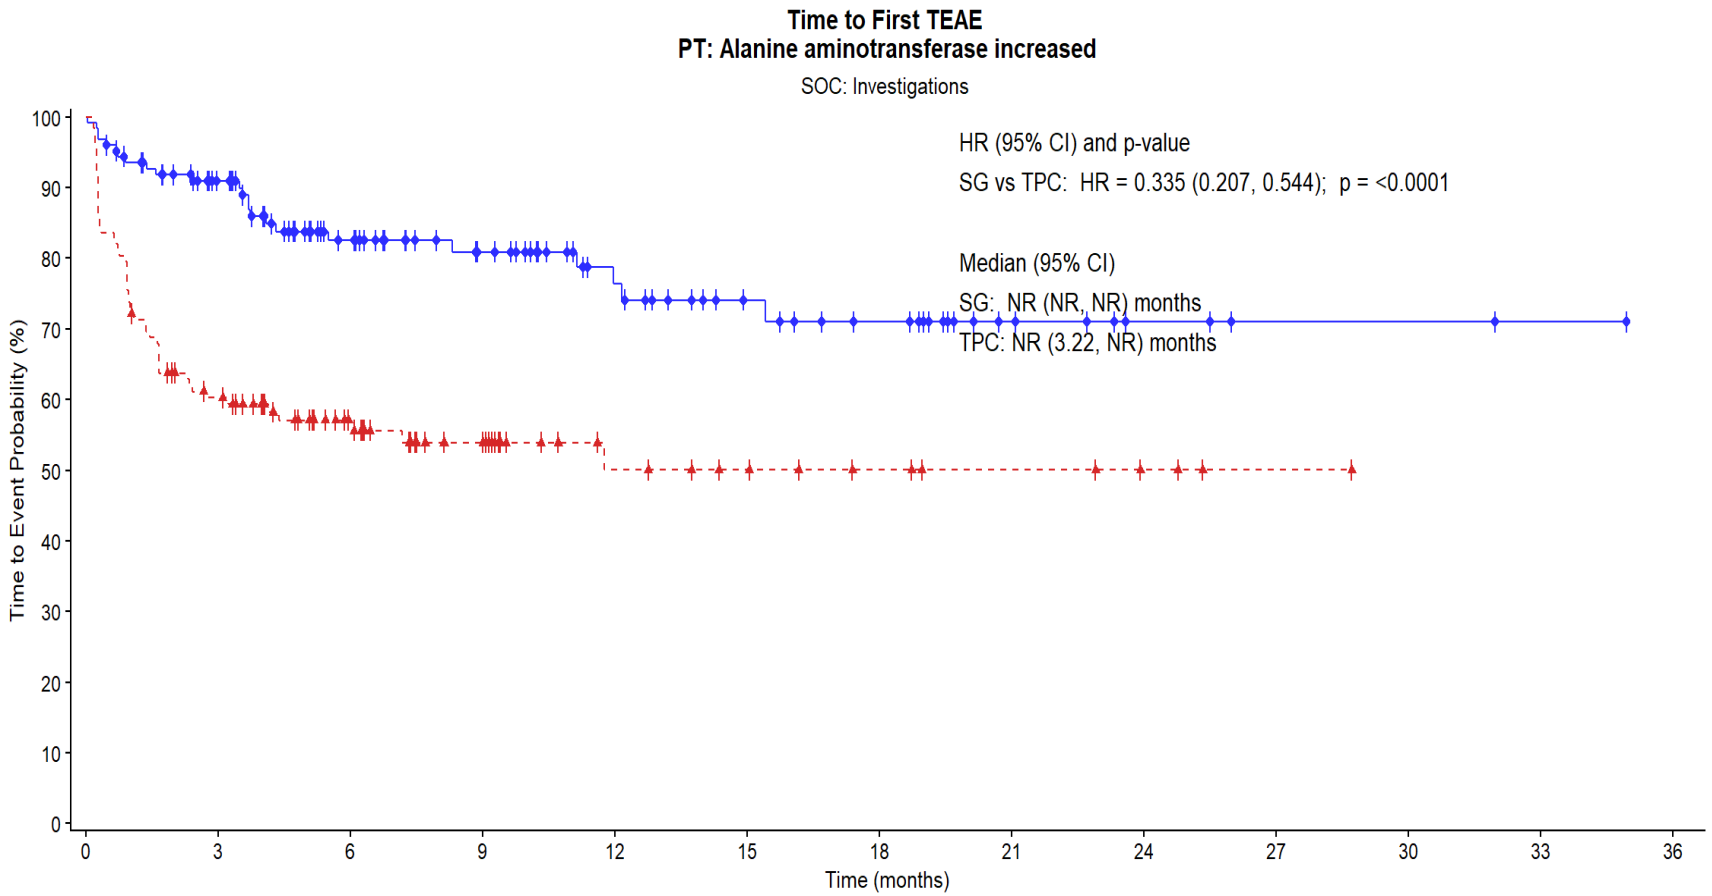
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.55. Figure 1.1.56: Kaplan Meier Plot of Time to First TEAE by PT Pneumonia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



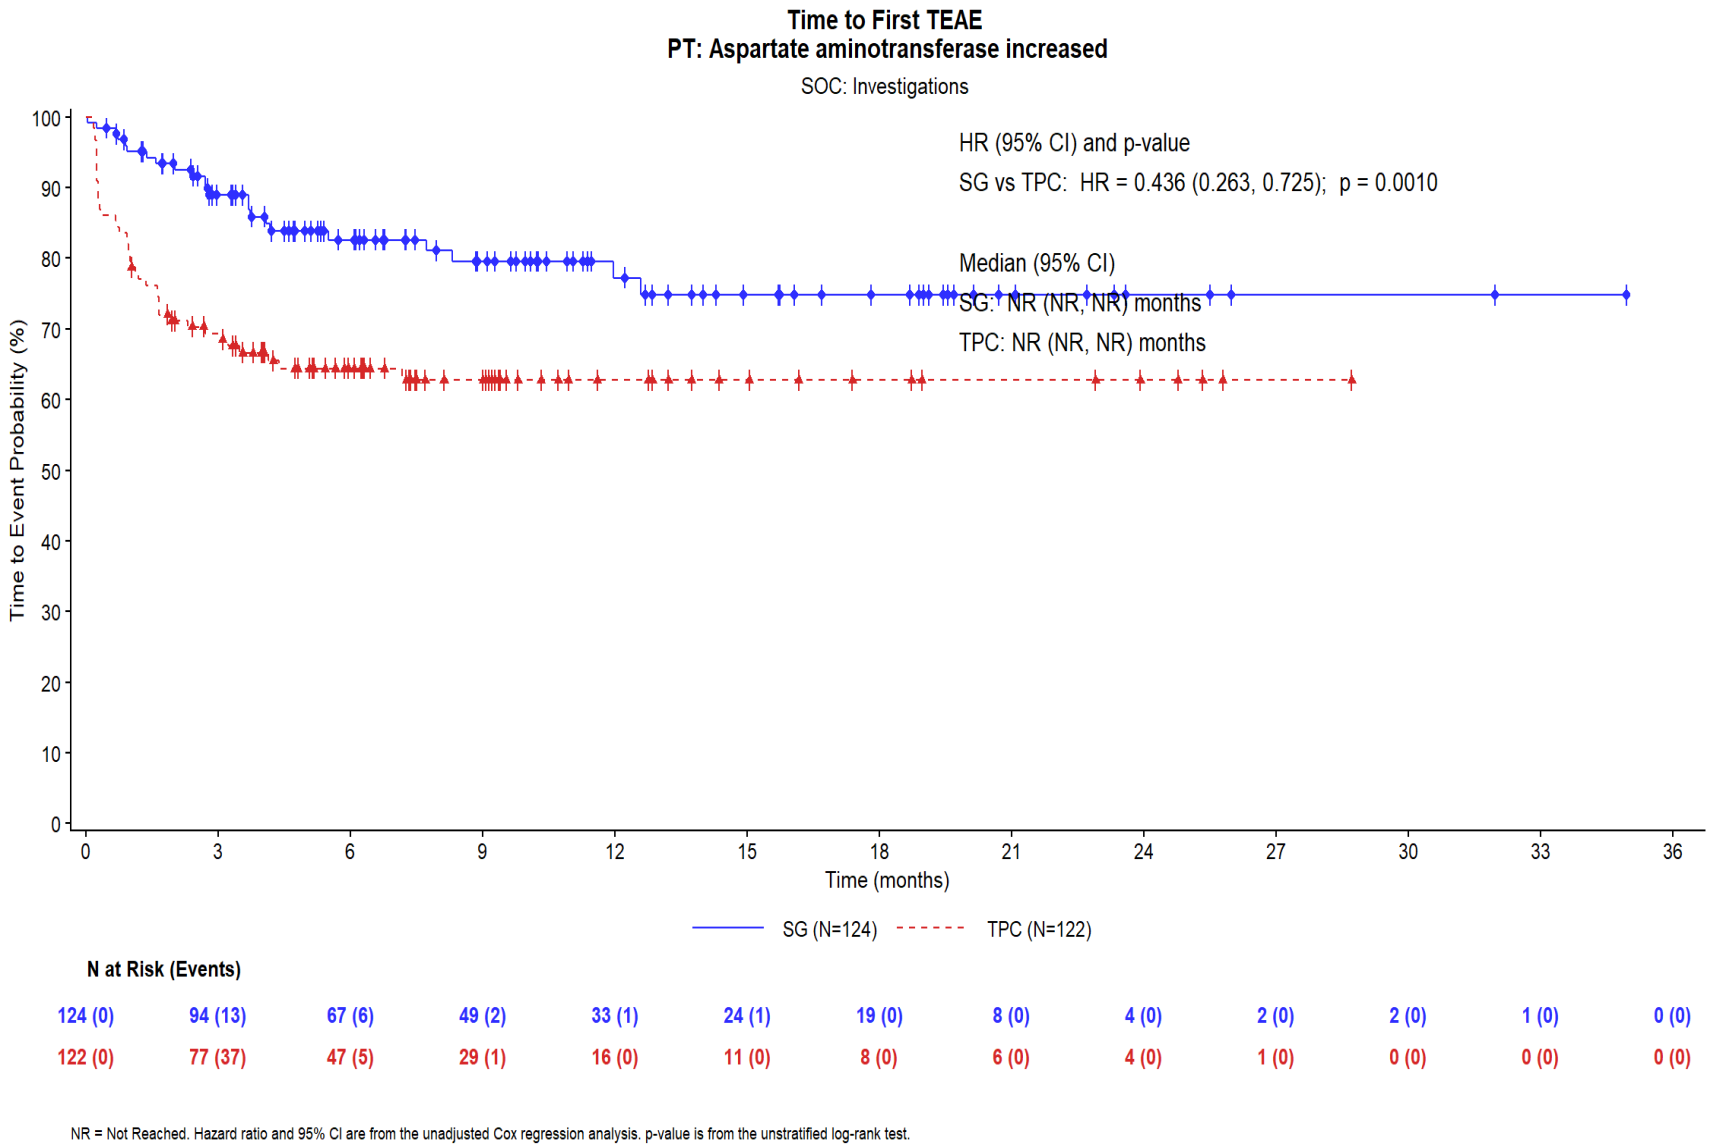
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.56. Figure 1.1.57: Kaplan Meier Plot of Time to First TEAE by PT Upper respiratory tract infection — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



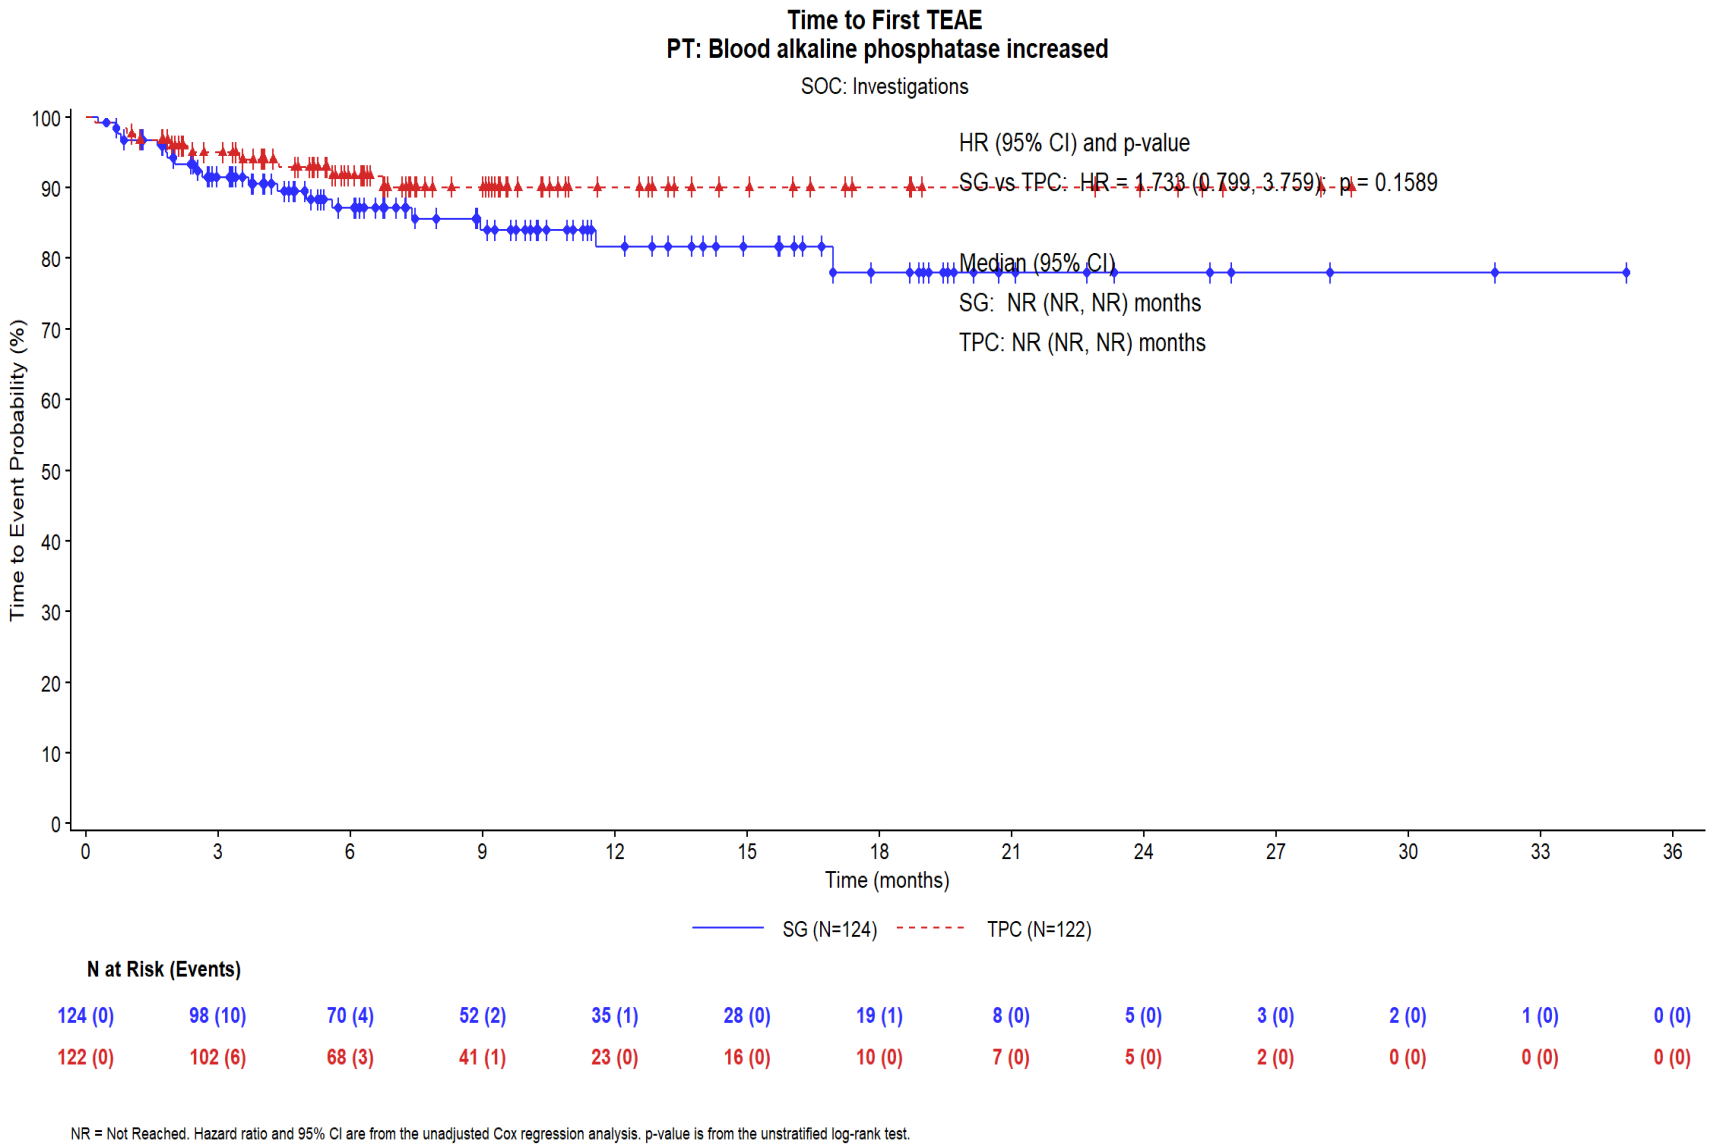
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.57. Figure 1.1.58: Kaplan Meier Plot of Time to First TEAE by PT Urinary tract infection — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



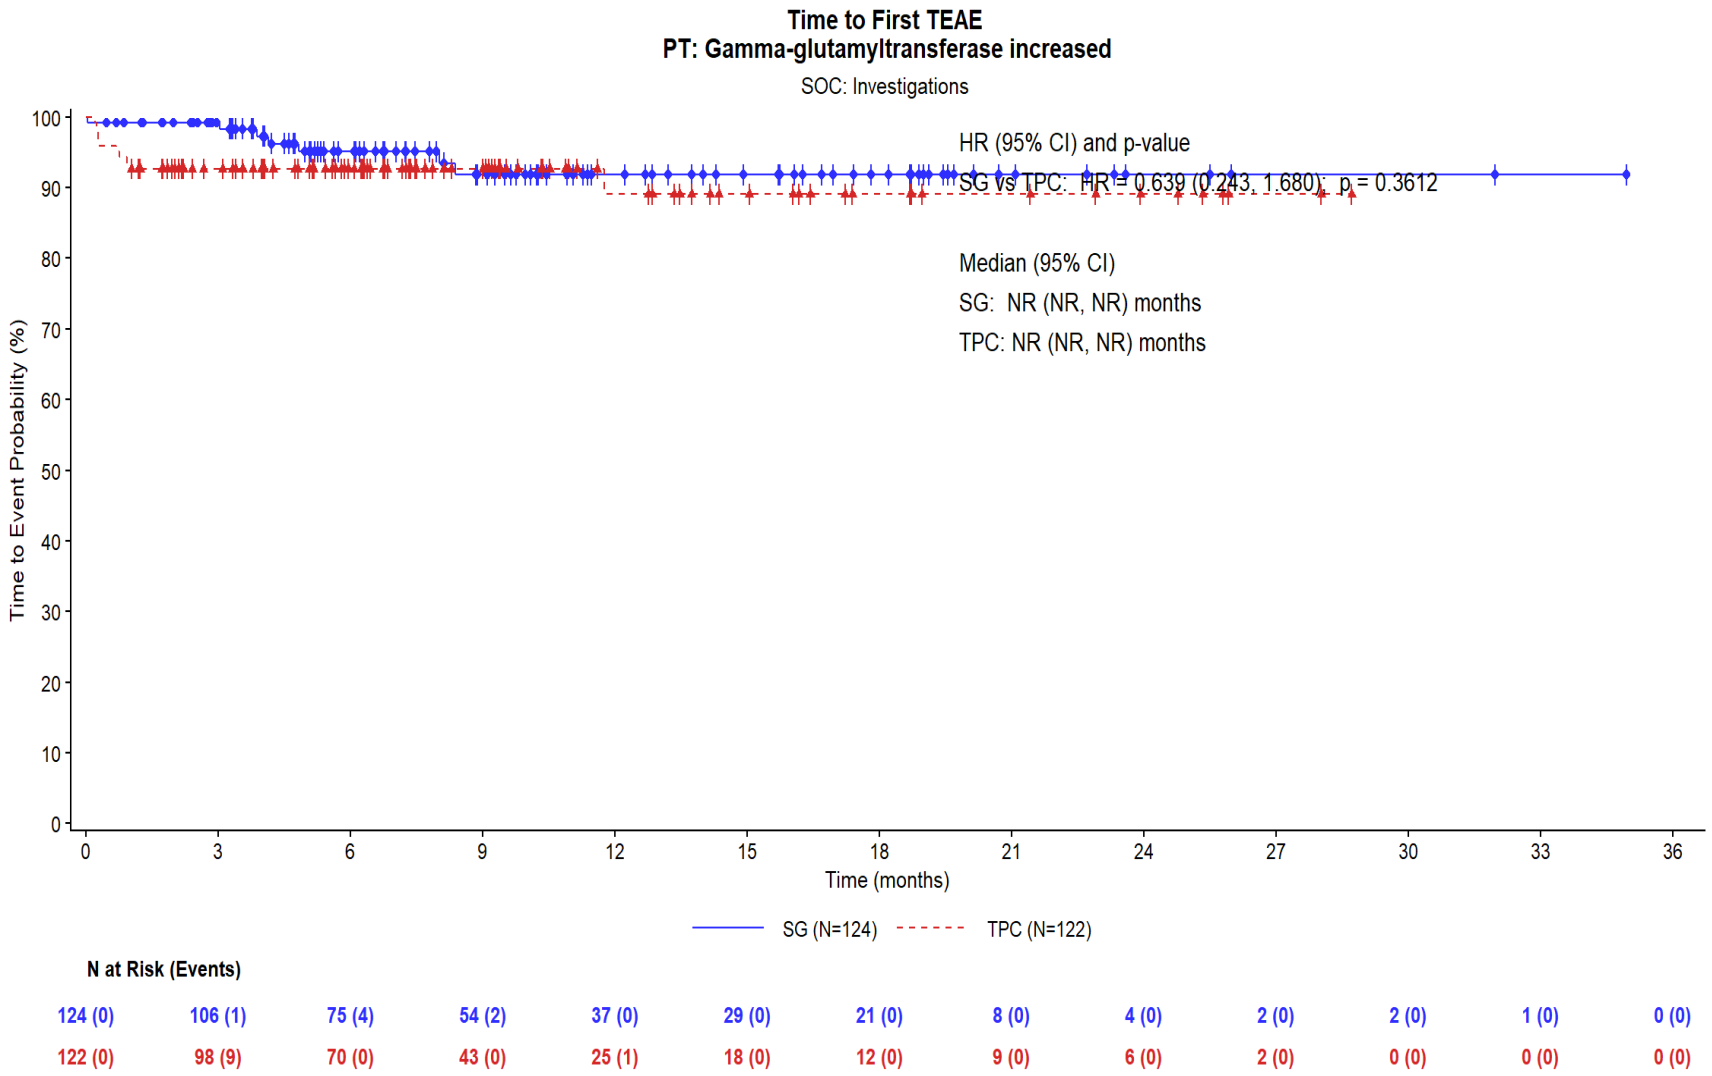
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.58. Figure 1.1.59: Kaplan Meier Plot of Time to First TEAE by PT Alanine aminotransferase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



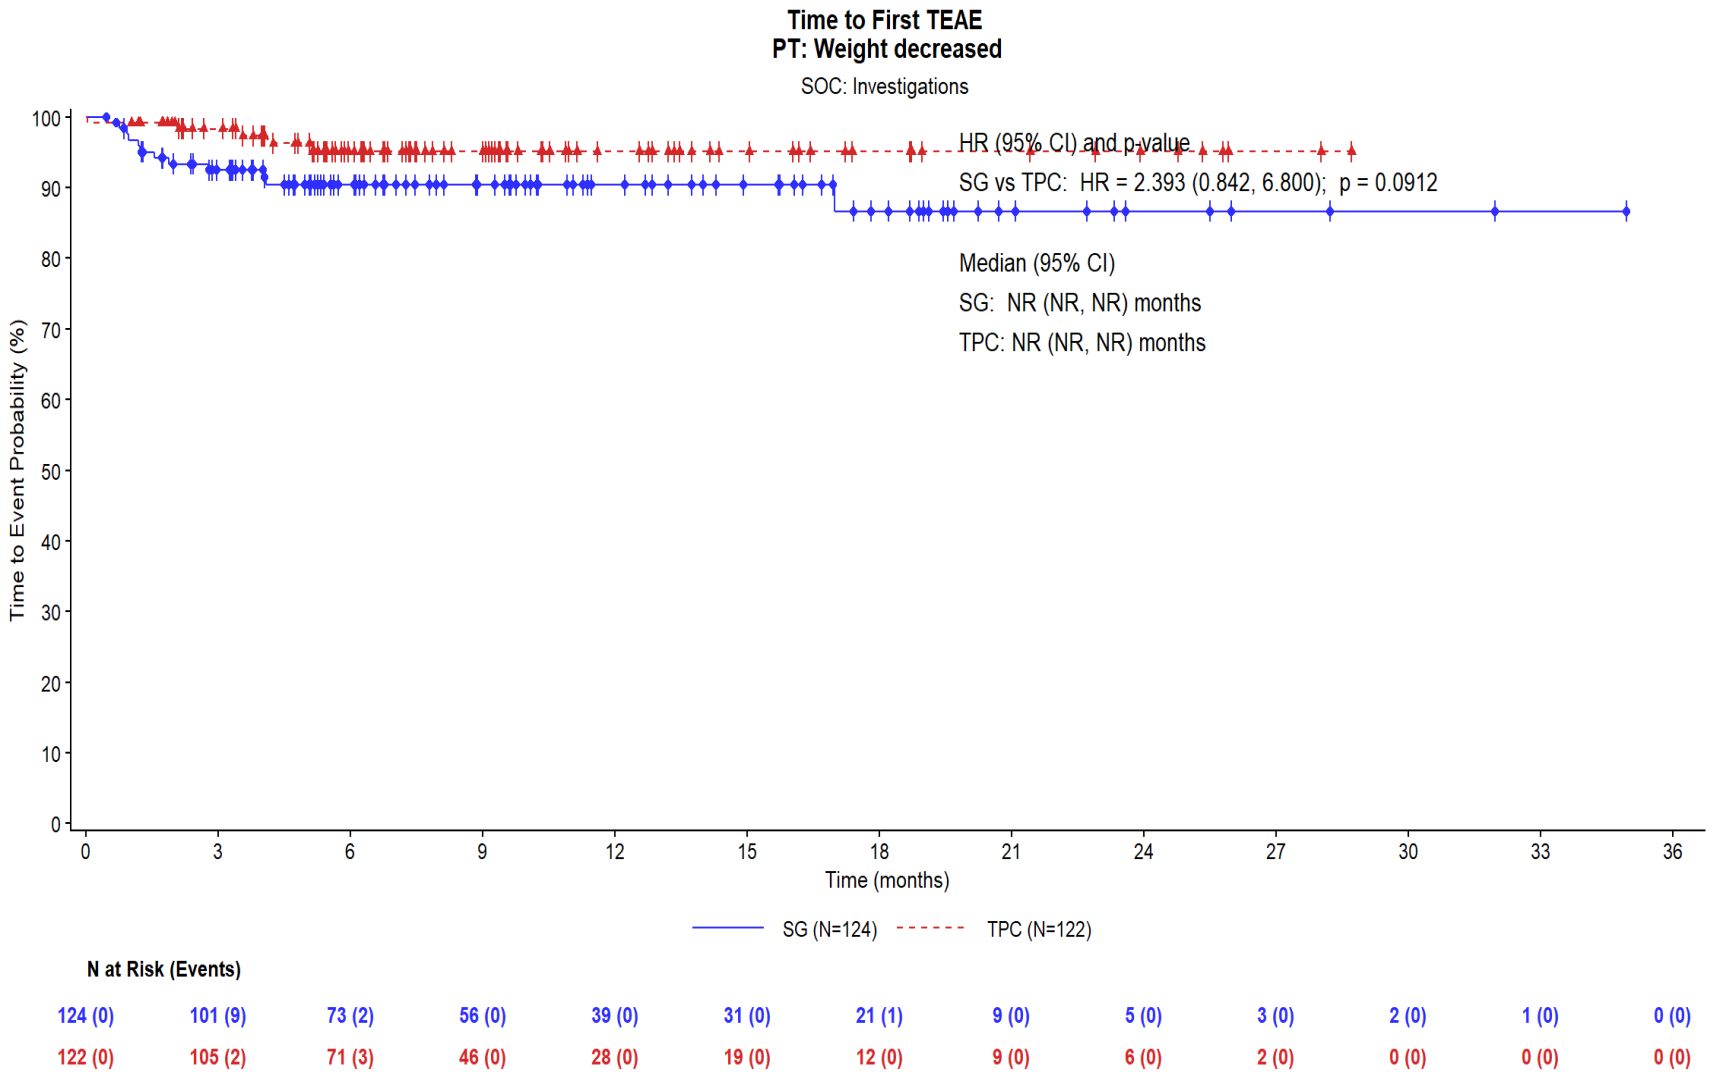
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.59. Figure 1.1.60: Kaplan Meier Plot of Time to First TEAE by PT Aspartate aminotransferase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



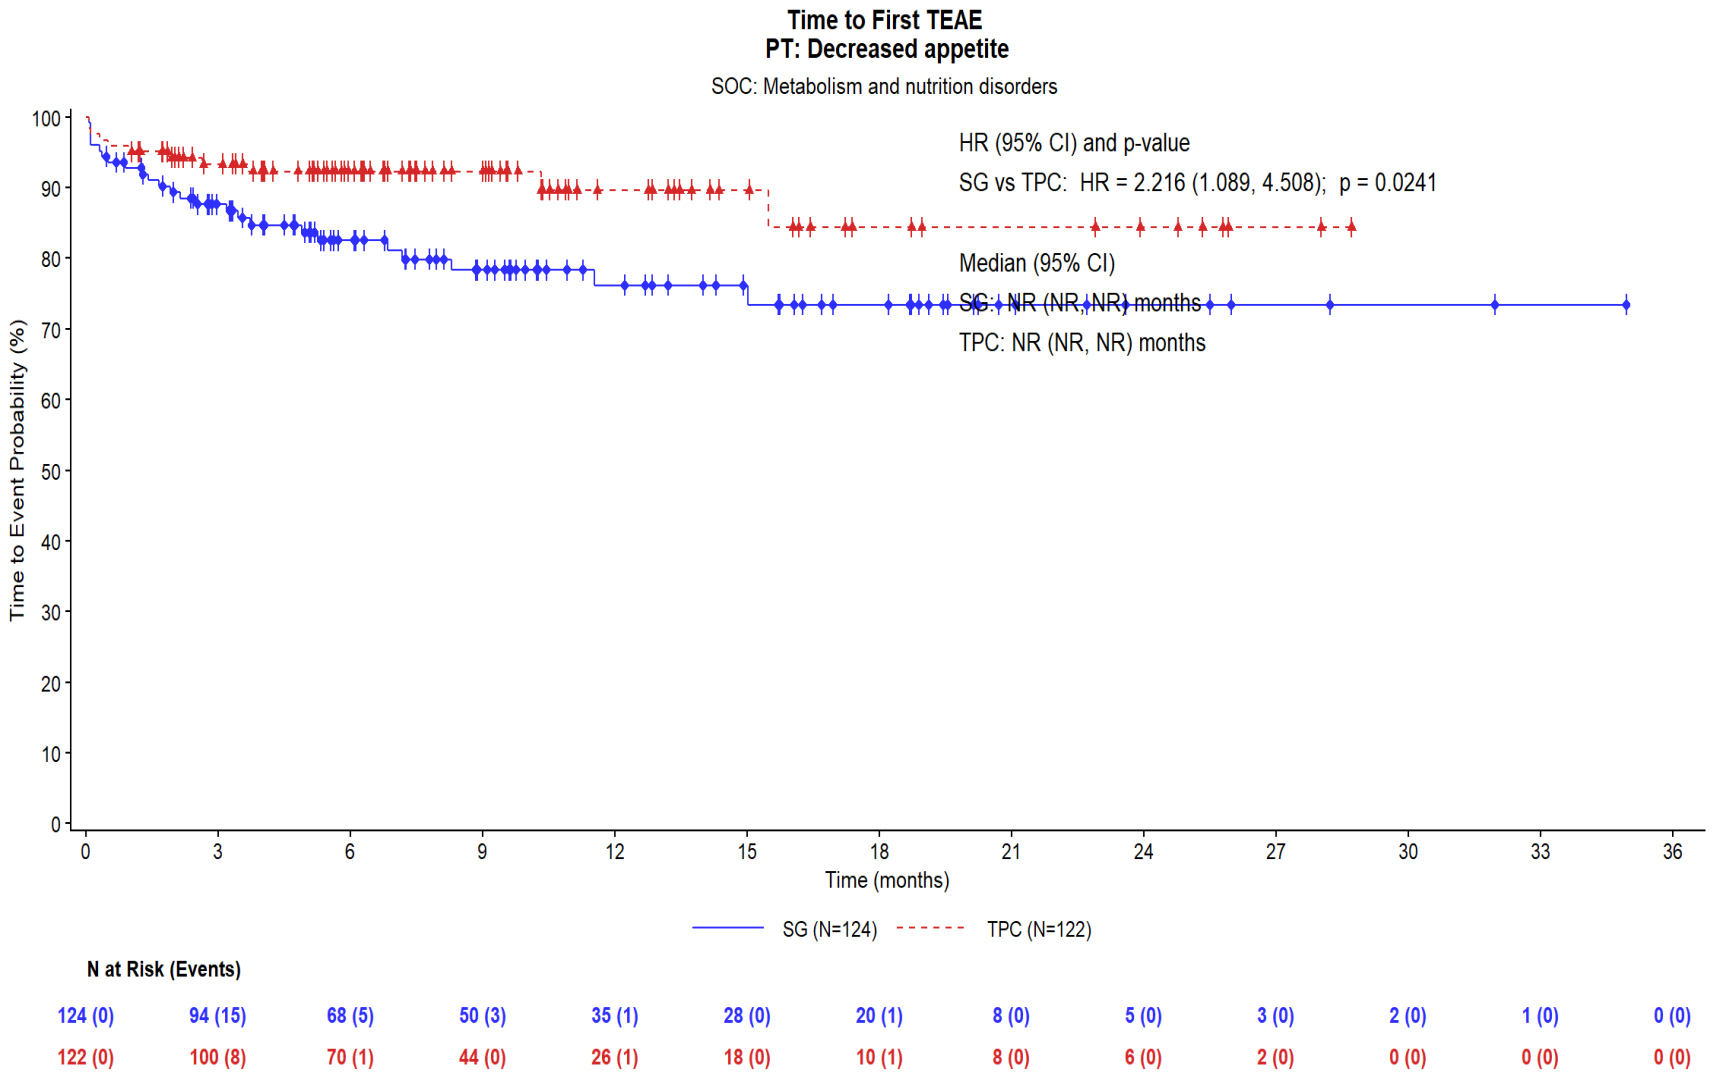
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.60. Figure 1.1.61: Kaplan Meier Plot of Time to First TEAE by PT Blood alkaline phosphatase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



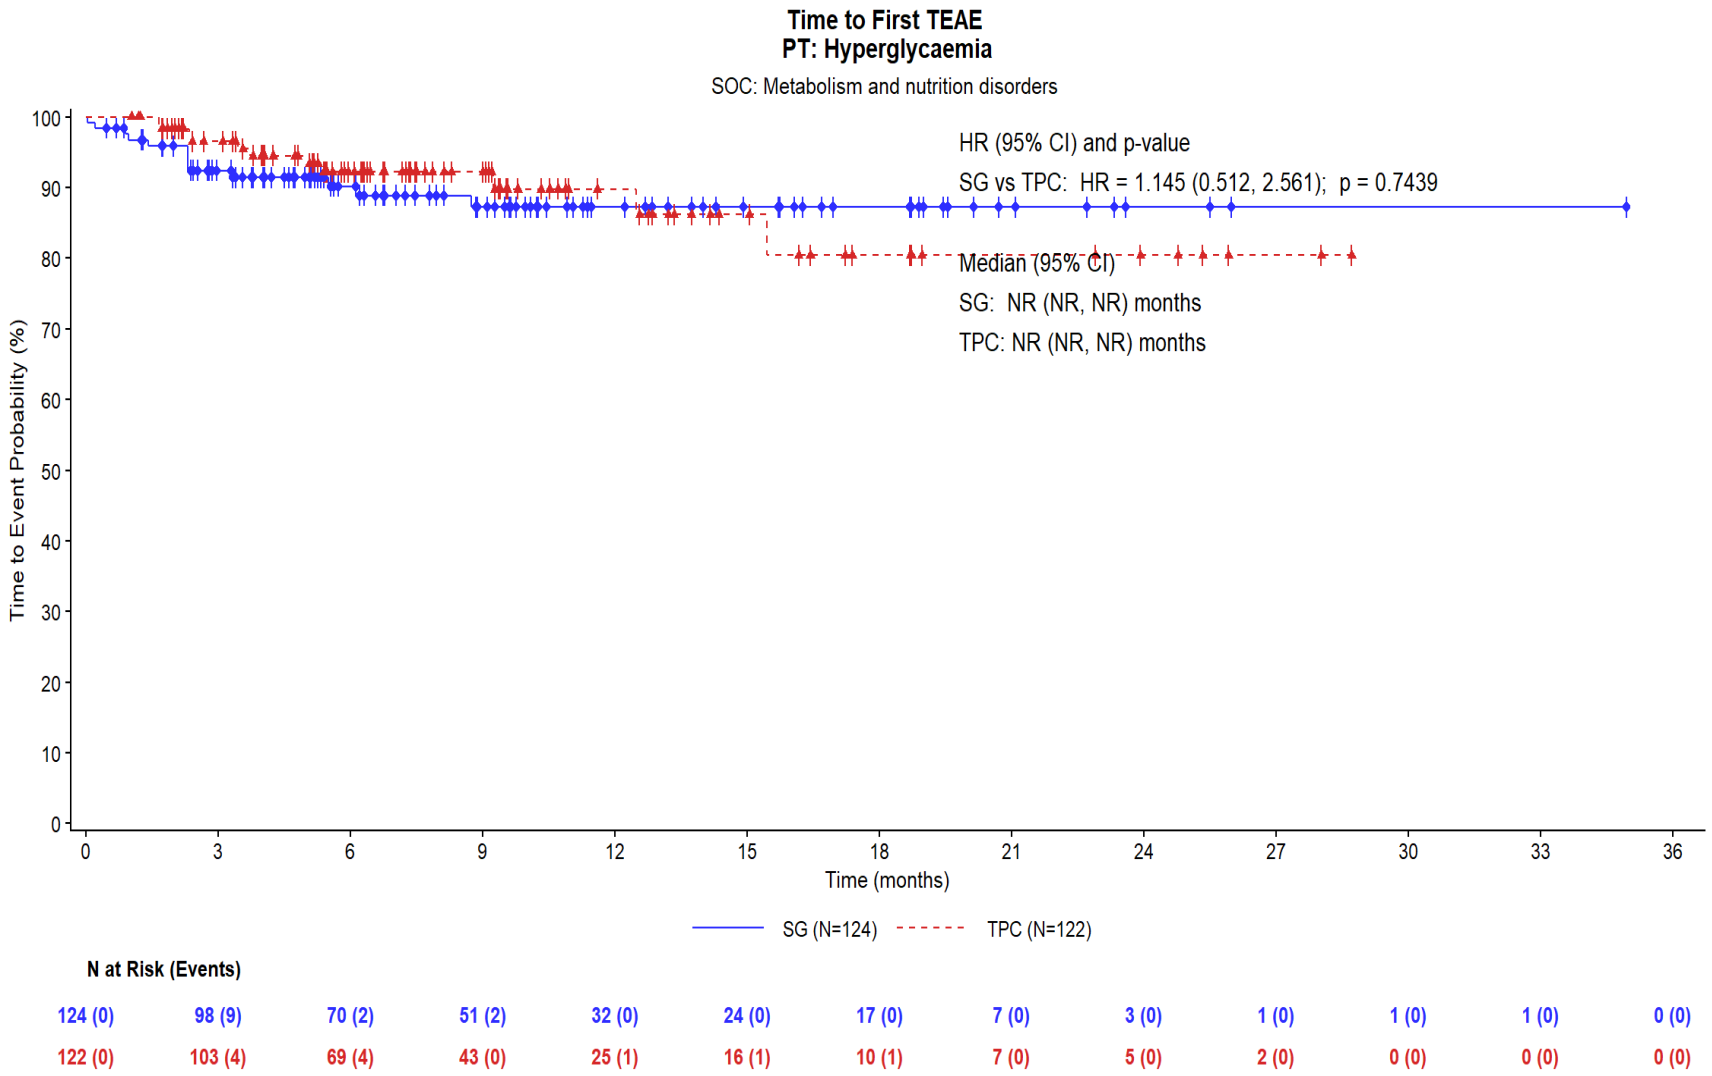
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.61. Figure 1.1.62: Kaplan Meier Plot of Time to First TEAE by PT Gamma glutamyltransferase increased — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



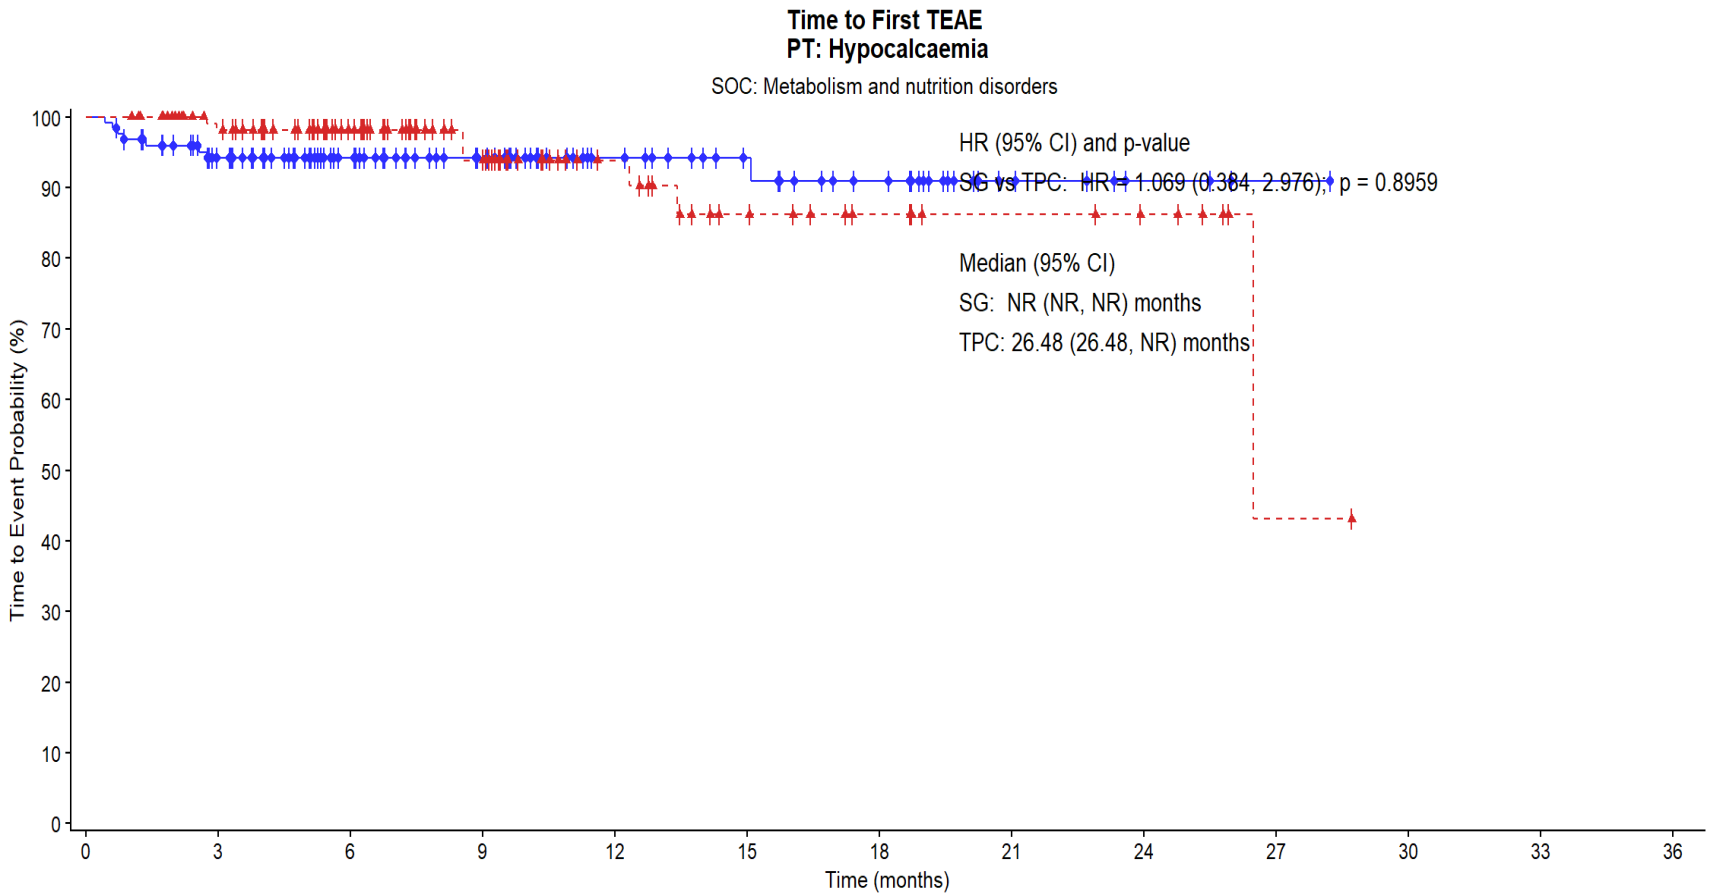
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.62. Figure 1.1.63: Kaplan Meier Plot of Time to First TEAE by PT Weight decreased — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



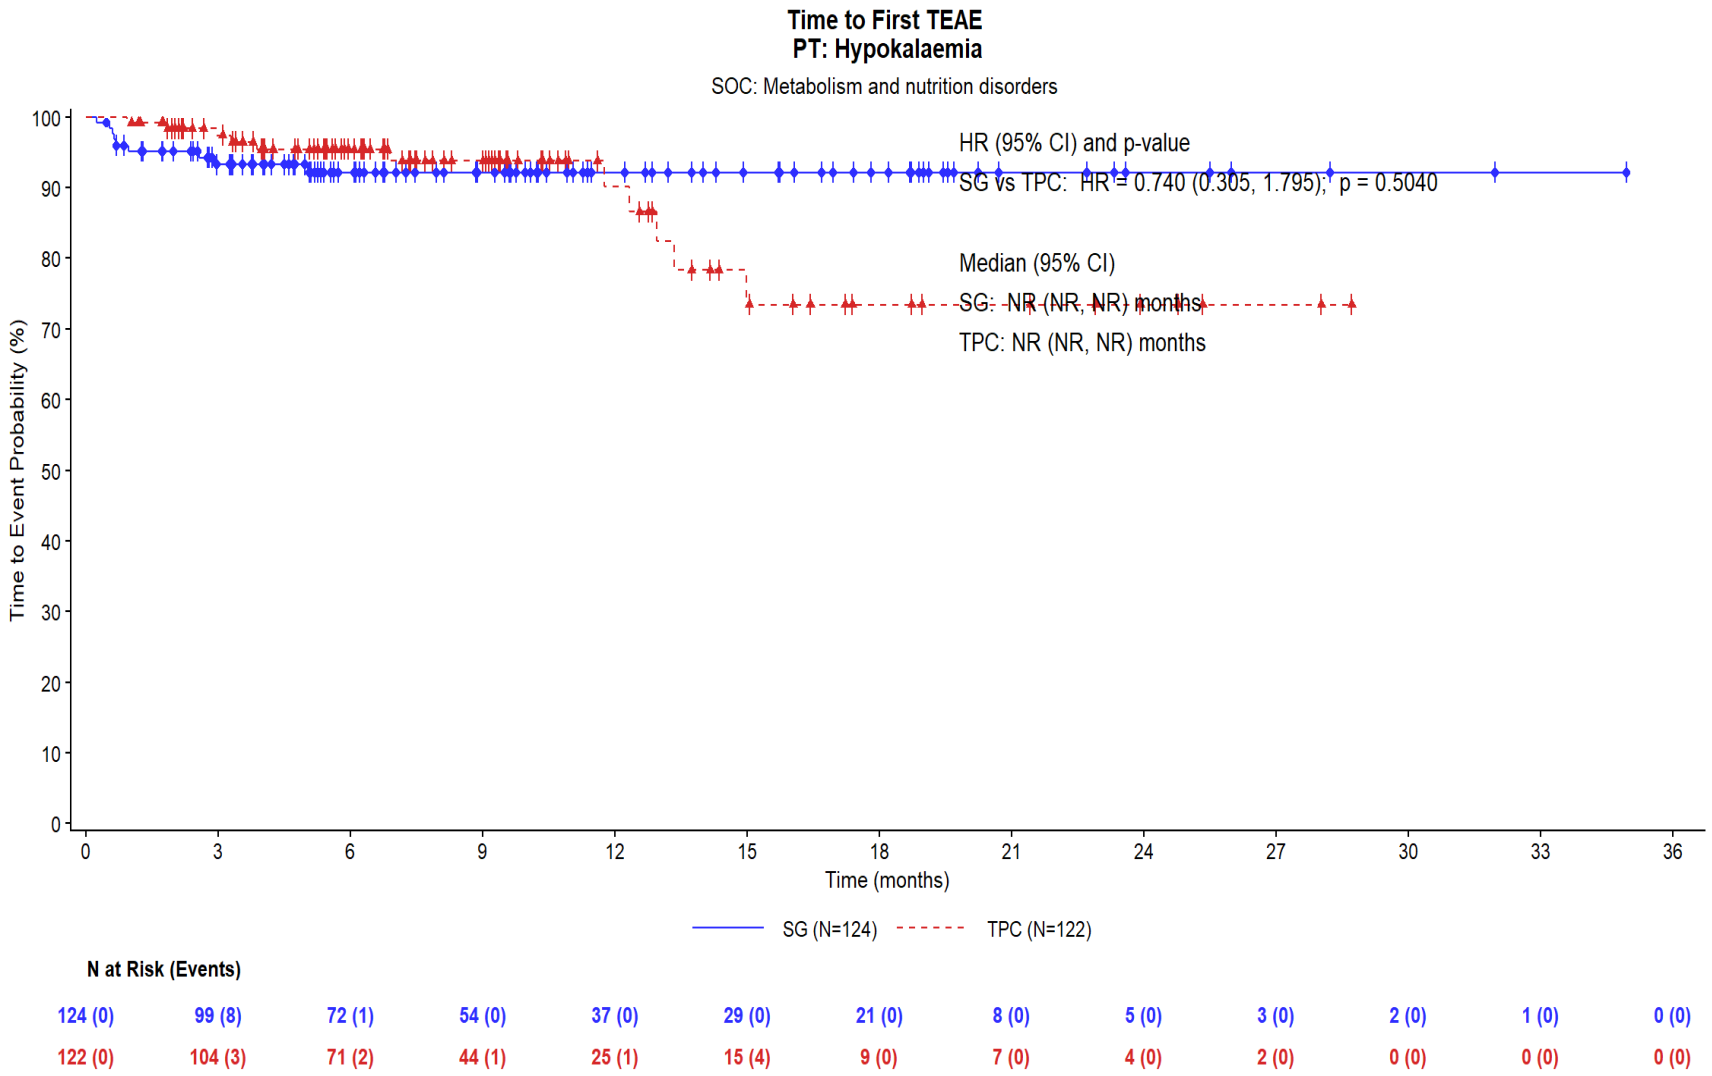
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.63. Figure 1.1.64: Kaplan Meier Plot of Time to First TEAE by PT Decreased appetite — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



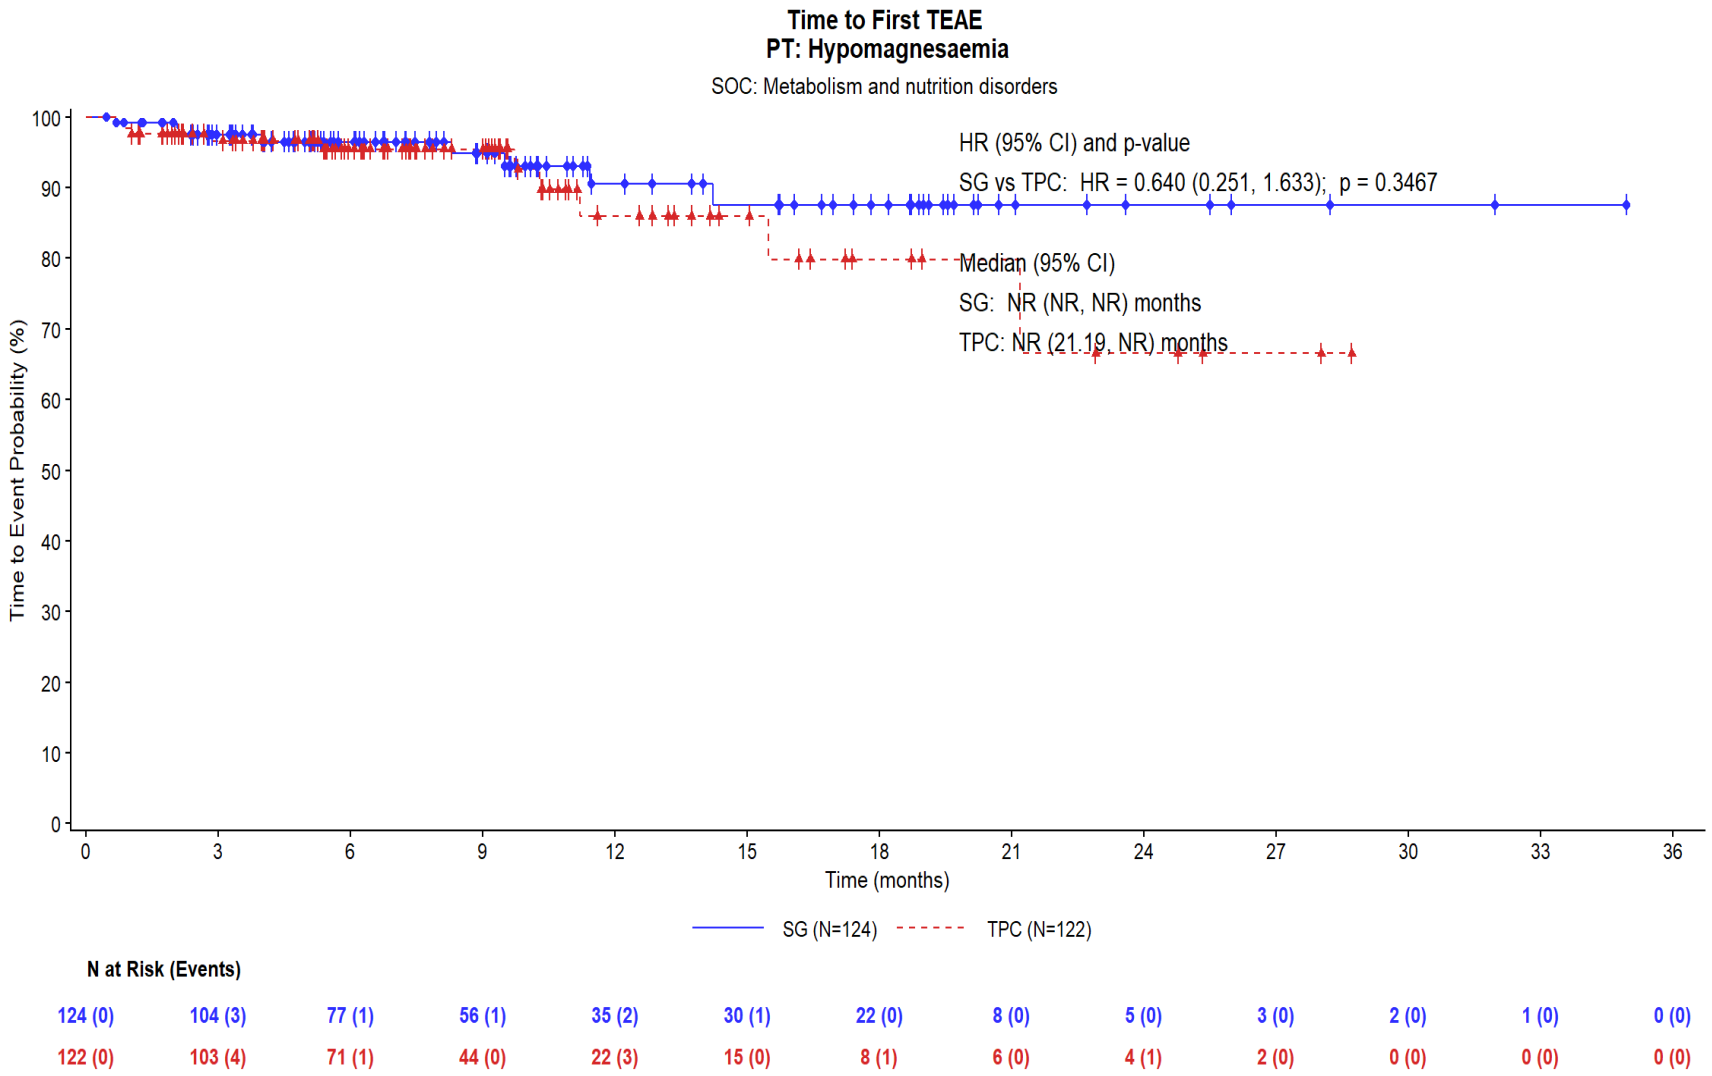
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.64. Figure 1.1.65: Kaplan Meier Plot of Time to First TEAE by PT Hyperglycaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



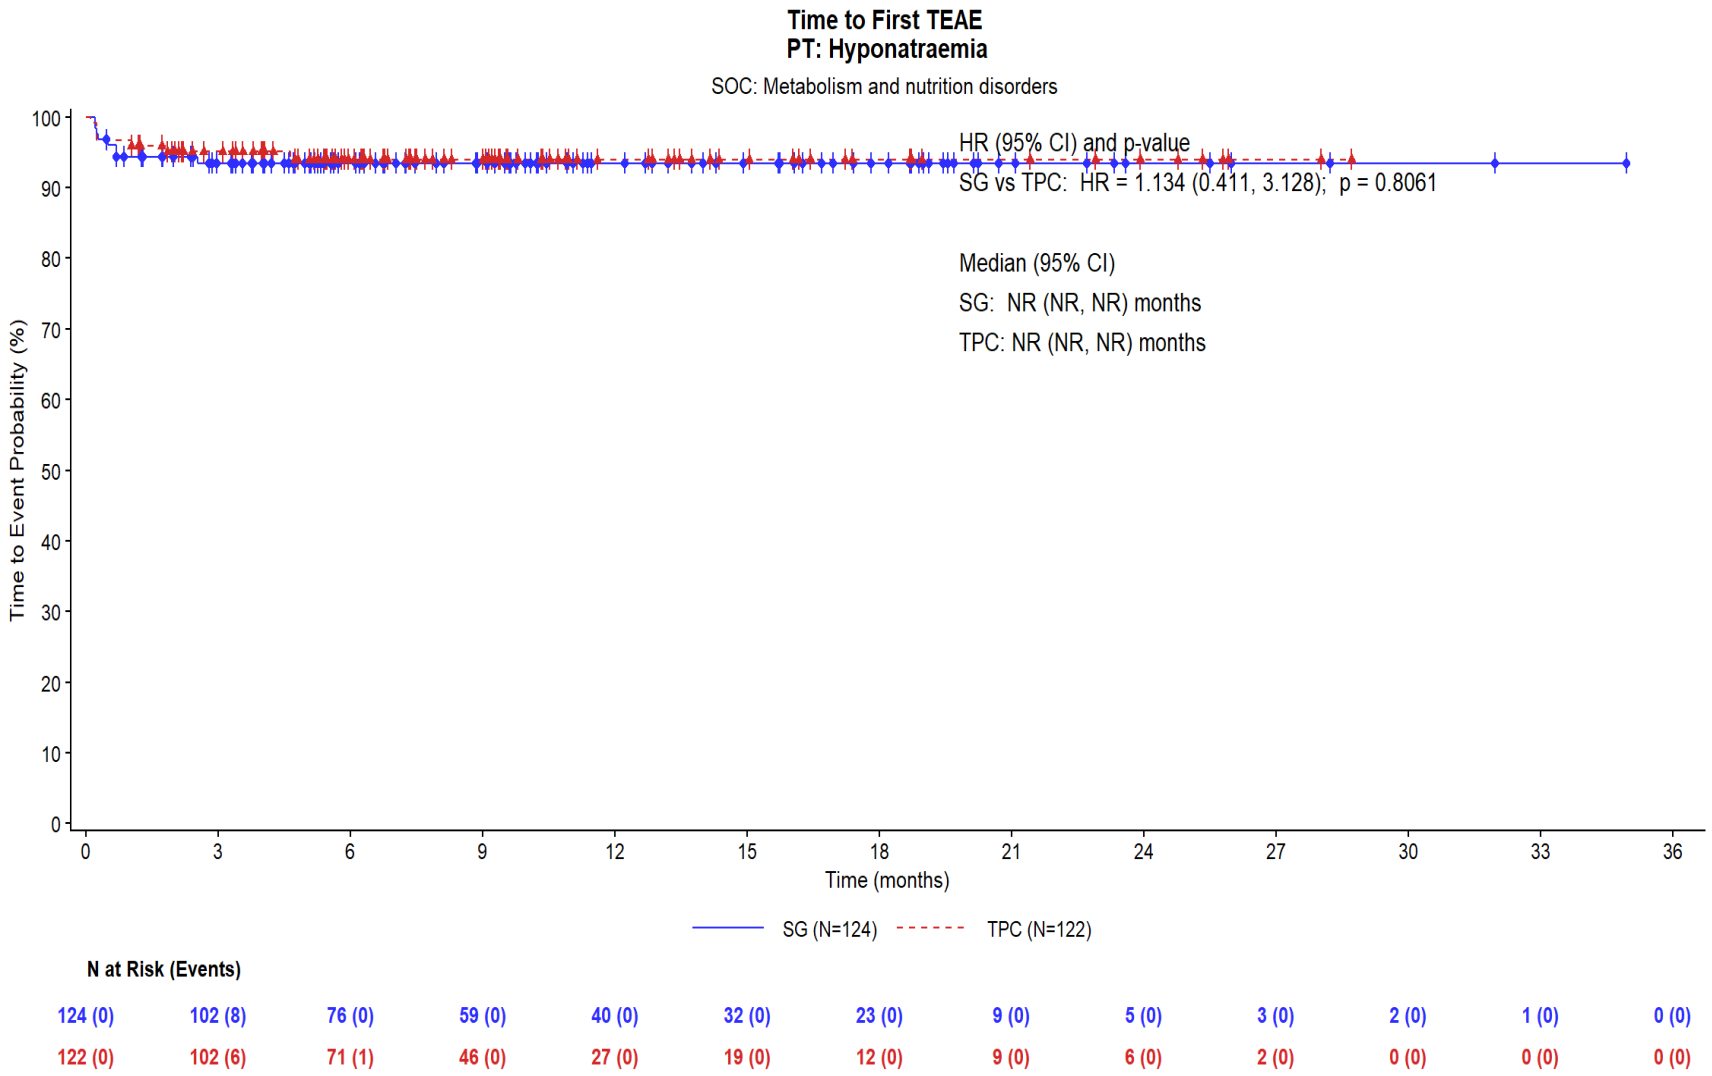
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.65. Figure 1.1.66: Kaplan Meier Plot of Time to First TEAE by PT Hypocalcaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



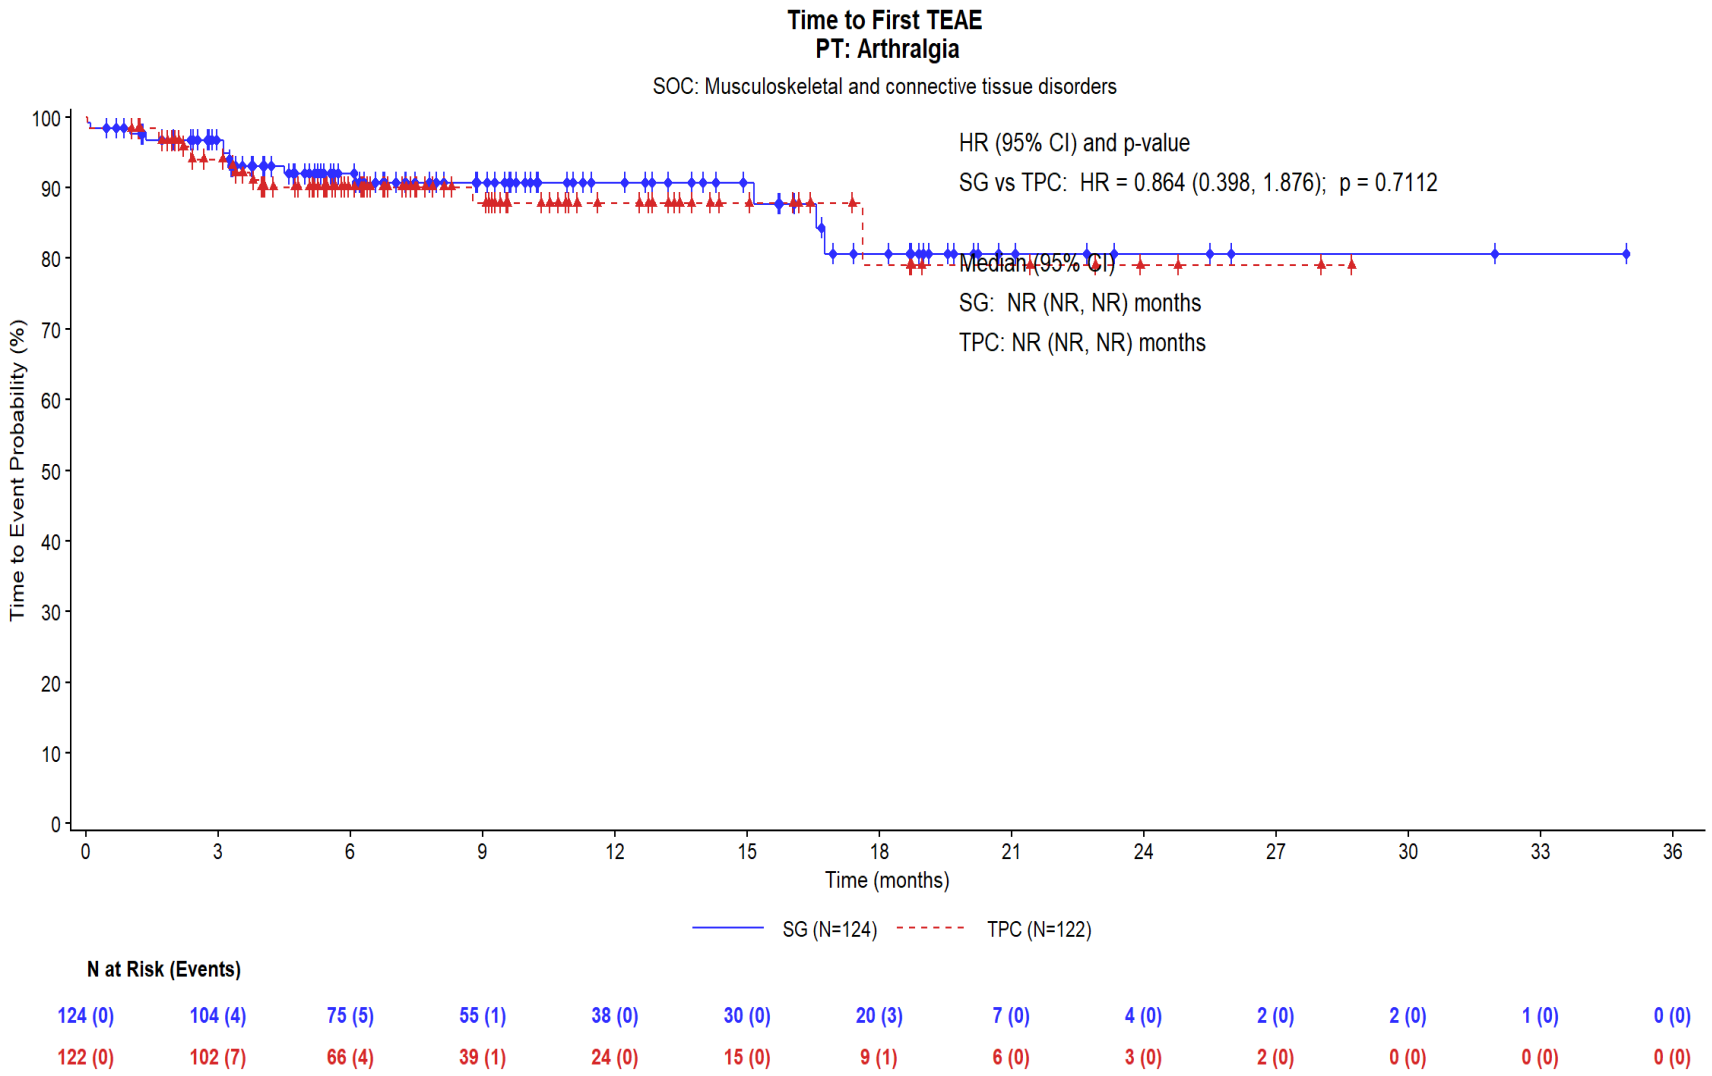
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.66. Figure 1.1.67: Kaplan Meier Plot of Time to First TEAE by PT Hypokalaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



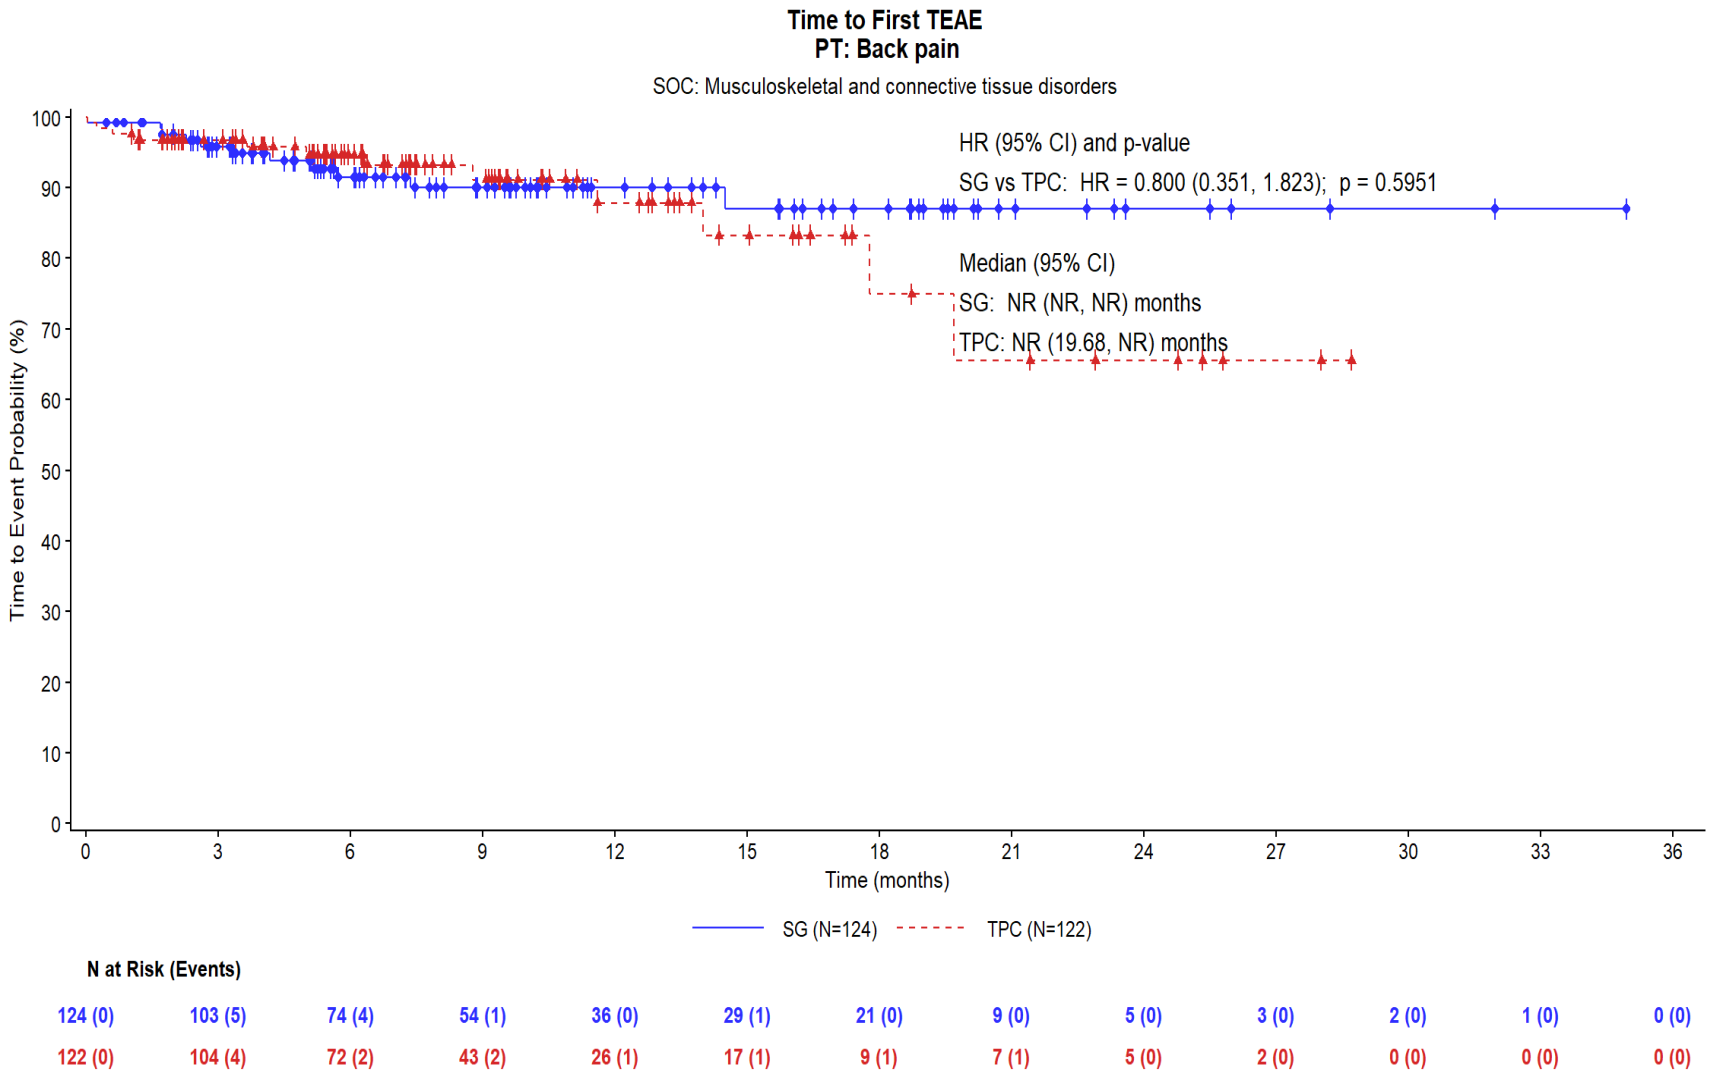
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.67. Figure 1.1.68: Kaplan Meier Plot of Time to First TEAE by PT Hypomagnesaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



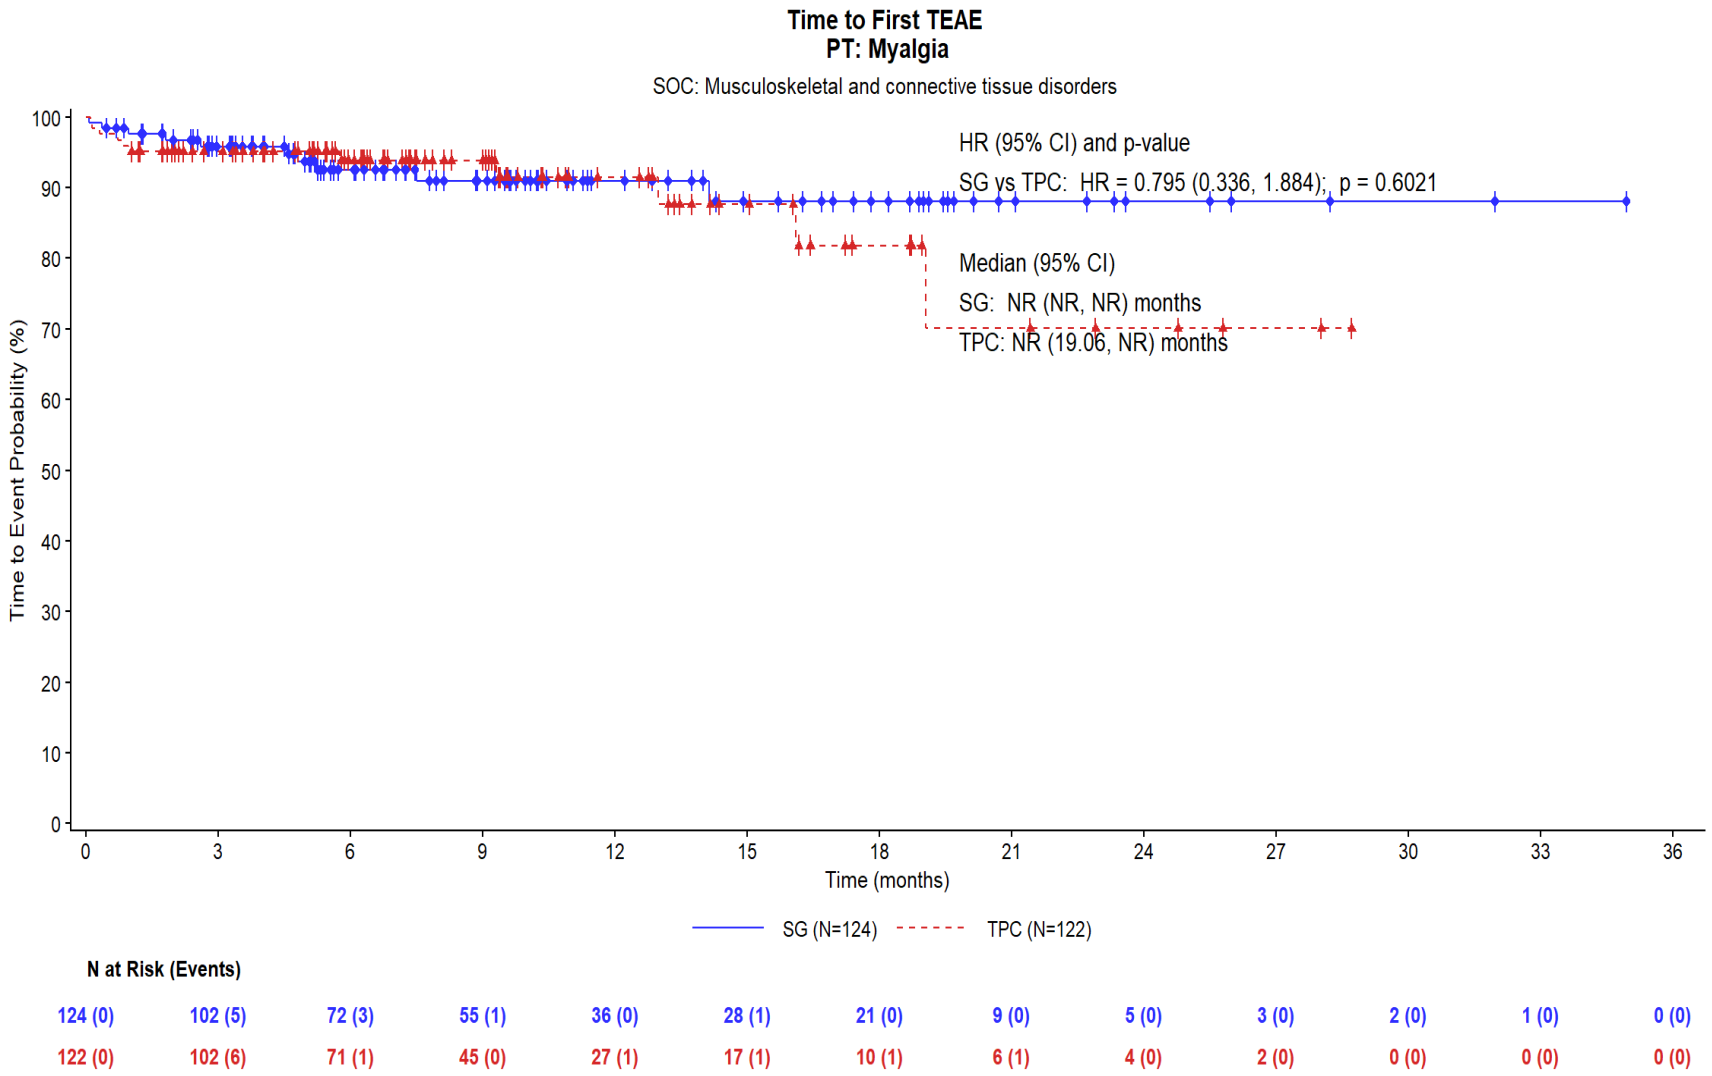
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.68. Figure 1.1.69: Kaplan Meier Plot of Time to First TEAE by PT Hyponatraemia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



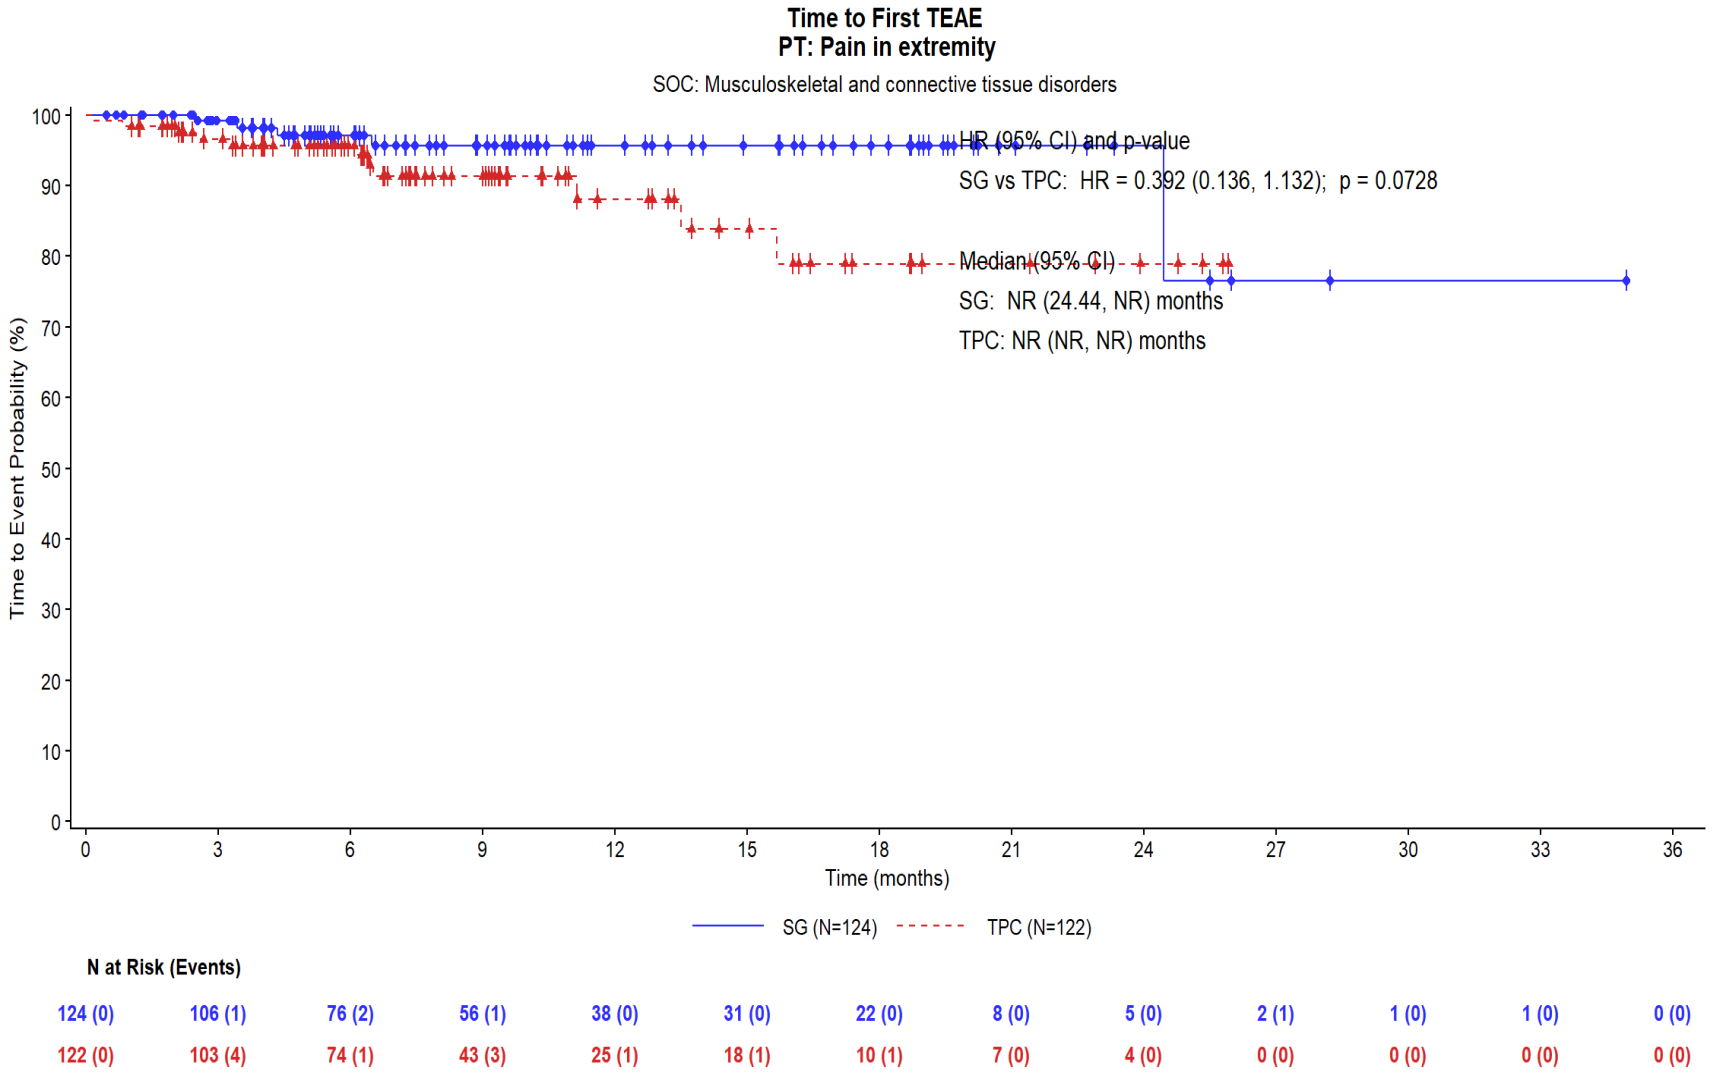
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.69. Figure 1.1.70: Kaplan Meier Plot of Time to First TEAE by PT Arthralgia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



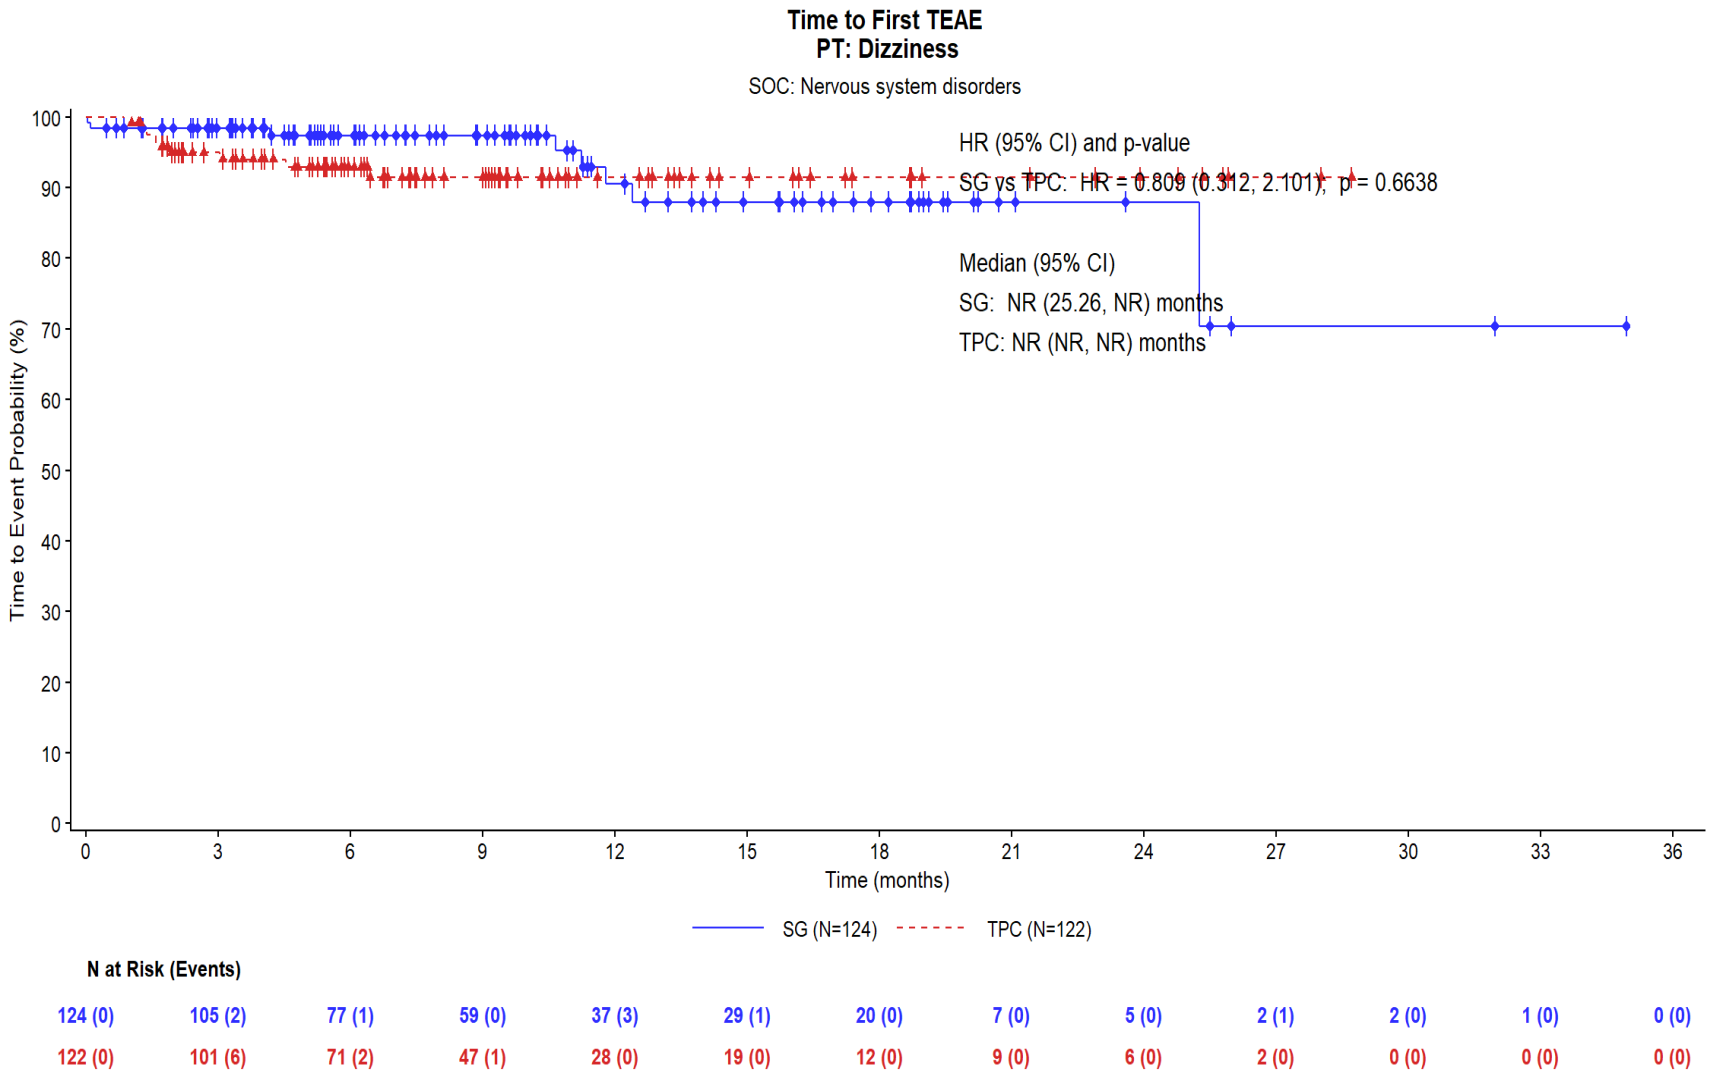
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.70. Figure 1.1.71: Kaplan Meier Plot of Time to First TEAE by PT Back pain — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



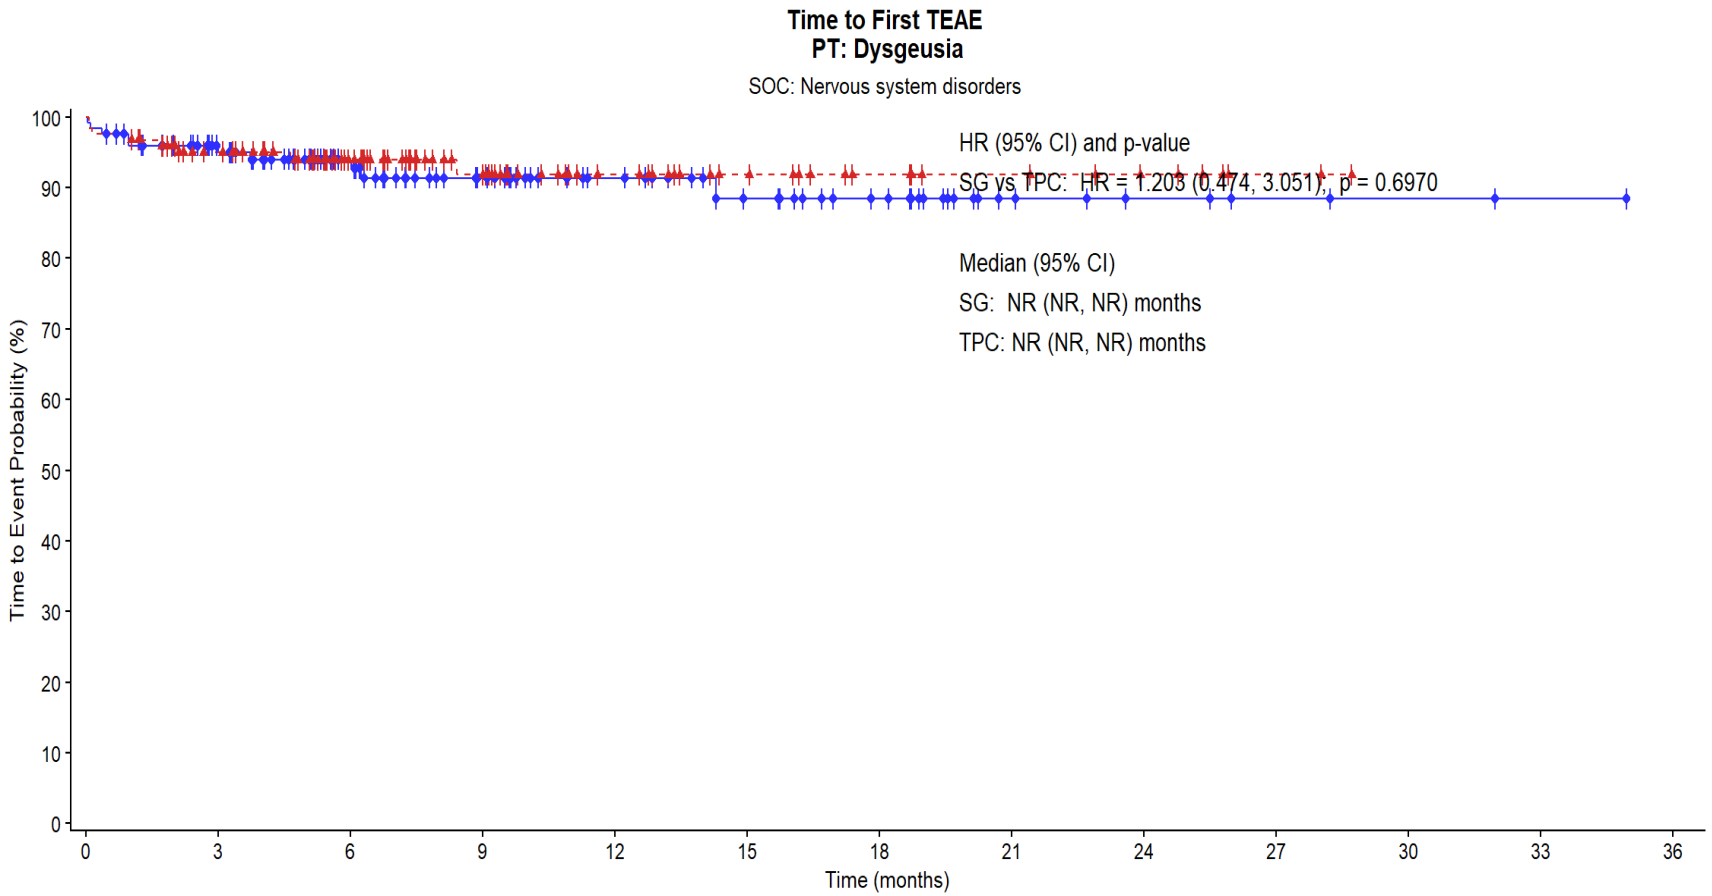
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.71. Figure 1.1.72: Kaplan Meier Plot of Time to First TEAE by PT Myalgia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



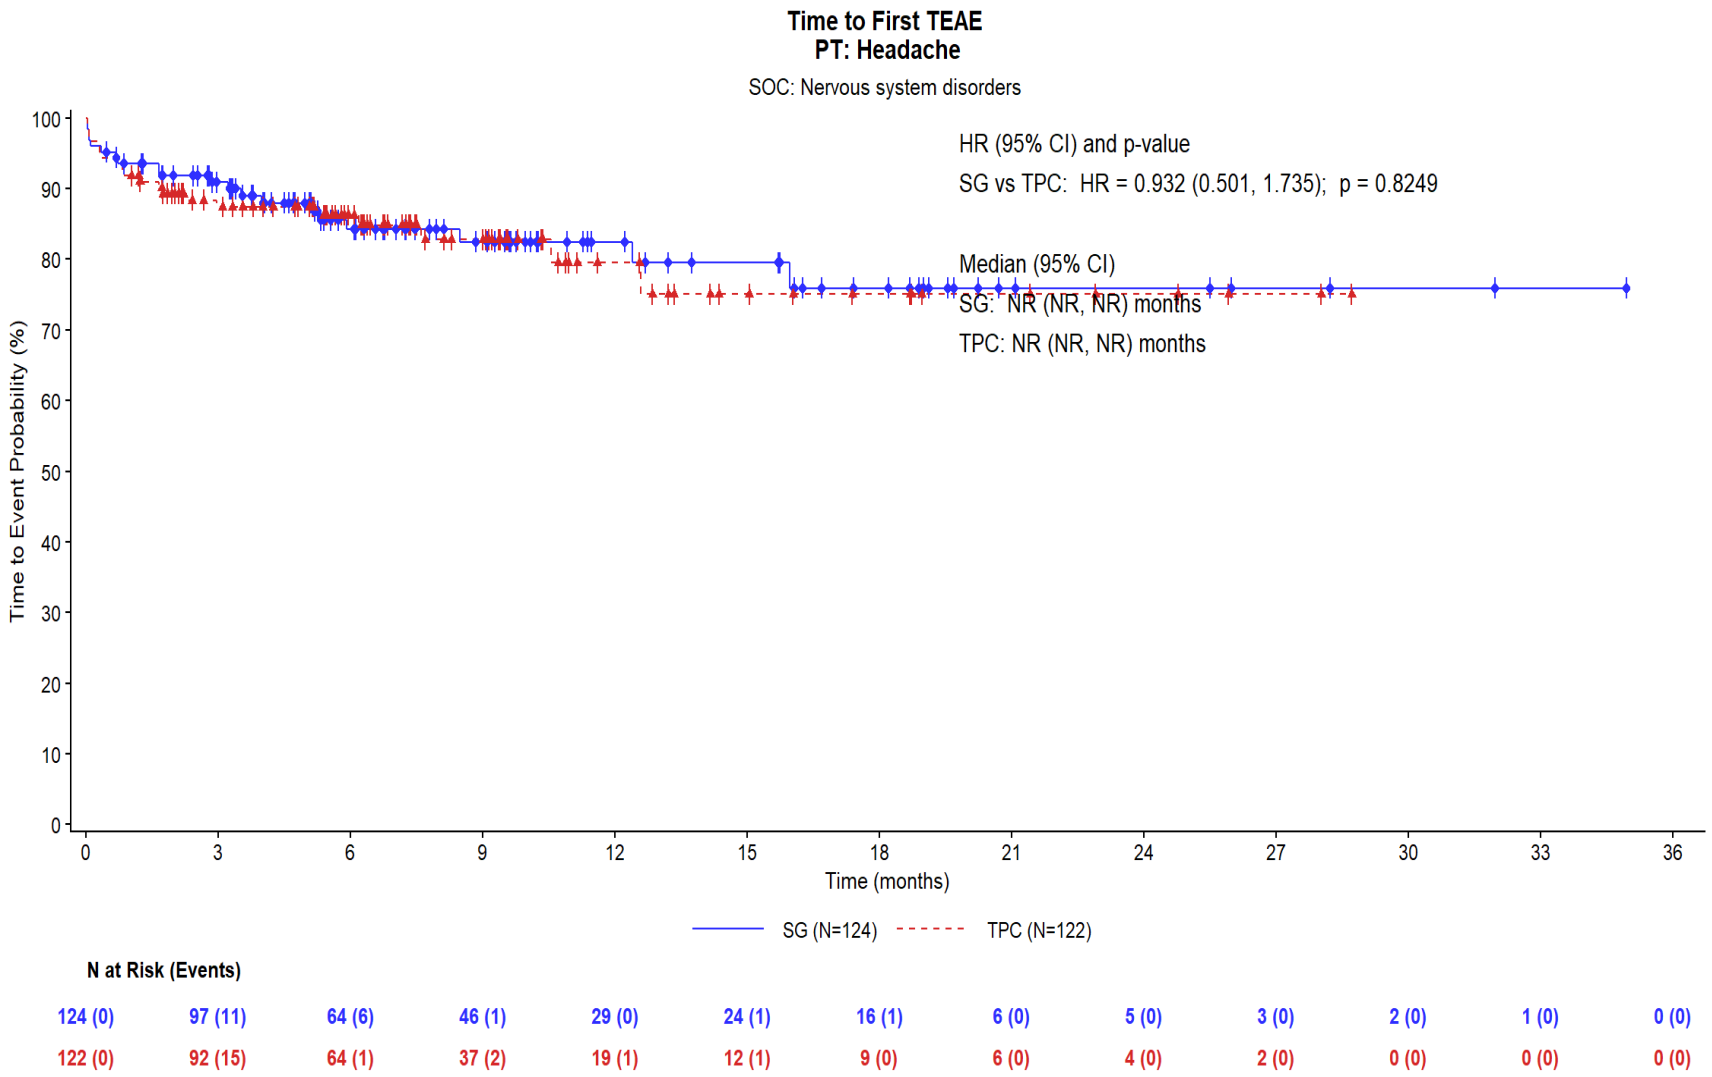
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.72. Figure 1.1.73: Kaplan Meier Plot of Time to First TEAE by PT Pain in extremity — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



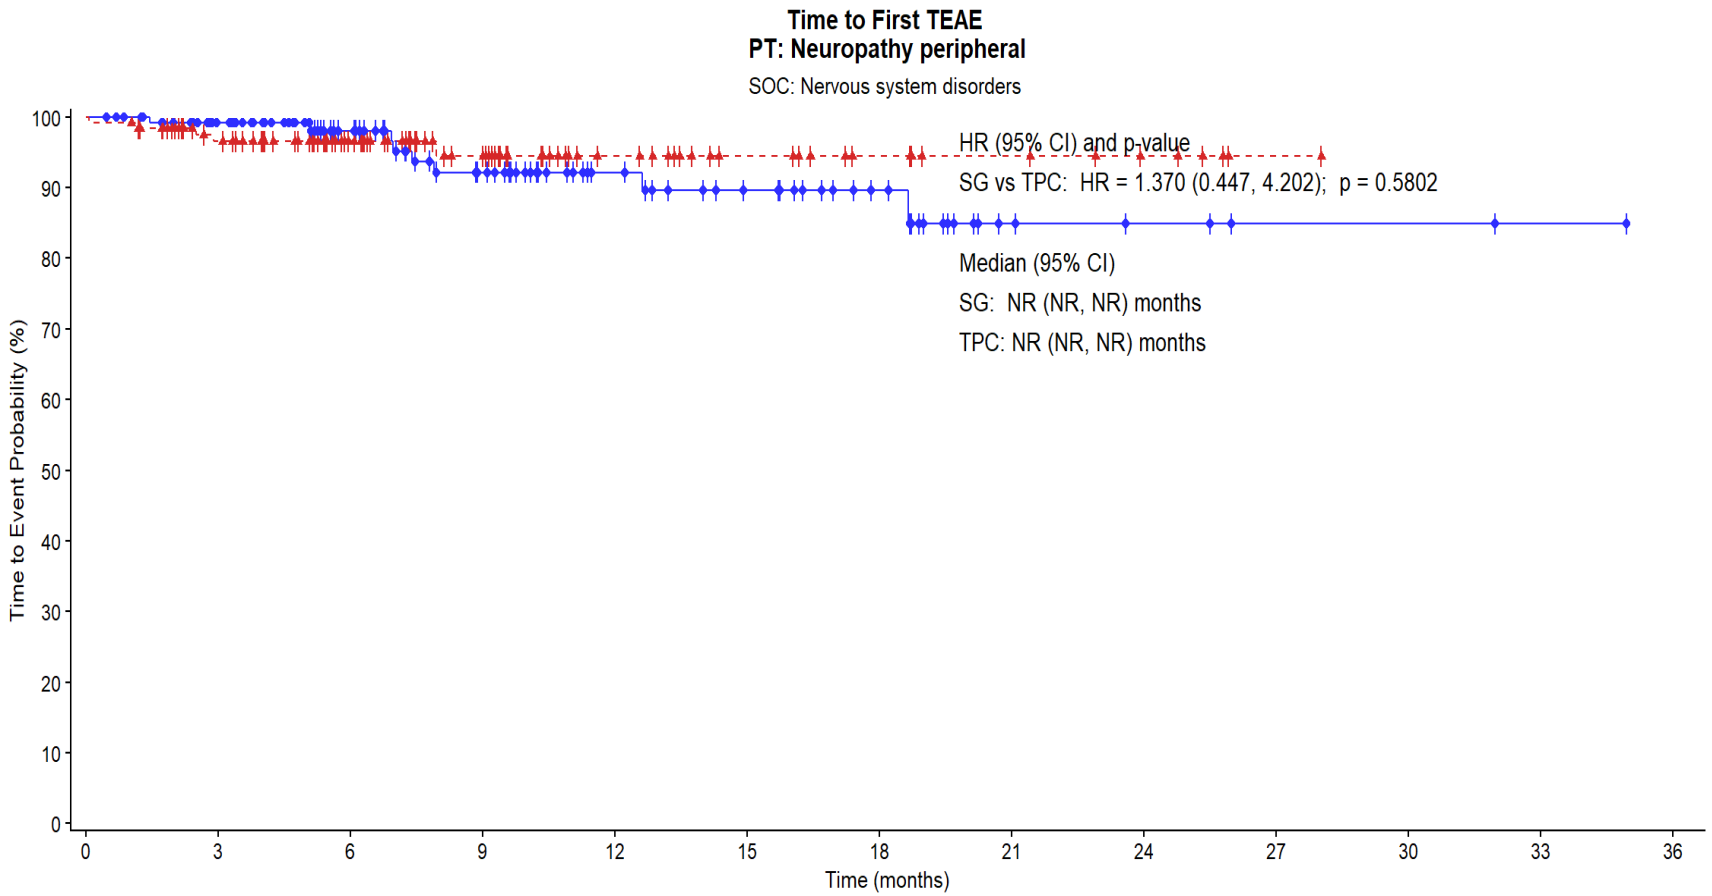
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.73. Figure 1.1.74: Kaplan Meier Plot of Time to First TEAE by PT Dizziness — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



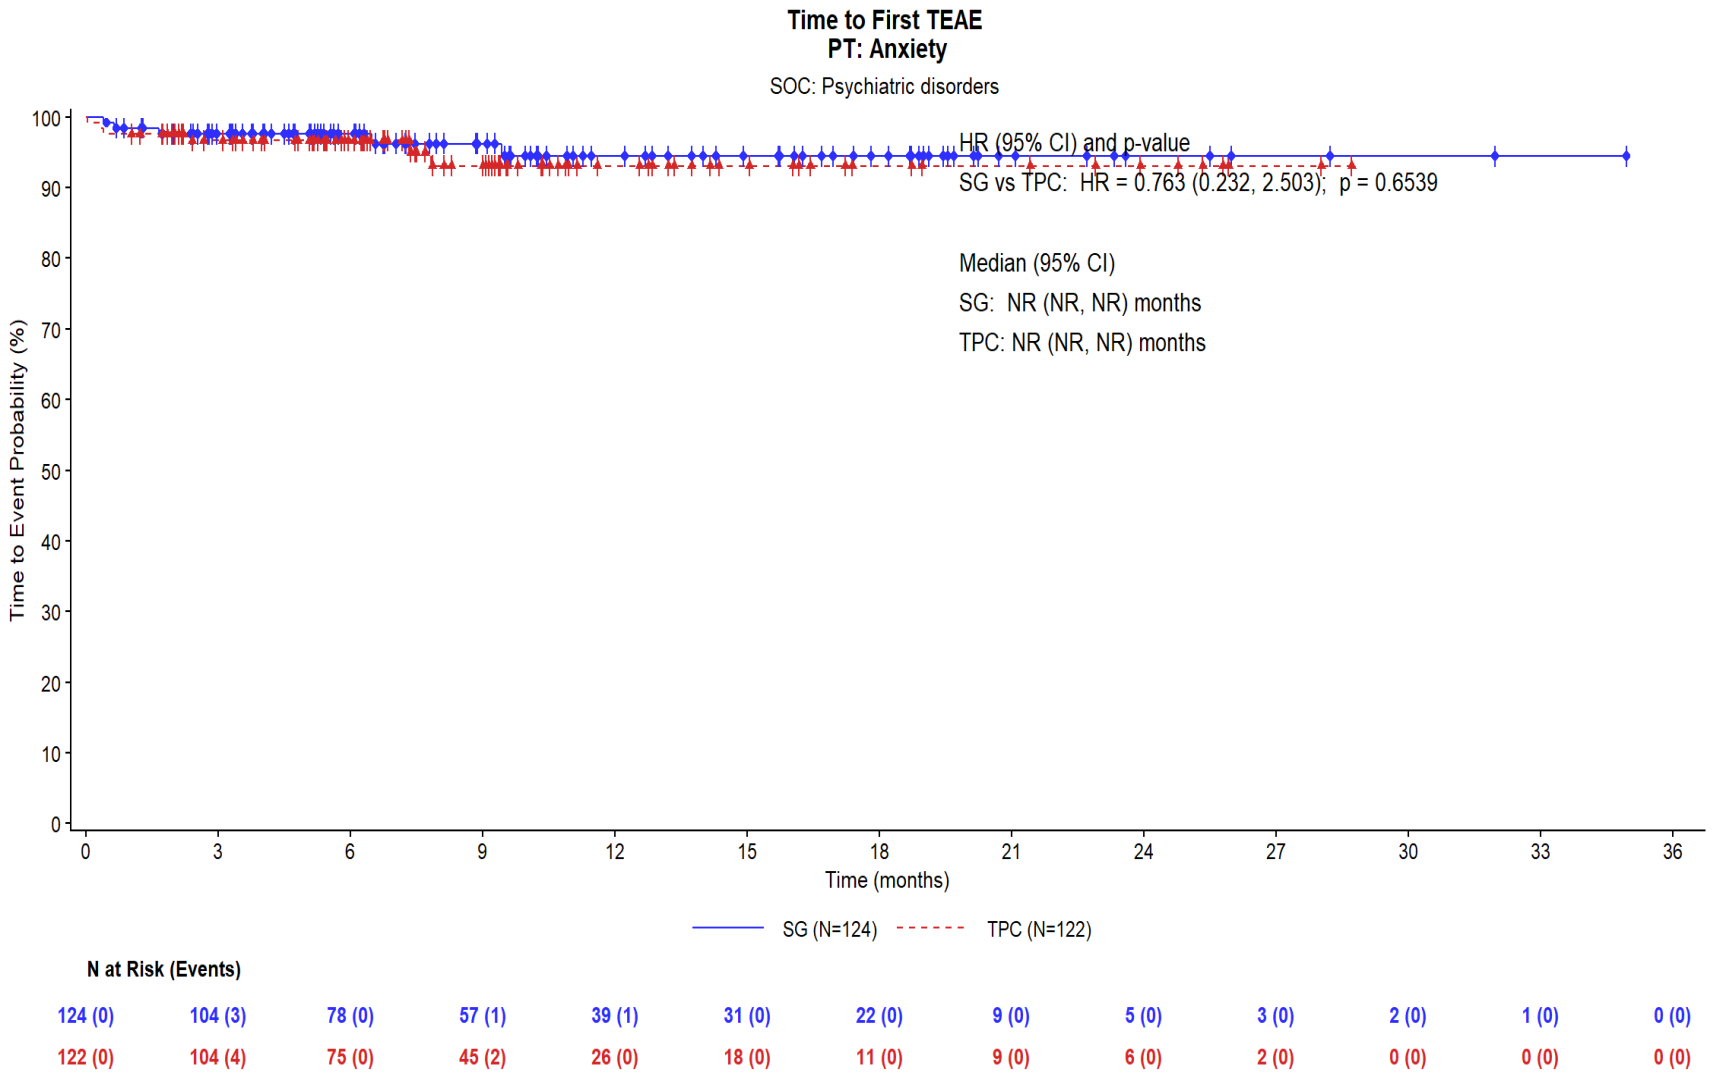
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.74. Figure 1.1.75: Kaplan Meier Plot of Time to First TEAE by PT Dysgeusia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



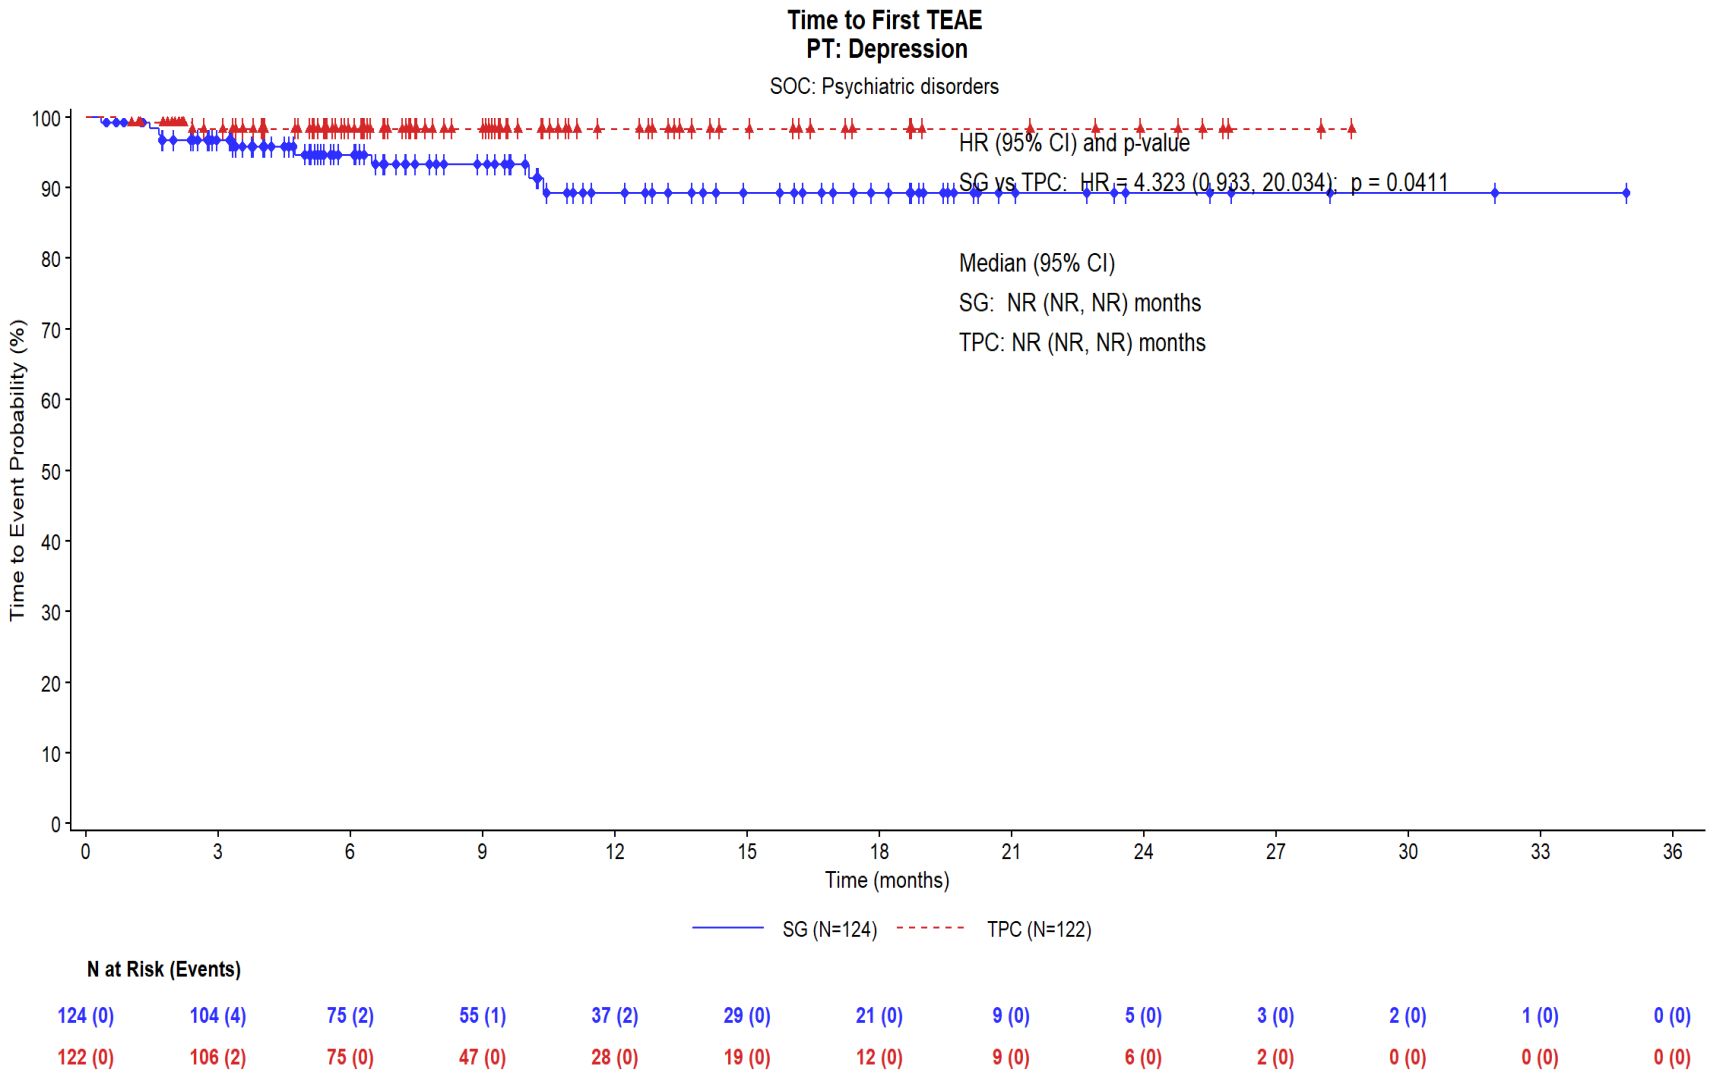
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.75. Figure 1.1.76: Kaplan Meier Plot of Time to First TEAE by PT Headache — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



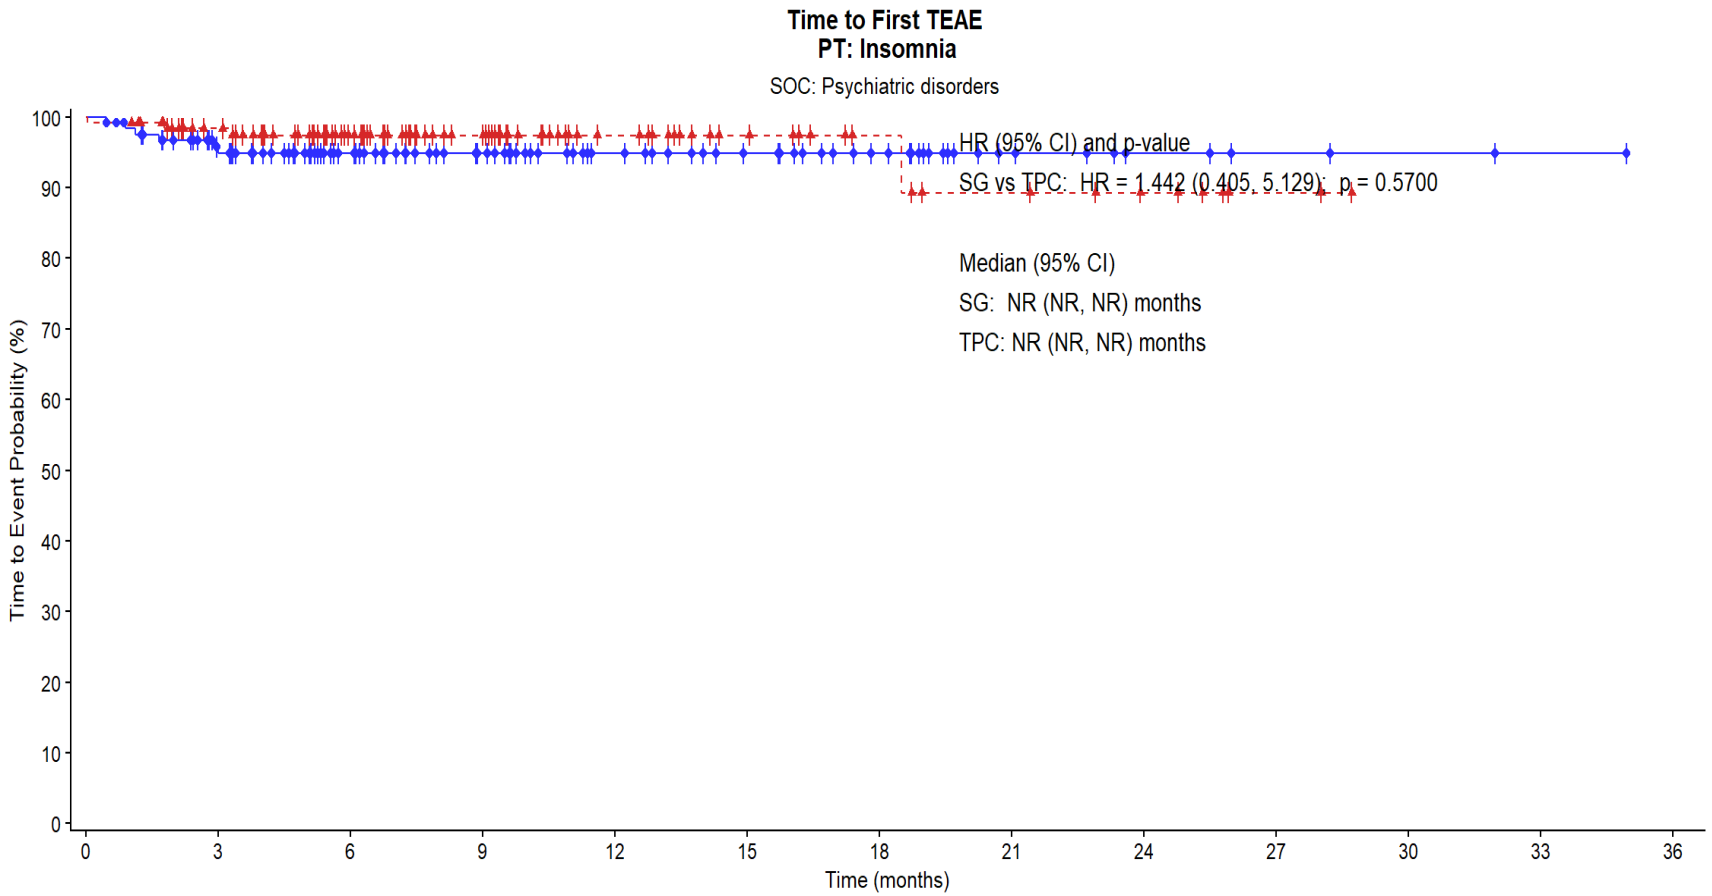
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.76. Figure 1.1.77: Kaplan Meier Plot of Time to First TEAE by PT Neuropathy peripheral — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



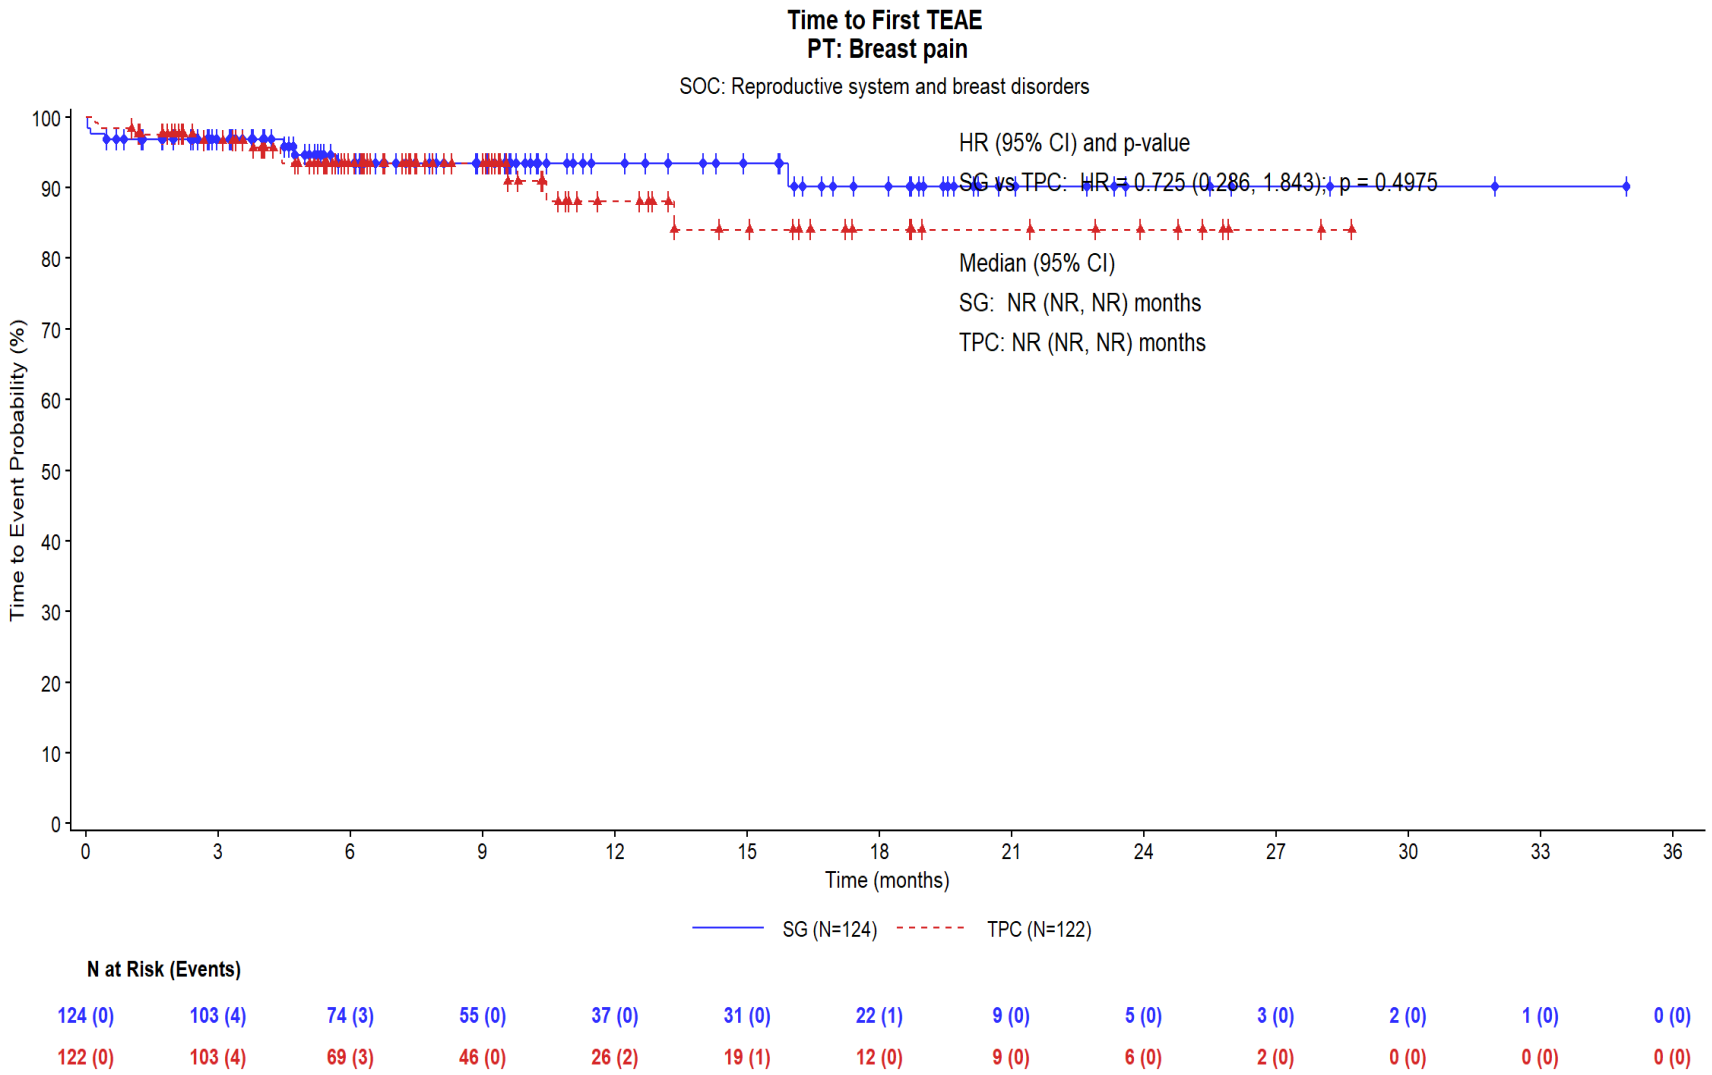
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.77. Figure 1.1.78: Kaplan Meier Plot of Time to First TEAE by PT Anxiety — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



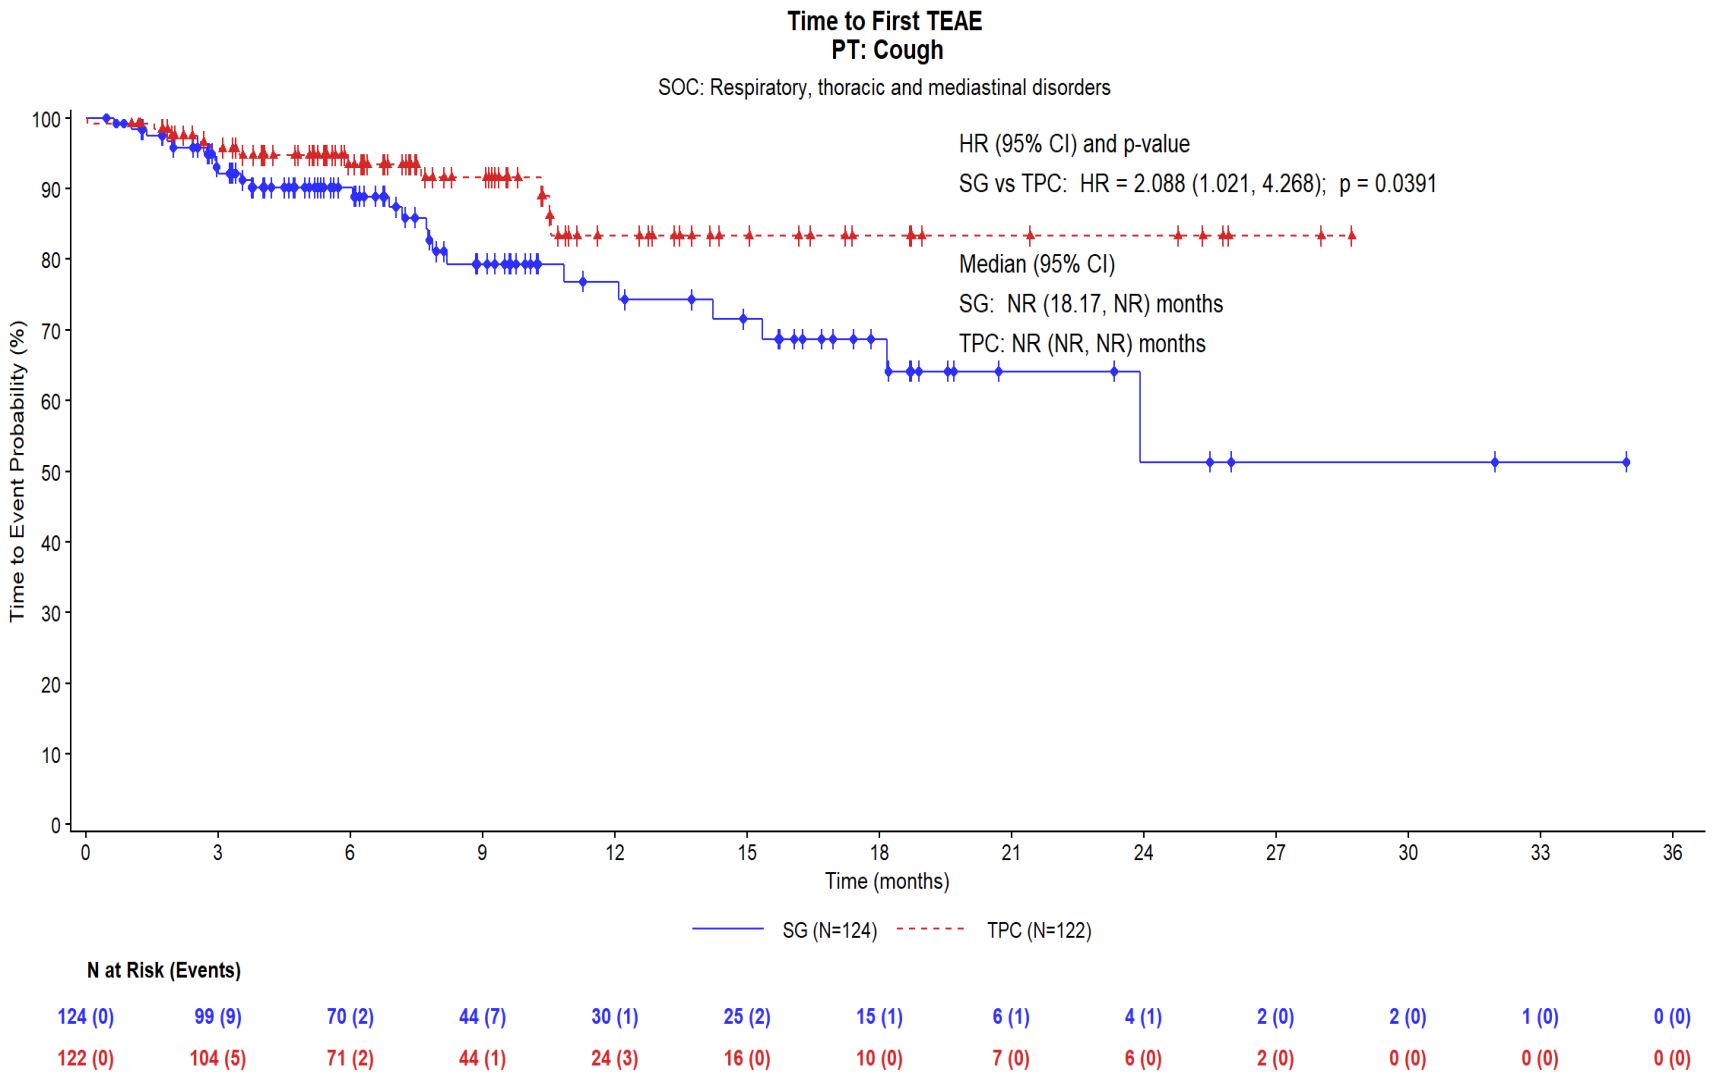
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.78. Figure 1.1.79: Kaplan Meier Plot of Time to First TEAE by PT Depression — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



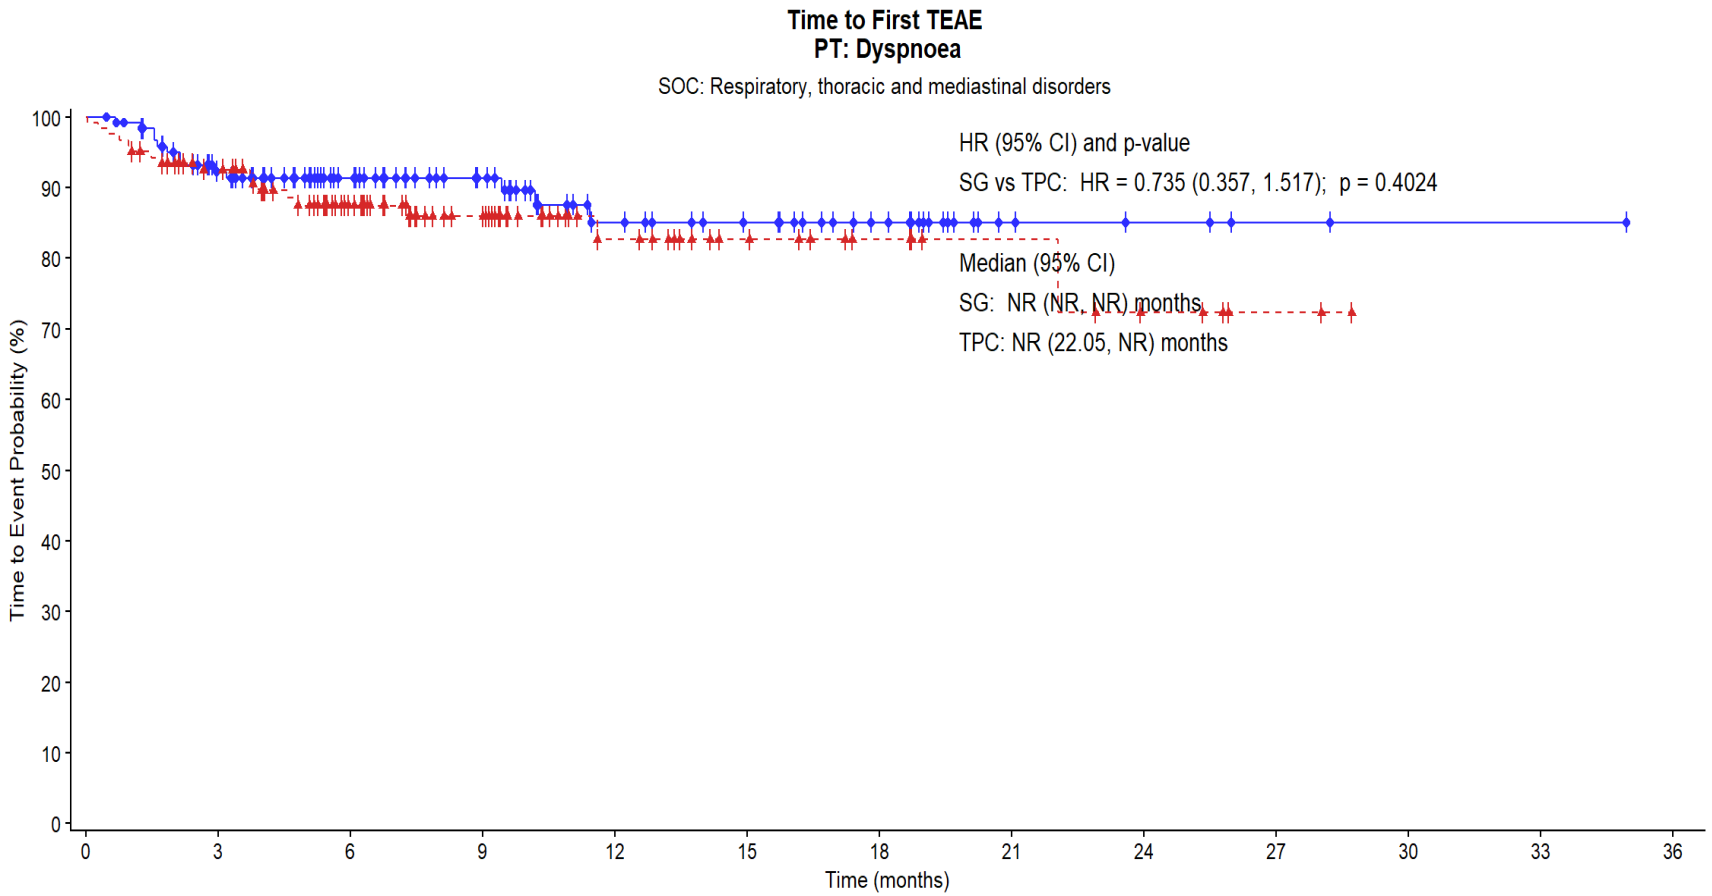
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.79. Figure 1.1.80: Kaplan Meier Plot of Time to First TEAE by PT Insomnia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



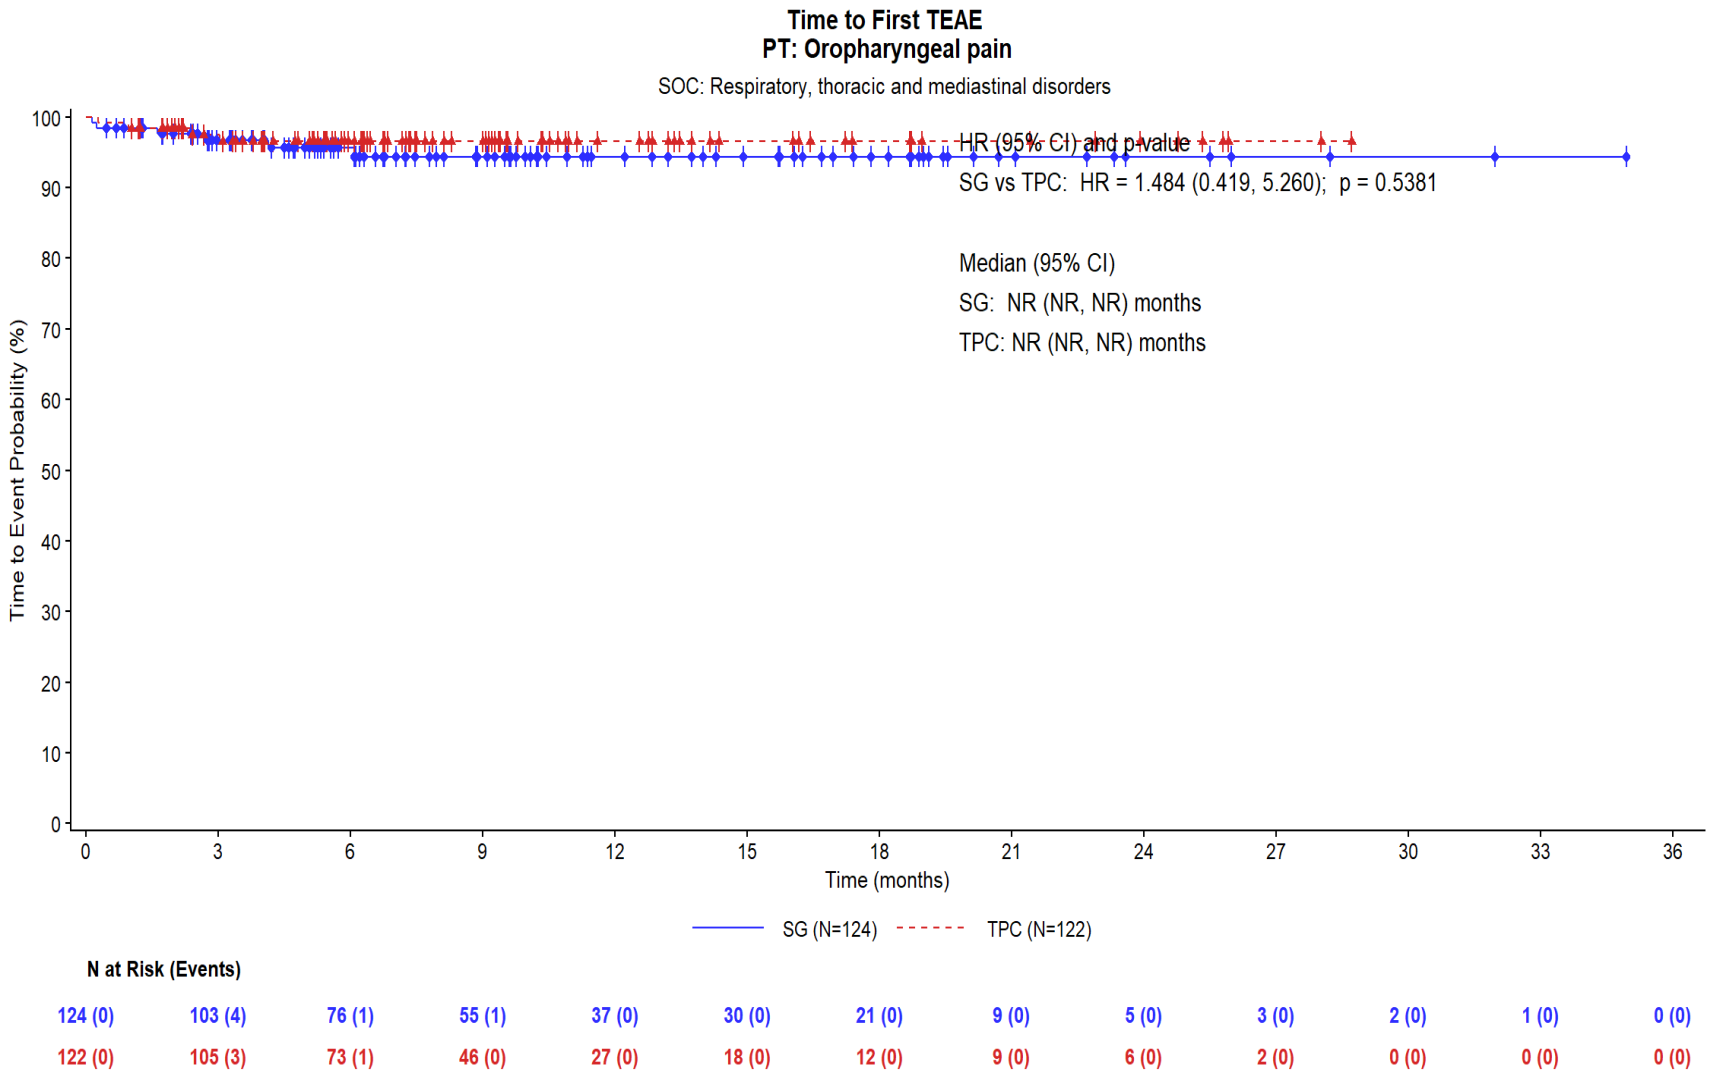
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.80. Figure 1.1.81: Kaplan Meier Plot of Time to First TEAE by PT Breast pain — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



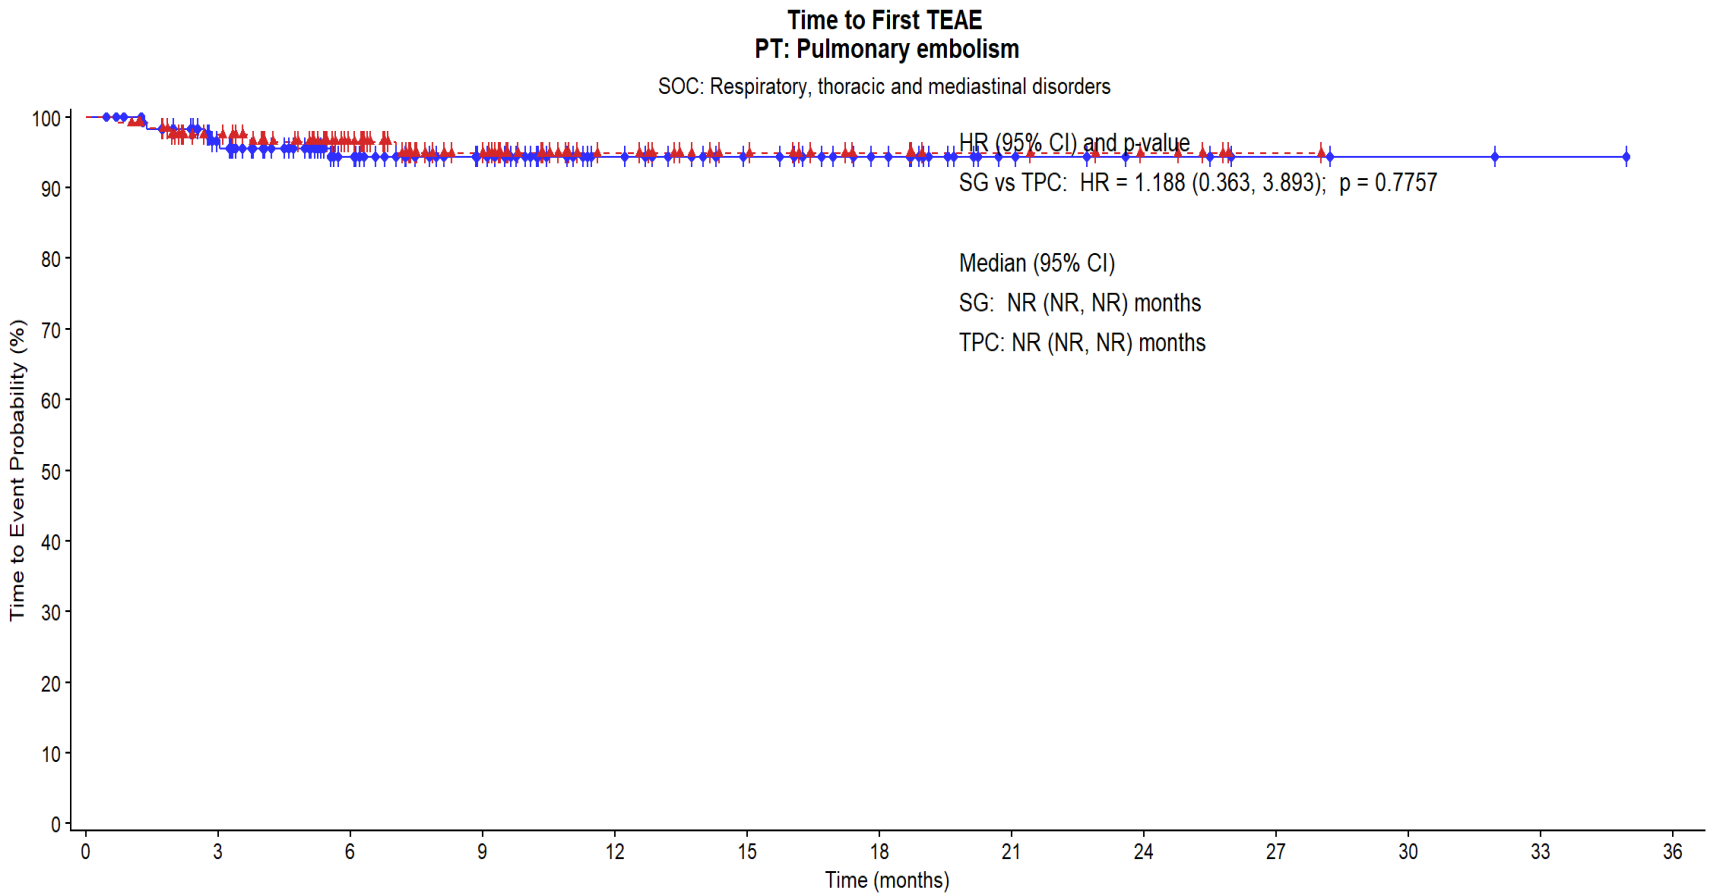
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.81. Figure 1.1.82: Kaplan Meier Plot of Time to First TEAE by PT Cough — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



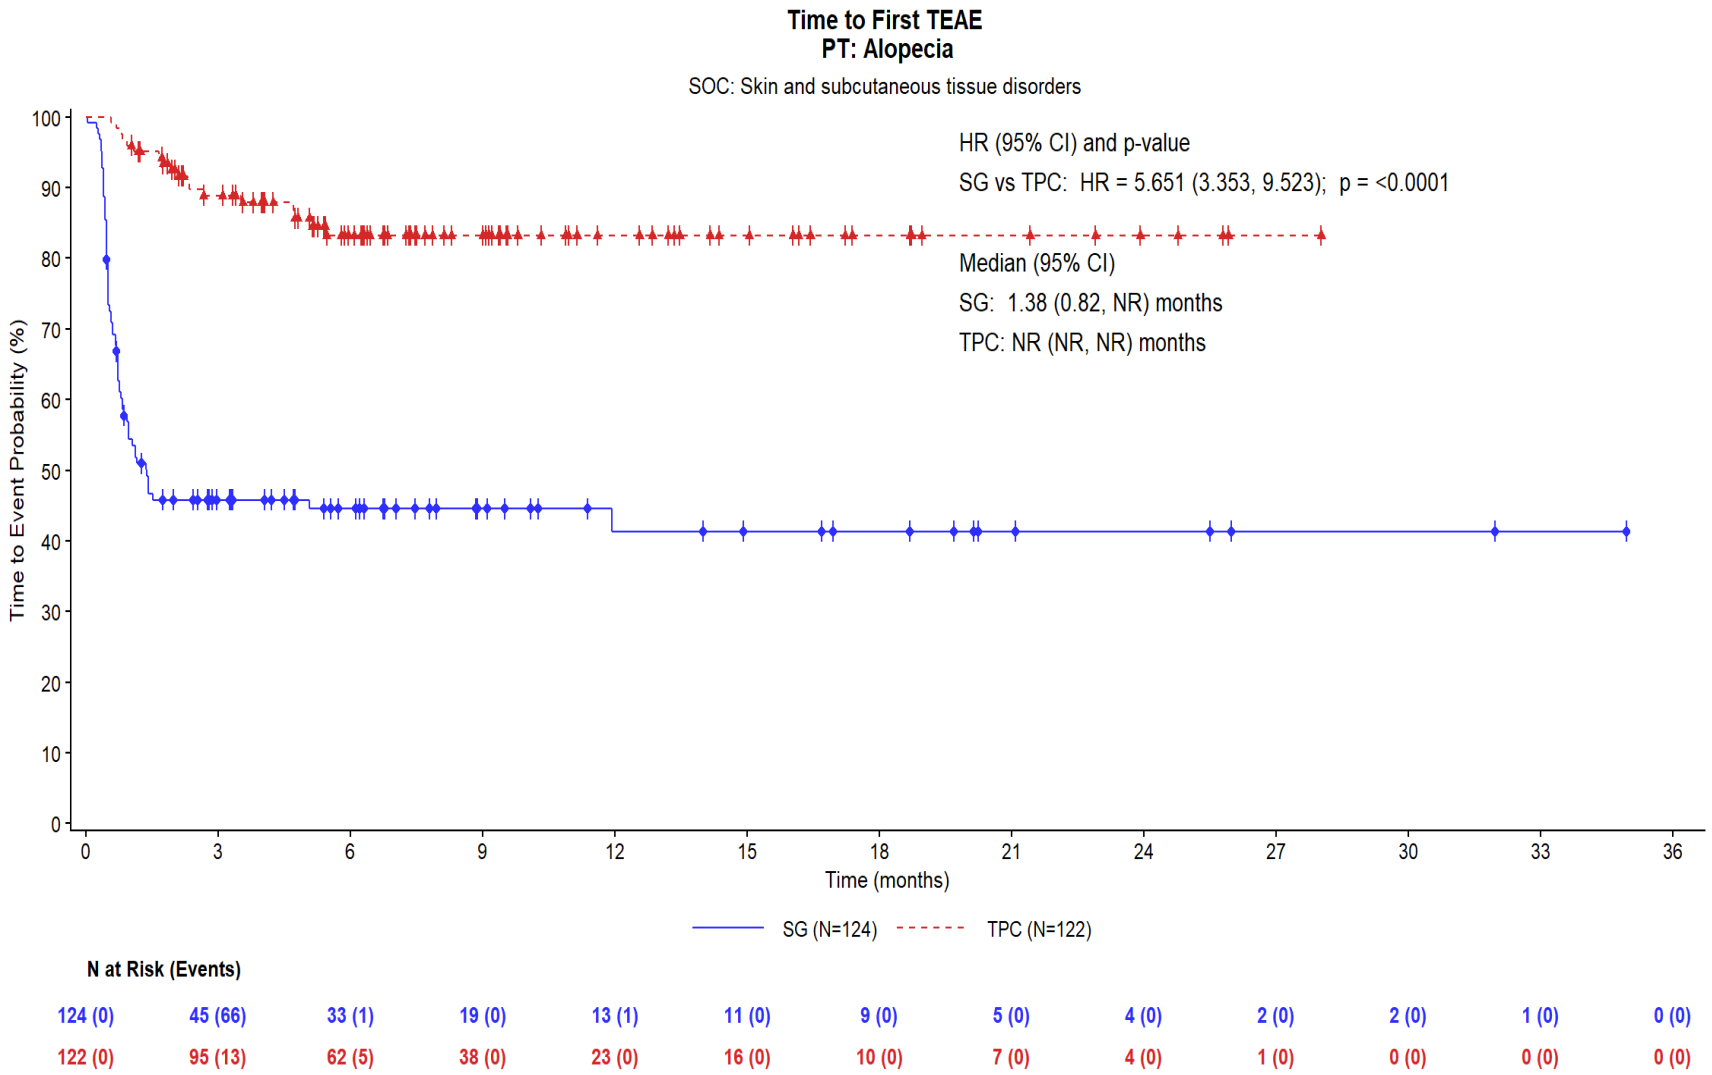
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.82. Figure 1.1.83: Kaplan Meier Plot of Time to First TEAE by PT Dyspnoea — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



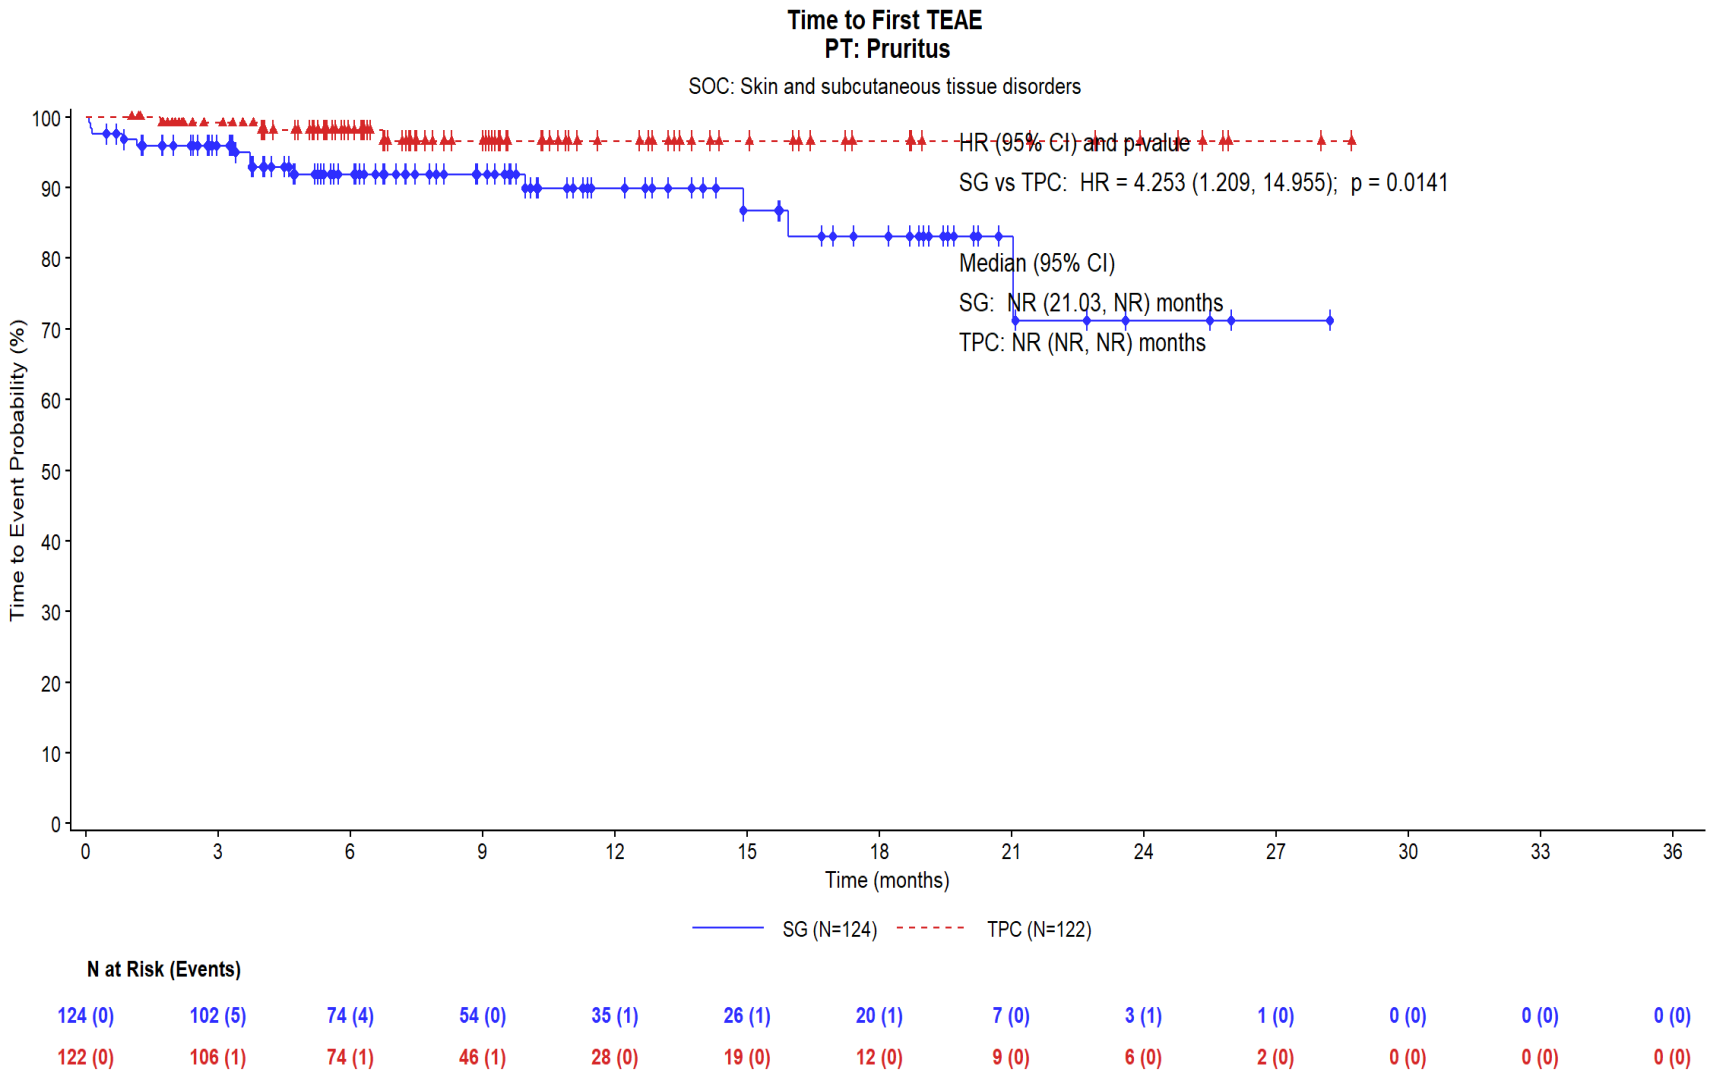
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.83. Figure 1.1.84: Kaplan Meier Plot of Time to First TEAE by PT Oropharyngeal pain — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



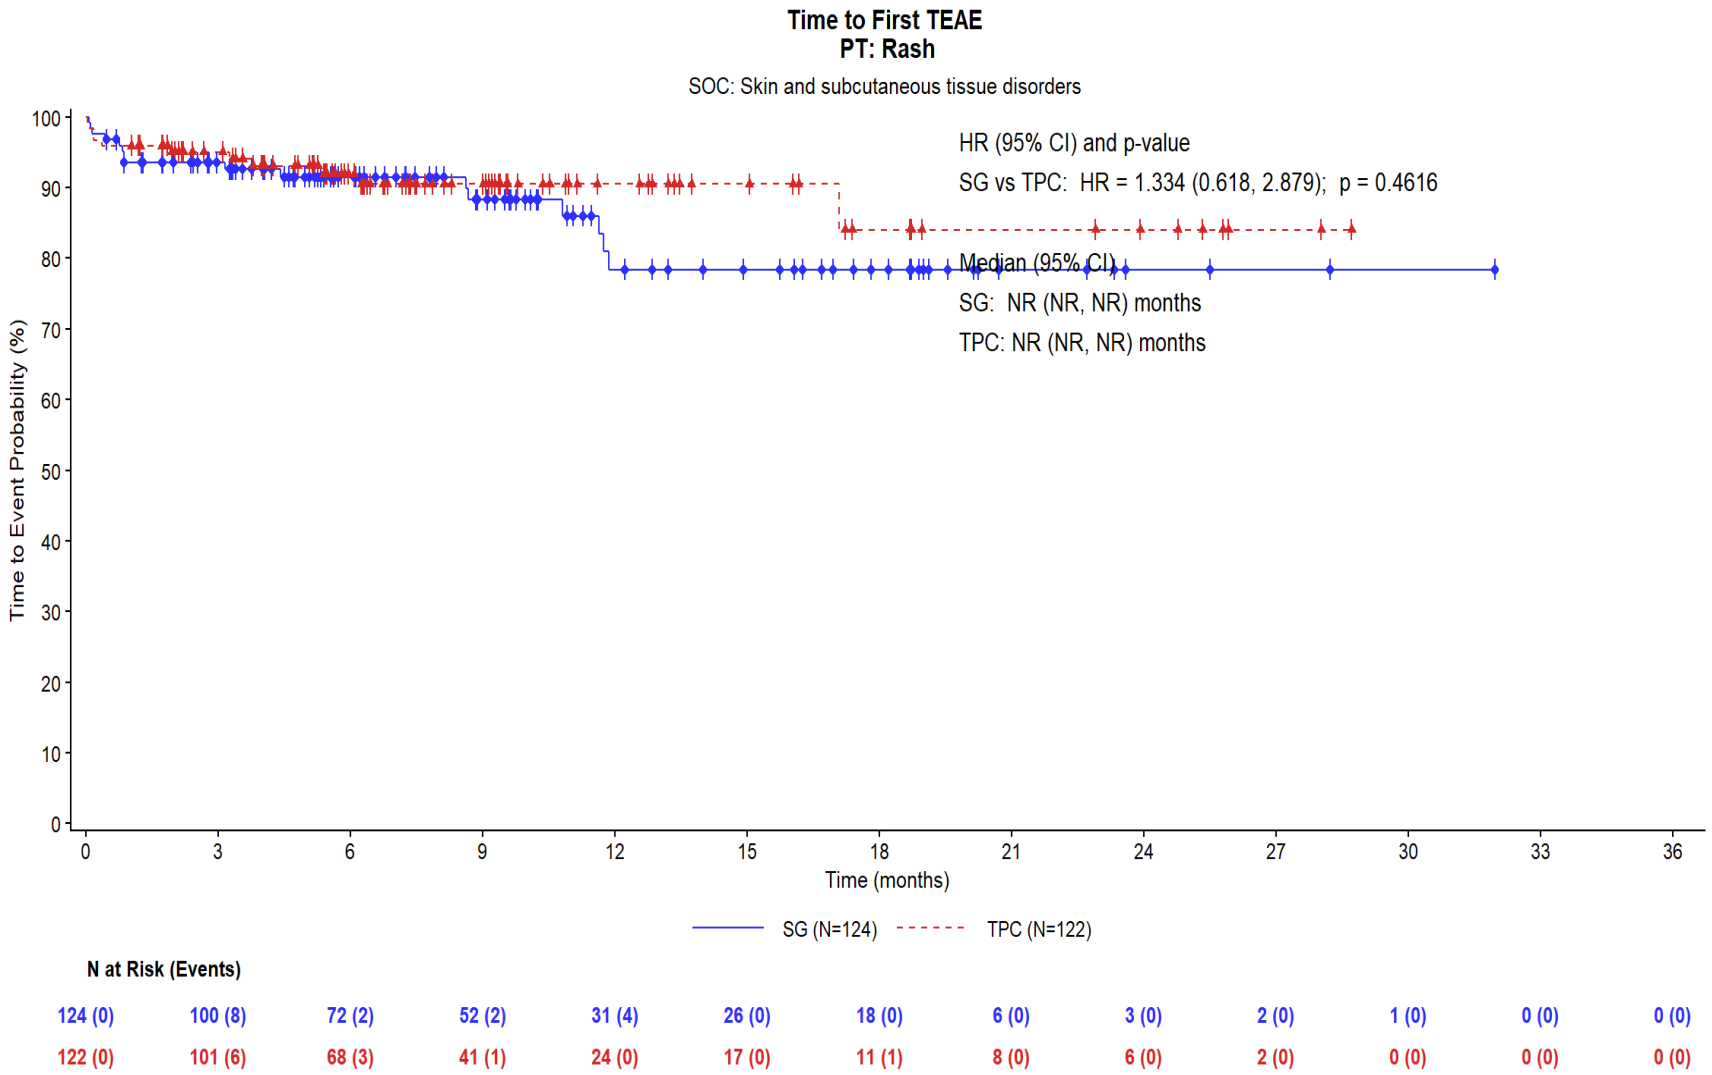
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.84. Figure 1.1.85: Kaplan Meier Plot of Time to First TEAE by PT Pulmonary embolism — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



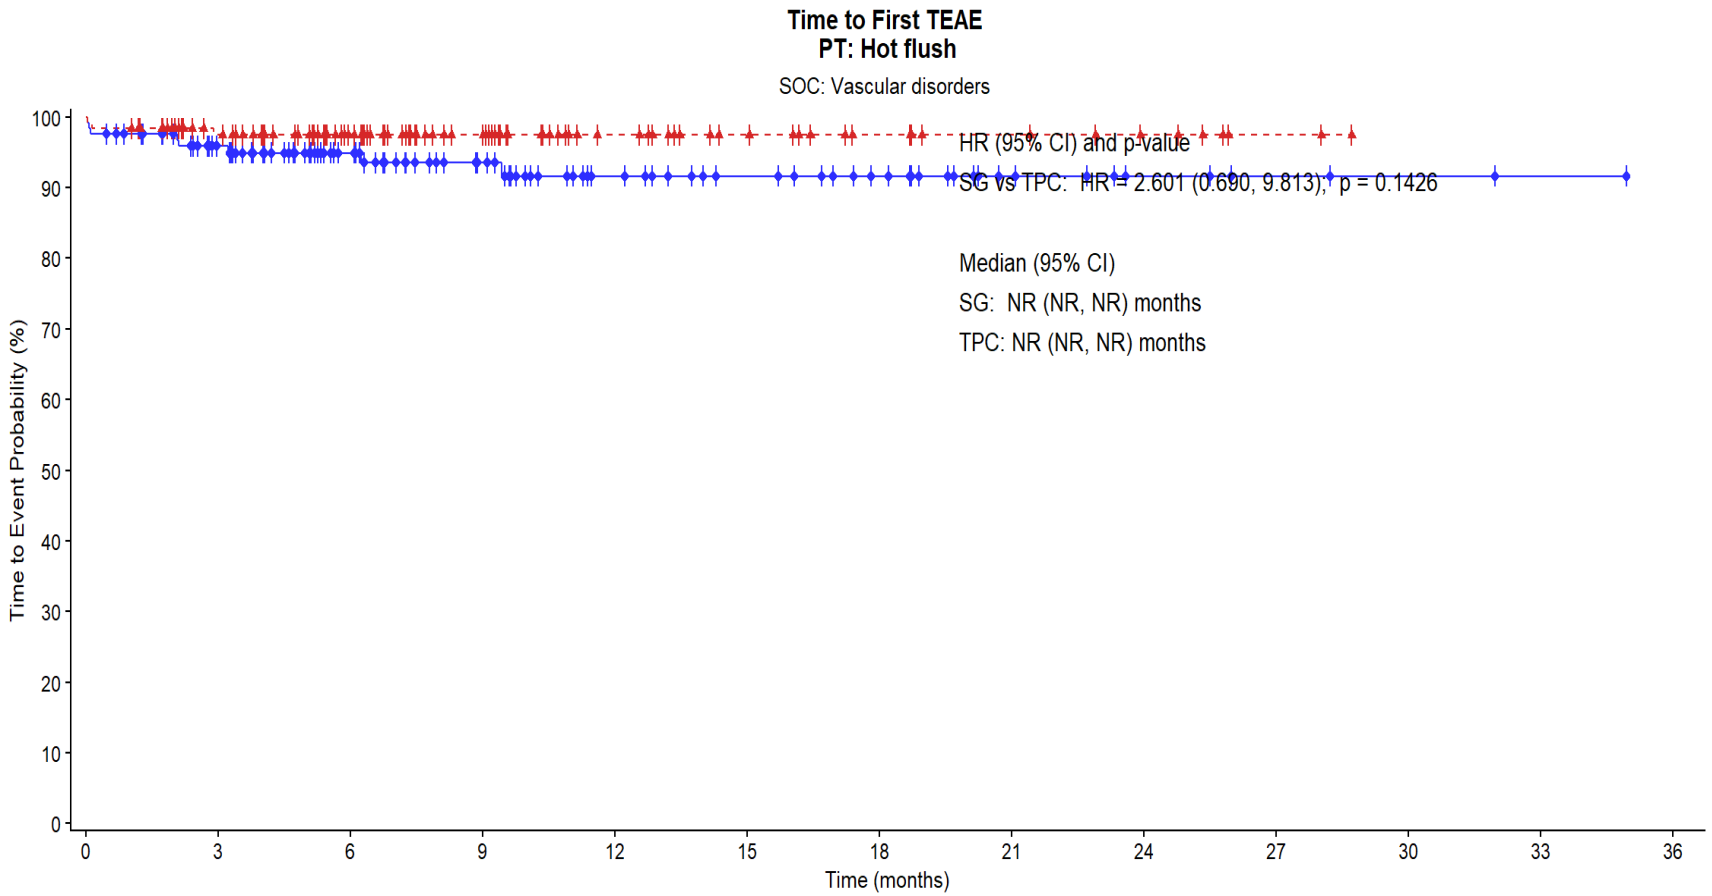
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.85. Figure 1.1.86: Kaplan Meier Plot of Time to First TEAE by PT Alopecia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



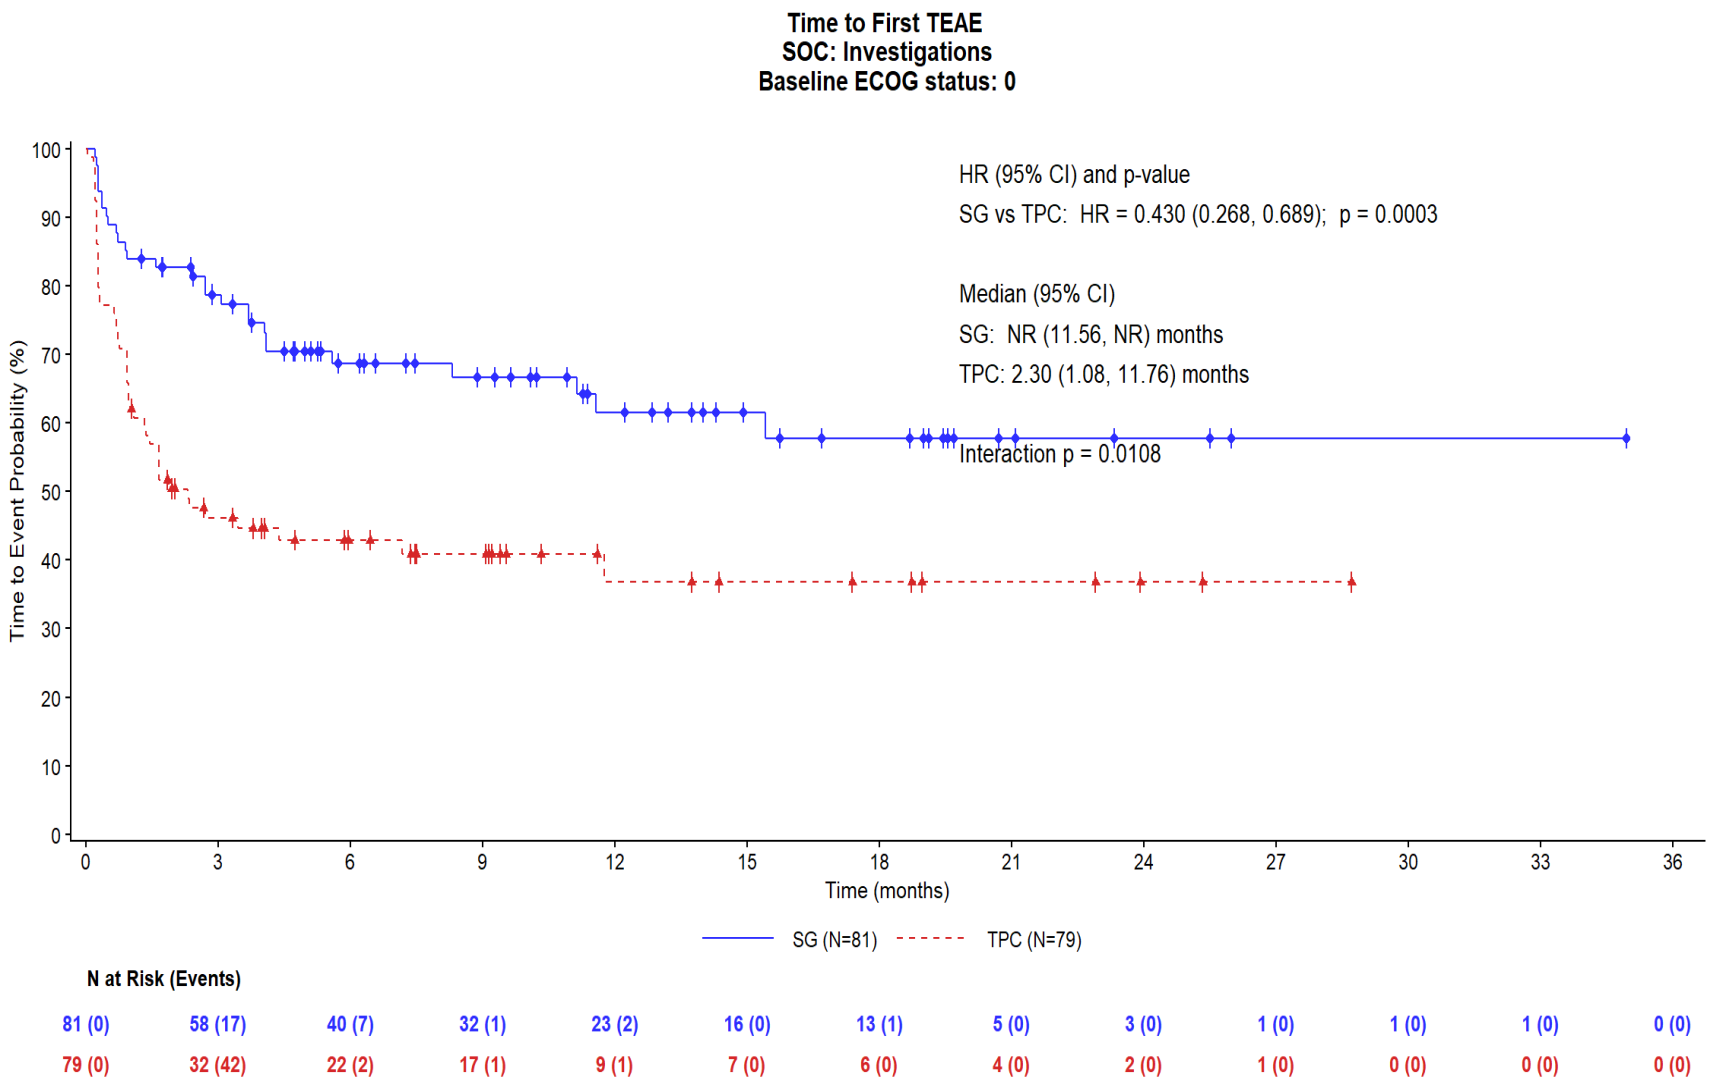
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.86. Figure 1.1.87: Kaplan Meier Plot of Time to First TEAE by PT Pruritus — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



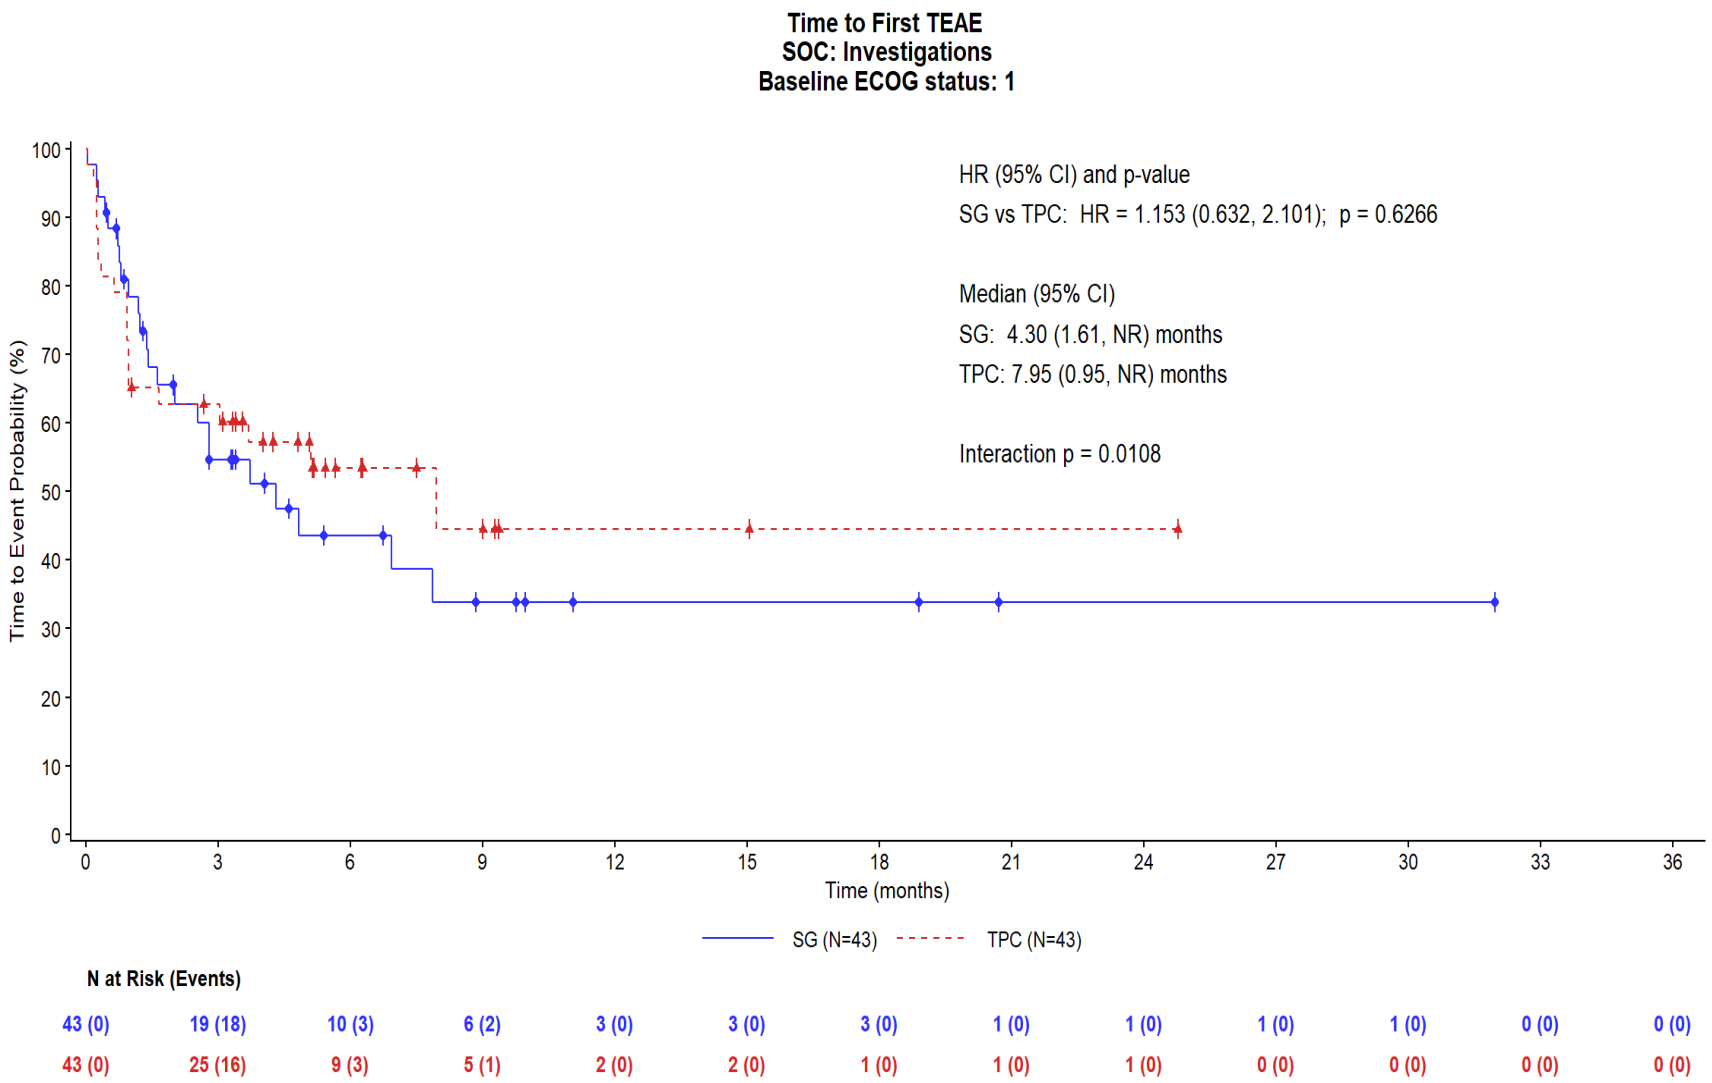
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.87. Figure 1.1.88: Kaplan Meier Plot of Time to First TEAE by PT Rash — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



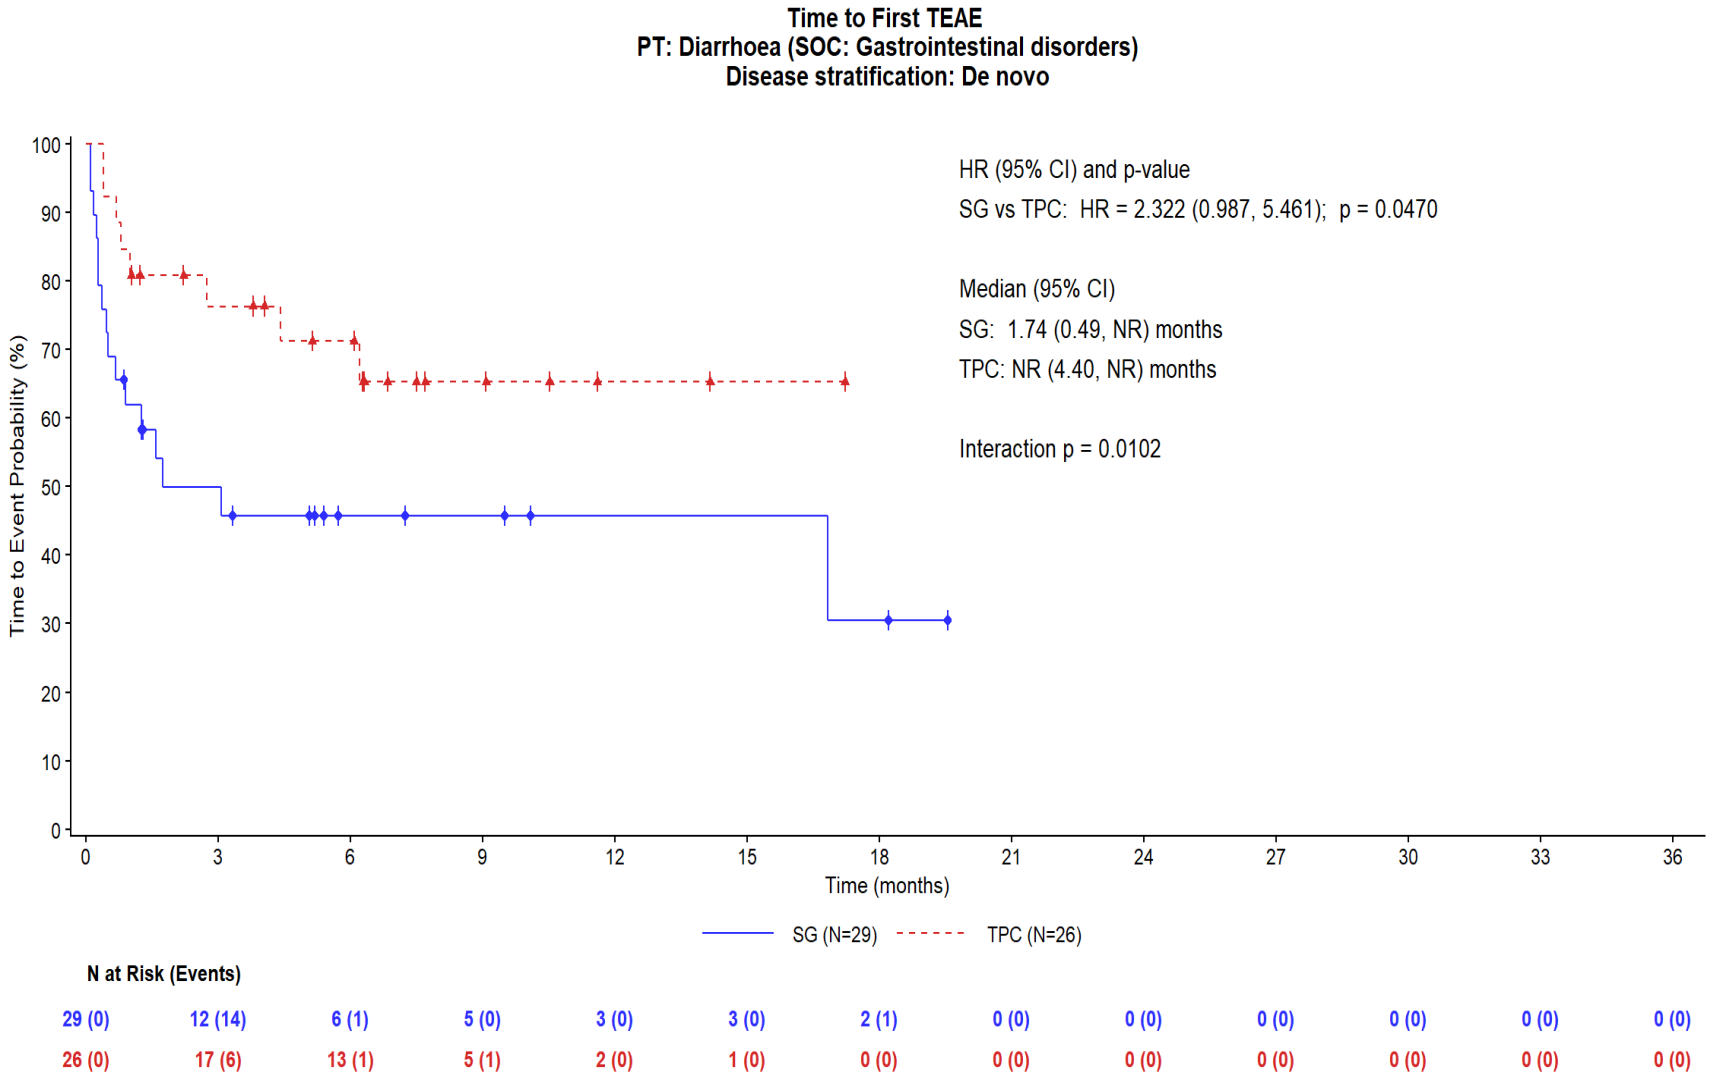
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.88. Figure 1.1.89: Kaplan Meier Plot of Time to First TEAE by PT Hot flush — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



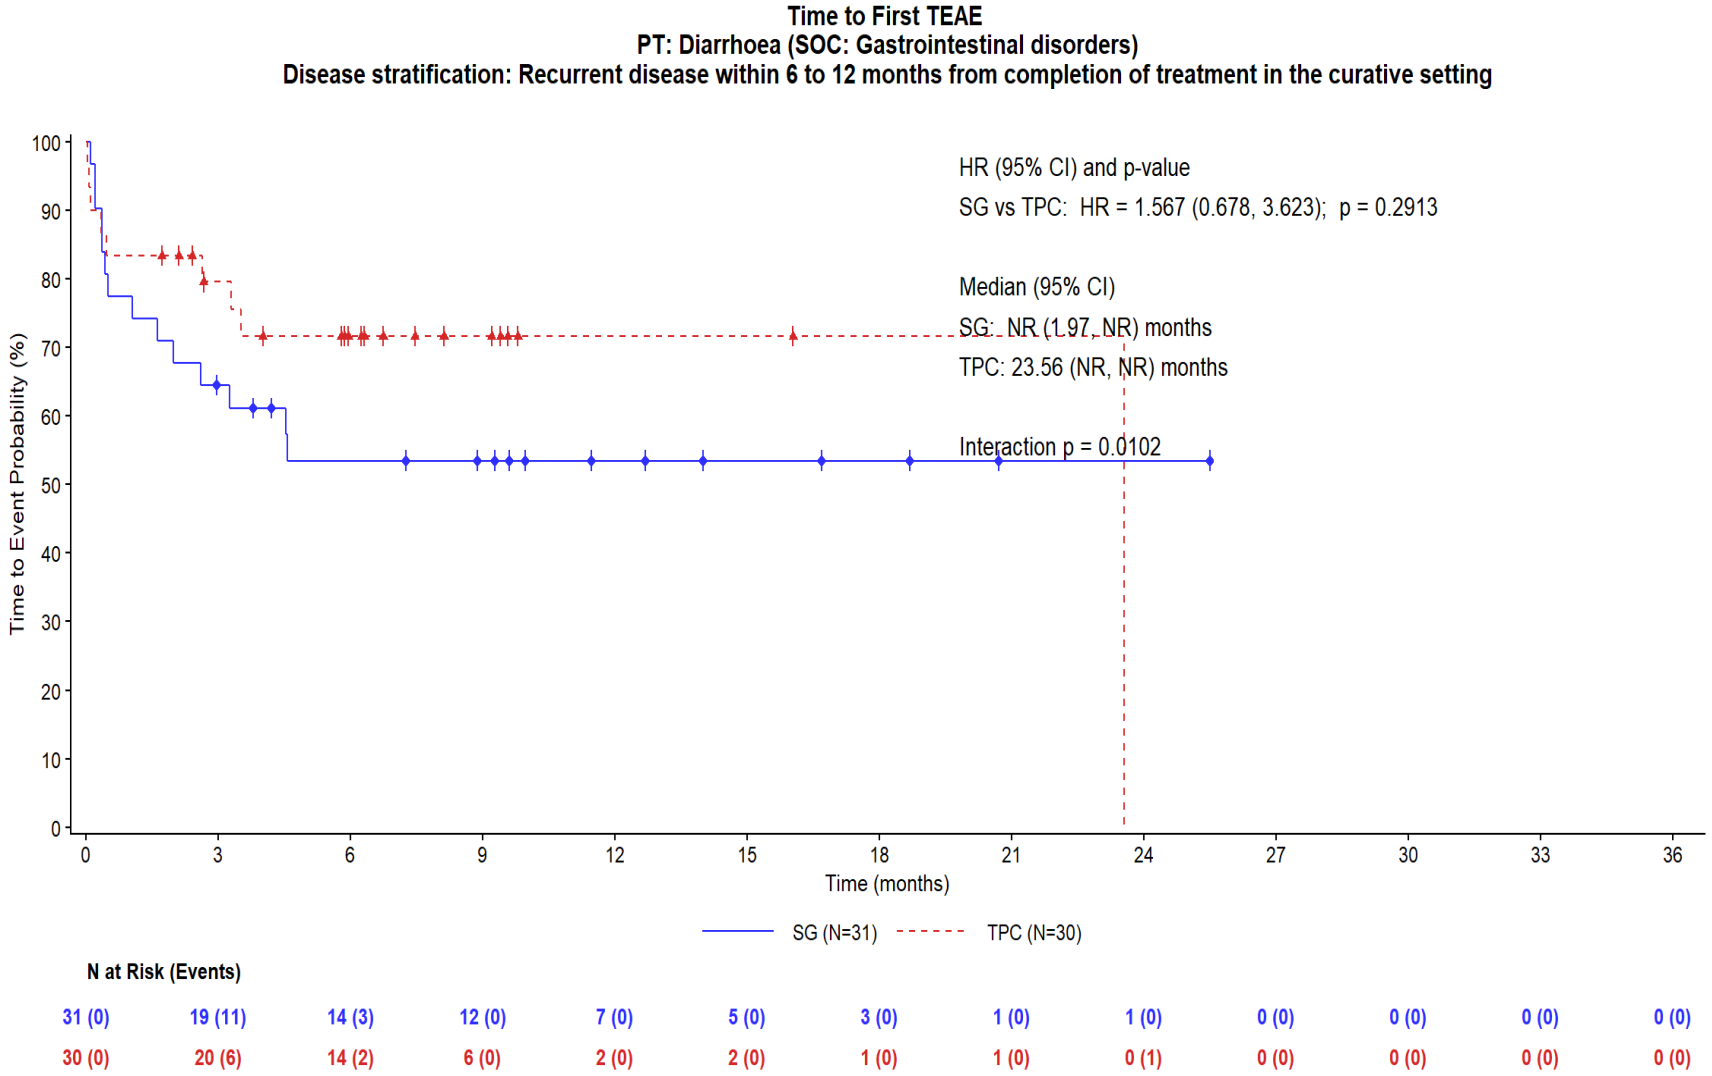
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.89. Figure 1.1.90: Kaplan Meier Plot of Time to First TEAE by SOC Investigations Baseline ECOG status 0 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



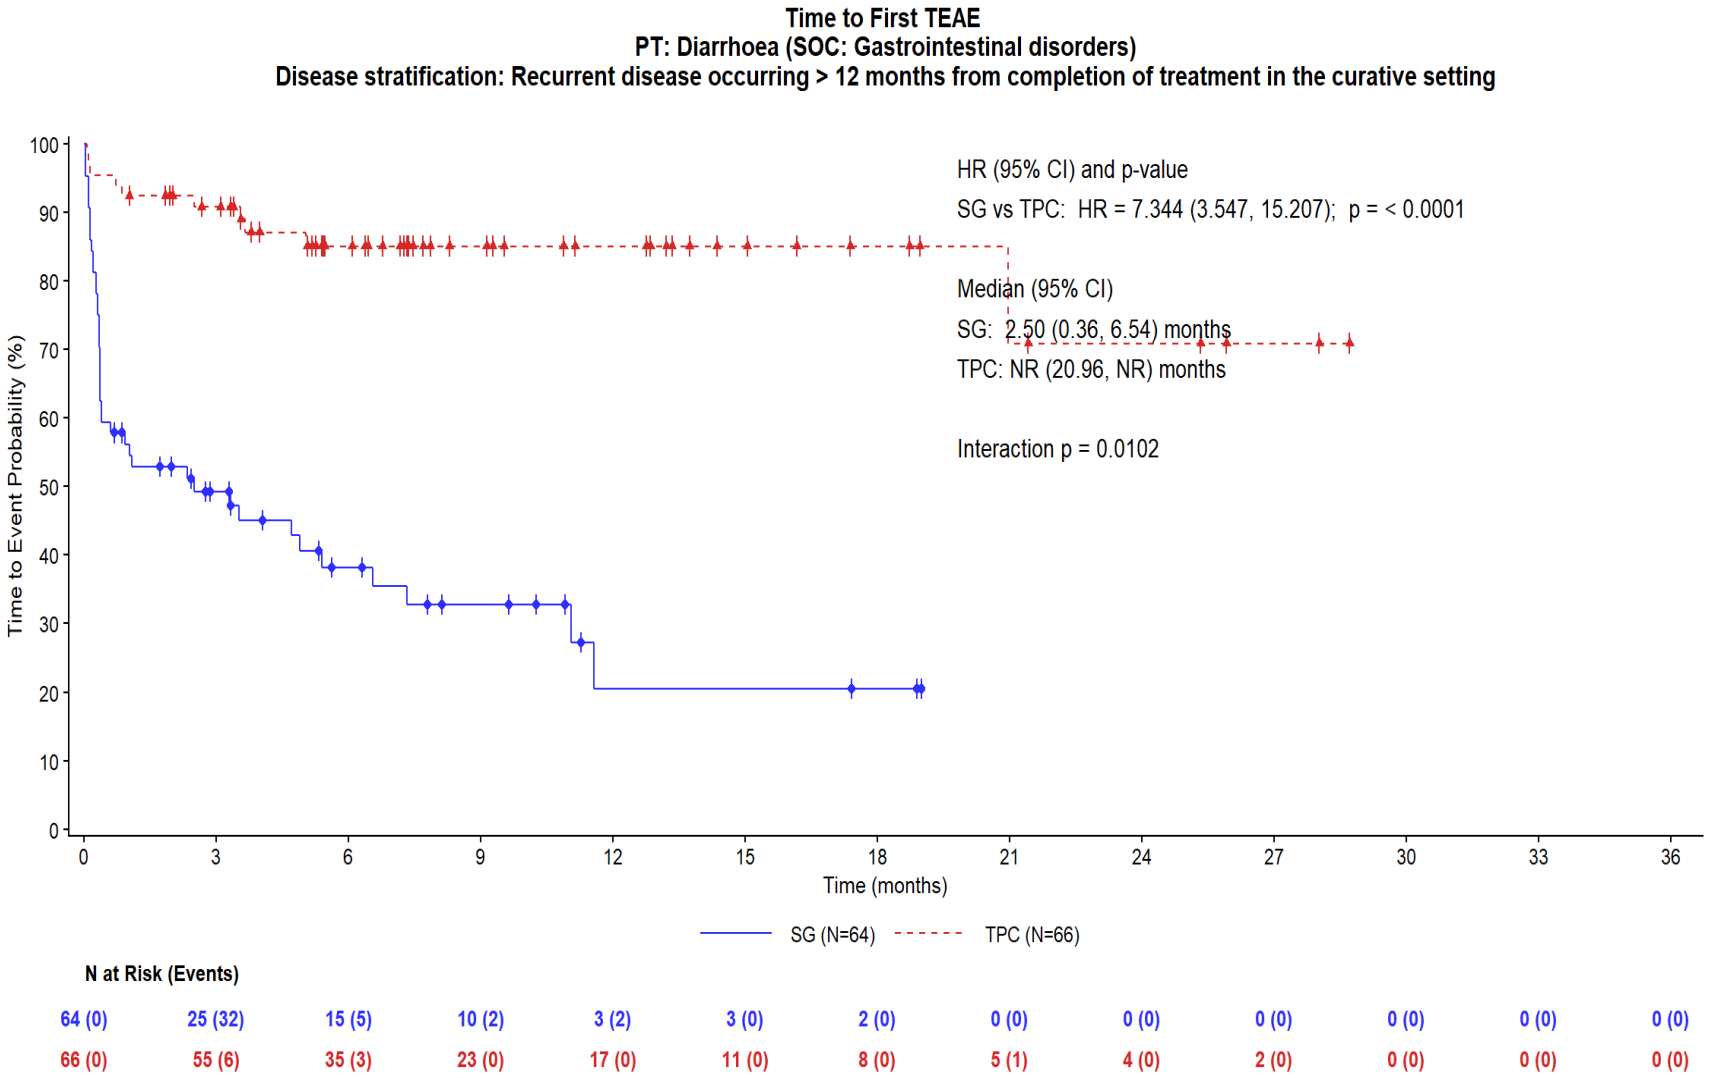
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.90. Figure 1.1.91: Kaplan Meier Plot of Time to First TEAE by SOC Investigations Baseline ECOG status 1 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



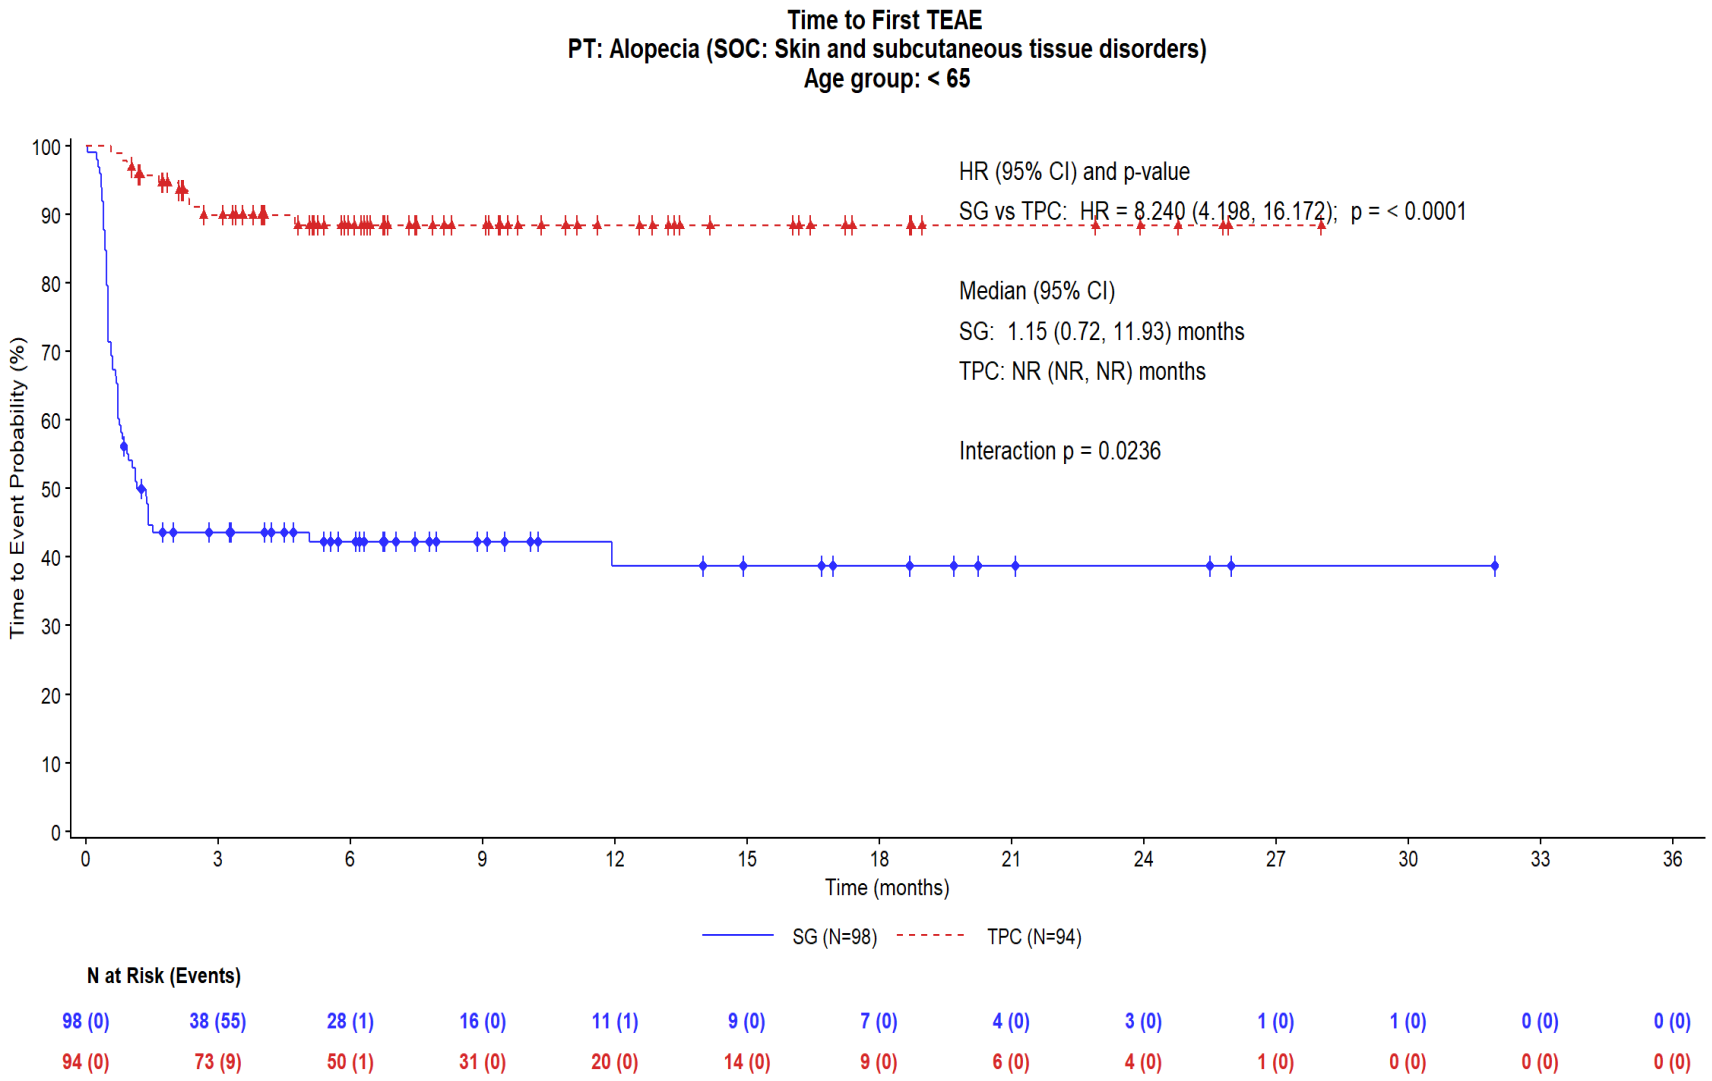
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.91. Figure 1.1.92: Kaplan Meier Plot of Time to First TEAE by PT Diarrhoea (SOC Gastrointestinal disorders) Disease stratification De novo — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



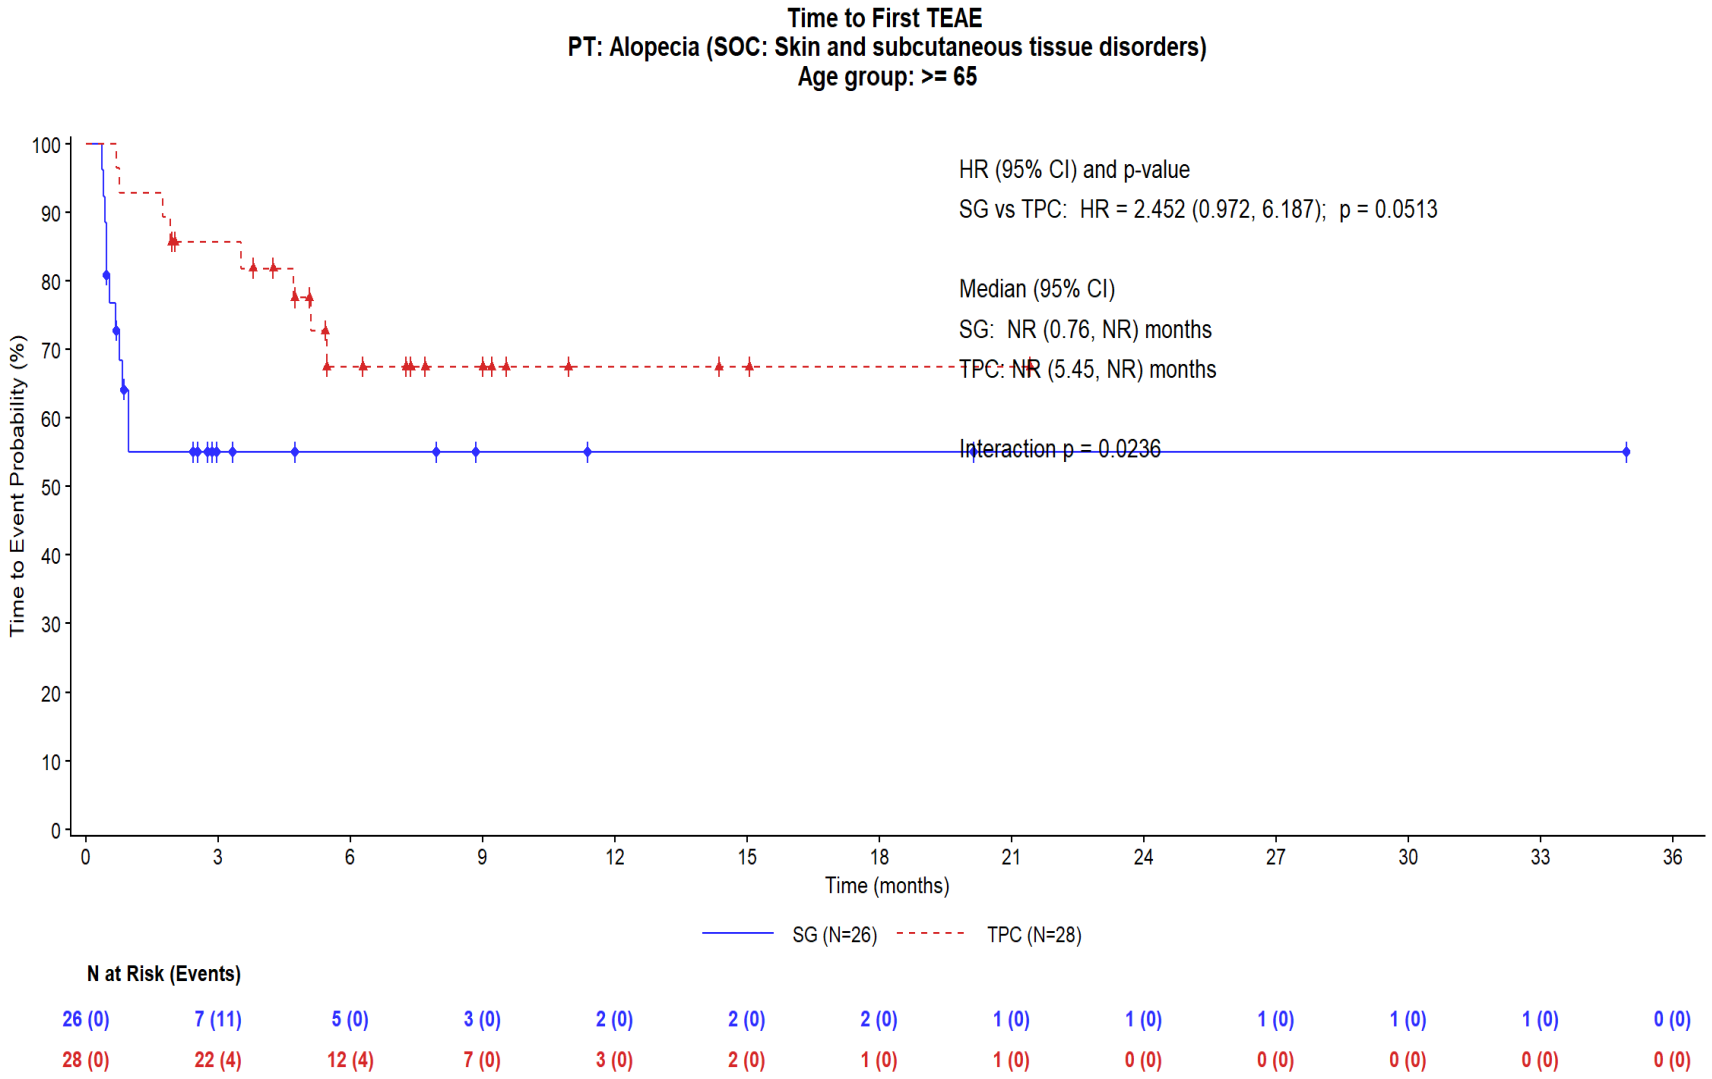
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.92. Figure 1.1.93: Kaplan Meier Plot of Time to First TEAE by PT Diarrhoea (SOC Gastrointestinal disorders) Disease stratification Recurrent disease within 6 to 12 months from completion of treatment in the curative setting — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



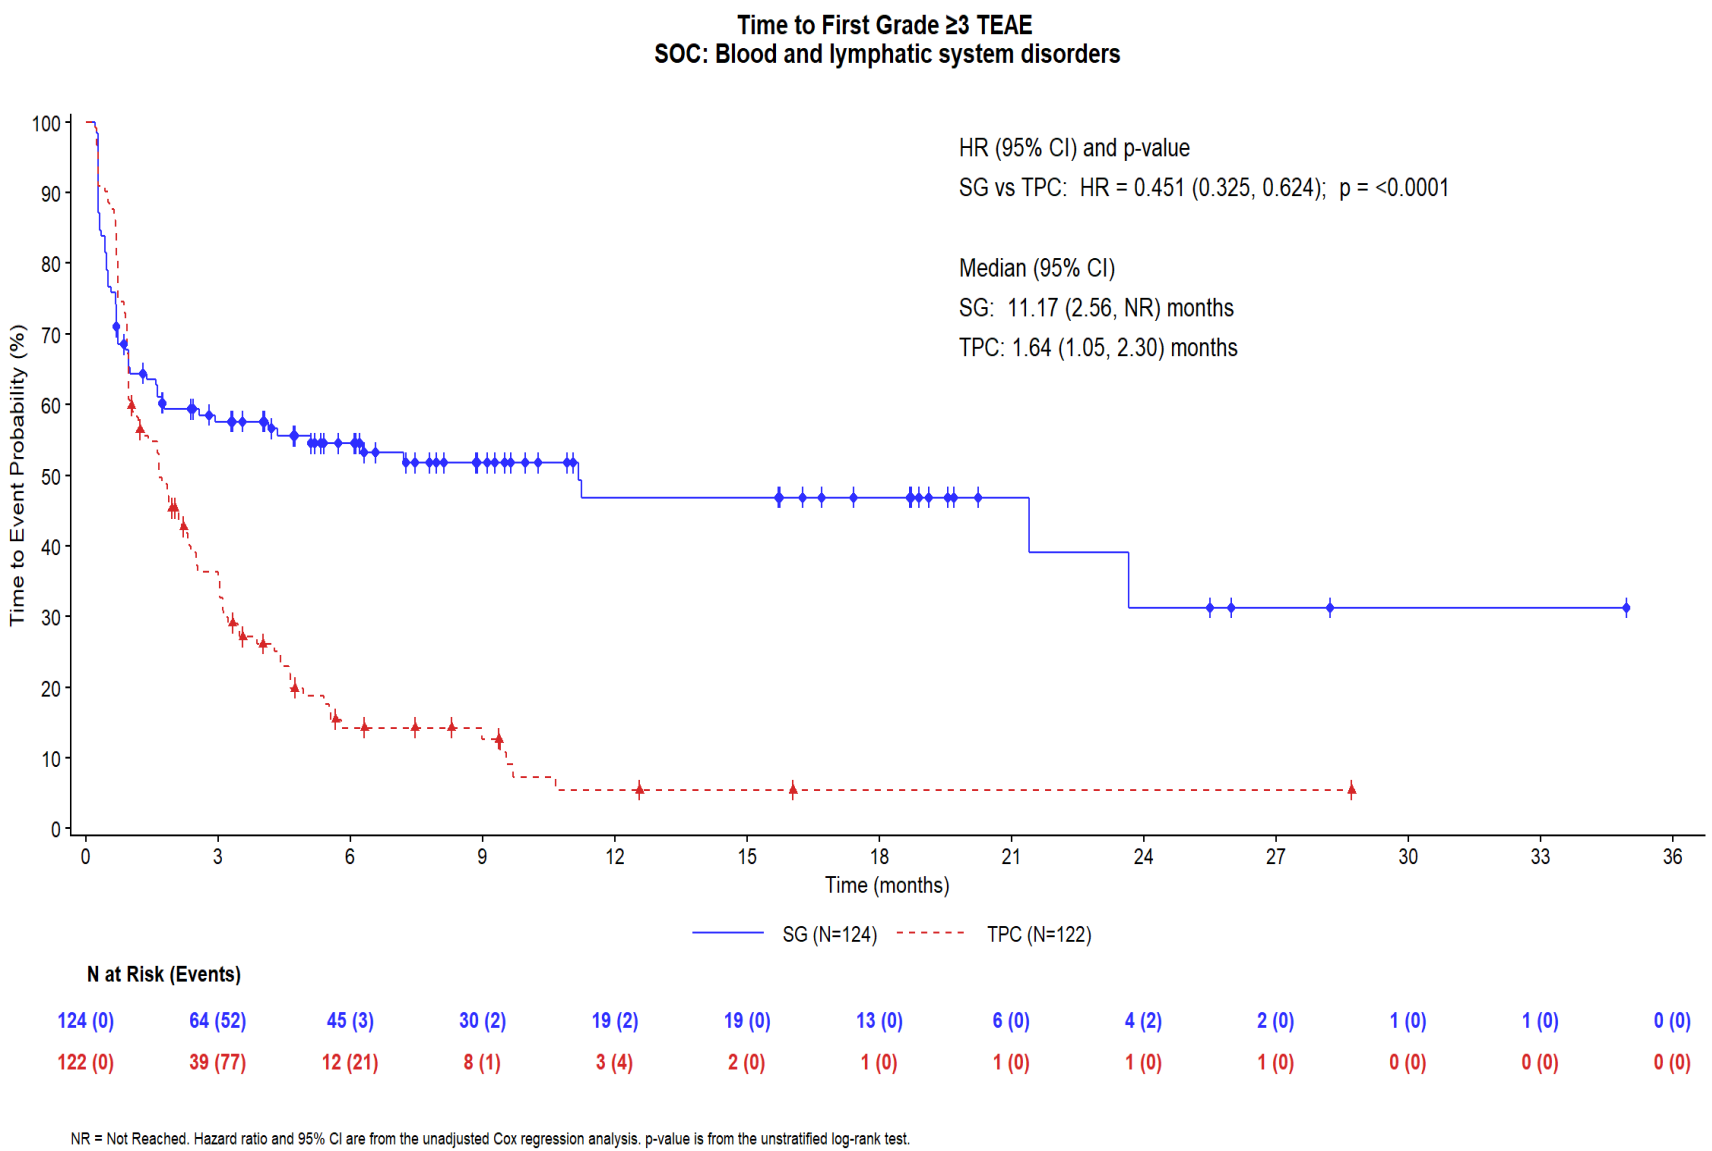
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.93. Figure 1.1.94: Kaplan Meier Plot of Time to First TEAE by PT Diarrhoea (SOC Gastrointestinal disorders) Disease stratification Recurrent disease occurring greater than 12 months from completion of treatment in the curative setting — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



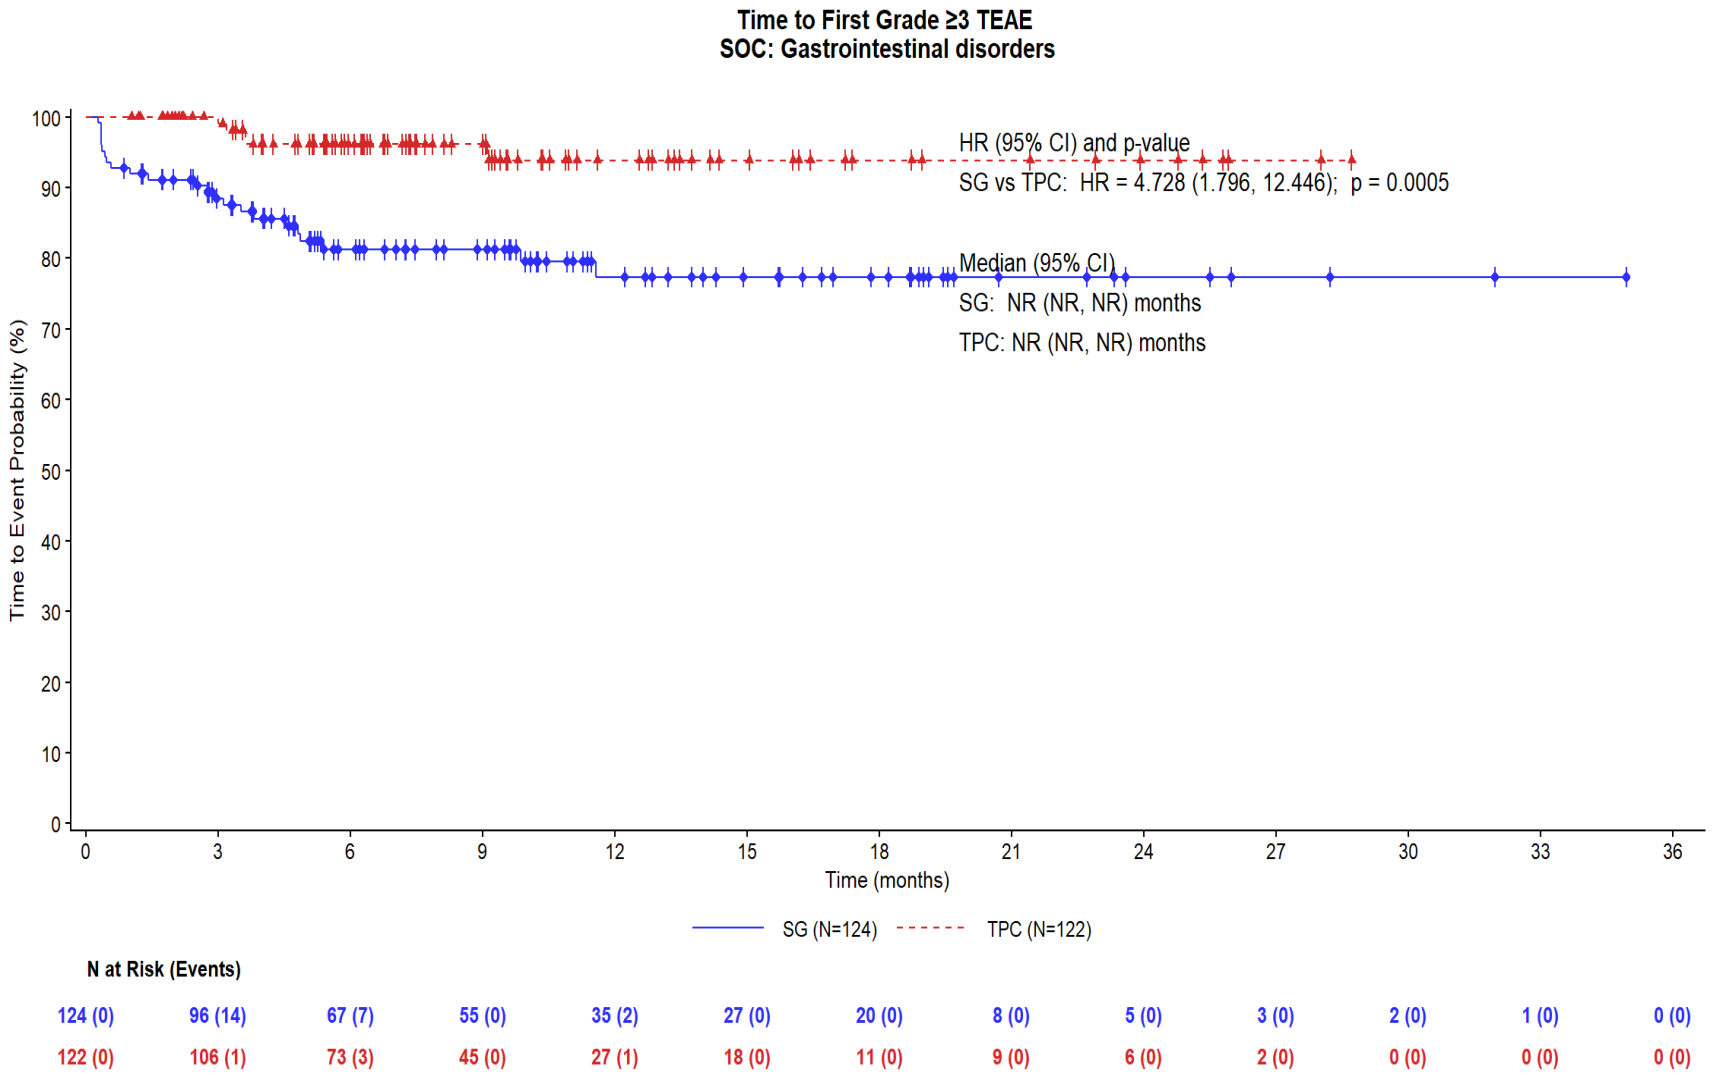
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.94. Figure 1.1.95: Kaplan Meier Plot of Time to First TEAE by PT Alopecia (SOC Skin and subcutaneous tissue disorders) Age group less than 65 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



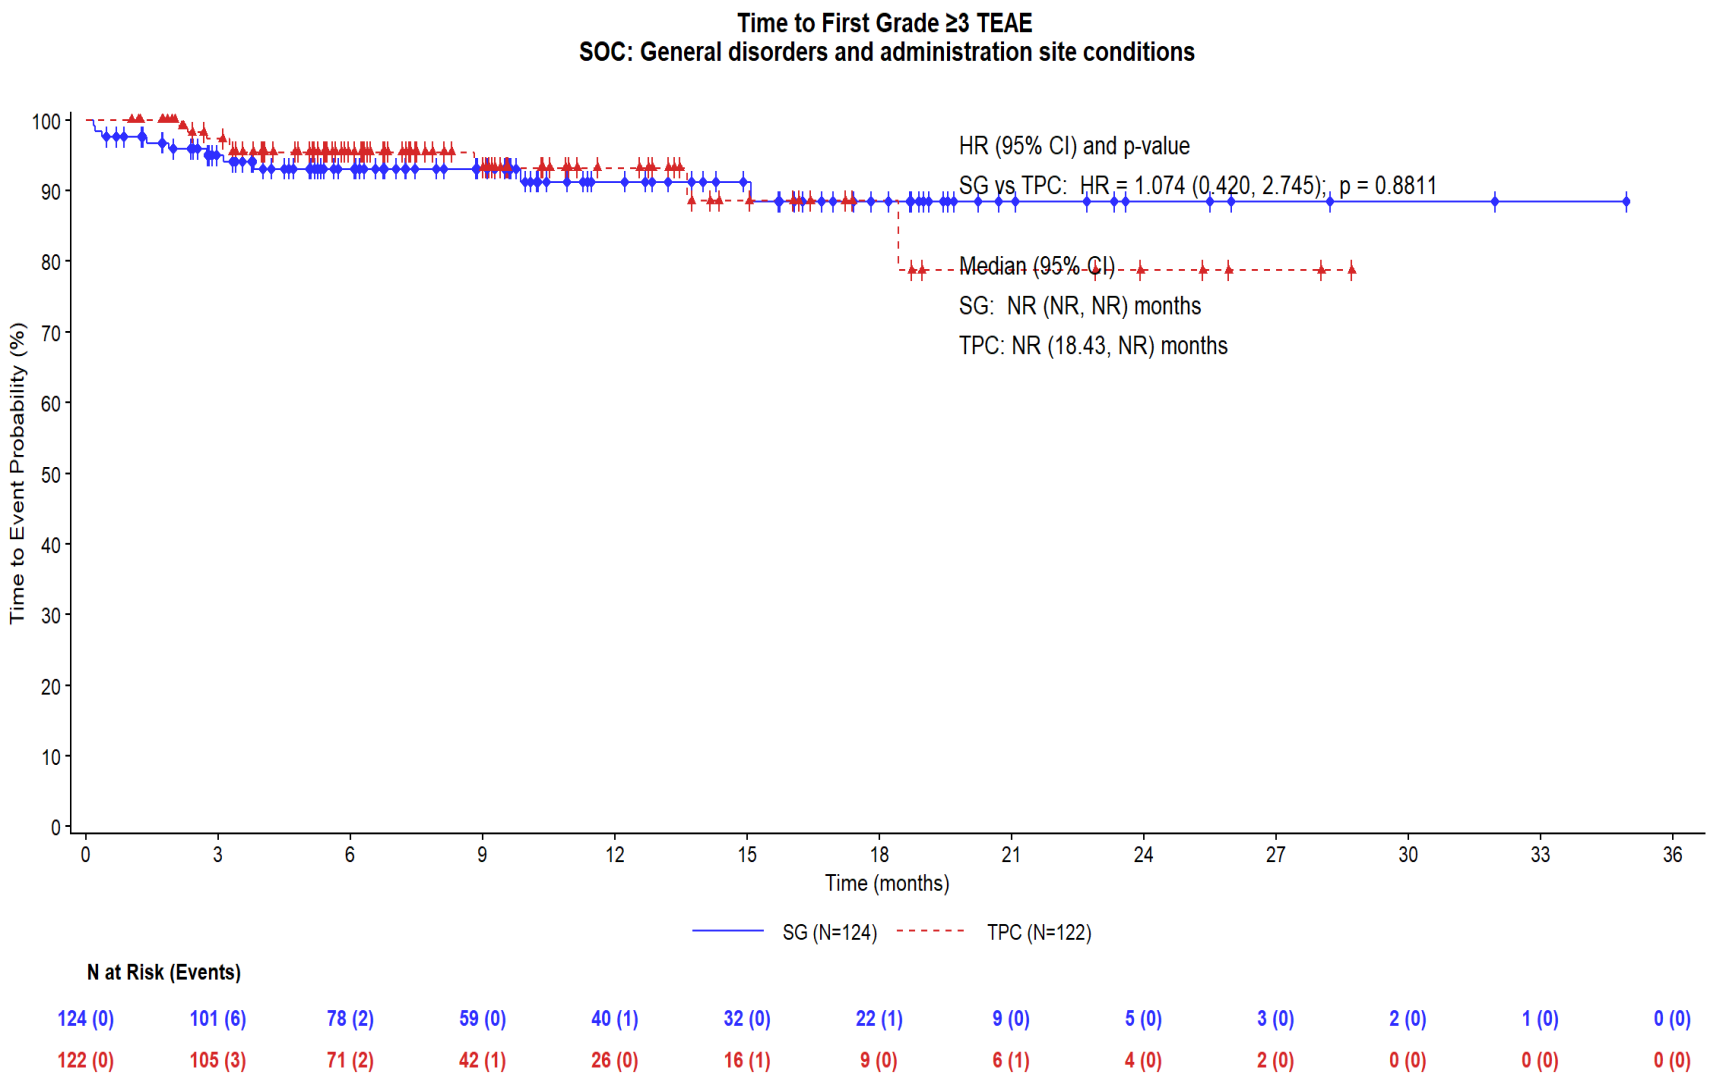
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.95. Figure 1.1.96: Kaplan Meier Plot of Time to First TEAE by PT Alopecia (SOC Skin and subcutaneous tissue disorders) Age group greater than or equal to 65 — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



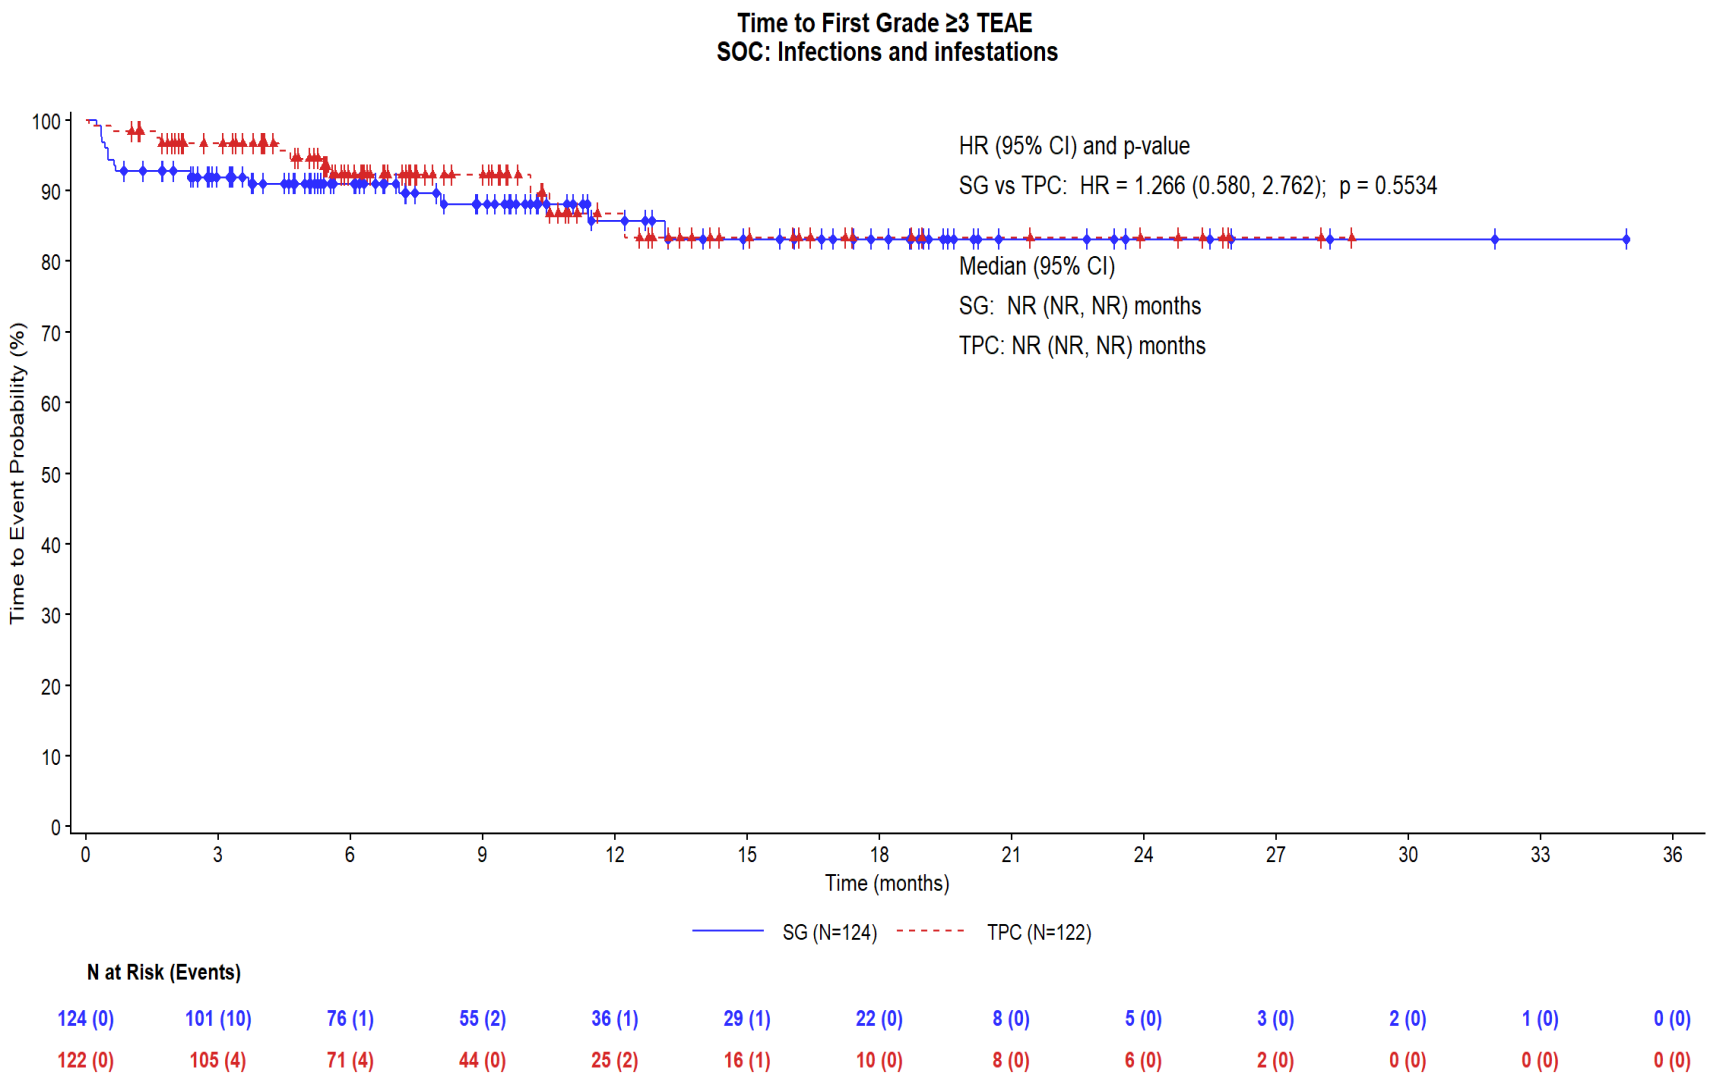
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test. Interaction p-value is from a likelihood ratio test comparing a Cox model with treatment + subgroup + treatment×subgroup interaction versus treatment + subgroup only.

7.96. Figure 1.1.97: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Blood and lymphatic system disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



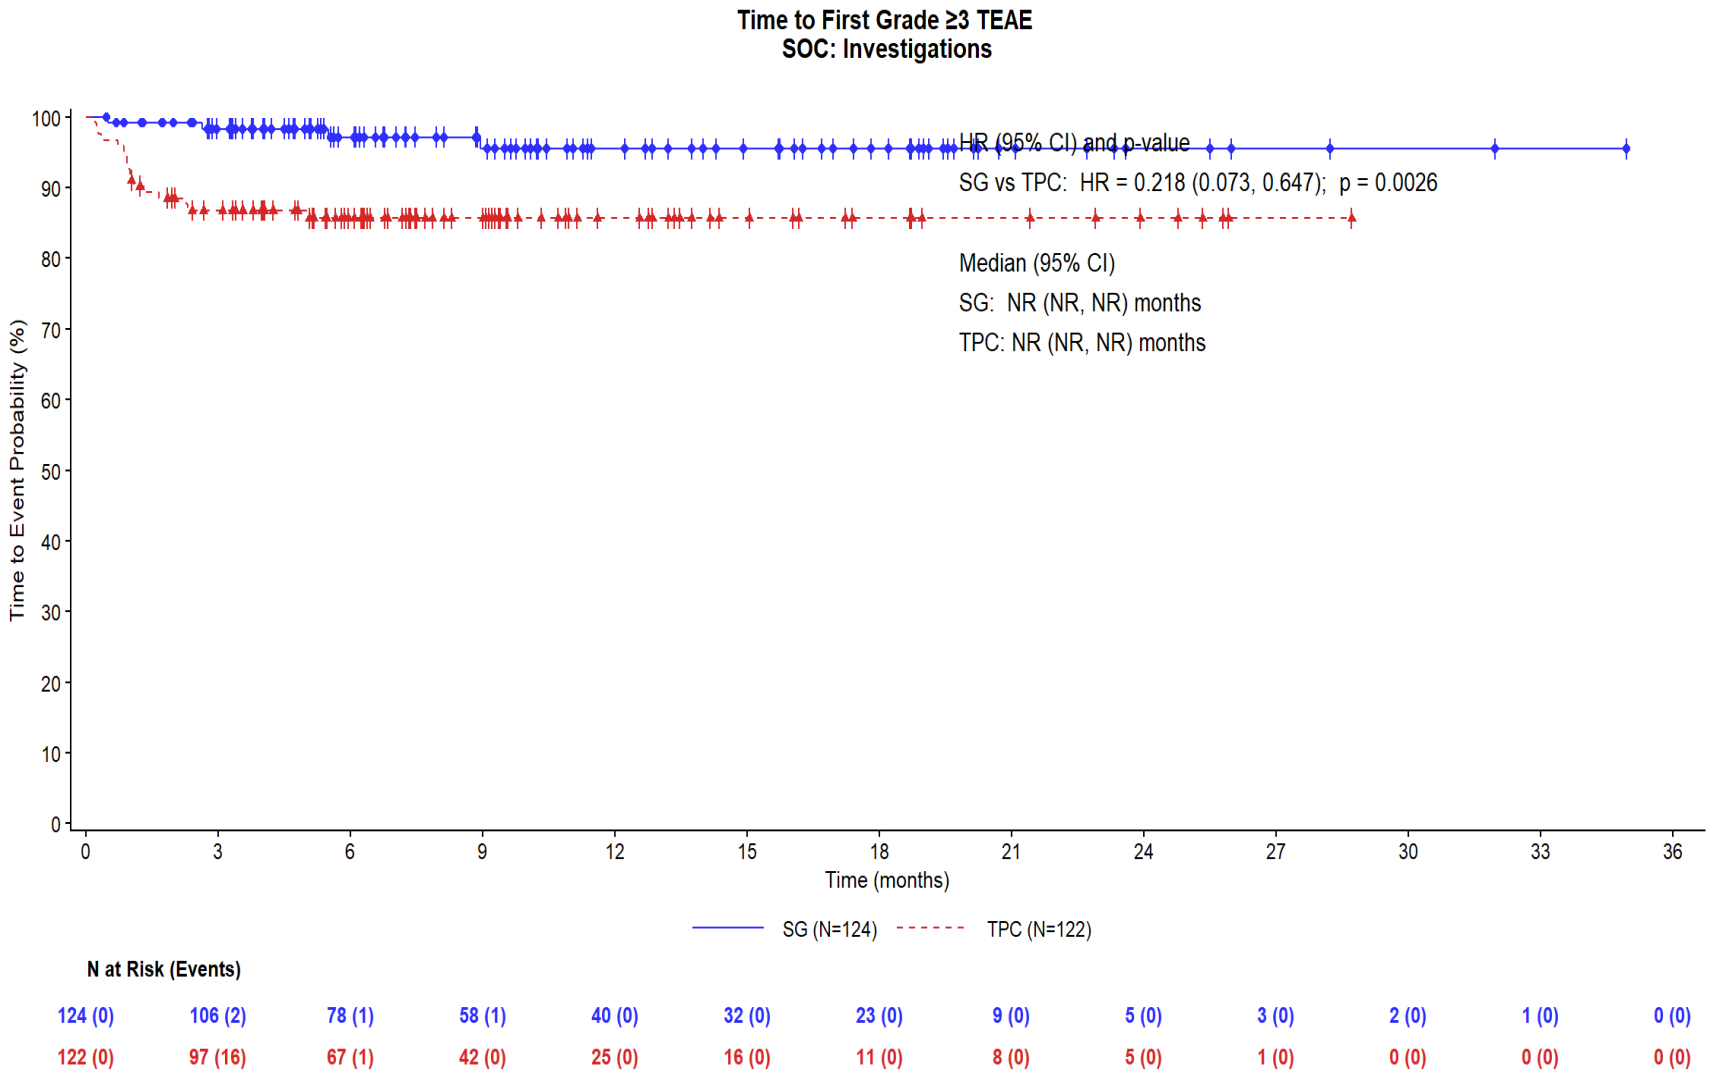
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.97. Figure 1.1.98: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Gastrointestinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



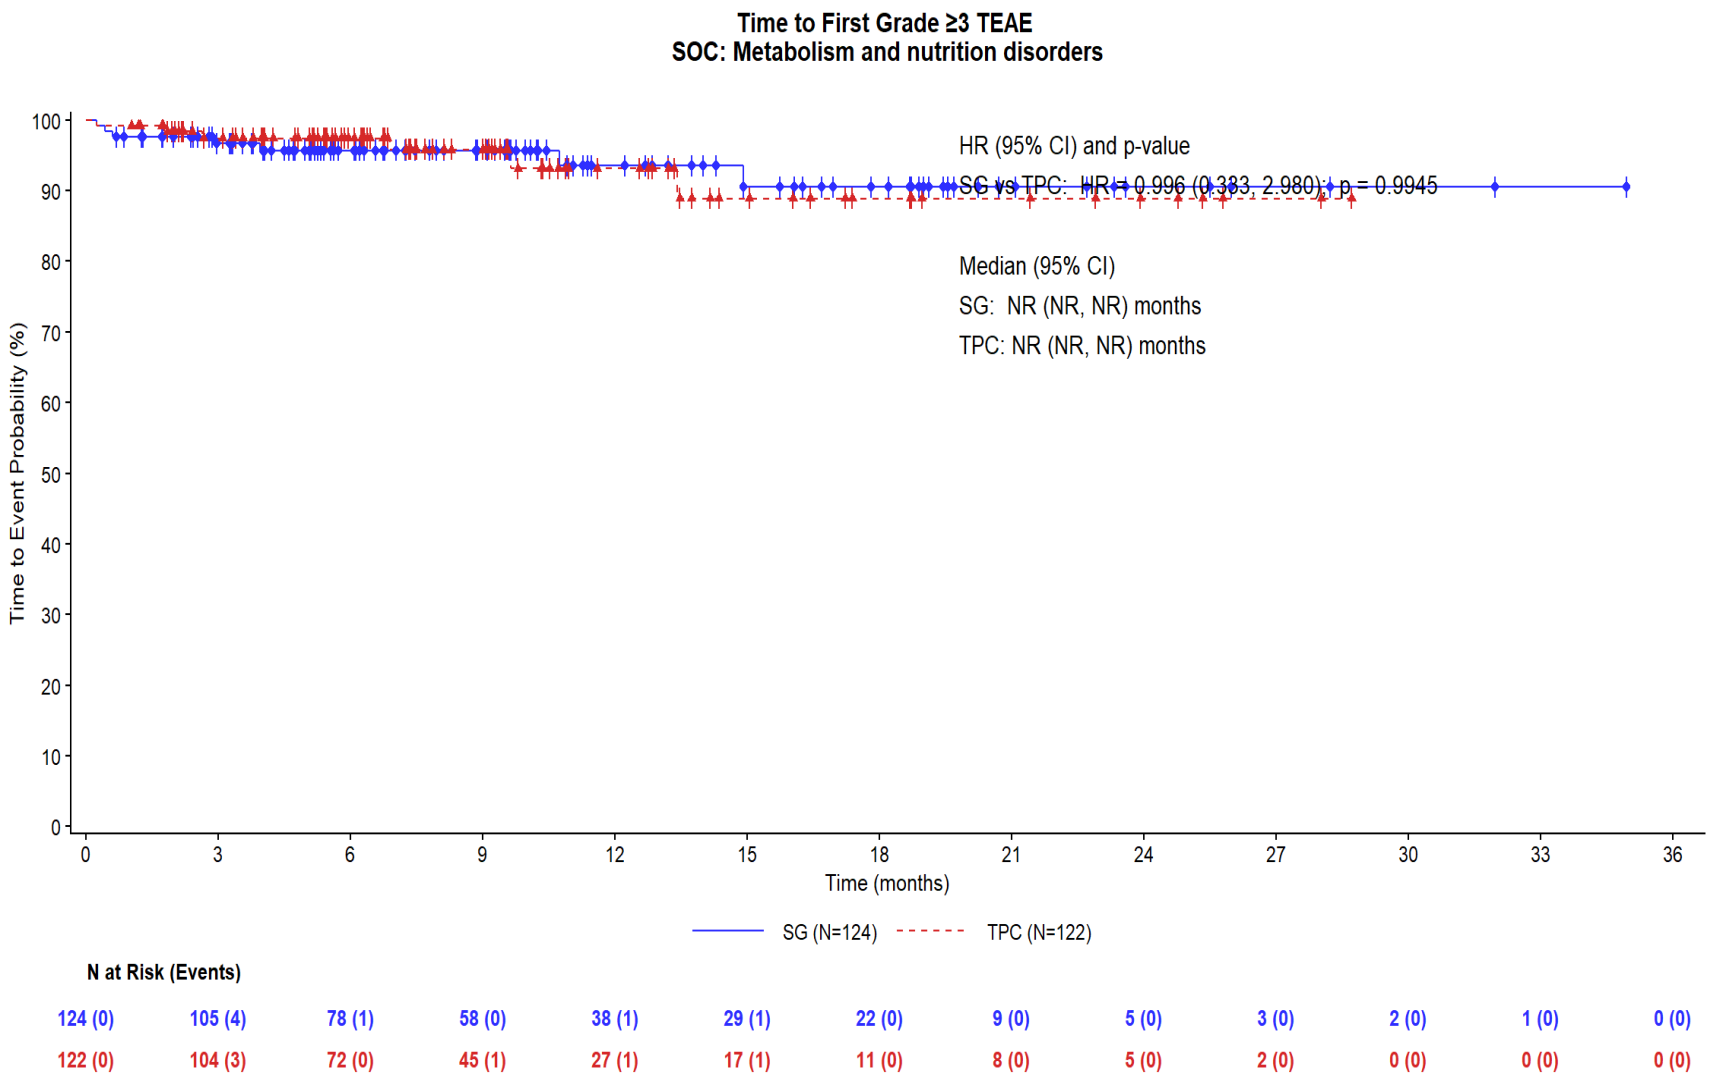
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.98. Figure 1.1.99: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC General disorders and administration site conditions — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



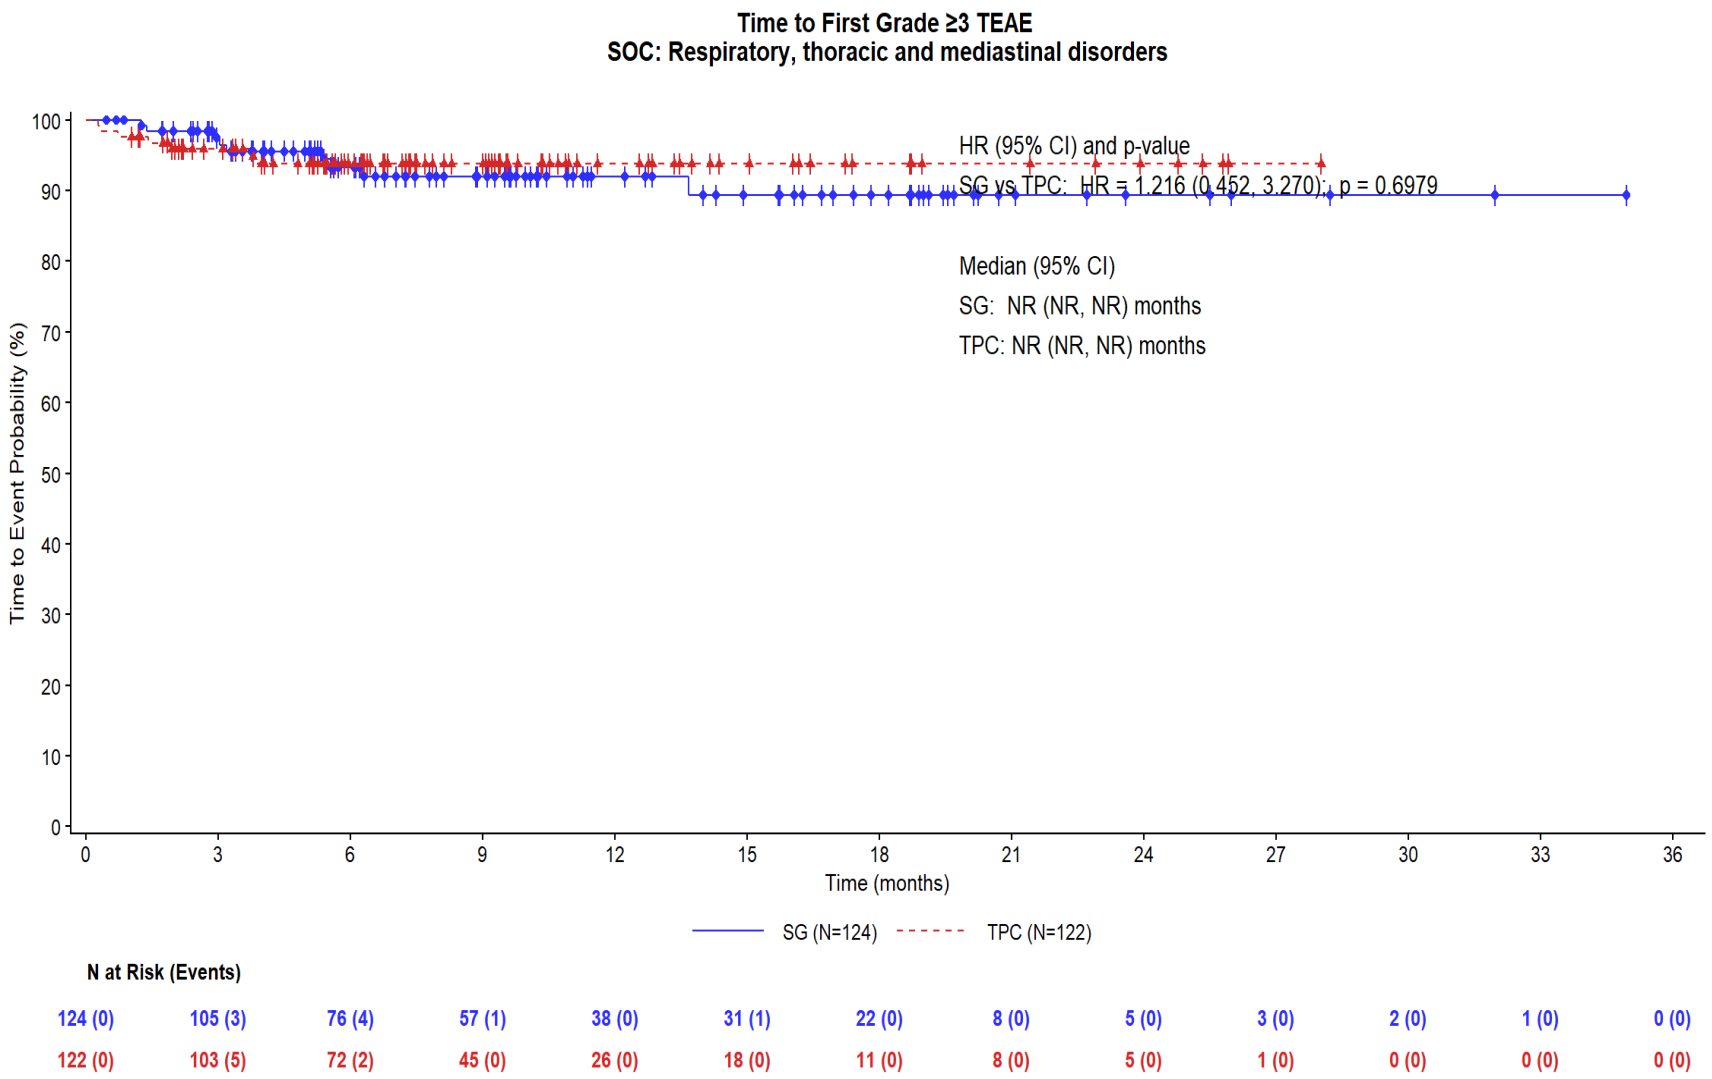
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.99. Figure 1.1.100: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Infections and infestations — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



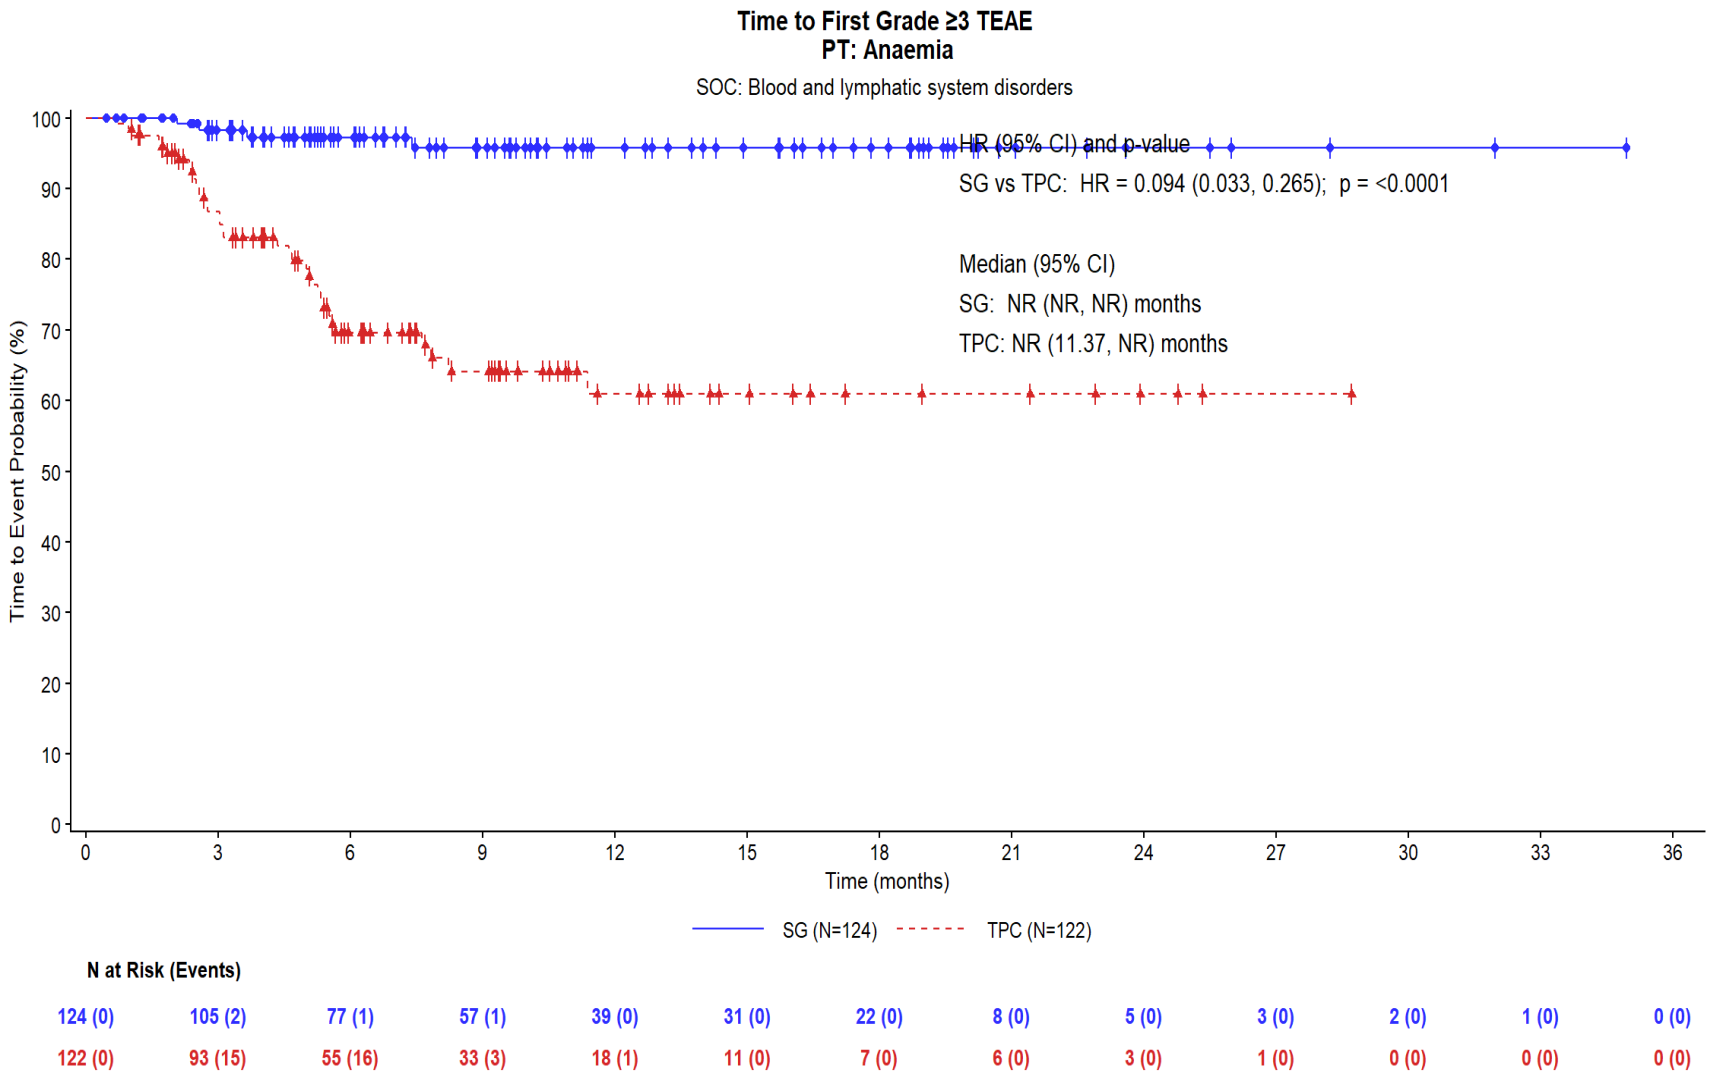
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.100. Figure 1.1.101: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Investigations — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



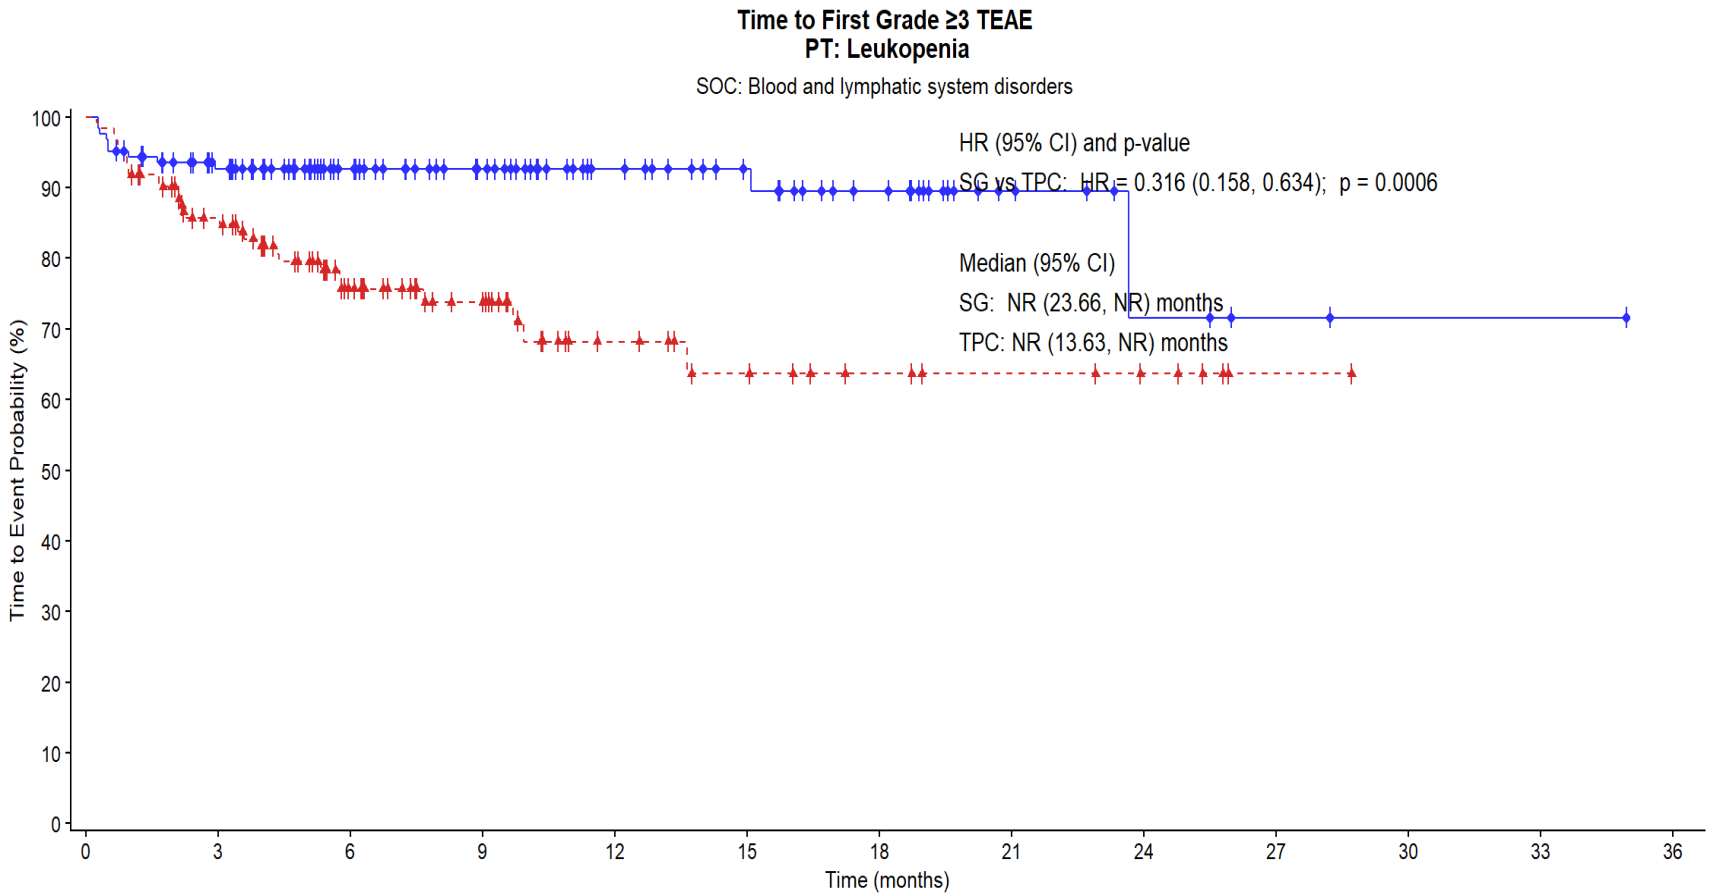
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.101. Figure 1.1.102: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Metabolism and nutrition disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



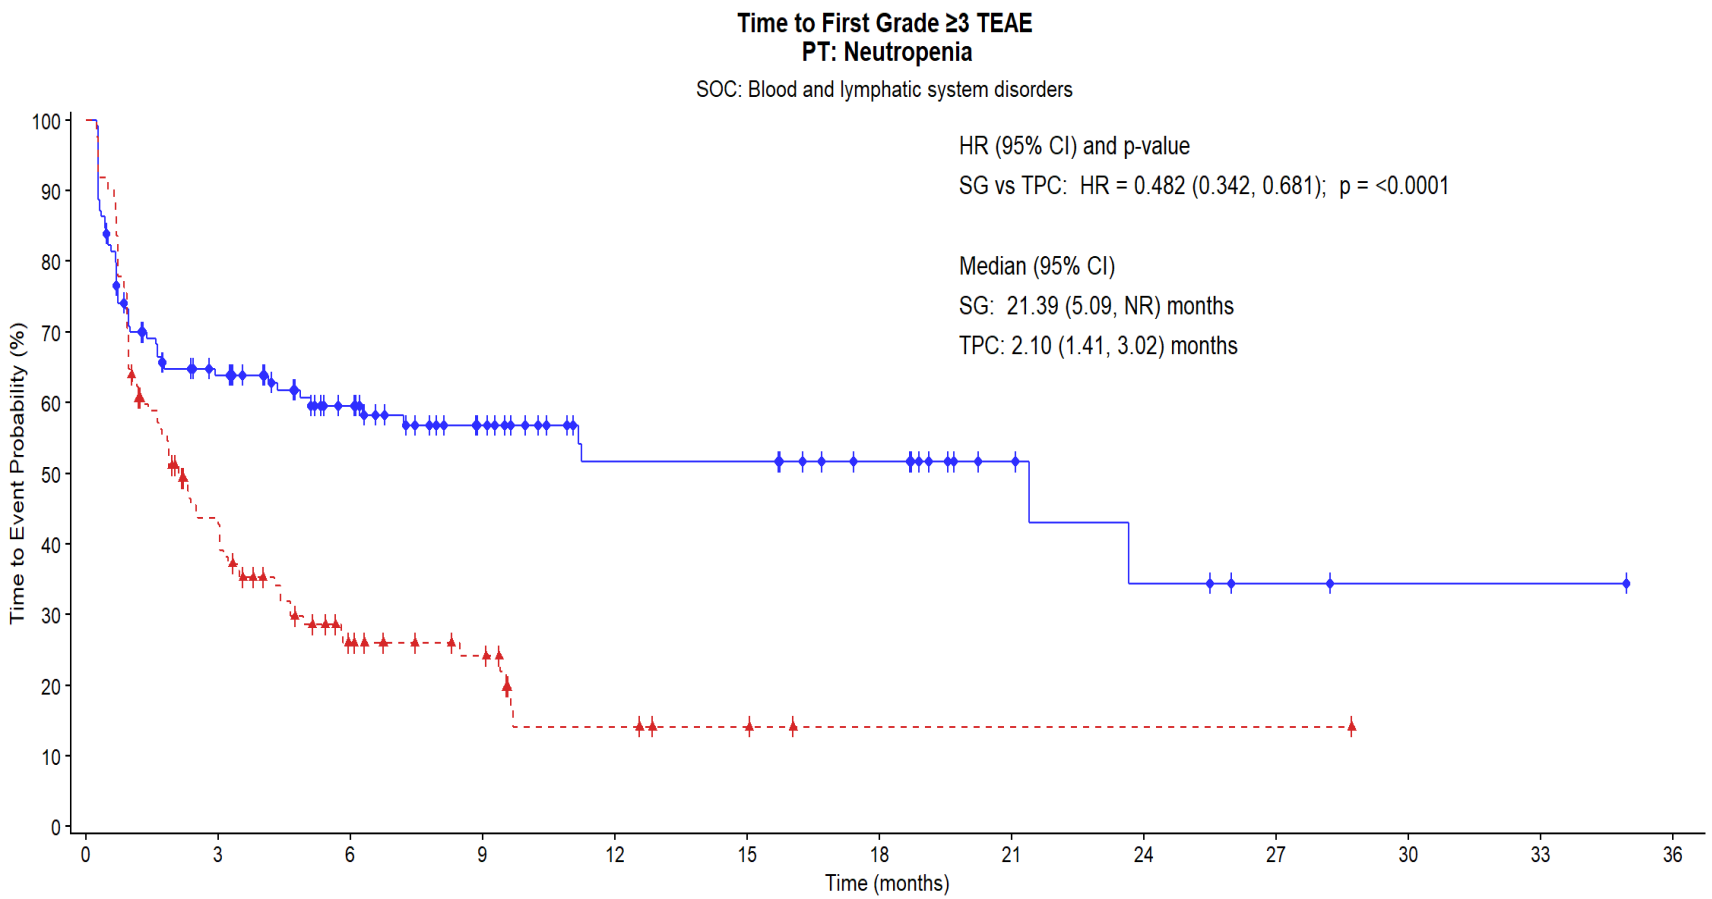
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.102. Figure 1.1.103: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by SOC Respiratory thoracic and mediastinal disorders — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



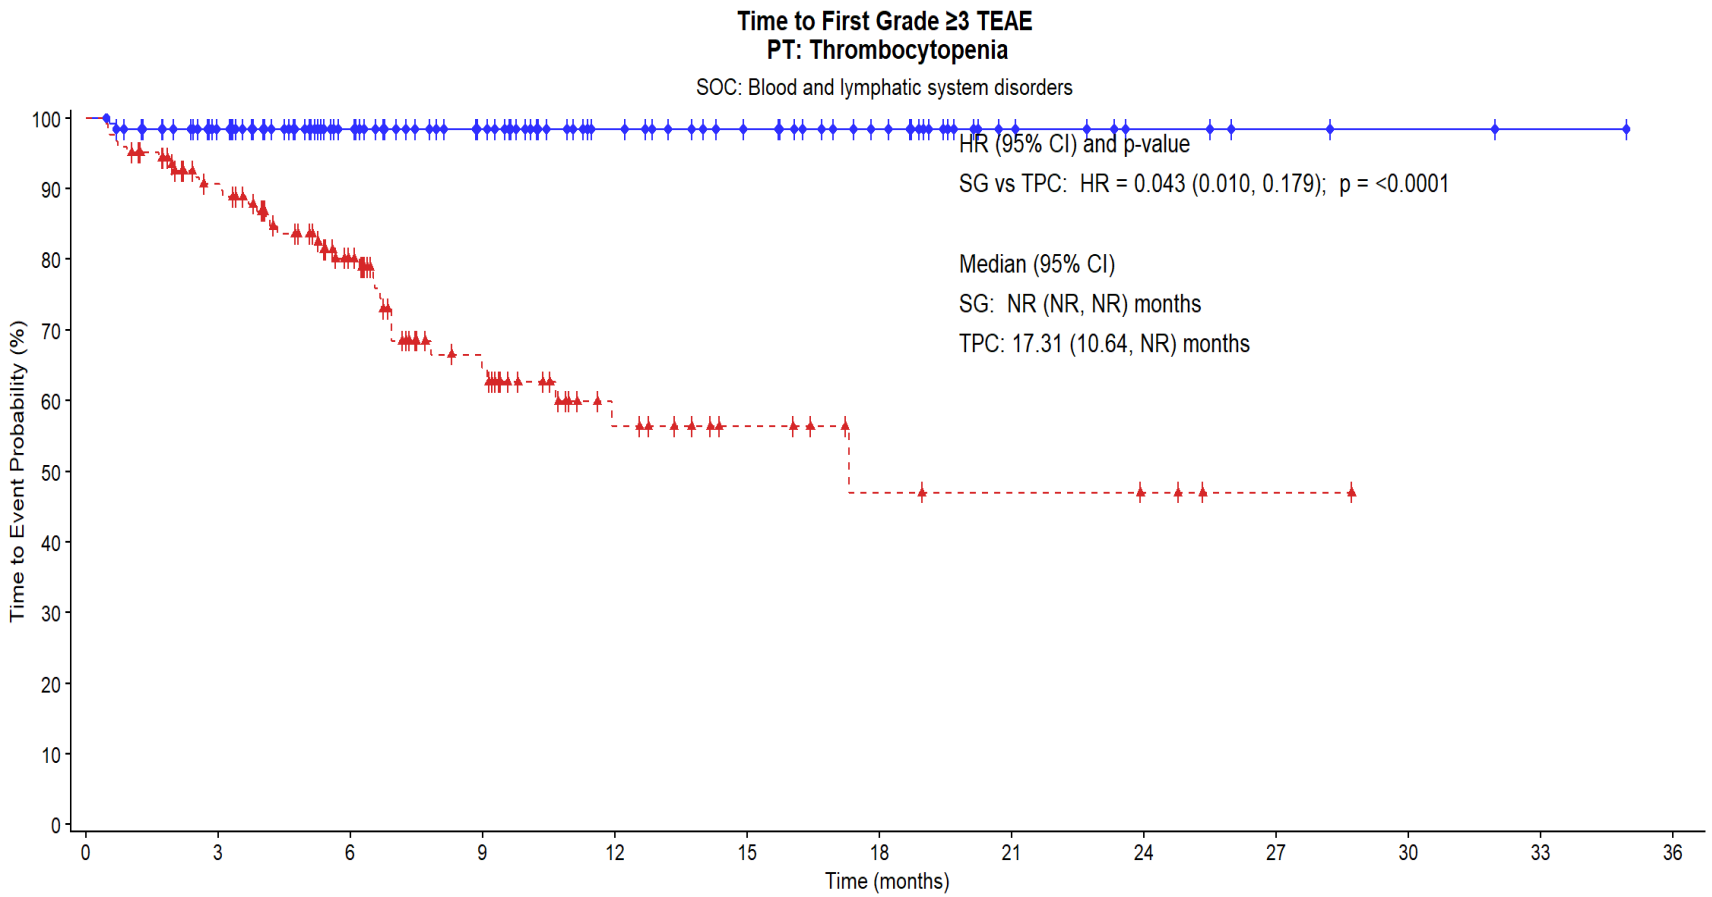
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.103. Figure 1.1.104: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Anaemia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



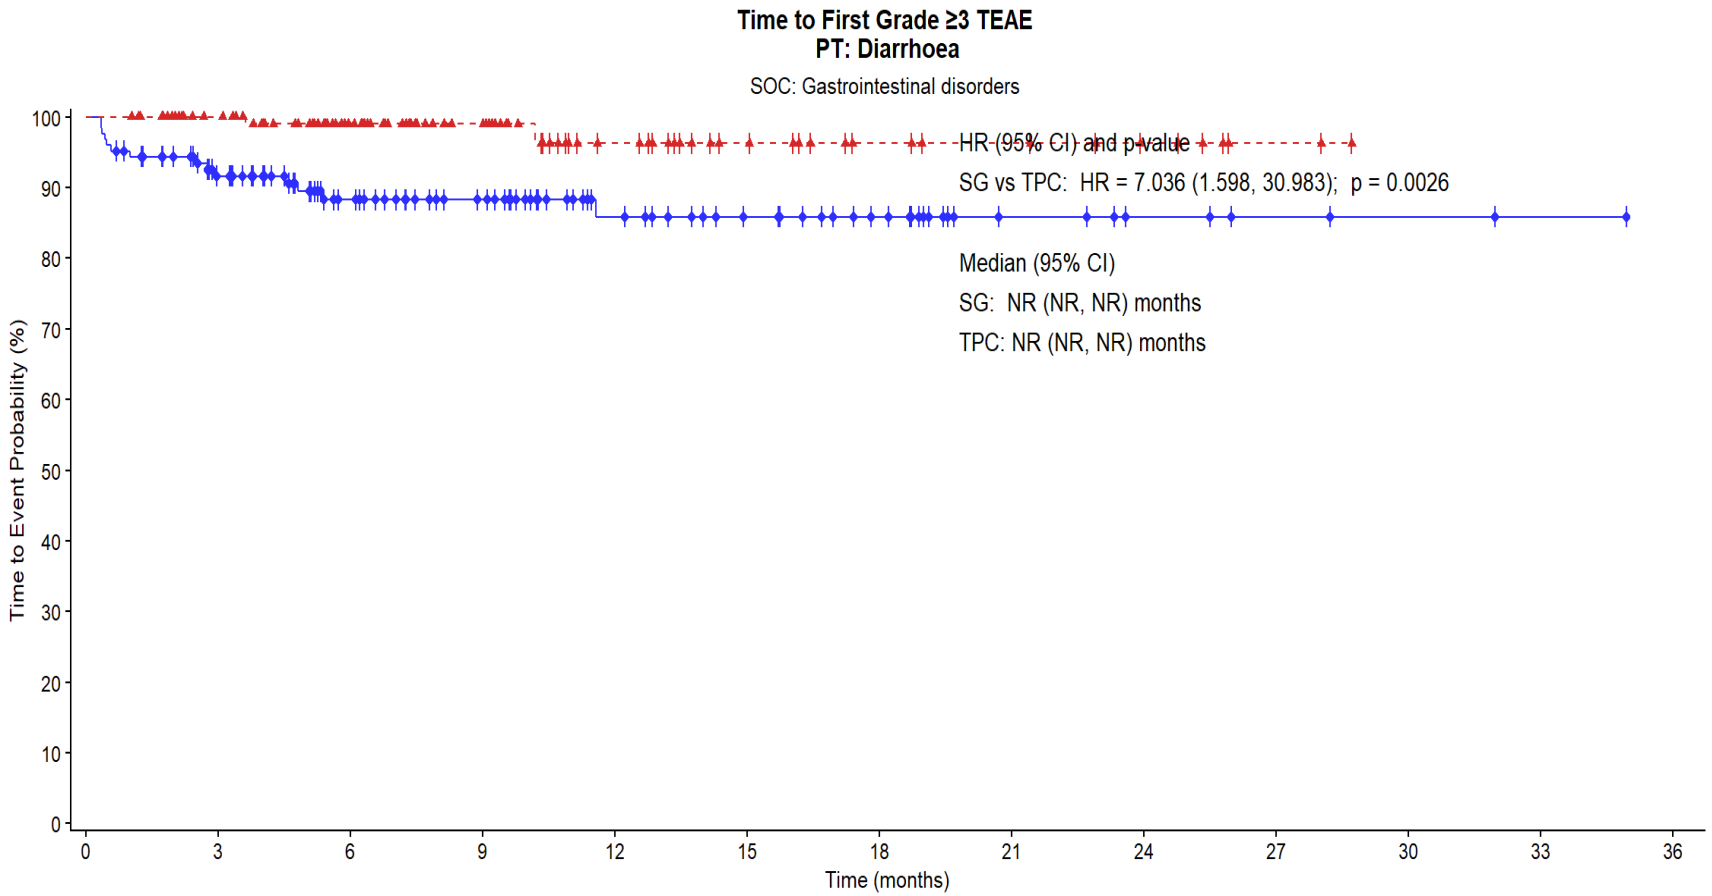
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.104. Figure 1.1.105: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Leukopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



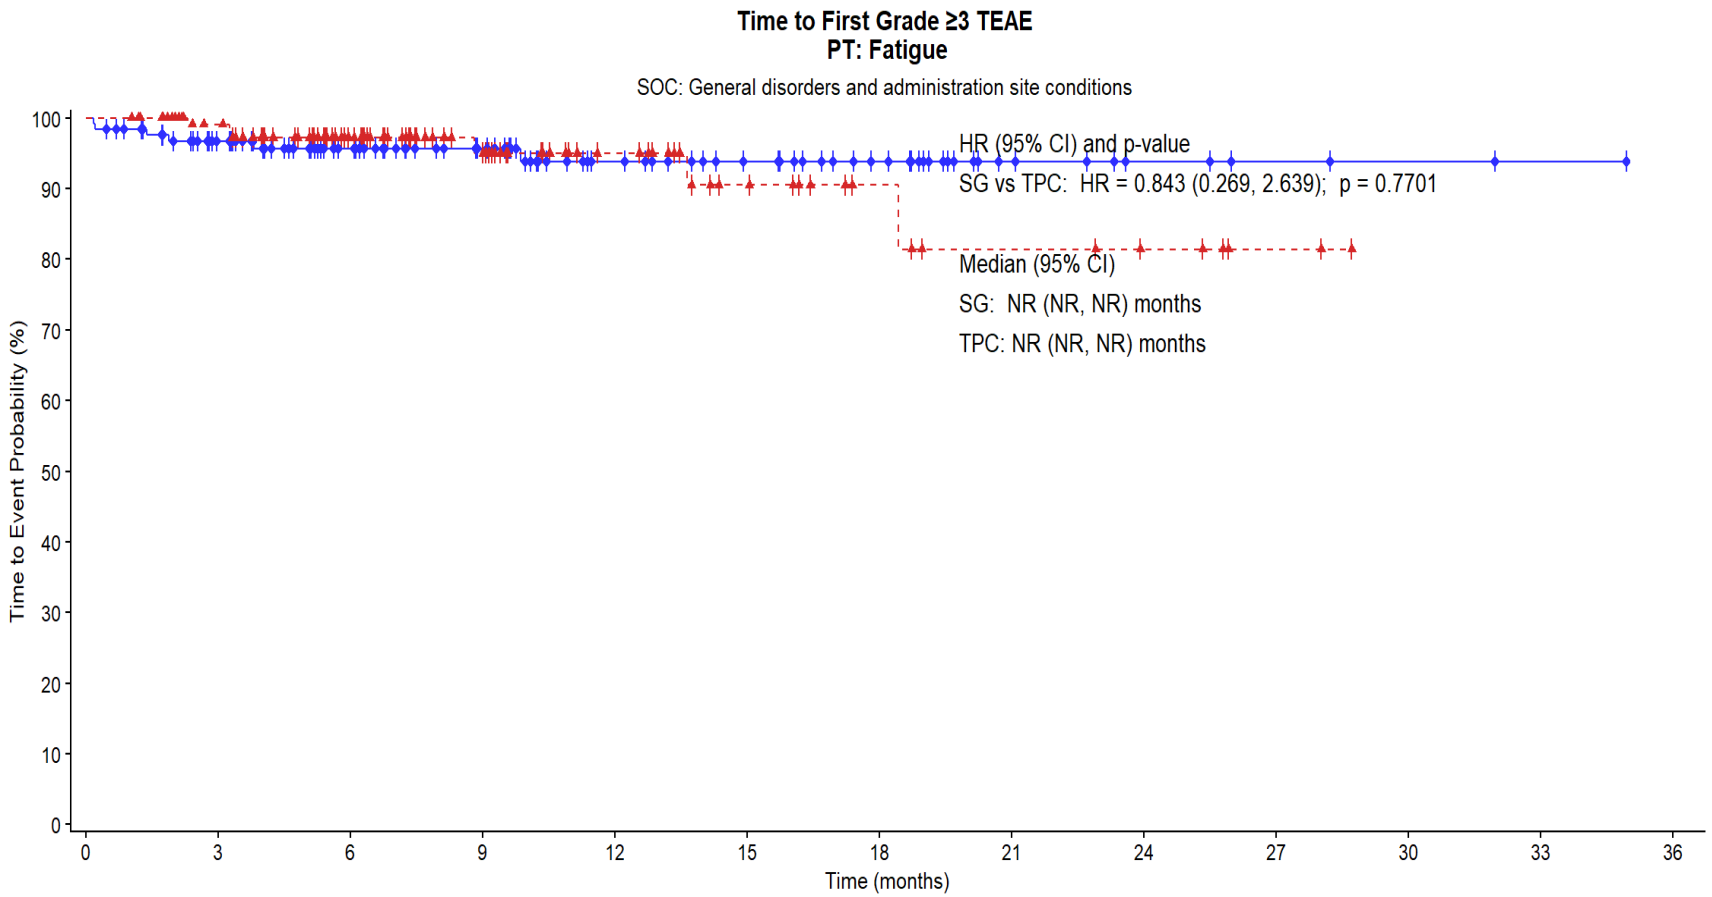
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.105. Figure 1.1.106: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Neutropenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



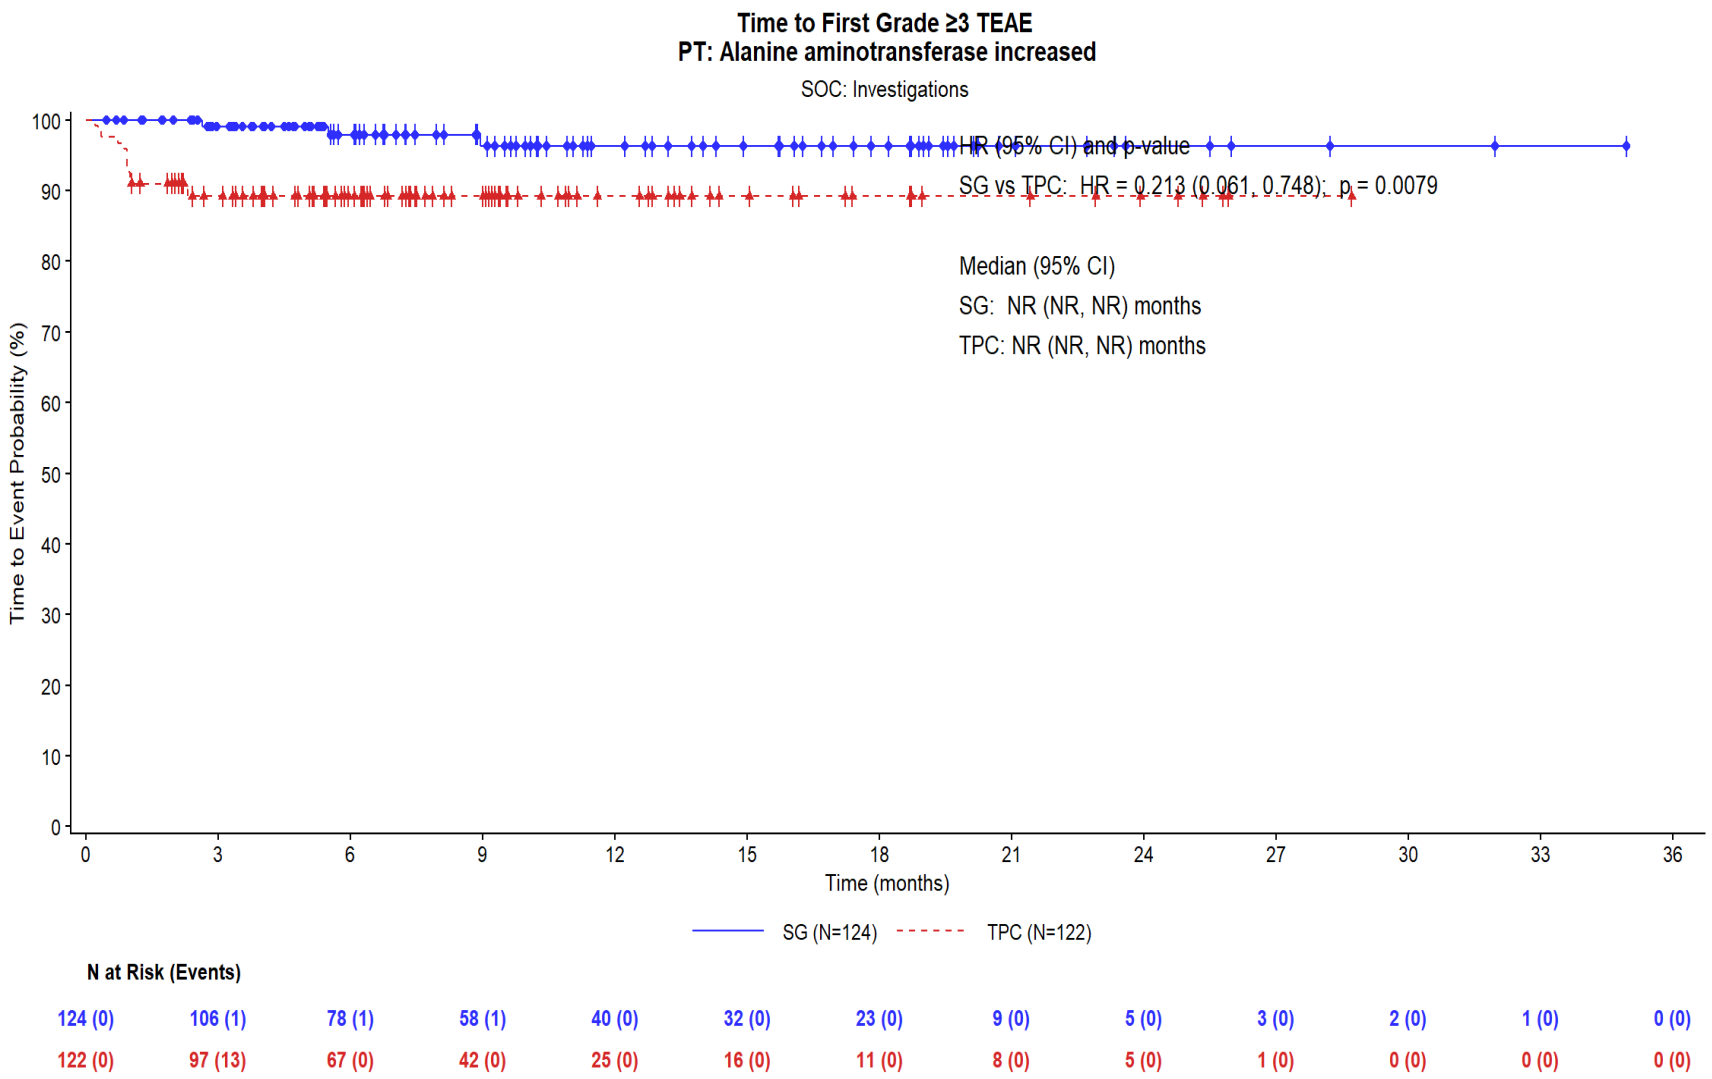
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.106. Figure 1.1.107: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Thrombocytopenia — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



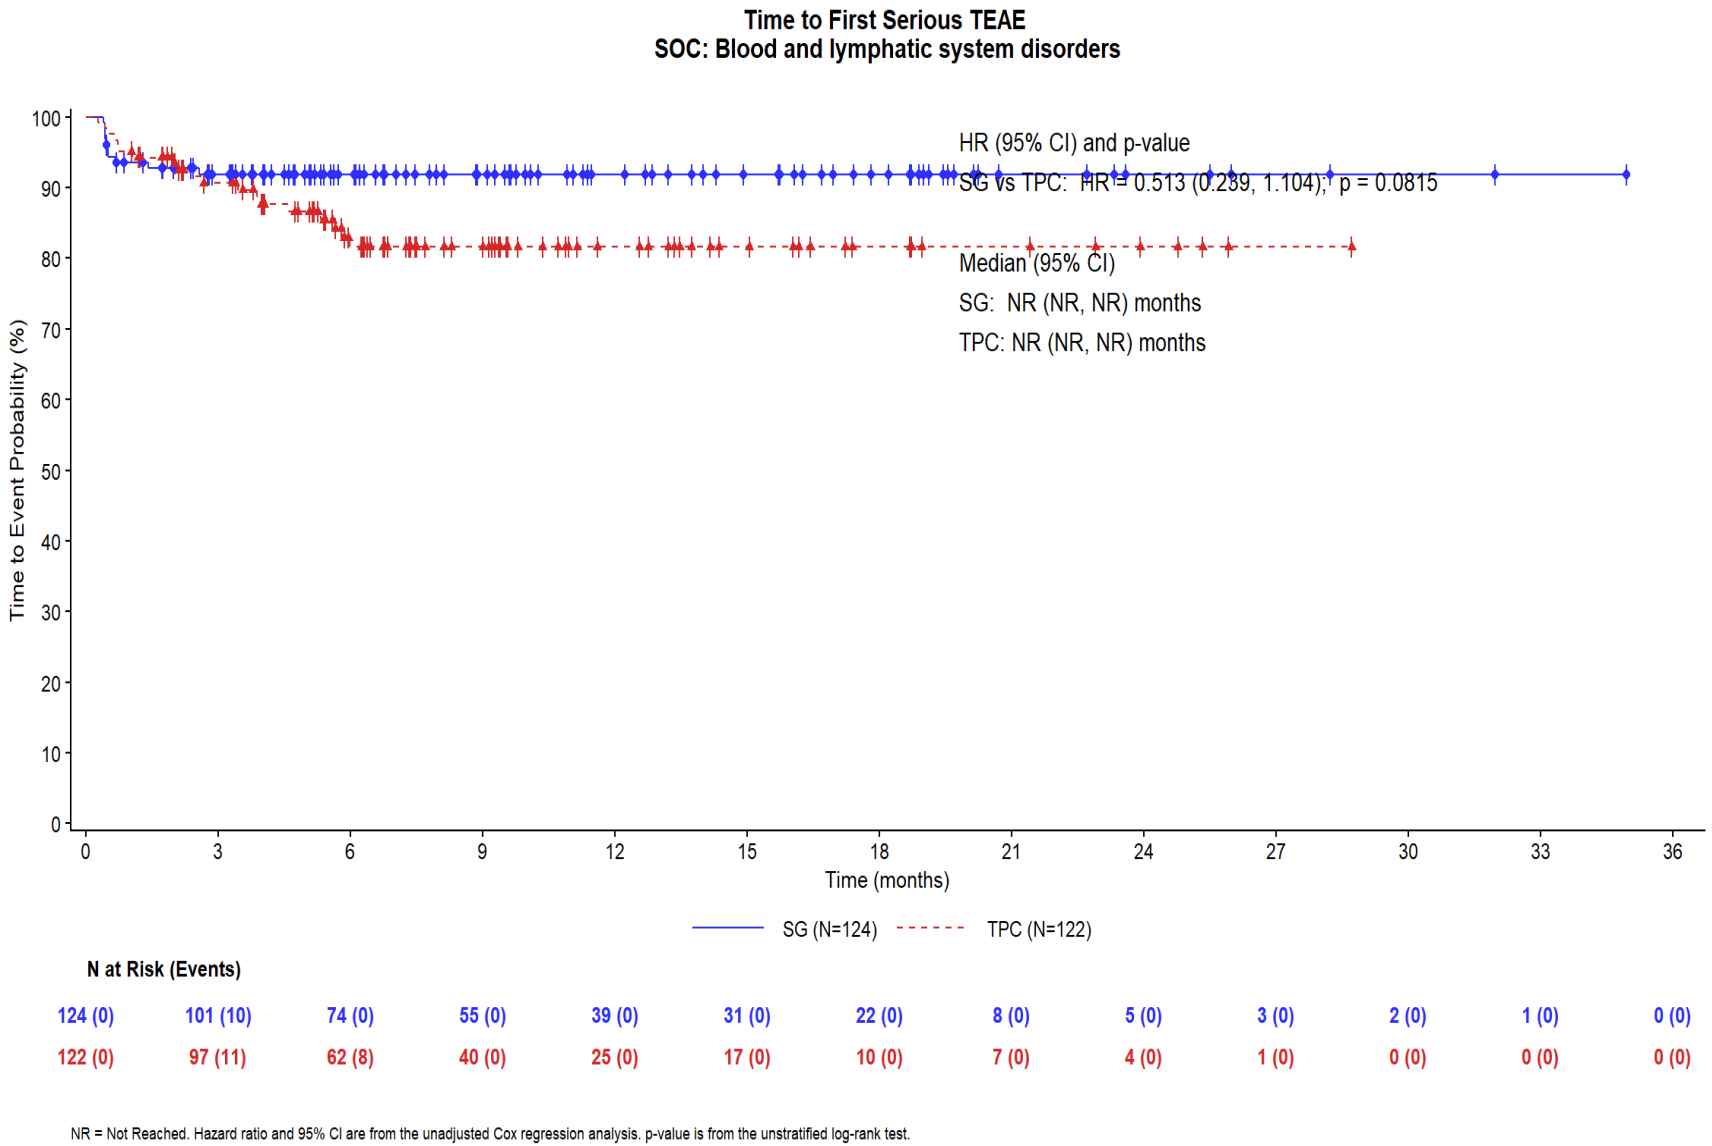
NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.107. Figure 1.1.108: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Diarrhoea — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.

7.108. Figure 1.1.109: Kaplan Meier Plot of Time to First TEAE with CTCAE Grade 3 or higher by PT Fatigue — mSAF — Excluding patients preselected to receive nab-paclitaxel or paclitaxel



NR = Not Reached. Hazard ratio and 95% CI are from the unadjusted Cox regression analysis. p-value is from the unstratified log-rank test.
