Table 14-4.1.503. Cox Regression of Time to Next Treatment
<Intent-to-Treat Population>

		Kd (N = 154)			KdD (N = 312)			p-value[a]	Hazard Ratio	
Characteristics	Subgroup	N	No. of Events (%)	Median (months) (95%CI)	N	No. of Events (%)	Median (months) (95%CI)	Interaction with Treatment	(KdD/Kd) (95%CI)	p-value (2-sided)[b]
Prior Lenalidomide exposure	Yes	74	47 (63.5)	15.2 [10.1, 19.0)	123	45 (36.6)	30.1 [27.3, NE)	0.2537	0.420 (0.278, 0.635)	<.0001
	No	80	37 (46.3)	25.6 [13.4, NE)	189	62 (32.8)	NE [NE, NE)		0.600 (0.399, 0.902)	0.0131
Refractory to Lenalidomide	Yes	55	35 (63.6)	14.1 [9.2, 20.0)	99	36 (36.4)	28.8 [27.3, NE)	0.2514	0.379 (0.236, 0.608)	<.0001
	No	99	49 (49.5)	19.0 [14.9, NE)	213	71 (33.3)	NE [NE, NE)		0.572 (0.397, 0.824)	0.0023

Time to next treatment is defined as the time (in months) from randomization to the initiation of subsequent non-protocol anti-cancer treatment for multiple myeloma.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Stratified analysis was conducted for all randomized subjects, and unstratified analysis was conducted for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the stratified or unstratified log-rank test as specified.

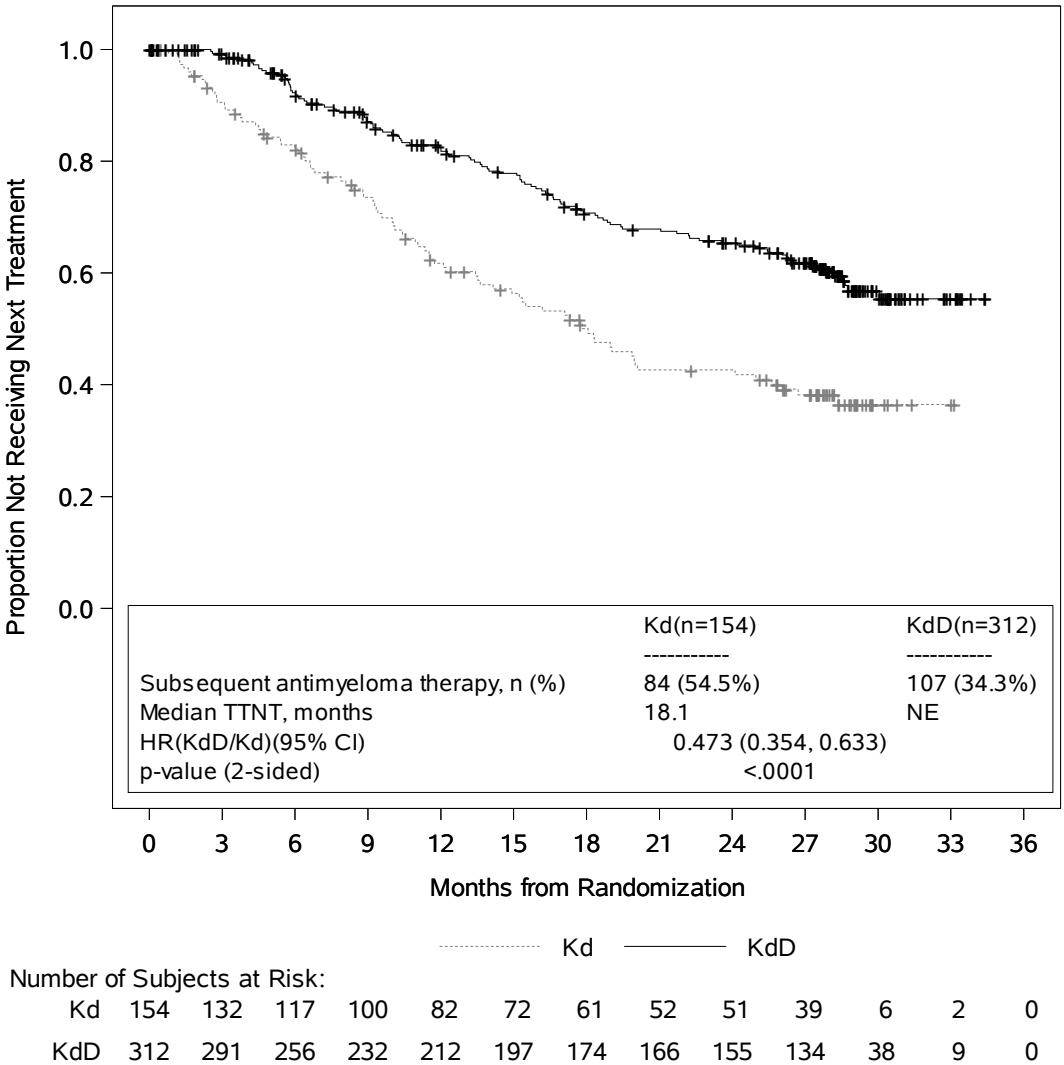
Figure 14-4.3.501. Time to Next Treatment KM Curves
<Intent-to-Treat Population>



Number of Subjects at Risk:

Kd	154	132	117	100	82	72	61	52	51	39	6	2	0
KdD	312	291	256	232	212	197	174	166	155	134	38	9	0

Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
The survival curves in this plot and the median time to next treatment in this plot were derived by stratified Kaplan-Meier method. Hazard ratio and 95% CI reported in the figure were from stratified Cox proportional hazards model, and 2-sided p-value was from stratified log-rank test.

Table 14-4.3.501. Analysis of Best Overall Response and Duration of Response as Assessed by the Independent Review Committee <Intent to Treat Population>

	Kd (N=154)	KdD (N=312)	Treatment Difference
Best overall response[a] - n(%)			
Complete response (CR)[b]	16 (10.4)	89 (28.5)	
MRD[-]CR[c]	6 (3.9)	49 (15.7)	
Very good partial response (VGPR)	59 (38.3)	127 (40.7)	
Partial response (PR)	40 (26.0)	47 (15.1)	
Stable disease (SD)	18 (11.7)	19 (6.1)	
Progressive disease (PD)	4 (2.6)	4 (1.3)	
Not evaluable (NE)	17 (11.0)	26 (8.3)	

Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Stratification factors (as assessed at randomization): International Staging System (ISS) stage (Stage 1 or 2 vs Stage 3) at screening; prior proteasome inhibitor exposure (yes vs no); number of prior lines of therapy (1 vs ≥ 2).
[a] Overall response rate is defined as the proportion of subjects in each treatment group who achieve sCR, CR, VGPR, or PR per the International Myeloma Working Group Uniform Response Criteria (IMWG-URC) as their best response. Complete response rate is defined as the proportion of subjects in each treatment group who achieve sCR or CR per IMWG-URC as their best response.
[b] sCR and CR cannot be differentiated due to lack of kappa/lambda ratio by IHC.
[c] MRD[-]CR is defined as achievement of CR (includes sCR) per IMWG-URC by IRC and MRD[-] status as assessed by NGS at any time during the study.
[d] 95% CIs for proportions were estimated using the Clopper-Pearson method.
[e] Odds ratios and corresponding 95% CIs were estimated by a stratified analysis by stratification factors using the Mantel-Haenszel method.
[f] P-values were calculated using the stratified by stratification factors Cochran-Mantel-Haenszel Chi-Square test.
[g] Durations were calculated for responders. Medians and percentiles were estimated using the Kaplan-Meier method. 95% CIs for medians and percentiles were estimated using the method by Klein and Moeschberger (1997) with log-log transformation.
[h] Time to overall response is defined as the time from randomization to the earliest of sCR, CR, VGPR, or PR per IMWG-URC. Time to complete response is defined as the time from randomization to the earliest of sCR, CR per IMWG-URC.

Table 14-4.3.501. Analysis of Best Overall Response and Duration of Response as Assessed by the Independent Review Committee <Intent to Treat Population>

	Kd (N=154)	KdD (N=312)	Treatment Difference
Overall response rate[a] (ORR)			
Number of subjects who achieved overall response	115	263	
ORR (95% CI)[d]	74.7 (67.0, 81.3)	84.3 (79.8, 88.1)	
Odds ratio (KdD/Kd) (95% CI)[e]			1.925 (1.184, 3.129)
1-sided p-value[f]			0.0040
Complete response rate[a] [b] (CRR)			
Number of subjects who achieved sCR or CR	16	89	
CRR (95% CI)[d]	10.4 (6.1, 16.3)	28.5 (23.6, 33.9)	
Odds ratio (KdD/Kd) (95% CI)[e]			3.507 (1.971, 6.238)
1-sided p-value[f]			<.0001

Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Stratification factors (as assessed at randomization): International Staging System (ISS) stage (Stage 1 or 2 vs Stage 3) at screening; prior proteasome inhibitor exposure (yes vs no); number of prior lines of therapy (1 vs ≥ 2).
[a] Overall response rate is defined as the proportion of subjects in each treatment group who achieve sCR, CR, VGPR, or PR per the International Myeloma Working Group Uniform Response Criteria (IMWG-URC) as their best response. Complete response rate is defined as the proportion of subjects in each treatment group who achieve sCR or CR per IMWG-URC as their best response.
[b] sCR and CR cannot be differentiated due to lack of kappa/lambda ratio by IHC.
[c] MRD[-]CR is defined as achievement of CR (includes sCR) per IMWG-URC by IRC and MRD[-] status as assessed by NGS at any time during the study.
[d] 95% CIs for proportions were estimated using the Clopper-Pearson method.
[e] Odds ratios and corresponding 95% CIs were estimated by a stratified analysis by stratification factors using the Mantel-Haenszel method.
[f] P-values were calculated using the stratified by stratification factors Cochran-Mantel-Haenszel Chi-Square test.
[g] Durations were calculated for responders. Medians and percentiles were estimated using the Kaplan-Meier method. 95% CIs for medians and percentiles were estimated using the method by Klein and Moeschberger (1997) with log-log transformation.
[h] Time to overall response is defined as the time from randomization to the earliest of sCR, CR, VGPR, or PR per IMWG-URC. Time to complete response is defined as the time from randomization to the earliest of sCR, CR per IMWG-URC.

KdD: 20/56 mg/m^2 twice weekly carfilzomib, dexamethasone, and daratumumab; Kd: 20/56 mg/m^2 twice weekly carfilzomib and dexamethasone
Mixed Model Repeated Measurement for change from baseline score, with time, treatment and interaction of time and treatment as independent variables, and baseline score included as a covariate. Due to non-convergence with an unstructured covariance matrix, the model was modified to use a structured covariance matrix (compound symmetry).

KdD: 20/56 mg/m^2 twice weekly carfilzomib, dexamethasone, and daratumumab; Kd: 20/56 mg/m^2 twice weekly carfilzomib and dexamethasone
Mixed Model Repeated Measurement for change from baseline score, with time, treatment and interaction of time and treatment as independent variables, and baseline score included as a covariate. Due to non-convergence with an unstructured covariance matrix, the model was modified to use a structured covariance matrix (compound symmetry).

Includes subjects with at least one CTCAE Grade ≥3 adverse event. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and subgroups.
Subgroup analyses are provided only if the respective SOC or SOC/PT event is statistically significant ($p < 0.05$) for the total population.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes SOC where at least 10 subjects with at least one adverse event in one treatment arm. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and subgroups.
Subgroup analyses are provided only if the respective SOC or SOC/PT event is statistically significant ($p < 0.05$) for the total population.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

SOC Characteristics	Subgroup	Kd (N = 153) N	Kd (N = 153) No. of Events (%)	Kd (N = 153) Median (months) (95%CI)	KdD (N = 308) N	KdD (N = 308) No. of Events (%)	KdD (N = 308) Median (months) (95%CI)	p-value[a] Interaction with Treatment	Hazard Ratio (KdD/Kd) (95%CI)	p-value (2-sided)[b]
Prior IMiD exposure	Yes	110	73 (66.4)	3.3 [2.6, 6.3)	205	174 (84.9)	3.2 [2.1, 4.1)	0.6256	1.306 (0.992, 1.720)	0.0571
	No	43	33 (76.7)	3.4 [1.8, 9.8)	103	86 (83.5)	4.5 [2.6, 6.5)		1.196 (0.797, 1.795)	0.3896
Refractory to IMiD	Yes	65	45 (69.2)	3.1 [2.1, 6.3)	129	104 (80.6)	3.7 [2.1, 5.5)	0.0377	0.964 (0.677, 1.372)	0.8353
	No	88	61 (69.3)	4.1 [2.2, 8.1)	179	156 (87.2)	3.4 [2.3, 4.3)		1.555 (1.148, 2.108)	0.0042

Includes SOC where at least 10 subjects with at least one adverse event in one treatment arm. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and subgroups.
Subgroup analyses are provided only if the respective SOC or SOC/PT event is statistically significant ($p < 0.05$) for the total population.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Table 14-6.1.505. Cox Regression of Most Frequent Adverse Events by MedDRA SOC and PT
<Safety Population>

SOC PT Characteristics	Subgroup	Kd (N = 153) N	Kd (N = 153) No. of Events (%)	Kd (N = 153) Median (months) (95%CI)	KdD (N = 308) N	KdD (N = 308) No. of Events (%)	KdD (N = 308) Median (months) (95%CI)	p-value[a] Interaction with Treatment	Hazard Ratio (KdD/Kd) (95%CI)	p-value (2-sided)[b]
Total subjects		153	15 (9.8)	NE [NE, NE)	308	47 (15.3)	NE [NE, NE)		1.415 (0.790, 2.534)	0.2406
Lymphopenia										
Total subjects		153	13 (8.5)	NE [NE, NE)	308	29 (9.4)	NE [NE, NE)		1.059 (0.550, 2.041)	0.8648

Includes PT where at least 10 subjects with at least one adverse event in one treatment arm. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
Subgroup analyses are provided only if the respective SOC or SOC/PT event is statistically significant (p <0.05) for the total population.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes PT where at least 10 subjects with at least one adverse event in one treatment arm. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
Subgroup analyses are provided only if the respective SOC or SOC/PT event is statistically significant ($p < 0.05$) for the total population.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Pain										

Includes PT where at least 10 subjects with at least one adverse event in one treatment arm. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
Subgroup analyses are provided only if the respective SOC or SOC/PT event is statistically significant (p <0.05) for the total population.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Unstratified analysis was conducted for total subjects and for subgroups.
Subgroup analyses are provided only if the respective SOC or SOC/PT event is statistically significant (p <0.05) for the total population.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Table 14-6.1.505. Cox Regression of Most Frequent Adverse Events by MedDRA SOC and PT
<Safety Population>

SOC PT Characteristics	Subgroup	Kd (N = 153) N	Kd (N = 153) No. of Events (%)	Kd (N = 153) Median (months) (95%CI)	KdD (N = 308) N	KdD (N = 308) No. of Events (%)	KdD (N = 308) Median (months) (95%CI)	p-value[a] Interaction with Treatment	Hazard Ratio (KdD/Kd) (95%CI)	p-value (2-sided)[b]
Number of prior lines of therapy per IXRS	1	66	0 (0.0)	NE [NE, NE)	131	13 (9.9)	NE [NE, NE)	0.9877	>999.999 (<.001, NE)	0.0093
	>= 2	87	3 (3.4)	NE [NE, NE)	177	12 (6.8)	NE [NE, NE)		1.960 (0.553, 6.949)	0.2942
Fall										

Includes PT where at least 10 subjects with at least one adverse event in one treatment arm. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
Subgroup analyses are provided only if the respective SOC or SOC/PT event is statistically significant (p <0.05) for the total population.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Unstratified analysis was conducted for total subjects and for subgroups.
Subgroup analyses are provided only if the respective SOC or SOC/PT event is statistically significant (p <0.05) for the total population.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

<Safety Population>

SOC PT Characteristics	Subgroup	Kd (N = 153) N	Kd (N = 153) No. of Events (%)	Kd (N = 153) Median (months) (95%CI)	KdD (N = 308) N	KdD (N = 308) No. of Events (%)	KdD (N = 308) Median (months) (95%CI)	p-value[a] Interaction with Treatment	Hazard Ratio (KdD/Kd) (95%CI)	p-value (2-sided)[b]
ISS stage per IXRS	1 or 2	126	2 (1.6)	NE [NE, NE)	250	20 (8.0)	NE [NE, NE)	0.9917	4.742 (1.107, 20.307)	0.0206
	3	27	0 (0.0)	NE [NE, NE)	58	2 (3.4)	NE [NE, NE)		>999.999 (<.001, NE)	0.4705
Prior proteasome inhibitor exposure per IXRS	Yes	138	1 (0.7)	NE [NE, NE)	276	20 (7.2)	NE [NE, NE)	0.1274	8.989 (1.206, 67.006)	0.0094

Includes PT where at least 10 subjects with at least one adverse event in one treatment arm. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
Subgroup analyses are provided only if the respective SOC or SOC/PT event is statistically significant ($p < 0.05$) for the total population.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Unstratified analysis was conducted for total subjects and for subgroups.
Subgroup analyses are provided only if the respective SOC or SOC/PT event is statistically significant (p <0.05) for the total population.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes PT where at least 5% subjects with at least one Grade ≥3 adverse event in one treatment arm. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
Subgroup analyses are provided only if the respective SOC or SOC/PT event is statistically significant ($p < 0.05$) for the total population.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Unstratified analysis was conducted for total subjects and for subgroups.
Subgroup analyses are provided only if the respective SOC or SOC/PT event is statistically significant ($p < 0.05$) for the total population.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes subjects with at least one adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes subjects with at least one adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes subjects with at least one adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes subjects with at least one adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Table 14-6.1.510. Cox Regression of Adverse Events of Interest for Carfilzomib
<Safety Population>

EOI Characteristics	Subgroup	Kd (N = 153) N	Kd No. of Events (%)	Kd Median (months) (95%CI)	KdD (N = 308) N	KdD No. of Events (%)	KdD Median (months) (95%CI)	p-value[a] Interaction with Treatment	Hazard Ratio (KdD/Kd) (95%CI)	p-value (2-sided)[b]
Prior Lenalidomide exposure	Yes	74	0 (0.0)	NE [NE, NE)	122	0 (0.0)	NE [NE, NE)	0.9999	NE (NE, NE)	NE
	No	79	1 (1.3)	NE [NE, NE)	186	1 (0.5)	NE [NE, NE)		0.300 (0.018, 4.875)	0.3699
Refractory to Lenalidomide	Yes	55	0 (0.0)	NE [NE, NE)	98	0 (0.0)	NE [NE, NE)	0.9999	NE (NE, NE)	NE
	No	98	1 (1.0)	NE [NE, NE)	210	1 (0.5)	NE [NE, NE)		0.338 (0.021, 5.479)	0.4239

Includes subjects with at least one adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

	Europe	102	3 (2.9)	NE [NE, NE)	203	13 (6.4)	NE [NE, NE)		1.854 (0.528, 6.515)	0.3282
	Asia Pacific	39	3 (7.7)	NE [19.7, NE)	84	2 (2.4)	NE [NE, NE)		0.142 (0.023, 0.886)	0.0169
Baseline ECOG PS	0-1	146	6 (4.1)	NE [NE, NE)	294	17 (5.8)	NE [NE, NE)	1.0000	1.132 (0.445, 2.882)	0.7944
	2	7	0 (0.0)	NE [NE, NE)	13	0 (0.0)	NE [NE, NE)		NE (NE, NE)	NE

Includes subjects with at least one adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Table 14-6.1.510. Cox Regression of Adverse Events of Interest for Carfilzomib <Safety Population>

EOI Characteristics	Subgroup	Kd (N = 153) N	Kd No. of Events (%)	Kd Median (months) (95%CI)	KdD (N = 308) N	KdD No. of Events (%)	KdD Median (months) (95%CI)	p-value[a] Interaction with Treatment	Hazard Ratio (KdD/Kd) (95%CI)	p-value (2-sided)[b]
Prior Lenalidomide exposure	Yes	74	6 (8.1)	NE [NE, NE)	122	15 (12.3)	NE [NE, NE)	0.9449	1.394 (0.540, 3.603)	0.4910
	No	79	7 (8.9)	NE [NE, NE)	186	23 (12.4)	NE [NE, NE)		1.336 (0.573, 3.114)	0.5009
Refractory to Lenalidomide	Yes	55	5 (9.1)	NE [NE, NE)	98	11 (11.2)	NE [NE, NE)	0.6365	1.111 (0.384, 3.215)	0.8461
	No	98	8 (8.2)	NE [NE, NE)	210	27 (12.9)	NE [NE, NE)		1.507 (0.685, 3.319)	0.3045

Includes subjects with at least one adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes subjects with at least one adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

EOI Characteristics	Subgroup	Kd (N = 153) N	Kd (N = 153) No. of Events (%)	Kd (N = 153) Median (months) (95%CI)	KdD (N = 308) N	KdD (N = 308) No. of Events (%)	KdD (N = 308) Median (months) (95%CI)	p-value[a] Interaction with Treatment	Hazard Ratio (KdD/Kd) (95%CI)	p-value (2-sided)[b]
Pulmonary hypertension (SMQ) - Narrow										
Total subjects		153	6 (3.9)	NE [NE, NE)	308	8 (2.6)	NE [NE, NE)		0.497 (0.171, 1.441)	0.1893

Includes subjects with at least one adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Prior Bortezomib or Ixazomib exposure	Yes	136	79 (58.1)	7.6 [4.3, 11.6)	285	218 (76.5)	5.1 [3.9, 6.5)	0.2918	1.314 (1.015, 1.700)	0.0377
	No	17	9 (52.9)	7.3 [1.0, NE)	23	22 (95.7)	4.6 [1.6, 9.7)		1.977 (0.904, 4.324)	0.0817
Refractory to Bortezomib or Ixazomib	Yes	55	25 (45.5)	11.6 [4.3, 17.3)	99	72 (72.7)	5.7 [3.7, 8.2)	0.3916	1.651 (1.047, 2.604)	0.0291
	No	98	63 (64.3)	6.3 [2.9, 8.6)	209	168 (80.4)	4.4 [3.7, 6.6)		1.271 (0.951, 1.700)	0.1047

Includes subjects with at least one adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes subjects with at least one adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

	No	15	2 (13.3)	NE [NE, NE)	32	0 (0.0)	NE [NE, NE)		<.001 (<.001, NE)	0.0320

Includes subjects with at least one adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes subjects with at least one CTCAE Grade ≥3 adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes subjects with at least one CTCAE Grade ≥3 adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes subjects with at least one CTCAE Grade ≥3 adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

EOI Characteristics	Subgroup	N	No. of Events (%)	Median (months) (95%CI)	N	No. of Events (%)	Median (months) (95%CI)	Interaction with Treatment	(KdD/Kd) (95%CI)	p-value (2-sided)[b]
Prior Lenalidomide exposure	Yes	74	3 (4.1)	NE [NE, NE)	122	16 (13.1)	NE [NE, NE)	0.7239	2.809 (0.816, 9.662)	0.0874
	No	79	5 (6.3)	NE [NE, NE)	186	28 (15.1)	NE [NE, NE)		2.090 (0.804, 5.434)	0.1221
Refractory to Lenalidomide	Yes	55	3 (5.5)	NE [NE, NE)	98	11 (11.2)	NE [NE, NE)	0.5155	1.648 (0.457, 5.942)	0.4414
	No	98	5 (5.1)	NE [NE, NE)	210	33 (15.7)	NE [NE, NE)		2.818 (1.099, 7.227)	0.0242

Includes subjects with at least one CTCAE Grade ≥3 adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

	No	15	0 (0.0)	NE [NE, NE)	32	0 (0.0)	NE [NE, NE)		NE (NE, NE)	NE

Includes subjects with at least one CTCAE Grade ≥3 adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes subjects with at least one CTCAE Grade ≥3 adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes subjects with at least one CTCAE Grade ≥3 adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes subjects with at least one CTCAE Grade ≥3 adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

EOI Characteristics	Subgroup	Kd (N = 153) N	Kd (N = 153) No. of Events (%)	Kd (N = 153) Median (months) (95%CI)	KdD (N = 308) N	KdD (N = 308) No. of Events (%)	KdD (N = 308) Median (months) (95%CI)	p-value[a] Interaction with Treatment	Hazard Ratio (KdD/Kd) (95%CI)	p-value (2-sided)[b]
Respiratory failure (SMQ) - Narrow										
Total subjects		153	1 (0.7)	NE [NE, NE)	308	3 (1.0)	NE [NE, NE)		1.273 (0.132, 12.271)	0.8345

Includes subjects with at least one CTCAE Grade ≥3 adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.

Includes subjects with at least one CTCAE Grade ≥3 adverse event of interest for Carfilzomib. If a subject has no event, the censoring is as follows: earliest between withdrawal of consent date, lost to follow-up date, study treatment end date + 30 days, cut-off date and death date.
CI: confidence interval; NE: not estimable; ECOG PS: Eastern Cooperative Oncology Group Performance Status; Kd: carfilzomib and dexamethasone; KdD: carfilzomib, dexamethasone, and daratumumab.
Unstratified analysis was conducted for total subjects and for subgroups.
[a] The p-value (2-sided) for interaction was from a Cox regression model with baseline characteristic, treatment group and interaction term between baseline characteristic and treatment as covariates.
[b] 2-sided p-values were calculated using the unstratified log-rank test.
