[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 18:27:09

TABLE 4.1.1: Treatment Emergent Adverse Event (TEAE) - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)

| Parameter | Measure | Nivolumab + Cabozantinib | Sunitinib |
|---|---|---|---|
| Treatment Emergent Adverse Event (TEAE) - Any Adverse Event | | | |
| Total number of subjects | N | 74 | 71 |
| Number of subjects with events | N | 74 (100.0%) | 71 (100.0%) |
| Number of censored cases | N | 0 (0.0%) | 0 (0.0%) |
| Time to first event (Months) | Mean (SE) | 0.58 (0.08) | 0.71 (0.18) |
| | Q1 [95% CI] | 0.1 [0.07;0.26] | 0.2 [0.10;0.30] |
| | Median [95% CI] | 0.46 [0.26;0.49] | 0.39 [0.33;0.49] |
| | Q3 [95% CI] | 0.7 [0.49;0.95] | 0.7 [0.49;0.72] |
| | p-value (a) | 0.8761 | |
| Stratified Cox PH model | HR (b) | 0.98 [0.70;1.37] | |

a: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT.
b: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by factors defined above, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT.
CI: Confidence Interval; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT.
CI: Confidence Interval; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT.
CI: Confidence Interval; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT.
CI: Confidence Interval; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT.
CI: Confidence Interval; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT.
CI: Confidence Interval; NE: Not Estimable; NYR: (Median) Not Yet Reached.

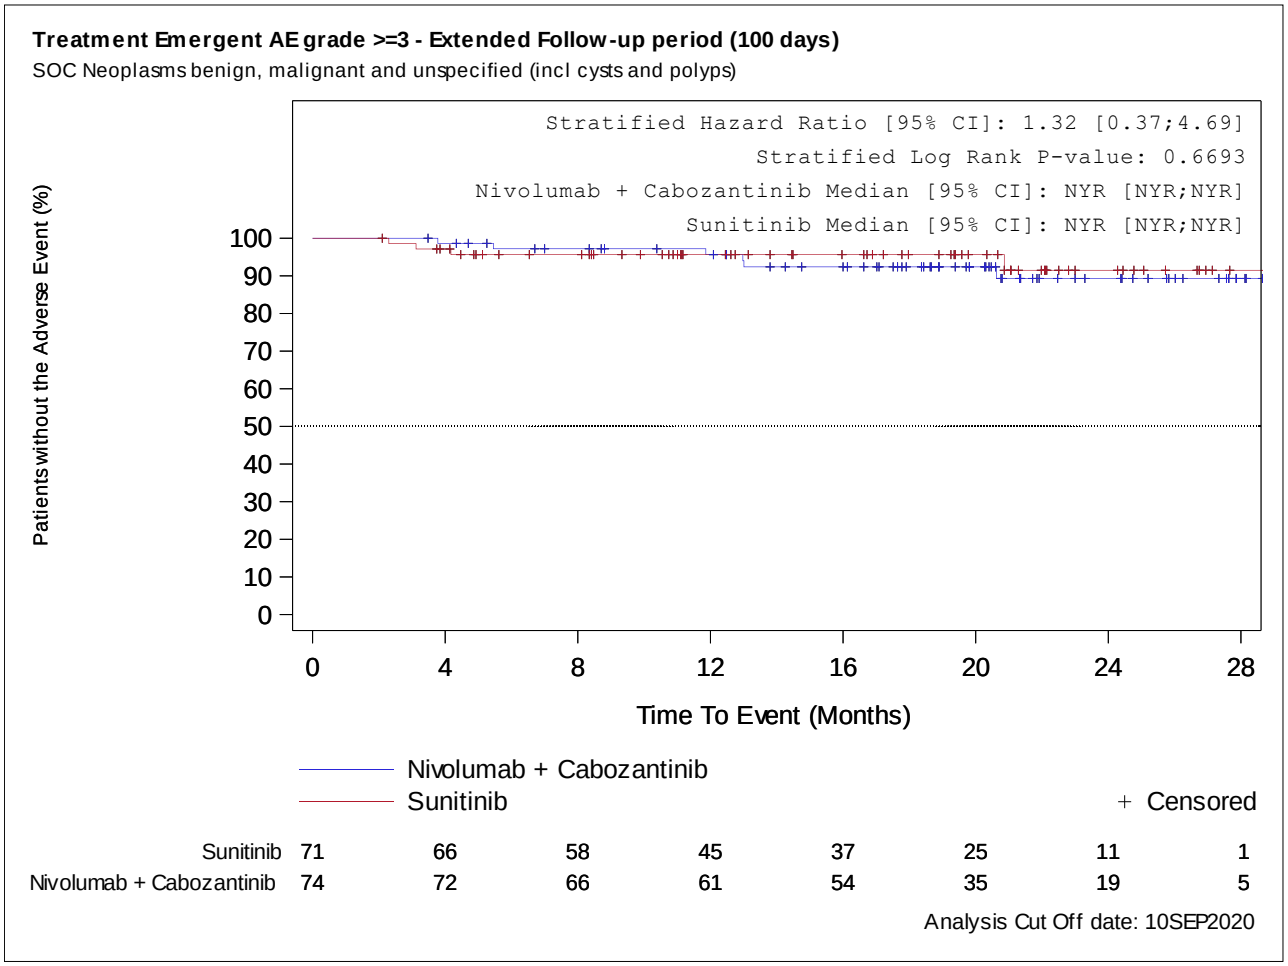
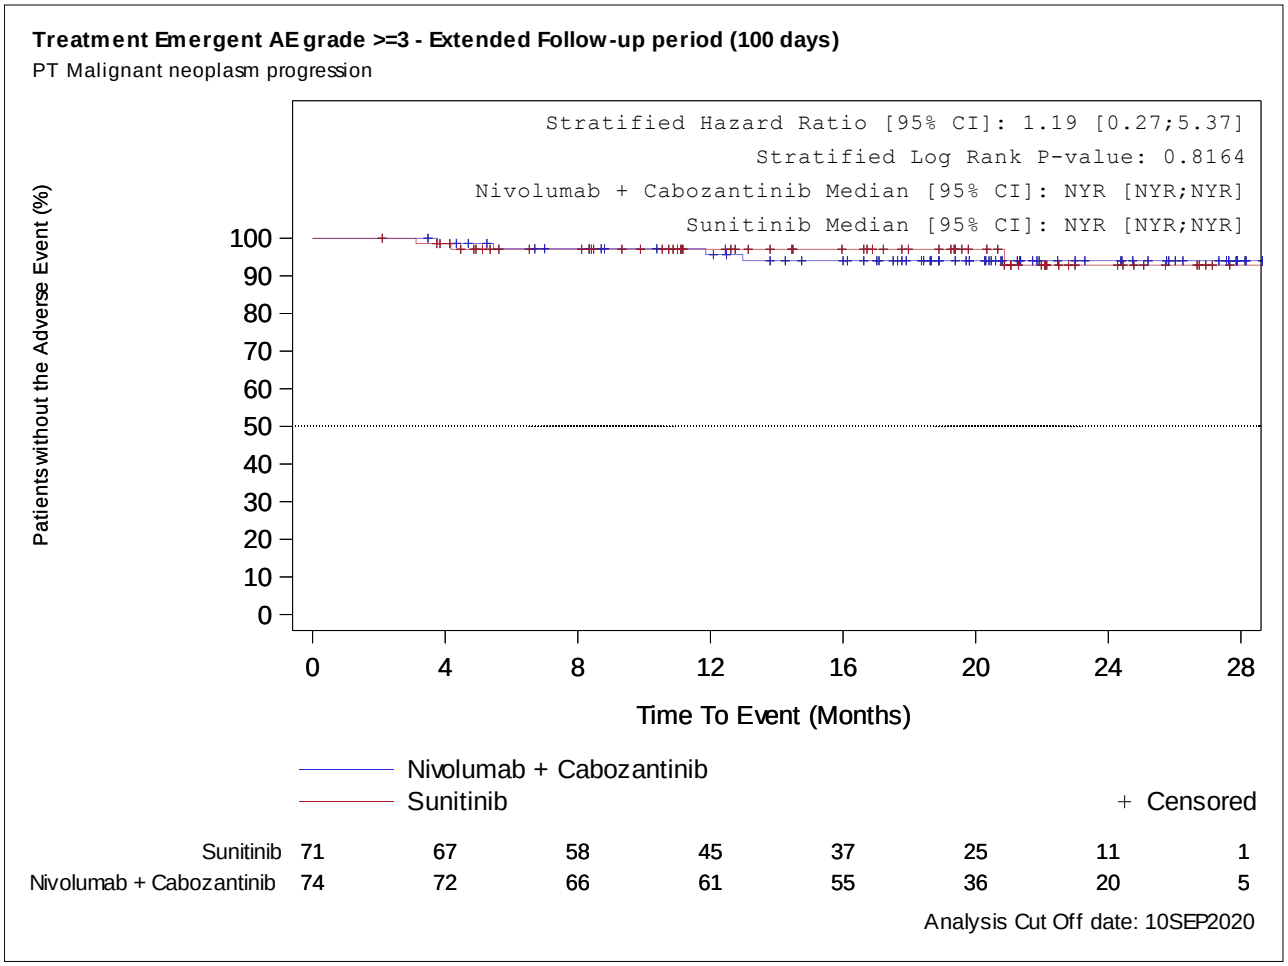
FIGURE 4.5.2.35: Kaplan-Meier curve - Treatment Emergent AE grade >=3 - Extended Follow-up period (100 days) - SOC Neoplasms benign, malignant and unspecified (incl cysts and polyps) - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



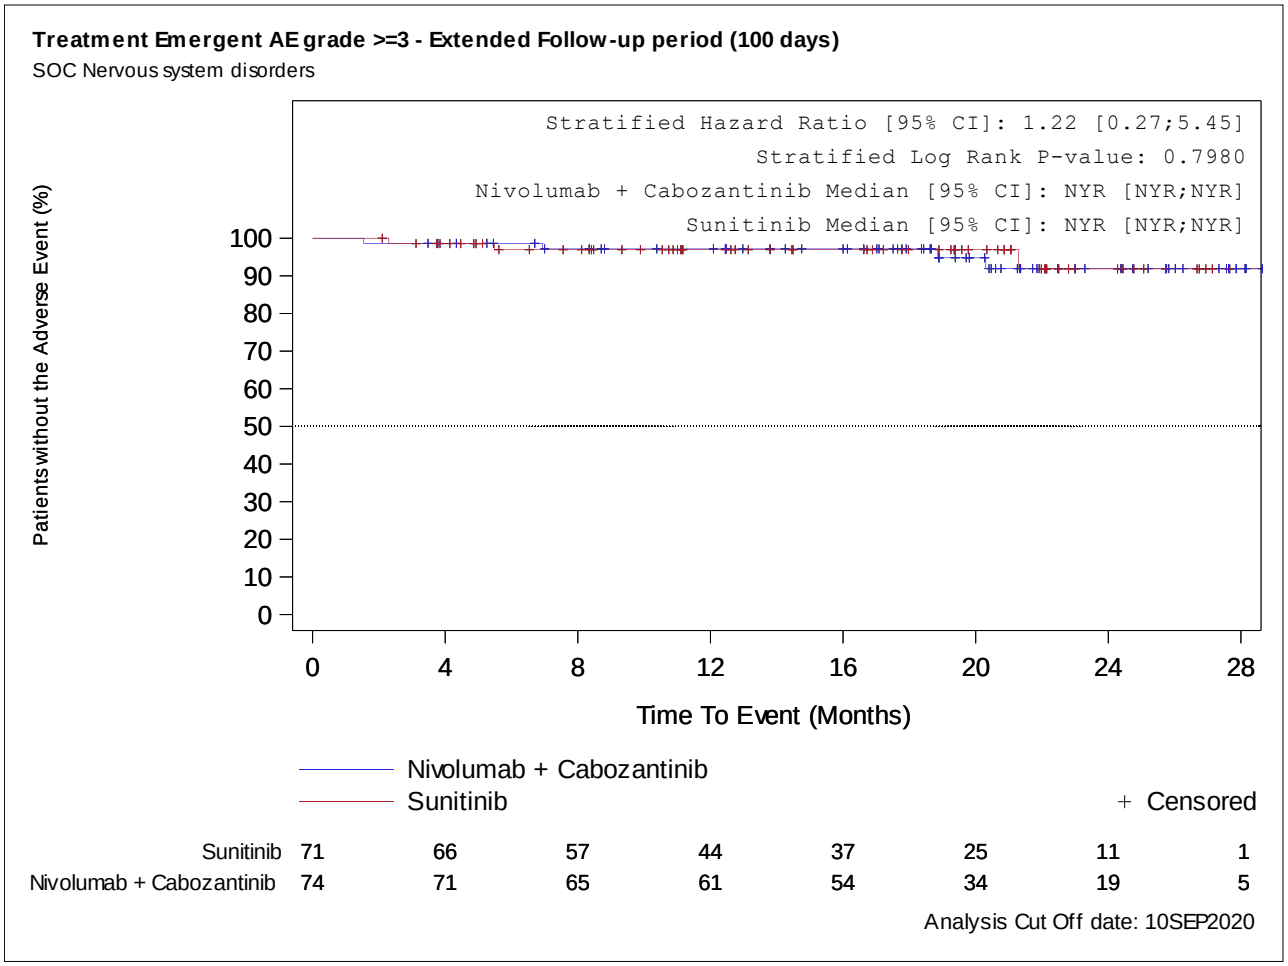
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:36:26

FIGURE 4.5.2.36: Kaplan-Meier curve - Treatment Emergent AE grade >=3 - Extended Follow-up period (100 days) - PT Malignant neoplasm progression - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



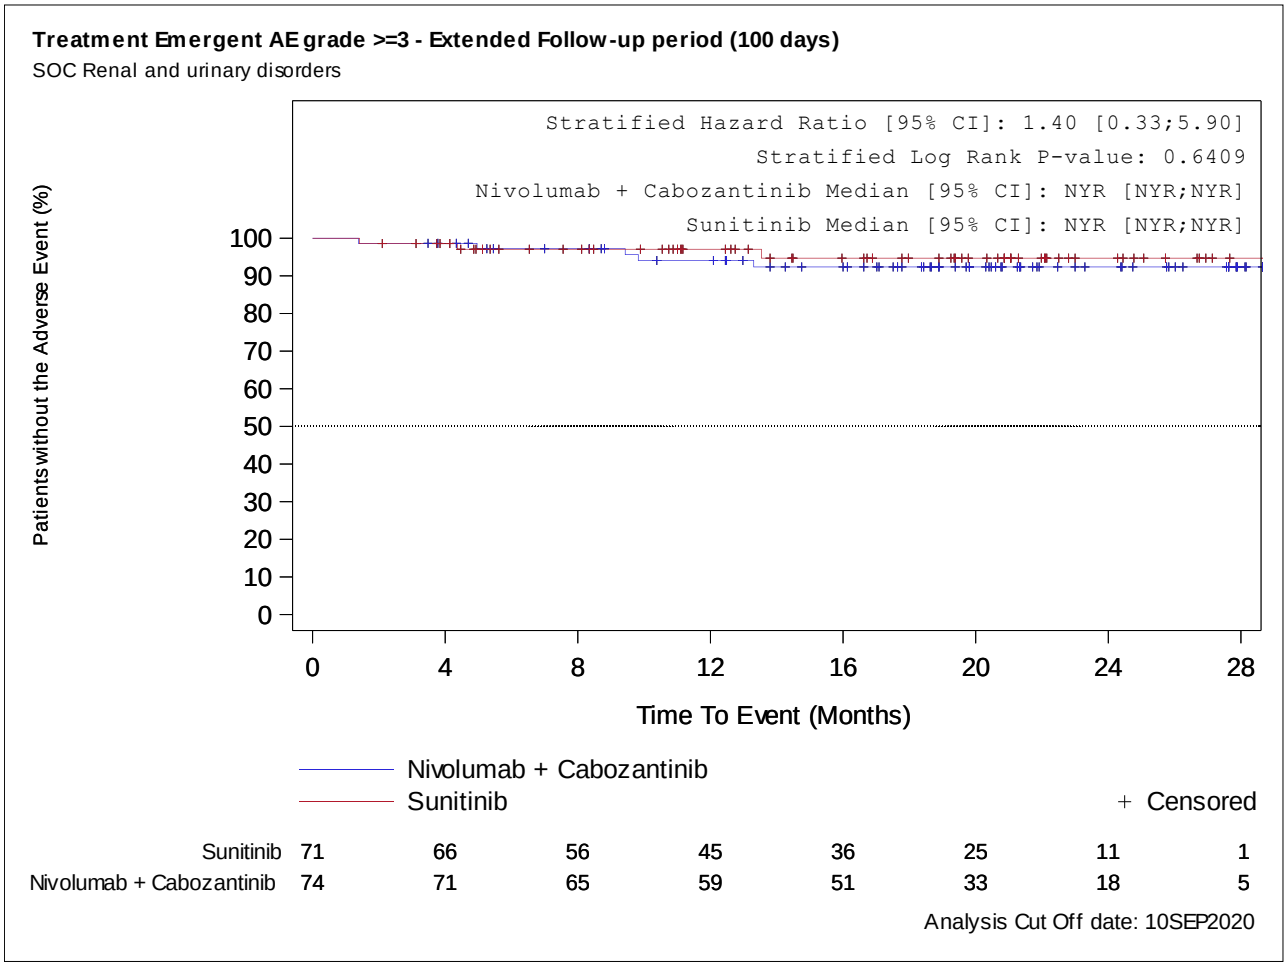
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:36:30

FIGURE 4.5.2.37: Kaplan-Meier curve - Treatment Emergent AE grade >=3 - Extended Follow-up period (100 days) - SOC Nervous system disorders - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



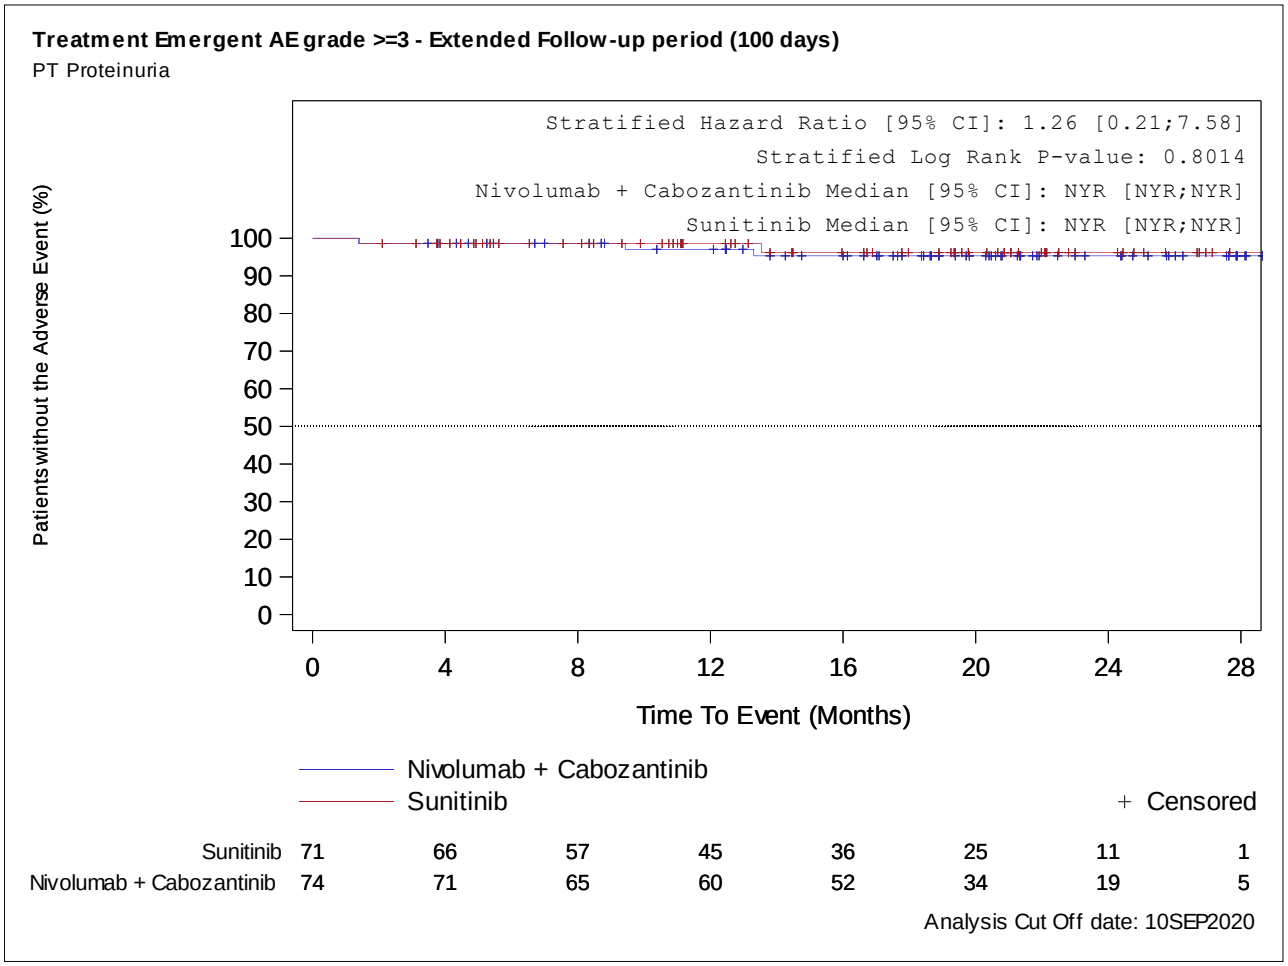
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:36:34

FIGURE 4.5.2.38: Kaplan-Meier curve - Treatment Emergent AE grade >=3 - Extended Follow-up period (100 days) - SOC Renal and urinary disorders - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



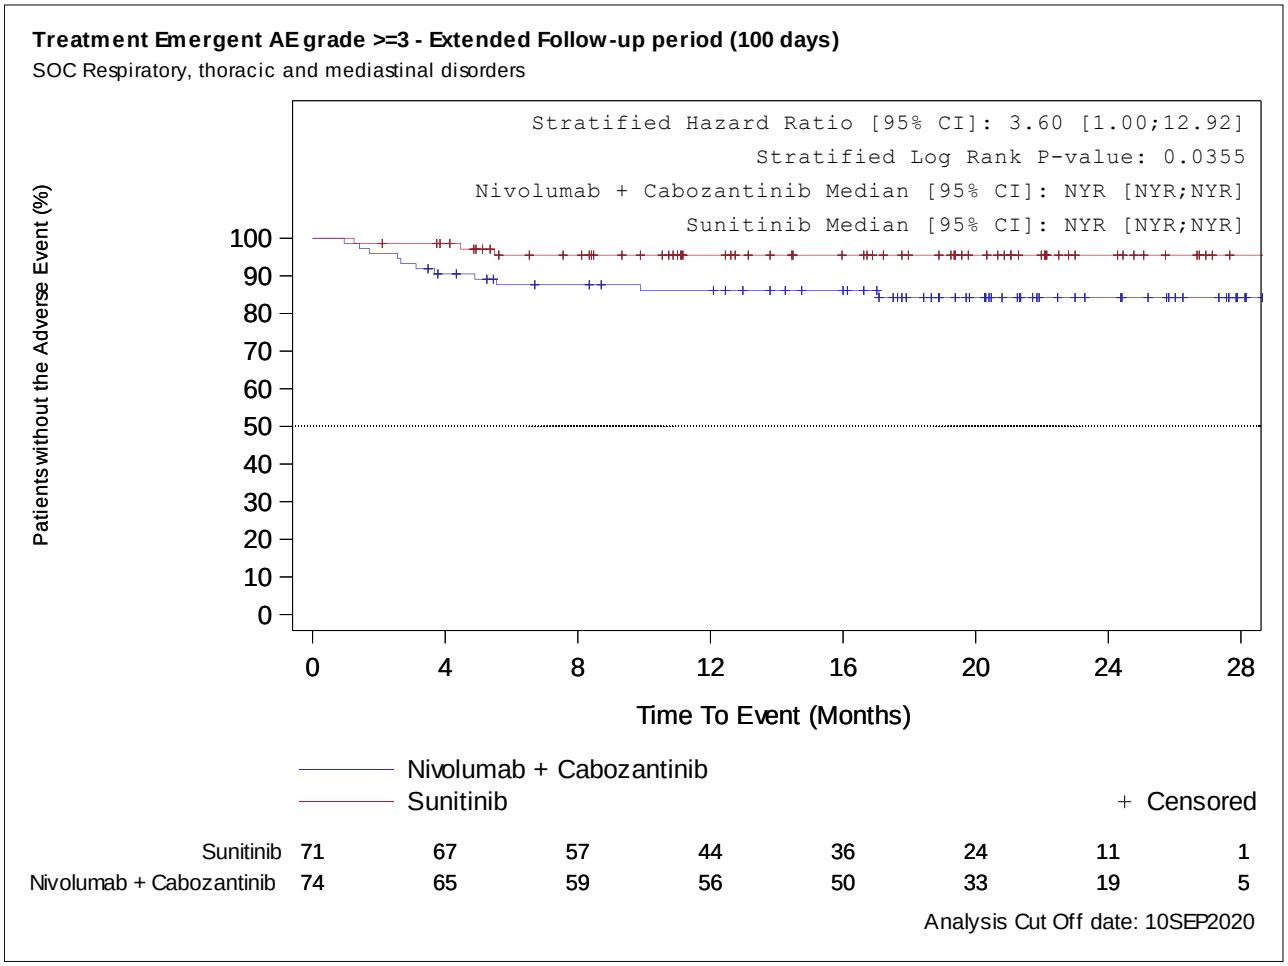
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:36:38

FIGURE 4.5.2.39: Kaplan-Meier curve - Treatment Emergent AE grade >=3 - Extended Follow-up period (100 days) - PT Proteinuria - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



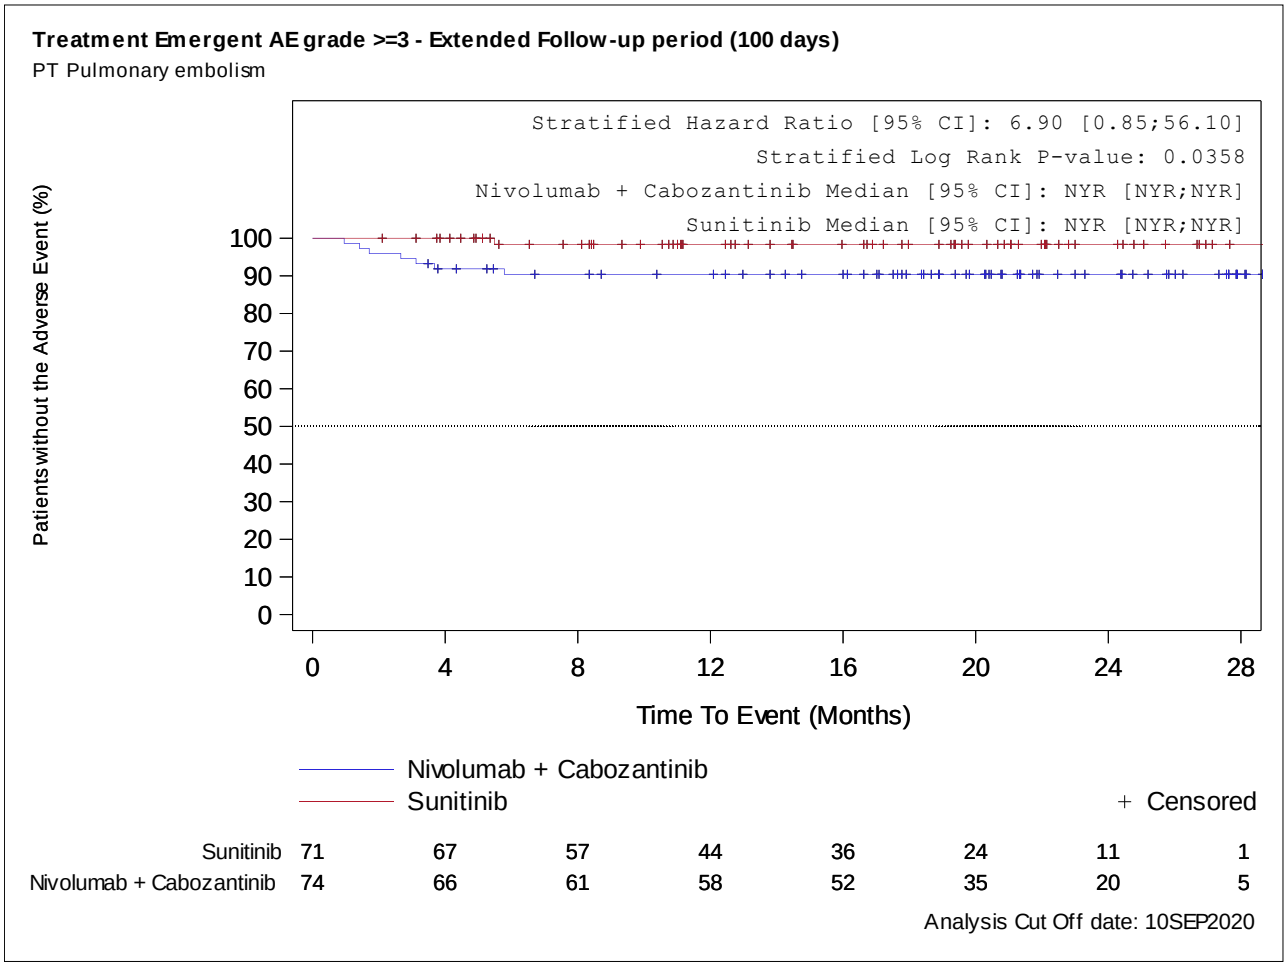
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:36:42

FIGURE 4.5.2.40: Kaplan-Meier curve - Treatment Emergent AE grade >=3 - Extended Follow-up period (100 days) - SOC Respiratory, thoracic and mediastinal disorders - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



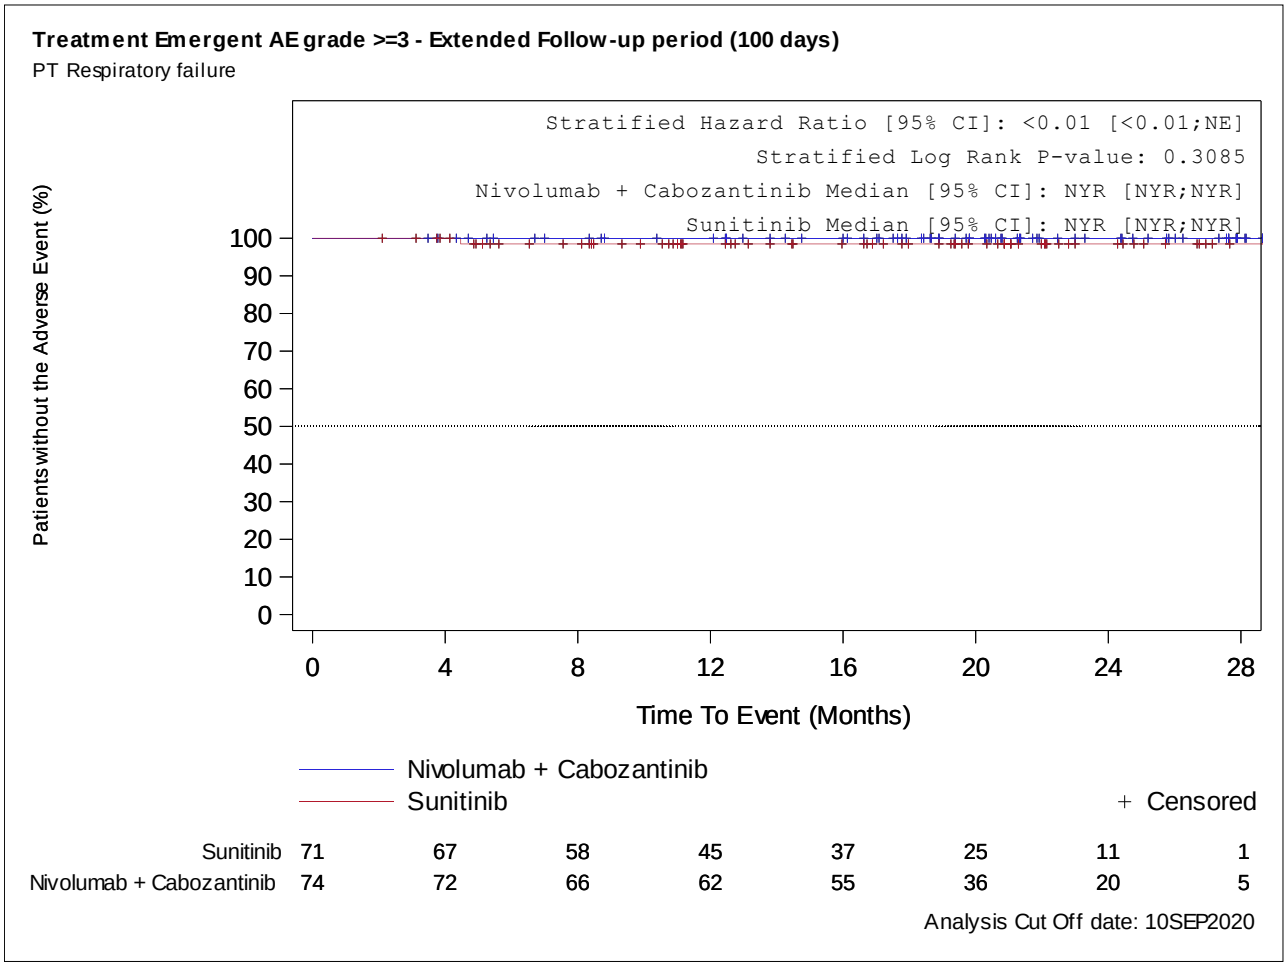
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:36:46

FIGURE 4.5.2.41: Kaplan-Meier curve - Treatment Emergent AE grade >=3 - Extended Follow-up period (100 days) - PT Pulmonary embolism - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



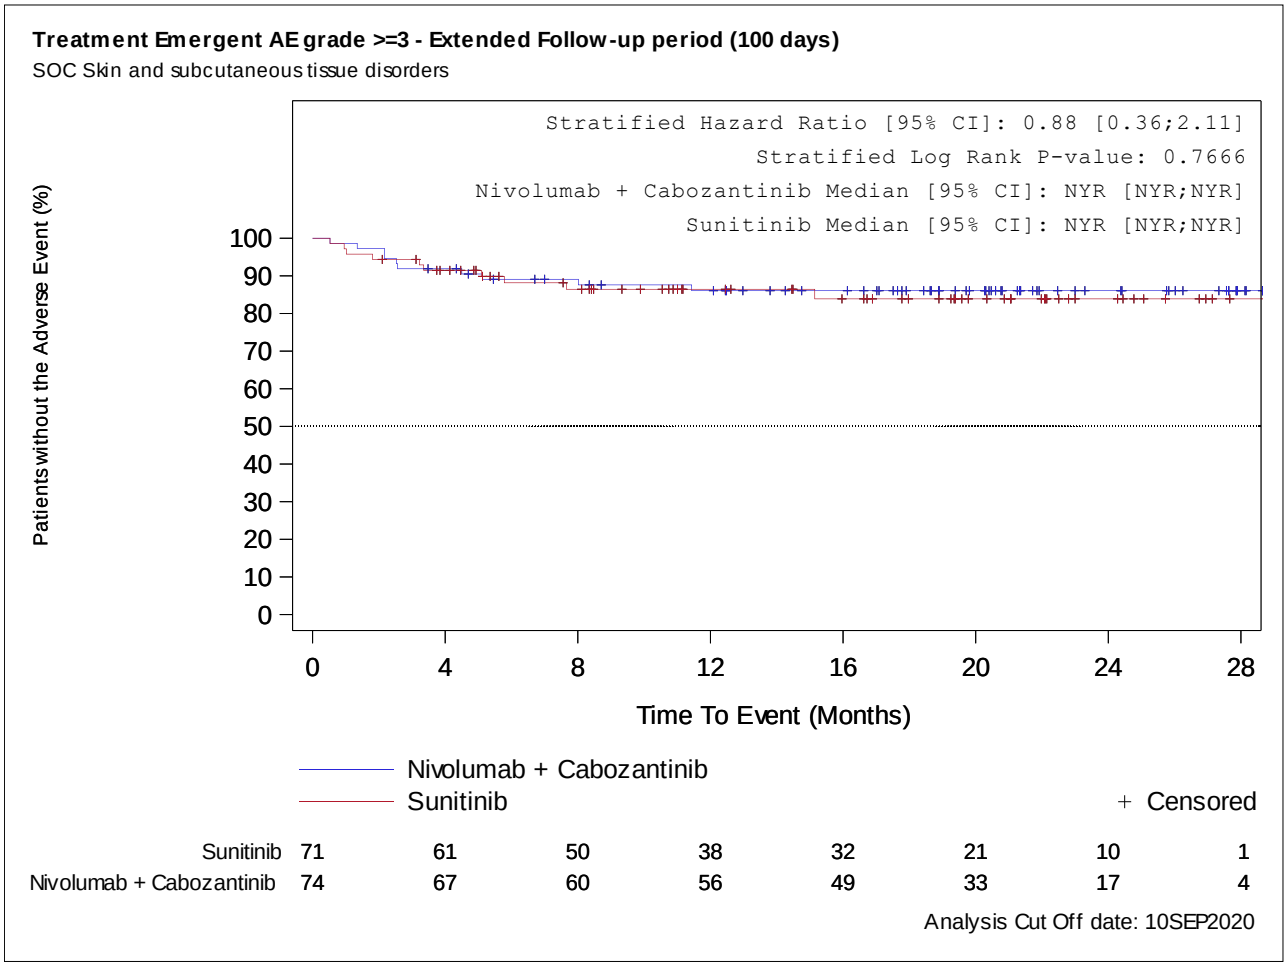
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:36:50

FIGURE 4.5.2.42: Kaplan-Meier curve - Treatment Emergent AE grade >=3 - Extended Follow-up period (100 days) - PT Respiratory failure - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



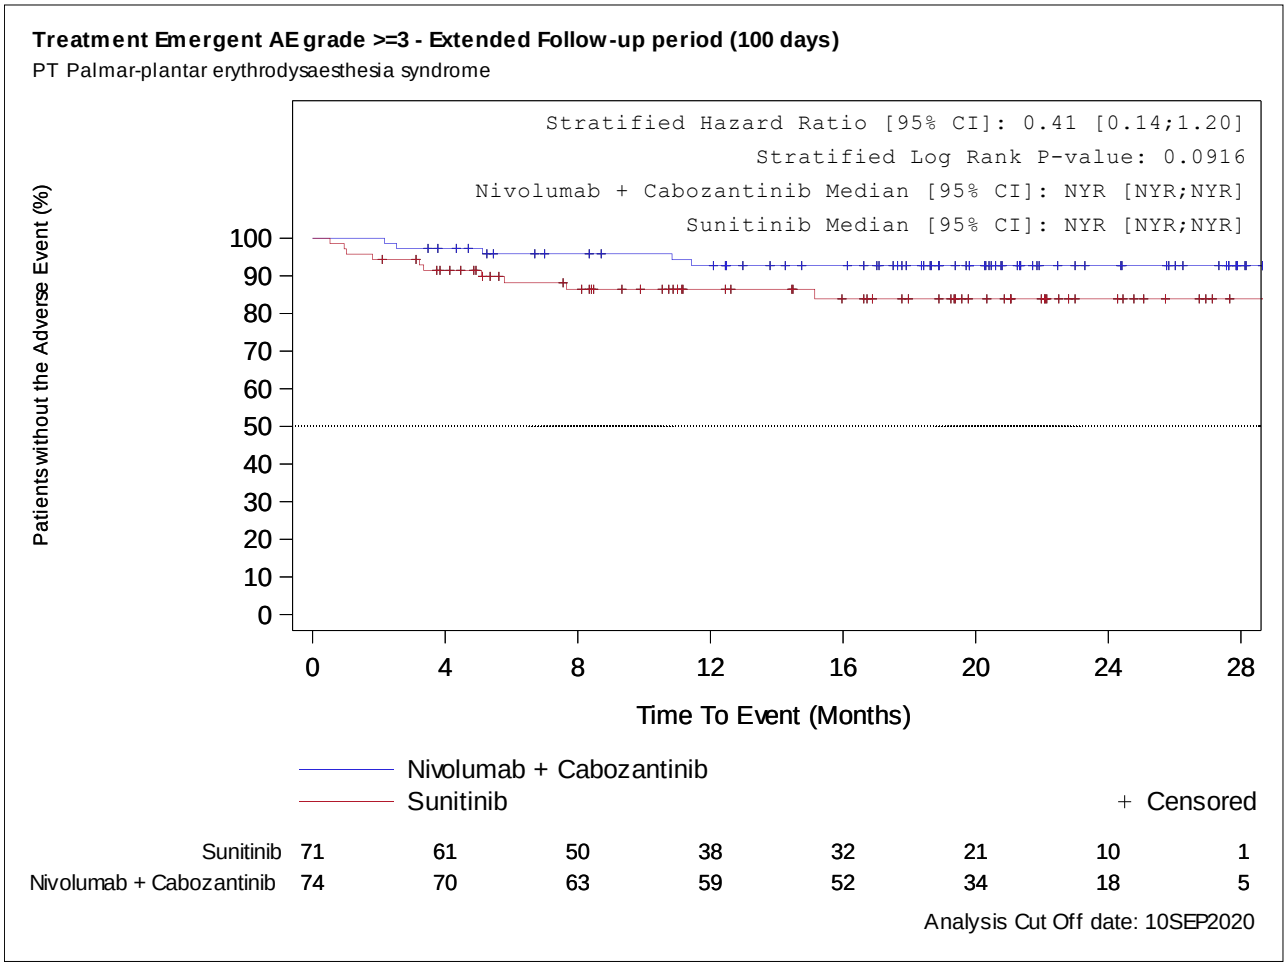
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:36:54

FIGURE 4.5.2.43: Kaplan-Meier curve - Treatment Emergent AE grade >=3 - Extended Follow-up period (100 days) - SOC Skin and subcutaneous tissue disorders - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



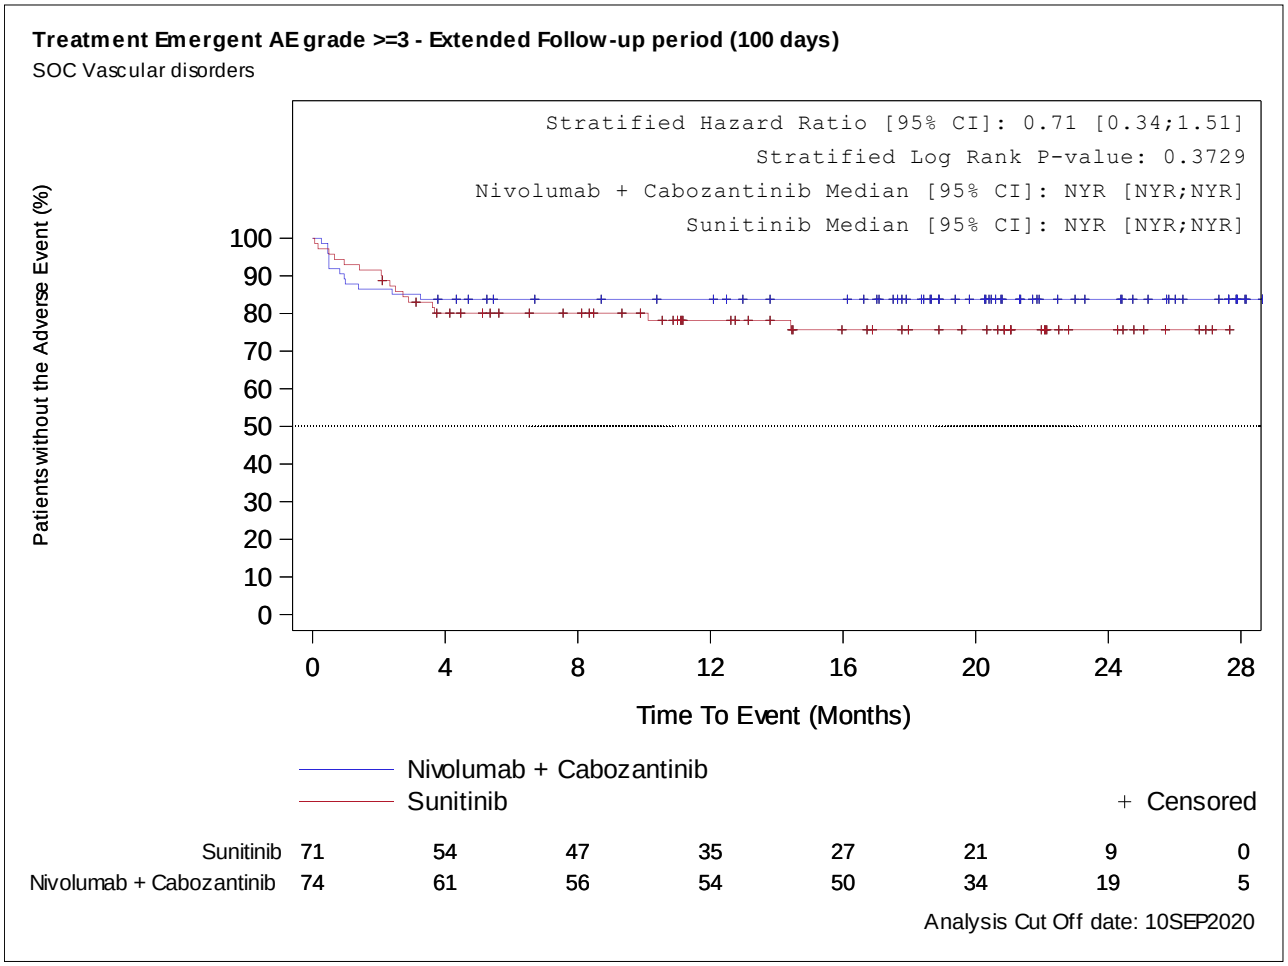
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:36:58

FIGURE 4.5.2.44: Kaplan-Meier curve - Treatment Emergent AE grade >=3 - Extended Follow-up period (100 days) - PT Palmar-plantar erythrodysaesthesia syndrome - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



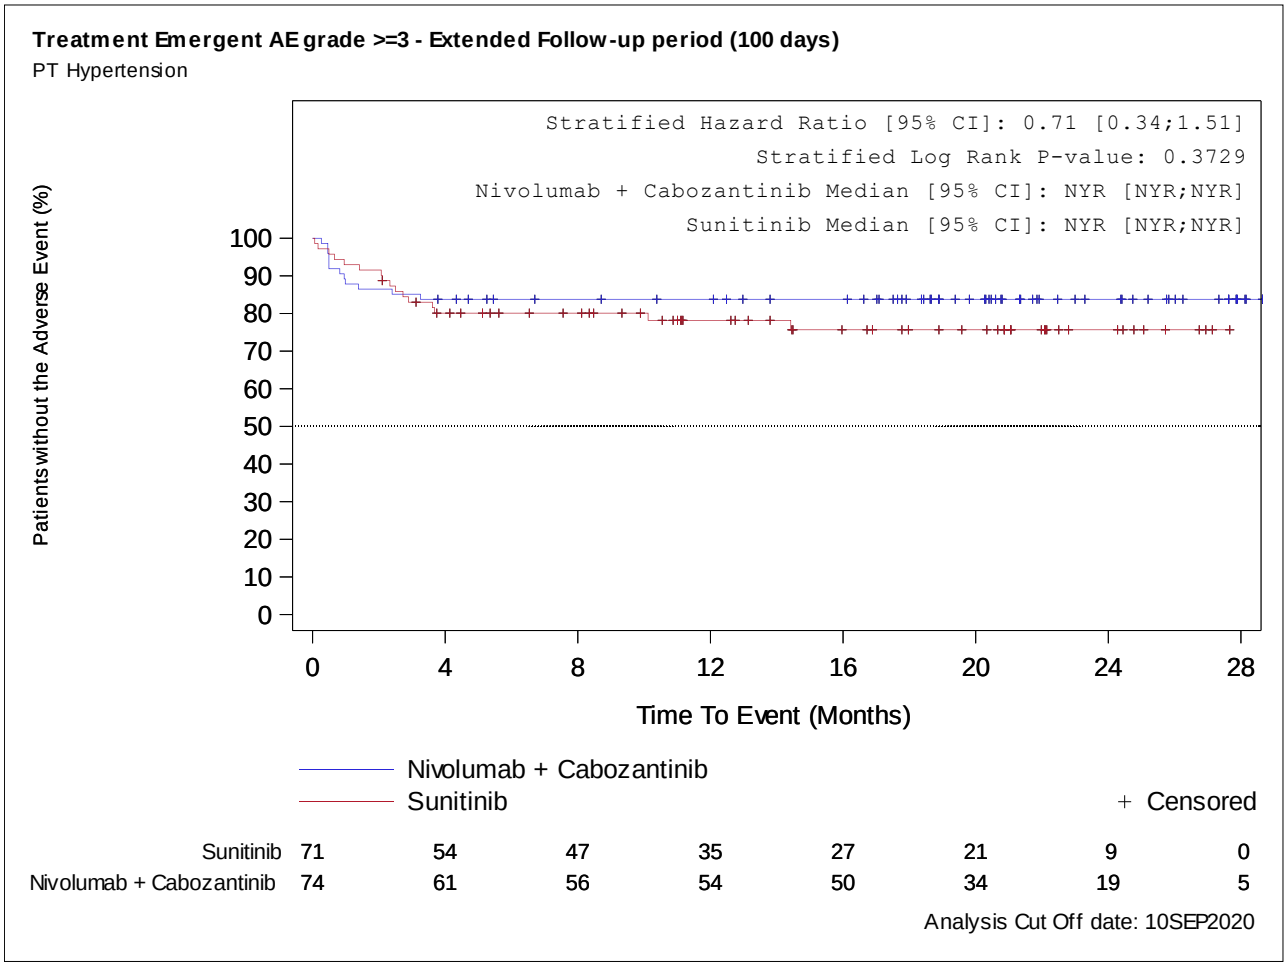
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:37:03

FIGURE 4.5.2.45: Kaplan-Meier curve - Treatment Emergent AE grade >=3 - Extended Follow-up period (100 days) - SOC Vascular disorders - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



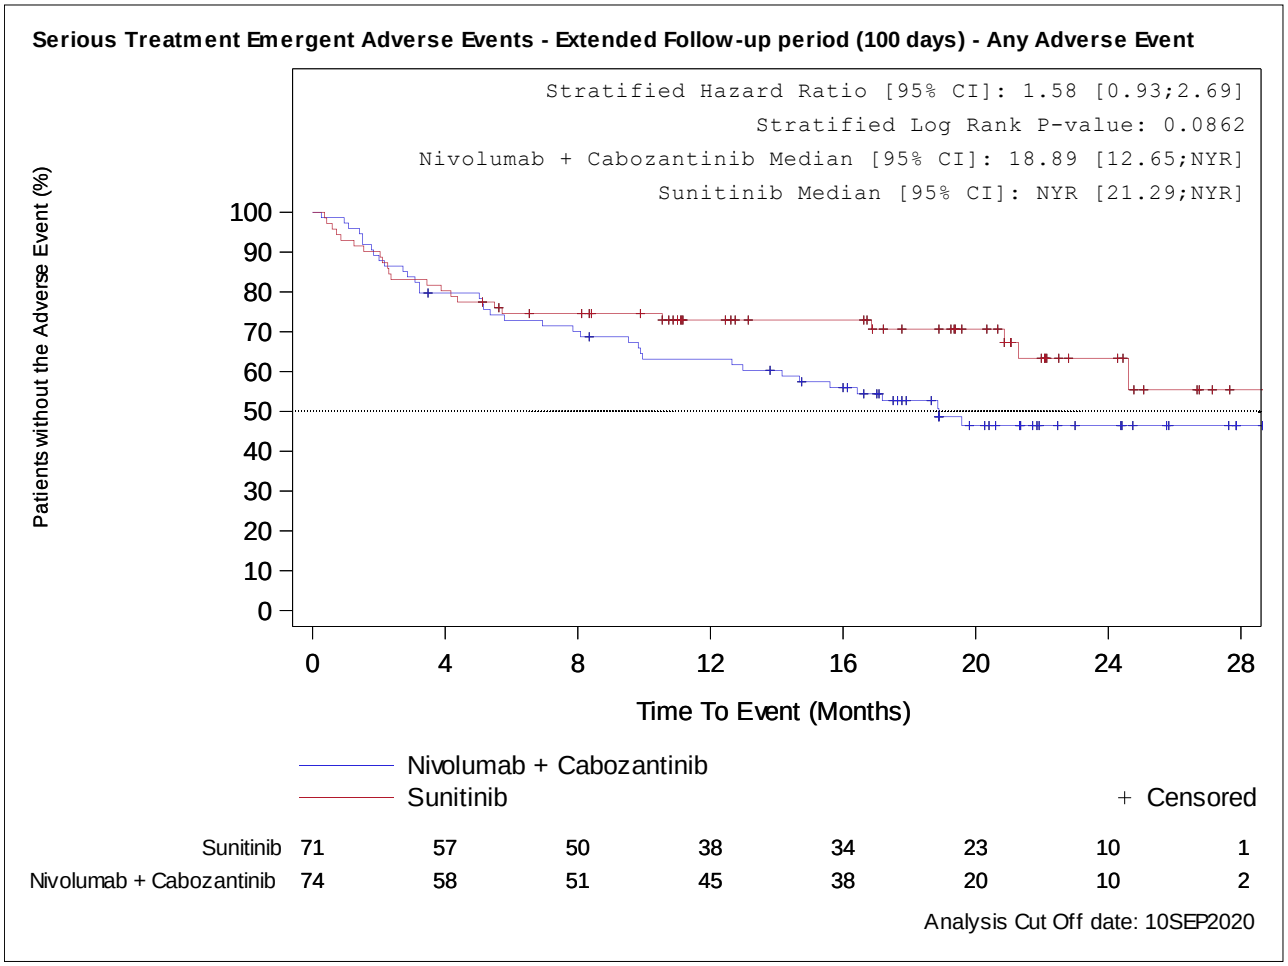
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:37:07

FIGURE 4.5.2.46: Kaplan-Meier curve - Treatment Emergent AE grade >=3 - Extended Follow-up period (100 days) - PT Hypertension - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



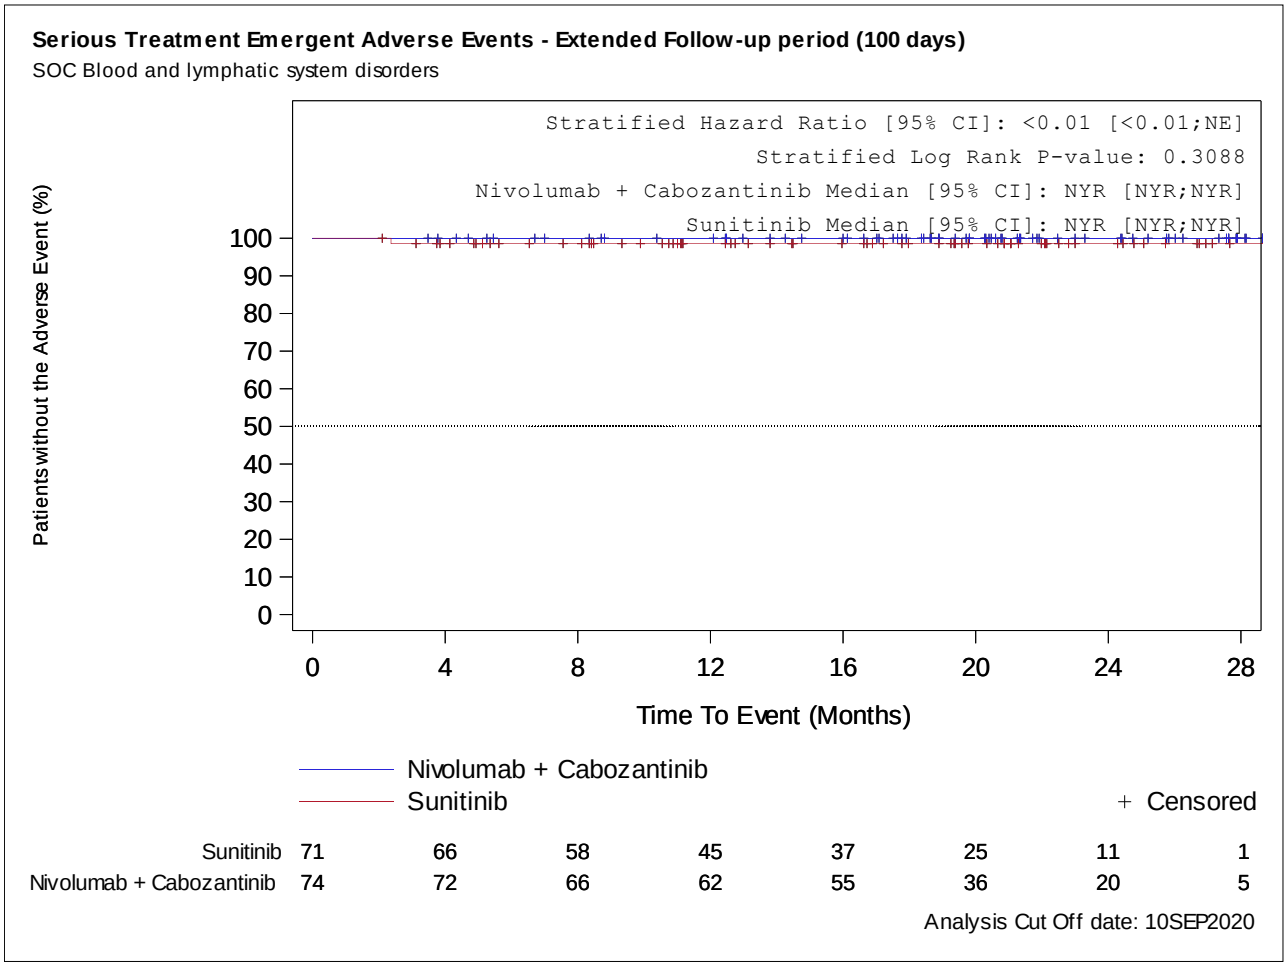
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:37:11

FIGURE 4.6.1: Serious Treatment Emergent Adverse Events - Extended Follow-up period (100 days) - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



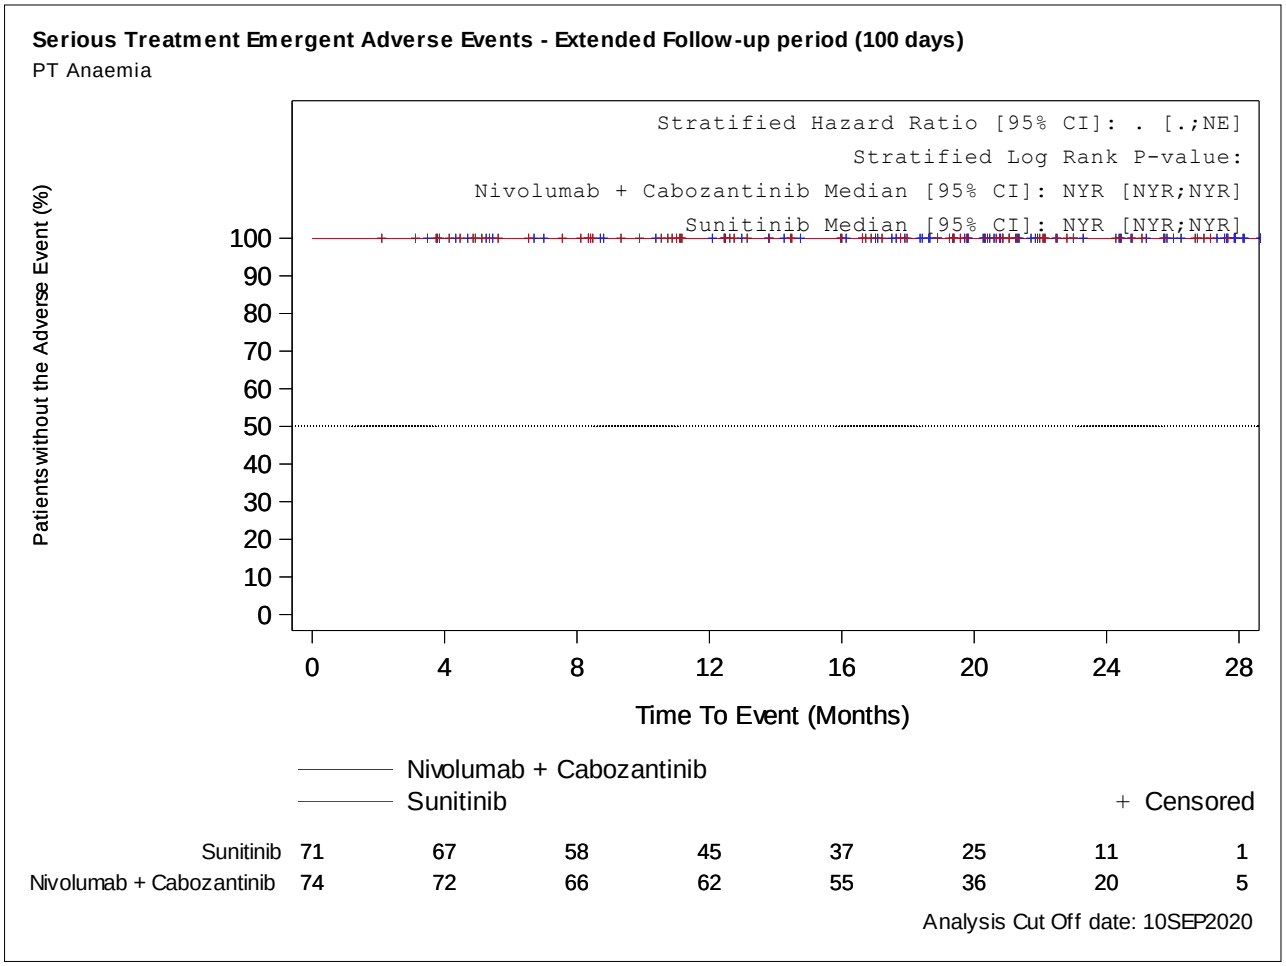
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:38:25

FIGURE 4.6.2.1: Kaplan-Meier curve - Serious Treatment Emergent Adverse Events - Extended Follow-up period (100 days) - SOC Blood and lymphatic system disorders - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



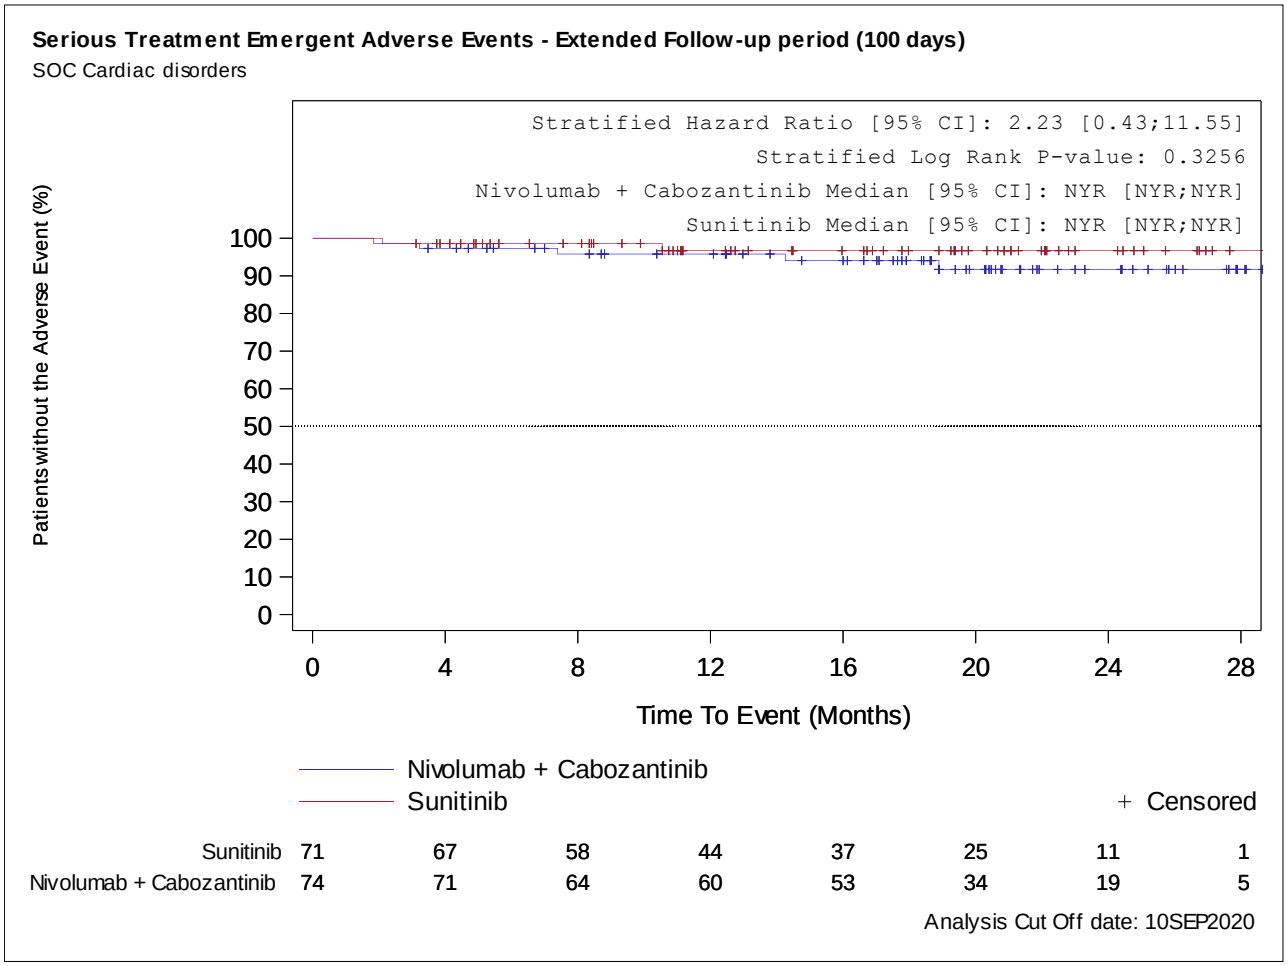
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:38:29

FIGURE 4.6.2.2: Kaplan-Meier curve - Serious Treatment Emergent Adverse Events - Extended Follow-up period (100 days) - PT Anaemia - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:38:33

FIGURE 4.6.2.3: Kaplan-Meier curve - Serious Treatment Emergent Adverse Events - Extended Follow-up period (100 days) - SOC Cardiac disorders - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.04 KM safety by SOCPT.sas] run Tuesday, March 23, 2021 at 16:38:37

FIGURE 4.6.2.4: Kaplan-Meier curve - Serious Treatment Emergent Adverse Events - Extended Follow-up period (100 days) - SOC Endocrine disorders - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)
