**Dokumentvorlage, Version vom 21.02.2019**

# Dossier zur Nutzenbewertung gemäß § 35a SGB V

*Cabozantinib-L-malat (Cabometyx®)*

Ipsen Pharma GmbH

**Modul 4 D Anhang 4I2**

*Behandlung des fortgeschrittenen Nierenzellkarzinoms bei nicht vorbehandelten Erwachsenen in Kombination mit Nivolumab*

Medizinischer Nutzen und
medizinischer Zusatznutzen,
Patientengruppen mit therapeutisch
bedeutsamem Zusatznutzen

Stand: 23.04.2021

**Statistische Outputs der CheckMate 9ER Studie für die Subpopulation D1 zum Datenschnitt vom 10.09.2020**

TABLE 2.1.1: Overall Survival (months) - Intent-to-treat Population A: Favorable risk (IMDC prognostic risk score = 0)

| Parameter | Measure | Nivolumab + Cabozantinib | Sunitinib |
|---|---|---|---|
| Overall Survival (months) | | | |
| Total number of subjects | N | 74 | 72 |
| Number of subjects with events | N | 15 (20.3%) | 15 (20.8%) |
| Number of censored cases | N | 59 (79.7%) | 57 (79.2%) |
| Time to first event (Months) | Mean (SE) | 21.66 (0.62) | 25.01 (0.88) |
| | Q1 [95% CI] | 23.80 [19.91;NYR] | 28.40 [18.66;NYR] |
| | Median [95% CI] | NYR [NYR;NYR] | NYR [28.35;NYR] |
| | Q3 [95% CI] | NYR [NYR;NYR] | NYR [NYR;NYR] |
| | p-value (a) | 0.9280 | |
| Stratified Cox PH model | HR (b) | 0.97 [0.47;1.98] | |

a: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT.
b: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by factors defined above, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
NYR: (Median) Not Yet Reached.

TABLE 2.2.2: Progression Free Survival (BICR) Primary (months) - Intent-to-treat Population A: Favorable risk (IMDC prognostic risk score = 0)

| | Nivolumab + Cabozantinib | | | Sunitinib | | | Nivolumab + Cabozantinib vs. Sunitinib | | |
|---|---|---|---|---|---|---|---|---|---|
| Subgroup Value | N[a] | Subjects with events n (%) | Median [95% CI][b] (Months) | N[a] | Subjects with events n (%) | Median [95% CI][b] (Months) | Hazard Ratio [95% CI][c] | p-value[d] | Interaction p[e] |
| **Prior nephrectomy** | | | | | | | | | |
| No | 11 | 7 (63.6%) | 12.75 [6.77;NYR] | 13 | 7 (53.8%) | 12.81 [5.49;NYR] | 0.90 [0.31;2.57] | 0.8428 | 0.3539 |
| Yes | 63 | 24 (38.1%) | 24.71 [13.60;NYR] | 59 | 30 (50.8%) | 12.48 [8.31;22.57] | 0.53 [0.31;0.90] | 0.0173 | |
| **Prior radiotherapy** | | | | | | | | | |
| No | 64 | 24 (37.5%) | 24.71 [13.08;NYR] | 66 | 35 (53.0%) | 12.81 [9.43;18.46] | 0.50 [0.29;0.83] | 0.0070 | 0.2358 |
| Yes | 10 | 7 (70.0%) | 13.26 [2.04;NYR] | 6 | 2 (33.3%) | NYR [6.08;NYR] | 1.48 [0.29;7.58] | 0.6326 | |
| **PD-L1+ Status Based on a 1% Cut Off** | | | | | | | | | |
| >= 1% | 11 | 3 (27.3%) | NYR [11.53;NYR] | 10 | 7 (70.0%) | 13.86 [2.56;22.57] | 0.20 [0.05;0.78] | 0.0106 | 0.0465 |
| < 1% | 61 | 26 (42.6%) | 24.71 [12.75;NYR] | 61 | 29 (47.5%) | 12.48 [9.56;NYR] | 0.67 [0.40;1.14] | 0.1413 | |
| Not Reported | 2 | 2 (100.0%) | NC | 1 | 1 (100.0%) | NC | NC | NC | |
| **Stage at Initial Diagnosis** | | | | | | | | | |
| Stage IV | 18 | 9 (50.0%) | 13.34 [7.36;NYR] | 21 | 14 (66.7%) | 12.48 [5.49;22.57] | 0.58 [0.25;1.35] | 0.1989 | 0.8386 |
| Non-Stage IV | 53 | 22 (41.5%) | 24.71 [13.08;NYR] | 51 | 23 (45.1%) | 13.86 [8.31;NYR] | 0.62 [0.35;1.12] | 0.1118 | |
| Not Reported | 3 | 0 (0.0%) | NC | 0 | 0/0 | NC | NC | NC | |

a: Number of patients in the Intent-to-treat Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

| Non-Stage IV | 53 | 38 (71.7%) | 6.93 [2.53;13.31] | 51 | 37 (72.5%) | 3.68 [1.77;5.78] | 0.83 [0.53;1.31] | 0.4156 | |
| Not Reported | 3 | 3 (100.0%) | NC | 0 | 0/0 | NC | NC | NC | |

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

| Stratified Cox PH model | HR (b) | 1.05 [0.51;2.16] | |

a: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT.
b: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by factors defined above, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

| US/Canada/Western Europe/Northern Europe | 39 | 1 (2.6%) | NYR [NYR;NYR] | 37 | 0 (0.0%) | NYR [NYR;NYR] | >99.99 [<0.01;NE] | 0.3300 | 0.9965 |
| Rest of World (ROW) | 35 | 1 (2.9%) | NYR [NYR;NYR] | 34 | 1 (2.9%) | NYR [NYR;NYR] | 0.94 [0.06;15.07] | 0.9666 | |

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

TABLE 3.89.1: TEAE of Special Interest - HYPERTHYROIDISM - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)

| Parameter | Measure | Nivolumab + Cabozantinib | Sunitinib |
|---|---|---|---|
| TEAE of Special Interest - HYPERTHYROIDISM - Any TEAE - Any Adverse Event | | | |
| Total number of subjects | N | 74 | 71 |
| Number of subjects with events | N | 10 (13.5%) | 7 (9.9%) |
| Number of censored cases | N | 64 (86.5%) | 64 (90.1%) |
| Time to first event (Months) | Mean (SE) | 16.06 (0.62) | 7.41 (0.21) |
| | Q1 [95% CI] | NYR [17.91;NYR] | NYR [NYR;NYR] |
| | Median [95% CI] | NYR [NYR;NYR] | NYR [NYR;NYR] |
| | Q3 [95% CI] | NYR [NYR;NYR] | NYR [NYR;NYR] |
| | p-value (a) | 0.6026 | |
| Stratified Cox PH model | HR (b) | 1.29 [0.49;3.39] | |

a: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT.
b: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by factors defined above, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

| | Q1 [95% CI] | NYR [NYR;NYR] | NYR [NYR;NYR] |
| | Median [95% CI] | NYR [NYR;NYR] | NYR [NYR;NYR] |
| | Q3 [95% CI] | NYR [NYR;NYR] | NYR [NYR;NYR] |
| | p-value (a) | | |
| Stratified Cox PH model | HR (b) | NE [NE;NE] | |

a: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT.
b: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by factors defined above, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
NYR: (Median) Not Yet Reached.

| | p-value (a) | | |
| Stratified Cox PH model | HR (b) | NE [NE;NE] | |

a: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT.
b: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by factors defined above, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
NYR: (Median) Not Yet Reached.

b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

| | p-value (a) | 0.0001 | |
| Stratified Cox PH model | HR (b) | 4.09 [1.88;8.88] | |

a: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT.
b: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by factors defined above, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

a: Number of patients in the Safety Population A: Favorable risk (IMDC prognostic risk score = 0).
b: Median and 95% CI were calculated using an unstratified product-limit estimator survival model.
c: The Hazard ratio was based on a Cox regression model (with treatment as the only covariate) stratified by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, and an unstratified model for subgroups, and was relative to the sunitinib group with <1 favoring the cabozantinib+nivolumab group.
d: P-value was based on a stratified log-rank test by PD-L1 tumor expression (>= 1% versus < 1% or indeterminate) and region (US/Canada/W Europe/N Europe, ROW) as entered in the IRT, for the overall population, and unstratified for subgroups.
Subgroup analyses are only performed on the subjects for which the subgroup variable value is known and for which there are at least 10 subjects.
CI: Confidence Interval; NC: Not Calculated; NE: Not Estimable; NYR: (Median) Not Yet Reached.

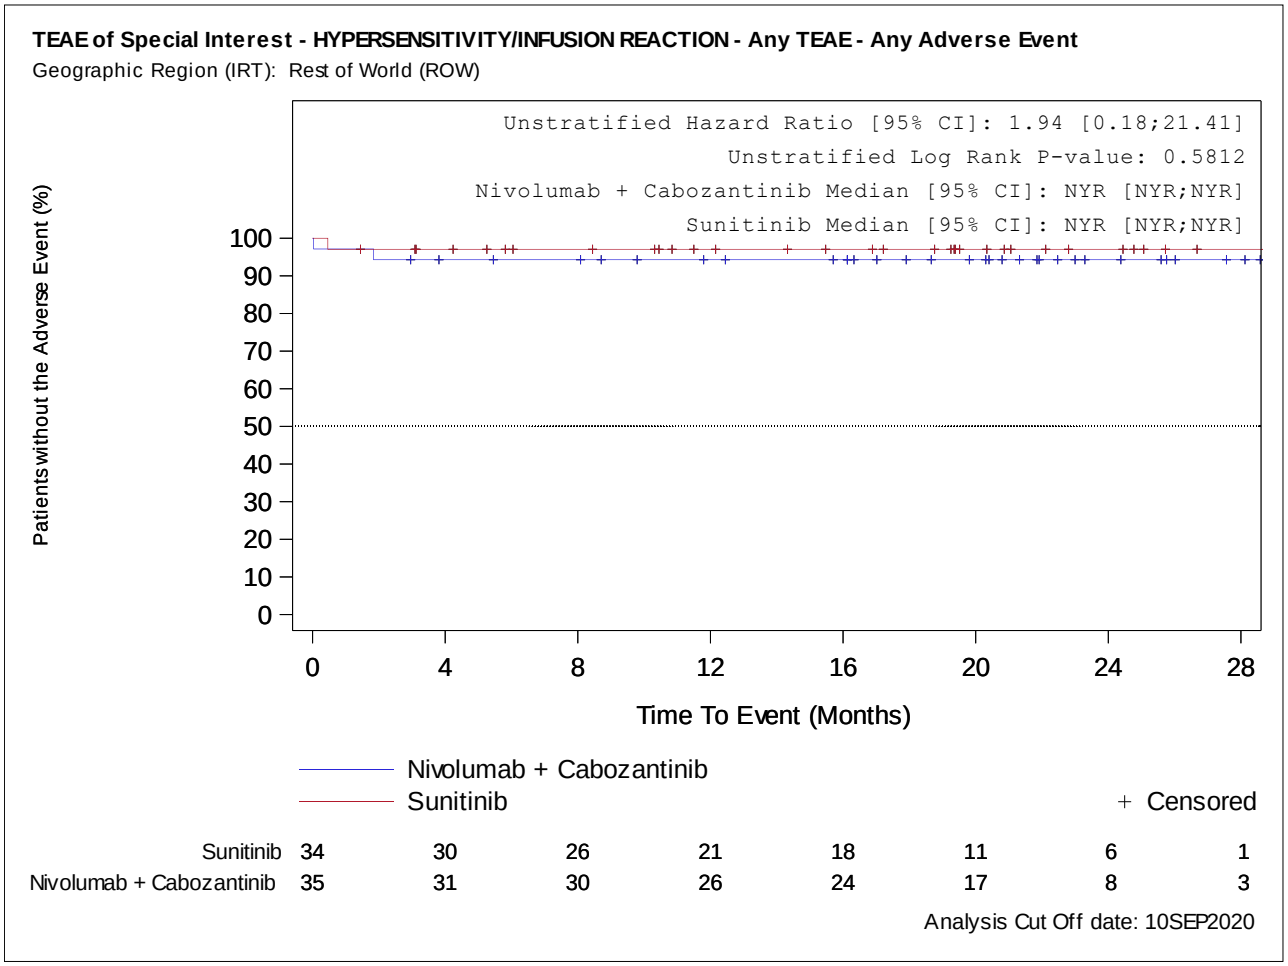
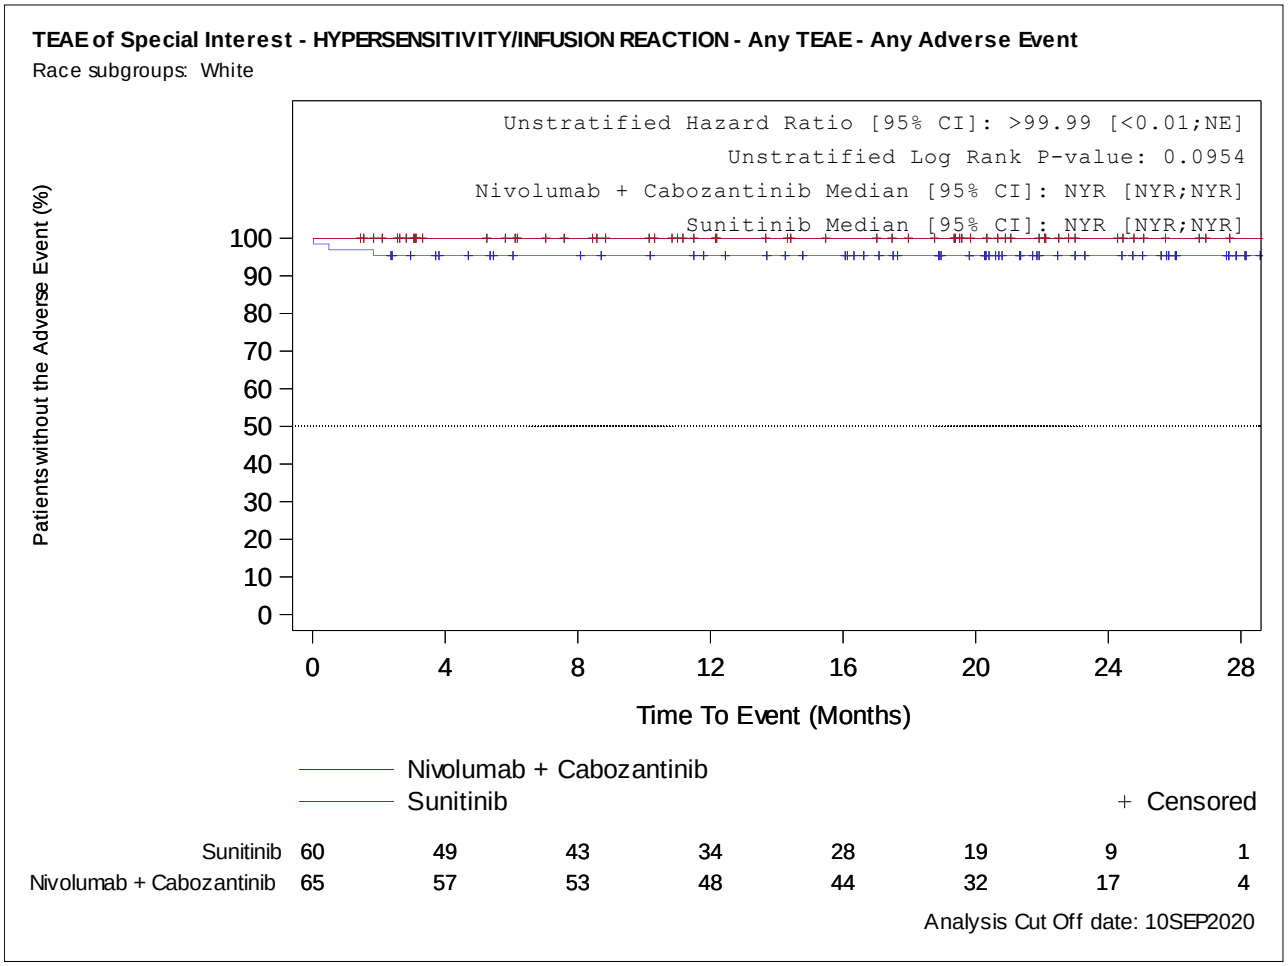
FIGURE 3.35.2.7: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Geographic Region (IRT): Rest of World (ROW)



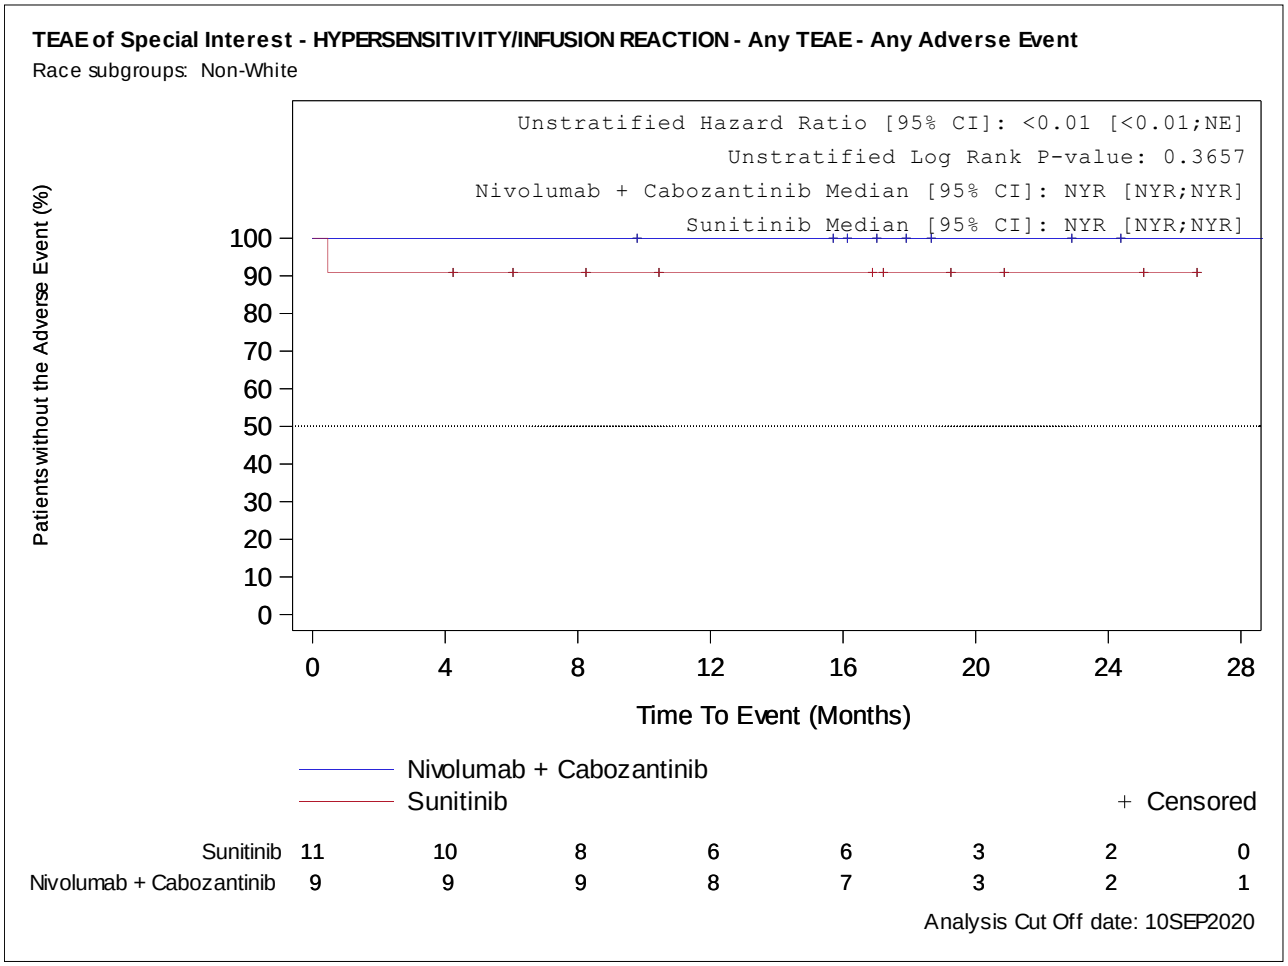
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:38:43

FIGURE 3.35.2.8: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Race subgroups: White



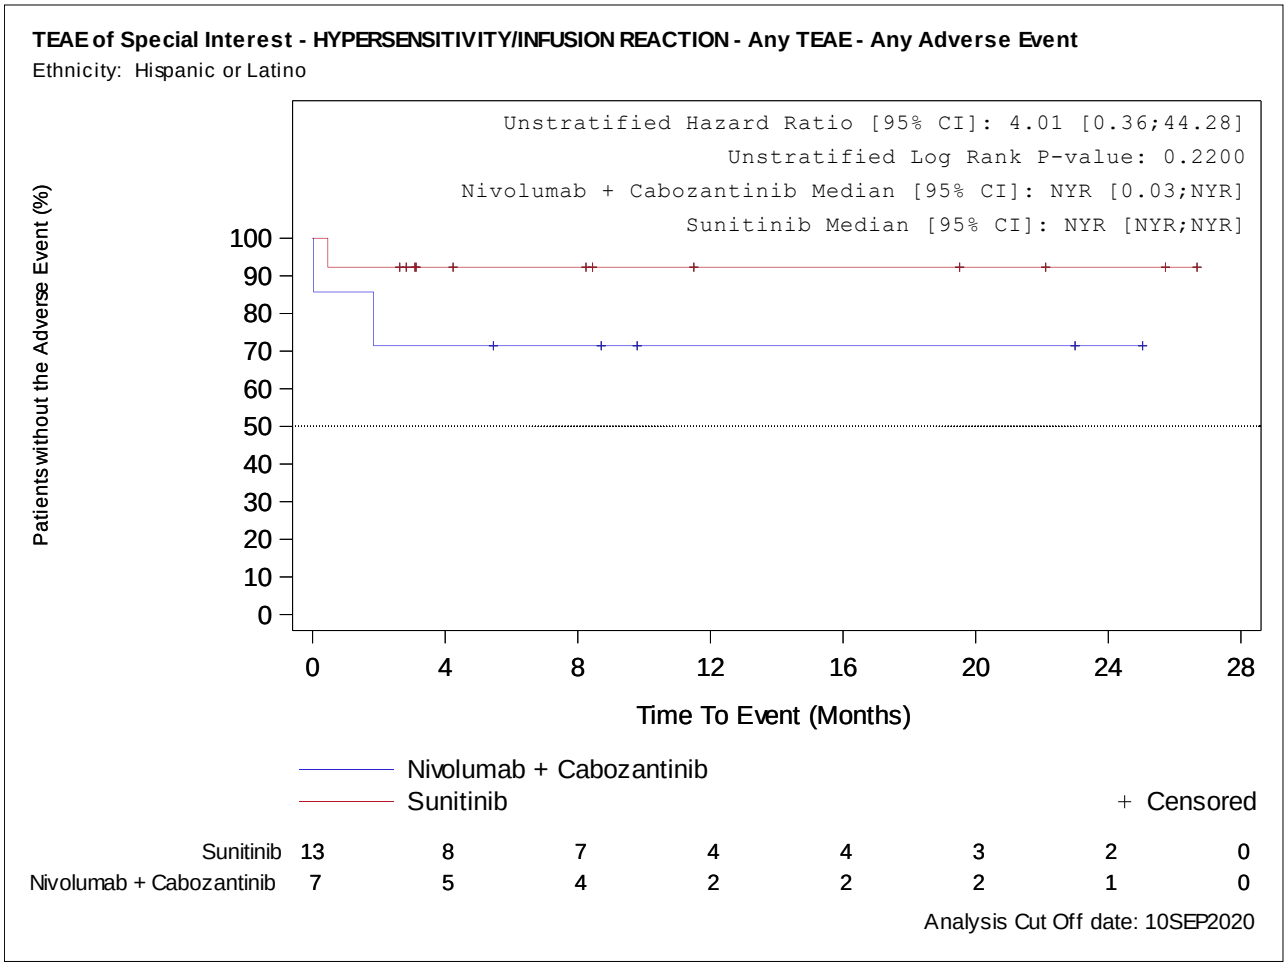
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:38:49

FIGURE 3.35.2.9: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Race subgroups: Non-White



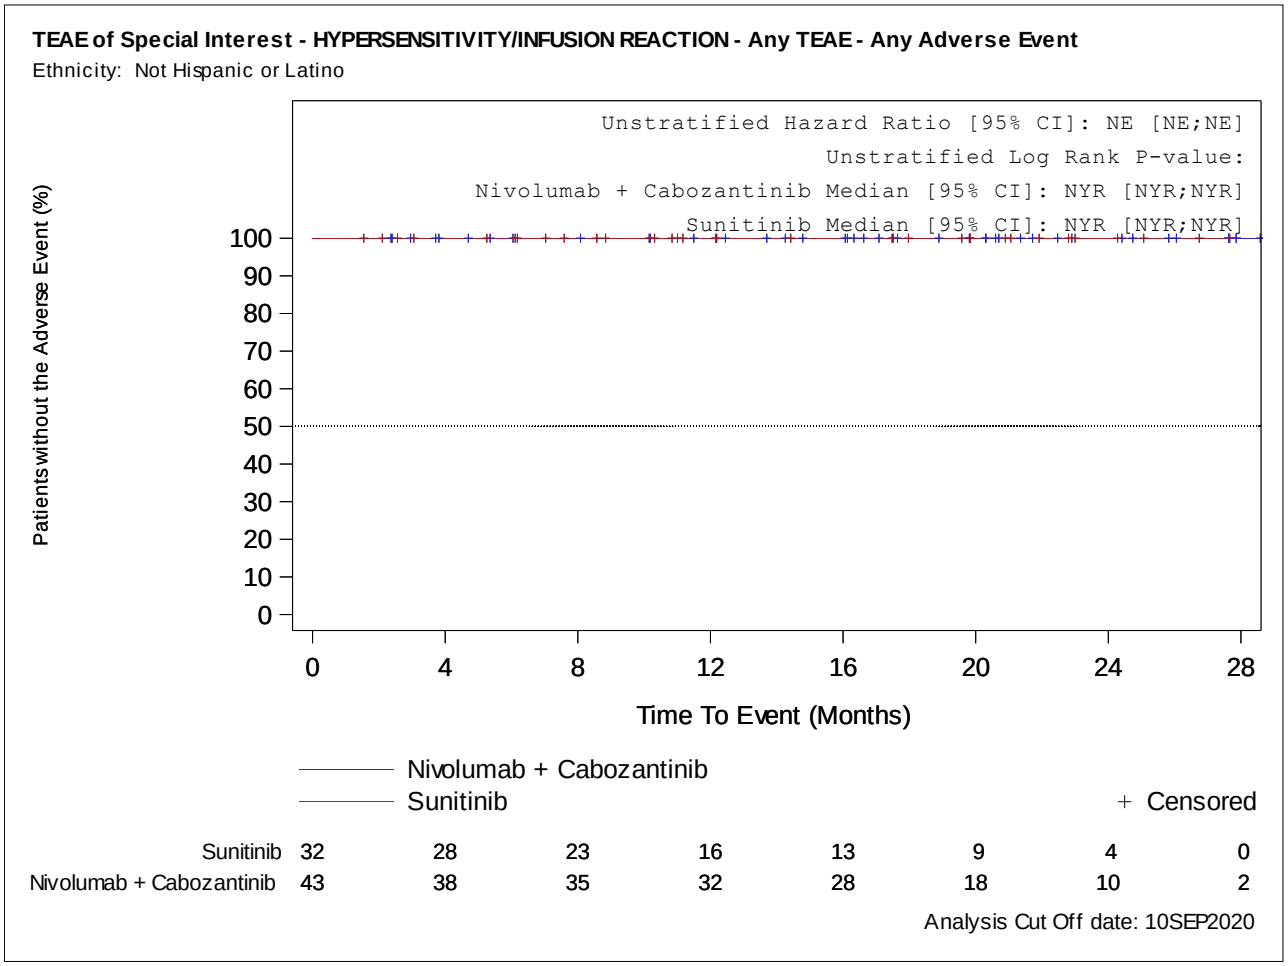
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:38:55

FIGURE 3.35.2.10: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Ethnicity: Hispanic or Latino



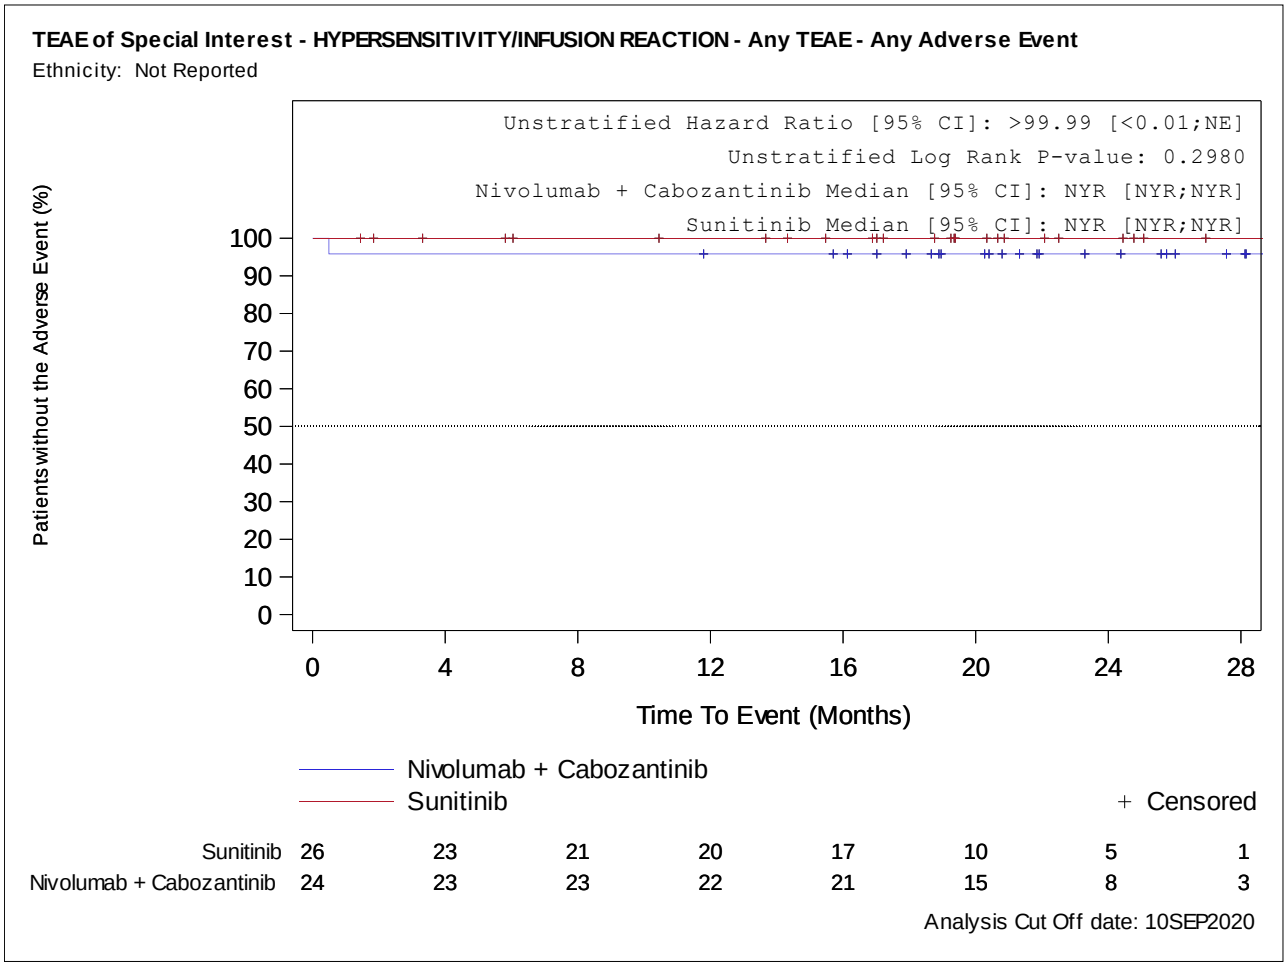
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:39:01

FIGURE 3.35.2.11: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Ethnicity: Not Hispanic or Latino



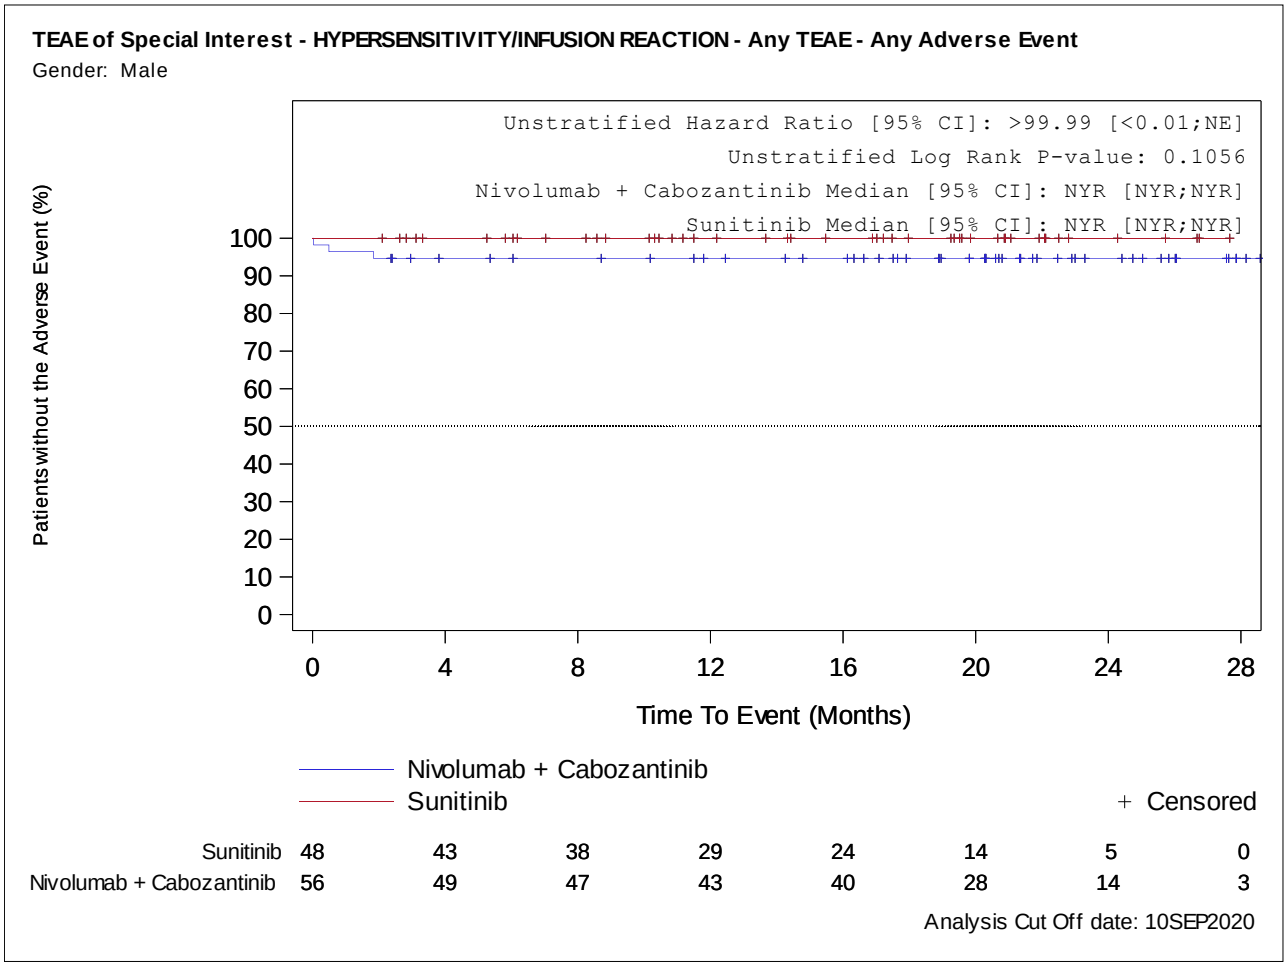
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:39:07

FIGURE 3.35.2.12: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Ethnicity: Not Reported



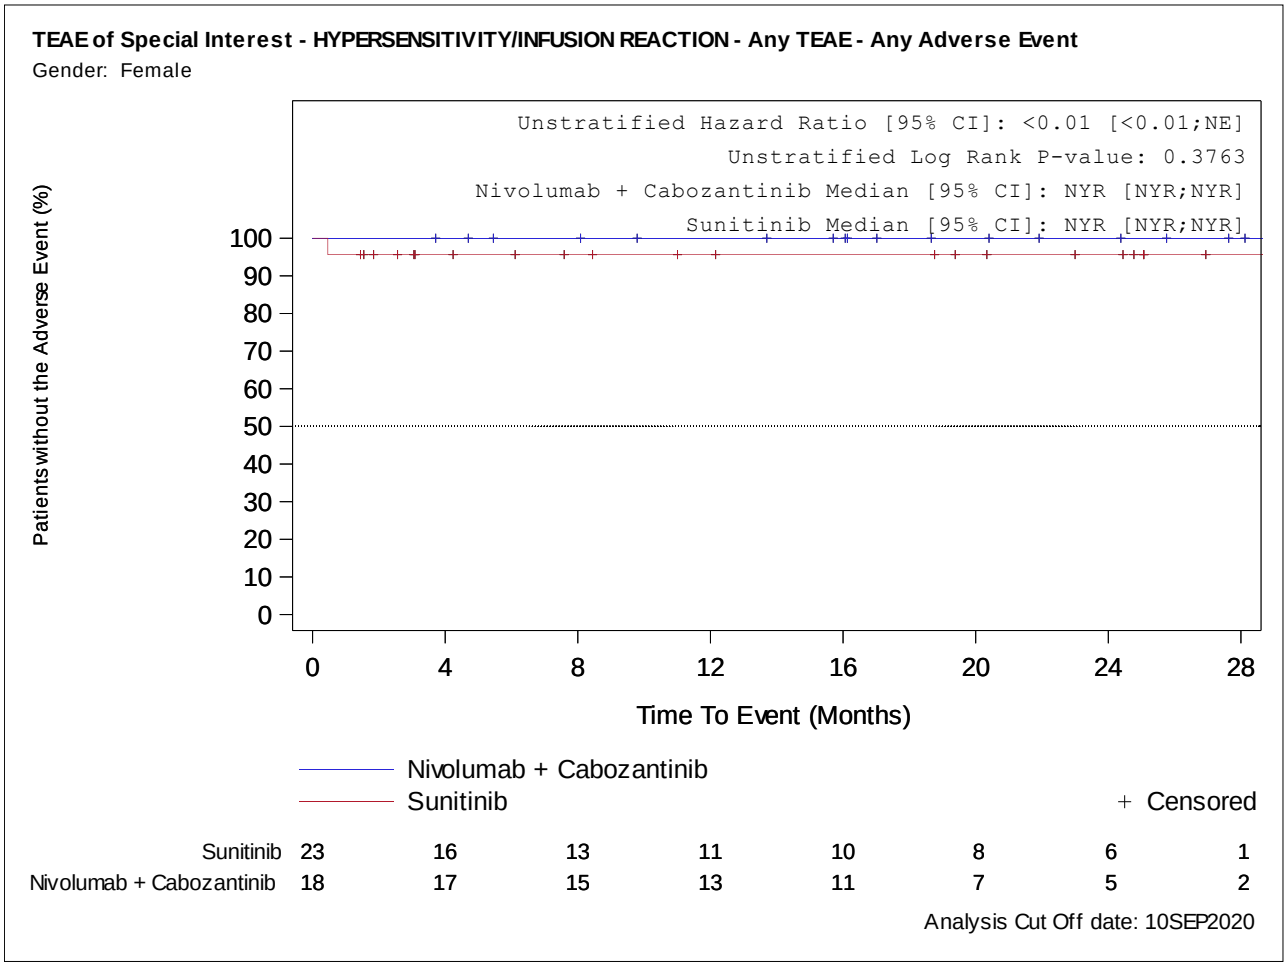
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:39:13

FIGURE 3.35.2.13: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Gender: Male



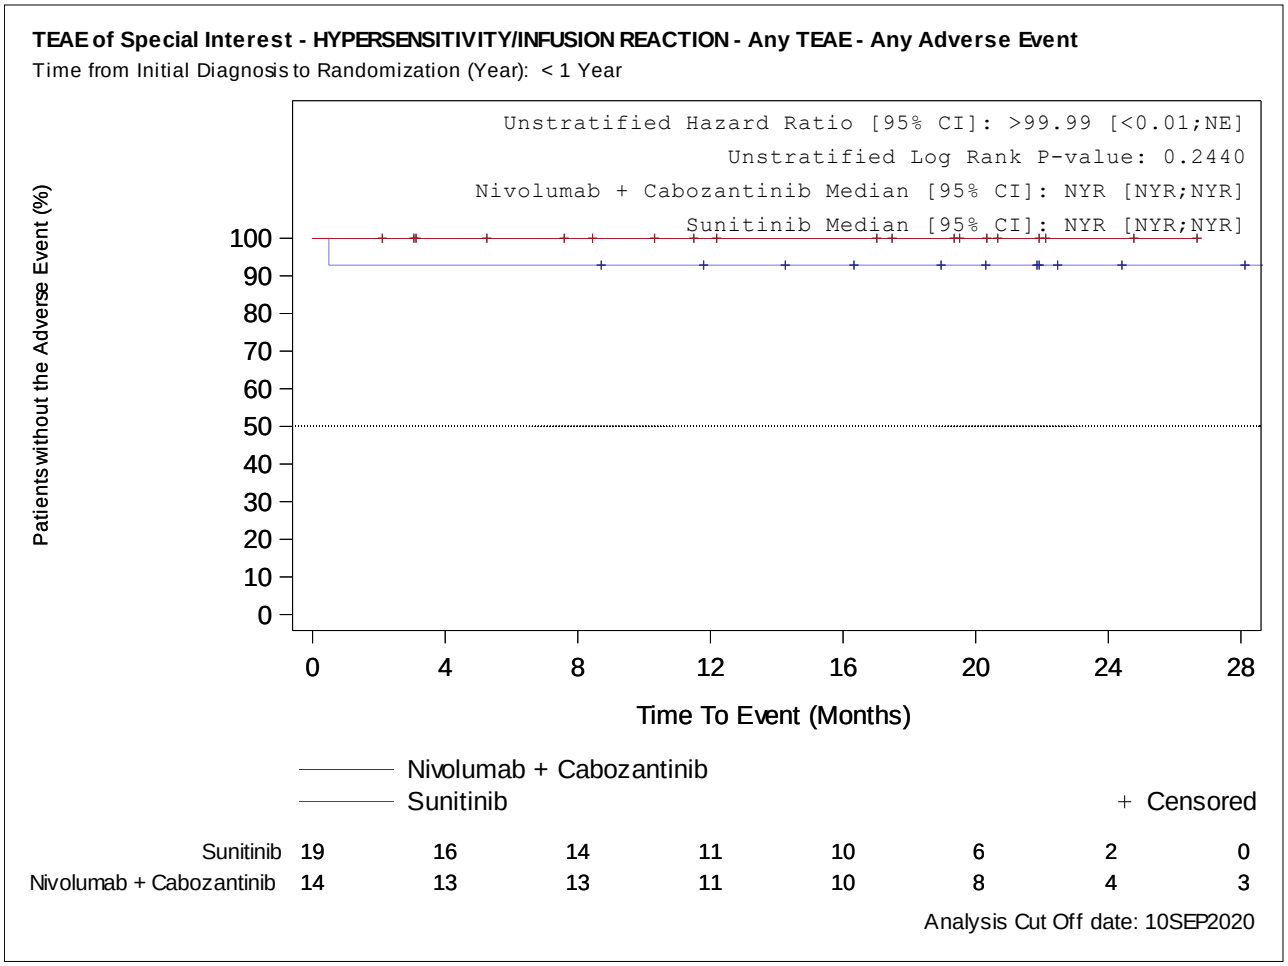
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:39:19

FIGURE 3.35.2.14: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Gender: Female



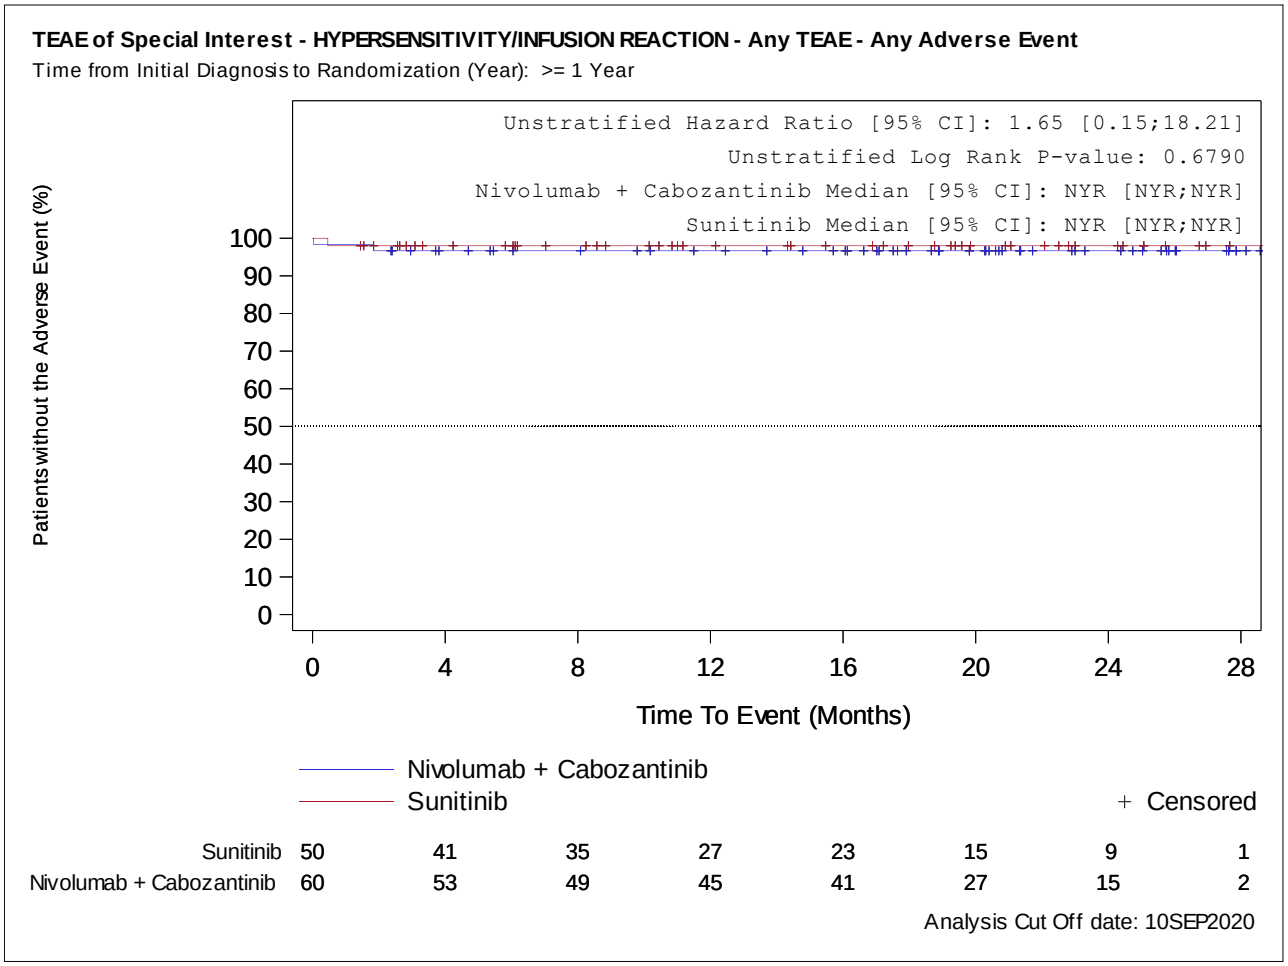
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:39:25

FIGURE 3.35.2.15: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Time from Initial Diagnosis to Randomization (Year): < 1 Year



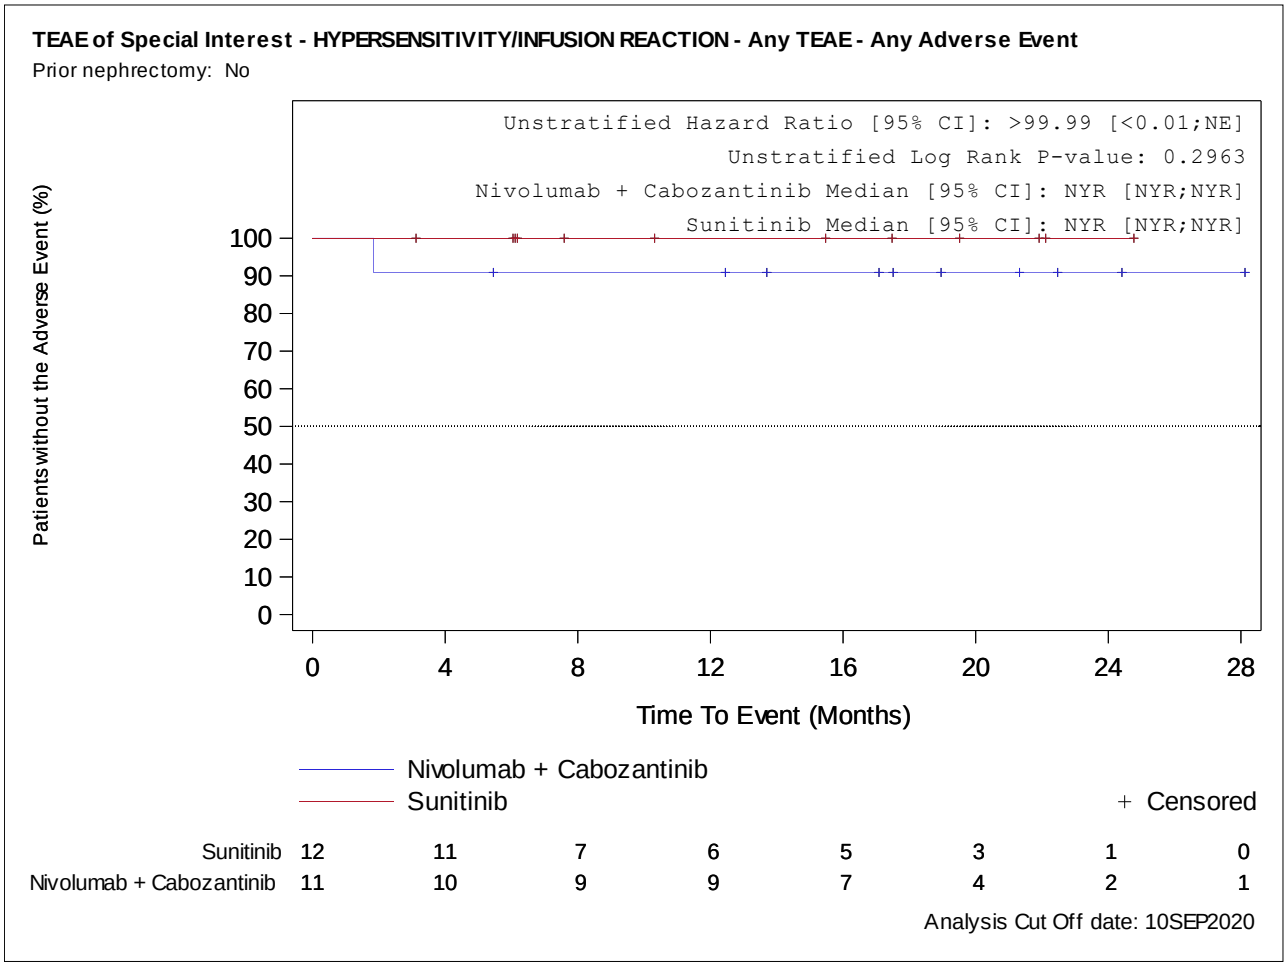
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:39:42

FIGURE 3.35.2.16: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Time from Initial Diagnosis to Randomization (Year): >= 1 Year



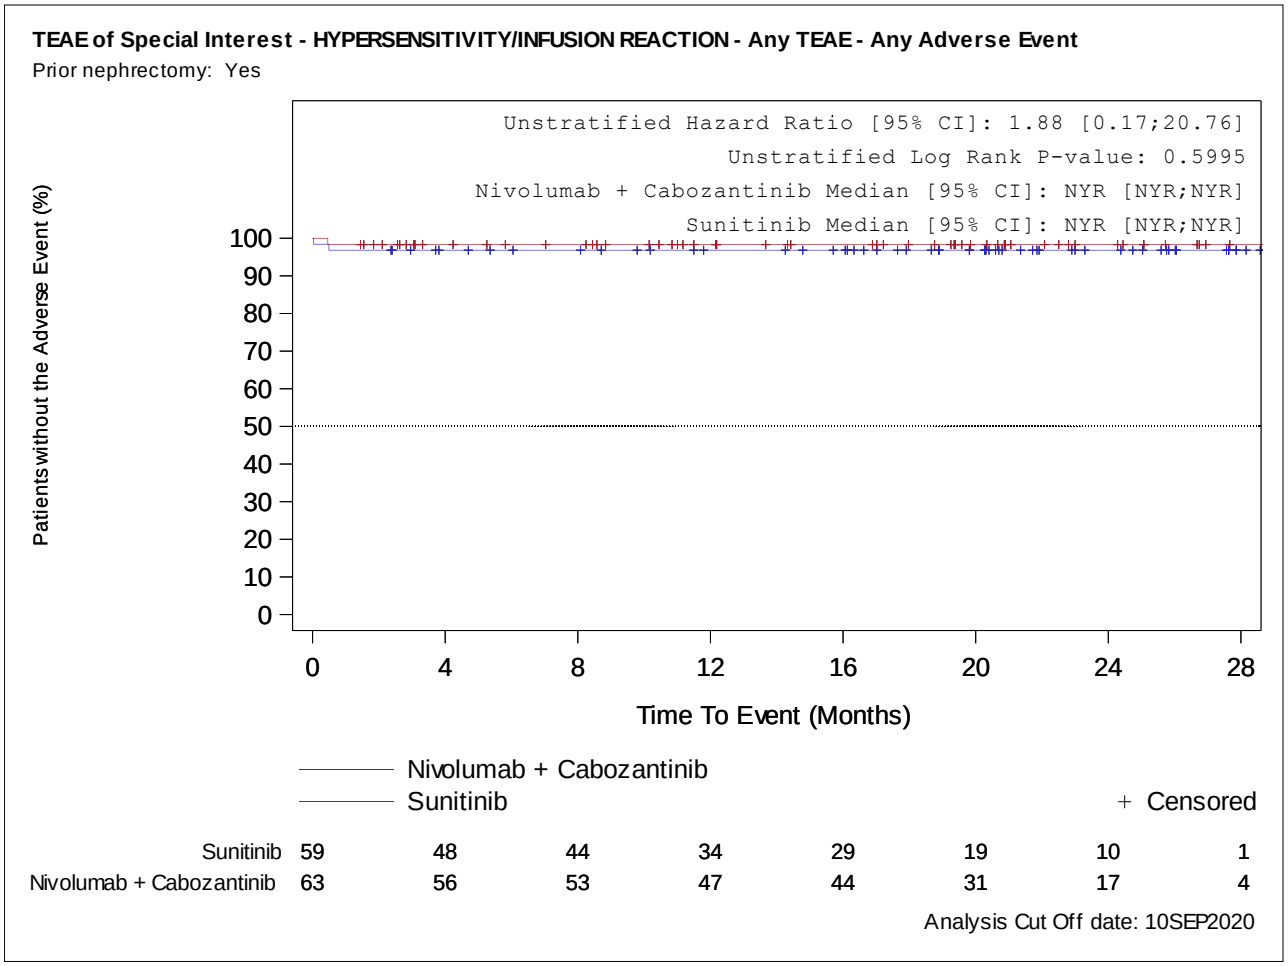
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:39:48

FIGURE 3.35.2.17: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Prior nephrectomy: No



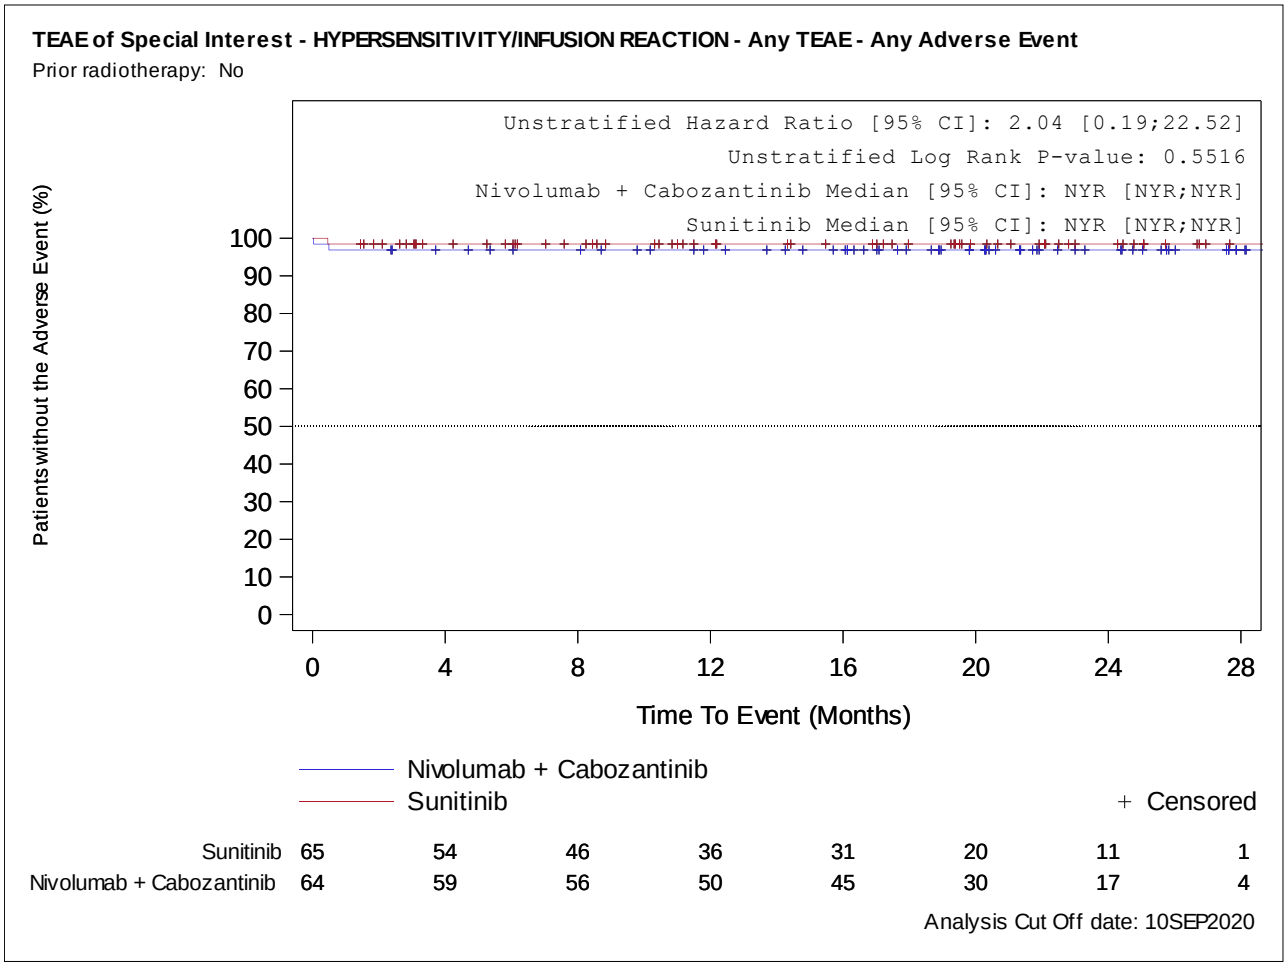
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:40:41

FIGURE 3.35.2.18: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Prior nephrectomy: Yes



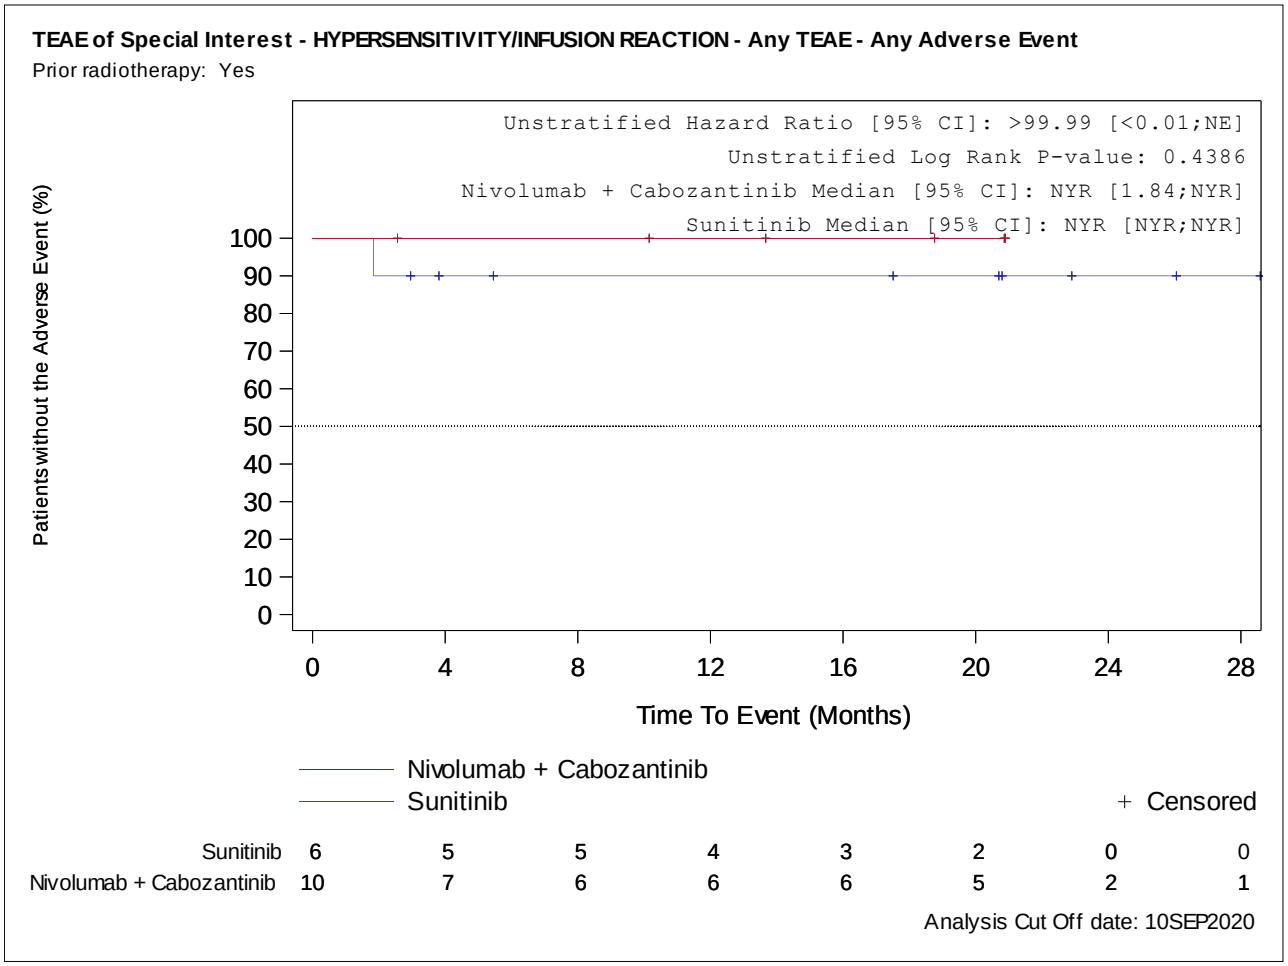
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:40:47

FIGURE 3.35.2.19: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Prior radiotherapy: No



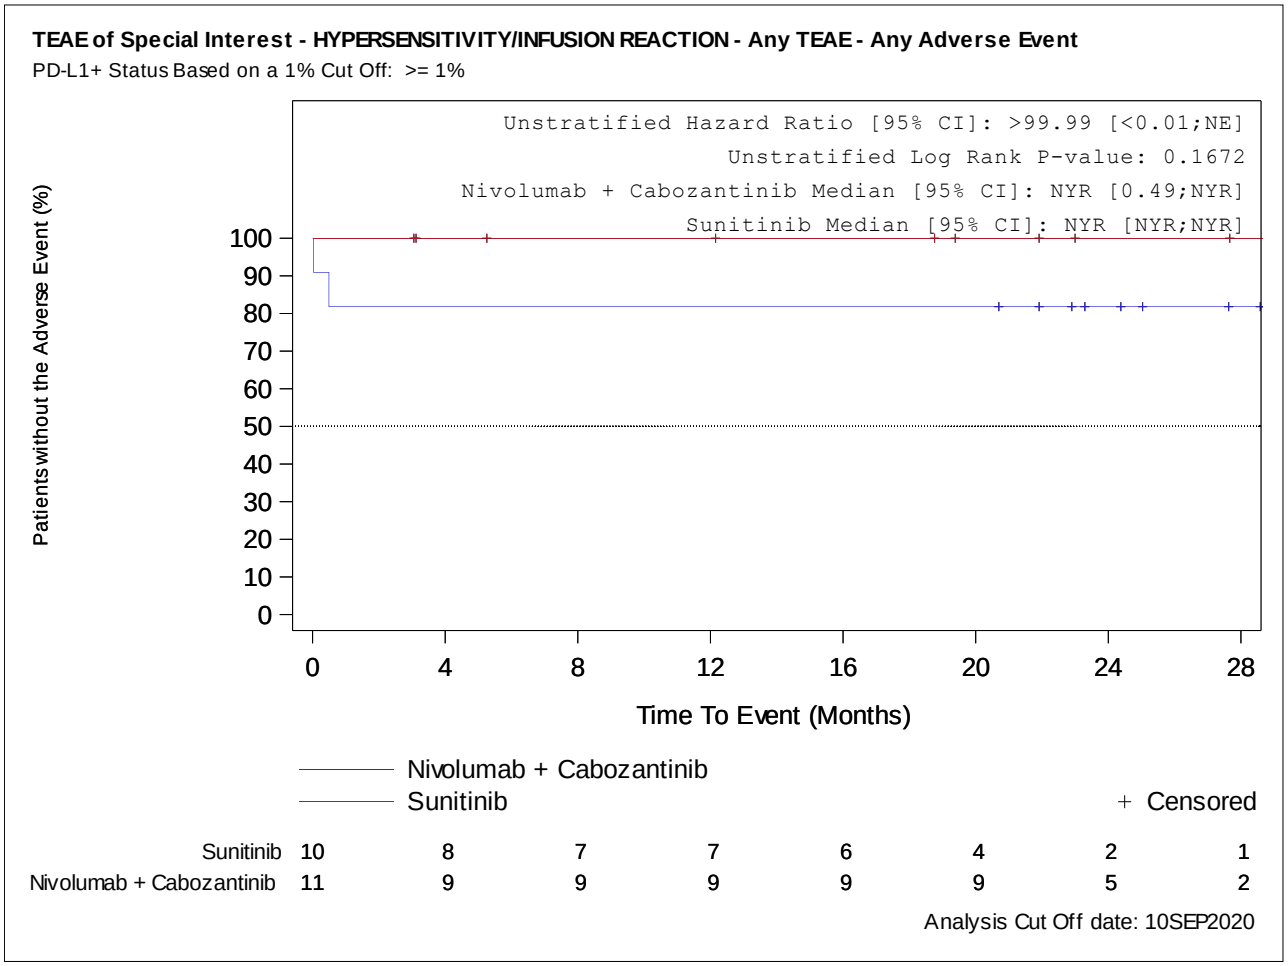
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:40:53

FIGURE 3.35.2.20: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Prior radiotherapy: Yes



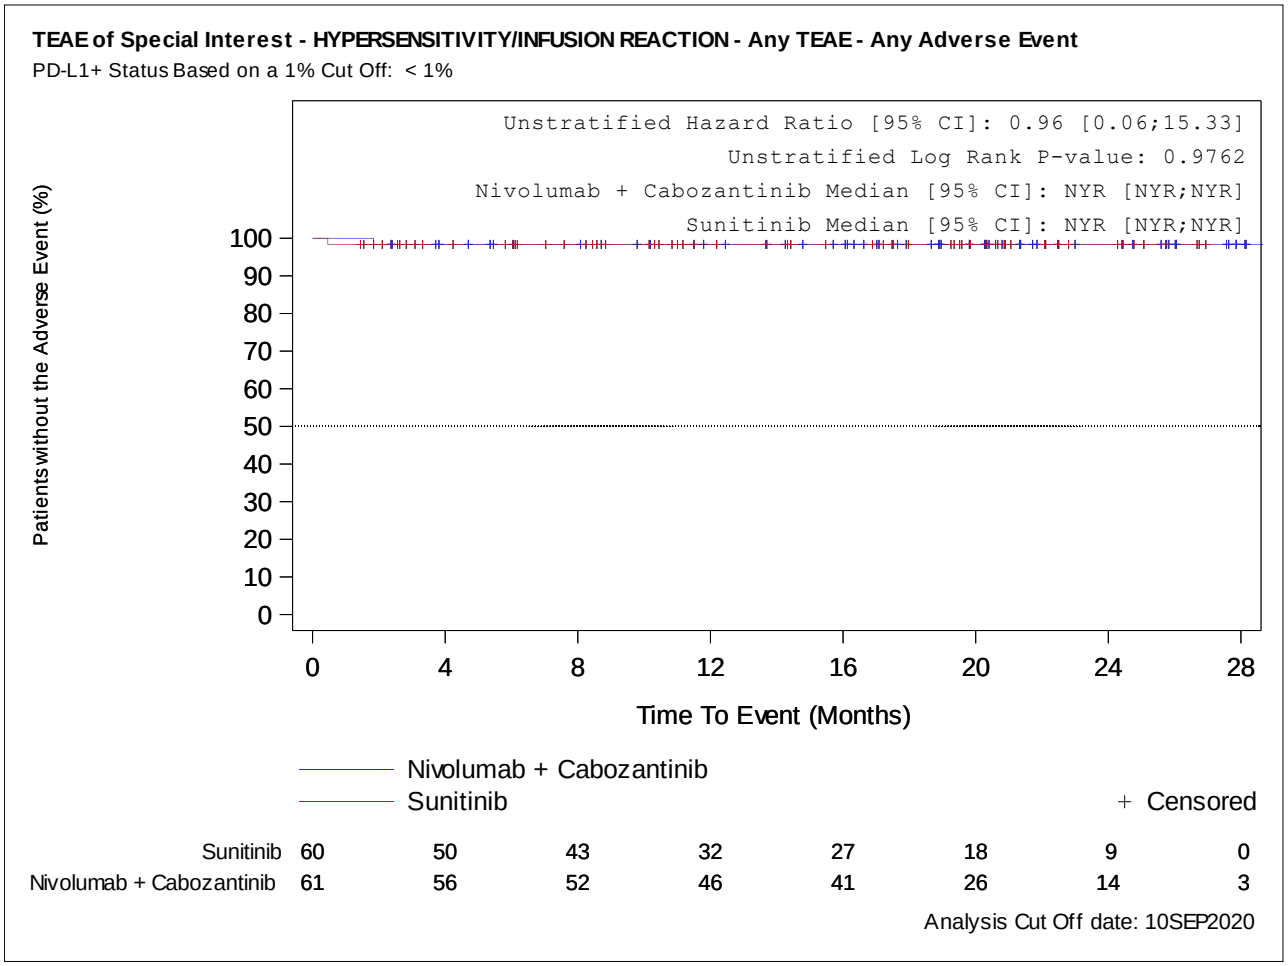
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:40:59

FIGURE 3.35.2.21: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - PD-L1+ Status Based on a 1% Cut Off: >= 1%



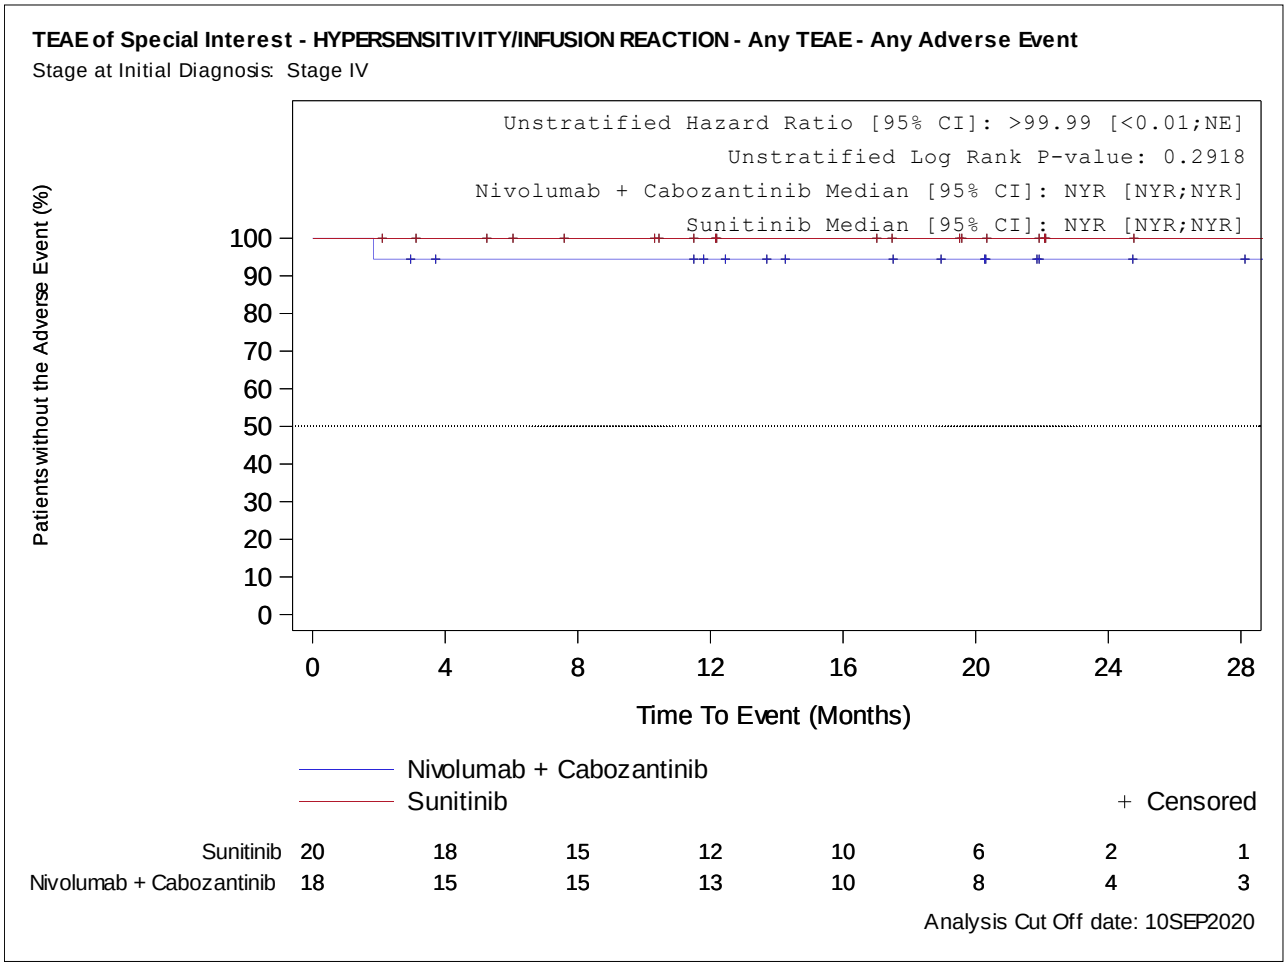
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:41:05

FIGURE 3.35.2.22: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - PD-L1+ Status Based on a 1% Cut Off: < 1%



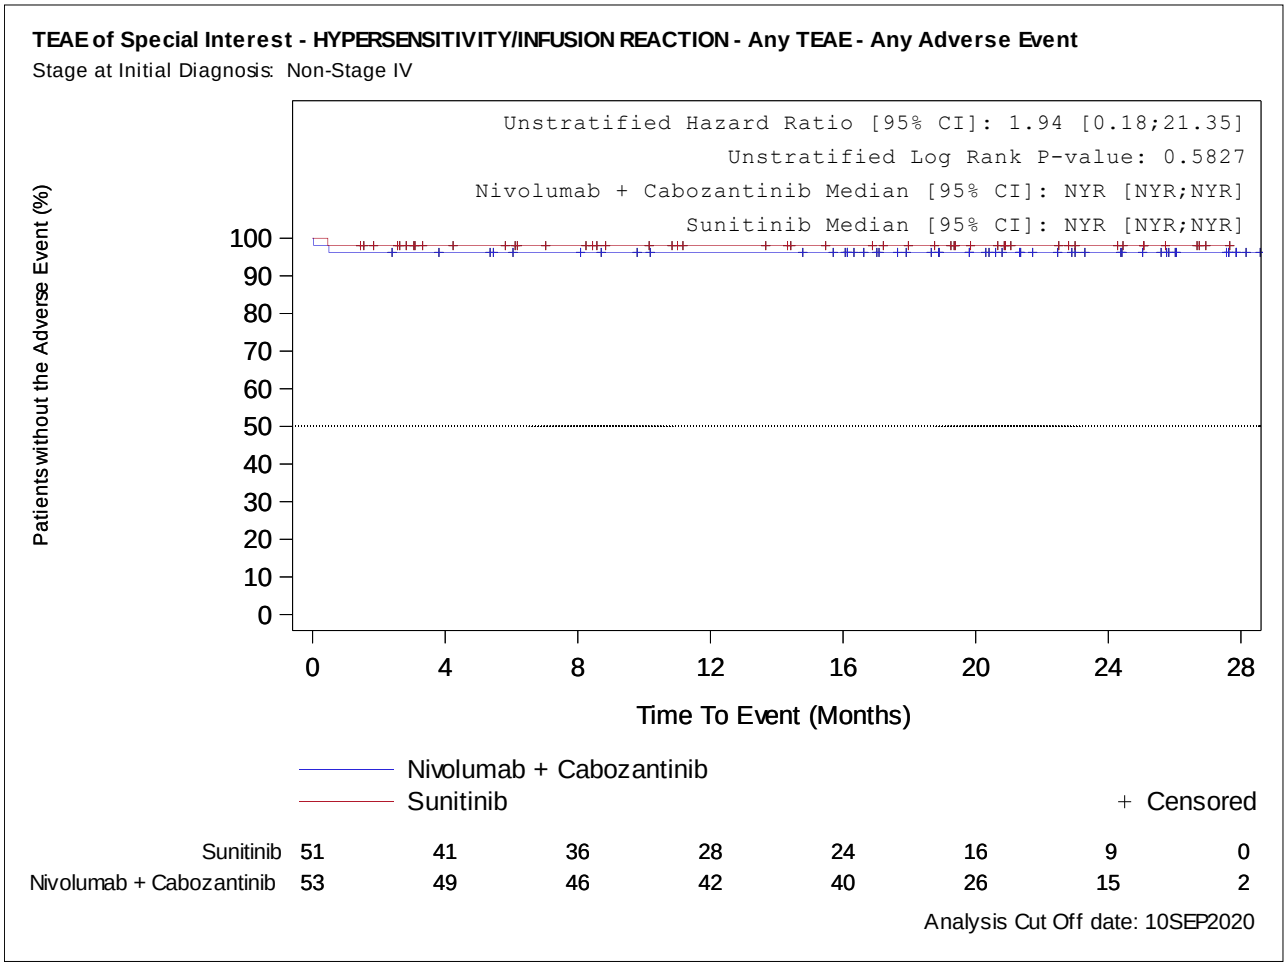
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:41:11

FIGURE 3.35.2.23: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Stage at Initial Diagnosis: Stage IV



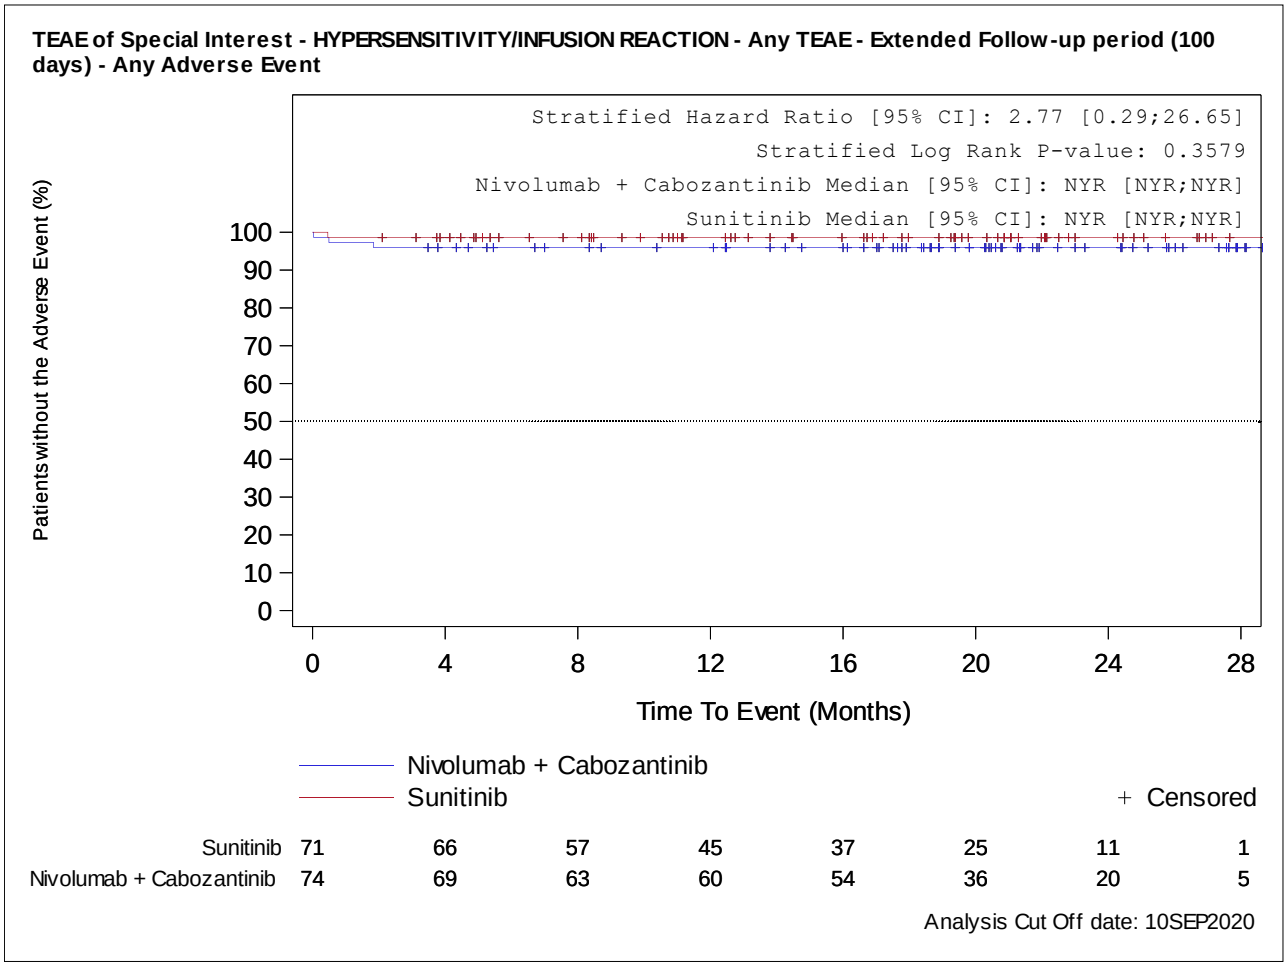
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:41:41

FIGURE 3.35.2.24: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Stage at Initial Diagnosis: Non-Stage IV



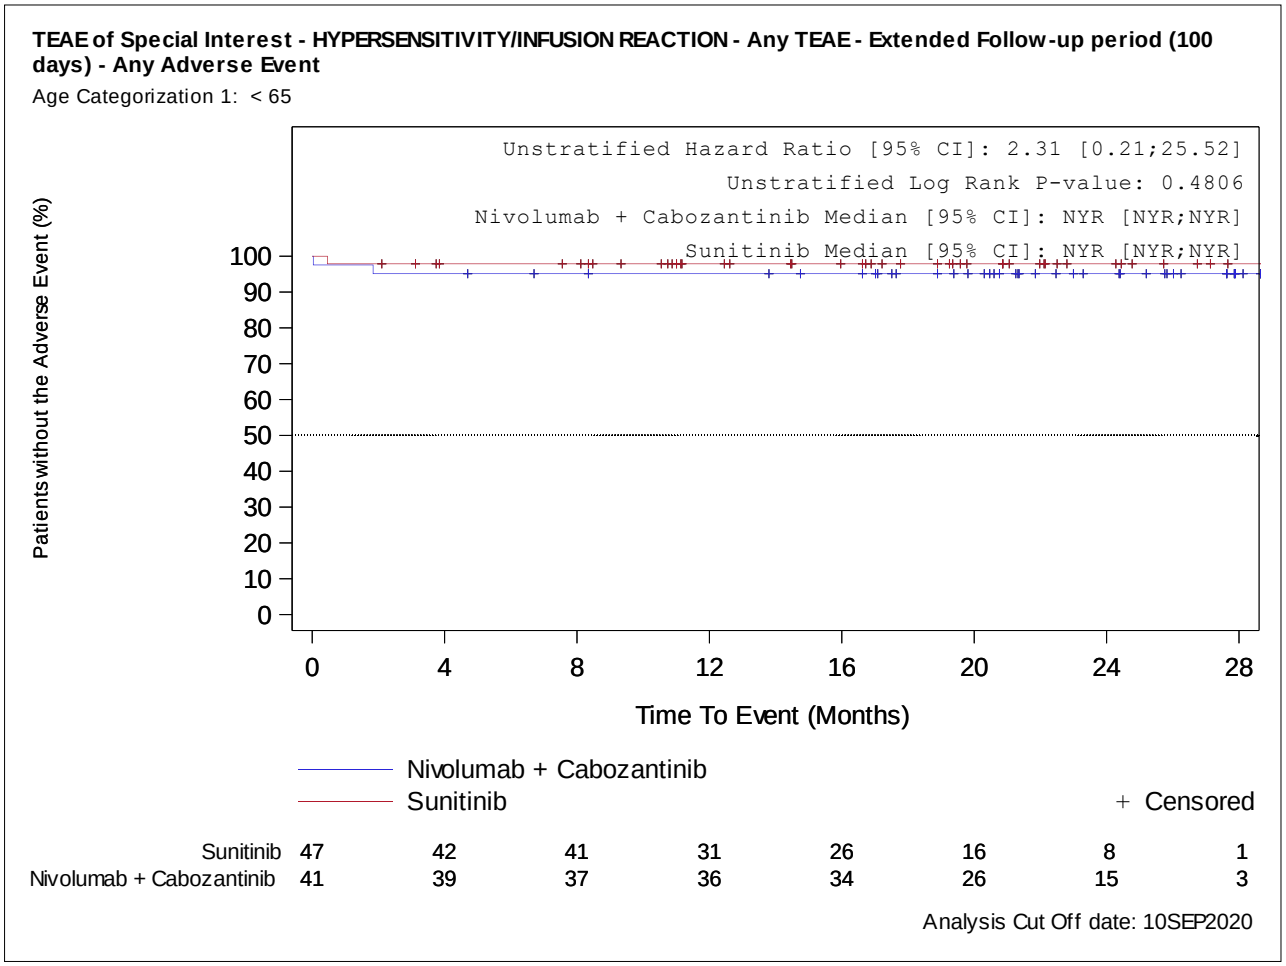
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:41:46

FIGURE 3.36.1: TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Extended Follow-up period (100 days) - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0)



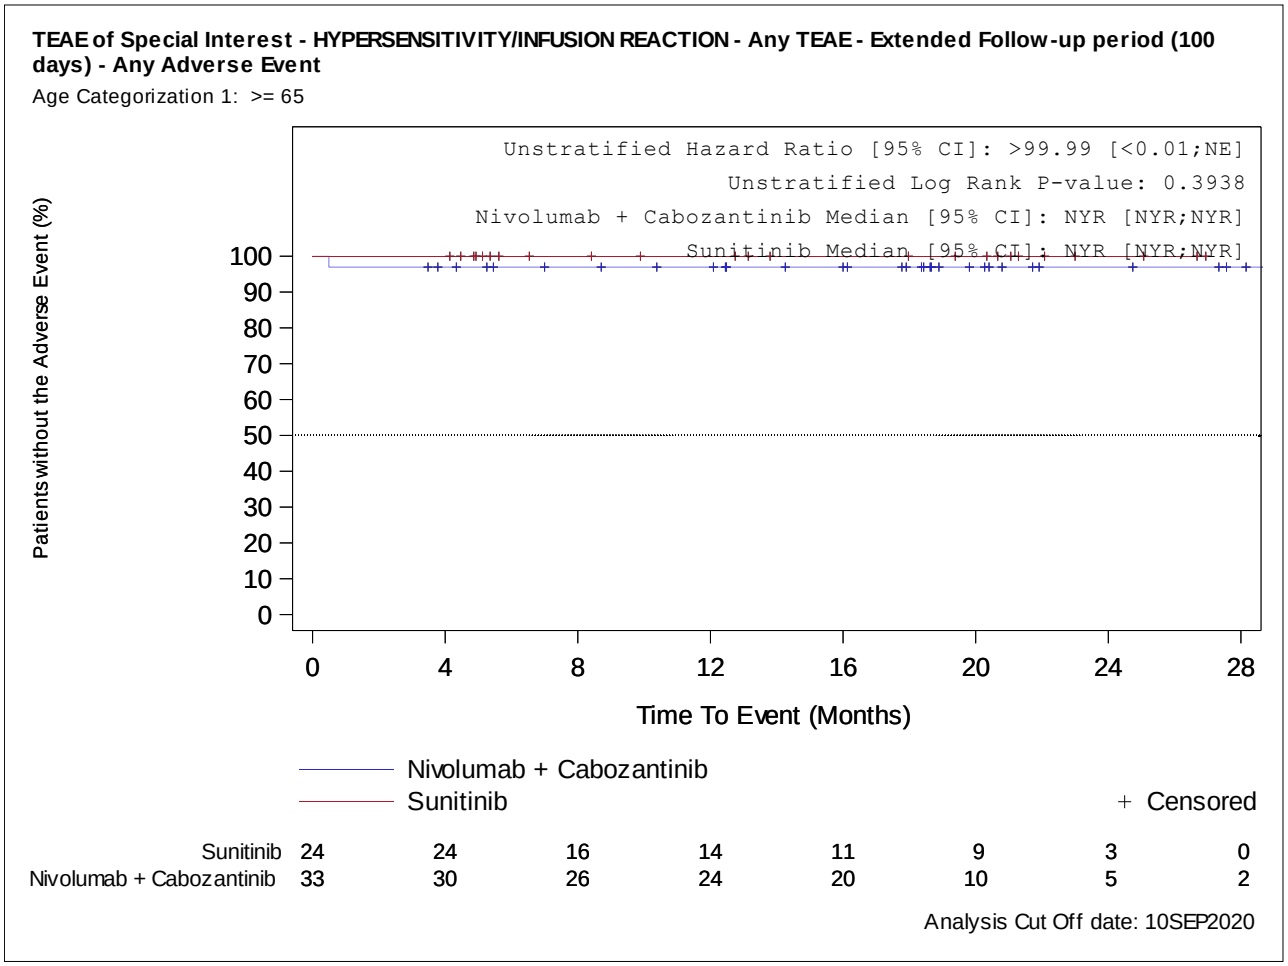
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:45:04

FIGURE 3.36.2.1: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Extended Follow-up period (100 days) - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Age Categorization 1: < 65



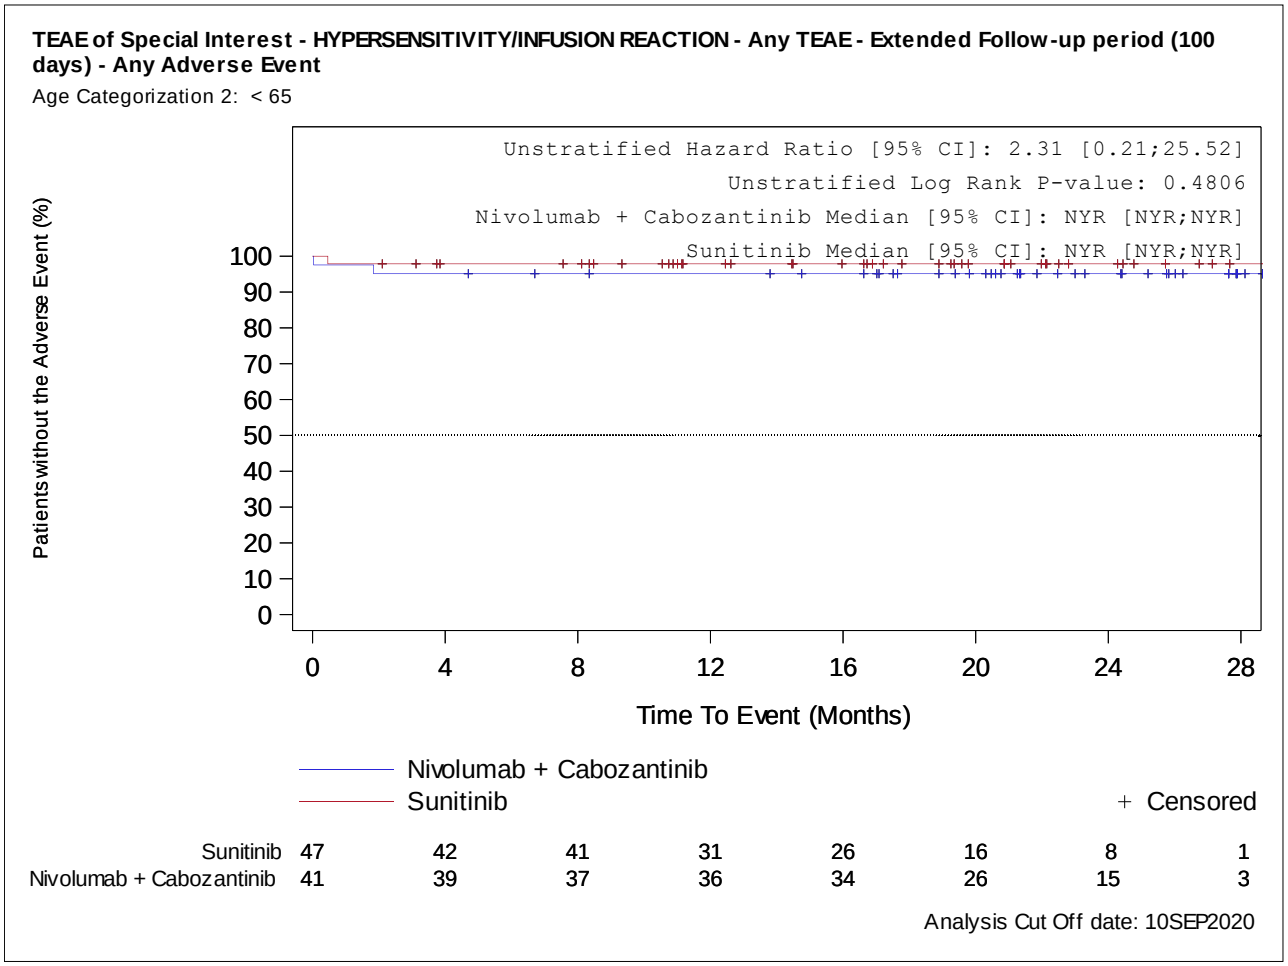
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:45:07

FIGURE 3.36.2.2: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Extended Follow-up period (100 days) - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Age Categorization 1: >= 65



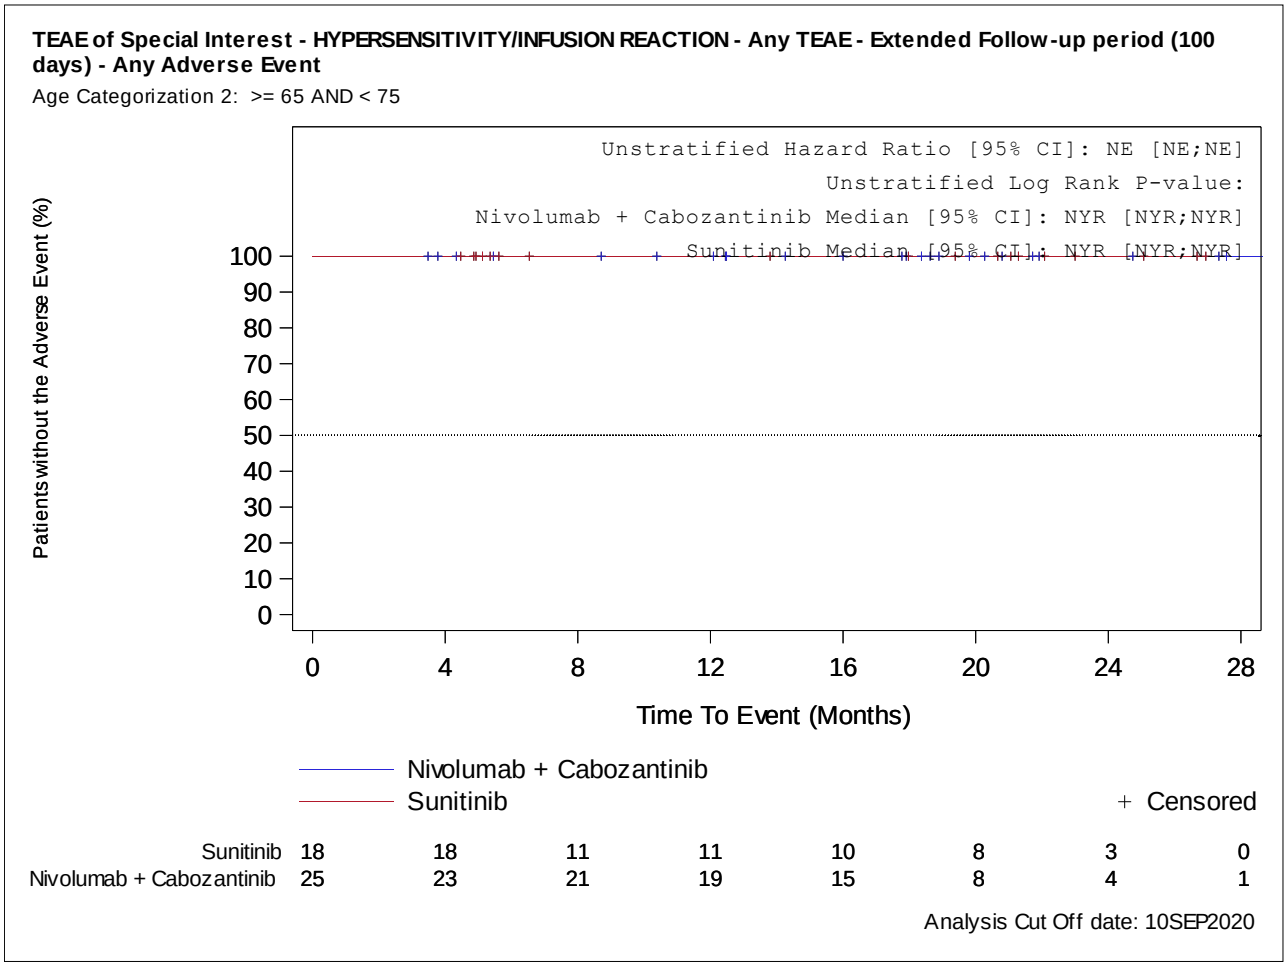
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:45:13

FIGURE 3.36.2.3: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Extended Follow-up period (100 days) - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Age Categorization 2: < 65



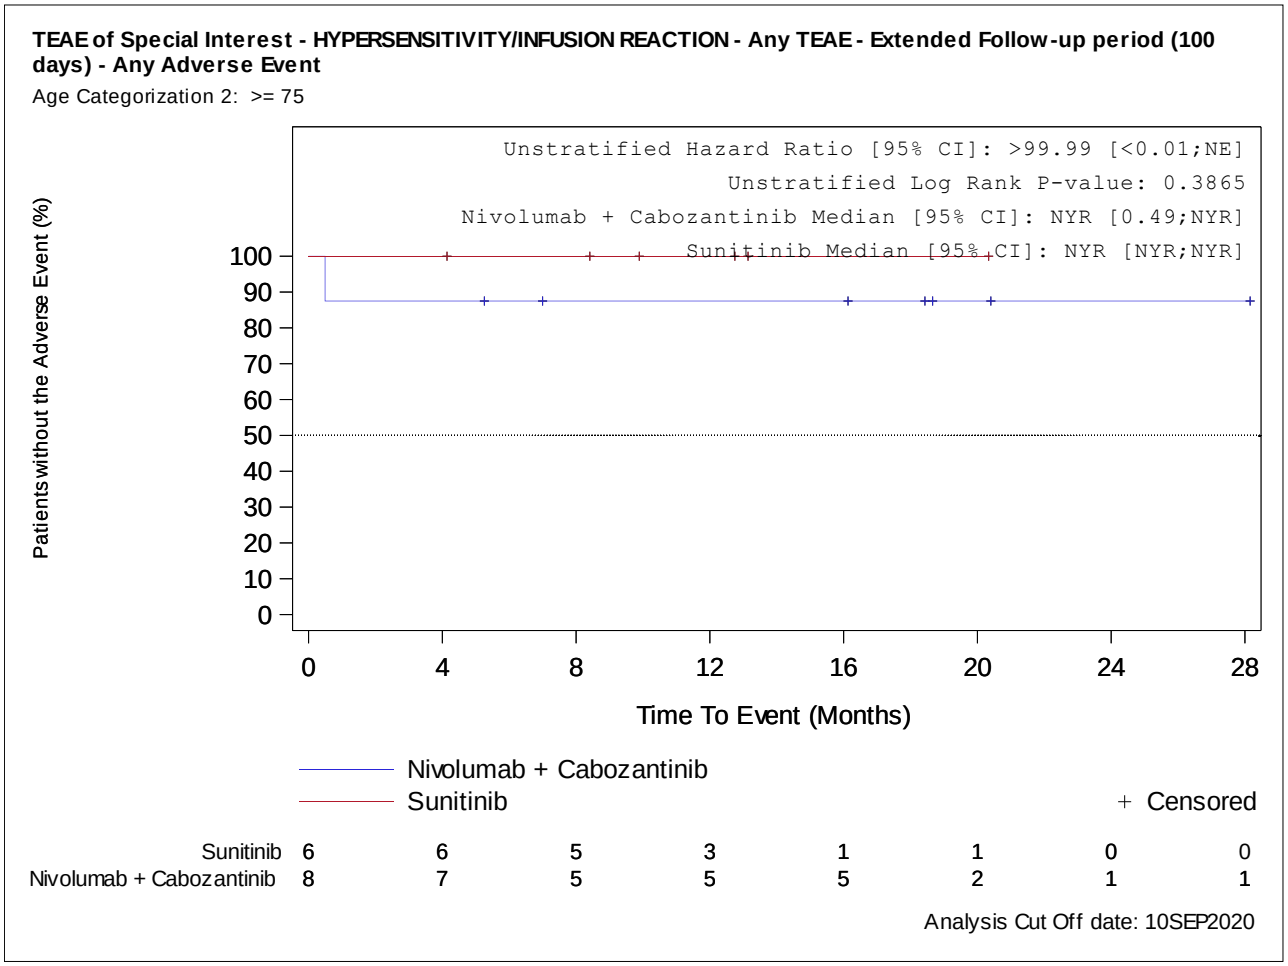
Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:45:19

FIGURE 3.36.2.4: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Extended Follow-up period (100 days) - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Age Categorization 2: >= 65 AND < 75



Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:45:24

FIGURE 3.36.2.5: Kaplan-Meier curve - TEAE of Special Interest - HYPERSENSITIVITY/INFUSION REACTION - Any TEAE - Extended Follow-up period (100 days) - Any Adverse Event - Safety Population A: Favorable risk (IMDC prognostic risk score = 0) - Age Categorization 2: >= 75



Analysis Cut Off date: 10SEP2020
[[root]\02 Programs\02.03 KM safety by subgroups.sas] run Monday, March 22, 2021 at 21:45:30
