

Table 2.01
 Analysis of Proportion of Subjects With Plasma HIV-1 RNA \geq 50 copies/mL (Snapshot) at Week 48 -
 Overall and by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup	Category	Measure	Q8W (N=327)	Q4W (N=327)
Overall		Number of Subjects with HIV-1 RNA \geq 50 c/mL/Total Assessed	5 / 327 (1.5%)	5 / 327 (1.5%)
		OR (95% CI) p value	1.0000 (0.2867, 3.4875) 1.000	
		RD (95% CI) p value	0.0000 (-1.8809, 1.8809) 1.000	
		RR (95% CI) p value	1.0000 (0.2923, 3.4215) 1.000	

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD is obtained from the Freq procedure. OR and RR are obtained from genmod models (link = logit or log, respectively) for overall and subgroups (using a 'by subgroup statement'). P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment. Zero counts for subjects with HIV-1 RNA \geq 50 c/mL in either treatment group may lead to unreliable statistical estimates.

By-subgroup OR, RD, RR and p-values are not provided when all levels of a subgroup have number of events less than 10 regardless of treatment group.

Statistical estimates are unadjusted.

Table 2.04
 Statistical Analysis of Change from Maintenance Baseline in CD4+ Cell Count (cells/mm³)
 at Week 48 - Overall - MMRM - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Treatment	N	n	Adjusted Mean[1]	S.E	Difference[2] (95% CI)	P-value	Hedges' g		
							Hedges' g (S.E)	95% CI	P-value
Q8W	327	305	-5.19	8.353	10.23 (-17.44, 37.90)	0.468	0.0627 (0.08136)	(-0.0972, 0.2225)	0.442
Q4W	327	298	-15.42	11.326					

[1] Adjusted mean is the estimated mean change from Baseline at Week 48 in each arm calculated from MMRM model with the following variables: treatment, visit, treatment*visit, Baseline CD4+ cell count, with visit as the repeated factor. No assumptions were made about the correlations between subject readings of CD4+ cell count i.e. the correlation matrix for within-subject errors is unstructured.

[2] Difference: Q8W - Q4W.

Note: MMRM = Mixed Model Repeated Measures.

PPD

Table 2.05
 Statistical Analysis of Change from Maintenance Baseline in CD4+ Cell Count (cells/mm³)
 at Week 48 by Subgroup - MMRM - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)
 Category: <35

Treatment	N	Adjusted		Difference[2] (95% CI)	P-value	Inter[3] P-value	Hedges' g		
		n	Mean[1] S.E				Hedges' g (S.E)	95% CI	P-value
Q8W	84	79	41.48 19.286	67.19 (15.11, 119.26)	0.012	0.043	0.2096 (0.15491)	(-0.0946, 0.5139)	0.177
Q4W	98	88	-25.70 18.159						

[1] For each subgroup, adjusted mean is the estimated mean change from Baseline at Week 48 in each arm calculated from repeated measures model with the following variables: treatment, visit, subgroup, treatment*visit, treatment*subgroup, visit*subgroup, treatment*visit*subgroup, Baseline CD4+ cell count, with visit as the repeated factor. No assumptions were made about the correlations between subject readings of CD4+ cell count i.e. the correlation matrix for within-subject errors is unstructured.

[2] Difference: Q8W - Q4W.

[3] Inter = Interaction between each subgroup and treatment.

Note: MMRM = Mixed Model Repeated Measures.

Table 2.05

Table 3.25
 Analysis of Proportion of Subjects with any New Onset of an "HIV-infection stage 3"
 Event (Maintenance Phase) - Overall - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Category	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value
Overall	0/327	2/327 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999

Note: OR = Odds Ratio; RD = Risk Difference(in percentages); RR = Relative Risk.
 RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively)
 with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either
 treatment group may lead to unreliable statistical estimates.

Table 6.01

Summary of Quality of Life (HATQoL) in Life Satisfaction, HIV Medication, and Disclosure Worries by Visit (Maintenance Phase) - Overall and by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Domain: Life Satisfaction Transformed Total Score

Subgroup	Category	Treatment	N	Actual Relative Time	n	Mean	SD	Median	Q1	Q3	Min.	Max.

Table 6.02

Statistical Analysis of Quality of Life (HATQoL) - Change from Maintenance Baseline in Life Satisfaction, HIV Medication, and Disclosure Worries at Week 48 - Overall - MMRM - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Domain: Life Satisfaction Transformed Total Score

Treatment	N	n	Adjusted Mean[1]	S.E	Difference[2] (95% CI)	P-value	Hedges'g		
							Hedges'g (S.E)	95% CI	P-value
Q8W	327	310	-0.23	0.791	-0.64 (-2.93, 1.65)	0.581	-0.0444 (0.08023)	(-0.2020, 0.1131)	0.580
Q4W	327	310	0.41	0.855					

[1] Adjusted mean is the estimated mean change from baseline in each arm calculated from repeated measures model with the following variables: treatment, visit, treatment*visit, Maintenance Baseline Score, sex at birth (female, male), age (<50, >=50 years), and race (white, non-white), with visit as the repeated factor. No assumptions were made about the correlations between subject readings of HATQoL scores i.e. the correlation matrix for within-subject errors is unstructured.

[2] Difference: Q8W - Q4W.

Note: MMRM = Mixed Model Repeated Measures.

Table 6.02

	Q4W	252	244	0.25 (0.969)						

[1] For each subgroup, adjusted mean is the estimated mean change from baseline in each arm calculated from repeated measures model with the following variables: treatment, visit, subgroup, treatment*visit, treatment*subgroup, visit*subgroup, treatment*visit*subgroup, Maintenance Baseline Score, sex at birth (female, male), age (<50, >=50 years; or <35, 35 - <50, >=50 years if subgroup = age), and race (white, non-white), with visit as the repeated factor. No assumptions were made about the correlations between subject readings of HATQoL scores i.e. the correlation matrix for within-subject errors is unstructured.

[2] Difference: Q8W - Q4W.

Note: MMRM = Mixed Model Repeated Measures.

Table 6.05

Statistical Analysis of HIVTSQs - Change from Maintenance Baseline in Total Treatment Satisfaction Score at Week 48 - Overall - MMRM - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Treatment	N	n	Adjusted Mean[1]	S.E	Difference[2] (95% CI)	P-value	Hedges'g		
							Hedges'g (S.E)	95% CI	P-value
Q8W	327	310	5.01	0.341	1.79 (0.70, 2.89)	0.001	0.3102 (0.08101)	(0.1510, 0.4695)	<.001
Q4W	327	308	3.21	0.440					

[1] Adjusted mean is the estimated mean change from baseline in each arm calculated from repeated measures model with the following variables: treatment, visit, treatment*visit, Maintenance Baseline Score, sex at birth (female, male), age (<50, >=50 years), and race (white, non-white), with visit as the repeated factor. No assumptions were made about the correlations between subject readings of HIVTSQs scores i.e. the correlation matrix for within-subject errors is unstructured.

[2] Difference: Q8W - Q4W.

Note: MMRM = Mixed Model Repeated Measures.

Table 6.06

Statistical Analysis of HIVTSQs - Change from Maintenance Baseline in Total Treatment Satisfaction Score at Week 48 by Subgroup - MMRM - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

Category	Treatment	N	n	Adjusted Mean[1] (S.E)	Difference[2] (95% CI)	P-value	Interaction P-value	Hedges'g		
								Hedges'g (S.E)	95% CI	P-value
<35	Q8W	84	80	4.81 (0.676)	1.78 (-0.29, 3.86)	0.092	0.968	0.1613 (0.15310)	(-0.1396, 0.4622)	0.293
	Q4W	98	91	3.03 (0.813)						
35 - <50	Q8W	154	144	4.87 (0.498)	2.00 (0.37, 3.64)	0.017	0.968	0.2341 (0.11986)	(-0.0015, 0.4697)	0.051
	Q4W	143	135	2.87 (0.667)

Note: "Any Event" represents subjects with any AE reported.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value
Blood creatine phosphokinase increased					
Any Event	2 (<1%)	3 (<1%)	0.6646 (0.1103, 4.0038) /0.656	-0.3058 (-1.6407, 1.0291) /0.653	0.6667 (0.1121, 3.9636) /0.656
Max Grade 1	2 (<1%)	2 (<1%)	1.0000 (0.1400, 7.1419) />0.999	<0.0001 (-1.1951, 1.1951) />0.999	1.0000 (0.1417, 7.0566) />0.999
Max Grade 2	0	1 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999
Max Grade 3	0	0	NC	NC	NC
Max Grade 4	0	0	NC	NC	NC
Max Grade 5	0	0	NC	NC	NC

Note: "Any Event" represents subjects with any AE reported.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.04

Analysis of Proportion of Subjects with Adverse Events Leading to Treatment Discontinuation
 (Maintenance Phase) - by System Organ Class and Preferred Term - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value

Psychiatric disorders					
Any Event	0	3 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999
Abnormal dreams	0	2 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999
Depression	0	1 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999
Insomnia	0	1 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999
Sleep disorder	0	1 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999

Note: "Any Event" represents subjects with any AE reported.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively), for overall and subgroup (using a 'by subgroup statement'). P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.05

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of a subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively), for overall and subgroup (using a 'by subgroup statement'). P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter- action p-value (RR)

Overall						
Any Event						
<35	81/ 84 (96%)	94/ 98 (96%)				
35 - <50	141/154 (92%)	134/143 (94%)				
>=50	81/ 89 (91%)	82/ 86 (95%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Injection site nodule						
<35	12/ 84 (14%)	15/ 98 (15%)	0.9222 (0.4053, 2.0983) /0.847	-1.0204 (-11.3554, 9.3146) /0.847	0.9333 (0.4631, 1.8812) /0.847	0.100
35 - <50	12/154 (8%)	29/143 (20%)	0.3322 (0.1623, 0.6801) /0.003	-12.4875 (-20.3203, -4.6547) /0.002	0.3842 (0.2040, 0.7237) /0.003	
>=50	6/ 89 (7%)	18/ 86 (21%)	0.2731 (0.1027, 0.7262) /0.009	-14.1887 (-24.2415, -4.1358) /0.006	0.3221 (0.1343, 0.7728) /0.011	

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Gonorrhoea						
<35	9/ 84 (11%)	4/ 98 (4%)				
35 - <50	0/154	4/143 (3%)				
>=50	0/ 89	1/ 86 (1%)				
Sinusitis						
<35	3/ 84 (4%)	5/ 98 (5%)				
35 - <50	3/154 (2%)	4/143 (3%)				
>=50	1/ 89 (1%)	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Escherichia infection						
<35	0/ 84	0/ 98				
35 - <50	1/154 (<1%)	0/143				
>=50	0/ 89	0/ 86				
External ear cellulitis						
<35	0/ 84	0/ 98				
35 - <50	1/154 (<1%)	0/143				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Costochondritis						
<35	0/ 84	1/ 98 (1%)				
35 - <50	0/154	0/143				
>=50	0/ 89	0/ 86				
Femoroacetabular impingement						
<35	0/ 84	0/ 98				
35 - <50	0/154	1/143 (<1%)				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Nasal septum deviation						
<35	0/ 84	0/ 98				
35 - <50	1/154 (<1%)	0/143				
>=50	0/ 89	0/ 86				
Painful respiration						
<35	0/ 84	0/ 98				
35 - <50	1/154 (<1%)	0/143				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
CD4 lymphocytes decreased						
<35	0/ 84	0/ 98				
35 - <50	0/154	0/143				
>=50	0/ 89	1/ 86 (1%)				
Campylobacter test positive						
<35	0/ 84	0/ 98				
35 - <50	0/154	1/143 (<1%)				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

35 - <50	0/154	0/143				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Pollakiuria						
<35	0/ 84	1/ 98 (1%)				
35 - <50	1/154 (<1%)	0/143				
>=50	0/ 89	0/ 86				
Haematuria						
<35	0/ 84	0/ 98				
35 - <50	0/154	1/143 (<1%)				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Goitre						
<35	0/ 84	0/ 98				
35 - <50	0/154	0/143				
>=50	0/ 89	1/ 86 (1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Injection site haematoma						
Female	0/ 73	2/ 75 (3%)				
Male	1/254 (<1%)	7/252 (3%)				
Chest pain						
Female	1/ 73 (1%)	1/ 75 (1%)				
Male	3/254 (1%)	3/252 (1%)				
Discomfort						
Female	1/ 73 (1%)	0/ 75				
Male	3/254 (1%)	3/252 (1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Bacterial vaginosis						
Female	0/ 73	1/ 75 (1%)				
Male	0/254	0/252				
Bronchitis viral						
Female	0/ 73	0/ 75				
Male	0/254	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	1/254 (<1%)	0/252				
Proctitis chlamydial						
Female	0/ 73	0/ 75				
Male	1/254 (<1%)	0/252				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Irritable bowel syndrome						
Female	0/ 73	0/ 75				
Male	1/254 (<1%)	1/252 (<1%)				
Noninfective gingivitis						
Female	1/ 73 (1%)	0/ 75				
Male	0/254	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Skin and subcutaneous tissue disorders						
Any Event						
Female	11/ 73 (15%)	13/ 75 (17%)				
Male	43/254 (17%)	51/252 (20%)				
Pruritus						
Female	1/ 73 (1%)	3/ 75 (4%)				
Male	9/254 (4%)	5/252 (2%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with (1) significant difference in occurrences between treatment arms on the study level (p<0.05) (2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Epistaxis						
Female	0/ 73	1/ 75 (1%)				
Male	1/254 (<1%)	3/252 (1%)				
Sleep apnoea syndrome						
Female	0/ 73	0/ 75				
Male	1/254 (<1%)	3/252 (1%)				
Dyspnoea						
Female	0/ 73	0/ 75				
Male	2/254 (<1%)	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Burns second degree						
Female	0/ 73	0/ 75				
Male	0/254	1/252 (<1%)				
Chemical burns of eye						
Female	0/ 73	0/ 75				
Male	0/254	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	1/254 (<1%)	0/252				
Stress						
Female	0/ 73	1/ 75 (1%)				
Male	0/254	0/252				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Female	0/ 73	0/ 75				
Male	2/254 (<1%)	0/252				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Blood pressure inadequately controlled						
Female	0/ 73	1/ 75 (1%)				
Male	0/254	0/252				
Hot flush						
Female	0/ 73	0/ 75				
Male	1/254 (<1%)	0/252				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Ear discomfort						
Female	0/ 73	0/ 75				
Male	1/254 (<1%)	1/252 (<1%)				
Excessive cerumen production						
Female	0/ 73	0/ 75				
Male	1/254 (<1%)	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Upper respiratory tract infection						
White	21/238 (9%)	36/256 (14%)	0.5914 (0.3345, 1.0457) /0.071	-5.2390 (-10.8174, 0.3395) /0.066	0.6275 (0.3774, 1.0432) /0.072	0.912
Non-White	14/ 89 (16%)	17/ 71 (24%)	0.5929 (0.2693, 1.3053) /0.194	-8.2133 (-20.6931, 4.2664) /0.197	0.6570 (0.3482, 1.2396) /0.195	

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Abdominal pain lower						
White	2/238 (<1%)	1/256 (<1%)				
Non-White	0/ 89	1/ 71 (1%)				
Gastritis						
White	0/238	3/256 (1%)				
Non-White	1/ 89 (1%)	0/ 71				
Anal fistula						
White	1/238 (<1%)	1/256 (<1%)				
Non-White	1/ 89 (1%)	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	1/ 89 (1%)	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Race (White vs. Non-White)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Pigmentation disorder						
White	1/238 (<1%)	0/256				
Non-White	0/ 89	0/ 71				
Pityriasis						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				
Pityriasis rosea						
White	1/238 (<1%)	0/256				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Periodic limb movement disorder						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				
Polyneuropathy						
White	1/238 (<1%)	0/256				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Race (White vs. Non-White)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Drug abuse						
White	0/238	2/256 (<1%)				
Non-White	0/ 89	0/ 71				
Irritability						
White	1/238 (<1%)	1/256 (<1%)				
Non-White	0/ 89	0/ 71				
Major depression						
White	0/238	2/256 (<1%)				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.
