Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Head injury						
Female	0/ 73	0/ 75				
Male	1/254 (<1%)	0/252				
Joint dislocation						
Female	0/ 73	0/ 75				
Male	1/254 (<1%)	0/252				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.19

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Sex at Birth - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Scapula fracture

Any Event						
Female	1/ 73 (1%)	0/ 75				
Male	1/254 (<1%)	3/252 (1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.19

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Sex at Birth - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 2

Male	0/254	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.19

Depression						
Female	0/ 73	0/ 75				
Male	0/254	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.20

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Race - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Injection site pain						
White	116/238 (49%)	123/256 (48%)	1.0281 (0.7222, 1.4636) /0.878	0.6926 (-8.1268, 9.5121) /0.878	1.0144 (0.8454, 1.2172) /0.878	0.176
Non-White	41/ 89 (46%)	24/ 71 (34%)	1.6727 (0.8780, 3.1870) /0.118	12.2646 (-2.8452, 27.3744) /0.112	1.3628 (0.9176, 2.0241) /0.125	

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Race - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Injection site warmth						
White	1/238 (<1%)	1/256 (<1%)				
Non-White	1/ 89 (1%)	2/ 71 (3%)				
Injection site anaesthesia						
White	1/238 (<1%)	0/256				
Non-White	2/ 89 (2%)	1/ 71 (1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Gonorrhoea						
White	5/238 (2%)	4/256 (2%)				
Non-White	3/ 89 (3%)	2/ 71 (3%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Race - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Rectal abscess						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				
Schistosomiasis cutaneous						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

PPD

Table 3.20

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Race - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 1

Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Respiratory tract congestion						
White	0/238	0/256				
Non-White	0/ 89	1/ 71 (1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.20

Weight increased						
White	2/238 (<1%)	2/256 (<1%)				
Non-White	0/ 89	0/ 71				
Blood cholesterol increased						
White	1/238 (<1%)	0/256				
Non-White	0/ 89	1/ 71 (1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Race - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Erectile dysfunction						
White	2/238 (<1%)	3/256 (1%)				
Non-White	0/ 89	1/ 71 (1%)				
Prostatomegaly						
White	0/238	2/256 (<1%)				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Ocular hyperaemia						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

White	79/238 (33%)	79/256 (31%)	1.1132 (0.7626, 1.6251) /0.578	2.3339 (-5.9007, 10.5685) /0.579	1.0756 (0.8318, 1.3910) /0.578	0.477
Non-White	28/ 89 (31%)	25/ 71 (35%)	0.8446 (0.4360, 1.6363) /0.617	-3.7506 (-18.4645, 10.9634) /0.617	0.8935 (0.5754, 1.3873) /0.616	

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	6/ 89 (7%)	8/ 71 (11%)	0.5693 (0.1880, 1.7240) /0.319	-4.5260 (-13.5389, 4.4868) /0.325	0.5983 (0.2176, 1.6452) /0.320	

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Race - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Laryngitis						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				
Pharyngeal chlamydia infection						
White	1/238 (<1%)	0/256				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Dyspepsia						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Race - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Pruritus						
White	1/238 (<1%)	1/256 (<1%)				
Non-White	1/ 89 (1%)	0/ 71				
Rash						
White	0/238	1/256 (<1%)				
Non-White	1/ 89 (1%)	0/ 71				
Eczema						
White	1/238 (<1%)	0/256				
Non-White	0/ 89	1/ 71 (1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

White	1/238 (<1%)	0/256				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Race - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Weight increased						
White	1/238 (<1%)	1/256 (<1%)				
Non-White	0/ 89	0/ 71				
Blood cholesterol increased						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

PPD

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Race - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Cataract						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				
Chalazion						
White	1/238 (<1%)	0/256				
Non-White	0/ 89	0/ 71				
Diplopia						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Renal and urinary disorders						
Any Event						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Rest of World	0/ 44	0/ 37	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Europe	29/165 (18%)	37/155 (24%)	0.6800 (0.3943, 1.1729) /0.166	-6.2952 (-15.1702, 2.5798) /0.164	0.7363 (0.4771, 1.1362) /0.167	
Rest of World	3/ 44 (7%)	1/ 37 (3%)	2.6341 (0.2622, 26.4586) /0.411	4.1155 (-4.9823, 13.2133) /0.375	2.5227 (0.2738, 23.2402) /0.414	

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Region - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Skin infection						
North America	0/118	0/135				
Europe	2/165 (1%)	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Groin abscess						
North America	1/118 (<1%)	0/135				
Europe	0/165	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Tracheitis						
North America	0/118	0/135				
Europe	0/165	1/155 (<1%)				
Rest of World	0/ 44	0/ 37				
Tracheobronchitis						
North America	0/118	0/135				
Europe	1/165 (<1%)	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Region - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Gingival pain						
North America	0/118	0/135				
Europe	1/165 (<1%)	1/155 (<1%)				
Rest of World	0/ 44	0/ 37				
Inguinal hernia						
North America	0/118	2/135 (1%)				
Europe	0/165	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Europe	1/165 (<1%)	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Table 3.21

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Region - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Joint stiffness						
North America	0/118	0/135				
Europe	1/165 (<1%)	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Region - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Solar dermatitis						
North America	0/118	1/135 (<1%)				
Europe	0/165	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Europe	1/165 (<1%)	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Table 3.21

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Region - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

General disorders and administration site conditions						
Any Event						
North America	44/118 (37%)	43/135 (32%)	1.2722 (0.7564, 2.1396) /0.364	5.4363 (-6.3065, 17.1790) /0.364	1.1707 (0.8332, 1.6448) /0.364	0.647
Europe	48/165 (29%)	48/155 (31%)	0.9145 (0.5668, 1.4755) /0.714	-1.8768 (-11.9271, 8.1734) /0.714	0.9394 (0.6722, 1.3128) /0.714	
Rest of World	15/ 44 (34%)	13/ 37 (35%)	0.9549 (0.3810, 2.3932) /0.922	-1.0442 (-21.8477, 19.7592) /0.922	0.9703 (0.5323, 1.7686) /0.922	

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Gait disturbance						
North America	1/118 (<1%)	0/135				
Europe	0/165	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Europe	0/165	4/155 (3%)				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Region - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Rash pruritic						
North America	0/118	0/135				
Europe	0/165	1/155 (<1%)				
Rest of World	0/ 44	0/ 37				
Rash vesicular						
North America	0/118	1/135 (<1%)				
Europe	0/165	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Table 3.21

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Region - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Cerebral infarction						
North America	0/118	0/135				
Europe	0/165	0/155				
Rest of World	1/ 44 (2%)	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Table 3.21

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Region - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Musculoskeletal foreign body						
North America	0/118	0/135				
Europe	1/165 (<1%)	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Region - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Creatinine renal clearance decreased						
North America	0/118	0/135				
Europe	0/165	1/155 (<1%)				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Table 3.21

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Region - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Seasonal allergy						
North America	0/118	1/135 (<1%)				
Europe	1/165 (<1%)	1/155 (<1%)				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Rest of World	0/ 44	0/ 37	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Table 3.21

Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Region - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Maximum Toxicity Grade= 3

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Intervertebral disc protrusion						
North America	0/118	0/135				
Europe	2/165 (1%)	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Eye disorders						
Any Event						
North America	0/118	1/135 (<1%)				
Europe	0/165	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.22

Analysis of Proportion of Subjects with Severe Adverse Events (Maximum Grade 3 or 4) by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Osteonecrosis						
<35	0/ 84	0/ 98				
35 - <50	1/154 (<1%)	0/143				
>=50	0/ 89	0/ 86				
Pain in extremity						
<35	0/ 84	1/ 98 (1%)				
35 - <50	0/154	0/143				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.22

Analysis of Proportion of Subjects with Severe Adverse Events (Maximum Grade 3 or 4) by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Immune system disorders						
Any Event						
<35	0/ 84	0/ 98				
35 - <50	0/154	1/143 (<1%)				
>=50	0/ 89	0/ 86				
Hypersensitivity						
<35	0/ 84	0/ 98				
35 - <50	0/154	1/143 (<1%)				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.
 Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.22

Analysis of Proportion of Subjects with Severe Adverse Events (Maximum Grade 3 or 4) by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Musculoskeletal and connective tissue disorders						
Any Event						
Female	1/ 73 (1%)	1/ 75 (1%)				
Male	3/254 (1%)	2/252 (<1%)				
Intervertebral disc protrusion						
Female	1/ 73 (1%)	0/ 75				
Male	1/254 (<1%)	0/252				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Female	0/ 73	0/ 75				
Male	0/254	1/252 (<1%)				
Pregnancy, puerperium and perinatal conditions						
Any Event						
Female	0/ 73	1/ 75 (1%)				
Male	0/254	0/252				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.22

Analysis of Proportion of Subjects with Severe Adverse Events (Maximum Grade 3 or 4) by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Race (White vs. Non-White)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Haemorrhoidal haemorrhage						
White	0/238	0/256				
Non-White	1/ 89 (1%)	0/ 71				
Oroantral fistula						
White	1/238 (<1%)	0/256				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.22

Analysis of Proportion of Subjects with Severe Adverse Events (Maximum Grade 3 or 4) by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Race (White vs. Non-White)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Investigations						
Any Event						
White	1/238 (<1%)	1/256 (<1%)				
Non-White	1/ 89 (1%)	0/ 71				
Body temperature increased						
White	1/238 (<1%)	0/256				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Analysis of Proportion of Subjects with Severe Adverse Events (Maximum Grade 3 or 4) by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Region (North America vs. Europe vs. Rest of World)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

General disorders and administration site conditions						
Any Event						
North America	5/118 (4%)	10/135 (7%)	0.5531 (0.1835, 1.6670) /0.293	-3.1701 (-8.8908, 2.5506) /0.277	0.5720 (0.2012, 1.6261) /0.295	0.625
Europe	2/165 (1%)	8/155 (5%)	0.2255 (0.0471, 1.0788) /0.062	-3.9492 (-7.8117, -0.0866) /0.045	0.2348 (0.0507, 1.0888) /0.064	
Rest of World	0/ 44	0/ 37	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported.
 Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.22

Analysis of Proportion of Subjects with Severe Adverse Events (Maximum Grade 3 or 4) by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Region (North America vs. Europe vs. Rest of World)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Haemorrhoidal haemorrhage						
North America	1/118 (<1%)	0/135				
Europe	0/165	0/155				
Rest of World	0/ 44	0/ 37				
Oroantral fistula						
North America	0/118	0/135				
Europe	1/165 (<1%)	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.22

Analysis of Proportion of Subjects with Severe Adverse Events (Maximum Grade 3 or 4) by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Region (North America vs. Europe vs. Rest of World)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Pregnancy, puerperium and perinatal conditions						
Any Event						
North America	0/118	0/135				
Europe	0/165	1/155 (<1%)				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.22

 Analysis of Proportion of Subjects with Serious Adverse Events (Excluding Deaths)
 by System Organ Class and Preferred Term (Maintenance Phase)
 - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Musculoskeletal and connective tissue disorders						
Any Event						
<35	0/ 84	0/ 98				
35 - <50	1/154 (<1%)	0/143				
>=50	1/ 89 (1%)	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	7/254 (3%)	5/252 (2%)	1.4000 (0.4384, 4.4709) /0.570	0.7718 (-1.8773, 3.4209) /0.568	1.3890 (0.4467, 4.3185) /0.570	

Note: "Any Event" represents subjects with any AE reported.
 Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Any Event						
White	11/238 (5%)	9/256 (4%)	1.3299 (0.5411, 3.2684) /0.534	1.1062 (-2.3874, 4.5998) /0.535	1.3147 (0.5546, 3.1163) /0.534	0.500
Non-White	6/ 89 (7%)	2/ 71 (3%)	2.4940 (0.4877, 12.7525) /0.272	3.9247 (-2.5521, 10.4014) /0.235	2.3933 (0.4981, 11.4992) /0.276	

Note: "Any Event" represents subjects with any AE reported.
 Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Subgroup: Race (White vs. Non-White)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter- action p-value (RR)

Respiratory, thoracic and mediastinal disorders						
Any Event						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				
Sleep apnoea syndrome						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.
 Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.
 Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.23
 Analysis of Proportion of Subjects with Serious Adverse Events (Excluding Deaths)
 by System Organ Class and Preferred Term (Maintenance Phase)

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.24
 Analysis of Proportion of Subjects with Adverse Events Leading to Treatment Discontinuation by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Injection site warmth						
<35	0/ 84	0/ 98				
35 - <50	1/154 (<1%)	0/143				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.
 Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.24

Analysis of Proportion of Subjects with Adverse Events Leading to Treatment Discontinuation by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Musculoskeletal and connective tissue disorders						
Any Event						
<35	0/ 84	0/ 98				
35 - <50	0/154	1/143 (<1%)				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.24

Analysis of Proportion of Subjects with Adverse Events Leading to Treatment Discontinuation by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Hypersensitivity						
Female	0/ 73	1/ 75 (1%)				
Male	0/254	0/252				
Investigations						
Any Event						
Female	0/ 73	1/ 75 (1%)				
Male	0/254	0/252				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.24
 Analysis of Proportion of Subjects with Adverse Events Leading to Treatment Discontinuation by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Race (White vs. Non-White)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Nausea						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				
Immune system disorders						
Any Event						
White	0/238	1/256 (<1%)				
Non-White	0/ 89	0/ 71				

Note: "Any Event" represents subjects with any AE reported.
 Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.24
 Analysis of Proportion of Subjects with Adverse Events Leading to Treatment Discontinuation by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Region (North America vs. Europe vs. Rest of World)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter- action p-value (RR)

Hyperhidrosis						
North America	0/118	2/135 (1%)				
Europe	0/165	0/155				
Rest of World	0/ 44	0/ 37				
Rash maculo-papular						
North America	1/118 (<1%)	0/135				
Europe	0/165	0/155				
Rest of World	0/ 44	0/ 37				

Note: "Any Event" represents subjects with any AE reported.
 Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of the subgroup have number of events less than 10 regardless of treatment group. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.
