Note: "Any Event" represents subjects with any AE reported.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Sex at Birth	Female	1/ 73 (1%)	0/ 75	>999 (>999, >999) /NC	3.6449 (-19.9869, 27.2768) /0.762	>999 (>999, >999) /NC	0.220
	Male	6/254 (2%)	7/252 (3%)	0.8468 (0.2806, 2.5556) /0.768	-0.4156 (-3.1733, 2.3421) /0.768	0.8504 (0.2898, 2.4952) /0.768	

Note: "Any Event" represents subjects with any respective AE reported.
 Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of a subgroup have number of events less than 10 regardless of treatment group.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively), for overall and subgroup (using a 'by subgroup statement'). P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 Analysis of AESI - Proportion of Subjects with Any ISR by Severity (Maintenance Phase) -
 Overall and by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

AE type: Maximum Toxicity Grade 3 or 4							
Subgroup	Category	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Interaction p-value(RR)
Overall		9 (3%)	18 (6%)	0.4858 (0.2150, 1.0980) /0.083	-2.7523 (-5.7945, 0.2899) /0.076	0.5000 (0.2280, 1.0966) /0.084	
Age (years)	<35	1/ 84 (1%)	4/ 98 (4%)	0.2831 (0.0310, 2.5838) /0.263	-2.8912 (-7.4437, 1.6614) /0.213	0.2917 (0.0332, 2.5592) /0.266	0.846
	35 - <50	5/154 (3%)	8/143 (6%)	0.5663 (0.1809, 1.7730) /0.329	-2.3477 (-7.0406, 2.3453) /0.327	0.5804 (0.1944, 1.7329) /0.330	
	>=50	3/ 89 (3%)	6/ 86 (7%)	0.4651 (0.1125, 1.9222) /0.290	-3.6060 (-10.1671, 2.9552) /0.281	0.4831 (0.1248, 1.8709) /0.292	

Note: "Any Event" represents subjects with any respective AE reported.
 Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of a subgroup have number of events less than 10 regardless of treatment group.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively), for overall and subgroup (using a 'by subgroup statement'). P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.08

Analysis of AESI - Proportion of Subjects with Any Event of Rash by Severity (Maintenance Phase) - Overall and by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

AE type: Serious Adverse Events

Subgroup	Category	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Interaction p-value(RR)
Overall		0	0				
Age (years)	<35	0/ 84	0/ 98				
	35 - <50	0/154	0/143				
	>=50	0/ 89	0/ 86				
Sex at Birth	Female	0/ 73	0/ 75				
	Male	0/254	0/252				
Race	White	0/239	0/256				
	Non-White	0/ 88	0/ 71				

Note: "Any Event" represents subjects with any respective AE reported.

Note: By-subgroup OR, RD, RR and p-values are not provided when all levels of a subgroup have number of events less than 10 regardless of treatment group.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively), for overall and subgroup (using a 'by subgroup statement'). P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter- action p-value (RR)

Overall						
Any Event						
<35	82/ 84 (98%)	96/ 98 (98%)				
35 - <50	144/154 (94%)	138/143 (97%)				
>=50	85/ 89 (96%)	84/ 86 (98%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Injection site pain						
<35	78/ 84 (93%)	78/ 98 (80%)				
35 - <50	126/154 (82%)	116/143 (81%)				
>=50	69/ 89 (78%)	67/ 86 (78%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

35 - <50	2/154 (1%)	0/143				
>=50	3/ 89 (3%)	1/ 86 (1%)				
Tooth abscess						
<35	0/ 84	1/ 98 (1%)				
35 - <50	1/154 (<1%)	1/143 (<1%)				
>=50	1/ 89 (1%)	5/ 86 (6%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

<35	0/ 84	0/ 98				
35 - <50	1/154 (<1%)	0/143				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC =

Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Schistosomiasis cutaneous						
<35	0/ 84	0/ 98				
35 - <50	0/154	0/143				
>=50	0/ 89	1/ 86 (1%)				
Sialoadenitis						
<35	0/ 84	0/ 98				
35 - <50	0/154	1/143 (<1%)				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

35 - <50	0/154	0/143				
>=50	1/ 89 (1%)	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC =

Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

>=50	0/ 89	1/ 86 (1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

35 - <50	2/154 (1%)	2/143 (1%)				
>=50	0/ 89	3/ 86 (3%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Periodic limb movement disorder						
<35	0/ 84	0/ 98				
35 - <50	0/154	1/143 (<1%)				
>=50	0/ 89	0/ 86				
Polyneuropathy						
<35	1/ 84 (1%)	0/ 98				
35 - <50	0/154	0/143				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Musculoskeletal foreign body						
<35	0/ 84	0/ 98				
35 - <50	0/154	0/143				
>=50	1/ 89 (1%)	1/ 86 (1%)				
Road traffic accident						
<35	0/ 84	1/ 98 (1%)				
35 - <50	0/154	1/143 (<1%)				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Anxiety						
<35	10/ 84 (12%)	5/ 98 (5%)				
35 - <50	7/154 (5%)	7/143 (5%)				
>=50	3/ 89 (3%)	0/ 86				
Depression						
<35	2/ 84 (2%)	4/ 98 (4%)				
35 - <50	4/154 (3%)	3/143 (2%)				
>=50	0/ 89	1/ 86 (1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

35 - <50	0/154	1/143 (<1%)				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC =

Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

>=50	1/ 89 (1%)	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Age (years) (<35 vs. 35 - <50 vs. >=50)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Urethral disorder						
<35	0/ 84	0/ 98				
35 - <50	0/154	1/143 (<1%)				
>=50	0/ 89	0/ 86				
Urethral pain						
<35	0/ 84	0/ 98				
35 - <50	0/154	1/143 (<1%)				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

35 - <50	2/154 (1%)	1/143 (<1%)				
>=50	1/ 89 (1%)	1/ 86 (1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Cholelithiasis						
<35	0/ 84	0/ 98				
35 - <50	0/154	1/143 (<1%)				
>=50	0/ 89	0/ 86				
Hepatic steatosis						
<35	1/ 84 (1%)	0/ 98				
35 - <50	0/154	0/143				
>=50	0/ 89	0/ 86				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Feeling abnormal						
Female	0/ 73	0/ 75				
Male	0/254	1/252 (<1%)				
Induration						
Female	0/ 73	1/ 75 (1%)				
Male	0/254	0/252				
Inflammation						
Female	0/ 73	0/ 75				
Male	0/254	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Folliculitis						
Female	1/ 73 (1%)	0/ 75				
Male	5/254 (2%)	7/252 (3%)				
Oropharyngeal gonococcal infection						
Female	0/ 73	0/ 75				
Male	6/254 (2%)	7/252 (3%)				
Rhinitis						
Female	0/ 73	0/ 75				
Male	5/254 (2%)	8/252 (3%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Skin infection						
Female	0/ 73	0/ 75				
Male	3/254 (1%)	0/252				
Staphylococcal infection						
Female	0/ 73	0/ 75				
Male	2/254 (<1%)	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Chest wall abscess						
Female	1/ 73 (1%)	0/ 75				
Male	0/254	0/252				
Conjunctivitis viral						
Female	0/ 73	0/ 75				
Male	0/254	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC =

Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC =

Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Groin pain						
Female	1/ 73 (1%)	0/ 75				
Male	0/254	1/252 (<1%)				
Joint contracture						
Female	0/ 73	0/ 75				
Male	0/254	2/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Seborrhoeic dermatitis						
Female	0/ 73	0/ 75				
Male	1/254 (<1%)	4/252 (2%)				
Urticaria						
Female	1/ 73 (1%)	0/ 75				
Male	2/254 (<1%)	2/252 (<1%)				
Dermal cyst						
Female	1/ 73 (1%)	0/ 75				
Male	2/254 (<1%)	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Exposure to communicable disease						
Female	0/ 73	0/ 75				
Male	4/254 (2%)	8/252 (3%)				
Muscle strain						
Female	0/ 73	2/ 75 (3%)				
Male	3/254 (1%)	7/252 (3%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC =

Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Traumatic haematoma						
Female	0/ 73	0/ 75				
Male	1/254 (<1%)	0/252				
Ulna fracture						
Female	0/ 73	0/ 75				
Male	0/254	1/252 (<1%)				
Wound						
Female	0/ 73	0/ 75				
Male	1/254 (<1%)	0/252				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC =

Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Blood cholesterol increased						
Female	0/ 73	1/ 75 (1%)				
Male	1/254 (<1%)	4/252 (2%)				
Blood pressure increased						
Female	0/ 73	2/ 75 (3%)				
Male	2/254 (<1%)	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Weight decreased						
Female	0/ 73	1/ 75 (1%)				
Male	2/254 (<1%)	1/252 (<1%)				
Blood glucose increased						
Female	0/ 73	0/ 75				
Male	3/254 (1%)	0/252				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Basal cell carcinoma						
Female	0/ 73	0/ 75				
Male	3/254 (1%)	0/252				
Fibrous histiocyctoma						
Female	0/ 73	0/ 75				
Male	0/254	3/252 (1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC =

Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	0/254	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC =

Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Sex at Birth (Female vs. Male)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Excessive cerumen production						
Female	0/ 73	0/ 75				
Male	1/254 (<1%)	1/252 (<1%)				
Deafness neurosensory

Male	0/254	1/252 (<1%)				
Hepatomegaly						
Female	0/ 73	0/ 75				
Male	0/254	1/252 (<1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	1/ 88 (1%)	1/ 71 (1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC =

Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 (Maintenance Phase) - by Subgroup - ATLAS-2M (Prior CAB + RPV of 0 Weeks)

Subgroup: Race (White vs. Non-White)

System Organ Class Preferred Term	Q8W (N=327)	Q4W (N=327)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Vulvovaginal mycotic infection						
White	1/239 (<1%)	1/256 (<1%)				
Non-White	0/ 88	1/ 71 (1%)				
Acute hepatitis B						
White	0/239	0/256				
Non-White	1/ 88 (1%)	1/ 71 (1%)				

Note: "Any Event" represents subjects with any AE reported.

Note: By-subgroup OR, RD, RR, p-value and interaction p-values are only provided for AEs with

(1) significant difference in occurrences between treatment arms on the study level (p<0.05)

(2) at least 1 level of the subgroup has number of events >=10 regardless of treatment group.

OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,

OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),

using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models

with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC =

Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.
