

Table 2.01
 Analysis of Proportion of Subjects With Plasma HIV-1 RNA ≥ 50 copies/mL at Week 48
 Overall and by Subgroup - Snapshot Analysis - FLAIR

Subgroup	Category	Measure	Q4W IM (N=283)	ABC/DTG/3TC (N=283)
Overall	Overall	Number of Subjects with HIV-1 RNA ≥ 50 c/mL/Total Assessed	6/283 (2.1%)	7/283 (2.5%)
		OR (95% CI) p value	0.8563 (0.2837, 2.5846) 0.783	
		RD (95% CI) p value	-0.3686 (-2.8337, 2.0965) 0.769	
		RR (95% CI) p value	0.8638 (0.2944, 2.5345) 0.790	

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For RD, statistical measures are obtained from Cochran-Mantel Haenszel stratified analysis adjusting for gender at birth (female, male) and Induction BL (Week -20) HIV-1 RNA (<100,000, $\geq 100,000$ c/mL). OR and RR are obtained from genmod models (link = logit or log, respectively) for overall and subgroups (using a 'by subgroup statement'), adjusting for gender at birth (female, male) and Induction BL (Week -20) HIV-1 RNA (<100,000, $\geq 100,000$ c/mL). p value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment, gender at birth (female, male) and Induction BL (Week -20) HIV-1 RNA (<100,000, $\geq 100,000$ c/mL). Zero counts for subjects with HIV-1 RNA ≥ 50 c/mL in either treatment group may lead to unreliable statistical estimates. NC = Not Calculable.

 Analysis of Proportion of Subjects With Plasma HIV-1 RNA <50 copies/mL at Week 48
 Overall and by Subgroup - Snapshot Analysis - FLAIR

Subgroup	Category	Measure	Q4W IM (N=283)	ABC/DTG/3TC (N=283)
Age (years)	35-<50	Number of Subjects with HIV-1 RNA <50 c/mL/Total Assessed	101/107 (94%)	104/109 (95%)
		OR (95% CI)	0.9137 (0.2660, 3.1385)	
		p value	0.886	
		RD (95% CI)	-0.5645 (-6.3803, 5.2513)	
		p value	0.849	
		RR (95% CI)	1.0150 (0.9348, 1.1020)	
		p value	0.724	
		P value for interaction	0.176	

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk.
 For RD, statistical measures are obtained from Cochran-Mantel Haenszel stratified analysis adjusting for gender at birth (female, male) and Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL).
 OR and RR are obtained from genmod models (link = logit or log, respectively) for overall and subgroups (using a 'by subgroup statement'), adjusting for gender at birth (female, male) and Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL). p value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment, gender at birth (female, male) and Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL).

Table 2.02
 Analysis of Proportion of Subjects With Plasma HIV-1 RNA <50 copies/mL at Week 48
 Overall and by Subgroup - Snapshot Analysis - FLAIR

Subgroup	Category	Measure	Q4W IM (N=283)	ABC/DTG/3TC (N=283)
Age (years)	>=50	Number of Subjects with HIV-1 RNA <50 c/mL/Total Assessed	30/33 (91%)	28/29 (97%)
		OR (95% CI) p value	0.3326 (0.0307, 3.5981) 0.365	
		RD (95% CI) p value	-6.0363 (-17.5864, 5.5139) 0.306	
		RR (95% CI) p value P value for interaction	0.9256 (0.7468, 1.1471) 0.480 0.176	

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk.
 For RD, statistical measures are obtained from Cochran-Mantel Haenszel stratified analysis adjusting for gender at birth (female, male) and Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL).
 OR and RR are obtained from genmod models (link = logit or log, respectively) for overall and subgroups (using a 'by subgroup statement'), adjusting for gender at birth (female, male) and Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL). p value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment, gender at birth (female, male) and Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL).

Table 2.04
 Statistical Analysis of Change from Maintenance Baseline in CD4+ Cell Count (cells/mm³) at
 Week 48 - Overall - MMRM - FLAIR

Treatment	N	n	Adjusted mean[1]	S.E	Difference [2] (95% CI)	P-value	Hedges'g		
							Hedges'g (S.E)	95% CI	P-value
Q4W IM	283	246	40.61	11.611	-36.11 (-68.08, -4.13)	0.027	-0.1903 (0.08876)	(-0.3646, -0.0159)	0.033
ABC/DTG/3TC	283	263	76.72	11.403					

[1] Adjusted mean is the estimated mean change from baseline at Week 48 in each arm calculated from MMRM with the following covariates/factors: treatment, visit, treatment*visit, Maintenance BL (Day 1) CD4+ Cell Count (cells/mm³), gender at birth (female, male) and Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL) with visit as the repeated factor. No assumptions were made about the correlations between subject readings of CD4+ Cell Count, i.e., the correlation matrix for within-subject errors is unstructured.

[2] Difference: Q4W IM - ABC/DTG/3TC.

Note: MMRM = Mixed Model Repeated Measures.

Table 2.05
 Statistical Analysis of Change from Maintenance Baseline in CD4+ Cell Count (cells/mm³) at Week 48
 by Subgroup - MMRM - FLAIR

Subgroup: Age (<35 vs. 35-<50 vs. >=50 years)
 Category: <35

Treatment	N	n	Adjusted mean[1]	S.E	Difference [2] (95% CI)	P-value	Inter[3] P-value	Hedges'g		
								Hedges'g (S.E)	95% CI	P-value
Q4W IM	143	128	44.06	16.343	-40.83 (-85.97, 4.32)	0.076	0.468	-0.1544 (0.12420)	(-0.3984, 0.0896)	0.214
ABC/DTG/3TC	145	131	84.88	16.197						

[1] For each subgroup, adjusted mean is the estimated mean change from baseline at Week 48 in each arm calculated from repeated measures model with the following covariates/factors: treatment, visit, subgroup (include if subgroup = age, race or region), treatment*visit, treatment*subgroup, visit*subgroup, treatment*visit*subgroup, Maintenance BL (Day 1) CD4+ Cell Count (cells/mm³), gender at birth (female, male), Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL) with visit as the repeated factor. No assumptions were made about the correlations between subject readings of CD4+ Cell Count, i.e., the correlation matrix for within-subject errors is unstructured. MMRM = Mixed Model Repeated Measures.

[2] Difference: Q4W IM - ABC/DTG/3TC.

[3] Inter = Interaction between each subgroup and treatment.

ABC/DTG/3TC	227	209	68.59	12.786						

[1] For each subgroup, adjusted mean is the estimated mean change from baseline at Week 48 in each arm calculated from repeated measures model with the following covariates/factors: treatment, visit, subgroup (include if subgroup = age, race or region), treatment*visit, treatment*subgroup, visit*subgroup, treatment*visit*subgroup, Maintenance BL (Day 1) CD4+ Cell Count (cells/mm³), gender at birth (female, male), Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL) with visit as the repeated factor. No assumptions were made about the correlations between subject readings of CD4+ Cell Count, i.e., the correlation matrix for within-subject errors is unstructured. MMRM = Mixed Model Repeated Measures.

[2] Difference: Q4W IM - ABC/DTG/3TC.

[3] Inter = Interaction between each subgroup and treatment.

Table 2.05

Statistical Analysis of Change from Maintenance Baseline in CD4+ Cell Count (cells/mm³) at Week 48
 by Subgroup - MMRM - FLAIR

Subgroup: Induction BL (Week -20) HIV-1 RNA (<100,000 vs. >=100,000 c/mL)
 Category: >=100,000

Treatment	N	n	Adjusted mean[1]	S.E	Difference [2] (95% CI)	P-value	Inter[3] P-value	Hedges'g		
								Hedges'g (S.E)	95% CI	P-value

ABC/DTG/3TC	56	54	108.33	25.376						

[1] For each subgroup, adjusted mean is the estimated mean change from baseline at Week 48 in each arm calculated from repeated measures model with the following covariates/factors: treatment, visit, subgroup (include if subgroup = age, race or region), treatment*visit, treatment*subgroup, visit*subgroup, treatment*visit*subgroup, Maintenance BL (Day 1) CD4+ Cell Count (cells/mm³), gender at birth (female, male), Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL) with visit as the repeated factor. No assumptions were made about the correlations between subject readings of CD4+ Cell Count, i.e., the correlation matrix for within-subject errors is unstructured. MMRM = Mixed Model Repeated Measures.
 [2] Difference: Q4W IM - ABC/DTG/3TC.
 [3] Inter = Interaction between each subgroup and treatment.

Table 3.26
 Analysis of Proportion of Subjects with any New Onset of an "HIV-infection stage 3"
 Event (Maintenance Phase) - by Subgroup - FLAIR

Subgroup: Overall

Category	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Interaction p-value(RR)
Overall	0/283	1/283 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999	

Note: OR = Odds Ratio; RD = Risk Difference(in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively), for overall and subgroup (using a 'by subgroup statement'). P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

PPD

Table 6.02

Statistical Analysis of SF-12 - Change from Maintenance Baseline in MCS and PCS Scores at Week 48
 - Overall - MMRM - FLAIR

Domain: Mental Component Score

Treatment	N	n	Adjusted mean[1]	S.E	Difference [2] (95% CI)	P-value	Hedges'g		
							Hedges'g (S.E)	95% CI	P-value
Q4W IM	283	240	0.06	0.453	0.98 (-0.34, 2.30)	0.147	0.1335 (0.09042)	(-0.0442, 0.3112)	0.140
ABC/DTG/3TC	283	249	-0.92	0.500					

[1] Adjusted mean is the estimated mean change from baseline in each arm calculated from repeated measures model with the following covariates/factors: treatment, visit, treatment*visit, Maintenance BL (Day 1) Score, gender at birth (female, male), age (<50, >=50 years), race (white, non-white) and Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL) with visit as the repeated factor. No assumptions were made about the correlations between subject readings of SF-12 scores, i.e., the correlation matrix for within-subject errors is unstructured.
 [2] Difference:= Q4W IM - ABC/DTG/3TC.

Note: MMRM=Mixed Model Repeated Measures.

Table 6.02

Statistical Analysis of SF-12 - Change from Maintenance Baseline in MCS and PCS Scores at Week 48
 - Overall - MMRM - FLAIR

Domain: Physical Component Score

Treatment	N	n	Adjusted mean[1]	S.E	Difference [2] (95% CI)	P-value	Hedges'g

	ABC/DTG/3TC	56	51	-0.08 (0.691)						

[1] For each subgroup, adjusted mean is the estimated mean change from baseline in each arm calculated from repeated measures model with the following covariates/factors: treatment, visit, subgroup (if subgroup = region), treatment*visit, treatment*subgroup, visit*subgroup, treatment*visit*subgroup, Maintenance BL (Day 1) Score, age (<50, >=50 years; or <35, 35-<50, >=50 years if subgroup = age), gender at birth (female, male), race (white, non-white), and Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL), with visit as the repeated factor. No assumptions were made about the correlations between subject readings of SF-12 scores, i.e., the correlation matrix for within-subject errors is unstructured. [2] Difference:= Q4W IM - ABC/DTG/3TC.

Note: MMRM=Mixed Model Repeated Measures.

Table 6.05

Statistical Analysis of Quality of Life (HATQoL)- Change from Maintenance Baseline in Life Satisfaction, HIV Medication, and Disclosure Worries at Week 48 - Overall - MMRM - FLAIR

Domain: Life Satisfaction Transformed Total Score

Treatment	N	n	Adjusted mean[1]	S.E	Difference [2] (95% CI)	P-value	Hedges'g		
							Hedges'g (S.E)	95% CI	P-value
Q4W IM	283	241	0.95	0.803	0.69 (-1.63, 3.01)	0.558	0.0537 (0.09024)	(-0.1236, 0.2310)	0.552
ABC/DTG/3TC	283	249	0.26	0.863					

[1] Adjusted mean is the estimated mean change from baseline in each arm calculated from repeated measures model with the following covariates/factors: treatment, visit, treatment*visit, Maintenance BL (Day 1) Score, gender at birth (female, male), age (<50, >=50 years), race (white, non-white) and Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL) with visit as the repeated factor. No assumptions were made about the correlations between subject readings of HATQoL scores, i.e., the correlation matrix for within-subject errors is unstructured.
 [2] Difference:= Q4W IM - ABC/DTG/3TC.

Note: MMRM=Mixed Model Repeated Measures.

Table 6.05

Statistical Analysis of Quality of Life (HATQoL)- Change from Maintenance Baseline in Life Satisfaction, HIV Medication, and Disclosure Worries at Week 48 - Overall - MMRM - FLAIR

Domain: HIV Medication Transformed Total Score

Table 6.08

Statistical Analysis of HIVTSQs - Change from Maintenance Baseline in Total Treatment Satisfaction Score at Week 44 - Overall - MMRM - FLAIR

Treatment	N	n	Adjusted mean[1]	S.E	Difference [2] (95% CI)	P-value	Hedges'g		
							Hedges'g (S.E)	95% CI	P-value
Q4W IM	283	238	1.59	0.392	0.81 (-0.26, 1.88)	0.137	0.1455 (0.09099)	(-0.0334, 0.3243)	0.111
ABC/DTG/3TC	283	245	0.78	0.378					

[1] Adjusted mean is the estimated mean change from baseline in each arm calculated from repeated measures model with the following covariates/factors: treatment, visit, treatment*visit, Maintenance BL (Day 1) Score, gender at birth (female, male), age (<50, >=50 years), race (white, non-white) and Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL) with visit as the repeated factor. No assumptions were made about the correlations between subject readings of HIVTSQs scores, i.e., the correlation matrix for within-subject errors is unstructured.
 [2] Difference:= Q4W IM - ABC/DTG/3TC.

Note: MMRM=Mixed Model Repeated Measures.

Table 6.09

[2] Difference:= Q4W IM - ABC/DTG/3TC.
 Note: MMRM=Mixed Model Repeated Measures.

Table 6.09

Statistical Analysis of HIVTSQs - Change from Maintenance Baseline in Total Treatment Satisfaction Score at Week 44 by Subgroup - MMRM - FLAIR

Subgroup: Induction BL (Week -20) HIV-1 RNA (<100,000 vs. >=100,000 c/mL)

Category	Treatment	N	n	Adjusted mean (S.E) [1]	Difference [2] (95% CI)	P-value	Interaction P-value	Hedges'g		
								(S.E)	95% CI	P-value
<100,000	Q4W IM	227	190	1.67 (0.439)	1.15 (-0.05, 2.36)	0.060	0.209	0.1842 (0.10208)	(-0.0165, 0.3848)	0.072
	ABC/DTG/3TC	227	194	0.52 (0.424)						
>=100,000	Q4W IM	56	48	1.27 (0.873)	-0.52 (-2.89, 1.86)	0.670	0.209	-0.0418 (0.20074)	(-0.4364, 0.3528)	0.835
	ABC/DTG/3TC	56	51	1.79 (0.833)						

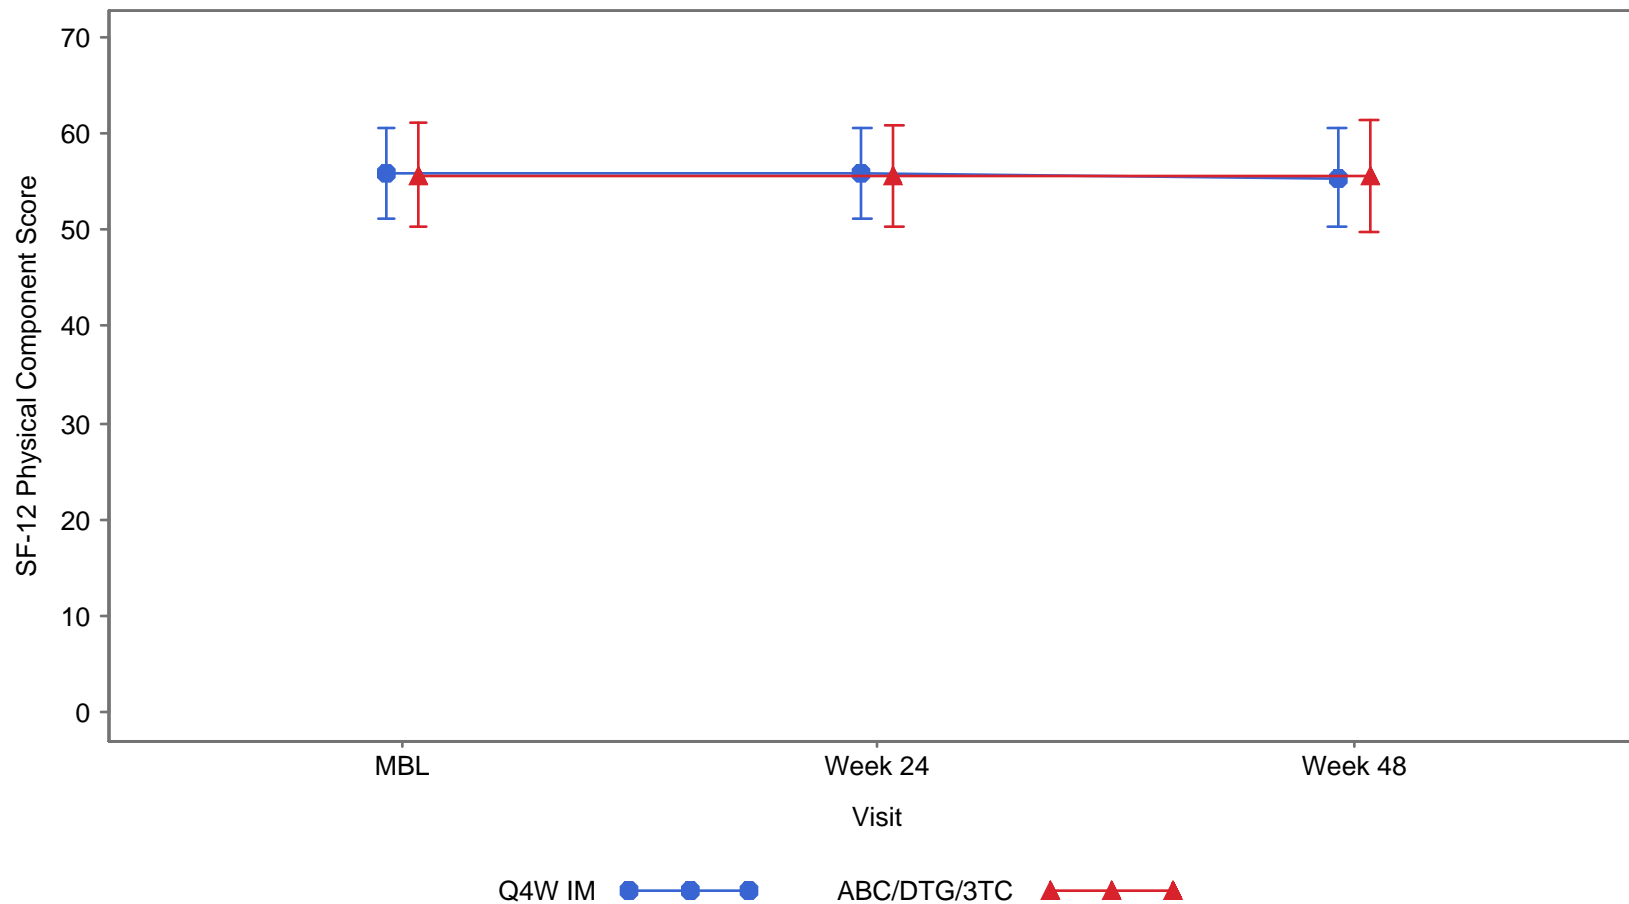

[1] For each subgroup, adjusted mean is the estimated mean change from baseline in each arm calculated from repeated measures model with the following covariates/factors: treatment, visit, subgroup (if subgroup = region), treatment*visit, treatment* subgroup, visit*subgroup, treatment*visit*subgroup, Maintenance BL (Day 1) Score, gender at birth (female, male), age (<50, >=50 years; or <35, 35-<50, >= 50 years if subgroup = age), race (white, non-white), and Induction BL (Week -20) HIV-1 RNA (<100,000, >=100,000 c/mL), with visit as the repeated factor. No assumptions were made about the correlations between subject readings of HIVTSQs scores, i.e., the correlation matrix for within-subject errors is unstructured. [2] Difference:= Q4W IM - ABC/DTG/3TC.
 Note: MMRM=Mixed Model Repeated Measures.

Note: "Any Event" represents subjects with any AE reported.

Note: OR = Odds Ratio; RD = Risk Difference(in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: OR = Odds Ratio; RD = Risk Difference(in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade,
 System Organ Class and Preferred Term (Maintenance Phase) - FLAIR

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value
Blood creatinine increased					
Any Event	1 (<1%)	0	>999 (>999, >999) /NC	0.3534 (-11.1403, 11.8471) /0.952	>999 (>999, >999) /NC
Max Grade 1	1 (<1%)	0	>999 (>999, >999) /NC	0.3534 (-11.1403, 11.8471) /0.952	>999 (>999, >999) /NC
Max Grade 2	0	0	NC	NC	NC
Max Grade 3	0	0	NC	NC	NC
Max Grade 4	0	0	NC	NC	NC
Max Grade 5	0	0	NC	NC	NC

Note: "Any Event" represents subjects with any AE reported.

Note: OR = Odds Ratio; RD = Risk Difference(in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported.

Note: OR = Odds Ratio; RD = Risk Difference(in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value
Thrombophlebitis superficial					
Any Event	1 (<1%)	0	>999 (>999, >999) /NC	0.3534 (-11.1403, 11.8471) /0.952	>999 (>999, >999) /NC
Max Grade 1	0	0	NC	NC	NC
Max Grade 2	1 (<1%)	0	>999 (>999, >999) /NC	0.3534 (-11.1403, 11.8471) /0.952	>999 (>999, >999) /NC
Max Grade 3	0	0	NC	NC	NC
Max Grade 4	0	0	NC	NC	NC
Max Grade 5	0	0			

Note: "Any Event" represents subjects with any AE reported.

Note: OR = Odds Ratio; RD = Risk Difference(in percentages); RR = Relative Risk. RD, OR and RR are obtained from genmod models (link = identity, logit or log, respectively) with no covariate adjustment.

NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

>=50	2/ 33 (6%)	0/ 29	>999 (>999, >999) /NC	8.1845 (-29.7522, 46.1212) /0.672	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17
 Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - FLAIR

Subgroup: Age (<35 vs. 35-<50 vs. >=50 years)

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

35-<50	0/107	0/109	NC	NC	NC	
>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

35-<50	0/107	1/109 (<1%)	<0.0001 (<0.0001, -) />0.999	-3.1687 (-23.0077, 16.6703) /0.754	<0.0001 (<0.0001, -) />0.999	
>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

<35	4/143 (3%)	1/145 (<1%)	4.1439 (0.4575, 37.5359) /0.206	2.1075 (-0.9121, 5.1272) /0.171	4.0559 (0.4589, 35.8478) /0.208	NC
35-<50	0/107	0/109	NC	NC	NC	
>=50	0/ 33	1/ 29 (3%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

35-<50	0/107	1/109 (<1%)	<0.0001 (<0.0001, -) />0.999	-3.1687 (-23.0077, 16.6703) /0.754	<0.0001 (<0.0001, -) />0.999	
>=50	1/ 33 (3%)	0/ 29	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17
 Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - FLAIR

Subgroup: Age (<35 vs. 35-<50 vs. >=50 years)

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Lipodystrophy acquired						
<35	0/143	0/145	NC	NC	NC	NC
35-<50	1/107 (<1%)	0/109	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

<35	8/143 (6%)	1/145 (<1%)	8.5333 (1.0533, 69.1345) /0.045	4.9048 (0.9045, 8.9050) /0.016	8.1119 (1.0277, 64.0275) /0.047	NC
35-<50	2/107 (2%)	0/109	>999 (>999, >999) /NC	4.1459 (-15.4115, 23.7032) /0.678	>999 (>999, >999) /NC	
>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

<35	17/143 (12%)	14/145 (10%)	1.2625 (0.5973, 2.6685) /0.542	2.2329 (-4.9259, 9.3917) /0.541	1.2313 (0.6309, 2.4028) /0.542	0.136
35-<50	8/107 (7%)	18/109 (17%)	0.4085 (0.1694, 0.9850) /0.046	-9.0371 (-17.6059, -0.4684) /0.039	0.4528 (0.2057, 0.9966) /0.049	
>=50	6/ 33 (18%)	5/ 29 (17%)	1.0667 (0.2884, 3.9454) /0.923	0.9404 (-18.0905, 19.9714) /0.923	1.0545 (0.3592, 3.0956) /0.923	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17
 Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - FLAIR

Subgroup: Age (<35 vs. 35-<50 vs. >=50 years)

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Traumatic haematoma						
<35	0/143	0/145	NC	NC	NC	NC
35-<50	0/107	0/109	NC	NC	NC	
>=50	1/ 33 (3%)	0/ 29	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Blood triglycerides increased						
<35	0/143	0/145	NC	NC	NC	NC
35-<50	1/107 (<1%)	0/109	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Insomnia <35	4/143 (3%)	2/145 (1%)	2.0576 (0.3709, 11.4144) /0.409	1.4179 (-1.8848, 4.7206) /0.400	2.0280 (0.3774, 10.8985) /0.410	0.247
35-<50	1/107 (<1%)	2/109 (2%)	0.5047 (0.0451, 5.6501) /0.579	-0.9003 (-4.0102, 2.2097) /0.570	0.5093 (0.0469, 5.5343) /0.579	
>=50	2/ 33 (6%)	0/ 29	>999 (>999, >999) /NC	8.1845 (-29.7522, 46.1212) /0.672	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

35-<50	0/107	0/109	NC	NC	NC	
>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Hydrocholecystis						
<35	0/143	0/145	NC	NC	NC	NC
35-<50	1/107 (<1%)	0/109	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	13/220 (6%)	9/219 (4%)	1.4654 (0.6131, 3.5023) /0.390	1.7995 (-2.2773, 5.8763) /0.387	1.4379 (0.6276, 3.2944) /0.391	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17
 Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - FLAIR

Subgroup: Gender at Birth (Female vs. Male)

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Sinusitis Female	0/ 63	1/ 64 (2%)	<0.0001 (<0.0001, -) />0.999	-3.8401 (-29.5545, 21.8743) /0.770	<0.0001 (<0.0001, -) />0.999	0.218
Male	4/220 (2%)	3/219 (1%)	1.3333 (0.2949, 6.0283) /0.709	0.4483 (-1.8941, 2.7908) /0.708	1.3273 (0.3006, 5.8611) /0.709	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Female	0/ 63	1/ 64 (2%)	<0.0001 (<0.0001, -) />0.999	-3.8401 (-29.5545, 21.8743) /0.770	<0.0001 (<0.0001, -) />0.999	NC
Male	3/220 (1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-cardiac chest pain						
Female	0/ 63	0/ 64	NC	NC	NC	NC
Male	0/220	1/219 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	2/220 (<1%)	2/219 (<1%)	0.9954 (0.1390, 7.1303) /0.996	-0.0042 (-1.7819, 1.7736) /0.996	0.9955 (0.1415, 7.0038) /0.996	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17
 Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - FLAIR

Subgroup: Gender at Birth (Female vs. Male)

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Epigastric discomfort						
Female	0/ 63	0/ 64	NC	NC	NC	NC
Male	1/220 (<1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
Gastrointestinal sounds abnormal						
Female	0/ 63	0/ 64	NC	NC	NC	NC
Male	1/220 (<1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - FLAIR

Subgroup: Gender at Birth (Female vs. Male)

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
<hr/>						
Pain in extremity						
Female	1/ 63 (2%)	0/ 64	>999 (>999, >999) /NC	3.8650 (-21.6768, 29.4068) /0.767	>999 (>999, >999) /NC	>0.999
Male	5/220 (2%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
Neck pain						
Female	0/ 63	0/ 64	NC	NC	NC	>0.999
Male	2/220 (<1%)	3/219 (1%)	0.6606 (0.1093, 3.9923) /0.651	-0.4608 (-2.4464, 1.5249) /0.649	0.6636 (0.1120, 3.9329) /0.652	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 (Maintenance Phase) - by Subgroup - FLAIR

Subgroup: Gender at Birth (Female vs. Male)

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Rosacea						
Female	0/ 63	0/ 64	NC	NC	NC	NC
Male	0/220	1/219 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999	
Skin disorder						
Female	1/ 63 (2%)	0/ 64	>999 (>999, >999) /NC	3.8650 (-21.6768, 29.4068) /0.767	>999 (>999, >999) /NC	NC
Male	0/220	0/219	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Upper respiratory tract inflammation						
Female	0/ 63	0/ 64	NC	NC	NC	NC
Male	0/220	1/219 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	0/220	1/219 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999	
Joint injury						
Female	0/ 63	0/ 64	NC	NC	NC	NC
Male	1/220 (<1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Female	2/ 63 (3%)	0/ 64	>999 (>999, >999) /NC	5.4180 (-20.1061, 30.9421) /0.677	>999 (>999, >999) /NC	NC
Male	0/220	0/219	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17
 Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - FLAIR

Male	0/220	1/219 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999	
Hypocalcaemia						
Female	0/ 63	0/ 64	NC	NC	NC	NC
Male	0/220	1/219 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Female	0/ 63	0/ 64	NC	NC	NC	>0.999
Male	1/220 (<1%)	2/219 (<1%)	0.4954 (0.0446, 5.5039) /0.568	-0.4587 (-2.0006, 1.0832) /0.560	0.4977 (0.0455, 5.4491) /0.568	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Lymphadenitis						
Female	1/ 63 (2%)	0/ 64	>999 (>999, >999) /NC	3.8650 (-21.6768, 29.4068) /0.767	>999 (>999, >999) /NC	NC
Male	0/220	0/219	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	1/ 67 (1%)	1/ 80 (1%)	1.1970 (0.0734, 19.5076) /0.900	0.2425 (-3.5465, 4.0316) /0.900	1.1940 (0.0761, 18.7290) /0.900	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17
 Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - FLAIR

Subgroup: Race (White vs. Non-White)

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Body tinea						
White	2/216 (<1%)	0/201	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	NC
Non-White	2/ 67 (3%)	0/ 80	>999 (>999, >999) /NC	5.2349 (-17.7448, 28.2147) /0.655	>999 (>999, >999) /NC	
Fungal skin infection						
White	3/216 (1%)	1/201 (<1%)	2.8169 (0.2906, 27.3037) /0.372	0.8914 (-0.9476, 2.7304) /0.342	2.7917 (0.2928, 26.6195) /0.372	>0.999
Non-White	0/ 67	0/ 80	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.17
 Analysis of Proportion of Subjects with Adverse Events by System Organ Class and Preferred Term
 (Maintenance Phase) - by Subgroup - FLAIR

Subgroup: Race (White vs. Non-White)

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Varicella						
White	1/216 (<1%)	0/201	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	NC
Non-White	0/ 67	0/ 80	NC	NC	NC	
Viral tonsillitis						
White	1/216 (<1%)	0/201	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	NC
Non-White	0/ 67	0/ 80	NC	NC	NC
