Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Age - FLAIR

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Asthenia <35	1/143 (<1%)	0/145	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	NC
35-<50	1/107 (<1%)	0/109	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Vomiting <35	1/143 (<1%)	2/145 (1%)	0.5035 (0.0451, 5.6155) /0.577	-0.6800 (-3.0186, 1.6586) /0.569	0.5070 (0.0465, 5.5293) /0.577	NC
35-<50	1/107 (<1%)	0/109	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD,
 OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively),
 using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models
 with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical
 estimates.

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Rhinitis allergic <35	2/143 (1%)	0/145	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	NC
35-<50	1/107 (<1%)	0/109	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade, System Organ Class and Preferred Term (Maintenance Phase) - by Age - FLAIR

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Contusion <35	1/143 (<1%)	0/145	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	NC
35-<50	0/107	1/109 (<1%)	<0.0001 (<0.0001, -) />0.999	-3.1687 (-23.0077, 16.6703) /0.754	<0.0001 (<0.0001, -) />0.999	
>=50	1/ 33 (3%)	0/ 29	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

>=50	0/ 33	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	107/220 (49%)	102/219 (47%)	1.0862 (0.7467, 1.5799) /0.666	2.0610 (-7.2807, 11.4027) /0.665	1.0443 (0.8581, 1.2708) /0.666	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Papilloma viral infection						
Female	2/ 63 (3%)	1/ 64 (2%)	2.0656 (0.1826, 23.3721) /0.558	1.6121 (-3.6770, 6.9012) /0.550	2.0317 (0.1890, 21.8459) /0.559	0.838
Male	3/220 (1%)	2/219 (<1%)	1.5000 (0.2482, 9.0660) /0.659	0.4504 (-1.5335, 2.4343) /0.656	1.4932 (0.2520, 8.8489) /0.659	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Cystitis Female	2/ 63 (3%)	0/ 64	>999 (>999, >999) /NC	5.4180 (-20.1061, 30.9421) /0.677	>999 (>999, >999) /NC	>0.999
Male	1/220 (<1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
Genital herpes simplex Female	0/ 63	0/ 64	NC	NC	NC	>0.999
Male	1/220 (<1%)	2/219 (<1%)	0.4954 (0.0446, 5.5039) /0.568	-0.4587 (-2.0006, 1.0832) /0.560	0.4977 (0.0455, 5.4491) /0.568	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade,
 System Organ Class, Preferred Term (Maintenance Phase) - by Sex at Birth - FLAIR

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Dacryocystitis						
Female	0/ 63	0/ 64	NC	NC	NC	NC
Male	1/220 (<1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
Fungal infection						
Female	1/ 63 (2%)	0/ 64	>999 (>999, >999) /NC	3.8650 (-21.6768, 29.4068) /0.767	>999 (>999, >999) /NC	NC
Male	0/220	0/219	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	0/220	1/219 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	3/220 (1%)	1/219 (<1%)	3.0138 (0.3111, 29.2001) /0.341	0.9070 (-0.8667, 2.6807) /0.316	2.9864 (0.3131, 28.4879) /0.342	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Female	0/ 63	0/ 64	NC	NC	NC	NC
Male	1/220 (<1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	1/220 (<1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade,
 System Organ Class, Preferred Term (Maintenance Phase) - by Sex at Birth - FLAIR

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Bronchitis chronic						
Female	0/ 63	0/ 64	NC	NC	NC	NC
Male	1/220 (<1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
Bronchospasm						
Female	0/ 63	1/ 64 (2%)	<0.0001 (<0.0001, -) />0.999	-3.8401 (-29.5545, 21.8743) /0.770	<0.0001 (<0.0001, -) />0.999	NC
Male	0/220	0/219	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	15/220 (7%)	20/219 (9%)	0.7280 (0.3625, 1.4621) /0.372	-2.3142 (-7.3788, 2.7503) /0.370	0.7466 (0.3926, 1.4198) /0.373	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.19
 Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade,
 System Organ Class, Preferred Term (Maintenance Phase) - by Sex at Birth - FLAIR

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Blood creatine phosphokinase increased						
Female	0/ 63	1/ 64 (2%)	<0.0001 (<0.0001, -) />0.999	-3.8401 (-29.5545, 21.8743) /0.770	<0.0001 (<0.0001, -) />0.999	0.343
Male	2/220 (<1%)	3/219 (1%)	0.6606 (0.1093, 3.9923) /0.651	-0.4608 (-2.4464, 1.5249) /0.649	0.6636 (0.1120, 3.9329) /0.652	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	4/220 (2%)	3/219 (1%)	1.3333 (0.2949, 6.0283) /0.709	0.4483 (-1.8941, 2.7908) /0.708	1.3273 (0.3006, 5.8611) /0.709	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	1/220 (<1%)	1/219 (<1%)	0.9954 (0.0619, 16.0157) /0.997	-0.0021 (-1.2620, 1.2578) /0.997	0.9955 (0.0627, 15.8145) /0.997	
Cystitis						
Female	1/ 63 (2%)	1/ 64 (2%)	1.0161 (0.0622, 16.6081) /0.991	0.0248 (-4.3061, 4.3557) /0.991	1.0159 (0.0649, 15.8892) /0.991	0.302
Male	0/220	1/219 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	0/220	1/219 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	1/220 (<1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
Neck pain						
Female	0/ 63	0/ 64	NC	NC	NC	NC
Male	1/220 (<1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.19
 Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade,
 System Organ Class, Preferred Term (Maintenance Phase) - by Sex at Birth - FLAIR

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Male	2/220 (<1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
Contusion						
Female	1/ 63 (2%)	1/ 64 (2%)	1.0161 (0.0622, 16.6081) /0.991	0.0248 (-4.3061, 4.3557) /0.991	1.0159 (0.0649, 15.8892) /0.991	0.308
Male	1/220 (<1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Female	1/ 63 (2%)	0/ 64	>999 (>999, >999) /NC	3.8650 (-21.6768, 29.4068) /0.767	>999 (>999, >999) /NC	NC
Male	0/220	0/219	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	1/220 (<1%)	3/219 (1%)	0.3288 (0.0339, 3.1853) /0.337	-0.9153 (-2.6930, 0.8623) /0.313	0.3318 (0.0348, 3.1653) /0.338	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Male	2/220 (<1%)	0/219	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Weight decreased						
Female	1/ 63 (2%)	0/ 64	>999 (>999, >999) /NC	3.8650 (-21.6768, 29.4068) /0.767	>999 (>999, >999) /NC	NC
Male	0/220	0/219	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	1/ 67 (1%)	3/ 80 (4%)	0.3889 (0.0395, 3.8285) /0.418	-2.2575 (-7.3330, 2.8181) /0.383	0.3980 (0.0424, 3.7378) /0.420	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

White	2/216 (<1%)	1/201 (<1%)	1.8692 (0.1682, 20.7734) /0.611	0.4284 (-1.1771, 2.0339) /0.601	1.8611 (0.1701, 20.3673) /0.611	0.366
Non-White	1/ 67 (1%)	0/ 80	>999 (>999, >999) /NC	3.7695 (-19.2467, 26.7858) /0.748	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	0/ 67	1/ 80 (1%)	<0.0001 (<0.0001, -) />0.999	-3.5218 (-28.3504, 21.3068) /0.781	<0.0001 (<0.0001, -) />0.999	
Acute sinusitis						
White	0/216	1/201 (<1%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999	NC
Non-White	0/ 67	0/ 80	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Sexually transmitted disease						
White	0/216	0/201	NC	NC	NC	NC
Non-White	1/ 67 (1%)	0/ 80	>999 (>999, >999) /NC	3.7695 (-19.2467, 26.7858) /0.748	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	0/ 67	0/ 80	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	0/ 67	0/ 80	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	1/ 67 (1%)	0/ 80	>999 (>999, >999) /NC	3.7695 (-19.2467, 26.7858) /0.748	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	0/ 67	0/ 80	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	0/ 67	0/ 80	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Investigations						
Any Event						
White	17/216 (8%)	8/201 (4%)	2.0609 (0.8692, 4.8866) /0.101	3.8903 (-0.6041, 8.3846) /0.090	1.9774 (0.8726, 4.4811) /0.102	0.577
Non-White	3/ 67 (4%)	3/ 80 (4%)	1.2031 (0.2347, 6.1669) /0.824	0.7276 (-5.7419, 7.1971) /0.826	1.1940 (0.2491, 5.7223) /0.824	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	0/ 67	1/ 80 (1%)	<0.0001 (<0.0001, -) />0.999	-3.5218 (-28.3504, 21.3068) /0.781	<0.0001 (<0.0001, -) />0.999	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	0/ 67	1/ 80 (1%)	<0.0001 (<0.0001, -) />0.999	-3.5218 (-28.3504, 21.3068) /0.781	<0.0001 (<0.0001, -) />0.999	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	3/ 67 (4%)	3/ 80 (4%)	1.2031 (0.2347, 6.1669) /0.824	0.7276 (-5.7419, 7.1971) /0.826	1.1940 (0.2491, 5.7223) /0.824	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	0/ 67	0/ 80	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.20

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	4/ 67 (6%)	2/ 80 (3%)	2.4762 (0.4392, 13.9610) /0.304	3.4701 (-3.1549, 10.0952) /0.305	2.3881 (0.4513, 12.6358) /0.306	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC selected.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	1/ 67 (1%)	0/ 80	>999 (>999, >999) /NC	3.7695 (-19.2467, 26.7858) /0.748	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.20
 Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade,
 System Organ Class, Preferred Term (Maintenance Phase) - by Race - FLAIR

 Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade,
 System Organ Class, Preferred Term (Maintenance Phase) - by Race - FLAIR

Maximum Toxicity Grade= 2

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Reproductive system and breast disorders						
Any Event						
White	3/216 (1%)	5/201 (2%)	0.5521 (0.1302, 2.3407) /0.420	-1.0987 (-3.7579, 1.5606) /0.418	0.5583 (0.1352, 2.3062) /0.421	0.020
Non-White	3/ 67 (4%)	0/ 80	>999 (>999, >999) /NC	6.6704 (-16.3851, 29.7260) /0.571	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Non-White	1/ 67 (1%)	1/ 80 (1%)	1.1970 (0.0734, 19.5076) /0.900	0.2425 (-3.5465, 4.0316) /0.900	1.1940 (0.0761, 18.7290) /0.900	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.

Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment. NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

White	6/216 (3%)	1/201 (<1%)	5.7142 (0.6819, 47.8846) /0.108	2.2803 (-0.1174, 4.6780) /0.062	5.5833 (0.6781, 45.9731) /0.110	0.416
Non-White	2/ 67 (3%)	0/ 80	>999 (>999, >999) /NC	5.2349 (-17.7448, 28.2147) /0.655	>999 (>999, >999) /NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Gastroenteritis						
North America	0/ 47	0/ 62	NC	NC	NC	0.770
Europe	12/213 (6%)	7/192 (4%)	1.5778 (0.6082, 4.0933) /0.348	1.9880 (-2.0884, 6.0643) /0.339	1.5453 (0.6211, 3.8448) /0.349	
Rest of World	1/ 23 (4%)	2/ 29 (7%)	0.6136 (0.0521, 7.2227) /0.698	-2.5487 (-14.9791, 9.8817) /0.688	0.6304 (0.0609, 6.5267) /0.699	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Europe	6/213 (3%)	2/192 (1%)	2.7536 (0.5491, 13.8086) /0.218	1.7752 (-0.8704, 4.4209) /0.188	2.7042 (0.5524, 13.2393) /0.220	
Rest of World	0/ 23	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Secondary syphilis						
North America	0/ 47	0/ 62	NC	NC	NC	NC
Europe	3/213 (1%)	1/192 (<1%)	2.7286 (0.2814, 26.4540) /0.386	0.8876 (-0.9941, 2.7694) /0.355	2.7042 (0.2837, 25.7791) /0.387	
Rest of World	0/ 23	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Europe	1/213 (<1%)	0/192	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
Rest of World	0/ 23	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Europe	4/213 (2%)	1/192 (<1%)	3.6555 (0.4050, 32.9930) /0.248	1.3571 (-0.7309, 3.4451) /0.203	3.6056 (0.4065, 31.9798) /0.249	
Rest of World	0/ 23	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Note: "Any Event" represents subjects with any AE reported, regardless of SOCs selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 System Organ Class, Preferred Term (Maintenance Phase) - by Region - FLAIR

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Visual field defect						
North America	0/ 47	0/ 62	NC	NC	NC	NC
Europe	1/213 (<1%)	0/192	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
Rest of World	0/ 23	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade,
 System Organ Class, Preferred Term (Maintenance Phase) - by Region - FLAIR

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Blood blister						
North America	0/ 47	0/ 62	NC	NC	NC	NC
Europe	0/213	0/192	NC	NC	NC	
Rest of World	0/ 23	1/ 29 (3%)	<0.0001 (<0.0001, -) />0.999	NC	<0.0001 (<0.0001, -) />0.999	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

 System Organ Class, Preferred Term (Maintenance Phase) - by Region - FLAIR

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)
Skin hyperpigmentation						
North America	0/ 47	0/ 62	NC	NC	NC	NC
Europe	1/213 (<1%)	0/192	>999 (>999, >999) /NC	NC	>999 (>999, >999) /NC	
Rest of World	0/ 23	0/ 29	NC	NC	NC	

Note: "Any Event" represents subjects with any AE reported, regardless of SOC's selected.
 Note: OR = Odds Ratio; RD = Risk Difference (in percentages); RR = Relative Risk. For each SOC and PT, RD, OR and RR for each subgroup are obtained from genmod models (link = identity, logit or log, respectively), using a 'by subgroup statement'. P-value for interaction is for RR only and is obtained by genmod models with the following variables: treatment, subgroup, subgroup*treatment with no covariate adjustment.
 NC = Not Calculable. Zero counts for AEs in either treatment group may lead to unreliable statistical estimates.

Table 3.21
 Analysis of Proportion of Subjects with Adverse Events by Maximum Toxicity Grade,
 System Organ Class, Preferred Term (Maintenance Phase) - by Region - FLAIR

Maximum Toxicity Grade= 1

System Organ Class Preferred Term	Q4W IM (N=283)	ABC/DTG/3TC (N=283)	OR (95%CI) /p-value	RD (95%CI) /p-value	RR (95%CI) /p-value	Inter-action p-value (RR)

Skin hypopigmentation
