Dossier zur Nutzenbewertung gemäß § 35a SGB V

Isatuximab (SARCLISA®)

Sanofi-Aventis Deutschland GmbH

Anhang 4-G

Isatuximab in Kombination mit Pomalidomid und Dexamethason zur Behandlung des rezidivierten und refraktären Multiplen Myeloms bei Erwachsenen, die mindestens zwei vorausgegangene Therapien, darunter Lenalidomid und einen Proteasom-Inhibitor, erhalten haben und unter der letzten Therapie eine Krankheitsprogression zeigten.

Stand: 07.05.2021

Studie ICARIA-MM (EFC14335)

Endpunkt **Seite**

1. Datenschnitt (11 OCT 2018)

2. Datenschnitt (01 OCT 2020)

Improvement probability (95% CI)[b]											

A higher score represents a better level of quality of life. Clinical meaningful improvement change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

Improvement probability (95% CI)[b]					

A higher score represents a better level of quality of life. Clinical meaningful improvement change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

P-value	-	0.1047		0.9361	
Deterioration probability (95% CI)[b]					

A lower score represents a better level of quality of life. Clinical meaningful deterioration change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

Hazard ratio inverted (95% CI) vs IPd		-		0.66 (0.45 to 0.96)	

A lower score represents a better level of quality of life. Clinical meaningful deterioration change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.

Deterioration probability (95% CI)[b]					

A lower score represents a better level of quality of life. Clinical meaningful deterioration change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

Median (95% CI)	6.64 (3.811 to NC)	5.62 (2.891 to 13.864)	6.11 (2.891 to NC)	4.73 (1.906 to NC)	
75% quantile (95% CI)	NC (NC to NC)	15.67 (13.864 to 15.671)	NC (NC to NC)	NC (4.830 to NC)	
Comparison vs. Pd					
Log-Rank test p-value[a] vs Pd	-	0.6890		0.3655	
Hazard ratio (95% CI) vs Pd	-	1.08 (0.74 to 1.58)		1.34 (0.71 to 2.51)	
P-value	-	0.6893		0.3672	
Deterioration probability (95% CI)[b]					

A lower score represents a better level of quality of life. Clinical meaningful deterioration change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

16.2.6.1.1 Fatigue
16.2.6.1.1.1 Efficacy response data
16.2.6.1.1.1.20 QLQ-C30 - Time until permanent improvement by 15 pt in fatigue (LOCF) - ITT population

First permanent improvement 15 points Fatigue (%)	**Pd (N=153)**	**IPd (N=154)**
Number (%) of events	9 (5.9)	13 (8.4)
Number (%) of patients censored	144 (94.1)	141 (91.6)
Kaplan-Meier estimates of fatigue in months		
25% quantile (95% CI)	NC (NC to NC)	16.79 (NC to NC)
Median (95% CI)	NC (NC to NC)	16.79 (NC to NC)
75% quantile (95% CI)	NC (NC to NC)	16.79 (NC to NC)
Comparison vs. Pd		
Stratified[a] Log-Rank test p-value[b] vs Pd	-	0.5079
Stratified[a] Hazard ratio (95% CI) vs Pd	-	1.33 (0.57 to 3.12)
P-value	-	0.5093
Probability (95% CI)[c]		
2 Months	0.03 (0.013 to 0.073)	0.03 (0.012 to 0.071)
4 Months	0.03 (0.013 to 0.073)	0.04 (0.016 to 0.080)

A lower score represents a better level of quality of life. Clinical meaningful improvement change from baseline less than or equal to -15 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] stratified on age (<75 years versus >=75 years) and Number of previous lines of therapy (2 or 3 versus > 3) according to IRT
[b] One-sided significance level is 0.025
[c] Estimated using the Kaplan-Meier method
NA/NC = Not Applicable / Not Calculable

Comparison vs. Pd					
Log-Rank test p-value[a] vs Pd	-			0.6799	
Hazard ratio (95% CI) vs Pd	-			0.91 (0.58 to 1.43)	
P-value	-			0.6796	
Deterioration probability (95% CI)[b]					

A higher score represents a better level of quality of life. Clinical meaningful improvement change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

Kaplan-Meier estimates of physical functioning in months		
25% quantile (95% CI)	2.83 (1.938 to 3.778)	2.89 (1.938 to 4.435)
Median (95% CI)	11.99 (5.618 to NC)	10.12 (6.702 to NC)
75% quantile (95% CI)	NC (NC to NC)	NC (15.244 to NC)
Comparison vs. Pd		
Stratified[a] Log-Rank test p-value[b] vs Pd	-	0.7695
Stratified[a] Hazard ratio (95% CI) vs Pd	-	0.95 (0.68 to 1.33)
P-value	-	0.7693
Probability (95% CI)[c]		
2 Months	0.81 (0.733 to 0.863)	0.79 (0.721 to 0.851)
4 Months	0.66 (0.577 to 0.733)	0.70 (0.616 to 0.765)

A higher score represents a better level of quality of life. Clinical meaningful improvement change from baseline greater than or equal to 15 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] stratified on age (<75 years versus >=75 years) and Number of previous lines of therapy (2 or 3 versus > 3) according to IRT
[b] One-sided significance level is 0.025
[c] Estimated using the Kaplan-Meier method
NA/NC = Not Applicable / Not Calculable
