Dossier zur Nutzenbewertung gemäß § 35a SGB V

Isatuximab (SARCLISA®)

Sanofi-Aventis Deutschland GmbH

Anhang 4-G

Isatuximab in Kombination mit Carfilzomib und Dexamethason zur Behandlung des Multiplen Myeloms bei Erwachsenen, die mindestens eine vorausgegangene Therapie erhalten haben

Zusammenfassung der Aussagen
im Dossier

Stand: 07.05.2021

Studie IKEMA (EFC15246)

16.2.6.2 Secondary efficacy endpoints - Overall survival
16.2.6.2.1 ITT population
16.2.6.2.1.3 Subgroup analyses by age
16.2.6.2.1.3.1 Overall survival by treatment group according to age - ITT population

	<65 years		>=65 years		
	Kd (N=66)	**IKd (N=88)**	**Kd (N=57)**	**IKd (N=91)**	**p-value of treatment-by-sub group interaction[c]**
Number (%) of deaths	13 (19.7)	18 (20.5)	12 (21.1)	13 (14.3)	0.4615
Number (%) of patients censored	53 (80.3)	70 (79.5)	45 (78.9)	78 (85.7)	
Kaplan-Meier estimates of OS in months					
25% quantile (95% CI)	NC (13.240 to NC)	23.13 (15.639 to NC)	23.39 (17.117 to NC)	NC (21.552 to NC)	
Median (95% CI)	NC (NC to NC)	NC (23.129 to NC)	NC (23.392 to NC)	NC (NC to NC)	
75% quantile (95% CI)	NC (NC to NC)	NC (NC to NC)	NC (NC to NC)	NC (NC to NC)	
Comparison vs. Kd					
Log-Rank test p-value[a] vs Kd	-	0.9254		0.3655	
Hazard ratio (95% CI) vs Kd	-	1.03 (0.51 to 2.11)		0.70 (0.32 to 1.53)	
P-value	-	0.9256		0.3680	
OS probability (95% CI)[b]					
12 Months	0.877 (0.768 to 0.936)	0.919 (0.838 to 0.961)	0.892 (0.775 to 0.950)	0.898 (0.813 to 0.946)	

OS: Overall survival, CI: Confidence interval
Cut-off date: 07FEB2020 HR<1 favors IKd arm
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] Two-sided significance level is 0.05.
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables and the treatment-by-subgroup interaction as covariates.
PGM=DEVOPS/SAR650984/EFC15246/CIR_RWE/REPORT/PGM/eff_km_subgp_sr_de_i_t.sas OUT=REPORT/OUTPUT/eff_km_os_age_de_i_t_x.rtf (19FEB2021 15:18)

16.2.6.2 Secondary efficacy endpoints - Overall survival
16.2.6.2.1 ITT population
16.2.6.2.1.4 Subgroup analyses by gender
16.2.6.2.1.4.1 Overall survival by treatment group according to gender - ITT population

TT1R: Time to first response, CI: Confidence interval, IRC: Independent Response Committee
Cut-off date: 07FEB2020 HR<1 favors IKd arm
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] Two-sided significance level is 0.05.
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables and the treatment-by-subgroup interaction as covariates.

Median (95% CI)	NC (NC to NC)	NC (NC to NC)	14.65 (6.801 to NC)	NC (1.971 to NC)	
75% quantile (95% CI)	NC (NC to NC)	NC (NC to NC)	NC (6.801 to NC)	NC (NC to NC)	
Comparison vs. Kd					
Log-Rank test p-value[a] vs Kd	-	0.5589		0.3692	
Hazard ratio (95% CI) vs Kd	-	1.18 (0.68 to 2.05)		0.42 (0.06 to 3.00)	
P-value	-	0.5594		0.3839	
Deterioration probability (95% CI)[b]					

A lower score represents a better level of quality of life. Clinical meaningful deterioration change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

Deterioration probability (95% CI)[b]					

A lower score represents a better level of quality of life. Clinical meaningful deterioration change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

P-value	-	0.7176		0.9212	
Deterioration probability (95% CI)[b]					

A lower score represents a better level of quality of life. Clinical meaningful deterioration change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.

First permanent deterioration 15 points Constipation (%)	**Kd (N=123)**	**IKd (N=179)**
Number (%) of events	15 (12.2)	24 (13.4)
Number (%) of patients censored	108 (87.8)	155 (86.6)
Kaplan-Meier estimates of Constipation in months		
25% quantile (95% CI)	NC (NC to NC)	NC (NC to NC)
Median (95% CI)	NC (NC to NC)	NC (NC to NC)
75% quantile (95% CI)	NC (NC to NC)	NC (NC to NC)
Comparison vs. Kd		
Stratified[a] Log-Rank test p-value[b] vs Kd	-	0.8780
Stratified[a] Hazard ratio (95% CI) vs Kd	-	1.05 (0.55 to 2.01)
P-value	-	0.8787
Deterioration probability (95% CI)[c]		
3 Months	0.983 (0.935 to 0.996)	0.966 (0.925 to 0.984)
6 Months	0.966 (0.911 to 0.987)	0.948 (0.902 to 0.972)

A lower score represents a better level of quality of life. Clinical meaningful deterioration change from baseline greater than or equal to 15 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] Stratified on number of prior lines of therapy (1 vs. >1) and Revised International Staging System (R-ISS) stage (I or II vs. III vs. not classified) according to IRT
[b] One-sided significance level is 0.025
[c] Estimated using the Kaplan-Meier method
NA/NC = Not Applicable / Not Calculable

Hazard ratio (95% CI) vs Kd	-	1.14 (0.59 to 2.21)		0.33 (0.02 to 5.48)	
P-value	-	0.7016		0.4420	
Deterioration probability (95% CI)[b]					

A lower score represents a better level of quality of life. Clinical meaningful deterioration change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

Number (%) of events	29 (52.7)	48 (49.5)	41 (60.3)	58 (70.7)	0.0732
Number (%) of patients censored	26 (47.3)	49 (50.5)	27 (39.7)	24 (29.3)	
Kaplan-Meier estimates of Insomnia in months					
25% quantile (95% CI)	1.05 (0.986 to 2.858)	1.97 (1.117 to 4.665)	3.06 (1.150 to 4.764)	1.31 (1.051 to 2.793)	
Median (95% CI)	10.32 (2.858 to NC)	18.46 (6.998 to NC)	8.44 (4.830 to 17.610)	3.75 (2.825 to 6.965)	
75% quantile (95% CI)	NC (NC to NC)	NC (NC to NC)	NC (19.351 to NC)	NC (8.345 to NC)	
Comparison vs. Kd					
Log-Rank test p-value[a] vs Kd	-	0.4852		0.0566	
Hazard ratio (95% CI) vs Kd	-	0.85 (0.53 to 1.35)		1.47 (0.99 to 2.20)	
P-value	-	0.4857		0.0582	
Deterioration probability (95% CI)[b]					

A lower score represents a better level of quality of life. Clinical meaningful deterioration change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

Improvement probability (95% CI)[b]					

A lower score represents a better level of quality of life. Clinical meaningful improvement change from baseline less than or equal to -10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

Log-Rank test p-value[a] vs Kd	-	0.3308		0.4955	
Hazard ratio (95% CI) vs Kd	-	0.75 (0.42 to 1.34)		1.20 (0.71 to 2.01)	
P-value	-	0.3325		0.4961	
Improvement probability (95% CI)[b]					

A lower score represents a better level of quality of life. Clinical meaningful improvement change from baseline less than or equal to -10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable
