Comparison vs. Kd					
Log-Rank test p-value[a] vs Kd	-	0.7829		0.8404	
Hazard ratio (95% CI) vs Kd	-	0.93 (0.58 to 1.51)		0.78 (0.07 to 8.65)	
P-value	-	0.7817		0.8408	
Deterioration probability (95% CI)[b]					

A higher score represents a better level of quality of life. Clinical meaningful deterioration change from baseline less than or equal to -10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

P-value	-	0.5951		0.9504		0.9988	

A lower score represents a better level of quality of life. Clinical meaningful deterioration change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

Number (%) of events	26 (21.1)	30 (16.8)
Number (%) of patients censored	97 (78.9)	149 (83.2)
Kaplan-Meier estimates of future perspective in months		
25% quantile (95% CI)	NC (13.602 to NC)	NC (20.534 to NC)
Median (95% CI)	NC (NC to NC)	NC (NC to NC)
75% quantile (95% CI)	NC (NC to NC)	NC (NC to NC)
Comparison vs. Kd		
Stratified[a] Log-Rank test p-value[b] vs Kd	-	0.2562
Stratified[a] Hazard ratio (95% CI) vs Kd	-	0.74 (0.44 to 1.25)
P-value	-	0.2580
Deterioration probability (95% CI)[c]		
3 Months	0.925 (0.861 to 0.960)	0.954 (0.910 to 0.977)
6 Months	0.899 (0.829 to 0.942)	0.919 (0.867 to 0.951)

A higher score represents a better level of quality of life. Clinical meaningful deterioration change from baseline less than or equal to -15 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] Stratified on number of prior lines of therapy (1 vs. >1) and Revised International Staging System (R-ISS) stage (I or II vs. III vs. not classified) according to IRT
[b] One-sided significance level is 0.025
[c] Estimated using the Kaplan-Meier method
NA/NC = Not Applicable / Not Calculable

Deterioration probability (95% CI)[b]					

A higher score represents a better level of quality of life. Clinical meaningful deterioration change from baseline less than or equal to -10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

Comparison vs. Kd					
Log-Rank test p-value[a] vs Kd	-	0.3578		0.4070	
Hazard ratio (95% CI) vs Kd	-	1.17 (0.84 to 1.64)		0.53 (0.12 to 2.42)	
P-value	-	0.3583		0.4141	
Improvement probability (95% CI)[b]					

A higher score represents a better level of quality of life. Clinical meaningful improvement change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable

Comparison vs. Kd					
Log-Rank test p-value[a] vs Kd	-	0.3130		0.8961	
Hazard ratio (95% CI) vs Kd	-	1.31 (0.78 to 2.20)		1.03 (0.67 to 1.58)	
P-value	-	0.3145		0.8963	
Improvement probability (95% CI)[b]					

A higher score represents a better level of quality of life. Clinical meaningful improvement change from baseline greater than or equal to 10 pt.
The last observation carried forward (LOCF) procedure was applied to impute missing data.
CI for Kaplan-Meier estimates are calculated with log-log transformation of survival function and methods of Brookmeyer and Crowley
[a] One-sided significance level is 0.025
[b] Estimated using the Kaplan-Meier method
[c] P-value for treatment-by-subgroup factor interaction are based on Cox proportional hazard model including treatment, subgroup variables, and the treatment-by-subgroup interaction as covariates.
NA/NC = Not Applicable / Not Calculable
