[1] At least 2 consecutively scheduled disease assessment is defined as at least 128 days before end of treatment (EOT) visit or 197 days if the death of progression is after EOT.
[2] Duration of response follow-up is based on reverse Kaplan-Meier method, with censoring at the event date.
[3] The 95% CI is based on Greenwood formula.

[1] At least 2 consecutively scheduled disease assessment is defined as at least 128 days before end of treatment (EOT) visit or 197 days if the death of progression is after EOT.
[2] Duration of response follow-up is based on reverse Kaplan-Meier method, with censoring at the event date.
[3] The 95% CI is based on Greenwood formula.

[1] At least 2 consecutively scheduled disease assessment is defined as at least 128 days before end of treatment (EOT) visit or 197 days if the death of progression is after EOT.
[2] Duration of response follow-up is based on reverse Kaplan-Meier method, with censoring at the event date.
[3] The 95% CI is based on Greenwood formula.

End of Study (LOCF)	Unknown	6	100.0	6	100.0	5.56	13.61	-8.73	19.84

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

		Unknown	4	3.7	2	50.0	15.0	85.0

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

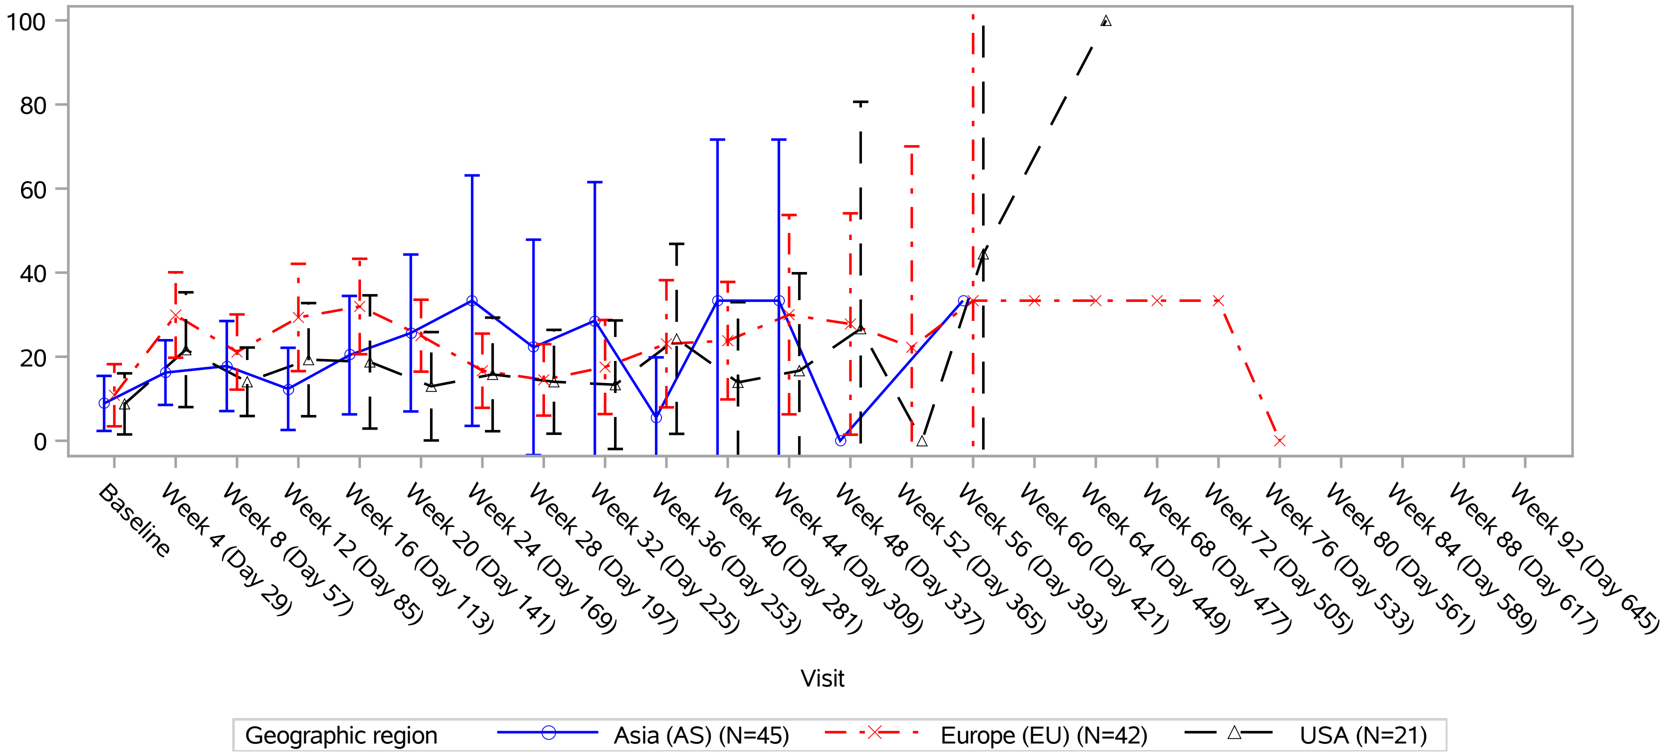
Output: root/clinical_studies/RO7499790/CDT30370/BO42863/data_analysis/ACE_NSCLC_MAA_D180/prod/output/pro_g_mean_B63_DCB_SAF_P41_TN_QSC30CO_SGECOG.pdf
15OCT2021 18:23

POPULATION: RET fusion NSCLC Patients Treated at 400 mg QD, Treatment-Naive Patients, PRO population, Safety Population
ENDPOINT: EORTC QLQ-C30: Constipation
STUDY: BO42863
Plot of Mean and 95% CI by Visit



Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

STUDY: BO42863
Plot of Mean and 95% CI by Visit

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
Clinical cut-off: 06NOV2020

Program: root/clinical_studies/RO7499790/CDT30370/BO42863/data_analysis/ACE_BASE/prod/program/pro_g_mean.sas
Output: root/clinical_studies/RO7499790/CDT30370/BO42863/data_analysis/ACE_NSCLC_MAA_D180/prod/output/pro_g_mean_B63_DCB_SAF_P41_TN_QSC30NV_SGECOG.pdf

End of Study (LOCF)	Unknown	6	100.0	6	100.0	19.44	16.39	2.25	36.64

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

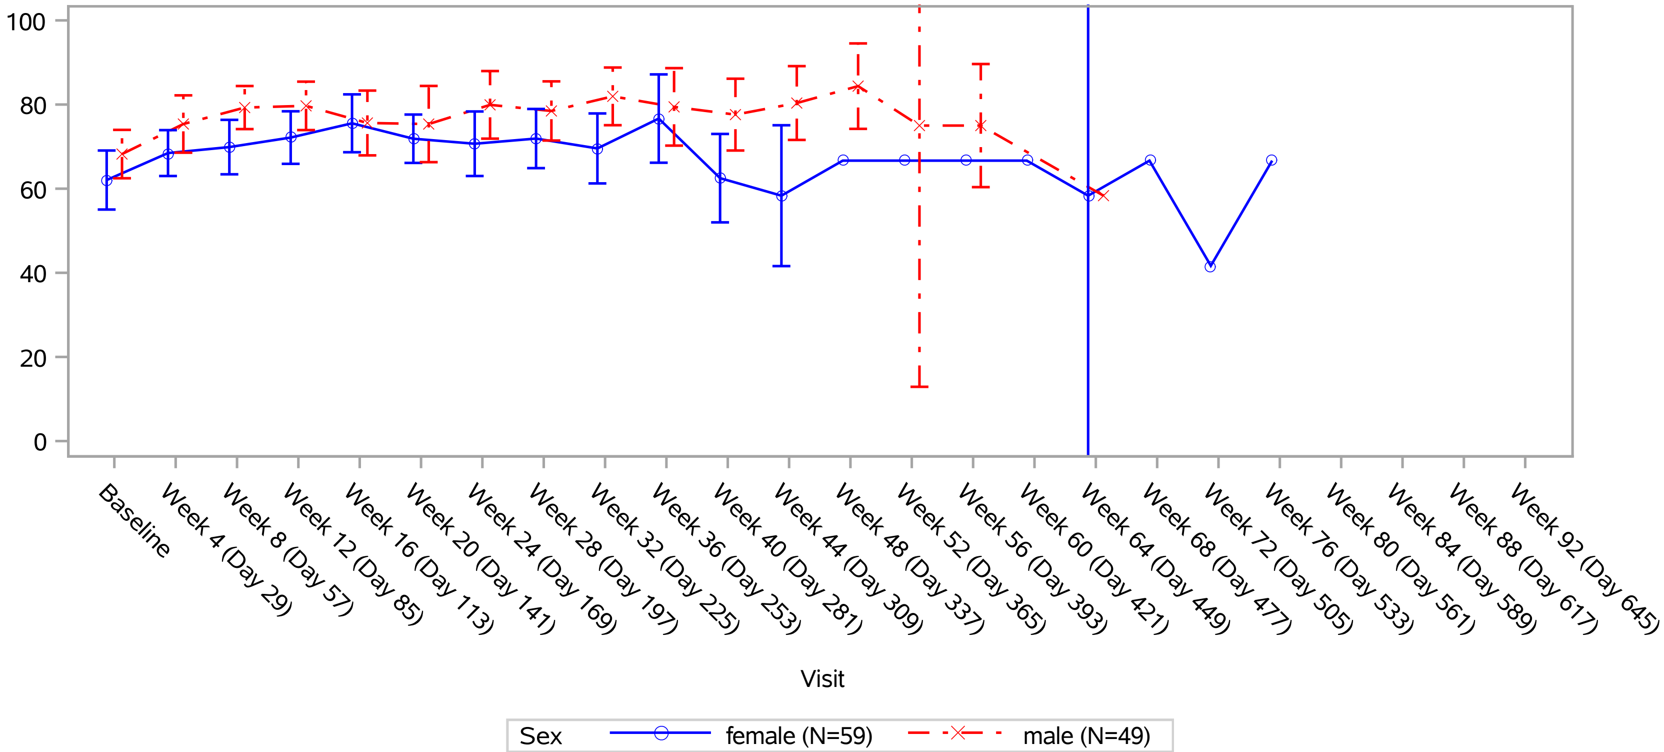
Output: root/clinical_studies/RO7499790/CDT30370/BO42863/data_analysis/ACE_NSCLC_MAA_D180/prod/output/pro_g_mean_B63_DCB_SAF_P41_TN_QSC30QL_SGRE.pdf
15OCT2021 19:30

POPULATION: RET fusion NSCLC Patients Treated at 400 mg QD, Treatment-Naive Patients, PRO population, Safety Population
ENDPOINT: EORTC QLQ-C30: Global health status
STUDY: BO42863
Plot of Mean and 95% CI by Visit



Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
Clinical cut-off: 06NOV2020

Cycle 12 (LOCF)	Unknown	6	100.0	6	100.0	58.33	36.13	20.41	96.25
End of Study (LOCF)	Unknown	6	100.0	6	100.0	66.67	23.57	41.93	91.40

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
¹ in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
² mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

		>= 2	51	45.1	6	11.8	5.5	23.4

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

15OCT2021 18:12

POPULATION: RET fusion NSCLC Patients Treated at 400 mg QD, Pre-Treated Patients, PRO population, Safety Population
ENDPOINT: EORTC QLQ-C30: Constipation
STUDY: BO42863
Plot of Mean and 95% CI by Visit

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

End of Study (LOCF)	>= 2	53	100.0	53	100.0	23.27	27.41	15.71	30.83

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
¹ in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
² mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Cycle 12 (LOCF)	>= 2	53	100.0	53	100.0	78.24	25.79	71.13	85.35
End of Study (LOCF)	>= 2	53	100.0	53	100.0	78.74	26.05	71.56	85.92

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
¹ in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
² mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
¹ in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
² mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

STUDY: BO42863
Plot of Mean and 95% CI by Visit

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
Clinical cut-off: 06NOV2020

Program: root/clinical_studies/RO7499790/CDT30370/BO42863/data_analysis/ACE_BASE/prod/program/pro_g_mean.sas
Output: root/clinical_studies/RO7499790/CDT30370/BO42863/data_analysis/ACE_NSCLC_MAA_D180/prod/output/pro_g_mean_B63_DCB_SAF_P41_TP_QSC30SF_SGECOG.pdf
15OCT2021 18:20

POPULATION: RET fusion NSCLC Patients Treated at 400 mg QD, Pre-Treated Patients, PRO population, Safety Population
ENDPOINT: EORTC QLQ-C30: Social functioning

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
¹ in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
² mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

¹ in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
² mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

¹ in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
² mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.

[1] in study: number of subjects in study at respective visit; % based on baseline.
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit.
[2] mean: descriptive statistics - absolute values.
The last value per patient collected before or on week 44 is used for the calculation of "Cycle 12 (LOCF)". The last recorded value per patient is used for "End of Study (LOCF)".
Clinical cut-off: 06NOV2020

Patients who signed the informed consent form for protocol amendment 4.1 or later (i.e. protocol amendments 4.1, and 5-13) before the first dosing date are considered in the analysis.
95% CI based on Wilson Scores.
Improvement is defined as increase in the functional scale scores or the global health status and as decrease in the symptom scale scores.
Worsening is defined as decrease in the functional scale scores or the global health status and as increase in the symptom scale scores.
