Test for interaction based on RR (Log-binomial regression).
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 * indicates convergence problem. Result is uninterpretable.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Clinical cut-off: 19Aug2021

POPULATION: SAFETY

ENDPOINT: Any AEs

Model: Unstratified analysis

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np < =5 in any treatment group, p-value is based on Fisher Exact Test.

Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.

Clinical cut-off: 19Aug2021

POPULATION: SAFETY

ENDPOINT: Any AEs (excluding disease related events)

Model: Unstratified analysis

STUDY: R10933-10987-COV-2067

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

POPULATION: SAFETY

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

POPULATION: SAFETY

ENDPOINT: Any AEs (excluding disease related events)

Model: Unstratified analysis

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

POPULATION: SAFETY

ENDPOINT: Any AEs (excluding disease related events)

Model: Unstratified analysis

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np < =5 in any treatment group, p-value is based on Fisher Exact Test.

Test for interaction based on RRR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np \leq 5 in any treatment group, p-value is based on Fisher Exact Test.

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np < =5 in any treatment group, p-value is based on Fisher Exact Test.

Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Clinical cut-off: 19Aug2021

POPULATION: SAFETY

ENDPOINT: AEs Grade 3

Model: Unstratified analysis

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np < =5 in any treatment group, p-value is based on Fisher Exact Test.

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).

* indicates convergence problem. Result is uninterpretable.

Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.

95% CI for the relative risk use Farrington-Manning method.

If np <=5 in any treatment group, p-value is based on Fisher Exact Test.

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

POPULATION: SAFETY

ENDPOINT: Any SAEs (excluding disease related events)

Model: Unstratified analysis

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RRR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <= 5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np <=5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
 Clinical cut-off: 19Aug2021

Test for interaction based on RR (Log-binomial regression).
 * indicates convergence problem. Result is uninterpretable.
 Treatment comparison values is derived on Cochran-Mantel-Haenszel (CMH) method.
 95% CI for the relative risk use Farrington-Manning method.
 If np < =5 in any treatment group, p-value is based on Fisher Exact Test.
