Anhang 4-G – Analyseergebnisse und Abbildungen, RHINE (GR40398), YOSEMITE (GR40349)

Das Dokument ist nach folgender Struktur aufgebaut:

Die Daten aller Endpunkte werden zu Jahr 1 und zu Jahr 2 dargestellt. Zu jedem Endpunkt ist die Hauptauswertung mit den Ergebnissen der gepoolten Analyse sowie den Ergebnissen der Einzelstudien vorangestellt. Zu jeder Hauptauswertung sind Forest-Plots der gepoolten Analyse dargestellt. Jeder Hauptauswertung folgen die Ergebnisse der zugehörigen Subgruppen.

Inhaltsverzeichnis

Seite

Behandlungsintervalle 1
Anteil der Patienten auf einem Q4W-Behandlungsintervall 1
Anteil der Patienten auf einem Q8W-Behandlungsintervall 23
Anteil der Patienten auf einem Q12W-Behandlungsintervall 45
Anteil der Patienten auf einem Q16W-Behandlungsintervall 67
Übersicht: Anteil der Patienten auf einem Q4W-, Q8W-, Q12W- oder Q16W-Intervall an den Studienvisiten 16 bis 96 89
Anteil der Patienten auf einem Behandlungsintervall von Q12W oder Q16W ohne Verkürzung des Behandlungsintervalls unter Q12W 90
Sehschärfe 96
Veränderung der BCVA 96
Anteil der Patienten mit einem Gewinn von ≥ 15 oder ≥ 10 Buchstaben in der BCVA 134
Anteil der Patienten, bei denen ein Verlust von ≥ 15 oder ≥ 10 Buchstaben in der BCVA vermieden werden kann 150
Morphologische Veränderungen 165
Veränderung der CST 165
Anteil der Patienten mit Abwesenheit des DMÖ 203
Anteil der Patienten mit Abwesenheit von IRF 211
Gesundheitsbezogene Lebensqualität 219
NEI VFQ-25 Composite Score 219
NEI VFQ-25 Subskala allgemeiner Gesundheitszustand 247
NEI VFQ-25 Subskala allgemeine Sehkraft 275
NEI VFQ-25 Subskala Augenschmerzen 303
NEI VFQ-25 Subskala Nahsicht 331
NEI VFQ-25 Subskala Fernsicht 359
NEI VFQ-25 Subskala sehbedingte soziale Funktionsfähigkeit 387
NEI VFQ-25 Subskala sehbedingtes psychisches Befinden 415
NEI VFQ-25 Subskala sehbedingte Ausübung sozialer Rollen 443
NEI VFQ-25 Subskala sehbedingte Abhängigkeit von anderen 471
NEI VFQ-25 Subskala Probleme mit dem Autofahren 499
NEI VFQ-25 Subskala peripheres Sehen 527
NEI VFQ-25 Subskala Farbensehen 555
Verträglichkeit 583
Generelle Verträglichkeit 583
Jegliche unerwünschte Ereignisse (UE) 583
Okulare UE (Studienauge) 591
Okulare UE (Nicht-Studienauge) 599
Moderate UE 607
Schwere UE 615

Schwerwiegende UE (SUE) ... 623
Okulare SUE (Studienauge) ... 631
Okulare SUE (Nicht-Studienauge) ... 639
UE, die zum Behandlungsabbruch führten ... 647
UE mit Todesfolge ... 655
Kausaler Zusammenhang UE mit Todesfolge – Faricimab ... 663
Jegliche UE nach SOC und PT ... 665
Moderate UE nach SOC und PT ... 933
Schwere UE nach SOC und PT ... 1081
SUE nach SOC und PT ... 1154
UE, die zum Behandlungsabbruch führten nach SOC und PT (deskriptiv) ... 1233
UE mit Todesfolge nach SOC und PT ... 1252
Spezifische Verträglichkeit ... 1269
Ausgewählte okulare UE (Studienauge) ... 1269
Ausgewählte okulare UE (Nicht-Studienauge) ... 1285
Ausgewählte okulare UE (Studienauge, schwer) ... 1300
Ausgewählte okulare UE (Nicht-Studienauge, schwer) ... 1314
Ausgewählte okulare UE (Studienauge, schwerwiegend) ... 1325
Ausgewählte okulare UE (Nicht-Studienauge, schwerwiegend) ... 1340
Unerwünschte Ereignisse von besonderem Interesse (AESI) ... 1352
Schwere AESI ... 1422
Schwerwiegende AESI ... 1488
Weitere Analysen ... 1558
Anzahl der Zentren/Länder/geografischen Regionen mit < 10, ≥ 10 Patienten pro Arm (ITT-Population) ... 1558
Studiendauer und Zeit in der PRO erhoben wurden ... 1559
Exposition mit dem Studienmedikament ... 1562
Zusammenfassung Patientendisposition und Abbruchgründe ... 1563
Demografie und Baseline Charakteristika ... 1569
Okulare Baseline Charakteristika des Studienauges ... 1575
Nicht-okulare Baseline Charakteristika ... 1584
Okulare medizinische Vorgeschichte des Studienauges ... 1593
Frühere gezielte nicht-okulare medizinische Vorgeschichte ... 1596
Frühere gezielte okulare Therapien/Behandlung am Studienauge ... 1602
Begleitende nicht-okulare Medikamente nach Medikamentenklasse und Wirkstoff (preferred name) ... 1608

POPULATION: Intent-to-Treat Population B vs. C
ENDPOINT: Proportion of Patients in the PTI arm on a Q4W treatment interval
MODEL: descriptive

Forest Plot of Mean Difference
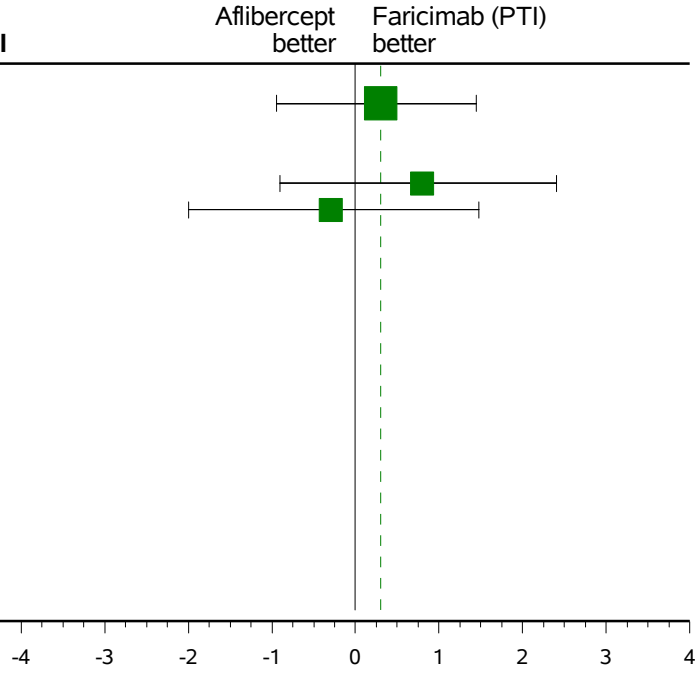
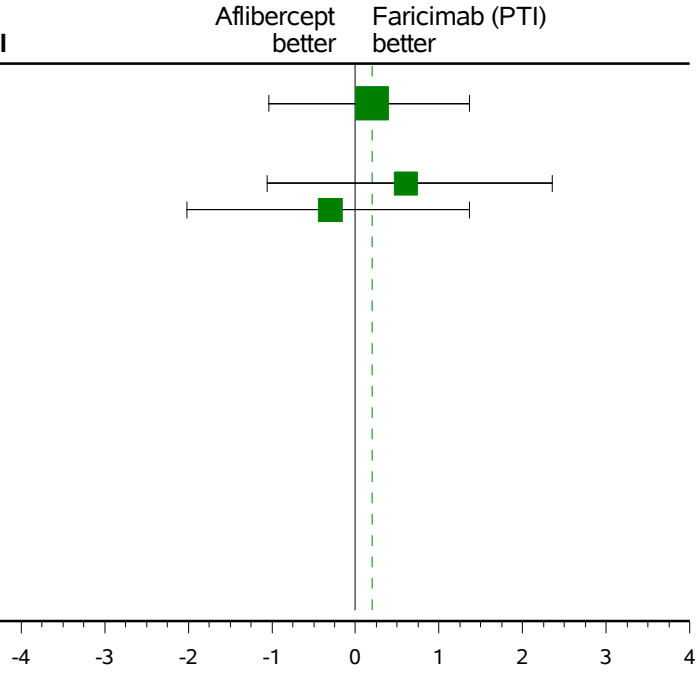
Week 4



Study	Total n (with value)	Aflibercept (N=627) n (with value)	Aflibercept (N=627) Mean	Faricimab (PTI) (N=632) n (with value)	Faricimab (PTI) (N=632) Mean	Mean Difference	95% CI
All Patients	1231	615	68.7	616	68.9	0.3	(-0.9, 1.4)
Study							
Rhine	617	309	68.5	308	69.1	0.7	(-0.9, 2.3)
Yosemite	614	306	68.8	308	68.7	-0.2	(-1.8, 1.5)

Units: letters. Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events.
COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021
Program: root/clinical_studies/RO6867461/CDT70122/share/ACE_pool_DME_Base/prod/program/g_forest_md.sas
Output: root/clinical_studies/RO6867461/CDT70122/share/ACE_pool_DME_CSR_Final/prod/output_bc/g_forest_md_SBCVA_PREST_ITBC_OCTNOV2021_DME.pdf 05OCT2022 15:43

POPULATION: Intent-to-Treat Population B vs. C
ENDPOINT: Best Corrected Visual Acuity (Study Eye) throughout the Entire Study
STUDY: GR40349 & GR40398
Forest Plot of Mean Difference
Week 8



Study	Total n (with value)	Aflibercept (N=627) n (with value)	Aflibercept (N=627) Mean	Faricimab (PTI) (N=632) n (with value)	Faricimab (PTI) (N=632) Mean	Mean Difference	95% CI
All Patients	1234	613	70.0	621	70.2	0.3	(-0.9, 1.4)
Study							
Rhine	622	309	69.7	313	70.4	0.8	(-0.9, 2.4)
Yosemite	612	304	70.3	308	70.1	-0.3	(-2.0, 1.5)

Units: letters. Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events.
COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021
Program: root/clinical_studies/RO6867461/CDT70122/share/ACE_pool_DME_Base/prod/program/g_forest_md.sas

[1] Patients with a value at baseline and at least one post-baseline value at Week 48, Week 52 or Week 56.
[2] LSMeans of change from baseline from MMRM (including all available records from all selected visits). Selected visits: Week 4, 8, 12, 16, 20, 24, 28, 32, 36, 40, 44, 48, 52 and 56. Early Termination (ET) visit was mapped to closest regular visit.
[3] Contrasts from MMRM
[4] Factors/Covariates: treatment, visit, treatment-by-visit interaction, baseline value. In addition adjusted for randomization stratification factors. The stratification factor is excluded if it is the subgroup.
Data as observed (no imputation of missing values). Covariance matrix: unstructured. Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events.
COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death. Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

[1] Patients with a value at baseline and a post-baseline value at the respective visit.
[2] LSMeans of change from baseline from MMRM (including all available records from all selected visits). Selected visits: Week 4, 8, 12, 16, 20, 24, 28, 32, 36, 40, 44, 48, 52, 56, 60, 64, 68, 72, 76, 80, 84, 88, 92, 96 and 100. Early Termination (ET) visit was mapped to closest regular visit.
[3] Contrasts from MMRM
[4] Factors/Covariates: treatment, visit, treatment-by-visit interaction, baseline value. In addition adjusted for randomization stratification factors. The stratification factor is excluded if it is the subgroup.
Data as observed (no imputation of missing values). Covariance matrix: unstructured. Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events.
COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death. Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events.
COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Program: ..al_studies/RO6867461/CDT70122/share/ACE_pool_DME_Base/prod/program/g_mean_plot.sas
Output: ..CE_pool_DME_CSR_Final/prod/output_bc/g_mean_plot_SCST_PREST_ITBC_OCTNOV2021_DME.pdf
25MAR2022 20:56

POPULATION: Intent-to-Treat Population B vs. C
ENDPOINT: Center Subfield Thickness (Study Eye) throughout the Entire Study
STUDY: GR40349 & GR40398
Study; Rhine (N=634)

Units: microns. Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events.
COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

[1] in study: number of subjects in study at respective visit; % based on baseline
with value: number of subjects in study and with value at respective visit - used for the calculation of the mean and SD; % based on patients in study at respective visit
[2] mean: descriptive statistics - absolute values
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events.
COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Units: microns. Early Termination (ET) visit was mapped to closest regular visit. Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

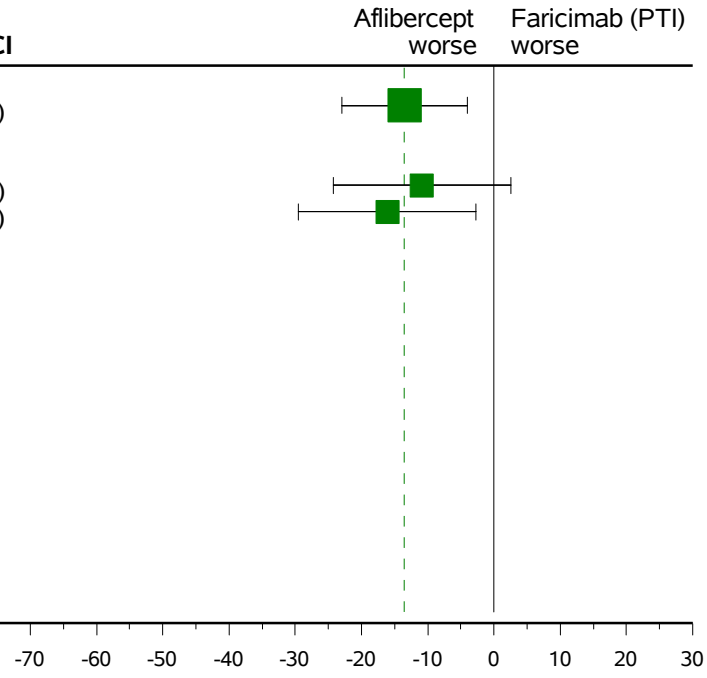
All Patients	1043	510	300.3	533	285.6	-14.7	(-25.4, -4.0)
Study							
Rhine	526	253	294.3	273	282.5	-11.8	(-28.2, 4.6)
Yosemite	517	257	306.1	260	288.8	-17.4	(-31.2, -3.5)

Units: microns. Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events.
COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021
Program: root/clinical_studies/RO6867461/CDT70122/share/ACE_pool_DME_Base/prod/program/g_forest_md.sas
Output: root/clinical_studies/RO6867461/CDT70122/share/ACE_pool_DME_CSR_Final/prod/output_bc/g_forest_md_SCST_PREST_ITBC_OCTNOV2021_DME.pdf 05OCT2022 15:45

POPULATION: Intent-to-Treat Population B vs. C
ENDPOINT: Center Subfield Thickness (Study Eye) throughout the Entire Study
STUDY: GR40349 & GR40398
Forest Plot of Mean Difference
Week 64



Study	Total n (with value)	Aflibercept (N=627) n (with value)	Aflibercept (N=627) Mean	Faricimab (PTI) (N=632) n (with value)	Faricimab (PTI) (N=632) Mean	Mean Difference	95% CI
All Patients	1067	519	309.0	548	283.1	-25.9	(-36.0, -15.7)
Study							
Rhine	546	258	301.7	288	282.3	-19.4	(-34.0, -4.8)
Yosemite	521	261	316.2	260	284.1	-32.1	(-46.2, -18.1)

Units: microns. Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events.
COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021
Program: root/clinical_studies/RO6867461/CDT70122/share/ACE_pool_DME_Base/prod/program/g_forest_md.sas

[1] Patients with a value at baseline and at least one post-baseline value at Week 48, Week 52 or Week 56.
[2] LSMeans of change from baseline from MMRM (including all available records from all selected visits). Selected visits: Week 4, 8, 12, 16, 20, 24, 28, 32, 36, 40, 44, 48, 52, 56, 60, 64, 68, 72, 76, 80, 84, 88, 92, 96 and 100. Early Termination (ET) visit was mapped to closest regular visit.
[3] Contrasts from MMRM
[4] Factors/Covariates: treatment, visit, treatment-by-visit interaction, baseline value. In addition adjusted for randomization stratification factors. The stratification factor is excluded if it is the subgroup.
Data as observed (no imputation of missing values). Covariance matrix: unstructured. Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events.
COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death. Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

[1] Patients with a value at baseline and a post-baseline value at the respective visit.
[2] LSMeans of change from baseline from MMRM (including all available records from all selected visits). Selected visits: Week 4, 8, 12, 16, 20, 24, 28, 32, 36, 40, 44, 48, 52, 56, 60, 64, 68, 72, 76, 80, 84, 88, 92, 96 and 100. Early Termination (ET) visit was mapped to closest regular visit.
[3] Contrasts from MMRM
[4] Factors/Covariates: treatment, visit, treatment-by-visit interaction, baseline value. In addition adjusted for randomization stratification factors. The stratification factor is excluded if it is the subgroup.
Data as observed (no imputation of missing values). Covariance matrix: unstructured. Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events.
COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death. Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.

Rhine	634	315	133	319	132	0.97	(0.71, 1.33)
Yosemite	624	311	134	313	116	0.78	(0.57, 1.07)

Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are:
Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.

Yosemite	624	311	160	313	159	0.97	(0.71, 1.34)

Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are:
Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021
Program: root/clinical_studies/RO6867461/CDT70122/share/ACE_pool_DME_Base/prod/program/g_forest_or.sas
Output: root/clinical_studies/RO6867461/CDT70122/share/ACE_pool_DME_CSR_Final/prod/output_bc/g_forest_or_str_QSBGV15I_W56_PREST_ITBC_OCTNOV2021_DME.pdf 30SEP2022 13:46

POPULATION: Intent-to-Treat Population B vs. C
ENDPOINT: Proportion of Patients with a >=15-point improvement from baseline in NEI VFQ-25 General Vision subscale through Week 56
MODEL: Stratified Analysis by Study, Baseline BCVA ETDRS letter score, Prior IVT anti-VEGF therapy, Geographic region (combined)
STUDY: GR40349 & GR40398

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.

[2] LSMeans of change from baseline from MMRM (including all available records from all selected visits).
Selected visits: Week 24, Week 52, Week 100. Early Termination (ET) visit was mapped to closest regular visit.
Factors/Covariates: treatment, visit, treatment-by-visit interaction, baseline value. In addition adjusted for randomization stratification factors. The stratification factor is excluded if it is the subgroup.
Data as observed (no imputation of missing values). Covariance matrix: unstructured.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events(IEs).
COVID-19 rel. IEs are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.

POPULATION: Intent-to-Treat Population B vs. C
ENDPOINT: Proportion of Patients with a >=4-point improvement from baseline in NEI VFQ-25 Vision Specific Dependency subscale through Week 56
MODEL: Adjusted Analysis by Study, Baseline BCVA ETDRS letter score, Prior IVT anti-VEGF therapy, Geographic region
STUDY: GR40349 & GR40398
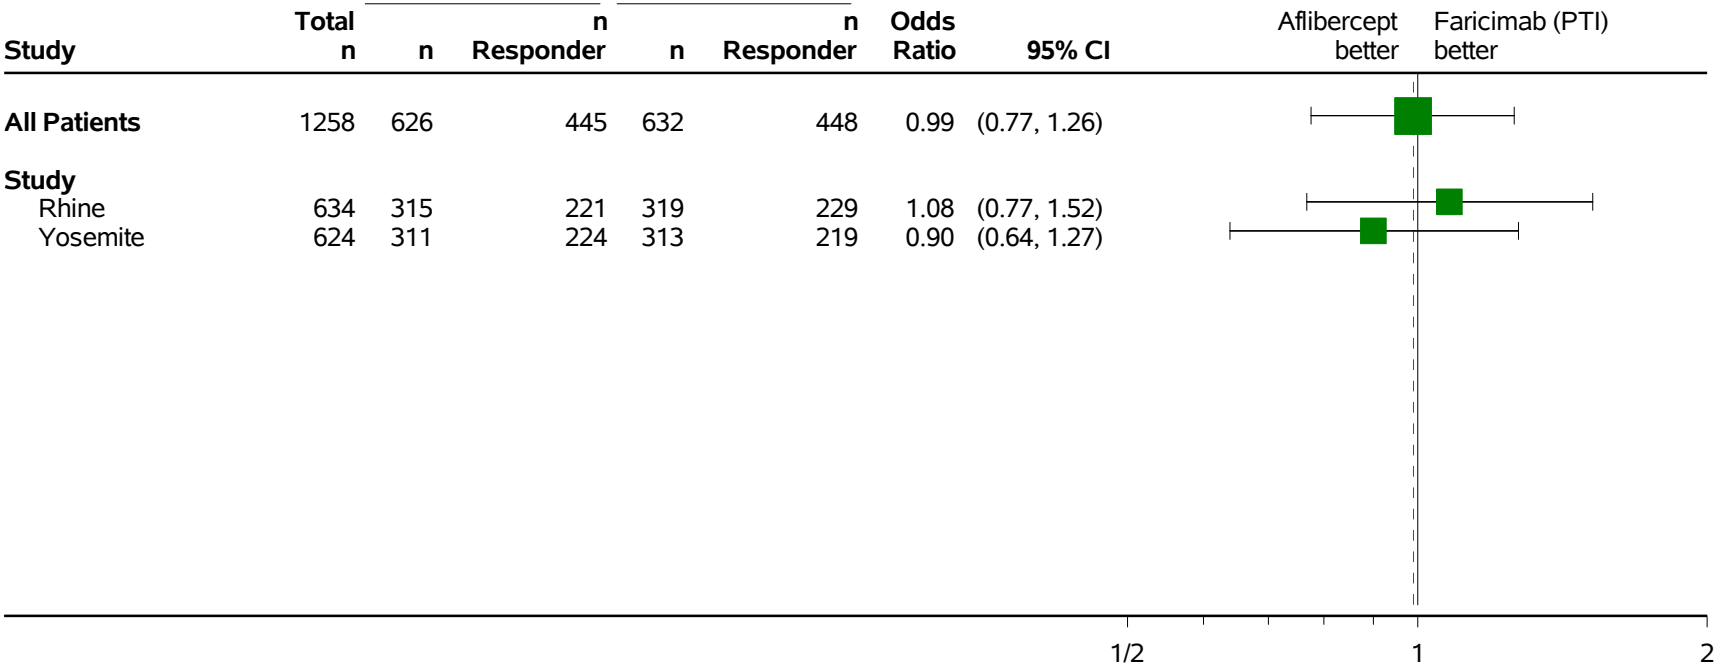
Forest Plot of Relative Risk



Study	Total n	Aflibercept (N=627) n	Aflibercept (N=627) n Responder	Faricimab (PTI) (N=632) n	Faricimab (PTI) (N=632) n Responder	Relative Risk	95% CI
All Patients	1258	626	233	632	267	1.13	(0.99, 1.29)
Study							
Rhine	634	315	110	319	133	1.20	(0.98, 1.46)
Yosemite	624	311	123	313	134	1.07	(0.89, 1.29)

Only patients with at least one value are used for analysis. For adjustment Asia and rest of the world regions are combined due to a small number of enrolled patients.
The adjustment factor is excluded if it is the subgroup.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are:
Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.

Selected visits: Week 24, Week 52, Week 100. Early Termination (ET) visit was mapped to closest regular visit.
Factors/Covariates: treatment, visit, treatment-by-visit interaction, baseline value. In addition adjusted for randomization stratification factors. The stratification factor is excluded if it is the subgroup.
Data as observed (no imputation of missing values). Covariance matrix: unstructured.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events(IEs).
COVID-19 rel. IEs are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 44,48 or 52 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021

Test for interaction based on RR (Log-binomial regression)
* indicates convergence problem. Result is uninterpretable.
Only patients with at least one value are used for analysis. For stratification Asia and rest of the world regions are combined due to a small number of enrolled patients. The stratification factor is excluded if it is the subgroup. OR is computed by stratified analysis, RR and ARD by adjusted analysis.
Early Termination (ET) visit was mapped to closest regular visit.
Treatment policy strategy was applied to non-COVID-19 related and hypothetical strategy was applied to COVID-19 related intercurrent events. COVID-19 related intercurrent events are: Disc. of Treatment due to COVID-19, Prohibited Treatment/Therapy due to COVID-19, Missed Dose at Week 88,92 or 96 due to COVID-19 and COVID-19 Death.
Clinical cut-off: YOSEMITE 01NOV2021 and RHINE 28OCT2021
