N = total number of patients in analysis set. n = number of patients with response. nval = number of patients with non-missing values.
95% CI = 95% confidence interval (percentages: Clopper-Pearson, RR/OR: Wald, RD: Newcombe method).
p-value = Cochran Q test for heterogeneity / Chi-square test, a # indicates that exact test of Fisher was used instead. * = significant treatment effect. i = significant Cochran Q.
RR = relative risk. OR = odds ratio. RD = risk difference. + = adding of 0.5 to each cell. NE = not evaluable. Cochran Q test and risk measures are only calculated if there are at least 10 patients with events in a subgroup.

Note: DITT = Dossier Intent-to-Treat Set.
N = total number of patients in analysis set. n = number of non-missing values. MMRM = Mixed Model Repeated Measures.
LS-Mean = Least square mean. SE = Standard error. 95% CI = 95% confidence interval. * = significant treatment effect.
A MMRM was applied with fixed factors for treatment, time, interaction treatment-by-time and baseline as covariate. Only observed values are included into the model. An unstructured covariance structure was used.
AQLQ+12 = Standardised asthma quality of life questionnaire for 12 years and older.
Source Data: aqlq, created on: 11AUG2022
