N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Confidence intervals (CIs) for proportions are Wilson confidence limits.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test.
**Q test for homogeneity of risk ratios (treatment by subgroup interaction).
inf = infinity. NC = not calculable

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Confidence intervals (CIs) for proportions are Wilson confidence limits.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test.
**Q test for homogeneity of risk ratios (treatment by subgroup interaction).
inf = infinity. NC = not calculable

gba\t-bin2.sas 30NOV2022

Table 2.2.28 Proportion of patients with GPPASI 90 pustulation subscore overall and by subgroup at week 1 - RS (EN-NRI-IE)

Subgroup Category	Placebo N	Placebo n	Placebo %	Placebo (95% CI)	Speso 900 mg IV SD N	Speso 900 mg IV SD n	Speso 900 mg IV SD %	Speso 900 mg IV SD (95% CI)	Speso 900 mg IV SD vs Placebo p-value*	Speso 900 mg IV SD vs Placebo Risk diff. (95% CI)
Renal impairment at baseline										
Normal	16	2	12.5		26	17	65.4			
Mild	1	0	0.0		6	2	33.3			
Moderate	0	0	na		1	0	0.0			
Severe	0	0	na		0	0	na			
ESRD	0	0	na		0	0	na			

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Confidence intervals (CIs) for proportions are Wilson confidence limits.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test.
**Q test for homogeneity of risk ratios (treatment by subgroup interaction).
inf = infinity. NC = not calculable

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Confidence intervals (CIs) for proportions are Wilson confidence limits.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test.
**Q test for homogeneity of risk ratios (treatment by subgroup interaction).
inf = infinity. NC = not calculable

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Confidence intervals (CIs) for proportions are Wilson confidence limits.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test.
**Q test for homogeneity of risk ratios (treatment by subgroup interaction).
inf = infinity. NC = not calculable

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Confidence intervals (CIs) for proportions are Wilson confidence limits.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test.
**Q test for homogeneity of risk ratios (treatment by subgroup interaction).
inf = infinity. NC = not calculable

Subgroup Category	Placebo N	Placebo n	Placebo %	Placebo (95% CI)	Speso 900 mg IV SD N	Speso 900 mg IV SD n	Speso 900 mg IV SD %	Speso 900 mg IV SD (95% CI)	Speso 900 mg IV SD vs Placebo p-value*	Speso 900 mg IV SD vs Placebo Risk diff. (95% CI)
Renal impairment at baseline										
Normal	16	1	6.3		26	10	38.5			
Mild	1	0	0.0		6	2	33.3			
Moderate	0	0	na		1	0	0.0			
Severe	0	0	na		0	0	na			
ESRD	0	0	na		0	0	na			

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Confidence intervals (CIs) for proportions are Wilson confidence limits.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test.
**Q test for homogeneity of risk ratios (treatment by subgroup interaction).
inf = infinity. NC = not calculable

Table 2.5.1 Time to first achievement of GPPGA pustulation subscore of 0 for pre vs post Speso by flare types - RS without patients receiving Placebo only without rescue medication (OC-IR)

Type of flare / Used timepoint of the category for 'time to be completely clear from pustules' pre Speso	Pre Speso N	Pre Speso n	Pre Speso %	Pre Speso Median [days]	Pre Speso (95% CI)	Post Speso N	Post Speso n	Post Speso %	Post Speso Median [days]	Post Speso (95% CI)	Post vs pre Speso HR*	Post vs pre Speso (95% CI)	Post vs pre Speso p-value
Typical flare													
Mid point	29	29	100.0	11.0	(11.00,25.00)	51	48	94.1	8.0	(6.00,9.00)	1.95	(1.18,3.21)	0.0088
Left point	29	29	100.0	8.0	(8.00,22.00)	51	48	94.1	8.0	(6.00,9.00)	1.19	(0.74,1.91)	0.4685
Right point	29	29	100.0	14.0	(14.00,28.00)	51	48	94.1	8.0	(6.00,9.00)	2.18	(1.31,3.62)	0.0027
Most severe flare													
Mid point	28	28	100.0	25.0	(NC.,NC.)	51	48	94.1	8.0	(6.00,9.00)	3.79	(2.12,6.79)	<0.0001
Left point	28	28	100.0	22.0	(NC.,NC.)	51	48	94.1	8.0	(6.00,9.00)	2.26	(1.32,3.87)	0.0030
Right point	28	28	100.0	28.0	(NC.,NC.)	51	48	94.1	8.0	(6.00,9.00)	4.36	(2.40,7.94)	<0.0001

NC. = Not calculated.

N is the number of patients in the respective group. n is the number of patients with an event in the respective group.
* Based on a Cox regression model with treatment and frailty term for patient.
Patients without a response prior to end of study are considered as non-responders and are censored at the day of end of study.

Background treatment prior to randomization												
Yes	8	0	0.0			15	0	0.0				
No	10	0	0.0			20	0	0.0				

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Patients with AE:Time at risk=start of first AE-start of treatment+1. Patients without AE:time at risk=end of time at risk-start of treatment+1.
End of time at risk: min of (the day before any non-randomized Speso, Day 6, the day of EoS if pts were not rolled over or the day before first dose in OLE study if pts were rolled over). All AEs starting up to the end of time at risk are included.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test. **Q-test for homogeneity of risk ratios (treatment by subgroup interaction).
Maximum intensity: If a patient has more than one AE only the worst is recorded.
MedDRA version: 24.0 inf=infinity. NC = not calculable

User-defined AE categories are only displayed if at least one event occurred within that category

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Patients with AE:Time at risk=start of first AE-start of treatment+1. Patients without AE:time at risk=end of time at risk-start of treatment+1.
End of time at risk: min of (the day before any non-randomized Speso, Day 6, the day of EoS if pts were not rolled over or the day before first dose in OLE study if pts were rolled over). All AEs starting up to the end of time at risk are included.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test. **Q-test for homogeneity of risk ratios (treatment by subgroup interaction).
MedDRA version: 24.0 inf=infinity. NC = not calculable

User-defined AE categories are only displayed if at least one event occurred within that category

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Patients with AE:Time at risk=start of first AE-start of treatment+1. Patients without AE:time at risk=end of time at risk-start of treatment+1.
End of time at risk: min of (the day before any non-randomized Speso, Day 6, the day of EoS if pts were not rolled over or the day before first dose in OLE study if pts were rolled over). All AEs starting up to the end of time at risk are included.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test. **Q-test for homogeneity of risk ratios (treatment by subgroup interaction).
MedDRA version: 24.0 inf=infinity. NC = not calculable
