>= 30 kg/m2	3	0	0.0			10	0	0.0					

User-defined AE categories are only displayed if at least one event occurred within that category

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Patients with AE:Time at risk=start of first AE-start of treatment+1. Patients without AE:time at risk=end of time at risk-start of treatment+1.
End of time at risk: min of (the day before any non-randomized Speso, Day 6, the day of EoS if pts were not rolled over or the day before first dose in OLE study if pts were rolled over). All AEs starting up to the end of time at risk are included.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test. **Q-test for homogeneity of risk ratios (treatment by subgroup interaction).
Maximum intensity: If a patient has more than one AE only the worst is recorded.
MedDRA version: 24.0 inf=infinity. NC = not calculable

User-defined AE categories are only displayed if at least one event occurred within that category

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Patients with AE:Time at risk=start of first AE-start of treatment+1. Patients without AE:time at risk=end of time at risk-start of treatment+1.
End of time at risk: min of (the day before any non-randomized Speso, Day 6, the day of EoS if pts were not rolled over or the day before first dose in OLE study if pts were rolled over). All AEs starting up to the end of time at risk are included.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test. **Q-test for homogeneity of risk ratios (treatment by subgroup interaction).
Maximum intensity: If a patient has more than one AE only the worst is recorded.
MedDRA version: 24.0 inf=infinity. NC = not calculable

User-defined AE categories are only displayed if at least one event occurred within that category

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Patients with AE:Time at risk=start of first AE-start of treatment+1. Patients without AE:time at risk=end of time at risk-start of treatment+1.
End of time at risk: min of (the day before any non-randomized Speso, Day 6, the day of EoS if pts were not rolled over or the day before first dose in OLE study if pts were rolled over). All AEs starting up to the end of time at risk are included.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test. **Q-test for homogeneity of risk ratios (treatment by subgroup interaction).
Maximum intensity: If a patient has more than one AE only the worst is recorded.
MedDRA version: 24.0 inf=infinity. NC = not calculable

Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test. **Q-test for homogeneity of risk ratios (treatment by subgroup interaction).
Maximum intensity: If a patient has more than one AE only the worst is recorded.
MedDRA version: 24.0 inf=infinity. NC = not calculable

gba\t-ttesaf4.sas 30NOV2022

Table 1.4.18 Proportion and incidence rate of patients with user defined adverse events concepts by category adverse events with life-threatening maximum intensity overall and by subgroup up to week 12- SAF (OC)

User Defined Adverse Event Category	UDAEC Search Criteria	UDAEC Scope	Additional condition	Preferred Term
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Listeria encephalitis
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Listeria sepsis
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Listeriosis
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Lower respiratory tract infection bacterial
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Lyme carditis
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Lyme disease
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Lymphadenitis bacterial
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Malignant syphilis
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Mastitis bacterial
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Medical device site cellulitis
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis Escherichia
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis bacterial
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis borrelia
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis cronobacter
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis enterococcal
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis gonococcal
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis haemophilus
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis leptospiral
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis listeria
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis meningococcal
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis pneumococcal
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis salmonella
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis staphylococcal
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningitis streptococcal
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningococcal bacteraemia
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningococcal carditis
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningococcal infection
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningococcal sepsis
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Meningoencephalitis bacterial
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Methylobacterium infection
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Micrococcal sepsis
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Micrococcus infection
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Moraxella infection
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Morganella infection
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Myocarditis bacterial
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Myocarditis meningococcal
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Myocarditis syphilitic
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Nail bed infection bacterial
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Necrobacillosis
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Necrotising fasciitis staphylococcal
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Necrotising fasciitis streptococcal
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Necrotising ulcerative gingivostomatitis
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Necrotising ulcerative periodontitis
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Neisseria infection
Serious infections	Bacterial infectious disorders (HLGT)		ASER eq 'Yes'	Nephritis bacterial

1.1.5 Adverse events on SOC level

Table 1.5.1 Proportion and incidence rate of patients with adverse events with >=10% occurrence in at least one treatment arm on SOC level overall and by subgroup up to week 1 - SAF (OC)
System Organ Class: Blood and lymphatic system disorders

	Placebo					Speso 900 mg IV SD					Speso 900 mg IV SD vs Placebo		
Subgroup Category	N	n	%	Time at risk [pt-yrs]	Rate/100 pt-yrs	N	n	%	Time at risk [pt-yrs]	Rate/100 pt-yrs	p-value*	Risk diff.	(95% CI)
Overall	18	2	11.1	0.3	640.8	35	1	2.9	0.6	154.1	0.3793	-8.3	(-31.5,6.9)

Subgroups for analyses by SOC are not displayed because overall test for treatment is not significant on 5% level

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Patients with AE:Time at risk=start of first AE-start of treatment+1. Patients without AE:time at risk=end of time at risk-start of treatment+1.
End of time at risk: min of (the day before any non-randomized Speso, Day 6, the day of EoS if pts were not rolled over or the day before first dose in OLE study if pts were rolled over). All AEs starting up to the end of time at risk are included.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test. **Q-test for homogeneity of risk ratios (treatment by subgroup interaction).
MedDRA version: 24.0 inf=infinity. NC = not calculable

Table 1.5.3 Proportion and incidence rate of patients with adverse events with >=10% occurrence in at least one treatment arm on SOC level overall and by subgroup up to week 12- SAF (OC)
System Organ Class: General disorders and administration site conditions

	Placebo					Speso 900 mg IV SD					Speso 900 mg IV SD vs Placebo		
Subgroup Category	N	n	%	Time at risk [pt-yrs]	Rate/100 pt-yrs	N	n	%	Time at risk [pt-yrs]	Rate/100 pt-yrs	p-value*	Risk diff.	(95% CI)
Overall	18	5	27.8	0.5	998.0	35	9	25.7	4.0	224.8	0.9152	-2.1	(-30.0,22.2)

Subgroups for analyses by SOC are not displayed because overall test for treatment is not significant on 5% level

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Patients with AE:Time at risk=start of first AE-start of treatment+1. Patients without AE:time at risk=end of time at risk-start of treatment+1.
End of time at risk: min of (the day before any non-randomized Speso, Day 6, the day of EoS if pts were not rolled over or the day before first dose in OLE study if pts were rolled over). All AEs starting up to the end of time at risk are included.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test. **Q-test for homogeneity of risk ratios (treatment by subgroup interaction).

System organ class: Metabolism and nutrition disorders
Preferred term: Hyperuricaemia

Subgroup Category	Speso 900 mg IV SD vs Placebo				
	Odds ratio	(95% CI)	Risk ratio	(exact 95% CI) (asymp 95% CI)	p-value**
Overall	0.00	(0.00,4.63)	0.00	(0.00,7.46)	

Subgroups for analyses by SOC and PT are not displayed because overall test for treatment is not significant on 5% level

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Patients with AE:Time at risk=start of first AE-start of treatment+1. Patients without AE:time at risk=end of time at risk-start of treatment+1.
End of time at risk: min of (the day before any non-randomized Speso, Day 6, the day of EoS if pts were not rolled over or the day before first dose in OLE study if pts were rolled over). All AEs starting up to the end of time at risk are included.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test. **Q-test for homogeneity of risk ratios (treatment by subgroup interaction).
Maximum intensity: If a patient has more than one AE only the worst is recorded.
MedDRA version: 24.0 inf=infinity. NC = not calculable

Patients with AE:Time at risk=start of first AE-start of treatment+1. Patients without AE:time at risk=end of time at risk-start of treatment+1.
End of time at risk: min of (the day before any non-randomized Speso, Day 6, the day of EoS if pts were not rolled over or the day before first dose in OLE study if pts were rolled over). All AEs starting up to the end of time at risk are included.
Exact confidence intervals (CIs) for risk ratios and risk differences are estimated by Chan and Zhang and for odds ratios exact mid-p confidence limits.
Asymptotic confidence intervals (CIs) for risk ratios are Wald confidence limits.
*2*one-sided p value is calculated using Suissa-Shuster Z-pooled test. **Q-test for homogeneity of risk ratios (treatment by subgroup interaction).
Maximum intensity: If a patient has more than one AE only the worst is recorded.
MedDRA version: 24.0 inf=infinity. NC = not calculable

gba\t-ttesaf6.sas 30NOV2022

Table 1.6.14 Proportion and incidence rate of patients with adverse events with severe maximum intensity with >=5% occurrence in at least one treatment arm on PT level overall and by subgroup up to week 4 - SAF (OC)
System organ class: General disorders and administration site conditions
Preferred term: Pyrexia

Subgroup Category	Speso 900 mg IV SD vs Placebo				
	Odds ratio	(95% CI)	Risk ratio	(exact 95% CI) (asymp 95% CI)	p-value**
Overall	0.00	(0.00,4.63)	0.00	(0.00,7.46)	

Subgroups for analyses by SOC and PT are not displayed because overall test for treatment is not significant on 5% level

N is the number of patients in the respective analysis set. n is the number of patients with at least one event in the respective analysis set.
Patients with AE:Time at risk=start of first AE-start of treatment+1. Patients without AE:time at risk=end of time at risk-start of treatment+1.
End of time at risk: min of (the day before any non-randomized Speso, Day 6, the day of EoS if pts were not rolled over or the day before first dose in OLE study if pts were rolled over). All AEs starting up to the end of time at risk are included.
