Abbreviations: CI=confidence interval, CVD=cardiovascular disease, DF=degrees of freedom, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, KDQoL=Kidney Disease Quality of Life, MID=minimal important difference, N=number of subjects, OR=odds ratio, SoC=standard of care.

Note: For 'Total' the OR is estimated by a GLM with factors treatment group and study using a binomial distribution and logit as link function.

Analysis is based on all post-baseline assessments available for this parameter.

The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights. The same method was applied to assess the heterogeneity between subgroups.

Category 'Missing' was excluded from meta-analysis.

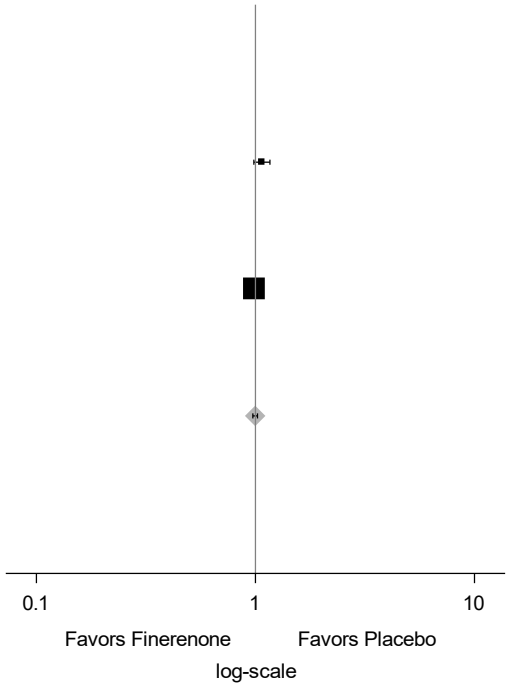
Table B2.0.5: Summary of Treatment Duration - Safety Analysis Set - Screening eGFR >= 60 ml/min/1.73m2

	Finerenone (N=2536)	Placebo (N=2523)	Total (N= 5059
Treatment duration (months)			
n	2536	2523	5059
Mean	35.4	35.1	35.2
SD	14.27	14.31	14.29
Median	35.7	35.3	35.4
Q1-Q3	27.5 - 46.2	26.8 - 46.1	27.1 - 46.2
Range	0.03 - 61.01	0.20 - 61.37	0.03 - 61.37

Abbreviations: eGFR=estimated glomerular filtration rate, N=number of subjects, n=number of subjects with non-missing values in category, Q1=first quartile, Q3=third quartile, SD=standard deviation.
Note: Treatment duration is defined as the time from start of study drug to permanent stop of study drug (in months).

Figure B2.1.1: Forestplot for Relative Risk of Proportion of Subjects with TEAEs
Safety Analysis Set - Screening eGFR >= 60 ml/min/1.73m2

Subgroup Study	Finerenone + SoC Events / Total	Placebo + SoC Events / Total	Weight (%)	Relative risk (fixed effect) 95% CI	Overall treatment effect
Overall					
FIDELIO-DKD	181 / 210	178 / 221	8.3	1.07 [0.98,1.16]	
FIGARO-DKD	1939 / 2326	1937 / 2302	91.7	0.99 [0.97,1.02]	
Total	2120 / 2536	2115 / 2523		1.00 [0.97,1.02]	Z=-0.24, p=0.8105
Heterogeneity:	Q=2.94 (df=1)	p=0.0865	I^2=66.0%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, RR=relative risk, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the RR is estimated by a GLM with classification term for treatment using a binomial distribution and log as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights.

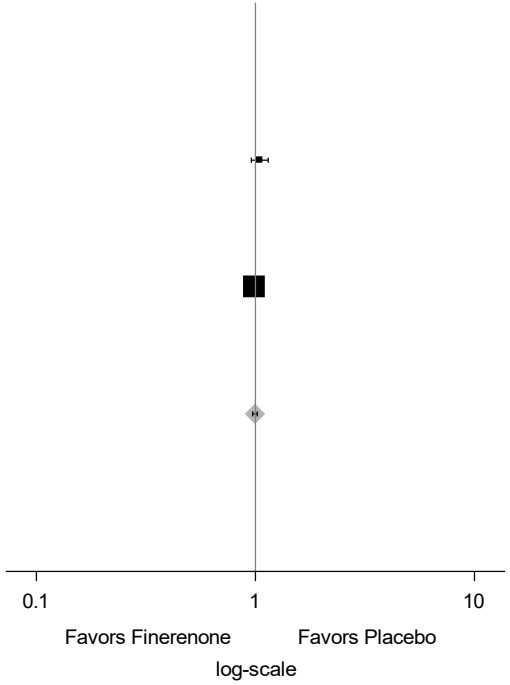
Figure B2.1.2: Forestplot for Relative Risk of Proportion of Subjects with TEAEs Excluding Progression-Related Events
Safety Analysis Set - Screening eGFR >= 60 ml/min/1.73m2

Subgroup Study	Finerenone + SoC Events / Total	Placebo + SoC Events / Total	Weight (%)	Relative risk (fixed effect) 95% CI	Overall treatment effect
Overall					
FIDELIO-DKD	176 / 210	177 / 221	7.9	1.05 [0.96,1.14]	
FIGARO-DKD	1926 / 2326	1924 / 2302	92.1	0.99 [0.97,1.02]	
Total	2102 / 2536	2101 / 2523		0.99 [0.97,1.02]	Z=-0.40, p=0.6910
Heterogeneity:	Q=1.35 (df=1)	p=0.2454	I^2=25.9%		



Abbreviations: CI=confidence interval, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, RR=relative risk, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the RR is estimated by a GLM with classification term for treatment using a binomial distribution and log as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights.

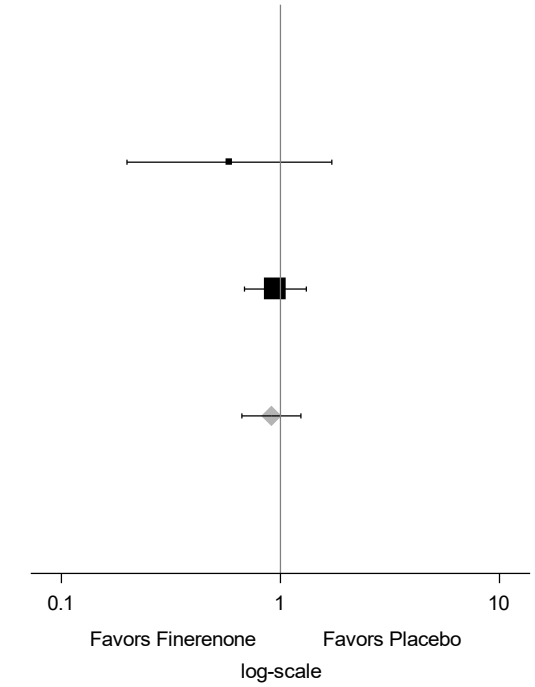
Figure B2.1.20: Forest Plot for Relative Risk of Proportion of Subjects with TEAEs - Diabetic retinopathy (PT with Incidence >=1%)
Safety Analysis Set - Screening eGFR >= 60 ml/min/1.73m2

Subgroup Study	Finerenone + SoC Events / Total	Placebo + SoC Events / Total	Weight (%)	Relative risk (fixed effect) 95% CI	Overall treatment effect
Overall					
FIDELIO-DKD	5 / 210	9 / 221	8.4	0.58 [0.20,1.72]	
FIGARO-DKD	69 / 2326	72 / 2302	91.6	0.95 [0.69,1.31]	
Total	74 / 2536	81 / 2523		0.91 [0.67,1.24]	Z=-0.60, p=0.5473
Heterogeneity:	Q=0.71 (df=1)	p=0.3992	I^2=0.0%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, PT=preferred term, RR=relative risk, SOC=system organ class, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the RR is estimated by a GLM with classification term for treatment using a binomial distribution and log as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights.

Figure B2.1.21: Forest Plot for Relative Risk of Proportion of Subjects with TEAEs - Vitreous haemorrhage (PT with Incidence >=1%)
Safety Analysis Set - Screening eGFR >= 60 ml/min/1.73m2

Safety Analysis Set - Screening eGFR >= 60 ml/min/1.73m2

Subgroup Study	Finerenone + SoC Events / Total	Placebo + SoC Events / Total	Weight (%)	Relative risk (fixed effect) 95% CI	Overall treatment effect
Overall					
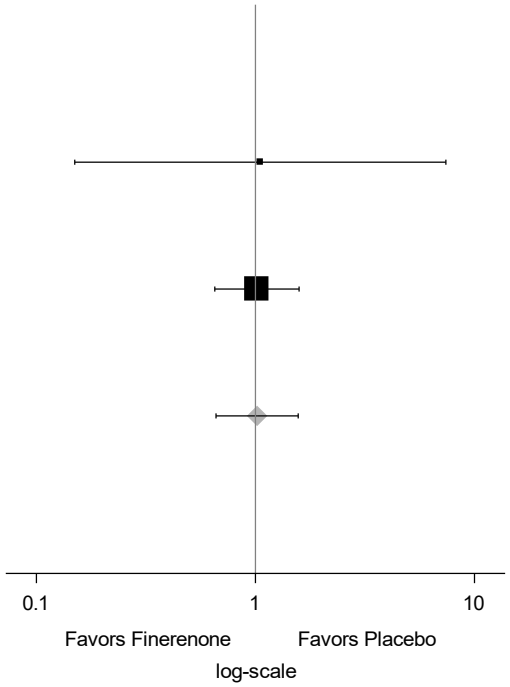
FIDELIO-DKD	2 / 210	2 / 221	4.9	1.05 [0.15,7.40]	
FIGARO-DKD	39 / 2326	38 / 2302	95.1	1.02 [0.65,1.58]	
Total	41 / 2536	40 / 2523		1.02 [0.66,1.57]	Z=0.08, p=0.9373
Heterogeneity:	Q=0.00 (df=1)	p=0.9723	I^2=0.0%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, PT=preferred term, RR=relative risk, SOC=system organ class, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the RR is estimated by a GLM with classification term for treatment using a binomial distribution and log as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights.

Figure B2.1.67: Forest Plot for Relative Risk of Proportion of Subjects with TEAEs - Fall (PT with Incidence >=1%)

Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, OR=odds ratio, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the OR is estimated by a GLM with classification term for treatment using a binomial distribution and logit as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights. The same method was applied to assess the heterogeneity between subgroups.

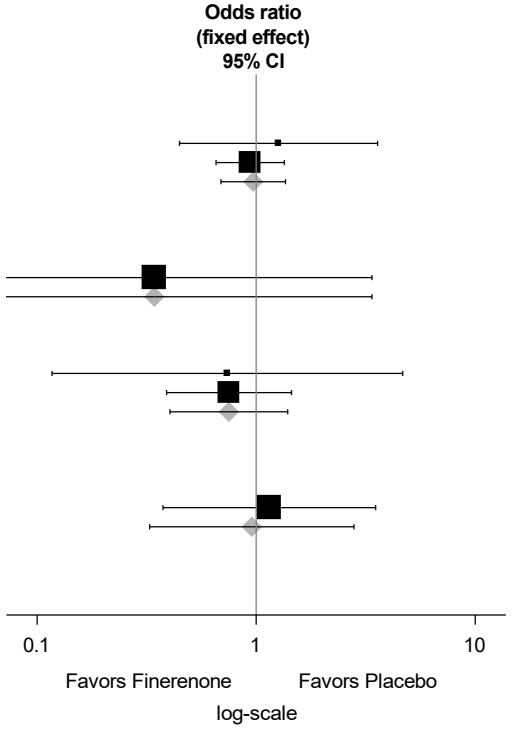
Heterogeneity:	Q=0.10 (df=1)	p=0.7469	I^2=0.0%		
Subgroup Heterogeneity:	Q=1.21 (df=3)	p=0.7502	I^2=0.0%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, OR=odds ratio, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the OR is estimated by a GLM with classification term for treatment using a binomial distribution and logit as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights. The same method was applied to assess the heterogeneity between subgroups.
Category 'Missing' was excluded from meta-analysis.

Figure B2.2.7.6: Forestplot for Odds Ratio of Proportion of Subjects with TEAEs leading to Discontinuation of Study Drug by Sex
Safety Analysis Set - Screening eGFR >= 60 ml/min/1.73m2

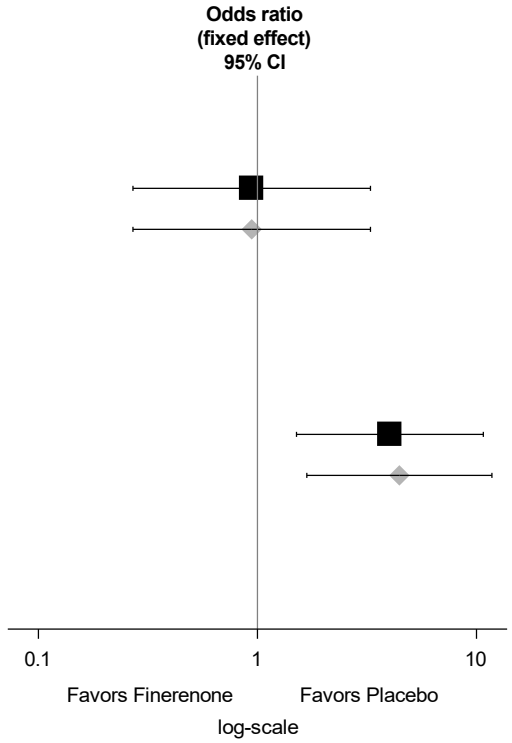
FIGARO-DKD	20 / 1963	5 / 1960	100.0	4.02 [1.51,10.75]	
Total	22 / 2173	5 / 2181		4.45 [1.68,11.76]	Z=3.01, p=0.0026
Heterogeneity:	Q=0.04 (df=1)	p=0.8426	I^2=0.0%		
Subgroup Heterogeneity:	Q=3.70 (df=1)	p=0.0546	I^2=72.9%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, N=number of subjects, PT=preferred term, OR=odds ratio, SOC=system organ class, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the OR is estimated by a GLM with classification term for treatment using a binomial distribution and logit as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights. The same method was applied to assess the heterogeneity between subgroups.

Figure B2.2.94: Forest Plot for Odds Ratio of Proportion of Subjects with TEAEs - Type 2 diabetes mellitus (PT with Incidence >=1%)
Safety Analysis Set - Screening eGFR >= 60 ml/min/1.73m2

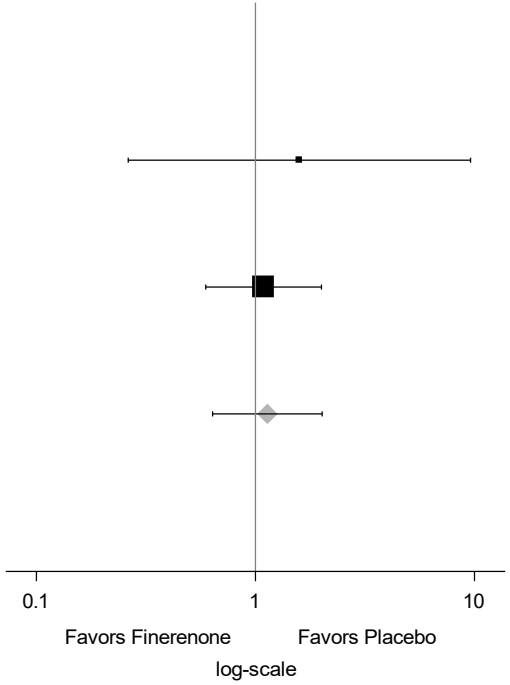
Figure B2.2.129: Forest Plot for Odds Ratio of Proportion of Subjects with TEAEs - Erectile dysfunction (PT with Incidence >=1%)
Safety Analysis Set - Screening eGFR >= 60 ml/min/1.73m2

Subgroup Study	Finerenone + SoC Events / Total	Placebo + SoC Events / Total	Weight (%)	Odds ratio (fixed effect) 95% CI	Overall treatment effect
Overall					
FIDELIO-DKD	3 / 210	2 / 221	10.3	1.59 [0.26,9.59]	
FIGARO-DKD	22 / 2326	20 / 2302	89.7	1.09 [0.59,2.00]	
Total	25 / 2536	22 / 2523		1.13 [0.64,2.02]	Z=0.43, p=0.6700
Heterogeneity:	Q=0.15 (df=1)	p=0.6979	I^2=0.0%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, N=number of subjects, PT=preferred term, OR=odds ratio, SOC=system organ class, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the OR is estimated by a GLM with classification term for treatment using a binomial distribution and logit as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights.

Figure B2.2.130: Forest Plot for Odds Ratio of Proportion of Subjects with TEAEs - Respiratory, Thoracic And Mediastinal Disorders (SOC with Incidence >=1%)
Safety Analysis Set - Screening eGFR >= 60 ml/min/1.73m2

Subgroup Study	Finerenone + SoC Events / Total	Placebo + SoC Events / Total	Weight (%)	Odds ratio (fixed effect) 95% CI	Overall treatment effect

Completed study	2824 (99.7%)	2832 (99.7%)	5656 (99.7%)

Number of subjects enrolled is the number of subjects who signed informed consent, including subjects who switched from study 16244 to study 17530.
The subject is considered as having completed the study if there is a contact with the subject after the EOS notification or if the subject died. Contact with the subject can be actual visits, phone contacts, or information available from public records, etc.
Lost to follow-up includes all study non-completers who have not withdrawn consent. This definition does not necessarily meet the reasons for non-completion of the specified study epochs.
Number of enrolled subjects and screen failures refer to the full study population.

Number of subjects enrolled is the number of subjects who signed informed consent, including subjects who switched from study 16244 to study 17530.
The subject is considered as having completed the study if there is a contact with the subject after the EOS notification or if the subject died. Contact with the subject can be actual visits, phone contacts, or information available from public records, etc.
Lost to follow-up includes all study non-completers who have not withdrawn consent. This definition does not necessarily meet the reasons for non-completion of the specified study epochs.
Number of enrolled subjects and screen failures refer to the full study population.

Table 1.3.1 / 16: Time to all-cause mortality (months): Kaplan-Meier summary, stratified logrank test and Hazard Ratio by Sex (full analysis set)

Sex: Male

Statistics	BAY 94-8862	Placebo
N	4481 (100.0%)	4607 (100.0%)
Number (%) of subjects with event	374 (8.3%)	448 (9.7%)
Number (%) of subjects censored	4107 (91.7%)	4159 (90.3%)
Median Time to event (month) [95 % CI]	n.c.	n.c.
Hazard ratio from stratified Cox proportional hazards model (BAY 94-8862/Placebo) [95 % CI]	0.85 [0.74; 0.97]	
two-sided p-value from stratified logrank test	0.0181	

Hazard ratio from stratified cox proportional hazard model including treatment as factor.
Stratification factors: Region / eGFR category at screening / type of albuminuria at screening / history of CV disease
Bayer: /var/swan/root/bhc/948862/17530/stat/query48/prod/pgms/t_adtte_cox_prophaz.sas 06FEB2023 11:30

Table 1.3.1 / 16: Time to all-cause mortality (months): Kaplan-Meier summary, stratified logrank test and Hazard Ratio by Sex (full analysis set) (cont.)

Sex: Female

Statistics	BAY 94-8862	Placebo
N	2038 (100.0%)	1900 (100.0%)
Number (%) of subjects with event	178 (8.7%)	166 (8.7%)
Number (%) of subjects censored	1860 (91.3%)	1734 (91.3%)
Median Time to event (month) [95 % CI]	n.c.	n.c.
Hazard ratio from stratified Cox proportional hazards model (BAY 94-8862/Placebo) [95 % CI]	1.01 [0.81; 1.25]	
two-sided p-value from stratified logrank test	0.9366	

Hazard ratio from stratified cox proportional hazard model including treatment as factor.
Stratification factors: Region / eGFR category at screening / type of albuminuria at screening / history of CV disease
Bayer: /var/swan/root/bhc/948862/17530/stat/query48/prod/pgms/t_adtte_cox_prophaz.sas 06FEB2023 11:30
End of table

Table 1.3.1 / 17: Time to all-cause mortality (months): Wald chi-square p-values from stratified model for subgroup Sex (full analysis set)

Subgroup-Variable	Treatment and Subgroup interaction p-value
Sex	0.1693

Wald chi-square p-value from stratified model including treatment, subgroup, and treatment x subgroup interaction.
Stratification factors: Region / eGFR category at screening / type of albuminuria at screening / history of CV disease
Bayer: /var/swan/root/bhc/948862/17530/stat/query48/prod/pgms/t_adtte_cox_prophaz.sas 06FEB2023 11:30
End of table

Table 1.3.1 / 18: Time to all-cause mortality (months): Kaplan-Meier summary, stratified logrank test and Hazard Ratio by Age group (years) 3rd category (full analysis set)

Age group (years) 3rd category: < 65 years

Statistics	BAY 94-8862	Placebo
N	2958 (100.0%)	2931 (100.0%)
Number (%) of subjects with event	187 (6.3%)	197 (6.7%)
Number (%) of subjects censored	2771 (93.7%)	2734 (93.3%)
Median Time to event (month) [95 % CI]	n.c.	n.c.
Hazard ratio from stratified Cox proportional hazards model (BAY 94-8862/Placebo) [95 % CI]	0.94 [0.76; 1.15]	
two-sided p-value from stratified logrank test	0.5218	

Hazard ratio from stratified cox proportional hazard model including treatment as factor.
Stratification factors: Region / eGFR category at screening / type of albuminuria at screening / history of CV disease
Bayer: /var/swan/root/bhc/948862/17530/stat/query48/prod/pgms/t_adtte_cox_prophaz.sas 06FEB2023 11:30

Table 1.3.1 / 18: Time to all-cause mortality (months): Kaplan-Meier summary, stratified logrank test and Hazard Ratio by Age group (years) 3rd category (full analysis set) (cont.)

Age group (years) 3rd category: >= 65 years

Statistics	BAY 94-8862	Placebo
N	3561 (100.0%)	3576 (100.0%)
Number (%) of subjects with event	365 (10.2%)	417 (11.7%)
Number (%) of subjects censored	3196 (89.8%)	3159 (88.3%)
Median Time to event (month) [95 % CI]	n.c.	n.c.
Hazard ratio from stratified Cox proportional hazards model (BAY 94-8862/Placebo) [95 % CI]	0.87 [0.76; >1.00]	
two-sided p-value from stratified logrank test	0.0554	

Hazard ratio from stratified cox proportional hazard model including treatment as factor.
Stratification factors: Region / eGFR category at screening / type of albuminuria at screening / history of CV disease
Bayer: /var/swan/root/bhc/948862/17530/stat/query48/prod/pgms/t_adtte_cox_prophaz.sas 06FEB2023 11:30
End of table

Table 1.3.1 / 19: Time to all-cause mortality (months): Wald chi-square p-values from stratified model for subgroup Age group (years) 3rd category (full analysis set)

Subgroup-Variable	Treatment and Subgroup interaction p-value
Age group (years) 3rd category	0.5623

Wald chi-square p-value from stratified model including treatment, subgroup, and treatment x subgroup interaction.
Stratification factors: Region / eGFR category at screening / type of albuminuria at screening / history of CV disease
Bayer: /var/swan/root/bhc/948862/17530/stat/query48/prod/pgms/t_adtte_cox_prophaz.sas 06FEB2023 11:30
