Dokumentvorlage, Version vom 16.12.2021

Dossier zur Nutzenbewertung gemäß § 35a SGB V

Finerenon (KERENDIA®)

Bayer Vital GmbH

Modul 4A, Anhang 4-H

Erwachsene mit chronischer Nierenerkrankung (Stadium 3 und 4 mit Albuminurie) und Diabetes mellitus Typ II

Medizinischer Nutzen und medizinischer Zusatznutzen, Patientengruppen mit therapeutisch bedeutsamem Zusatznutzen

Stand: 22.02.2023

Inhaltsverzeichnis

Table of contents

4.2 Disposition

Table 4.2 / 1: Subject disposition (all enrolled Fidelio - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

Disposition	BAY 94-8862	Placebo	Total
Number of subjects			
Enrolled			13911
Screening failures			8177
Randomized	2649	2645	5294
GCP VIOLATIONS	27	25	52
Full analysis set	2622 (100.0%)	2620 (100.0%)	5242 (100.0%)
Study drug never administered	5 (0.2%)	10 (0.4%)	15 (0.3%)
Treated	2617 (99.8%)	2610 (99.6%)	5227 (99.7%)
Did not complete study	9 (0.3%)	8 (0.3%)	17 (0.3%)
WITHDRAWN CONSENT	4 (0.2%)	5 (0.2%)	9 (0.2%)
LOST TO FOLLOW-UP	5 (0.2%)	3 (0.1%)	8 (0.2%)
Completed study	2613 (99.7%)	2612 (99.7%)	5225 (99.7%)

Number of subjects enrolled is the number of subjects who signed informed consent, including subjects who switched from study 16244 to study 17530.
The subject is considered as having completed the study if there is a contact with the subject after the EOS notification or if the subject died. Contact with the subject can be actual visits, phone contacts, or information available from public records, etc.
Lost to follow-up includes all study non-completers who have not withdrawn consent. This definition does not necessarily meet the reasons for non-completion of the specified study epochs.
Number of enrolled subjects and screen failures refer to the full study population.

Primary system organ class Preferred term MedDRA version 23.1	BAY 94-8862 N=2622 (100%)	Placebo N=2620 (100%)	Total N=5242 (100%)
Keratometry	1 (<0.1%)	0	1 (<0.1%)
Laparoscopy	1 (<0.1%)	0	1 (<0.1%)
Light chain analysis increased	0	1 (<0.1%)	1 (<0.1%)
Lipase increased	0	2 (<0.1%)	2 (<0.1%)
Lipids abnormal	1 (<0.1%)	0	1 (<0.1%)
Lipids increased	1 (<0.1%)	0	1 (<0.1%)
Lipoprotein (a) increased	0	2 (<0.1%)	2 (<0.1%)
Liver function test abnormal	1 (<0.1%)	1 (<0.1%)	2 (<0.1%)
Liver function test increased	0	3 (0.1%)	3 (<0.1%)
Mean cell volume increased	1 (<0.1%)	0	1 (<0.1%)
Monocyte count increased	1 (<0.1%)	0	1 (<0.1%)
Myocardial necrosis marker increased	1 (<0.1%)	0	1 (<0.1%)
Myocardial strain	0	2 (<0.1%)	2 (<0.1%)
N-terminal prohormone brain natriuretic peptide increased	0	1 (<0.1%)	1 (<0.1%)
Neutrophil count increased	1 (<0.1%)	0	1 (<0.1%)
Ophthalmological examination normal	0	1 (<0.1%)	1 (<0.1%)
Oxygen consumption increased	2 (<0.1%)	2 (<0.1%)	4 (<0.1%)
Parasite stool test positive	1 (<0.1%)	0	1 (<0.1%)
Pedal pulse decreased	0	2 (<0.1%)	2 (<0.1%)
Peripheral arteriogram	0	1 (<0.1%)	1 (<0.1%)
Peripheral pulse decreased	1 (<0.1%)	2 (<0.1%)	3 (<0.1%)
Platelet count decreased	2 (<0.1%)	1 (<0.1%)	3 (<0.1%)
Polymerase chain reaction positive	0	1 (<0.1%)	1 (<0.1%)
Popliteal pulse	0	1 (<0.1%)	1 (<0.1%)
Proctosigmoidoscopy	0	1 (<0.1%)	1 (<0.1%)
Prostatic specific antigen increased	5 (0.2%)	8 (0.3%)	13 (0.2%)
Pulmonary imaging procedure abnormal	1 (<0.1%)	0	1 (<0.1%)
Pulse absent	0	1 (<0.1%)	1 (<0.1%)
QRS axis abnormal	3 (0.1%)	11 (0.4%)	14 (0.3%)
Red blood cell sedimentation rate increased	1 (<0.1%)	1 (<0.1%)	2 (<0.1%)
Red cell distribution width increased	0	1 (<0.1%)	1 (<0.1%)
Renal function test abnormal	0	1 (<0.1%)	1 (<0.1%)
Scan myocardial perfusion abnormal	0	1 (<0.1%)	1 (<0.1%)
Smear cervix abnormal	0	1 (<0.1%)	1 (<0.1%)
Stress echocardiogram	0	1 (<0.1%)	1 (<0.1%)
Thyroid function test abnormal	1 (<0.1%)	0	1 (<0.1%)
Thyroid function test normal	2 (<0.1%)	0	2 (<0.1%)
Thyroxine abnormal	0	1 (<0.1%)	1 (<0.1%)
Transaminases increased	0	4 (0.2%)	4 (<0.1%)
Transferrin saturation decreased	1 (<0.1%)	0	1 (<0.1%)
Troponin T increased	4 (0.2%)	2 (<0.1%)	6 (0.1%)

Table 4.5 / 1: Number of subjects with medical history findings by primary system organ class and preferred term (full analysis set - Fidelio - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

Primary system organ class Preferred term MedDRA version 23.1	BAY 94-8862 N=2622 (100%)	Placebo N=2620 (100%)	Total N=5242 (100%)

Glucagon-like peptide-1(GLP1) agonists	239 (9.1%)	241 (9.2%)	480 (9.2%)
SGLT-2 inhibitors	161 (6.1%)	189 (7.2%)	350 (6.7%)
Biguanides	460 (17.5%)	443 (16.9%)	903 (17.2%)
Sulfonylureas	272 (10.4%)	311 (11.9%)	583 (11.1%)
Alpha glucosidase inhibitors	111 (4.2%)	106 (4.0%)	217 (4.1%)
Meglitinides	119 (4.5%)	138 (5.3%)	257 (4.9%)
Thiazolidinediones	76 (2.9%)	77 (2.9%)	153 (2.9%)

Medications that began after the start of study drug, and those that were started after end of study drug, are included in this table.
Multiple drug groups per drug are possible. Therefore, the same drug may be counted in more than one category for the same subject.

Table of contents

1.2.1 Study duration

Table 1.2.1 / 1: Study duration (full analysis set - Fidelio - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

		BAY 94-8862 (N=2622)	Placebo (N=2620)	Total (N=5242)
Study duration (months)	n	2622	2620	5242
	Nmiss	0	0	0
	Mean	31.619	31.451	31.535
	SD	9.946	10.018	9.981
	Min	0.03	0.03	0.03
	Median	31.195	31.310	31.310
	Max	51.48	51.52	51.52

Study duration is defined as time from randomization to the EOS visit (or to last contact date if no EOS visit took place).

Table A2.0.5: Summary of Treatment Duration - Safety Analysis Set - Screening eGFR < 60 ml/min/1.73m2

	Finerenone (N=2617)	Placebo (N=2610)	Total (N= 5227
Treatment duration (months)			
n	2617	2610	5227
Mean	26.5	26.9	26.7
SD	12.32	12.05	12.19
Median	26.1	26.5	26.3
Q1-Q3	19.4 - 35.8	19.8 - 35.7	19.6 - 35.7
Range	0.03 - 51.48	0.07 - 51.52	0.03 - 51.52

Abbreviations: eGFR=estimated glomerular filtration rate, N=number of subjects, n=number of subjects with non-missing values in category, Q1=first quartile, Q3=third quartile, SD=standard deviation.
Note: Treatment duration is defined as the time from start of study drug to permanent stop of study drug (in months).

Table A2.1.1: Effect Measures of Proportion of Subjects with TEAEs
Safety Analysis Set - Screening eGFR < 60 ml/min/1.73m2

	Finerenone vs. Placebo	Finerenone (N=2617)	Placebo (N=2610)	Total (N=5227)
Number of subjects at risk		2617 (100.0%)	2610 (100.0%)	5227 (100.0%)
Number of subjects with events		2287 (87.4%)	2300 (88.1%)	4587 (87.8%)
Number of subjects without events		330 (12.6%)	310 (11.9%)	640 (12.2%)
Odds Ratio [a]				
OR, 95% CI	0.934 [0.792, 1.102]			
p-value	0.4193			
Relative Risk [b]				
RR, 95% CI	0.992 [0.972, 1.012]			
p-value	0.4192			
Risk Difference [c]				
RD, 95% CI	-0.007 [-0.025, 0.010]			
p-value	0.4192			

Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, N=number of subjects, OR=odds ratio, RD=risk difference, RR=relative risk, TE(S)AE=treatment-emergent (serious) adverse event.
Note: Results shown in the second column based on GLMs with classification term for treatment. The GLMs were fitted by SAS PROC GENMOD with different link-functions and/or distributions.
[a] Estimated by a GLM with binomial distribution and logit as link function, [b] Estimated by a GLM with binomial distribution and log as link function.
[c] Estimated by a GLM with binomial distribution and identity as link function. RD = absolute risk of Finerenone - absolute risk of Placebo.
Wald chi-square p-values are presented.
* = model had convergence issues.

Table A2.1.2: Effect Measures of Proportion of Subjects with TEAEs Excluding Progression-Related Events
Safety Analysis Set - Screening eGFR < 60 ml/min/1.73m2

LOST TO FOLLOW-UP	2 (0.1%)	3 (0.2%)	5 (0.2%)
Completed study	1357 (99.9%)	1355 (99.5%)	2712 (99.7%)

Number of subjects enrolled is the number of subjects who signed informed consent, including subjects who switched from study 16244 to study 17530.
The subject is considered as having completed the study if there is a contact with the subject after the EOS notification or if the subject died. Contact with the subject can be actual visits, phone contacts, or information available from public records, etc.
Lost to follow-up includes all study non-completers who have not withdrawn consent. This definition does not necessarily meet the reasons for non-completion of the specified study epochs.
Number of enrolled subjects and screen failures refer to the full study population.

Figure 1.1.2 / 1: Time to all-cause mortality (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

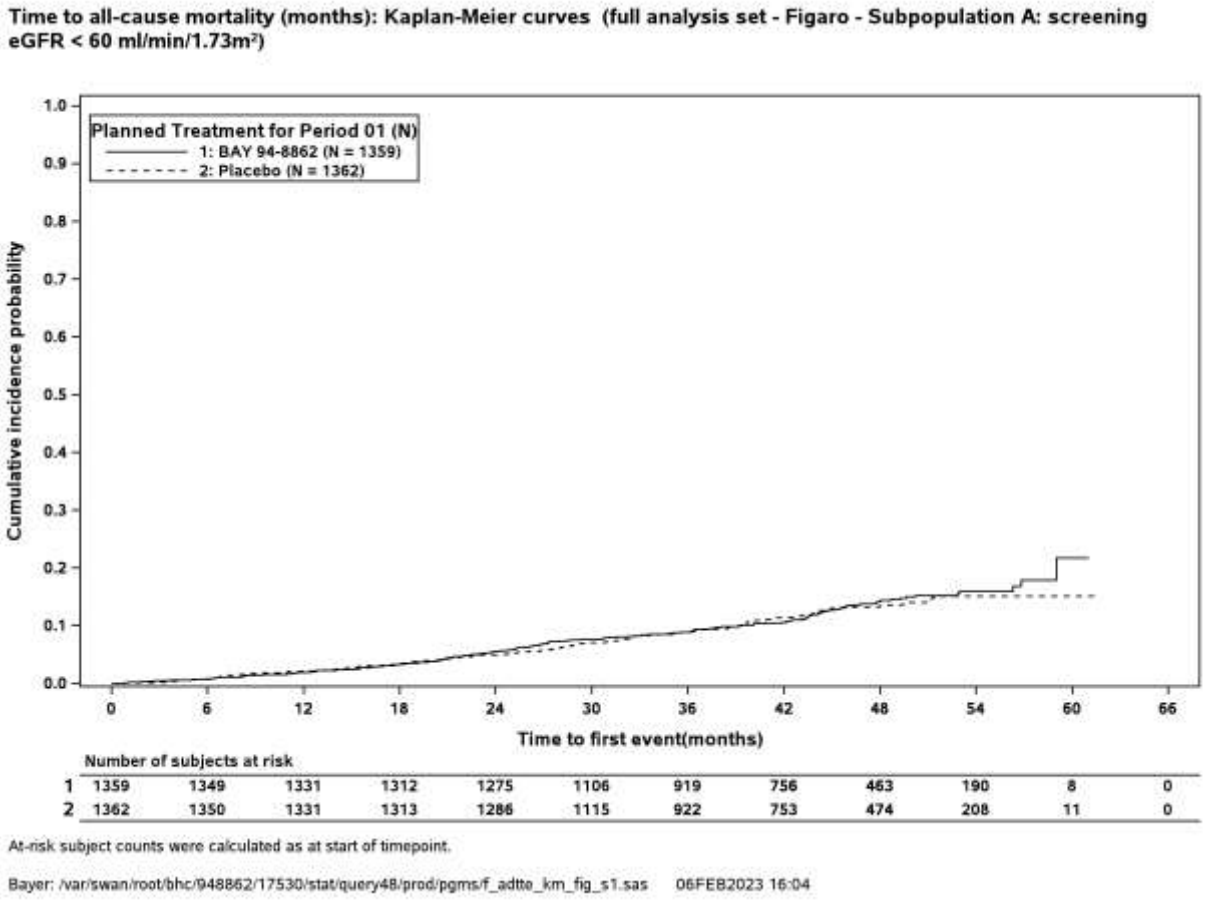

Figure 1.1.2 / 2: Time to onset of kidney failure, a sustained decrease of eGFR 40% or renal death (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

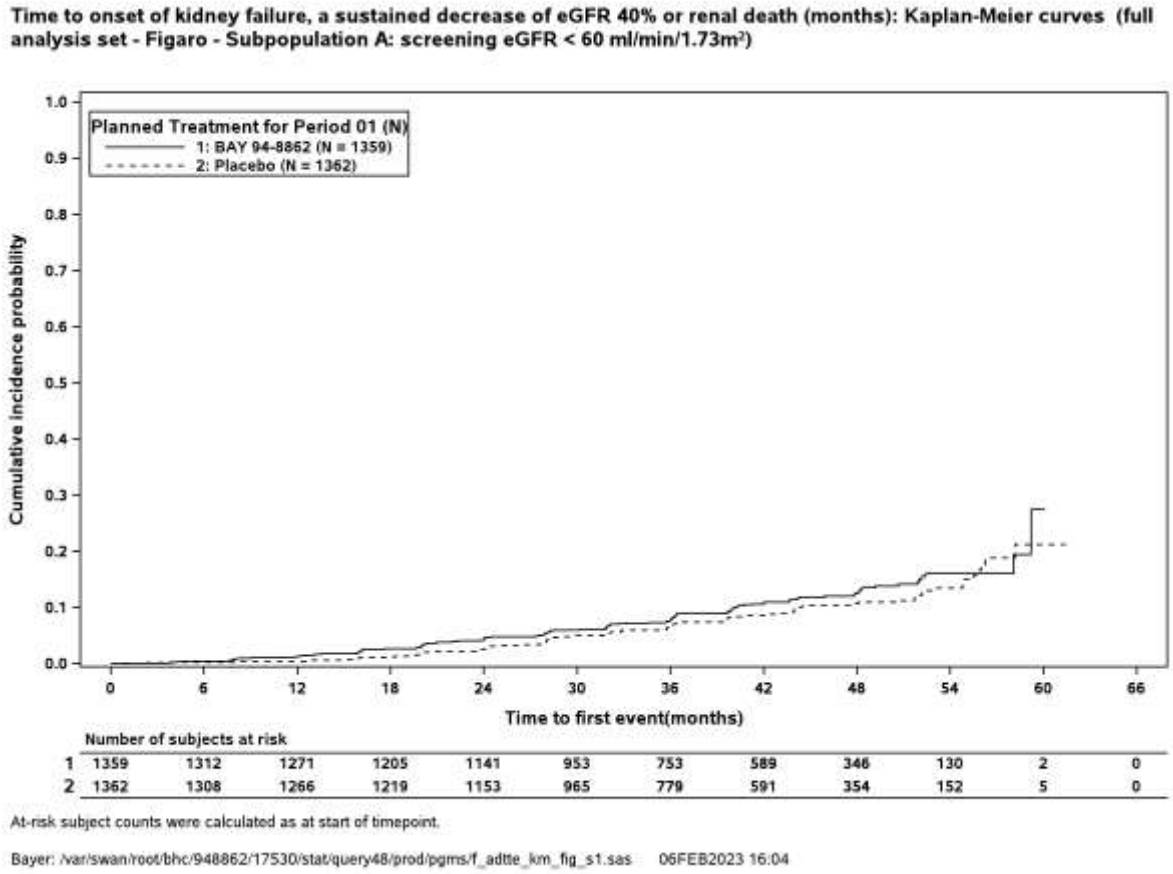

Figure 1.1.2 / 3: Time to onset of kidney failure, a sustained decrease of eGFR 57% or renal death (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

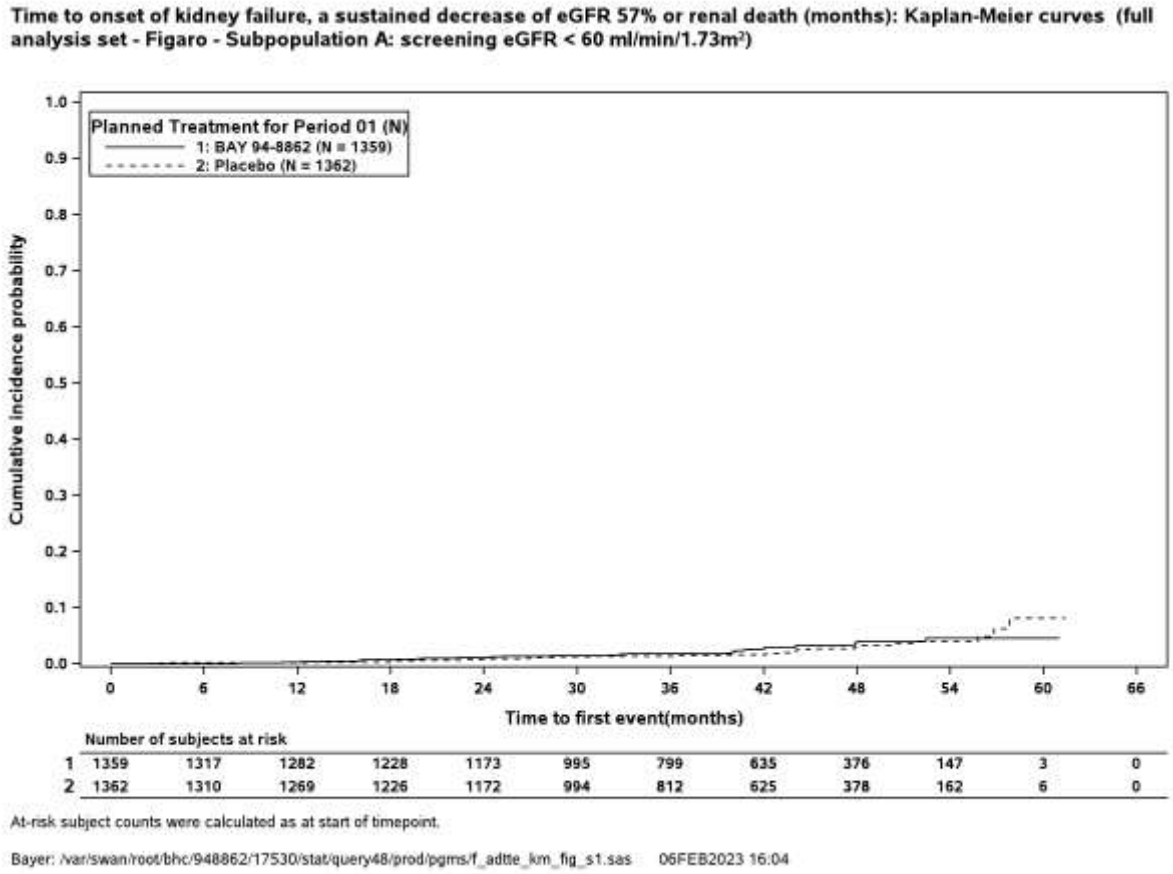

Figure 1.1.2 / 4: Time to onset of kidney failure (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

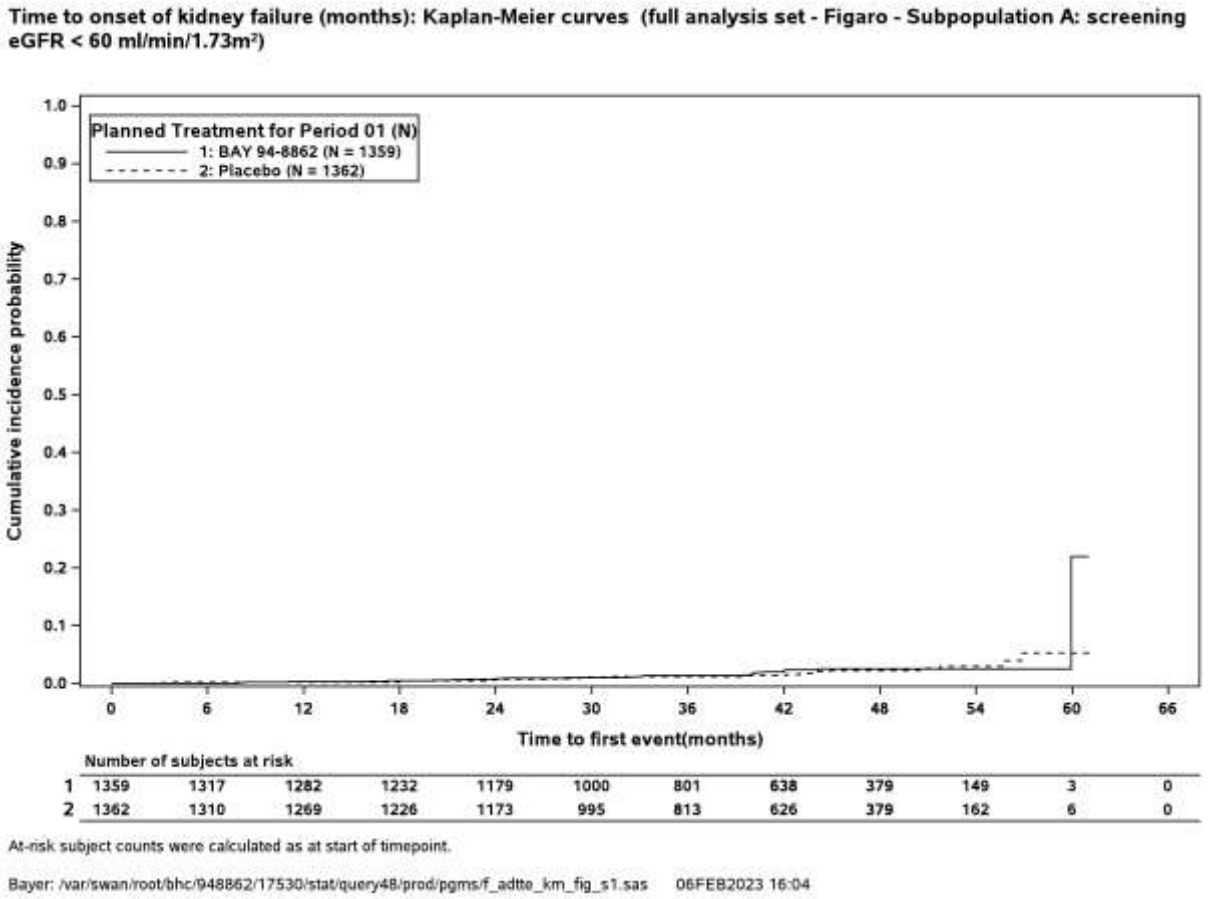

Figure 1.1.2 / 5: Time to onset of ESRD (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

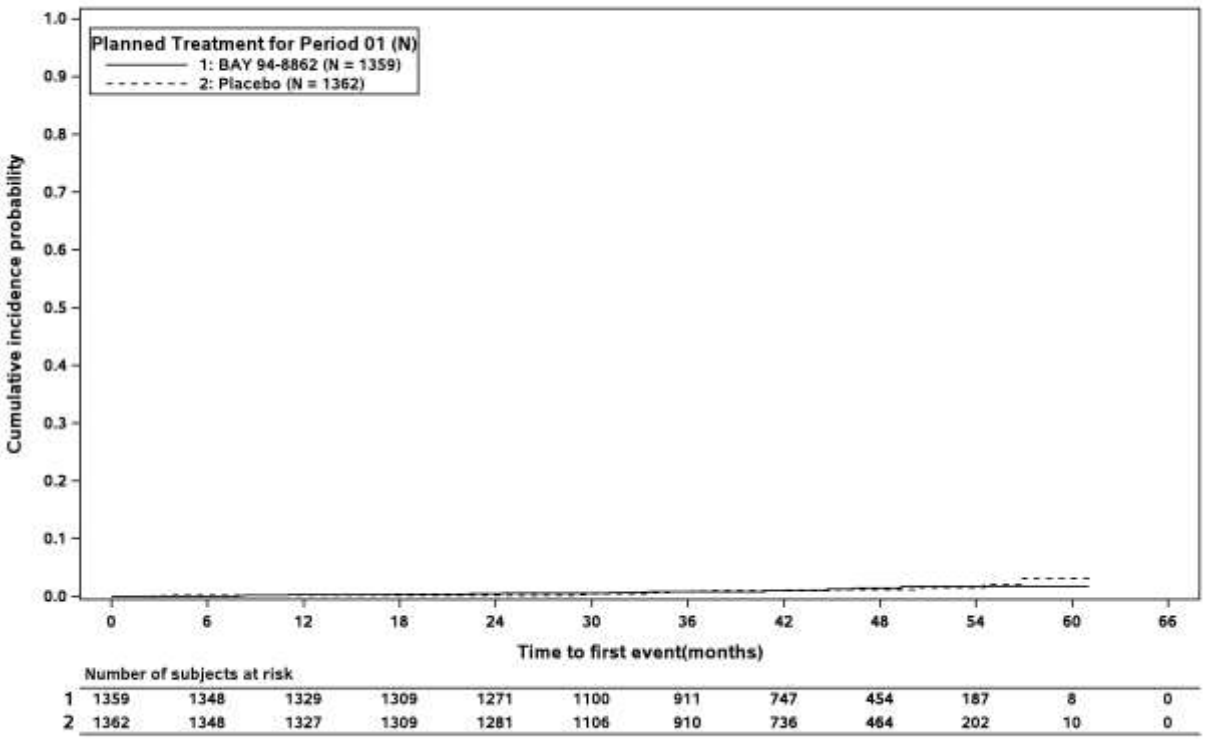
Time to onset of ESRD (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)



Number of subjects at risk

1	1359	1348	1329	1309	1271	1100	911	747	454	187	8	0
2	1362	1348	1327	1309	1281	1106	910	736	464	202	10	0

At-risk subject counts were calculated as at start of timepoint.

Figure 1.1.2 / 6: Time to onset of eGFR decrease to less than 15 mL/min sustained over at least 4 weeks (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

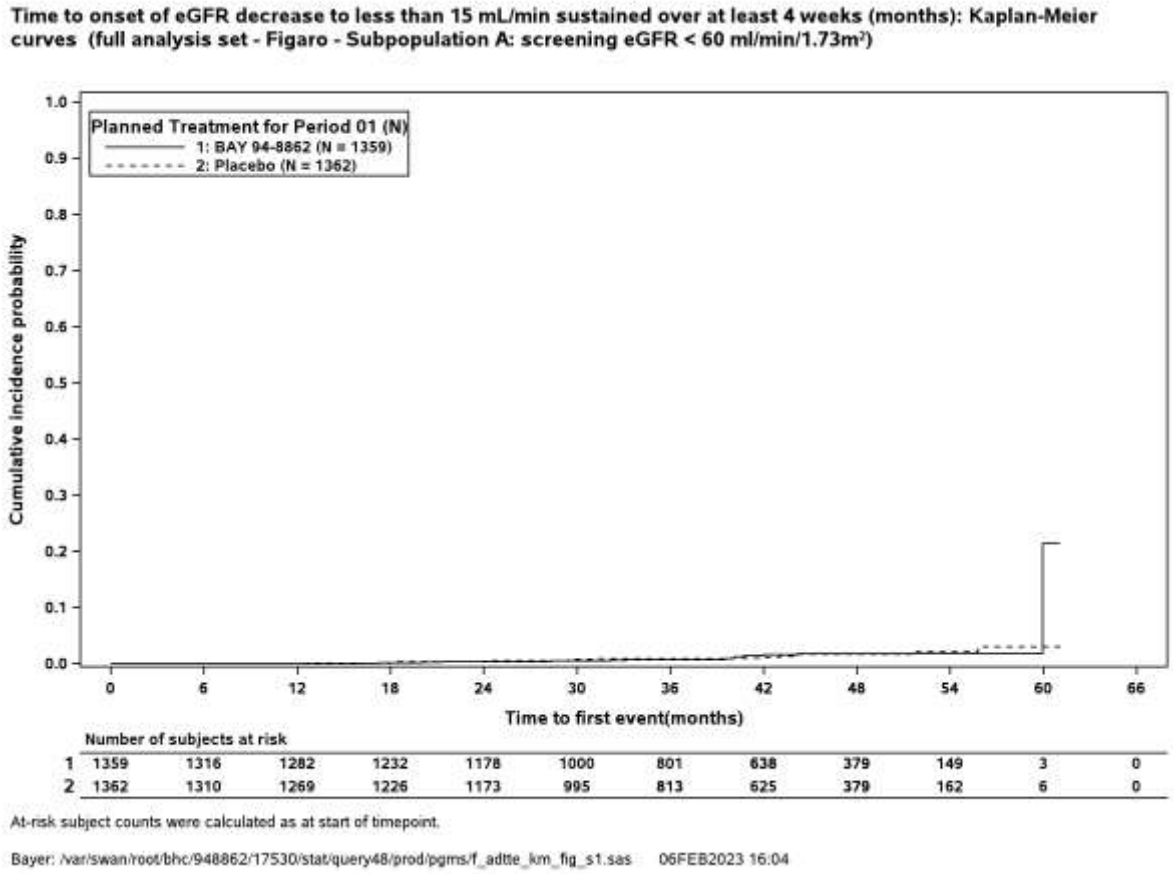

Figure 1.1.2 / 7: Time to onset of eGFR decrease of >=57% sustained over at least 4 weeks (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

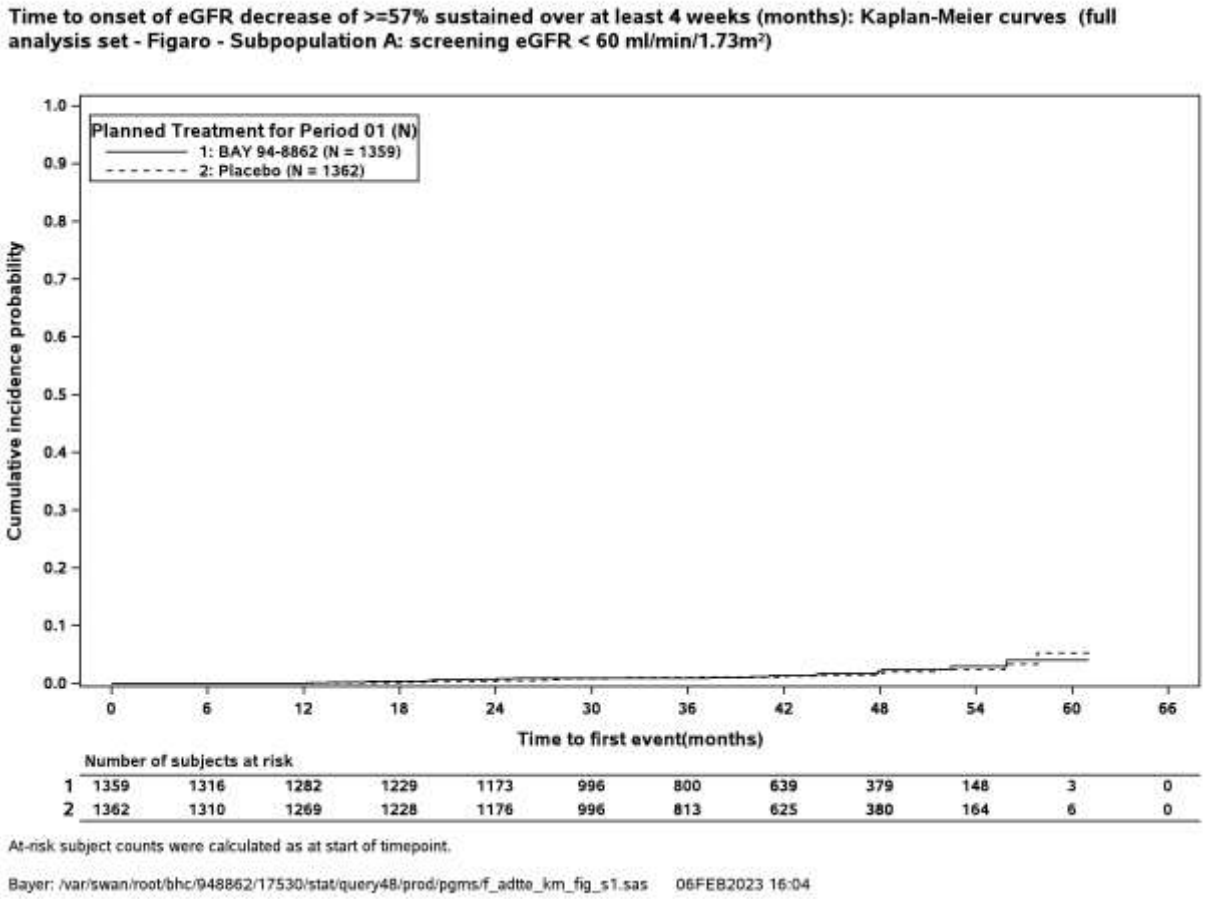

Figure 1.1.2 / 8: Time to renal death (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

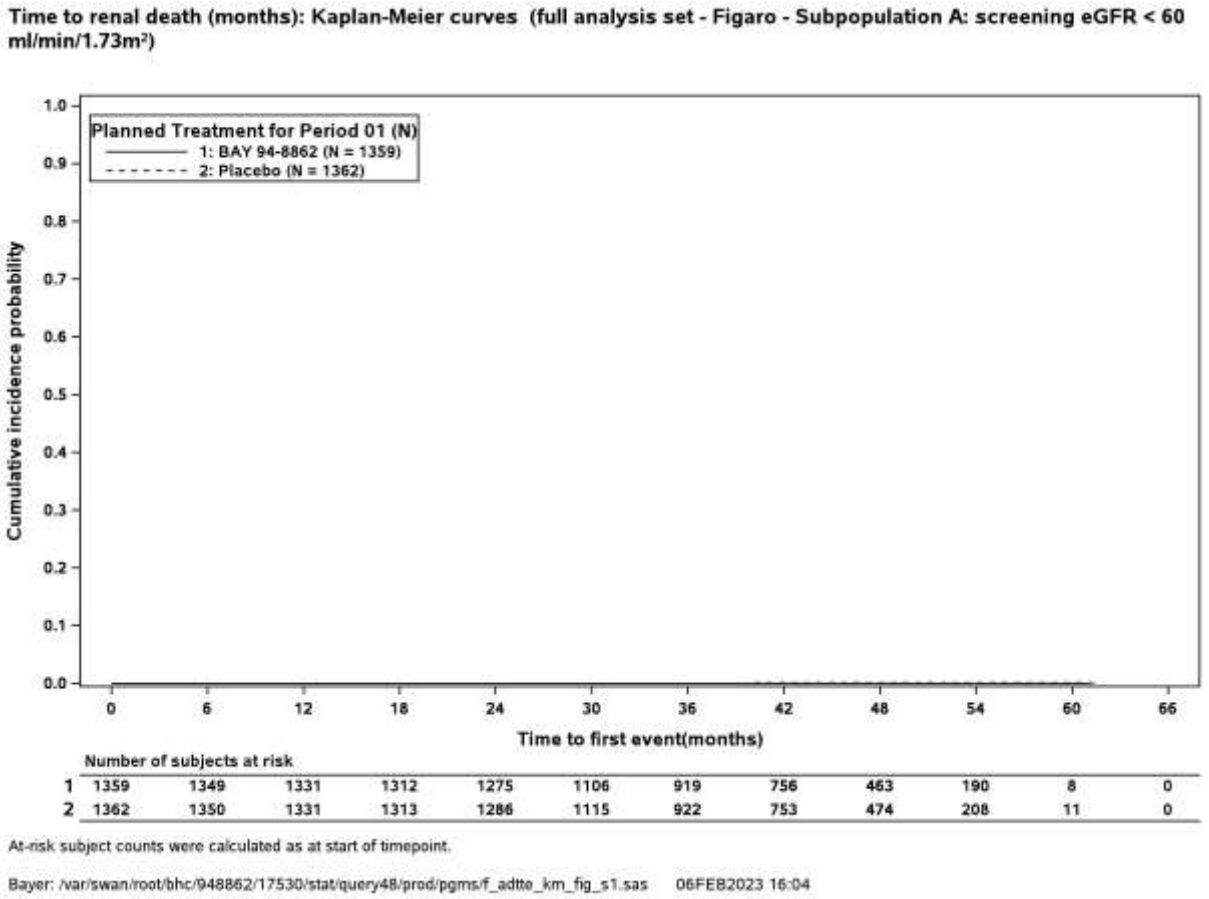

Figure 1.1.2 / 9: Time to onset of eGFR decrease to less than 30 mL/min and baseline >= 40 or less than 15 sustained over at least 4 weeks respectively (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

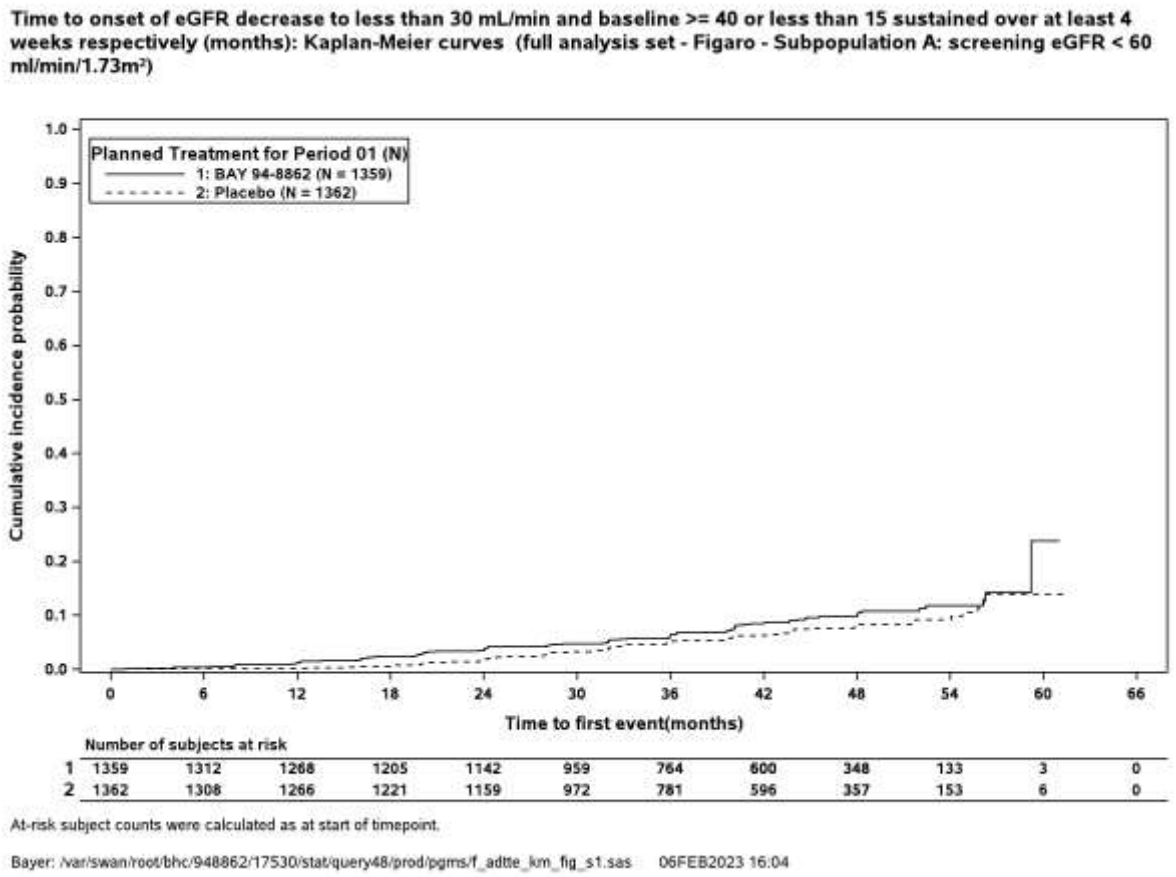

Figure 1.1.2 / 10: Time to first occurrence of CV death or non-fatal CV event (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

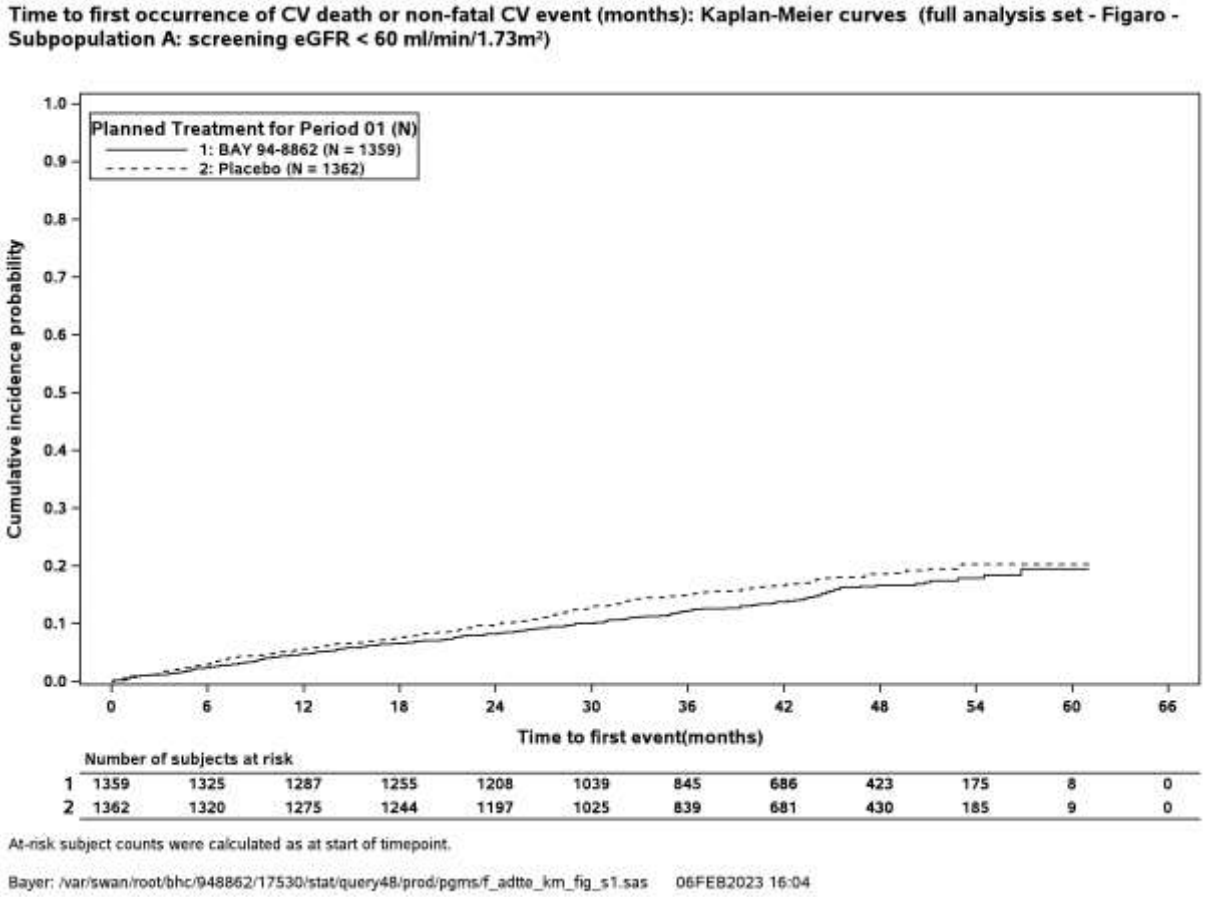

Figure 1.1.2 / 11: Time to CV death (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

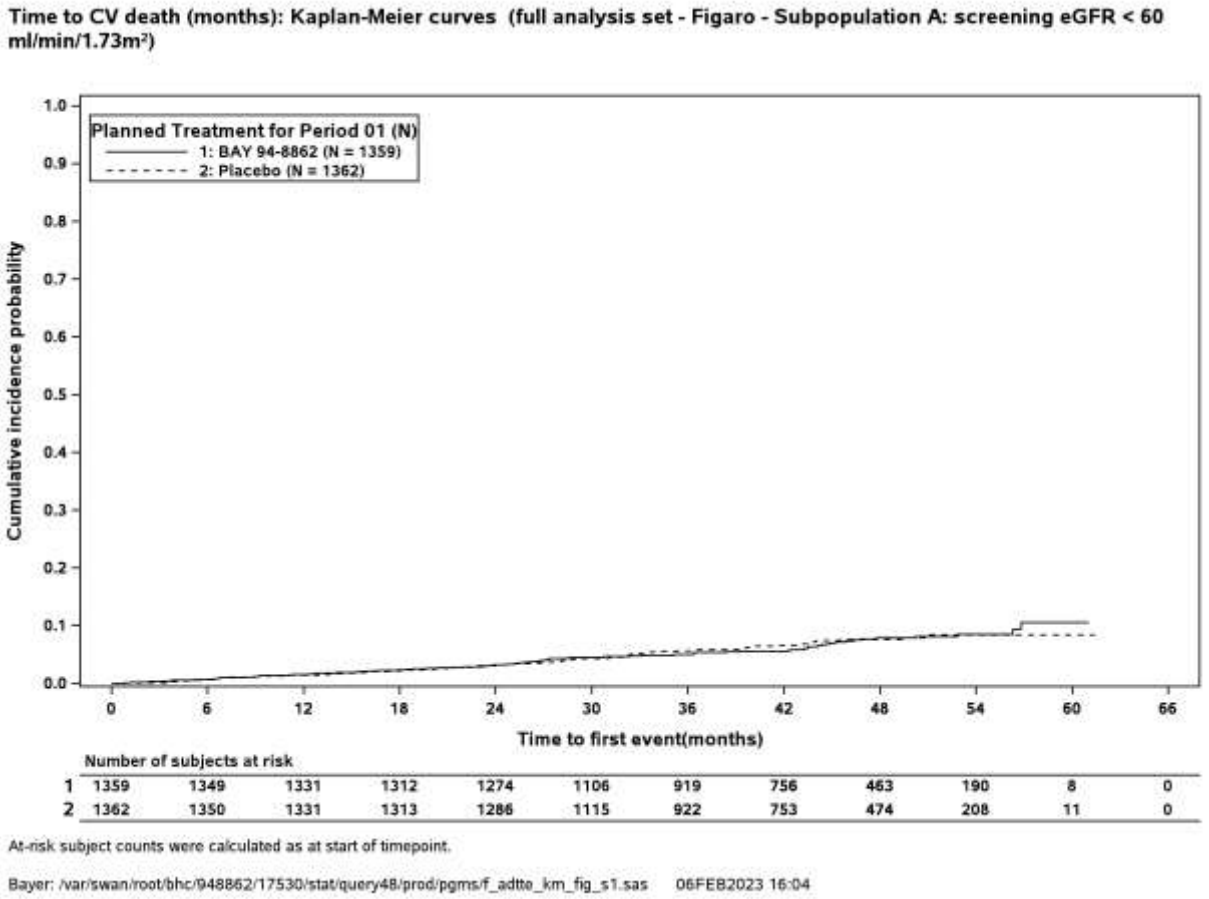

Figure 1.1.2 / 12: Time to first occurrence of non-fatal myocardial infarction (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

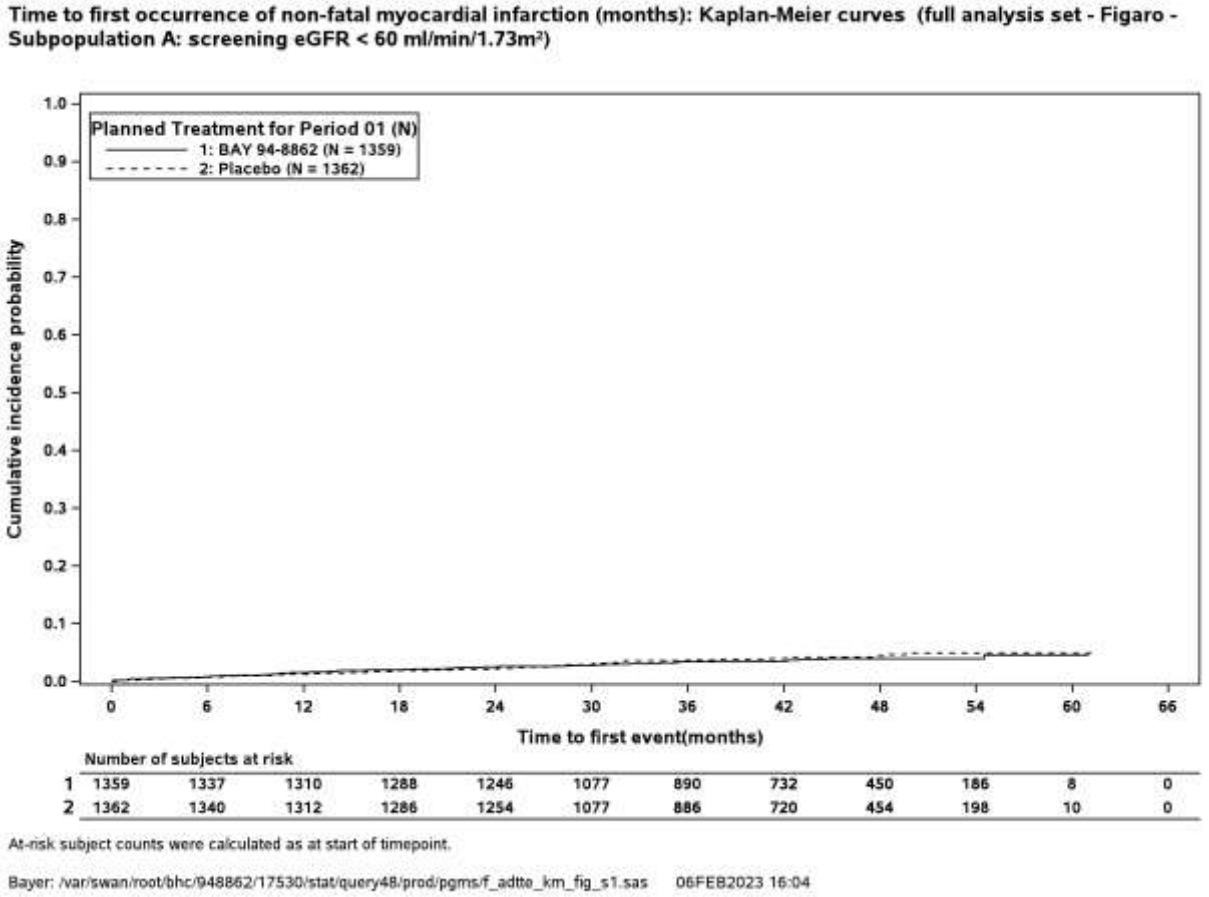

Figure 1.1.2 / 13: Time to first occurrence of non-fatal stroke (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

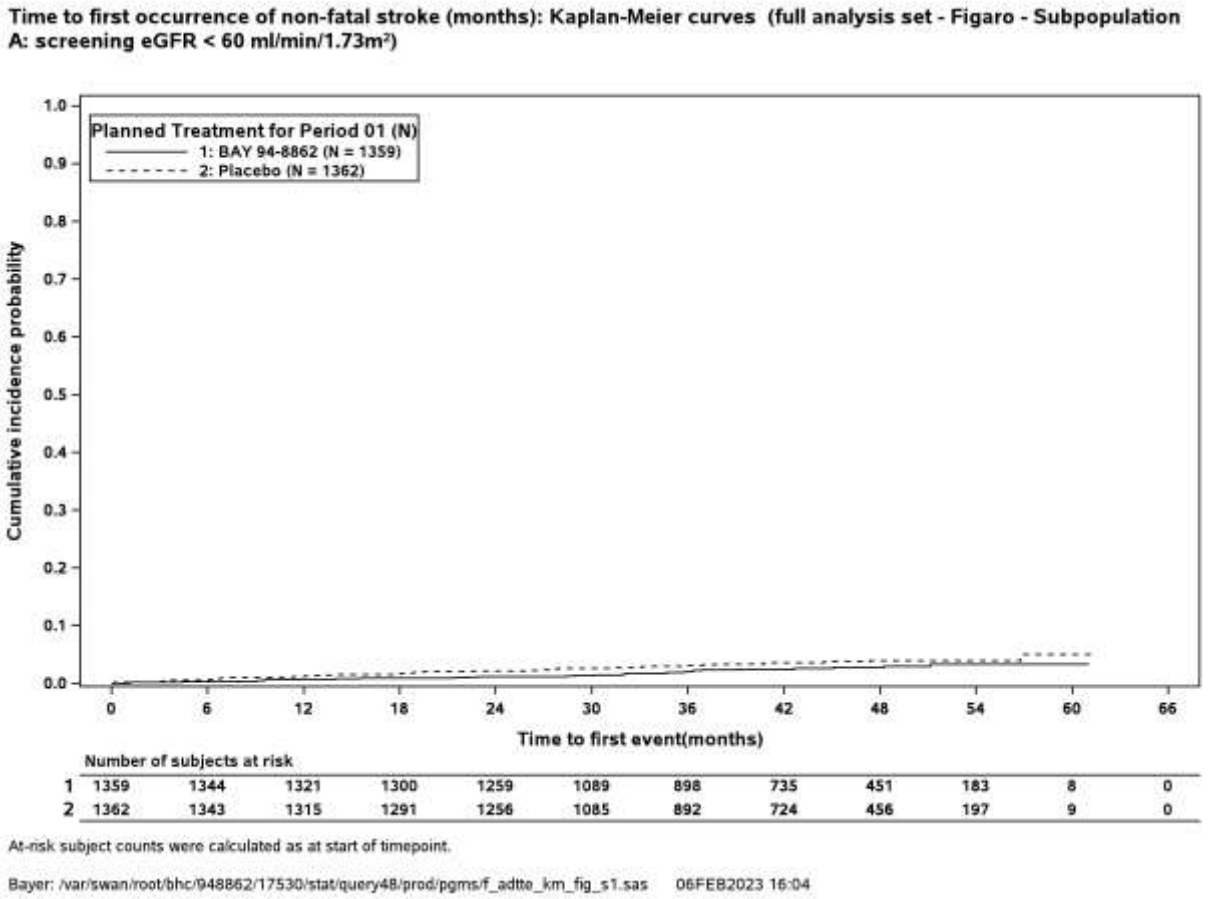

Figure 1.1.2 / 14: Time to hospitalization due to heart failure (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

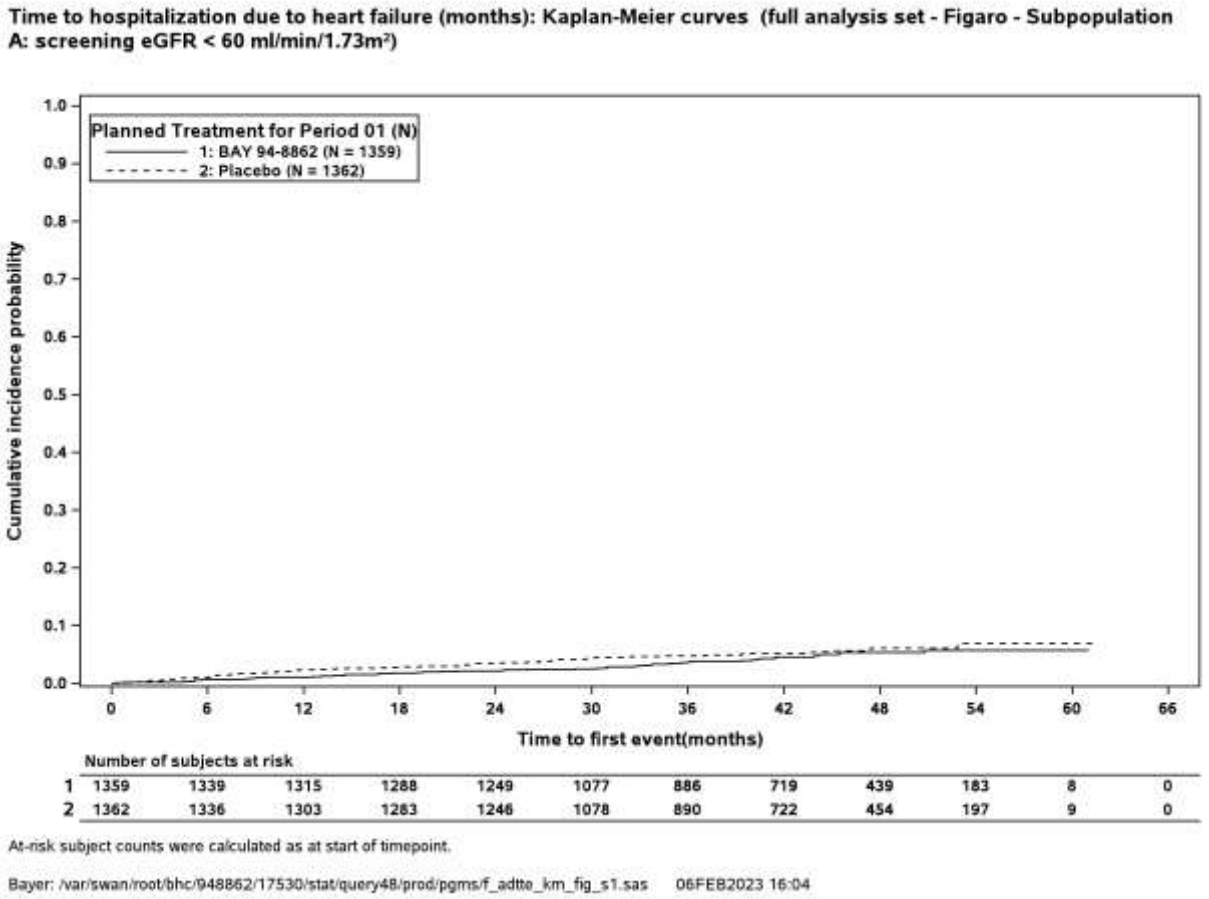

Figure 1.1.2 / 15: Time to fatal or non-fatal myocardial infarction (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

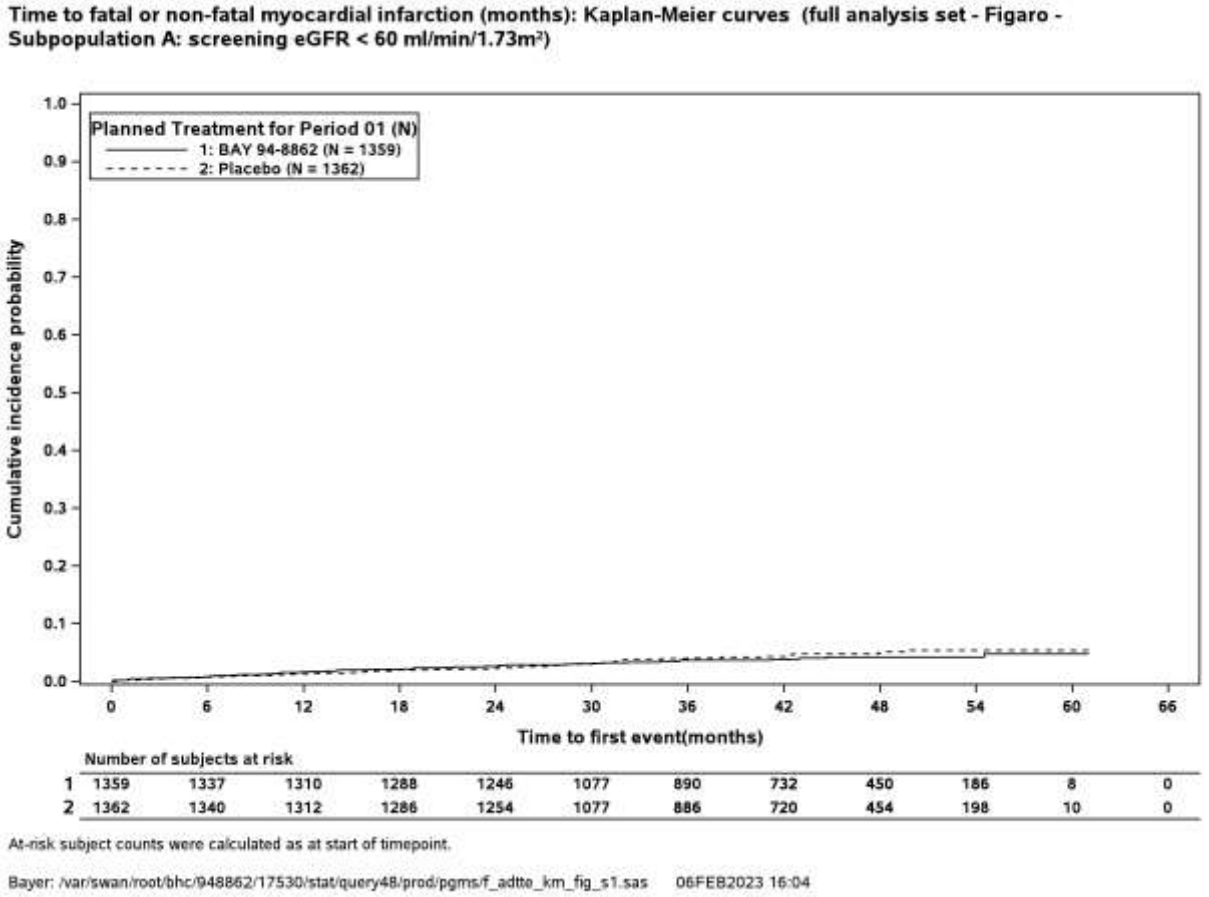

Figure 1.1.2 / 16: Time to fatal or non-fatal stroke (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

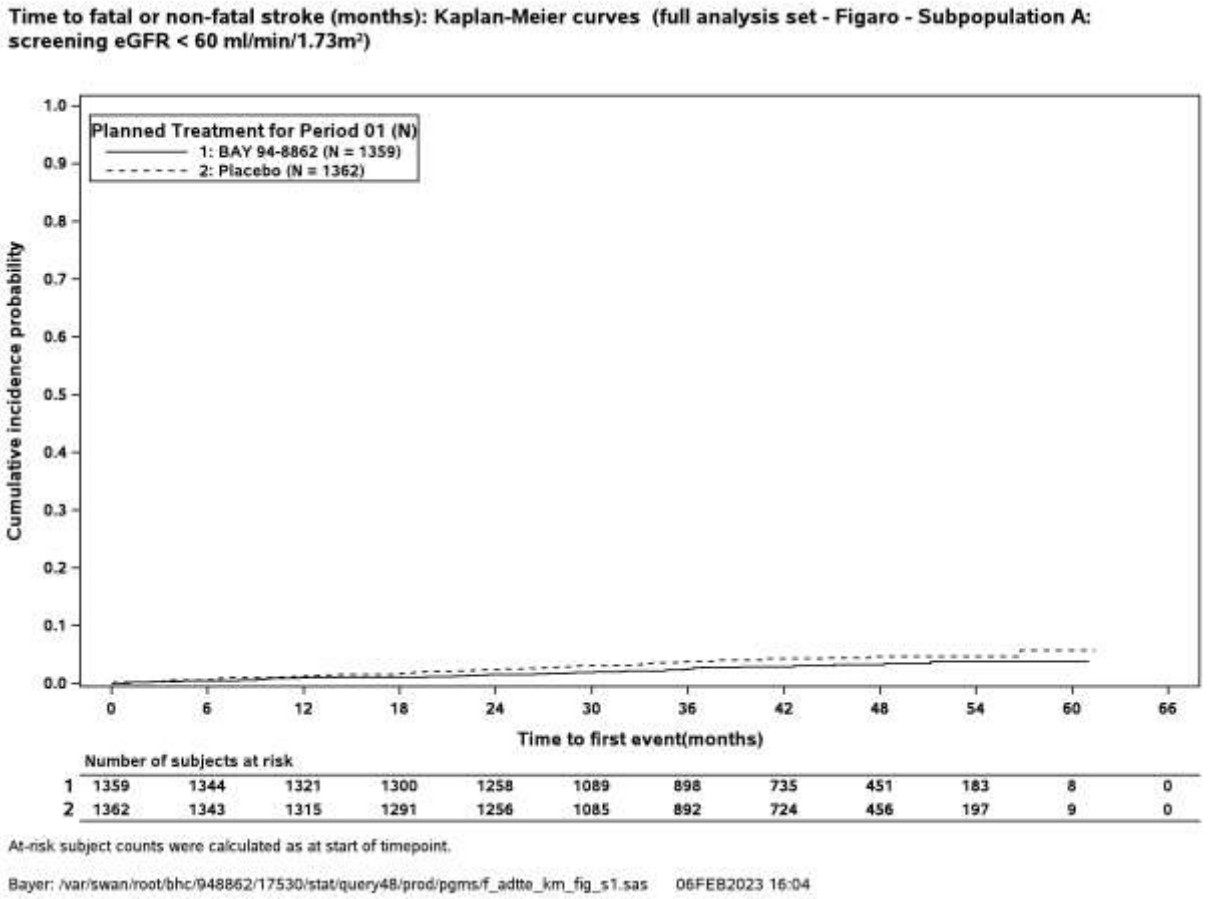

Figure 1.1.2 / 17: Time to first occurrence of the composite endpoint of CV death for HF or hospitalization for HF (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

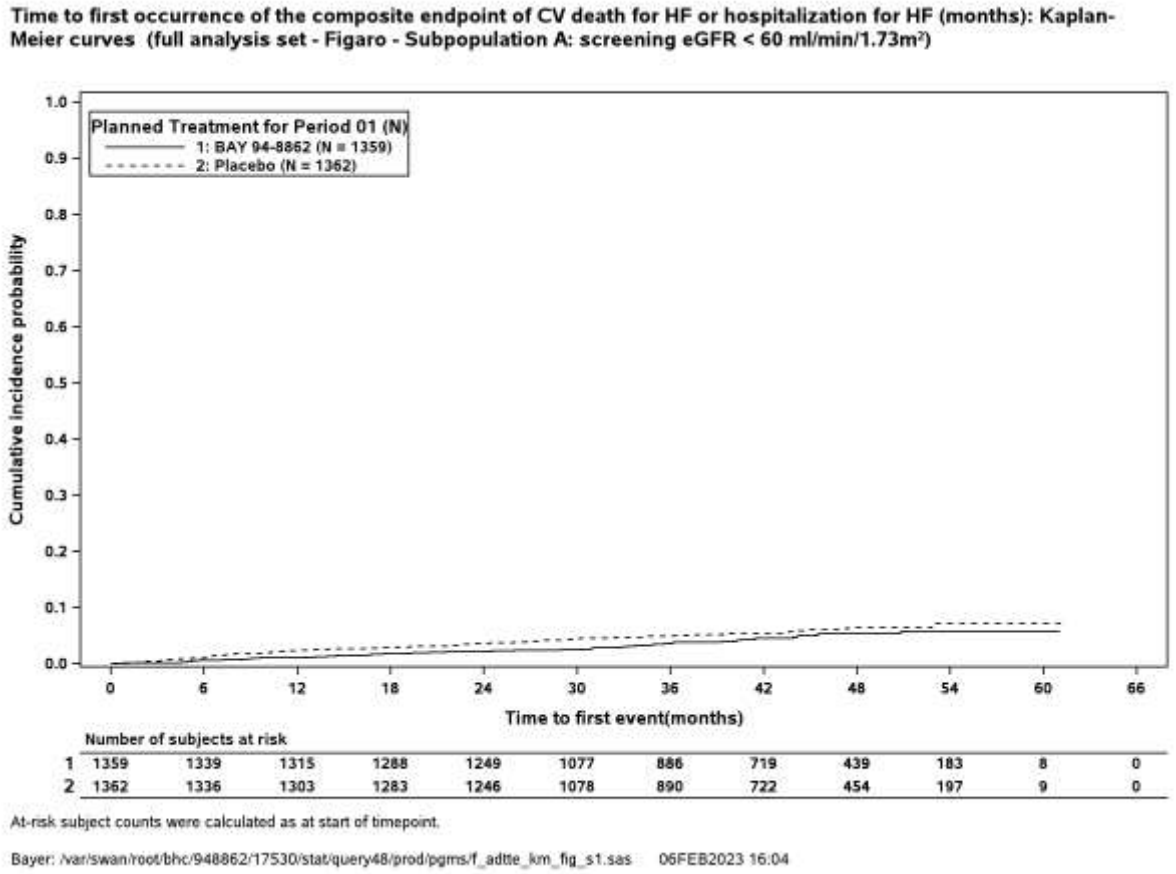

Figure 1.1.2 / 18: Time to all-cause hospitalization (months): Kaplan-Meier curves (full analysis set - Figaro - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

[a] Estimated by a GLM with binomial distribution and logit as link function, [b] Estimated by a GLM with binomial distribution and log as link function.
[c] Estimated by a GLM with binomial distribution and identity as link function. RD = absolute risk of Finerenone - absolute risk of Placebo.
Wald chi-square p-values are presented. * = model had convergence issues.
Analysis is based on all post-baseline assessments available for this parameter.

Table A3.4.11: KDQoL-36 - Effect Measures of Proportion of Subjects with at least one Improvement of Symptoms and Problems of at least MID=15
Full Analysis Set - Screening eGFR < 60 ml/min/1.73m2

	Finerenone vs. Placebo	Finerenone (N=1359)	Placebo (N=1362)	Total (N=2721)
Number of subjects at risk		1359 (100.0%)	1362 (100.0%)	2721 (100.0%)
Number of subjects with events		177 (13.0%)	171 (12.6%)	348 (12.8%)
Number of subjects without events		1182 (87.0%)	1191 (87.4%)	2373 (87.2%)
Odds Ratio [a]				
OR, 95% CI	1.042 [0.832, 1.305]

Completed study	3970 (99.7%)	3967 (99.6%)	7937 (99.7%)

Number of subjects enrolled is the number of subjects who signed informed consent, including subjects who switched from study 16244 to study 17530.
The subject is considered as having completed the study if there is a contact with the subject after the EOS notification or if the subject died. Contact with the subject can be actual visits, phone contacts, or information available from public records, etc.
Lost to follow-up includes all study non-completers who have not withdrawn consent. This definition does not necessarily meet the reasons for non-completion of the specified study epochs.
Number of enrolled subjects and screen failures refer to the full study population.

Table 4.6 / 2: Number of subjects who took at least one new anti-diabetic concomitant medication of interest (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

Drug grouping	BAY 94-8862 N=3981 (100%)	Placebo N=3982 (100%)	Total N=7963 (100%)
Number (%) of subjects with at least one new concomitant medication of interest	2553 (64.1%)	2583 (64.9%)	5136 (64.5%)
Insulins and analogues	1863 (46.8%)	1875 (47.1%)	3738 (46.9%)
Dipeptidyl peptidase 4 inhibitors	689 (17.3%)	685 (17.2%)	1374 (17.3%)
Glucagon-like peptide-1(GLP1) agonists	404 (10.1%)	412 (10.3%)	816 (10.2%)
SGLT-2 inhibitors	334 (8.4%)	343 (8.6%)	677 (8.5%)
Biguanides	772 (19.4%)	749 (18.8%)	1521 (19.1%)
Sulfonylureas	461 (11.6%)	487 (12.2%)	948 (11.9%)
Alpha glucosidase inhibitors	153 (3.8%)	142 (3.6%)	295 (3.7%)
Meglitinides	167 (4.2%)	192 (4.8%)	359 (4.5%)
Thiazolidinediones	121 (3.0%)	127 (3.2%)	248 (3.1%)

Medications that began after the start of study drug, and those that were started after end of study drug, are included in this table.
Multiple drug groups per drug are possible. Therefore, the same drug may be counted in more than one category for the same subject.

Median Time to event (month) [95 % CI]	41.600 [39.300;44.367]	38.367 [35.967;40.700]
Hazard ratio from stratified Cox proportional hazards model (BAY 94-8862/Placebo) [95 % CI]	0.95 [0.89; 1.02]	
two-sided p-value from stratified logrank test	0.1707	

Hazard ratio from stratified cox proportional hazard model including treatment as factor.
Stratification factors: Region / eGFR category at screening / type of albuminuria at screening / history of CV disease
Bayer: /var/swan/root/bhc/948862/17530/stat/query48/prod/pgms/t_adtte_cox_prophaz_ipd_s1.sas 06FEB2023 17:18

Table 1.2.1 / 178: Time to all-cause hospitalization (months): Rate Ratio from stratified Andersen-Gill model with robust estimation of standard errors (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

Statistic	Value
Rate ratio from stratified Andersen-Gill model with robust estimation of standard errors (BAY 94-8862/Placebo) [95 % CI]	0.96 [0.84; 1.09]
two-sided p-value from stratified Andersen-Gill model with robust estimation of standard errors	0.5384

Andersen-Gill model accounting for recurrent events.
If multiple events occured on the same day, only a single event is counted for the analysis.
Bayer: /var/swan/root/bhc/948862/17530/stat/query48/prod/pgms/t_adtte_cox_prophaz_sens3_s.sas 06FEB2023 17:44

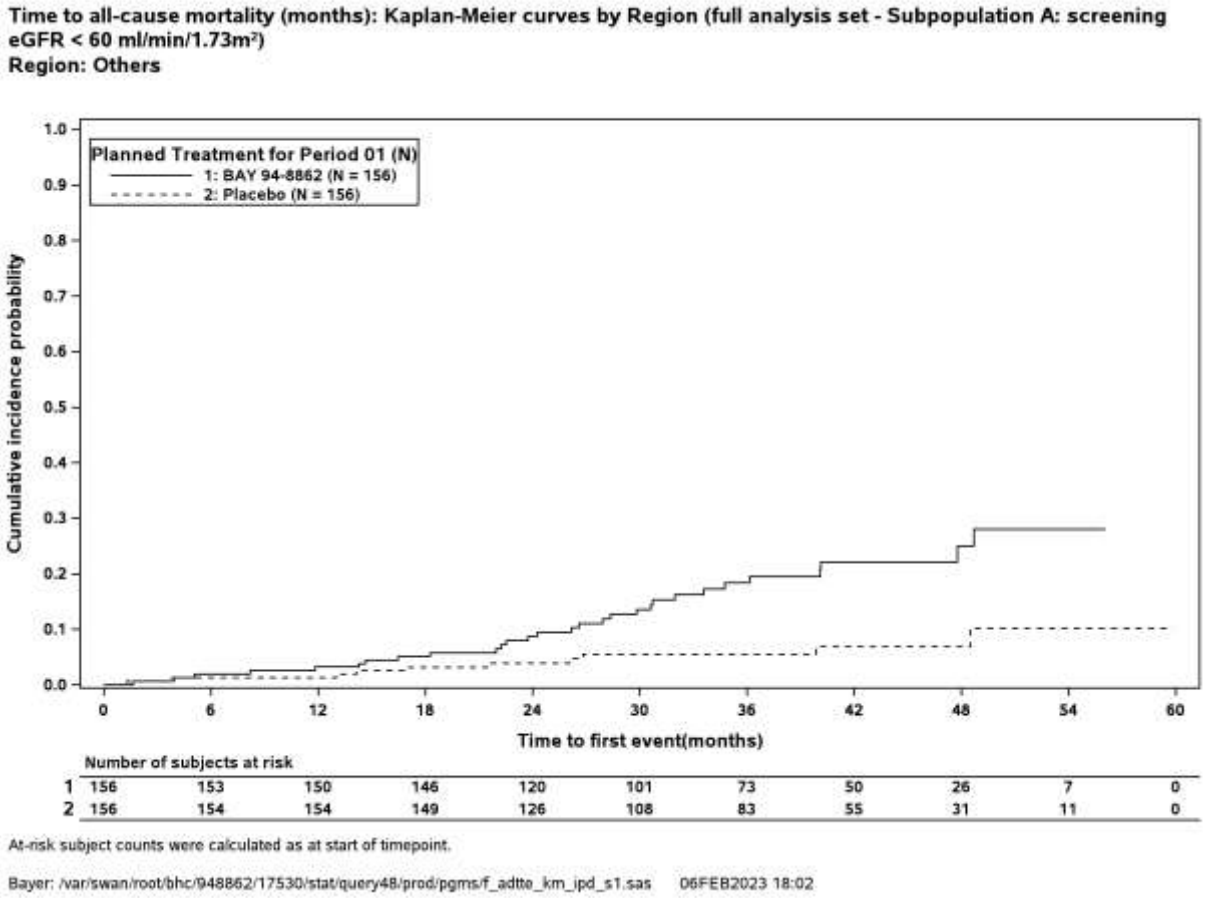

Figure 1.2.1 / 3: Time to all-cause mortality (months): Kaplan-Meier curves by Screening eGFR (mL/min/1.73m2) category (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

Screening eGFR (mL/min/1.73m2) category: 25 - < 45 mL/min/1.73m2

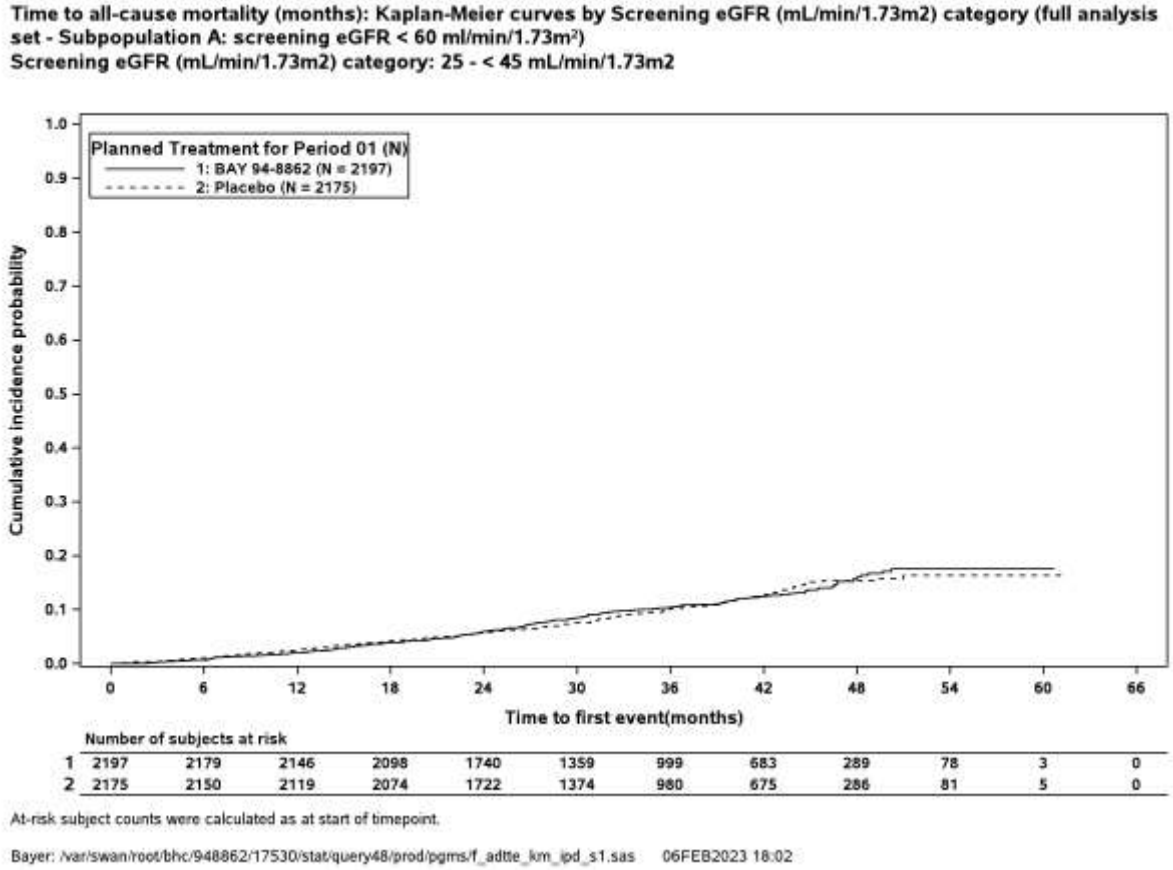

Figure 1.2.1 / 3: Time to all-cause mortality (months): Kaplan-Meier curves by Screening eGFR (mL/min/1.73m2) category (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²) (cont.)

Screening eGFR (mL/min/1.73m2) category: 45 - < 60 mL/min/1.73m2

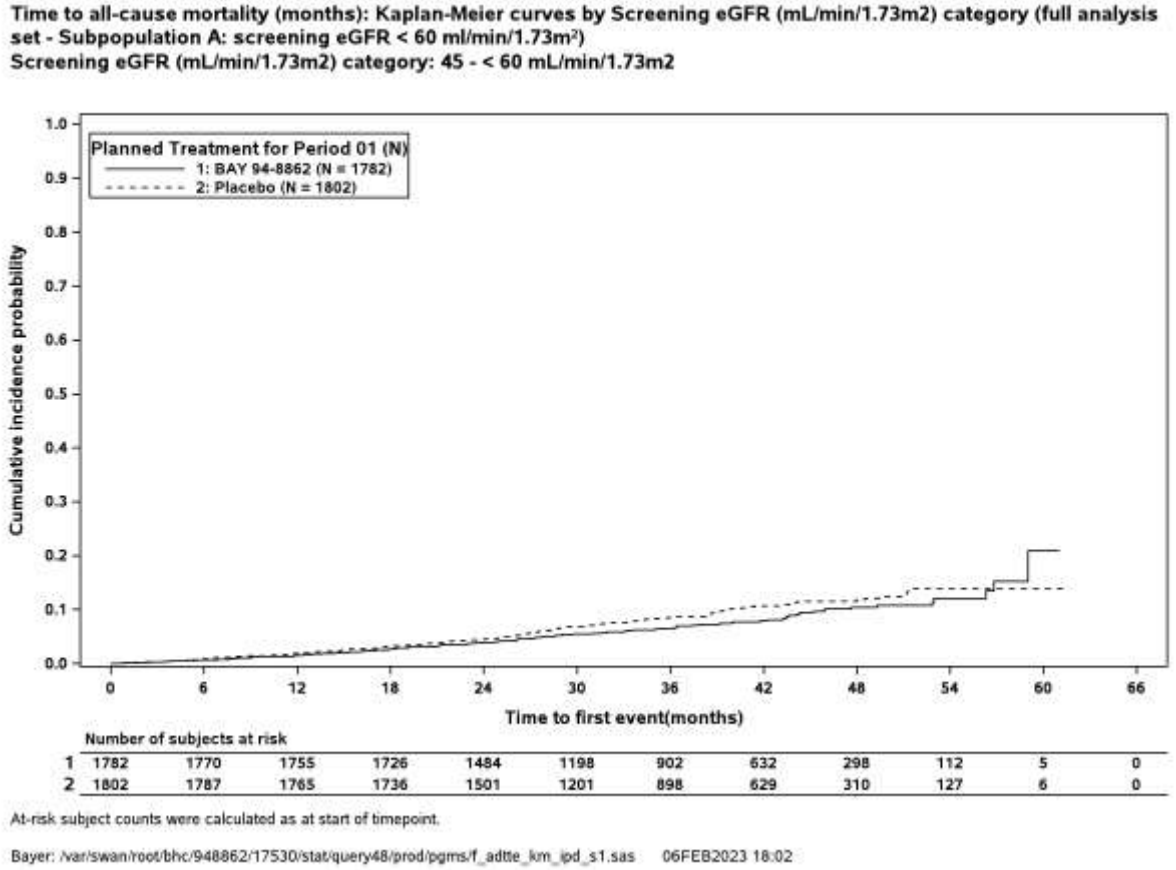

Figure 1.2.1 / 4: Time to all-cause mortality (months): Kaplan-Meier curves by Screening albuminuria (mg/g) category (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

Screening albuminuria (mg/g) category: High albuminuria (30 mg/g - < 300 mg/g)

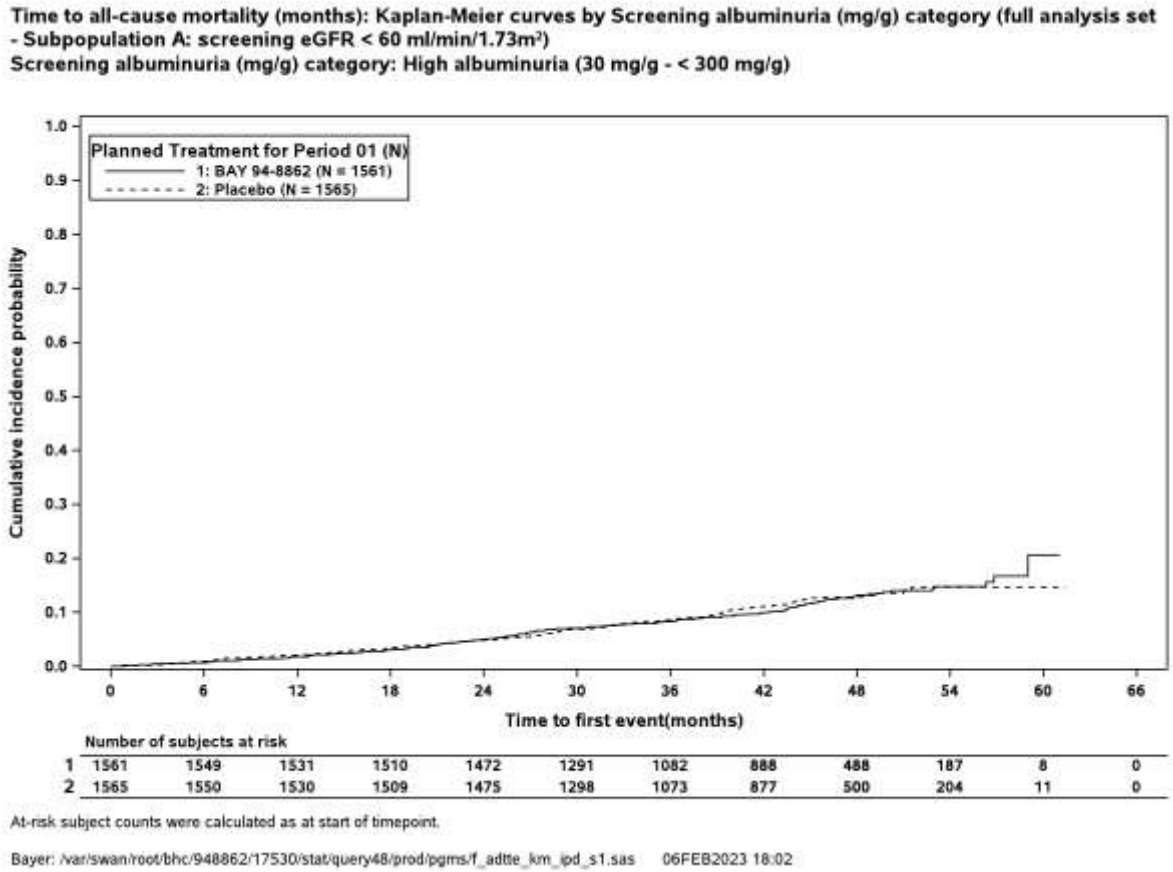

Figure 1.2.1 / 4: Time to all-cause mortality (months): Kaplan-Meier curves by Screening albuminuria (mg/g) category (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²) (cont.)

Screening albuminuria (mg/g) category: Very high albuminuria (>= 300 mg/g)

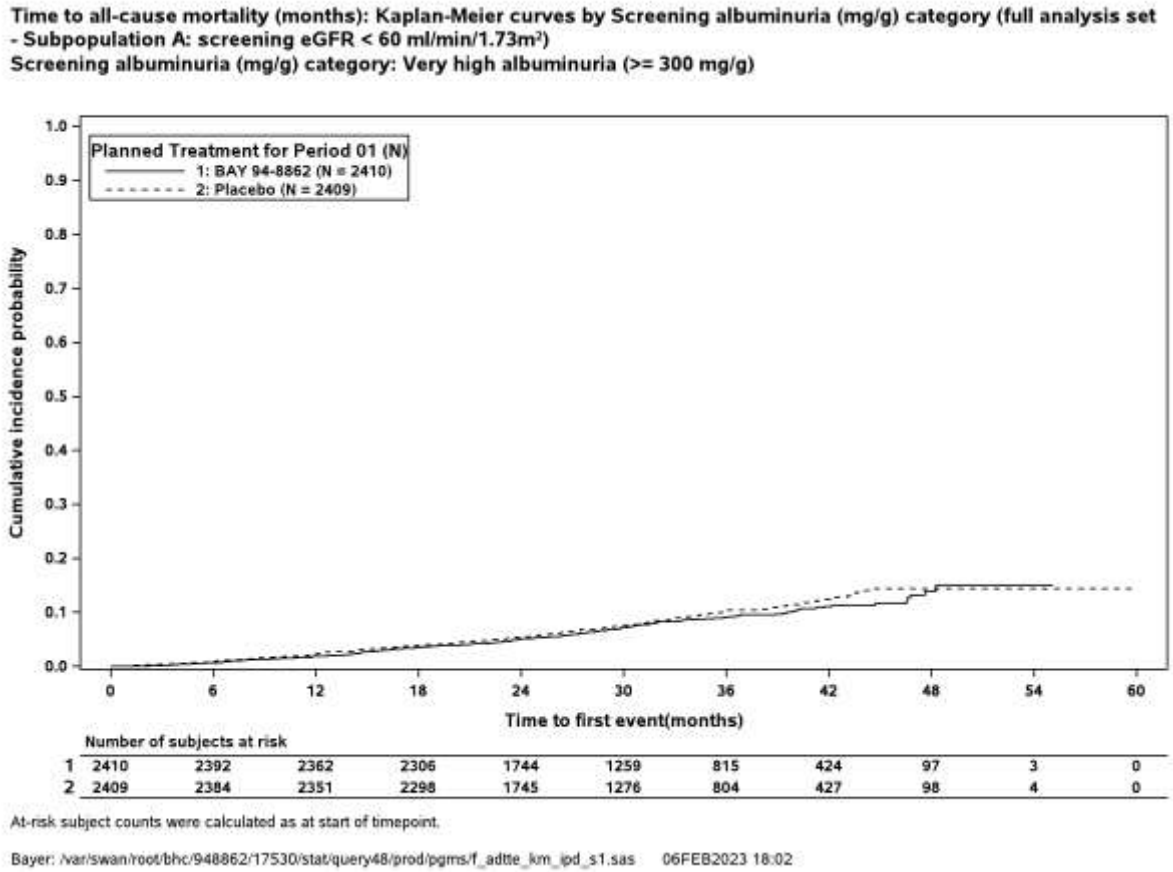

Figure 1.2.1 / 5: Time to all-cause mortality (months): Kaplan-Meier curves by History of CVD (Medical history) (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

History of CVD (Medical history): present

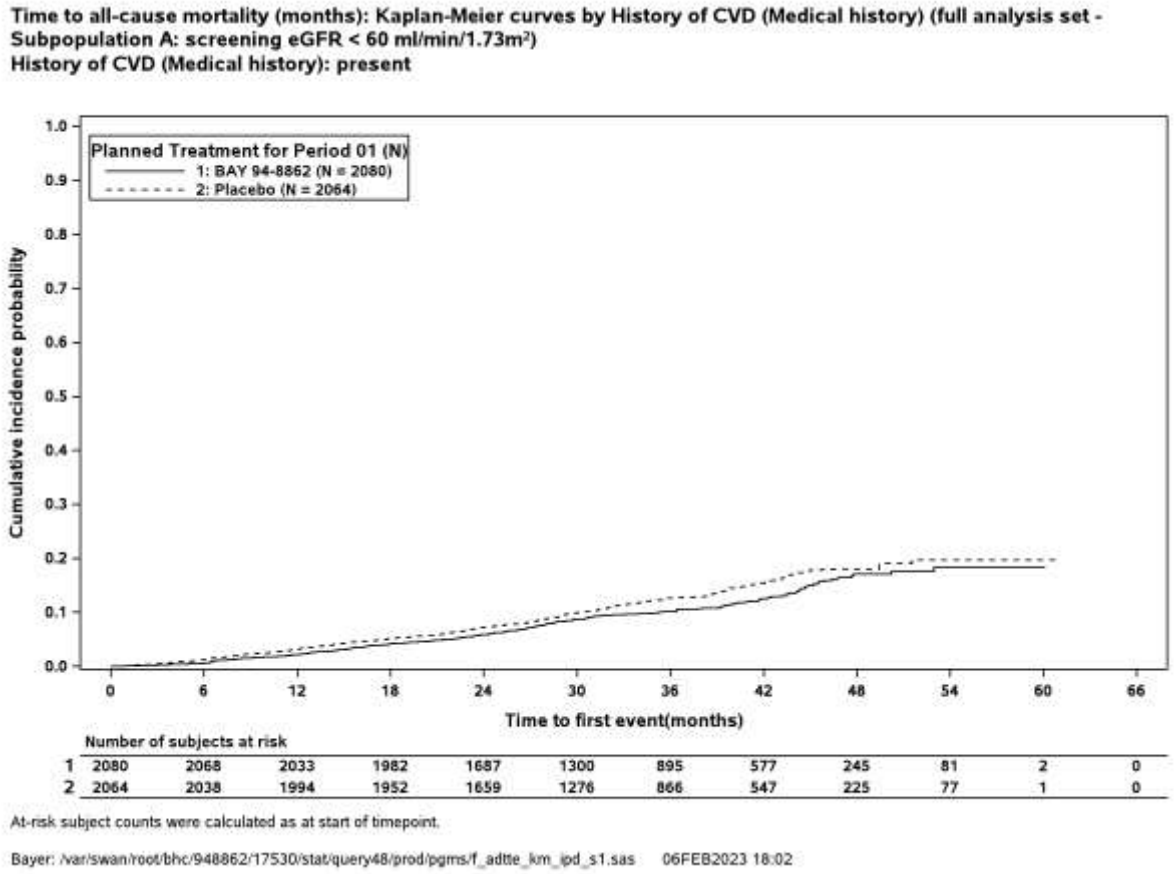

Figure 1.2.1 / 5: Time to all-cause mortality (months): Kaplan-Meier curves by History of CVD (Medical history) (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²) (cont.)

History of CVD (Medical history): absent

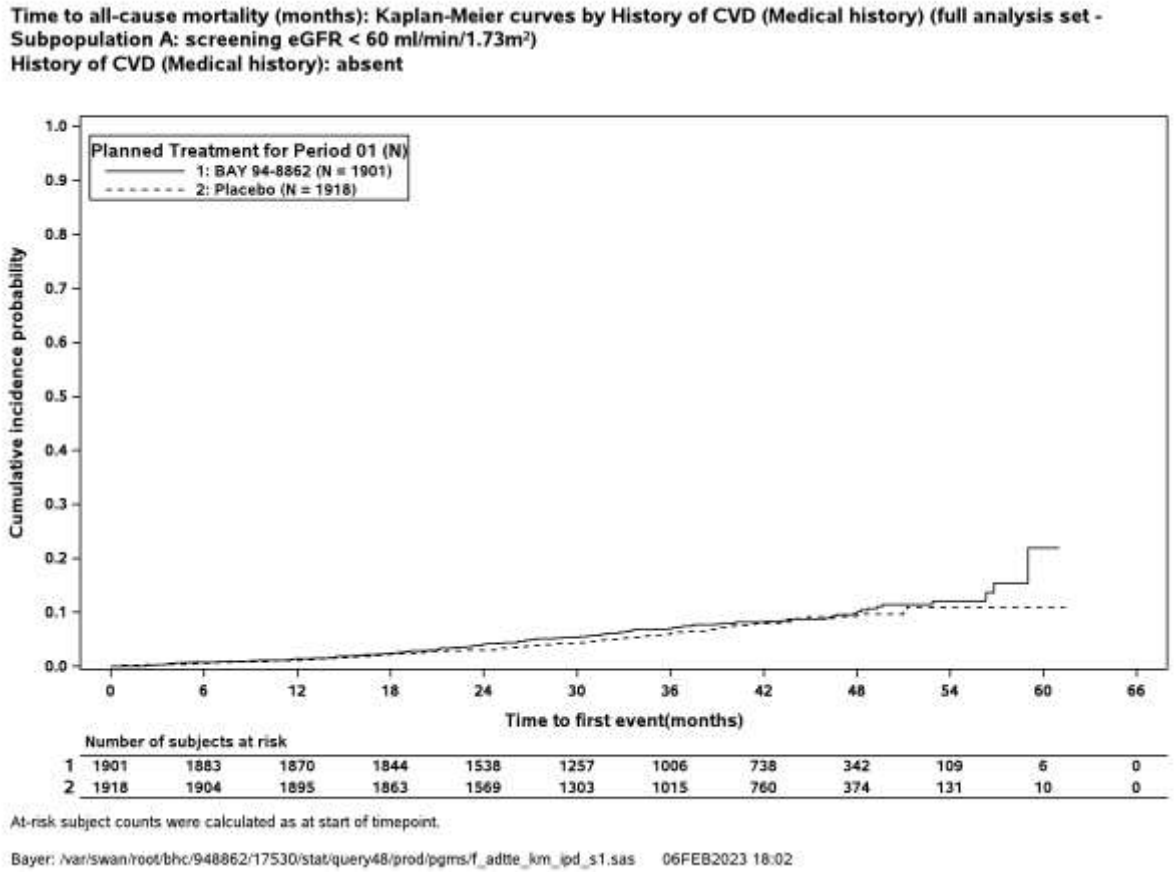

Figure 1.2.1 / 6: Time to all-cause mortality (months): Kaplan-Meier curves by Baseline serum potassium (mmol/L) category (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

Baseline serum potassium (mmol/L) category: <= 4.5 mmol/L

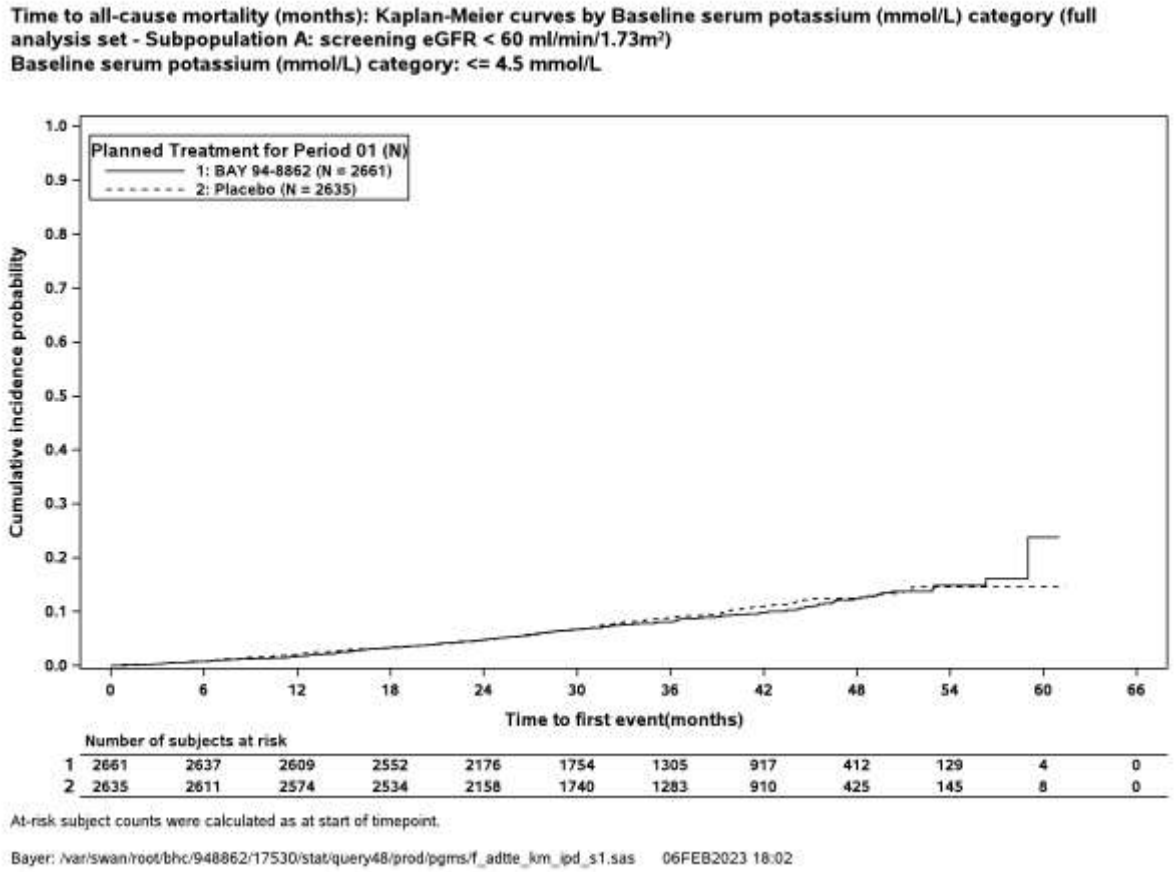

Figure 1.2.1 / 6: Time to all-cause mortality (months): Kaplan-Meier curves by Baseline serum potassium (mmol/L) category (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²) (cont.)

Baseline serum potassium (mmol/L) category: > 4.5 mmol/L

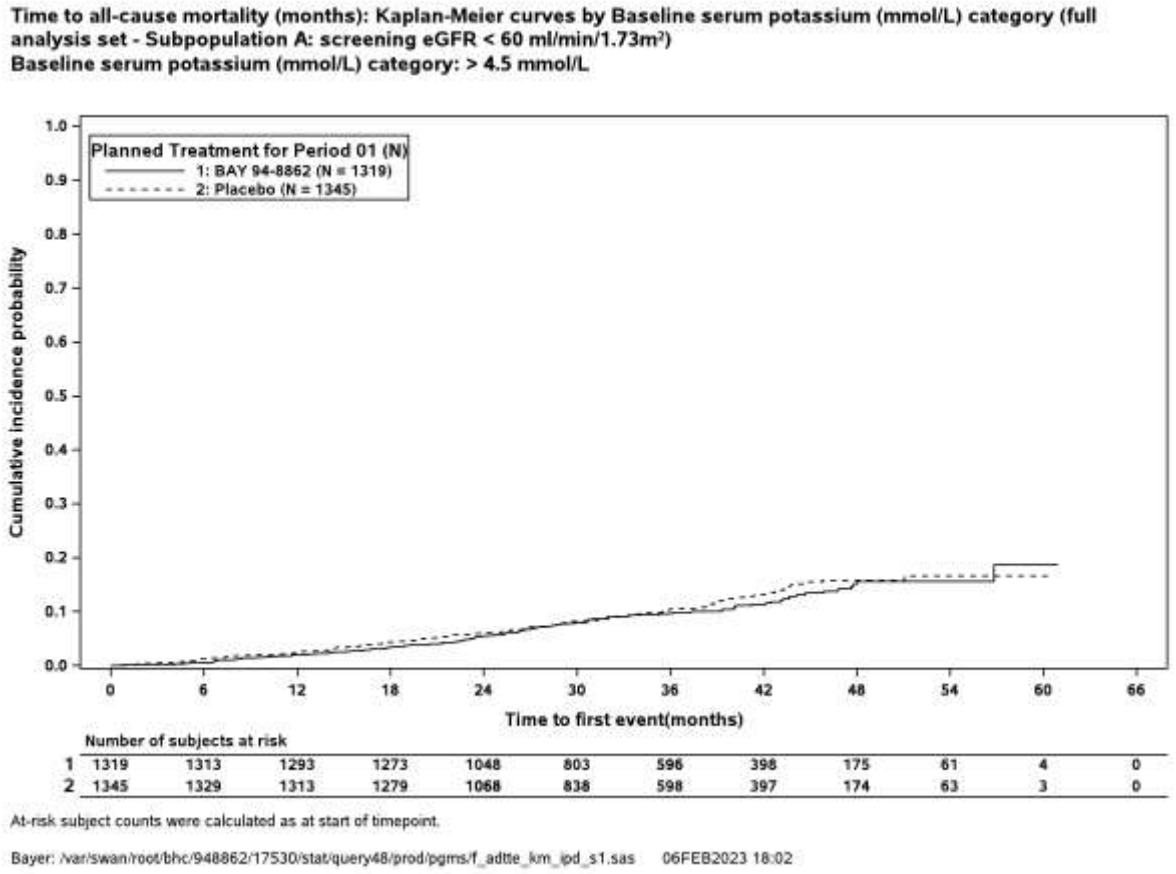

Figure 1.2.1 / 7: Time to all-cause mortality (months): Kaplan-Meier curves by Baseline systolic blood pressure (mmHg) category (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

Baseline systolic blood pressure (mmHg) category: < 130 mmHg

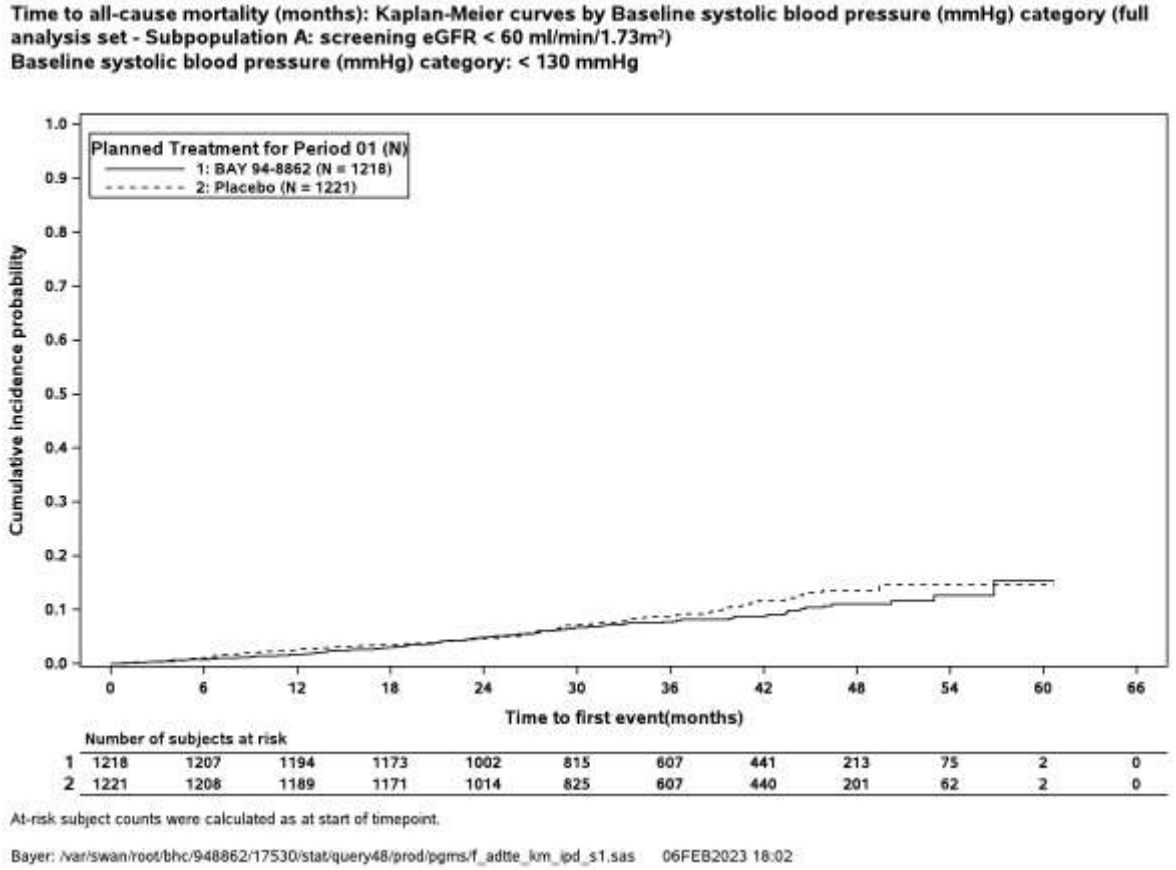

Figure 1.2.1 / 7: Time to all-cause mortality (months): Kaplan-Meier curves by Baseline systolic blood pressure (mmHg) category (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²) (cont.)

Baseline systolic blood pressure (mmHg) category: 130 - < 160 mmHg

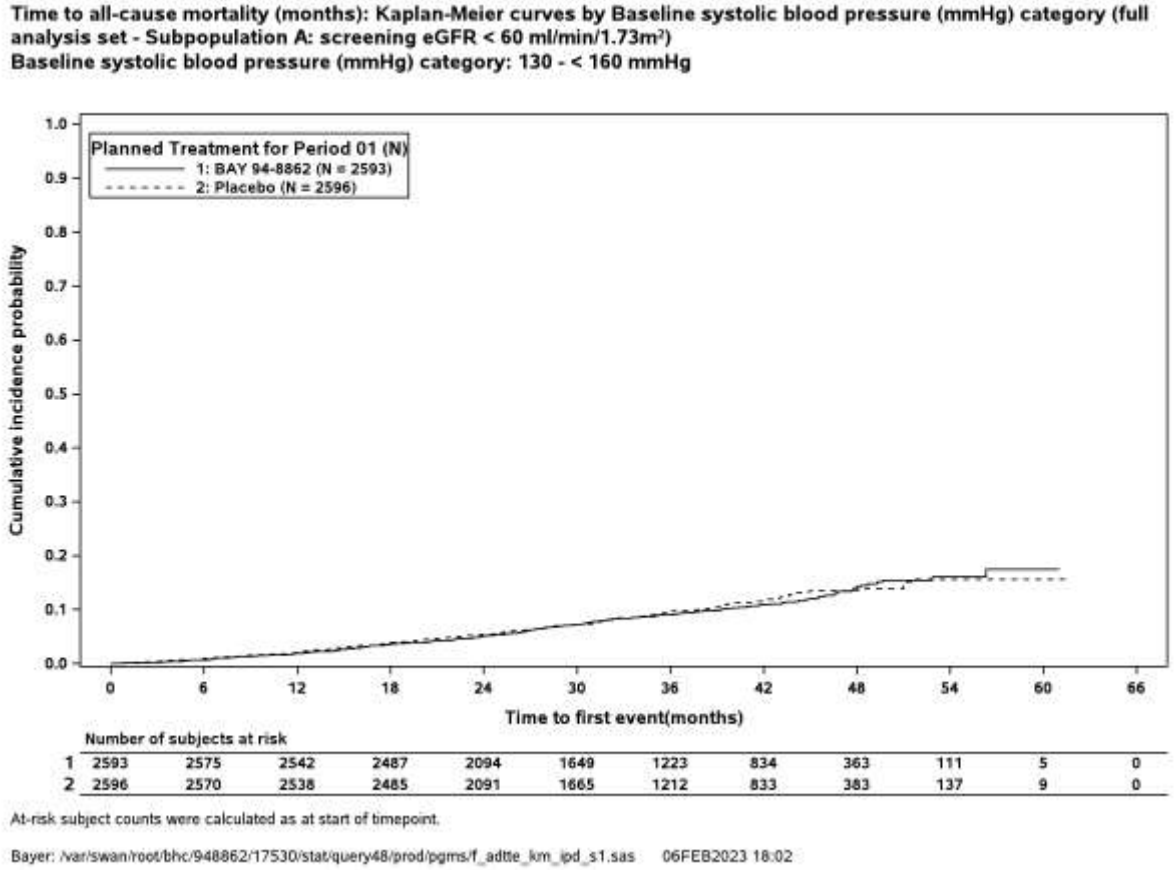

Figure 1.2.1 / 7: Time to all-cause mortality (months): Kaplan-Meier curves by Baseline systolic blood pressure (mmHg) category (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²) (cont.)

Baseline systolic blood pressure (mmHg) category: >= 160 mmHg

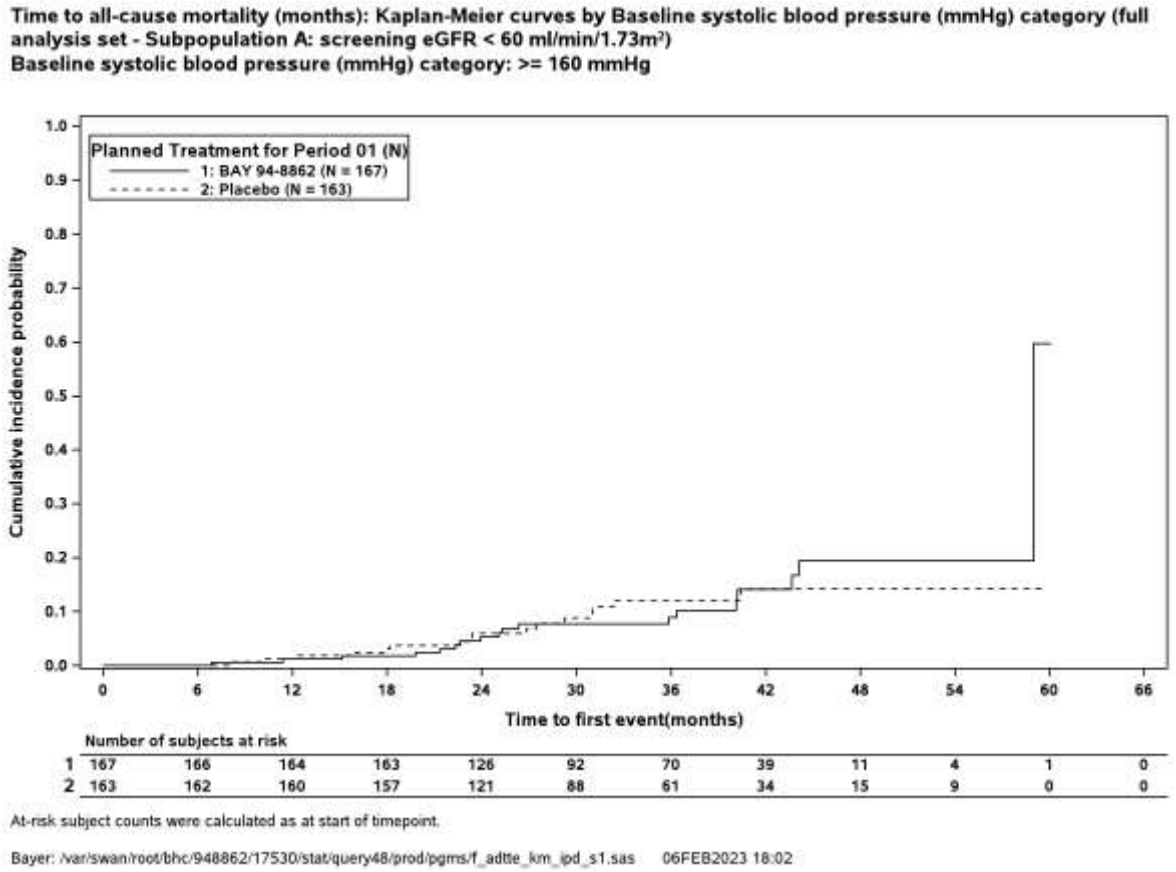

Figure 1.2.1 / 8: Time to all-cause mortality (months): Kaplan-Meier curves by Race (4 categories) (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²)

Race (4 categories): White

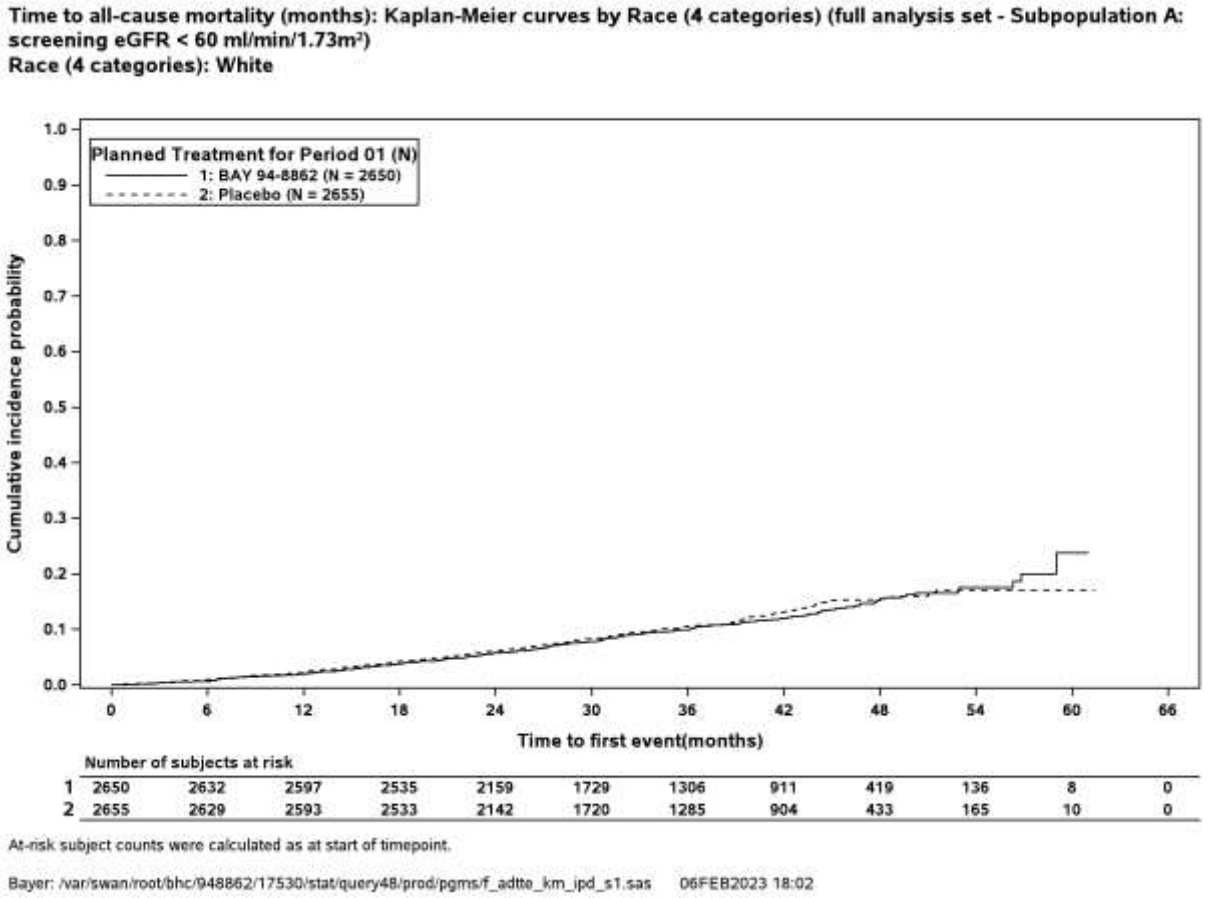

Figure 1.2.1 / 8: Time to all-cause mortality (months): Kaplan-Meier curves by Race (4 categories) (full analysis set - Subpopulation A: screening eGFR < 60 ml/min/1.73m²) (cont.)

Race (4 categories): Black
