Abbreviations: CI=confidence interval, CVD=cardiovascular disease, DF=degrees of freedom, eGFR=estimated glomerular filtration rate, EQ-5D=EuroQOL group 5-dimension, GLM=generalized linear model, MID=minimal important difference, N=number of subjects, RR=relative risk, SoC=standard of care, VAS=Visual Analogue Scale.
Note: For 'Total' the RR is estimated by a GLM with factors treatment group and study using a binomial distribution and log as link function.
Analysis is based on all post-baseline assessments available for this parameter.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights. The same method was applied to assess the heterogeneity between subgroups.

Note: For 'Total' the OR is estimated by a GLM with factors treatment group and study using a binomial distribution and logit as link function.
Analysis is based on all post-baseline assessments available for this parameter.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights. The same method was applied to assess the heterogeneity between subgroups.
Category 'Missing' was excluded from meta-analysis.

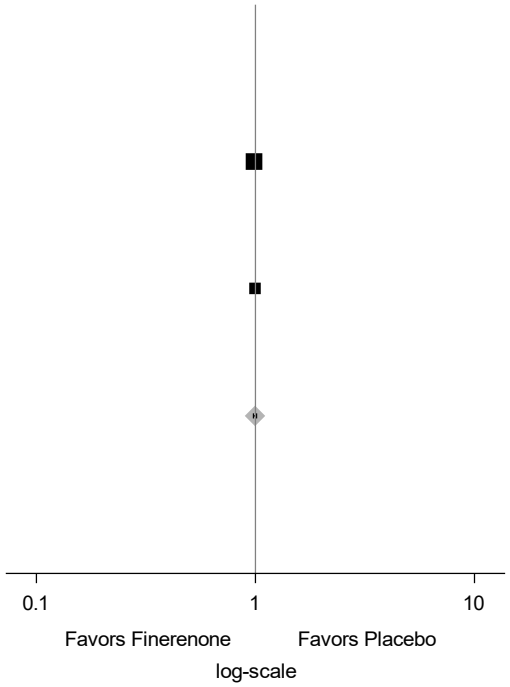
Table A2.0.5: Summary of Treatment Duration - Safety Analysis Set - Screening eGFR < 60 ml/min/1.73m2

	Finerenone (N=3974)	Placebo (N=3966)	Total (N= 7940
Treatment duration (months)			
n	3974	3966	7940
Mean	29.2	29.8	29.5
SD	13.99	13.72	13.86
Median	29.2	29.6	29.3
Q1-Q3	20.0 - 40.3	20.7 - 40.8	20.3 - 40.6
Range	0.03 - 60.16	0.03 - 60.55	0.03 - 60.55

Abbreviations: eGFR=estimated glomerular filtration rate, N=number of subjects, n=number of subjects with non-missing values in category, Q1=first quartile, Q3=third quartile, SD=standard deviation.
Note: Treatment duration is defined as the time from start of study drug to permanent stop of study drug (in months).

Figure A2.1.1: Forestplot for Relative Risk of Proportion of Subjects with TEAEs
Safety Analysis Set - Screening eGFR < 60 ml/min/1.73m2

Subgroup Study	Finerenone + SoC Events / Total	Placebo + SoC Events / Total	Weight (%)	Relative risk (fixed effect) 95% CI	Overall treatment effect
Overall					
FIDELIO-DKD	2287 / 2617	2300 / 2610	65.3	0.99 [0.97,1.01]	
FIGARO-DKD	1195 / 1357	1192 / 1356	34.7	1.00 [0.97,1.03]	
Total	3482 / 3974	3492 / 3966		1.00 [0.98,1.01]	Z=-0.58, p=0.5623
Heterogeneity:	Q=0.33 (df=1)	p=0.5642	I^2=0.0%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, RR=relative risk, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the RR is estimated by a GLM with classification term for treatment using a binomial distribution and log as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights.

Others					
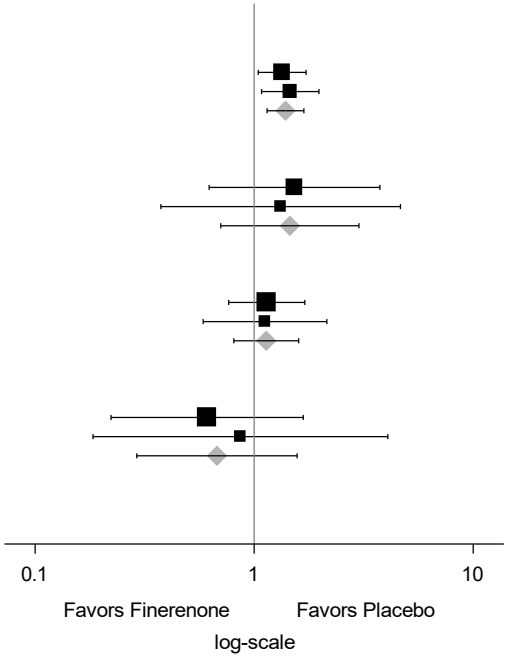
FIDELIO-DKD	6 / 176	9 / 161	70.2	0.61 [0.22,1.68]	
FIGARO-DKD	3 / 52	3 / 45	29.8	0.87 [0.18,4.08]	
Total	9 / 228	12 / 206		0.68 [0.29,1.57]	Z=-0.91, p=0.3629
Heterogeneity:	Q=0.14 (df=1)	p=0.7108	I^2=0.0%		
Subgroup Heterogeneity:	Q=3.47 (df=3)	p=0.3250	I^2=13.5%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, RR=relative risk, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the RR is estimated by a GLM with classification term for treatment using a binomial distribution and log as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights. The same method was applied to assess the heterogeneity between subgroups.
Category 'Missing' was excluded from meta-analysis.

Figure A2.1.7.6: Forestplot for Relative Risk of Proportion of Subjects with TEAEs leading to Discontinuation of Study Drug by Sex
Safety Analysis Set - Screening eGFR < 60 ml/min/1.73m2

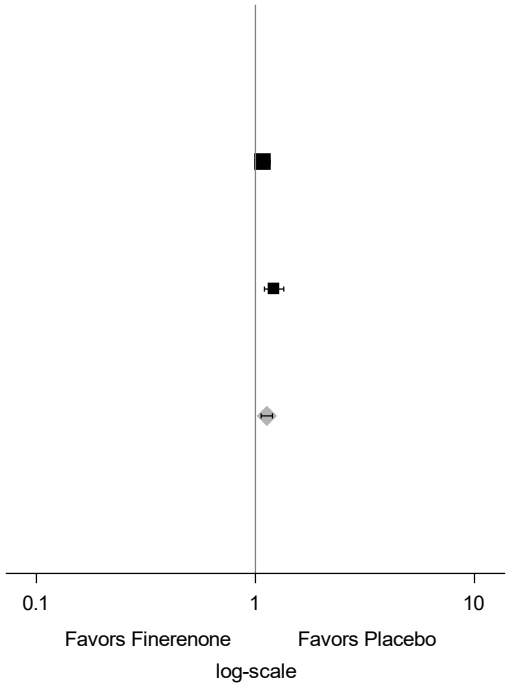
Figure A2.1.80: Forest Plot for Relative Risk of Proportion of Subjects with TEAEs - Metabolism And Nutrition Disorders (SOC with Incidence >=1%)
Safety Analysis Set - Screening eGFR < 60 ml/min/1.73m2

Subgroup Study	Finerenone + SoC Events / Total	Placebo + SoC Events / Total	Weight (%)	Relative risk (fixed effect) 95% CI	Overall treatment effect
Overall					
FIDELIO-DKD	971 / 2617	894 / 2610	66.1	1.08 [1.01,1.17]	
FIGARO-DKD	532 / 1357	437 / 1356	33.9	1.22 [1.10,1.35]	
Total	1503 / 3974	1331 / 3966		1.13 [1.06,1.20]	Z=3.96, p=<.0001
Heterogeneity:	Q=3.30 (df=1)	p=0.0692	I^2=69.7%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, PT=preferred term, RR=relative risk, SOC=system organ class, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the RR is estimated by a GLM with classification term for treatment using a binomial distribution and log as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights.

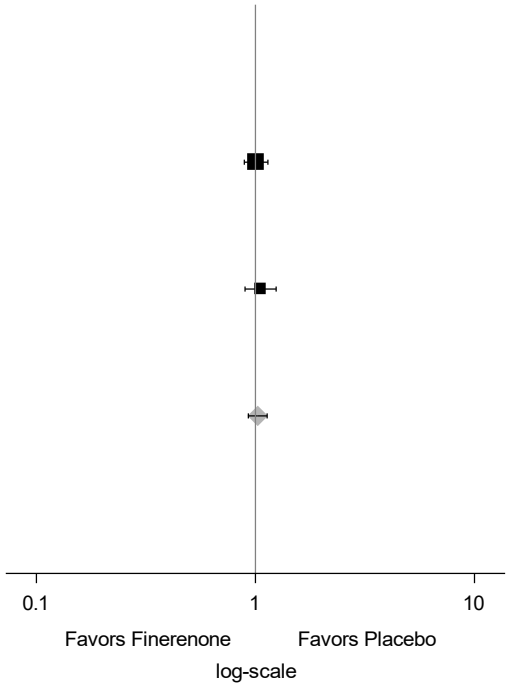
Figure A2.1.135: Forest Plot for Relative Risk of Proportion of Subjects with TEAEs - Skin And Subcutaneous Tissue Disorders (SOC with Incidence >=1%)
Safety Analysis Set - Screening eGFR < 60 ml/min/1.73m2

Subgroup Study	Finerenone + SoC Events / Total	Placebo + SoC Events / Total	Weight (%)	Relative risk (fixed effect) 95% CI	Overall treatment effect
Overall					
FIDELIO-DKD	422 / 2617	418 / 2610	63.5	1.01 [0.89,1.14]	
FIGARO-DKD	244 / 1357	231 / 1356	36.5	1.06 [0.90,1.24]	
Total	666 / 3974	649 / 3966		1.02 [0.93,1.13]	Z=0.48, p=0.6328
Heterogeneity:	Q=0.20 (df=1)	p=0.6522	I^2=0.0%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, PT=preferred term, RR=relative risk, SOC=system organ class, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the RR is estimated by a GLM with classification term for treatment using a binomial distribution and log as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights.

Figure A2.1.136: Forest Plot for Relative Risk of Proportion of Subjects with TEAEs - Diabetic foot (PT with Incidence >=1%)

Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, PT=preferred term, RR=relative risk, SOC=system organ class, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the RR is estimated by a GLM with classification term for treatment using a binomial distribution and log as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights. The same method was applied to assess the heterogeneity between subgroups.

Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, OR=odds ratio, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the OR is estimated by a GLM with classification term for treatment using a binomial distribution and logit as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights. The same method was applied to assess the heterogeneity between subgroups.

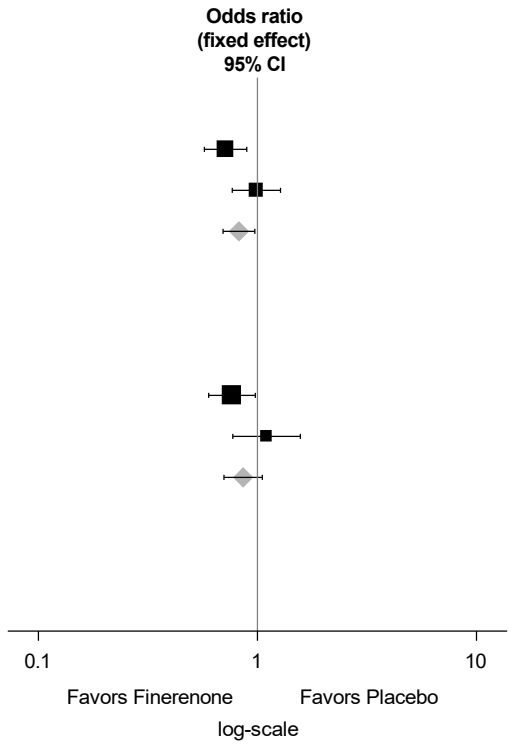
Heterogeneity:	Q=2.72 (df=1)	p=0.0991	I^2=63.2%		
Subgroup Heterogeneity:	Q=0.11 (df=1)	p=0.7406	I^2=0.0%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, N=number of subjects, PT=preferred term, OR=odds ratio, SOC=system organ class, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the OR is estimated by a GLM with classification term for treatment using a binomial distribution and logit as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights. The same method was applied to assess the heterogeneity between subgroups.

Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, N=number of subjects, PT=preferred term, OR=odds ratio, SOC=system organ class, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the OR is estimated by a GLM with classification term for treatment using a binomial distribution and logit as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights. The same method was applied to assess the heterogeneity between subgroups.

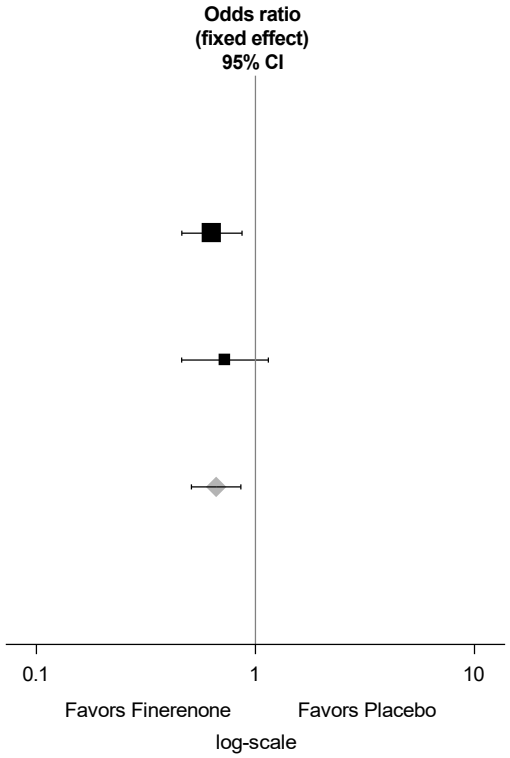
Figure A2.2.156: Forest Plot for Odds Ratio of Proportion of Subjects with TESAEs - Pneumonia (PT with Incidence >=1%)
Safety Analysis Set - Screening eGFR < 60 ml/min/1.73m2

Subgroup Study	Finerenone + SoC Events / Total	Placebo + SoC Events / Total	Weight (%)	Odds ratio (fixed effect) 95% CI	Overall treatment effect
Overall					
FIDELIO-DKD	65 / 2617	101 / 2610	67.5	0.63 [0.46,0.87]	
FIGARO-DKD	33 / 1357	45 / 1356	32.5	0.73 [0.46,1.15]	
Total	98 / 3974	146 / 3966		0.66 [0.51,0.86]	Z=-3.12, p=0.0018
Heterogeneity:	Q=0.24 (df=1)	p=0.6266	I^2=0.0%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, N=number of subjects, PT=preferred term, OR=odds ratio, SOC=system organ class, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the OR is estimated by a GLM with classification term for treatment using a binomial distribution and logit as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights.

Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, N=number of subjects, PT=preferred term, OR=odds ratio, SOC=system organ class, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the OR is estimated by a GLM with classification term for treatment using a binomial distribution and logit as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights. The same method was applied to assess the heterogeneity between subgroups.

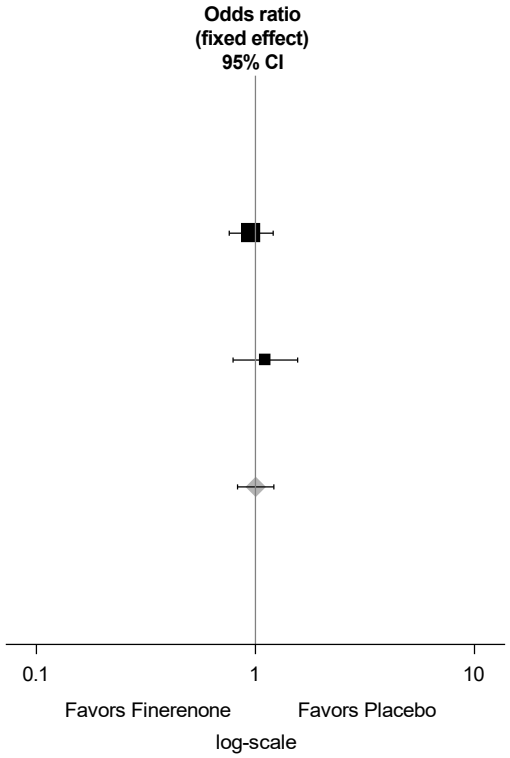
FIGARO-DKD	74 / 1357	67 / 1356	31.7	1.11 [0.79,1.56]	
Total	224 / 3974	223 / 3966		1.00 [0.83,1.21]	Z=0.03, p=0.9791
Heterogeneity:	Q=0.50 (df=1)	p=0.4783	I^2=0.0%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, N=number of subjects, PT=preferred term, OR=odds ratio, SOC=system organ class, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the OR is estimated by a GLM with classification term for treatment using a binomial distribution and logit as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights.

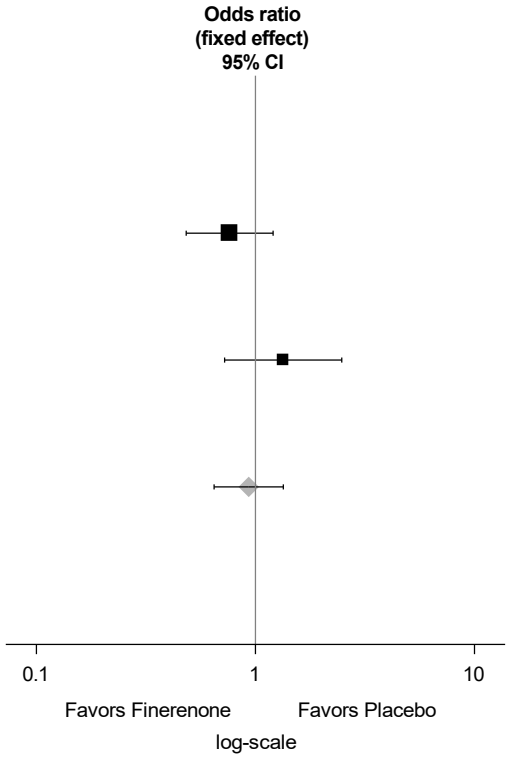
Figure A2.2.187: Forest Plot for Odds Ratio of Proportion of Subjects with Severe TEAEs - Vascular Disorders (SOC with Incidence >=1%)
Safety Analysis Set - Screening eGFR < 60 ml/min/1.73m2

Subgroup Study	Finerenone + SoC Events / Total	Placebo + SoC Events / Total	Weight (%)	Odds ratio (fixed effect) 95% CI	Overall treatment effect
Overall					
FIDELIO-DKD	33 / 2617	43 / 2610	64.5	0.76 [0.48,1.20]	
FIGARO-DKD	24 / 1357	18 / 1356	35.5	1.34 [0.72,2.48]	
Total	57 / 3974	61 / 3966		0.93 [0.65,1.34]	Z=-0.38, p=0.7026
Heterogeneity:	Q=2.07 (df=1)	p=0.1503	I^2=51.7%		



Abbreviations: CI=confidence interval, CVD=cardiovascular disease, eGFR=estimated glomerular filtration rate, GLM=generalized linear model, N=number of subjects, PT=preferred term, OR=odds ratio, SOC=system organ class, SoC=standard of care, TE(S)AE=treatment-emergent (serious) adverse event.
Note: For single studies the OR is estimated by a GLM with classification term for treatment using a binomial distribution and logit as link function.
For 'Total' the same model as for single studies including study as additional factor was applied.
The heterogeneity between studies was analyzed using Cochrane's Q statistic with inverse variance weights.
