| 30 months | NE (NE, NE) | NE (NE, NE) |
| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12

Program: /home/yingyuan.lin/sasdata/Data/Development/MA/R2810/R2810-ONC/MA/HTA-Germany-1676/Analysis_MA/Programs/t-tte-subgroup-sub-pdl1.sas (23JAN23:12:16:12, yingyuan.lin)

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12

Program: /home/yingyuan.lin/sasdata/Data/Development/MA/R2810/R2810-ONC/MA/HTA-Germany-1676/Analysis_MA/Programs/t-tte-subgroup-sub-pdl1.sas (23JAN23:12:16:12, yingyuan.lin)

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12

Program: /home/yingyuan.lin/sasdata/Data/Development/MA/R2810/R2810-ONC/MA/HTA-Germany-1676/Analysis_MA/Programs/t-tte-subgroup-sub-pdl1.sas (23JAN23:12:16:12, yingyuan.lin)

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12

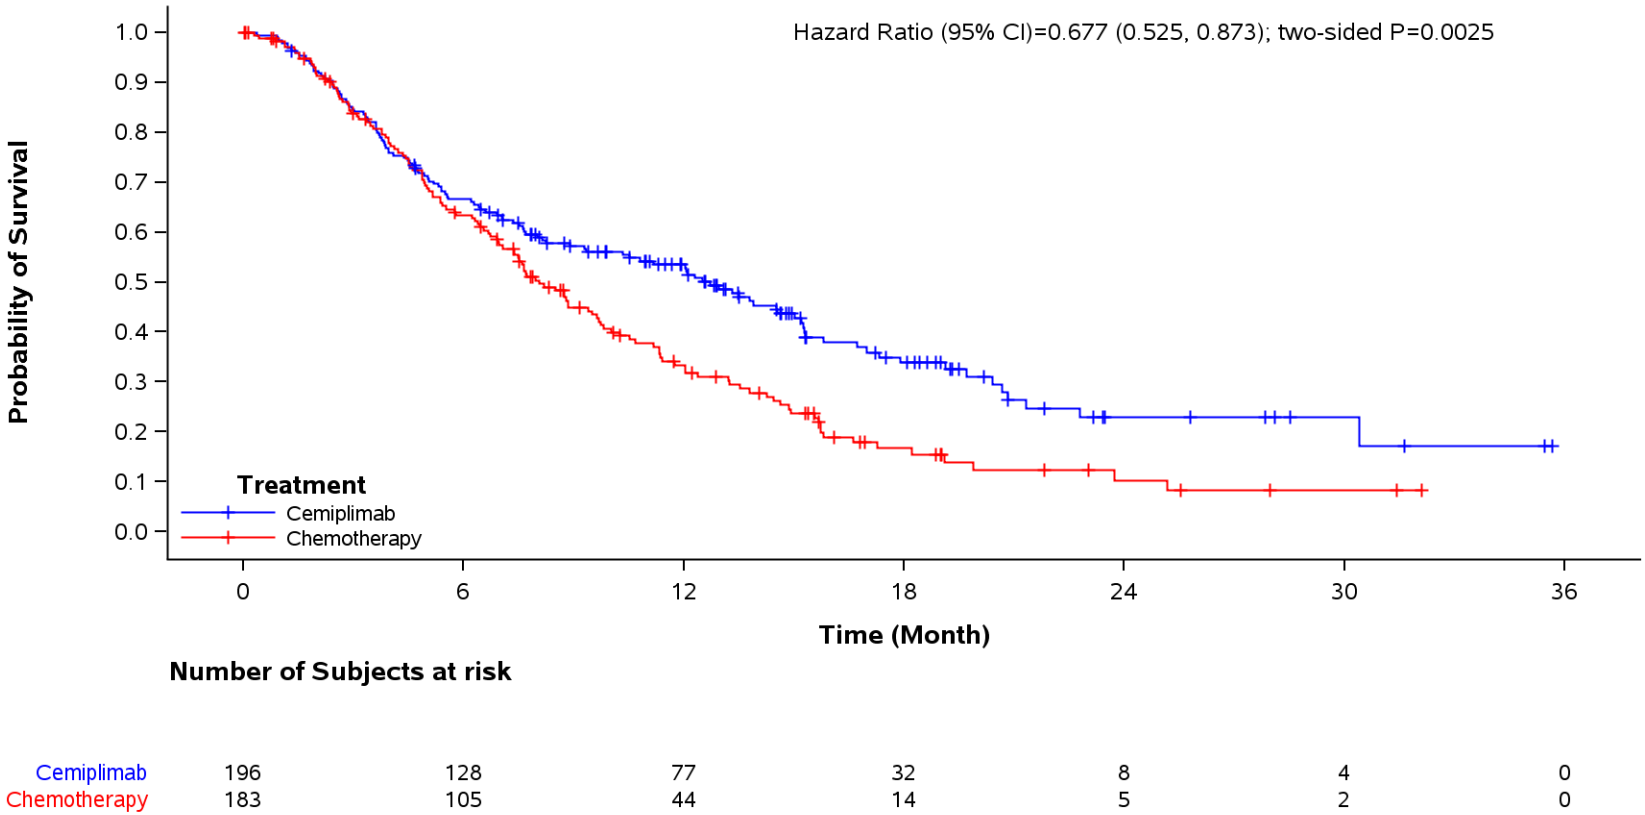
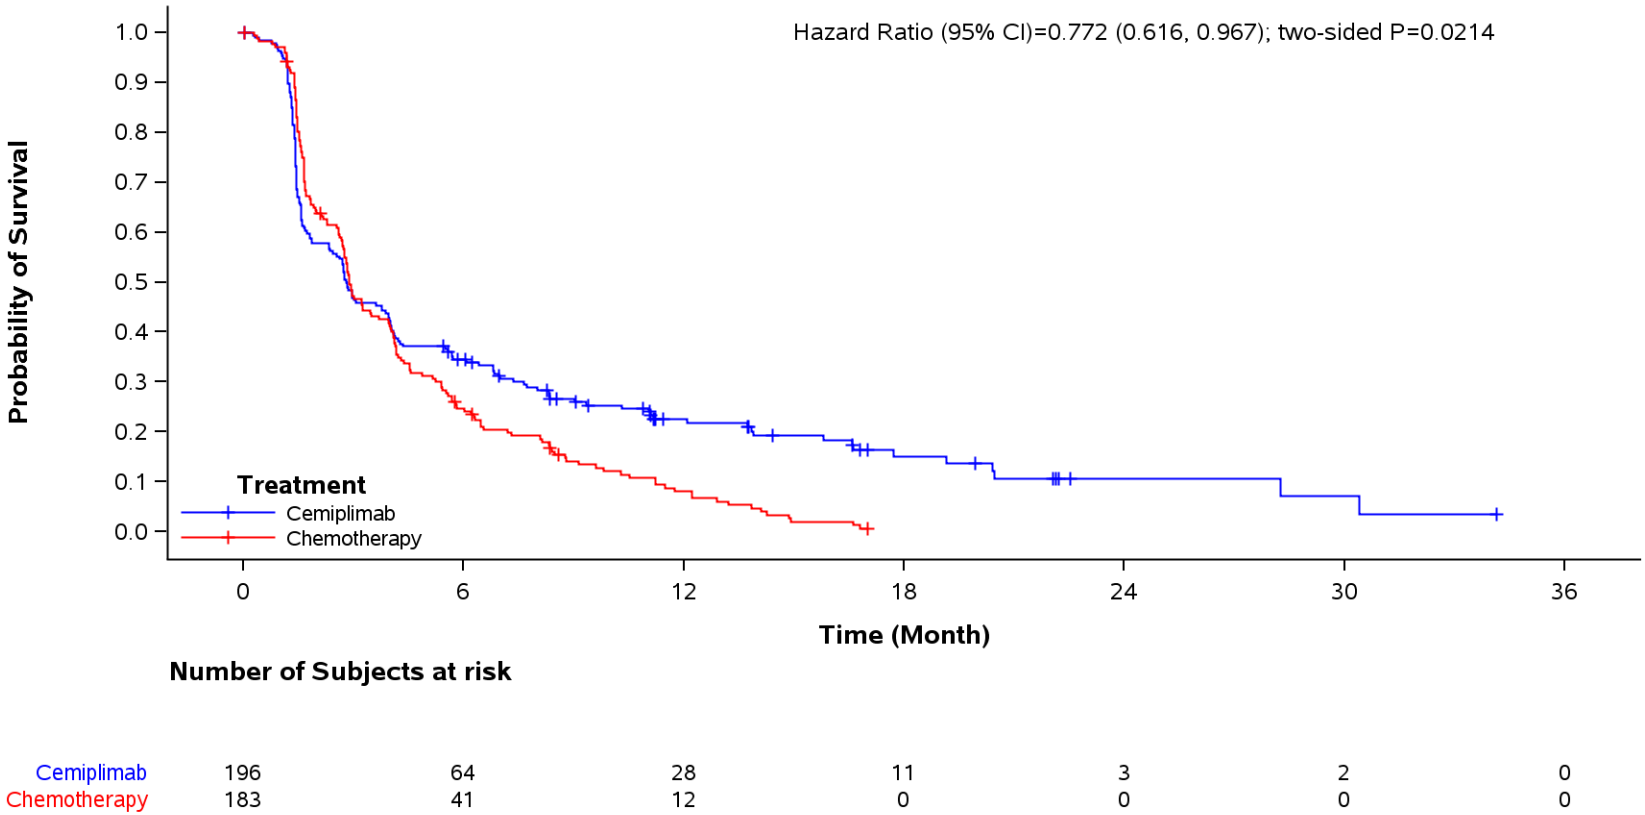
Figure 2.1.1. Kaplan Meier Cumulative Incidence Curve for Overall Survival
(Full Analysis Set Exclude Patients Assigned to Gemcitabine)



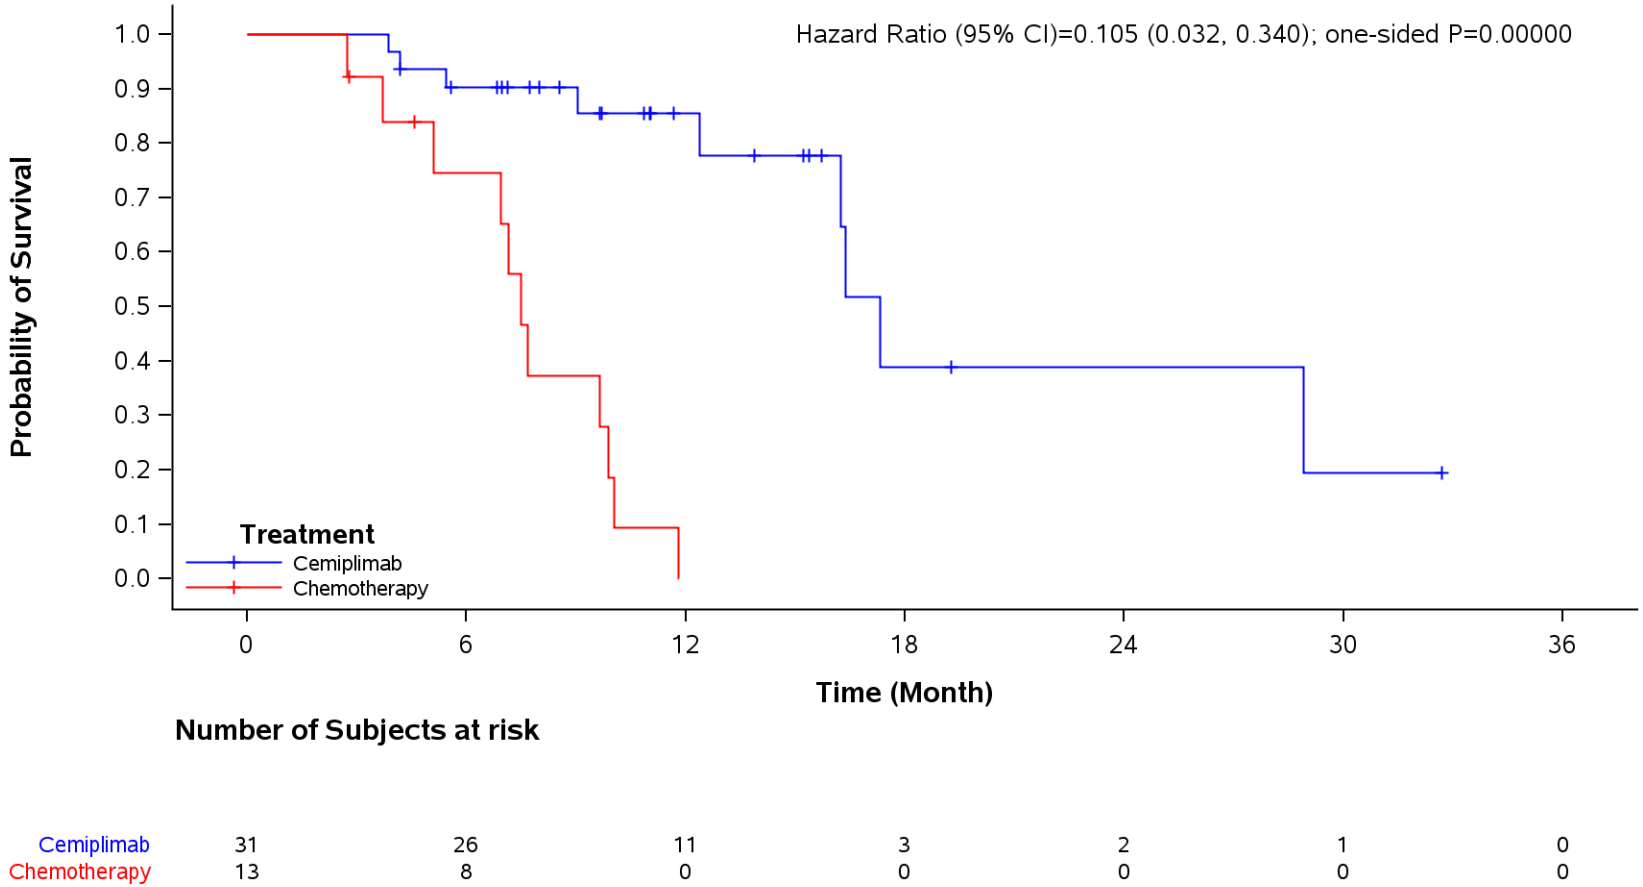
Data cut-off as of Jan 4th, 2021.
Hazard ratio is based on stratified proportional hazards model (cemiplimab vs chemotherapy). Two-sided p-value is from stratified log-rank test. Stratification factors are geographic region (North America versus Asia versus ROW) and Histology (SCC versus adenocarcinoma) according to IWRS.

Figure 2.1.2. Kaplan Meier Cumulative Incidence Curve for Progression-free Survival
(Full Analysis Set Exclude Patients Assigned to Gemcitabine)



Data cut-off as of Jan 4th, 2021.
Hazard ratio is based on stratified proportional hazards model (cemiplimab vs chemotherapy). Two-sided p-value is from stratified log-rank test. Stratification factors are geographic region (North America versus Asia versus ROW) and Histology (SCC versus adenocarcinoma) according to IWRS.

Figure 2.1.3. Kaplan Meier Cumulative Incidence Curve for Estimation of Duration of Response
(Full Analysis Set Exclude Patients Assigned to Gemcitabine - Patients with Confirmed CR or PR)



Number of Subjects at risk

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Cemiplimab | 31 | 26 | 11 | 3 | 2 | 1 | 0 |
| Chemotherapy | 13 | 8 | 0 | 0 | 0 | 0 | 0 |

Data cut-off as of Jan 4th, 2021.
[a] Based on patients with confirmed CR or PR.
[b] Stratified by geographic region (North America versus Asia versus ROW) and Histology (SCC versus adenocarcinoma) according to IWRS.
[c] One-sided p-value converted from stratified log-rank test two-sided p-value.
[d] Based on stratified proportional hazards model (cemiplimab vs chemotherapy).

Emotional Functioning - 10 pts sustained deterioration

Number of Subjects at risk

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Cemiplimab | 161 | 60 | 32 | 14 | 3 | 0 | 0 |
| Chemotherapy | 137 | 31 | 3 | 0 | 0 | 0 | 0 |

Data cut-off as of Jan 4th, 2021.
Hazard ratio is based on unstratified proportional hazards model (cemiplimab vs chemotherapy). Two-sided p-value is from unstratified log-rank test.

| Cemiplimab | 20 | 3 | 2 | 1 | 1 | 0 | 0 |
| Chemotherapy | 21 | 0 | 0 | 0 | 0 | 0 | 0 |

Data cut-off as of Jan 4th, 2021.
Hazard ratio is based on unstratified proportional hazards model (cemiplimab vs chemotherapy). Two-sided p-value is from unstratified log-rank test.

Figure 2.2.7a. Time to First Sensitivity Sustained Improvement with C30 10-points Threshold, Last Observation Carried Forward by Subgroup without PD-L1 (Full Analysis Set Exclude Patients Assigned to Gemcitabine)

Choice of IC chemotherapy: Topotecan
Pain - 10 pts sensitivity sustained improvement

Data cut-off as of Jan 4th, 2021.
Hazard ratio is based on unstratified proportional hazards model (cemiplimab vs chemotherapy). Two-sided p-value is from unstratified log-rank test.

Figure 2.2.7a. Time to First Sensitivity Sustained Improvement with C30 10-points Threshold, Last Observation Carried Forward by Subgroup without PD-L1 (Full Analysis Set Exclude Patients Assigned to Gemcitabine)

Choice of IC chemotherapy: Topotecan
Physical Functioning - 10 pts sensitivity sustained improvement

Data cut-off as of Jan 4th, 2021.
Hazard ratio is based on unstratified proportional hazards model (cemiplimab vs chemotherapy). Two-sided p-value is from unstratified log-rank test.

Figure 2.2.7a. Time to First Sensitivity Sustained Improvement with C30 10-points Threshold, Last Observation Carried Forward by Subgroup without PD-L1 (Full Analysis Set Exclude Patients Assigned to Gemcitabine)

Choice of IC chemotherapy: Topotecan

Global health status / QoL - 10 pts sensitivity sustained improvement

**Number of Subjects at risk**

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Cemiplimab | 20 | 4 | 3 | 1 | 1 | 0 | 0 |
| Chemotherapy | 21 | 2 | 0 | 0 | 0 | 0 | 0 |

Data cut-off as of Jan 4th, 2021.

Hazard ratio is based on unstratified proportional hazards model (cemiplimab vs chemotherapy). Two-sided p-value is from unstratified log-rank test.

Figure 2.2.7a. Time to First Sensitivity Sustained Improvement with C30 10-points Threshold, Last Observation Carried Forward by Subgroup without PD-L1 (Full Analysis Set Exclude Patients Assigned to Gemcitabine)

Choice of IC chemotherapy: Topotecan
Role Functioning - 10 pts sensitivity sustained improvement

Data cut-off as of Jan 4th, 2021.
Hazard ratio is based on unstratified proportional hazards model (cemiplimab vs chemotherapy). Two-sided p-value is from unstratified log-rank test.

Figure 2.2.7a. Time to First Sensitivity Sustained Improvement with C30 10-points Threshold, Last Observation Carried Forward by Subgroup without PD-L1 (Full Analysis Set Exclude Patients Assigned to Gemcitabine)

Choice of IC chemotherapy: Topotecan
Social Functioning - 10 pts sensitivity sustained improvement

Data cut-off as of Jan 4th, 2021.
Hazard ratio is based on unstratified proportional hazards model (cemiplimab vs chemotherapy). Two-sided p-value is from unstratified log-rank test.
