**Anhang 4-G: Post-hoc Analysen inklusive der Analysen, die nicht zur Ableitung des Zusatznutzens herangezogen werden**

Es werden in Anhang 4-G die folgenden Analysen dargestellt:

- Analysen für den Datenschnitt zum 04.01.2021
    - Einschließlich der Sensitivitätsanalyse zum EORTC QLQ-C30 um ≥ 10 Punkte (Datenschnitt zum 04.01.2021)
- Abbildungen für den Datenschnitt zum 04.01.2021
    - Einschließlich der Kaplan-Meier-Kurven für Subgruppenanalysen ohne signifikanten Interaktionsterm (Datenschnitt zum 04.01.2021)
- Analysen für den Datenschnitt zum 04.01.2022
- Abbildungen für den Datenschnitt zum 04.01.2022

Table 1.1.1. Demographics and Baseline Characteristics
(Full Analysis Set Exclude Patients Assigned to Gemcitabine)

| | Cemiplimab (N=196) | Chemotherapy (N=183) | Total (N=379) |
|---|---|---|---|
| Age (years) | | | |
| n | 196 | 183 | 379 |
| Mean (SD) | 49.6 (10.96) | 50.4 (11.45) | 50.0 (11.19) |
| Median | 50.0 | 50.0 | 50.0 |
| Q1 : Q3 | 41.0 : 58.5 | 43.0 : 56.0 | 42.0 : 57.0 |
| Min : Max | 22 : 75 | 28 : 87 | 22 : 87 |
| Age Groups (years), n (%) | | | |
| <65 | 180 (91.8%) | 163 (89.1%) | 343 (90.5%) |
| >=65 | 16 (8.2%) | 20 (10.9%) | 36 (9.5%) |
| Age Groups (years), n (%) | | | |
| <65 | 180 (91.8%) | 163 (89.1%) | 343 (90.5%) |
| >=65 and <75 | 15 (7.7%) | 14 (7.7%) | 29 (7.7%) |
| >=75 | 1 (0.5%) | 6 (3.3%) | 7 (1.8%) |

Data cut-off as of Jan 4th, 2021.
ECOG, Geographic Region are based on clinical database.

Table 1.1.1. Demographics and Baseline Characteristics
(Full Analysis Set Exclude Patients Assigned to Gemcitabine)

| | Cemiplimab (N=196) | Chemotherapy (N=183) | Total (N=379) |
|---|---|---|---|

Table 5.1.1. Overall Survival
(Full Analysis Set Exclude Patients Assigned to Gemcitabine)

| | Cemiplimab (N=196) | Chemotherapy (N=183) |
|---|---|---|
| Number of deaths, n (%) | 119 (60.7%) | 131 (71.6%) |
| Number of censored patients, n (%) | 77 (39.3%) | 52 (28.4%) |
| | | |
| Median (95% CI), (Months) [a] | 12.7 (8.9, 15.2) | 8.0 (7.0, 9.7) |
| Stratified log-rank test 2-sided p-value [b][c] | 0.0025 | |
| HR (95% CI) [b][d] | 0.677 (0.525, 0.873) | |
| HR P-Value [b][d] | 0.0026 | |
| | | |
| Estimated Survival Probability, %(95% CI)[a] | | |
| 6 months | 66.6 (59.5, 72.7) | 63.4 (55.7, 70.2) |
| 12 months | 53.6 (46.2, 60.5) | 33.3 (25.9, 40.9) |
| 18 months | 33.9 (26.0, 41.9) | 16.7 (10.7, 23.9) |
| 24 months | 23.0 (15.0, 32.0) | 10.3 (5.0, 18.0) |
| 30 months | 23.0 (15.0, 32.0) | 8.3 (3.3, 16.1) |
| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Stratified by geographic region (North America versus Asia versus ROW) and Histology (SCC versus adenocarcinoma) according to IWRS.
[c] Two-sided p-value is from stratified log-rank test.
[d] Based on stratified proportional hazards model (cemiplimab vs chemotherapy).

Table 5.1.2. Progression-free Survival
(Full Analysis Set Exclude Patients Assigned to Gemcitabine)

| | Cemiplimab (N=196) | Chemotherapy (N=183) |
|---|---|---|
| Number of events, n (%) | 160 (81.6%) | 165 (90.2%) |
| Progressive Disease, n (%) | 135 (68.9%) | 130 (71.0%) |
| Number of deaths, n (%) | 25 (12.8%) | 35 (19.1%) |
| Number of censored patients, n (%) | 36 (18.4%) | 18 (9.8%) |
| | | |
| Median (95% CI), (Months) [a] | 2.8 (2.3, 3.9) | 2.9 (2.7, 3.7) |
| Stratified log-rank test 2-sided p-value [b][c] | 0.0214 | |
| HR (95% CI) [b][d] | 0.772 (0.616, 0.967) | |
| HR P-Value [b][d] | 0.0245 | |
| | | |
| Estimated Event-Free Probability, %(95% CI)[a] | | |
| 6 months | 34.5 (27.9, 41.2) | 24.8 (18.6, 31.5) |
| 12 months | 22.6 (16.8, 29.0) | 8.1 (4.5, 13.0) |
| 18 months | 15.0 (9.6, 21.6) | NE (NE, NE) |
| 24 months | 10.6 (5.6, 17.5) | NE (NE, NE) |
| 30 months | 7.1 (2.2, 16.1) | NE (NE, NE) |
| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Stratified by geographic region (North America versus Asia versus ROW) and Histology (SCC versus adenocarcinoma) according to IWRS.
[c] Two-sided p-value is from stratified log-rank test.
[d] Based on stratified proportional hazards model (cemiplimab vs chemotherapy).

Table 5.1.3. Kaplan-Meier Estimation of Duration of Response
(Full Analysis Set Exclude Patients Assigned to Gemcitabine - Patients with Confirmed CR or PR)

| | Cemiplimab (N=31) | Chemotherapy (N=13) |
|---|---|---|
| KM Estimation of Duration of Response (CR or PR) [a] | | |
| n | 31 | 13 |
| Number of events, n (%) | 9 (29.0%) | 11 (84.6%) |
| Number of censored patients, n (%) | 22 (71.0%) | 2 (15.4%) |
| Median (95% CI), (months) [a] | 17.3 (16.2, NE) | 7.5 (3.7, 9.9) |
| Stratified log-rank test 1-sided p-value [b][c] | <0.0001 | |
| HR (95% CI) [b][d] | 0.105 (0.032, 0.340) | |
| HR P-Value [b][d] | 0.0002 | |
| Estimated Event-Free Probability, % (95% CI) [a] | | |
| 6 months | 90.2 (72.6, 96.7) | 74.6 (39.8, 91.1) |
| 12 months | 85.5 (65.1, 94.4) | 0.0 (NE, NE) |
| 18 months | 38.8 (10.1, 67.7) | 0.0 (NE, NE) |
| 24 months | 38.8 (10.1, 67.7) | 0.0 (NE, NE) |
| 30 months | 19.4 (1.2, 54.3) | 0.0 (NE, NE) |
| 36 months | NE (NE, NE) | 0.0 (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on patients with confirmed CR or PR.
[b] Stratified by geographic region (North America versus Asia versus ROW) and Histology (SCC versus adenocarcinoma) according to IWRS.
[c] One-sided p-value converted from stratified log-rank test two-sided p-value.
[d] Based on stratified proportional hazards model (cemiplimab vs chemotherapy).

Table 5.1.4a. Time to First Improvement with C30 10-points Threshold
(Full Analysis Set Exclude Patients Assigned to Gemcitabine)

Appetite loss - 10 pts improvement

| | Cemiplimab (N=196) | Chemotherapy (N=183) |
|---|---|---|
| Patients with event, n (%) | 46 (23.5%) | 34 (18.6%) |
| Censored Patients, n (%) | 150 (76.5%) | 149 (81.4%) |
| Median (95% CI), (Months) [a] | 2.83 (1.84, 4.21) | 3.45 (2.69, 7.26) |
| Stratified log-rank test 2-sided p-value [b][c] | 0.3970 | |
| HR (95% CI) [b][d] | 1.229 (0.778, 1.940) | |
| HR P-Value [b][d] | 0.3768 | |
| Estimated Event-Free Probability, %(95% CI)[a] | | |

| Estimated Event-Free Probability, %(95% CI)[a] | | |
| 6 months | 73.0 (61.4, 81.6) | 65.1 (49.5, 77.0) |
| 12 months | 61.9 (47.3, 73.6) | NE (NE, NE) |
| 18 months | 43.0 (20.7, 63.7) | NE (NE, NE) |
| 24 months | NE (NE, NE) | NE (NE, NE) |
| 30 months | NE (NE, NE) | NE (NE, NE) |
| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Stratified by geographic region (North America versus Asia versus ROW) and Histology (SCC versus adenocarcinoma) according to IWRS.
[c] Two-sided p-value is from stratified log-rank test.
[d] Based on stratified proportional hazards model (cemiplimab vs chemotherapy).
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12

| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Stratified by geographic region (North America versus Asia versus ROW) and Histology (SCC versus adenocarcinoma) according to IWRS.
[c] Two-sided p-value is from stratified log-rank test.
[d] Based on stratified proportional hazards model (cemiplimab vs chemotherapy).
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12

| 24 months | 68.0 (49.3, 81.0) | NE (NE, NE) |
| 30 months | NE (NE, NE) | NE (NE, NE) |
| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Stratified by geographic region (North America versus Asia versus ROW) and Histology (SCC versus adenocarcinoma) according to IWRS.
[c] Two-sided p-value is from stratified log-rank test.
[d] Based on stratified proportional hazards model (cemiplimab vs chemotherapy).
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Stratified by geographic region (North America versus Asia versus ROW) and Histology (SCC versus adenocarcinoma) according to IWRS.
[c] Two-sided p-value is from stratified log-rank test.
[d] Based on stratified proportional hazards model (cemiplimab vs chemotherapy).
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Stratified by geographic region (North America versus Asia versus ROW) and Histology (SCC versus adenocarcinoma) according to IWRS.
[c] Two-sided p-value is from stratified log-rank test.
[d] Based on stratified proportional hazards model (cemiplimab vs chemotherapy).
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored
Program: /home/yingyuan.lin/sasdata/Data/Development/MA/R2810/R2810-ONC/MA/HTA-Germany-1676/Analysis_MA/Programs/t-tte-subgroup-10pts.sas (23JAN23:11:39:43, yingyuan.lin)

n/n1 (where n is number of patients with data available and n1 is number of patients imputed by LOCF)
Note: LOCF (Last observation carried forward) method for the last post-baseline available observed value was carried forward to impute missing data for non-monotone missing values only.
* The dependent variable for the Mixed Model Repeated Measures (MMRM) model is change from baseline of PRO scores and the predictors are the corresponding baseline PROscores, treatment, visit, geographic region, Histology, treatment by visit, and baseline PRO scores by visit interactions.
Scheduled visits with less than 10 patients in either arm, unscheduled visits, and off-treatment visits are not included in the analysis.

Data cut-off as of Jan 4th, 2021.
n/n1 (where n is number of patients with data available and n1 is number of patients imputed by LOCF)
Note: LOCF (Last observation carried forward) method for the last post-baseline available observed value was carried forward to impute missing data for non-monotone missing values only.
* The dependent variable for the Mixed Model Repeated Measures (MMRM) model is change from baseline of PRO scores and the predictors are the corresponding baseline PROscores, treatment, visit, geographic region, Histology, treatment by visit, and baseline PRO scores by visit interactions.
Scheduled visits with less than 10 patients in either arm, unscheduled visits, and off-treatment visits are not included in the analysis.

Data cut-off as of Jan 4th, 2021.
n/n1 (where n is number of patients with data available and n1 is number of patients imputed by LOCF)
Note: LOCF (Last observation carried forward) method for the last post-baseline available observed value was carried forward to impute missing data for non-monotone missing values only.
* The dependent variable for the Mixed Model Repeated Measures (MMRM) model is change from baseline of PRO scores and the predictors are the corresponding baseline PROscores, treatment, visit, geographic region, Histology, treatment by visit, and baseline PRO scores by visit interactions.
Scheduled visits with less than 10 patients in either arm, unscheduled visits, and off-treatment visits are not included in the analysis.

Data cut-off as of Jan 4th, 2021.
n/n1 (where n is number of patients with data available and n1 is number of patients imputed by LOCF)
Note: LOCF (Last observation carried forward) method for the last post-baseline available observed value was carried forward to impute missing data for non-monotone missing values only.
* The dependent variable for the Mixed Model Repeated Measures (MMRM) model is change from baseline of PRO scores and the predictors are the corresponding baseline PROscores, treatment, visit, geographic region, Histology, treatment by visit, and baseline PRO scores by visit interactions.
Scheduled visits with less than 10 patients in either arm, unscheduled visits, and off-treatment visits are not included in the analysis.

Data cut-off as of Jan 4th, 2021.
n/n1 (where n is number of patients with data available and n1 is number of patients imputed by LOCF)
Note: LOCF (Last observation carried forward) method for the last post-baseline available observed value was carried forward to impute missing data for non-monotone missing values only.
* The dependent variable for the Mixed Model Repeated Measures (MMRM) model is change from baseline of PRO scores and the predictors are the corresponding baseline PROscores, treatment, visit, geographic region, Histology, treatment by visit, and baseline PRO scores by visit interactions.
Scheduled visits with less than 10 patients in either arm, unscheduled visits, and off-treatment visits are not included in the analysis.

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.

[a] Based on Kaplan-Meier method.

[b] Two-sided p-value is from unstratified log-rank test.

[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).

[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.

Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12

Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Pain - 10 pts sensitivity sustained improvement

| | Cemiplimab (N=113) | Chemotherapy (N=114) |
|---|---|---|
| Patients with event, n (%) | 19 (16.8%) | 11 (9.6%) |
| Censored Patients, n (%) | 94 (83.2%) | 103 (90.4%) |
| Median (95% CI), (Months) [a] | 17.05 (11.17, NE) | NE (NE, NE) |
| Unstratified log-rank test 2-sided p-value [b] | 0.1966 | |
| HR (95% CI) [c] | 1.645 (0.778, 3.479) | |
| HR P-Value [c] | 0.1928 | |
| Heterogeneity p-value [d] | 0.6656 | |
| Estimated Event-Free Probability, %(95% CI)[a] | | |
| 6 months | 74.9 (61.2, 84.3) | 77.3 (61.5, 87.2) |
| 12 months | 62.9 (42.0, 78.0) | 77.3 (61.5, 87.2) |
| 18 months | 41.9 (9.9, 72.1) | 77.3 (61.5, 87.2) |
| 24 months | NE (NE, NE) | NE (NE, NE) |
| 30 months | NE (NE, NE) | NE (NE, NE) |
| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored
Program: /home/yingyuan.lin/sasdata/Data/Development/MA/R2810/R2810-ONC/MA/HTA-Germany-1676/Analysis_MA/Programs/t-tte-subgroup-sub-no-pdl1.sas (23JAN23:12:01:24, yingyuan.lin)

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Table 18.2.5a. Time to First Sensitivity Sustained Improvement with C30 10-points Threshold, Last Observation Carried Forward by Subgroup without PD-L1 (Full Analysis Set Exclude Patients Assigned to Gemcitabine)

Choice of IC chemotherapy: Pemetrexed
Nausea / Vomiting - 10 pts sensitivity sustained improvement

| | Cemiplimab (N=119) | Chemotherapy (N=111) |
|---|---|---|
| Patients with event, n (%) | 9 (7.6%) | 8 (7.2%) |
| Censored Patients, n (%) | 110 (92.4%) | 103 (92.8%) |
| Median (95% CI), (Months) [a] | 12.06 (2.83, NE) | NE (3.68, NE) |
| Unstratified log-rank test 2-sided p-value [b] | 0.9323 | |
| HR (95% CI) [c] | 1.049 (0.392, 2.803) | |
| HR P-Value [c] | 0.9241 | |
| Heterogeneity p-value [d] | 0.8708 | |
| Estimated Event-Free Probability, %(95% CI)[a] | | |
| 6 months | 70.8 (47.4, 85.2) | 69.0 (46.9, 83.4) |
| 12 months | 61.9 (35.2, 80.3) | NE (NE, NE) |
| 18 months | 49.6 (20.3, 73.4) | NE (NE, NE) |
| 24 months | NE (NE, NE) | NE (NE, NE) |
| 30 months | NE (NE, NE) | NE (NE, NE) |
| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12

[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained improvement means those with consecutive achievement of 10 points improvement till the last assessment. For all 10 points improvement included in sustained improvement, the date of first 10 points improvement is used in the calculation of time. Time is defined as (date of first 10 points sustained improvement - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored
Program: /home/yingyuan.lin/sasdata/Data/Development/MA/R2810/R2810-ONC/MA/HTA-Germany-1676/Analysis_MA/Programs/t-tte-subgroup-sub-no-pdl1.sas (23JAN23:12:01:53, yingyuan.lin)

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Histology: Squamous
Nausea / Vomiting - 10 pts sensitivity sustained deterioration

| | Cemiplimab (N=161) | Chemotherapy (N=137) |
|---|---|---|
| Patients with event, n (%) | 10 (6.2%) | 14 (10.2%) |
| Censored Patients, n (%) | 151 (93.8%) | 123 (89.8%) |
| Median (95% CI), (Months) [a] | NE (NE, NE) | NE (11.07, NE) |
| Unstratified log-rank test 2-sided p-value [b] | 0.0128 | |
| HR (95% CI) [c] | 0.343 (0.142, 0.824) | |
| HR P-Value [c] | 0.0168 | |
| Heterogeneity p-value [d] | 0.7995 | |
| Estimated Event-Free Probability, %(95% CI)[a] | | |
| 6 months | 94.3 (87.4, 97.5) | 85.4 (74.6, 91.9) |
| 12 months | 87.7 (76.2, 93.9) | 64.9 (28.6, 86.2) |
| 18 months | 83.7 (68.8, 91.9) | NE (NE, NE) |
| 24 months | 83.7 (68.8, 91.9) | NE (NE, NE) |
| 30 months | NE (NE, NE) | NE (NE, NE) |
| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.

[a] Based on Kaplan-Meier method.

[b] Two-sided p-value is from unstratified log-rank test.

[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).

[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.

Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12

Patients who reach the threshold for the first time at the last documented visit are censored

Appetite loss - 10 pts sensitivity sustained deterioration

| | Cemiplimab (N=113) | Chemotherapy (N=114) |
|---|---|---|
| Patients with event, n (%) | 13 (11.5%) | 18 (15.8%) |
| Censored Patients, n (%) | 100 (88.5%) | 96 (84.2%) |
| Median (95% CI), (Months) [a] | NE (NE, NE) | NE (NE, NE) |
| Unstratified log-rank test 2-sided p-value [b] | 0.1162 | |
| HR (95% CI) [c] | 0.564 (0.275, 1.158) | |
| HR P-Value [c] | 0.1186 | |
| Heterogeneity p-value [d] | 0.8265 | |
| Estimated Event-Free Probability, %(95% CI)[a] | | |
| 6 months | 81.7 (68.8, 89.7) | 69.9 (55.6, 80.4) |
| 12 months | 73.8 (56.7, 85.0) | 69.9 (55.6, 80.4) |
| 18 months | 73.8 (56.7, 85.0) | 69.9 (55.6, 80.4) |
| 24 months | NE (NE, NE) | NE (NE, NE) |
| 30 months | NE (NE, NE) | NE (NE, NE) |
| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored
Program: /home/yingyuan.lin/sasdata/Data/Development/MA/R2810/R2810-ONC/MA/HTA-Germany-1676/Analysis_MA/Programs/t-tte-subgroup-sub-no-pdl1.sas (23JAN23:12:01:53, yingyuan.lin)

Table 18.2.6a. Time to First Sensitivity Sustained Deterioration with C30 10-points Threshold, Last Observation Carried Forward by Subgroup without PD-L1 (Full Analysis Set Exclude Patients Assigned to Gemcitabine)

Choice of IC chemotherapy: Irinotecan
Diarhoea - 10 pts sensitivity sustained deterioration

| | Cemiplimab (N=26) | Chemotherapy (N=19) |
|---|---|---|
| Patients with event, n (%) | 0 | 1 (5.3%) |
| Censored Patients, n (%) | 26 (100.0%) | 18 (94.7%) |
| Median (95% CI), (Months) [a] | NE (NE, NE) | NE (NE, NE) |
| Unstratified log-rank test 2-sided p-value [b] | 0.2207 | |
| HR (95% CI) [c] | 0.000 (0.000, NE) | |
| HR P-Value [c] | 0.9984 | |
| Heterogeneity p-value [d] | 0.2029 | |
| Estimated Event-Free Probability, %(95% CI)[a] | | |
| 6 months | 100.0 (100.0, 100.0) | 93.8 (63.2, 99.1) |
| 12 months | 100.0 (100.0, 100.0) | NE (NE, NE) |
| 18 months | 100.0 (100.0, 100.0) | NE (NE, NE) |
| 24 months | NE (NE, NE) | NE (NE, NE) |
| 30 months | NE (NE, NE) | NE (NE, NE) |
| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored
Program: /home/yingyuan.lin/sasdata/Data/Development/MA/R2810/R2810-ONC/MA/HTA-Germany-1676/Analysis_MA/Programs/t-tte-subgroup-sub-no-pdl1.sas (23JAN23:12:01:53, yingyuan.lin)

| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Post baseline score is imputed using LOCF, then sustained deterioration means those with consecutive achievement of 10 points deterioration till the last assessment. For all 10 points deterioration included in sustained deterioration, the date of first 10 points deterioration is used in the calculation of time. Time is defined as (date of first 10 points sustained deterioration - Date of Randomization +1)/ 365.25*12
Patients who reach the threshold for the first time at the last documented visit are censored

[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
Time is defined as (date of achieving 10 points improvement first time - Date of Randomization +1)/365.25*12

Program: /home/yingyuan.lin/sasdata/Data/Development/MA/R2810/R2810-ONC/MA/HTA-Germany-1676/Analysis_MA/Programs/t-tte-subgroup-sub-no-pdl1.sas (23JAN23:11:59:18, yingyuan.lin)

Table 18.2.1a. Time to First Improvement with C30 10-points Threshold by Subgroup without PD-L1
(Full Analysis Set Exclude Patients Assigned to Gemcitabine)

Baseline ECOG Status: 0
Physical Functioning - 10 pts improvement

| | Cemiplimab (N=83) | Chemotherapy (N=69) |
|---|---|---|
| Patients with event, n (%) | 25 (30.1%) | 6 (8.7%) |
| Censored Patients, n (%) | 58 (69.9%) | 63 (91.3%) |
| | | |
| Median (95% CI), (Months) [a] | 4.96 (2.83, NE) | NE (6.74, NE) |
| Unstratified log-rank test 2-sided p-value [b] | 0.0115 | |
| HR (95% CI) [c] | 3.011 (1.228, 7.380) | |
| HR P-Value [c] | 0.0160 | |
| Heterogeneity p-value [d] | 0.4614 | |
| | | |
| Estimated Event-Free Probability, %(95% CI)[a] | | |
| 6 months | 44.2 (28.1, 59.1) | 82.9 (60.3, 93.3) |
| 12 months | 40.2 (24.1, 55.8) | 59.2 (25.4, 81.9) |
| 18 months | 40.2 (24.1, 55.8) | NE (NE, NE) |
| 24 months | 26.8 (7.4, 51.4) | NE (NE, NE) |
| 30 months | NE (NE, NE) | NE (NE, NE) |
| 36 months | NE (NE, NE) | NE (NE, NE) |

Data cut-off as of Jan 4th, 2021.
[a] Based on Kaplan-Meier method.
[b] Two-sided p-value is from unstratified log-rank test.
[c] Based on unstratified proportional hazards model (cemiplimab vs chemotherapy).
[d] Heterogeneity p-values are based on type 3 test of proportional hazards model with treatment, subgroup, treatment-by-subgroup as fixed factors.
