Table LT1A\_TSSS11: Time to first TEAE by SOC/PT by subgroup: Maximal longest diameter  
 ITT set

Time to first TEAE by SOC/PT by subgroup: Maximal longest diameter	Loncastuximab tesirine Data-cut 1
SOC: Investigations	
PT: Blood alkaline phosphatase increased	
Maximal longest diameter:	
>5 - <= 7,5 cm	
Patients in analysis set	36
Patients with events - n(%)	7 (19,4)
95%-CI	[8,2-36,0]
TEAE in months [95%-CI]	
Median	NE [3,25-NE]
TEAE:	
Status at specific timepoints KM-estimate [95%-CI]	
Month 3	80,1 [60,0-90,9]
Month 6	72,9 [48,4-87,1]
Month 12	NE
Month 18	NE
Month 24	NE

Note: n = number of patients with events. 95% CI = 95% confidence intervals. NE = Not evaluable. TEAE = Treatment-emergent adverse event.

ITT set = Intent to Treat set. SOC= System organ class. PT=Preferred term.

Confidence interval for event rate: exact Clopper-Pearson method.

Confidence interval for Median: Brookmeyer Crowley.

Confidence interval for time point estimates: via log-log transformation of rates.
