<p>Meta-analysis was performed using a fixed effect model. KH-PM: Knapp-Hartung method with Paule-Mandel-methodology.                      meta-analysis for interaction was performed based on RRs from different subgroups.                      Due to convergent issue, inverse variance method was used for pooling studies than generalized linear mixed model (GLMM). This may cause different estimate than using GLMM.</p>
