Table 2.2002 Kaplan Meier Analysis of EORTC QLQ-EN24 Dimension Scores Time to First Deterioration and Improvement by Age Group (ITT Analysis Set): MMRp/MSS Subjects

Scale/Item: EN24 Sexual Enjoyment Score 10-point Improvement
Age (years): >=65

Variable	Dostarlimab + Carboplatin/Paclitaxel (N=192)	Placebo + Carboplatin/Paclitaxel (N=184)
Inverse hazard ratio[b] (95% CI)	0.58 (0.090, 3.688)	
p-value of 2-sided stratified log-rank test	0.5564	
Number of subsequent visits with confirmation after first improvement [n (%)]		
n	3	2
0	2 (66.7%)	2 (100%)
1	0	0
2	0	0
3	0	0
>=4	1 (33.3%)	0
p-value from Interaction Test[c]	0.5366	

a. 95% Confidence intervals generated using the method of Brookmeyer and Crowley (1982).
b. Stratified Cox regression.
c. Based on a Stratified Cox Regression model for the interaction of age group (<65 vs. >=65) and treatment; in a model containing covariates: treatment group and age group (<65 vs. >=65).
NE = Not Estimable.
Note: For QLQ-EN24 Functional Scales, the scale score change from baseline are categorized as follows: Improvement: change from baseline >= 10; Stable: -10 < change from baseline < 10; Deterioration: change from baseline <= -10.
For QLQ-EN24 Symptom Scales, the scale score change from baseline are categorized as follows: Improvement: change from baseline <= -10; Stable: -10 < change from baseline < 10; Deterioration: change from baseline >= 10.

Table 3.2802 Summary of Kaplan Meier Analysis of Time to Treatment-Emergent Adverse Events Leading to Death by Disease Status (Safety Analysis Set): MMRp/MSS Subjects

Disease Status	Variable	Dostarlimab + Carboplatin/Paclitaxel (N=189)	Placebo + Carboplatin/Paclitaxel (N=181)
Primary Stage IV	Number of Subjects in the Subgroup	65	64
	Status [n (%)]		
	Events observed	3 (4.6%)	0
	Censored	62 (95.4%)	64 (100%)

Note: TEAE: Treatment-Emergent Adverse Event.
a. 95% Confidence intervals generated using the method of Brookmeyer and Crowley (1982).
b. Stratified Cox regression.
c. Based on a Stratified Cox Regression model for the interaction of disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV) and treatment; in a model containing covariates: treatment group and disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV).
NE = Not Estimable.
Note: In case of 0 events in one treatment arm, H.R is produced using cox proportional hazard model with Firth's correction(Firth 1993) and the corresponding 95% confidence for H.R will be constructed using the profile likelihood method [Heinze and Schemper 2001].

Table 3.4402 Summary of Kaplan Meier Analysis of Time to Treatment-Emergent Adverse Events Leading to Study Drug Discontinuation by Disease Status
(Safety Analysis Set): MMRp/MSS Subjects

Disease Status	Variable	Dostarlimab + Carboplatin/Paclitaxel (N=189)	Placebo + Carboplatin/Paclitaxel (N=181)
Primary Stage IV	Number of Subjects in the Subgroup	65	64
	Status [n (%)]		
	Events observed	19 (29.2%)	5 (7.8%)
	Censored	46 (70.8%)	59 (92.2%)
	Estimates for TEAE (months) Quartile (95% CI)[a]		
	25%	14.1 (3.5, 34.7)	37.8 (37.8, NE)
	50%	36.5 (16.7, NE)	37.8 (37.8, NE)
	75%	NE (36.5, NE)	NE (37.8, NE)

Note: TEAE: Treatment-Emergent Adverse Event.
a. 95% Confidence intervals generated using the method of Brookmeyer and Crowley (1982).
b. Stratified Cox regression.
c. Based on a Stratified Cox Regression model for the interaction of disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV) and treatment; in a model containing covariates: treatment group and disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV).
NE = Not Estimable.
Note: In case of 0 events in one treatment arm, H.R is produced using cox proportional hazard model with Firth's correction(Firth 1993) and the corresponding 95% confidence for H.R will be constructed using the profile likelihood method [Heinze and Schemper 2001].

Disease Status	Variable	Dostarlimab + Carboplatin/Paclitaxel (N=189)	Placebo + Carboplatin/Paclitaxel (N=181)
Primary Stage III	Survival probability (95% CI) at		
	Month 6	82.9% (65.8%, 91.9%)	79.9% (60.5%, 90.4%)
	Month 12	82.9% (65.8%, 91.9%)	79.9% (60.5%, 90.4%)
	Month 18	72.5% (43.9%, 88.2%)	79.9% (60.5%, 90.4%)
	Month 24	72.5% (43.9%, 88.2%)	79.9% (60.5%, 90.4%)
	Month 30	72.5% (43.9%, 88.2%)	79.9% (60.5%, 90.4%)
	Month 36	72.5% (43.9%, 88.2%)	79.9% (60.5%, 90.4%)
	Hazard ratio[b] (95% CI)	0.97 (0.324, 2.886)	
	p-value of 2-sided stratified log-rank test	0.9500	

Note: TEAE: Treatment-Emergent Adverse Event.
Note: Immune-related Adverse Events are identified as any >=Grade 2 AEs based on a pre-specified preferred terms (PTs) list.
Note: In case of 0 events in one treatment arm, H.R is produced using cox proportional hazard model with Firth's correction(Firth 1993) and the corresponding 95% confidence for H.R will be constructed using the profile likelihood method [Heinze and Schemper 2001].
a. 95% Confidence intervals generated using the method of Brookmeyer and Crowley (1982).
b. Stratified Cox regression.
c. Based on a Stratified Cox Regression model for the interaction of disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV) and treatment; in a model containing covariates: treatment group and disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV).
NE = Not Estimable.

Note: TEAE: Treatment-Emergent Adverse Event.
Note: Immune-related Adverse Events are identified as any >=Grade 2 AEs based on a pre-specified preferred terms (PTs) list.
a. 95% Confidence intervals generated using the method of Brookmeyer and Crowley (1982).
b. Stratified Cox regression.
c. Based on a Stratified Cox Regression model for the interaction of disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV) and treatment; in a model containing covariates: treatment group and disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV).
NE = Not Estimable.
Note: In case of 0 events in one treatment arm, H.R is produced using cox proportional hazard model with Firth's correction(Firth 1993) and the corresponding 95% confidence for H.R will be constructed using the profile likelihood method [Heinze and Schemper 2001].

Table 3.5602 Summary of Kaplan Meier Analysis of Time to Treatment-Emergent Immune-Related Adverse Events of Grade >=3 by irAE Category by Disease Status
(Safety Analysis Set): MMRp/MSS Subjects

irAE Category: Non-hypersensitivity

Disease Status	Variable	Dostarlimab + Carboplatin/Paclitaxel (N=189)	Placebo + Carboplatin/Paclitaxel (N=181)
Primary Stage IV	Survival probability (95% CI) at		
	Month 6	83.5% (71.4%, 90.8%)	93.4% (83.2%, 97.5%)
	Month 12	78.4% (64.5%, 87.4%)	93.4% (83.2%, 97.5%)
	Month 18	70.4% (53.0%, 82.3%)	93.4% (83.2%, 97.5%)
	Month 24	70.4% (53.0%, 82.3%)	93.4% (83.2%, 97.5%)
	Month 30	70.4% (53.0%, 82.3%)	93.4% (83.2%, 97.5%)
	Month 36	70.4% (53.0%, 82.3%)	93.4% (83.2%, 97.5%)
	Hazard ratio[b] (95% CI)	3.67 (1.206, 11.142)	
	p-value of 2-sided stratified log-rank test	0.0141	
	p-value from Interaction Test[c]	0.1880	

Note: TEAE: Treatment-Emergent Adverse Event.
Note: Immune-related Adverse Events are identified as any >=Grade 2 AEs based on a pre-specified preferred terms (PTs) list.
Note: In case of 0 events in one treatment arm, H.R is produced using cox proportional hazard model with Firth's correction(Firth 1993) and the corresponding 95% confidence for H.R will be constructed using the profile likelihood method [Heinze and Schemper 2001].
a. 95% Confidence intervals generated using the method of Brookmeyer and Crowley (1982).
b. Stratified Cox regression.
c. Based on a Stratified Cox Regression model for the interaction of disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV) and treatment; in a model containing covariates: treatment group and disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV).
NE = Not Estimable.

Table 3.5602 Summary of Kaplan Meier Analysis of Time to Treatment-Emergent Immune-Related Adverse Events of Grade >=3 by irAE Category by Disease Status
(Safety Analysis Set): MMRp/MSS Subjects

irAE Category: Immune-mediated Endocrinopathies

Disease Status	Variable	Dostarlimab + Carboplatin/Paclitaxel (N=189)	Placebo + Carboplatin/Paclitaxel (N=181)
Primary Stage III	Number of Subjects in the Subgroup	35	30
	Status [n (%)]		
	Events observed	0	0
	Censored	35 (100%)	30 (100%)

Note: TEAE: Treatment-Emergent Adverse Event.
Note: Immune-related Adverse Events are identified as any >=Grade 2 AEs based on a pre-specified preferred terms (PTs) list.
Note: In case of 0 events in one treatment arm, H.R is produced using cox proportional hazard model with Firth's correction(Firth 1993) and the corresponding 95% confidence for H.R will be constructed using the profile likelihood method [Heinze and Schemper 2001].
a. 95% Confidence intervals generated using the method of Brookmeyer and Crowley (1982).
b. Stratified Cox regression.
c. Based on a Stratified Cox Regression model for the interaction of disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV) and treatment; in a model containing covariates: treatment group and disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV).
NE = Not Estimable.

Preferred Term: Rash maculo-papular

Age (years)	Variable	Dostarlimab + Carboplatin/Paclitaxel (N=189)	Placebo + Carboplatin/Paclitaxel (N=181)
<65	Number of Subjects in the Subgroup	96	82
	Status [n (%)]		
	Events observed	11 (11.5%)	3 (3.7%)
	Censored	85 (88.5%)	79 (96.3%)
	Estimates for TEAE (months) Quartile (95% CI)[a]		
	25%	NE (17.1, NE)	NE (NE, NE)
	50%	NE (NE, NE)	NE (NE, NE)
	75%	NE (NE, NE)	NE (NE, NE)

Note: TEAE: Treatment-Emergent Adverse Event.
Note: Analysis only includes treatment-emergent adverse events for Preferred Terms occurring in [at least 10% of patients in any treatment arm] OR in [at least 10 patients AND at least 1% of patients in any treatment arm within the population].
a. 95% Confidence intervals generated using the method of Brookmeyer and Crowley (1982).
b. Stratified Cox regression.
c. Based on a Stratified Cox Regression model for the interaction of age group (<65 vs. >=65) and treatment; in a model containing covariates: treatment group and age group (<65 vs. >=65).
NE = Not Estimable.
Note: In case of 0 events in one treatment arm, H.R is produced using cox proportional hazard model with Firth's correction(Firth 1993) and the corresponding 95% confidence for H.R will be constructed using the profile likelihood method [Heinze and Schemper 2001].

Age (years)	Variable	Dostarlimab + Carboplatin/Paclitaxel (N=189)	Placebo + Carboplatin/Paclitaxel (N=181)
<65	Number of Subjects in the Subgroup	96	82
	Status [n (%)]		
	Events observed	13 (13.5%)	5 (6.1%)
	Censored	83 (86.5%)	77 (93.9%)
	Estimates for TEAE (months) Quartile (95% CI)[a]		
	25%	16.0 (11.1, NE)	NE (NE, NE)
	50%	NE (NE, NE)	NE (NE, NE)
	75%	NE (NE, NE)	NE (NE, NE)

Note: TEAE: Treatment-Emergent Adverse Event.
Note: Analysis only includes treatment-emergent adverse events for Preferred Terms occurring in [at least 10% of patients in any treatment arm] OR in [at least 10 patients AND at least 1% of patients in any treatment arm within the population].
a. 95% Confidence intervals generated using the method of Brookmeyer and Crowley (1982).
b. Stratified Cox regression.
c. Based on a Stratified Cox Regression model for the interaction of age group (<65 vs. >=65) and treatment; in a model containing covariates: treatment group and age group (<65 vs. >=65).
NE = Not Estimable.
Note: In case of 0 events in one treatment arm, H.R is produced using cox proportional hazard model with Firth's correction(Firth 1993) and the corresponding 95% confidence for H.R will be constructed using the profile likelihood method [Heinze and Schemper 2001].

	Month 36	36.9% (15.6%, 58.6%)	55.7% (42.1%, 67.3%)
	Hazard ratio[b] (95% CI)	1.35 (0.869, 2.112)	
	p-value of 2-sided stratified log-rank test	0.1777	
	p-value from Interaction Test[c]	0.8819	

Note: TEAE: Treatment-Emergent Adverse Event.

Note: Analysis only includes treatment-emergent adverse events for System Organ Classes occurring in [at least 10% of patients in any treatment arm] OR in [at least 10 patients AND at least 1% of patients in any treatment arm within the population].

a. 95% Confidence intervals generated using the method of Brookmeyer and Crowley (1982).

b. Stratified Cox regression.

c. Based on a Stratified Cox Regression model for the interaction of age group (<65 vs. >=65) and treatment; in a model containing covariates: treatment group and age group (<65 vs. >=65).

NE = Not Estimable.

Note: In case of 0 events in one treatment arm, H.R is produced using cox proportional hazard model with Firth's correction(Firth 1993) and the corresponding 95% confidence for H.R will be constructed using the profile likelihood method [Heinze and Schemper 2001].

Table 3.2402 Summary of Kaplan Meier Analysis of Time to Treatment-Emergent Serious Adverse Events by System Organ Class by Disease Status (Safety Analysis Set): MMRp/MSS Subjects

System Organ Class: Infections and infestations

Disease Status	Variable	Dostarlimab + Carboplatin/Paclitaxel (N=189)	Placebo + Carboplatin/Paclitaxel (N=181)
Primary Stage III	Number of Subjects in the Subgroup	35	30
	Status [n (%)]		
	Events observed	2 (5.7%)	1 (3.3%)
	Censored	33 (94.3%)	29 (96.7%)

Note: TEAE: Treatment-Emergent Adverse Event.

Note: Analysis only includes treatment-emergent adverse events for System Organ Classes occurring in [at least 5% of patients in any treatment arm] OR in [at least 10 patients AND at least 1% of patients in any treatment arm within the population].

a. 95% Confidence intervals generated using the method of Brookmeyer and Crowley (1982).

b. Stratified Cox regression.

c. Based on a Stratified Cox Regression model for the interaction of disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV) and treatment; in a model containing covariates: treatment group and disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV).

NE = Not Estimable.

Note: In case of 0 events in one treatment arm, H.R is produced using cox proportional hazard model with Firth's correction(Firth 1993) and the corresponding 95% confidence for H.R will be constructed using the profile likelihood method [Heinze and Schemper 2001].

	75%	NE (NE, NE)	NE (NE, NE)

Note: TEAE: Treatment-Emergent Adverse Event.

Note: Analysis only includes treatment-emergent adverse events for System Organ Classes occurring in [at least 10% of patients in any treatment arm] OR in [at least 10 patients AND at least 1% of patients in any treatment arm within the population].

a. 95% Confidence intervals generated using the method of Brookmeyer and Crowley (1982).

b. Stratified Cox regression.

c. Based on a Stratified Cox Regression model for the interaction of age group (<65 vs. >=65) and treatment; in a model containing covariates: treatment group and age group (<65 vs. >=65).

NE = Not Estimable.

Note: In case of 0 events in one treatment arm, H.R is produced using cox proportional hazard model with Firth's correction(Firth 1993) and the corresponding 95% confidence for H.R will be constructed using the profile likelihood method [Heinze and Schemper 2001].

	Month 18	95.0% (85.2%, 98.3%)	91.0% (69.4%, 97.6%)
	Month 24	95.0% (85.2%, 98.3%)	91.0% (69.4%, 97.6%)
	Month 30	95.0% (85.2%, 98.3%)	91.0% (69.4%, 97.6%)
	Month 36	95.0% (85.2%, 98.3%)	91.0% (69.4%, 97.6%)
	Hazard ratio[b] (95% CI)	1.00 (0.202, 4.948)	
	p-value of 2-sided stratified log-rank test	0.9986	
	p-value from Interaction Test[c]	0.1450	

Note: TEAE: Treatment-Emergent Adverse Event.

Note: Analysis only includes treatment-emergent adverse events for System Organ Classes occurring in [at least 10% of patients in any treatment arm] OR in [at least 10 patients AND at least 1% of patients in any treatment arm within the population].

a. 95% Confidence intervals generated using the method of Brookmeyer and Crowley (1982).

b. Stratified Cox regression.

c. Based on a Stratified Cox Regression model for the interaction of disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV) and treatment; in a model containing covariates: treatment group and disease status (Recurrent vs. Primary Stage III vs. Primary Stage IV).

NE = Not Estimable.

Note: In case of 0 events in one treatment arm, H.R is produced using cox proportional hazard model with Firth's correction(Firth 1993) and the corresponding 95% confidence for H.R will be constructed using the profile likelihood method [Heinze and Schemper 2001].
