- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- Baseline is defined as the pre-dose Day 1 value. If the pre-dose Day 1 value is missing, the most recent pre-dose, non-missing value on or after the Day -14 visit, including unscheduled visits, is used as baseline.
- MMRM includes data from all available visits up to Week 52. The model includes fixed categorical effects for treatment, visit, age at screening (<18 vs ≥18 years), genotype group (F/F, F/G, F/RF, TCR/non-F) and treatment-by-visit interaction, with baseline ppFEV$_1$ and baseline sweat chloride as continuous covariates. For "Age at screening" subgroup factor, Age at screening (<18 years vs ≥18 years) covariate is removed from MMRM.

Version: Parents/Caregivers Version
Domain: School (Parents/Caregivers Form)
SwCl at baseline <30 mmol/L

Subgroup criteria are not met for this subgroup factor.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- Baseline is defined as the pre-dose Day 1 value. If the pre-dose Day 1 value is missing, the most recent pre-dose, non-missing value on or after the Day -14 visit, including unscheduled visits, is used as baseline.
- MMRM includes data from all available visits up to Week 52. The model includes fixed categorical effects for treatment, visit, and treatment-by-visit interaction, with baseline ppFEV$_1$ and baseline sweat chloride as continuous covariates.

Program: GMA\VX121\germandossier\clinstat_prod\121-103\f-qs-abs-cfqr-cg-52wks-sub-103.sas Creation: 11JAN2025 16:08

ppFEV$_1$ at baseline ≥70 %

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- Baseline is defined as the pre-dose Day 1 value. If the pre-dose Day 1 value is missing, the most recent pre-dose, non-missing value on or after the Day -14 visit, including unscheduled visits, is used as baseline.
- MMRM includes data from all available visits up to Week 52. The model includes fixed categorical effects for treatment, visit, age at screening (<18 vs ≥18 years), genotype group (F/F, F/G, F/RF, TCR/non-F) and treatment-by-visit interaction, with baseline ppFEV$_1$ and baseline sweat chloride as continuous covariates. For "Age at screening" subgroup factor, Age at screening (<18 years vs ≥18 years) covariate is removed from MMRM.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- Baseline is defined as the pre-dose Day 1 value. If the pre-dose Day 1 value is missing, the most recent pre-dose, non-missing value on or after the Day -14 visit, including unscheduled visits, is used as baseline.
- MMRM includes data from all available visits up to Week 52. The model includes fixed categorical effects for treatment, visit, age at screening (<18 vs ≥18 years), genotype group (F/F, F/G, F/RF, TCR/non-F) and treatment-by-visit interaction, with baseline ppFEV$_1$ and baseline sweat chloride as continuous covariates. For "Age at screening" subgroup factor, Age at screening (<18 years vs ≥18 years) covariate is removed from MMRM.

The model includes fixed categorical effects for treatment, visit, age at screening (<18 vs ≥18 years), genotype group (F/F, F/G, F/RF, TCR/non-F) and treatment-by-visit interaction, with baseline ppFEV$_1$ and baseline sweat chloride as continuous covariates. For "Age at screening" subgroup factor, Age at screening (<18 years vs ≥18 years) covariate is removed from MMRM.

Program: GMA\VX121\germandossier\clinstat_prod\121-103\f-qs-abs-cfiq-52wks-sub-103.sas Creation: 07JAN2025 11:43

Figure 2.2.2.13.2
Study VX20-121-103: Plot of Absolute Change from Baseline in CF-IQ Domain Score at Each Visit up to Week 52
Full Analysis Set

Domain: Work/School Limitations
SwCl at baseline <30 mmol/L

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- Baseline is defined as the pre-dose Day 1 value. If the pre-dose Day 1 value is missing, the most recent pre-dose, non-missing value on or after the Day -14 visit, including unscheduled visits, is used as baseline.
- MMRM includes data from all available visits up to Week 52. The model includes fixed categorical effects for treatment, visit, age at screening (<18 vs ≥18 years), genotype group (F/F, F/G, F/RF, TCR/non-F) and treatment-by-visit interaction, with baseline ppFEV$_1$ and baseline sweat chloride as continuous covariates. For "Age at screening" subgroup factor, Age at screening (<18 years vs ≥18 years) covariate is removed from MMRM.

Table 1.1.2.1
Study VX21-121-105: Summary of Patients with Ongoing Antibiotic Medications at Baseline or at Week 24 for F/MF Safety Set

	VNZ/TEZ/D-IVA N = 24 n (%)
Baseline, N1	24
Subjects with 0 ongoing AB	17 (70.83)
Subjects with 1 ongoing AB	4 (16.67)
Subjects with ≥ 2 ongoing AB	3 (12.50)
Subjects with ≥ 1 ongoing IV AB	0
Week 24, N1	24
Subjects with 0 ongoing AB	17 (70.83)
Subjects with 1 ongoing AB	5 (20.83)
Subjects with ≥ 2 ongoing AB	2 (8.33)
Subjects with ≥ 1 ongoing IV AB	0

- AB: Antibiotic medications are defined as those medications with the ATC level 2 names of "ANTIBACTERIALS FOR SYSTEMIC USE" and "ANTIMYCOBACTERIALS".
- Antibiotic medications included in this summary refer to those with route being "INTRAMUSCULAR", "INTRAVENOUS", "INTRAVENOUS BOLUS", "NASAL", "ORAL", or "RESPIRATORY (INHALATION)".
- IV antibiotic medications refer to those with route being "INTRAVENOUS" or "INTRAVENOUS BOLUS".
- The ongoing antibiotic medications at baseline refer to those with start date < first dose date of study drug in the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing antibiotic medications at Week 24 refer to those with start date < Week 24 visit date and the end date ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

Table 1.1.2.2
Study VX21-121-105: Summary of Patients with Antibiotic Medications during the Study Treatment Period for F/MF
Safety Set

	VNZ/TEZ/D-IVA N = 24 n (%)
All subjects	24
Subjects with 0 AB	3 (12.50)
Subjects with 1-3 AB	16 (66.67)
Subjects with ≥ 4 AB	5 (20.83)
Subjects with 0 IV AB	22 (91.67)
Subjects with 1 IV AB	0
Subjects with ≥ 2 IV AB	2 (8.33)
Subjects with 0 ongoing antibiotic medication at baseline	17
Subjects with 0 AB	3 (17.65)
Subjects with 1-3 AB	13 (76.47)
Subjects with ≥ 4 AB	1 (5.88)
Subjects with 0 IV AB	16 (94.12)
Subjects with 1 IV AB	0
Subjects with ≥ 2 IV AB	1 (5.88)

- AB: Antibiotic medications are defined as those medications with the ATC level 2 names of "ANTIBACTERIALS FOR SYSTEMIC USE" and "ANTIMYCOBACTERIALS".
- Antibiotic medications included in this summary refer to those with route being "INTRAMUSCULAR", "INTRAVENOUS", "INTRAVENOUS BOLUS", "NASAL", "ORAL", or "RESPIRATORY (INHALATION)".
- IV antibiotic medications refer to those with route being "INTRAVENOUS" or "INTRAVENOUS BOLUS".
- Antibiotic medications during study refer to those with start date ≤ end date of treatment-emergent period of the Treatment Period, and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The percentages in this table are calculated based on the number of subjects under each category.

Safety Set

	VNZ/TEZ/D-IVA N = 24 n (%)
Baseline, N1	24
Subjects with 0 ongoing PT	9 (37.50)
Subjects with 1 ongoing PT	13 (54.17)
Subjects with ≥ 2 ongoing PT	2 (8.33)
Week 24, N1	24
Subjects with 0 ongoing PT	9 (37.50)
Subjects with 1 ongoing PT	12 (50.00)
Subjects with ≥ 2 ongoing PT	3 (12.50)

- PT: Physiotherapies refer to the non-pharmacological treatments with preferred names of "Positive expiratory pressure therapy", "Airway secretion clearance therapy", "Positive end-expiratory pressure", or "Physiotherapy chest".
- The ongoing physiotherapy at baseline is defined as a physiotherapy whose start date is prior to first dose date of study drug in the Treatment Period and the end date is ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing physiotherapy at Week 24 is defined as a physiotherapy whose start date is prior to Week 24 visit date and the end date is ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

Table 1.1.3.2
Study VX21-121-105: Summary of Patients with Physiotherapies during the Study Treatment Period for F/MF
Safety Set

	VNZ/TEZ/D-IVA N = 24 n (%)
All subjects	24
Subjects with 0 PT	9 (37.50)
Subjects with 1 PT	12 (50.00)
Subjects with ≥ 2 PT	3 (12.50)
Subjects with 0 ongoing physiotherapies at baseline	9
Subjects with 0 PT	9 (100.00)
Subjects with 1 PT	0
Subjects with ≥ 2 PT	0

- PT: Physiotherapies refer to the non-pharmacological treatments with preferred names of "Positive expiratory pressure therapy", "Airway secretion clearance therapy", "Positive end-expiratory pressure", or "Physiotherapy chest".
- Physiotherapies during study refer to those with start date ≤ end date of treatment-emergent period of the Treatment Period, and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The percentages in this table are calculated based on the number of subjects under each category.

Table 1.1.4.1
Study VX21-121-105: Summary of Patients with Ongoing Inhaled Medications at Baseline or at Week 24 for F/MF Safety Set

	VNZ/TEZ/D-IVA N = 24 n (%)
Baseline, N1	24
Subjects with 0 ongoing IM	2 (8.33)
Subjects with 1 ongoing IM	0
Subjects with ≥ 2 ongoing IM	22 (91.67)
Week 24, N1	24
Subjects with 0 ongoing IM	2 (8.33)
Subjects with 1 ongoing IM	0
Subjects with ≥ 2 ongoing IM	22 (91.67)

- IM: Inhaled medications refer to those medications for mucolytics (defined as the ATC codes of R05CB or B05CB) and for obstructive airway disease (defined as the ATC code of R03xx). It also requires the route of administration to be "RESPIRATORY (INHALATION)".
- The ongoing IMs at baseline refer to those IMs with start date < first dose date of study drug in the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing IMs at Week 24 refer to those IMs with start date < Week 24 visit date and the end date ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

Table 1.1.4.2
Study VX21-121-105: Summary of Patients with Inhaled Medications during the Study Treatment Period for F/MF
Safety Set

Subjects with 0 ongoing inhaled medication at baseline	5
Subjects with 0 IM	4 (80.00)
Subjects with 1 IM	0
Subjects with ≥ 2 IM	1 (20.00)

- IM: Inhaled medications refer to those medications for obstructive airway disease (defined as the ATC code of R03xx). It also requires the route of administration to be "RESPIRATORY (INHALATION)".
- IMs during study refer to those with start date ≤ end date of treatment-emergent period of the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing..
- The percentages in this table are calculated based on the number of subjects under each category.

Table 1.1.5.1
Study VX21-121-105: Summary of Patients with Ongoing CF-related Medications at Baseline or at Week 24 for F/MF
Safety Set

	VNZ/TEZ/D-IVA N = 24 n (%)
Baseline, N1	24
Subjects with 0 ongoing CF-related medications	0
Subjects with 1 ongoing CF-related medications	1 (4.17)
Subjects with 2 ongoing CF-related medications	0
Subjects with 3 ongoing CF-related medications	3 (12.50)
Subjects with 4 ongoing CF-related medications	4 (16.67)
Subjects with ≥5 ongoing CF-related medications	16 (66.67)
Week 24, N1	24
Subjects with 0 ongoing CF-related medications	0
Subjects with 1 ongoing CF-related medications	1 (4.17)
Subjects with 2 ongoing CF-related medications	0
Subjects with 3 ongoing CF-related medications	3 (12.50)
Subjects with 4 ongoing CF-related medications	3 (12.50)
Subjects with ≥5 ongoing CF-related medications	17 (70.83)

- CF-related medications: CF co-medications are defined as those medications with
o ATC level 2 names of "DRUGS FOR OBSTRUCTIVE AIRWAY DISEASES", "DIGESTIVES, INCL. ENZYMES", "ANTIBACTERIALS FOR SYSTEMIC USE", "DRUGS USED IN DIABETES", "BILE AND LIVER THERAPY", "GENERAL NUTRIENTS";
o or ATC level 3 names of "DRUGS FOR CONSTIPATION", "PROPULSIVES";
o or ATC level 4 names of "MUCOLYTICS".
In addition, the route of administration for "DRUGS FOR OBSTRUCTIVE AIRWAY DISEASES" and "MUCOLYTICS" requires to be "RESPIRATORY (INHALATION)" and the route for "ANTIBACTERIALS FOR SYSTEMIC USE" requires to be "INTRAMUSCULAR", "INTRAVENOUS", "INTRAVENOUS BOLUS", "NASAL", "ORAL", or "RESPIRATORY (INHALATION)".
- The ongoing CF-related medications at baseline refer to those CF-related medications with start date < first dose date of study drug in the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing CF-related medications at Week 24 refer to those CF-related medications with start date < Week 24 visit date and the end date ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

Table 1.2.1.1
Study VX21-121-105: MMRM Analysis of Absolute Change from Baseline in ppFEV$_1$ (percentage points) through Week 24 for F/MF
Full Analysis Set

	VNZ/TEZ/D-IVA N = 24

- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effects for visit, with baseline CFQ-R Respiratory Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

Absolute Change through Week 24	24 (100.00)

- n (%): For "Through Week 24", n is the number of patients for whom the average between Week 16 and Week 24 can be calculated, i.e. for whom at least one of Week 16 or Week 24 is non-missing. For "Change at Week X" or "Change through Week 24", n is the number of patients for which the stated change is calculable, i.e. for whom both Baseline and the given post-Baseline visit (or through Week 24 average) are non-missing. Otherwise, n is the number of patients with non-missing values at the given visits.
- % is the compliance rate = n expressed as a percentage of N.

Table 1.2.1.13
Study VX21-121-105: Summary of Pulmonary Exacerbations through Week 24 for F/MF
Full Analysis Set

	VNZ/TEZ/D-IVA N = 24
Total number of days (years) of the PEx analysis period	4040 (12.0)
Pulmonary exacerbations	
Number of subjects with events, n (%)	2 (8.33)
Total number of events	2
Observed event rate per year	0.17
Pulmonary exacerbations requiring hospitalization	
Number of subjects with events, n (%)	0
Total number of events	0
Observed event rate per year	0
Pulmonary exacerbations requiring IV antibiotic therapy	
Number of subjects with events, n (%)	0
Total number of events	0
Observed event rate per year	0
Pulmonary exacerbations requiring hospitalization or IV antibiotic therapy	
Number of subjects with events, n (%)	0
Total number of events	0
Observed event rate per year	0

- Pulmonary exacerbation (PEx): new or change in antibiotic therapy (intravenous (IV), inhaled, or oral) for ≥4 sinopulmonary signs/symptoms.
- Total number of days = sum of the individual duration (actual number of days) of the PEx analysis period across all subjects. Total number of years = total number of days / 336; for analysis purposes, 1 year is defined as 48 weeks or 336 days.
- Observed event rate per year = total number of events * 336 / total number of days of the PEx analysis period.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effects for visit, with baseline CFQ-R Physical (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effects for visit, with baseline CFQ-R Treatment Burden (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effects for visit, with baseline CFQ-R Vitality (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

Subjects with any Treatment-emergent Neuropsychiatric Events	1 (4.17)
Subjects with non-severe events (Maximum Grade 1/2)	1 (4.17)
Subjects with severe events (Maximum Grade 3/4/5)	0
Subjects with serious events	0

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.

Table 1.3.1.11
Study VX21-121-105: Summary of Death for F/MF
Safety Set

	VNZ/TEZ/D-IVA N = 24 n (%)

No data met the criteria for this table.

- Include death during Treatment-emergent Period for the Treatment Period from two sources: 1) treatment/study discontinuation due to death; 2) TEAEs leading to death.

Table 1.3.1.12
Study VX21-121-105: Summary of Treatment-emergent Infective Pulmonary Exacerbation Events for F/MF
Safety Set

	VNZ/TEZ/D-IVA N = 24 n (%)
Subjects with any Treatment-emergent Infective Pulmonary Exacerbation Events	3 (12.50)
Subjects with non-severe events (Maximum Grade 1/2)	3 (12.50)
Subjects with severe events (Maximum Grade 3/4/5)	0
Subjects with serious events	0

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.

Table 1.3.2.1.1
Study VX21-121-105: Subgroup Factor Test for TEAEs by SOC and PT for F/MF
(Excluding Infective Pulmonary Exacerbation of Cystic Fibrosis)
Safety Set

System Organ Class Preferred Term Subgroup	P-value[1]
Subjects with any TEAEs	
Sex (Male vs. Female)	-
Region (North America vs. Rest of the World)	0.1083
$LCI_{2.5}$ at baseline (<7.5 vs. ≥7.5)	-
Respiratory, thoracic and mediastinal disorders	
Sex (Male vs. Female)	-
Region (North America vs. Rest of the World)	0.4755
$LCI_{2.5}$ at baseline (<7.5 vs. ≥7.5)	-

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.
- [1] P-value based on Chi-square test. If the overall rate or any SOC/PT level rate is 100%, display "NA" because Chi-square statistics are undefined in this case.
- P-values are reported at SOC/PT level only if 1) Respective analysis on the study level is done; 2) there are at least 10 subjects in each subgroup (per factor); and 3) there are at least 10 subjects with events in at least one of the subgroups (per factor). For the overall rate, p-value will be reported if conditions (2) and (3) are met.
- Table is sorted in descending order of frequency of the VNZ/TEZ/D-IVA column by System Organ Class, and by Preferred Term within each System Organ Class.

Table 2.1.2.1
Study VX21-121-105: Summary of Patients with Ongoing Antibiotic Medications at Baseline or at Week 24 non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
Baseline, N1	54
Subjects with 0 ongoing AB	46 (85.19)
Subjects with 1 ongoing AB	8 (14.81)
Subjects with ≥ 2 ongoing AB	0
Subjects with ≥ 1 ongoing IV AB	0
Week 24, N1	54
Subjects with 0 ongoing AB	49 (90.74)
Subjects with 1 ongoing AB	5 (9.26)
Subjects with ≥ 2 ongoing AB	0
Subjects with ≥ 1 ongoing IV AB	0

- AB: Antibiotic medications are defined as those medications with the ATC level 2 names of "ANTIBACTERIALS FOR SYSTEMIC USE" and "ANTIMYCOBACTERIALS".
- Antibiotic medications included in this summary refer to those with route being "INTRAMUSCULAR", "INTRAVENOUS", "INTRAVENOUS BOLUS", "NASAL", "ORAL", or "RESPIRATORY (INHALATION)".
- IV antibiotic medications refer to those with route being "INTRAVENOUS" or "INTRAVENOUS BOLUS".
- The ongoing antibiotic medications at baseline refer to those with start date < first dose date of study drug in the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing antibiotic medications at Week 24 refer to those with start date < Week 24 visit date and the end date ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

All subjects	54
Subjects with 0 AB	24 (44.44)
Subjects with 1-3 AB	28 (51.85)
Subjects with ≥ 4 AB	2 (3.70)
Subjects with 0 IV AB	51 (94.44)
Subjects with 1 IV AB	3 (5.56)
Subjects with ≥ 2 IV AB	0
Subjects with 0 ongoing antibiotic medication at baseline	46
Subjects with 0 AB	24 (52.17)
Subjects with 1-3 AB	21 (45.65)
Subjects with ≥ 4 AB	1 (2.17)
Subjects with 0 IV AB	43 (93.48)
Subjects with 1 IV AB	3 (6.52)
Subjects with ≥ 2 IV AB	0

- AB: Antibiotic medications are defined as those medications with the ATC level 2 names of "ANTIBACTERIALS FOR SYSTEMIC USE" and "ANTIMYCOBACTERIALS".
- Antibiotic medications included in this summary refer to those with route being "INTRAMUSCULAR", "INTRAVENOUS", "INTRAVENOUS BOLUS", "NASAL", "ORAL", or "RESPIRATORY (INHALATION)".
- IV antibiotic medications refer to those with route being "INTRAVENOUS" or "INTRAVENOUS BOLUS".
- Antibiotic medications during study refer to those with start date ≤ end date of treatment-emergent period of the Treatment Period, and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The percentages in this table are calculated based on the number of subjects under each category.

Table 2.1.3.1
Study VX21-121-105: Summary of Patients with Ongoing Physiotherapies at Baseline or at Week 24 non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
Baseline, N1	54
Subjects with 0 ongoing PT	12 (22.22)
Subjects with 1 ongoing PT	37 (68.52)
Subjects with ≥ 2 ongoing PT	5 (9.26)
Week 24, N1	54
Subjects with 0 ongoing PT	12 (22.22)
Subjects with 1 ongoing PT	37 (68.52)
Subjects with ≥ 2 ongoing PT	5 (9.26)

- PT: Physiotherapies refer to the non-pharmacological treatments with preferred names of "Positive expiratory pressure therapy", "Airway secretion clearance therapy", "Positive end-expiratory pressure", or "Physiotherapy chest".
- The ongoing physiotherapy at baseline is defined as a physiotherapy whose start date is prior to first dose date of study drug in the Treatment Period and the end date is ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing physiotherapy at Week 24 is defined as a physiotherapy whose start date is prior to Week 24 visit date and the end date is ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

Table 2.1.3.2
Study VX21-121-105: Summary of Patients with Physiotherapies during the Study Treatment Period non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
All subjects	54
Subjects with 0 PT	12 (22.22)
Subjects with 1 PT	37 (68.52)
Subjects with ≥ 2 PT	5 (9.26)
Subjects with 0 ongoing physiotherapies at baseline	12
Subjects with 0 PT	12 (100.00)
Subjects with 1 PT	0
Subjects with ≥ 2 PT	0

- PT: Physiotherapies refer to the non-pharmacological treatments with preferred names of "Positive expiratory pressure therapy", "Airway secretion clearance therapy", "Positive end-expiratory pressure", or "Physiotherapy chest".
- Physiotherapies during study refer to those with start date ≤ end date of treatment-emergent period of the Treatment Period, and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The percentages in this table are calculated based on the number of subjects under each category.

Table 2.1.4.1
Study VX21-121-105: Summary of Patients with Ongoing Inhaled Medications at Baseline or at Week 24 non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
Baseline, N1	54
Subjects with 0 ongoing IM	4 (7.41)
Subjects with 1 ongoing IM	6 (11.11)
Subjects with ≥ 2 ongoing IM	44 (81.48)
Week 24, N1	54
Subjects with 0 ongoing IM	4 (7.41)
Subjects with 1 ongoing IM	6 (11.11)
Subjects with ≥ 2 ongoing IM	44 (81.48)

- IM: Inhaled medications refer to those medications for mucolytics (defined as the ATC codes of R05CB or B05CB) and for obstructive airway disease (defined as the ATC code of R03xx). It also requires the route of administration to be "RESPIRATORY (INHALATION)".
- The ongoing IMs at baseline refer to those IMs with start date < first dose date of study drug in the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing IMs at Week 24 refer to those IMs with start date < Week 24 visit date and the end date ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

Table 2.1.4.2
Study VX21-121-105: Summary of Patients with Inhaled Medications during the Study Treatment Period non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
All subjects	54
Subjects with 0 IM	4 (7.41)
Subjects with 1 IM	6 (11.11)
Subjects with ≥ 2 IM	44 (81.48)
Subjects with 0 ongoing inhaled medication at baseline	4
Subjects with 0 IM	4 (100.00)
Subjects with 1 IM	0
Subjects with ≥ 2 IM	0

- IM: Inhaled medications refer to those medications for mucolytics (defined as the ATC codes of R05CB or B05CB) and for obstructive airway disease (defined as the ATC code of R03xx). It also requires the route of administration to be "RESPIRATORY (INHALATION)".
- IMs during study refer to those with start date ≤ end date of treatment-emergent period of the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The percentages in this table are calculated based on the number of subjects under each category.

Table 2.1.4.3
Study VX21-121-105: Summary of Patients with Ongoing Inhaled Medications for Mucolytics at Baseline or at Week 24 non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
Baseline, N1	54
Subjects with 0 ongoing IM	9 (16.67)
Subjects with 1 ongoing IM	19 (35.19)

Week 24, N1	54
Subjects with 0 ongoing IM	9 (16.67)
Subjects with 1 ongoing IM	19 (35.19)
Subjects with ≥ 2 ongoing IM	26 (48.15)

- IM: Inhaled medications refer to those medications for mucolytics (defined as the ATC codes of R05CB or B05CB). It also requires the route of administration to be "RESPIRATORY (INHALATION)".
- The ongoing IMs at baseline refer to those IMs with start date < first dose date of study drug in the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing IMs at Week 24 refer to those IMs with start date < Week 24 visit date and the end date ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

Table 2.1.4.4
Study VX21-121-105: Summary of Patients with Inhaled Medications for Mucolytics during the Study Treatment Period non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
All subjects	54
Subjects with 0 IM	9 (16.67)
Subjects with 1 IM	19 (35.19)
Subjects with ≥ 2 IM	26 (48.15)
Subjects with 0 ongoing inhaled medication at baseline	9
Subjects with 0 IM	9 (100.00)
Subjects with 1 IM	0
Subjects with ≥ 2 IM	0

- IM: Inhaled medications refer to those medications for mucolytics (defined as the ATC codes of R05CB or B05CB). It also requires the route of administration to be "RESPIRATORY (INHALATION)".
- IMs during study refer to those with start date ≤ end date of treatment-emergent period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The percentages in this table are calculated based on the number of subjects under each category.

Table 2.1.4.5
Study VX21-121-105: Summary of Patients with Ongoing Inhaled Medications for Obstructive Airway Disease at Baseline or at Week 24 non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
Baseline, N1	54
Subjects with 0 ongoing IM	13 (24.07)
Subjects with 1 ongoing IM	24 (44.44)
Subjects with ≥ 2 ongoing IM	17 (31.48)
Week 24, N1	54
Subjects with 0 ongoing IM	13 (24.07)
Subjects with 1 ongoing IM	23 (42.59)
Subjects with ≥ 2 ongoing IM	18 (33.33)

- IM: Inhaled medications refer to those medications for obstructive airway disease (defined as the ATC code of R03xx). It also requires the route of administration to be "RESPIRATORY (INHALATION)".
- The ongoing IMs at baseline refer to those IMs with start date < first dose date of study drug in the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing IMs at Week 24 refer to those IMs with start date < Week 24 visit date and the end date ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

Table 2.1.4.6

Study VX21-121-105: Summary of Patients with Inhaled Medications for Obstructive Airway Disease during the Study Treatment Period non-(F/MF)

Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
All subjects	54
Subjects with 0 IM	13 (24.07)
Subjects with 1 IM	23 (42.59)
Subjects with ≥ 2 IM	18 (33.33)
Subjects with 0 ongoing inhaled medication at baseline	13
Subjects with 0 IM	13 (100.00)
Subjects with 1 IM	0
Subjects with ≥ 2 IM	0

- IM: Inhaled medications refer to those medications for obstructive airway disease (defined as the ATC code of R03xx). It also requires the route of administration to be "RESPIRATORY (INHALATION)".
- IMs during study refer to those with start date ≤ end date of treatment-emergent period of the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing..
- The percentages in this table are calculated based on the number of subjects under each category.

Table 2.1.5.1
Study VX21-121-105: Summary of Patients with Ongoing CF-related Medications at Baseline or at Week 24 non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
Baseline, N1	54
Subjects with 0 ongoing CF-related medications	1 (1.85)
Subjects with 1 ongoing CF-related medications	3 (5.56)
Subjects with 2 ongoing CF-related medications	2 (3.70)
Subjects with 3 ongoing CF-related medications	10 (18.52)
Subjects with 4 ongoing CF-related medications	12 (22.22)
Subjects with ≥5 ongoing CF-related medications	26 (48.15)
Week 24, N1	54
Subjects with 0 ongoing CF-related medications	1 (1.85)
Subjects with 1 ongoing CF-related medications	3 (5.56)
Subjects with 2 ongoing CF-related medications	4 (7.41)
Subjects with 3 ongoing CF-related medications	11 (20.37)
Subjects with 4 ongoing CF-related medications	12 (22.22)
Subjects with ≥5 ongoing CF-related medications	23 (42.59)

- CF-related medications: CF co-medications are defined as those medications with
o ATC level 2 names of "DRUGS FOR OBSTRUCTIVE AIRWAY DISEASES", "DIGESTIVES, INCL. ENZYMES", "ANTIBACTERIALS FOR SYSTEMIC USE", "DRUGS USED IN DIABETES", "BILE AND LIVER THERAPY", "GENERAL NUTRIENTS";
o or ATC level 3 names of "DRUGS FOR CONSTIPATION", "PROPULSIVES";
o or ATC level 4 names of "MUCOLYTICS".
In addition, the route of administration for "DRUGS FOR OBSTRUCTIVE AIRWAY DISEASES" and "MUCOLYTICS" requires to be "RESPIRATORY (INHALATION)" and the route for "ANTIBACTERIALS FOR SYSTEMIC USE" requires to be "INTRAMUSCULAR", "INTRAVENOUS", "INTRAVENOUS BOLUS", "NASAL", "ORAL", or "RESPIRATORY (INHALATION)".
- The ongoing CF-related medications at baseline refer to those CF-related medications with start date < first dose date of study drug in the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing CF-related medications at Week 24 refer to those CF-related medications with start date < Week 24 visit date and the end date ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effects for visit, with baseline CFQ-R Respiratory Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- n (%): For "Through Week 24", n is the number of patients for whom the average between Week 16 and Week 24 can be calculated, i.e. for whom at least one of Week 16 or Week 24 is non-missing. For "Change at Week X" or "Change through Week 24", n is the number of patients for which the stated change is calculable, i.e. for whom both Baseline and the given post-Baseline visit (or through Week 24 average) are non-missing. Otherwise, n is the number of patients with non-missing values at the given visits.
- % is the compliance rate = n expressed as a percentage of N.

Table 2.2.1.13
Study VX21-121-105: Summary of Pulmonary Exacerbations through Week 24 non-(F/MF)
Full Analysis Set

	VNZ/TEZ/D-IVA N = 54
Total number of days (years) of the PEx analysis period	9148 (27.2)
Pulmonary exacerbations	
Number of subjects with events, n (%)	4 (7.41)
Total number of events	4
Observed event rate per year	0.15
Pulmonary exacerbations requiring hospitalization	
Number of subjects with events, n (%)	1 (1.85)
Total number of events	1
Observed event rate per year	0.04
Pulmonary exacerbations requiring IV antibiotic therapy	
Number of subjects with events, n (%)	1 (1.85)
Total number of events	1
Observed event rate per year	0.04
Pulmonary exacerbations requiring hospitalization or IV antibiotic therapy	
Number of subjects with events, n (%)	1 (1.85)
Total number of events	1
Observed event rate per year	0.04

- Pulmonary exacerbation (PEx): new or change in antibiotic therapy (intravenous (IV), inhaled, or oral) for ≥4 sinopulmonary signs/symptoms.
- Total number of days = sum of the individual duration (actual number of days) of the PEx analysis period across all subjects. Total number of years = total number of days / 336; for analysis purposes, 1 year is defined as 48 weeks or 336 days.
- Observed event rate per year = total number of events * 336 / total number of days of the PEx analysis period.

LS mean (SE)	-0.21 (0.97)
95% CI of LS mean	(-2.18, 1.76)
P-value	0.8278

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value. For subjects who are on stable ELX/TEZ/IVA, if the pre-dose Day 1 value is missing, the most recent available pre-dose value, including the screening assessment, is used as baseline.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit, with baseline $ppFEV_1$ as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

Subgroup criteria are not met for this subgroup factor.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value. For subjects who are on stable ELX/TEZ/IVA, if the pre-dose Day 1 value is missing, the most recent available pre-dose value, including the screening assessment, is used as baseline.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect for visit, with baseline height z-score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- N/C: model does not converge.

- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effects for visit, with baseline CFQ-R Body Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effects for visit, with baseline CFQ-R Eat (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

Study VX21-121-105: MMRM Analysis of Absolute Change from Baseline in CFQ-R Non-Respiratory Domain Score (Parent's Version) through Week 24 by Subgroups non-(F/MF)
Full Analysis Set

Domain: Health Perceptions (Parents/Caregivers Form)
$LCI_{2.5}$ at baseline ≥7.5

	VNZ/TEZ/D-IVA N = 4

Subgroup criteria are not met for this subgroup factor.

- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effects for visit, with baseline CFQ-R Health Perceptions (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effects for visit, with baseline CFQ-R Treatment Burden (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

Week 24	
n	27
Mean (SD)	70.62 (13.11)

- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effects for visit, with baseline CFQ-R Vitality (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.
- SOCs and PTs are reported only if corresponding events are either 1) occurring in at least 5% of patients in any treatment group; OR 2) occurring in at least 10 patients in the total study population and also occurring in at least 1% of patients in any treatment group.
- Table is sorted in descending order of frequency of the VNZ/TEZ/D-IVA column by System Organ Class, and by Preferred Term within each System Organ Class.

Table 2.3.1.4
Study VX21-121-105: Summary of TEAEs Leading to Treatment Discontinuation by SOC and PT non-(F/MF)
(Excluding Infective Pulmonary Exacerbation of Cystic Fibrosis)
Safety Set

System Organ Class Preferred Term	VNZ/TEZ/D-IVA N = 54 n (%)
Subjects with any TEAEs leading to treatment discontinuation	1 (1.85)
General disorders and administration site conditions	1 (1.85)
Fatigue	1 (1.85)
Respiratory, thoracic and mediastinal disorders	1 (1.85)
Cough	1 (1.85)

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.
- Table is sorted in descending order of frequency of the VNZ/TEZ/D-IVA column by System Organ Class, and by Preferred Term within each System Organ Class.

Table 2.3.1.5
Study VX21-121-105: Summary of AESI: Treatment-emergent Elevated Transaminase Events - Total and by Severity non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
Subjects with any Treatment-emergent Elevated Transaminase Events	4 (7.41)
Subjects with non-severe events (Maximum Grade 1/2)	4 (7.41)
Subjects with severe events (Maximum Grade 3/4/5)	0
Subjects with serious events	0

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.

Table 2.3.1.6
Study VX21-121-105: Summary of AESI: Treatment-emergent Creatine Kinase Elevation Events - Total and by Severity non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
Subjects with any Treatment-emergent Creatine Kinase Elevation Events	1 (1.85)
Subjects with non-severe events (Maximum Grade 1/2)	1 (1.85)
Subjects with severe events (Maximum Grade 3/4/5)	0
Subjects with serious events	0

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.

Table 2.3.1.7
Study VX21-121-105: Summary of AESI: Treatment-emergent Rash Events - Total and by Severity non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
Subjects with any Treatment-emergent Rash Events	4 (7.41)
Subjects with non-severe events (Maximum Grade 1/2)	4 (7.41)
Subjects with severe events (Maximum Grade 3/4/5)	0
Subjects with serious events	0

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.

Table 2.3.1.8
Study VX21-121-105: Summary of AESI: Treatment-emergent Cataract Events - Total and by Severity non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
Subjects with any Treatment-emergent Cataract Events	1 (1.85)
Subjects with non-severe events (Maximum Grade 1/2)	1 (1.85)
Subjects with severe events (Maximum Grade 3/4/5)	0
Subjects with serious events	0

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.

Table 2.3.1.9
Study VX21-121-105: Summary of AESI: Treatment-emergent Hypoglycemia Events - Total and by Severity non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
Subjects with any Treatment-emergent Hypoglycemia Events	0
Subjects with non-severe events (Maximum Grade 1/2)	0
Subjects with severe events (Maximum Grade 3/4/5)	0
Subjects with serious events	0

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.

Table 2.3.1.10
Study VX21-121-105: Summary of AESI: Treatment-emergent Neuropsychiatric Events - Total and by Severity non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
Subjects with any Treatment-emergent Neuropsychiatric Events	3 (5.56)
Subjects with non-severe events (Maximum Grade 1/2)	3 (5.56)
Subjects with severe events (Maximum Grade 3/4/5)	0
Subjects with serious events	0

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.

Table 2.3.1.11
Study VX21-121-105: Summary of Death non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)

No data met the criteria for this table.

- Include death during Treatment-emergent Period for the Treatment Period from two sources: 1) treatment/study discontinuation due to death; 2) TEAEs leading to death.

Table 2.3.1.12
Study VX21-121-105: Summary of Treatment-emergent Infective Pulmonary Exacerbation Events non-(F/MF)
Safety Set

	VNZ/TEZ/D-IVA N = 54 n (%)
Subjects with any Treatment-emergent Infective Pulmonary Exacerbation Events	10 (18.52)
Subjects with non-severe events (Maximum Grade 1/2)	10 (18.52)
Subjects with severe events (Maximum Grade 3/4/5)	0
Subjects with serious events	2 (3.70)

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.

Table 2.3.2.1.1
Study VX21-121-105: Subgroup Factor Test for TEAEs by SOC and PT non-(F/MF)
(Excluding Infective Pulmonary Exacerbation of Cystic Fibrosis)
Safety Set

System Organ Class Preferred Term Subgroup	P-value[1]
Subjects with any TEAEs	
Sex (Male vs. Female)	>0.9999
Region (North America vs. Rest of the World)	0.1416
$LCI_{2.5}$ at baseline (<7.5 vs. ≥7.5)	-
Respiratory, thoracic and mediastinal disorders	
Sex (Male vs. Female)	0.5730
Region (North America vs. Rest of the World)	0.6902
$LCI_{2.5}$ at baseline (<7.5 vs. ≥7.5)	-

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.
- [1] P-value based on Chi-square test. If the overall rate or any SOC/PT level rate is 100%, display "NA" because Chi-square statistics are undefined in this case.
- P-values are reported at SOC/PT level only if 1) Respective analysis on the study level is done; 2) there are at least 10 subjects in each subgroup (per factor); and 3) there are at least 10 subjects with events in at least one of the subgroups (per factor). For the overall rate, p-value will be reported if conditions (2) and (3) are met.
- Table is sorted in descending order of frequency of the VNZ/TEZ/D-IVA column by System Organ Class, and by Preferred Term within each System Organ Class.

Table 2.3.2.1.1
Study VX21-121-105: Subgroup Factor Test for TEAEs by SOC and PT non-(F/MF)
(Excluding Infective Pulmonary Exacerbation of Cystic Fibrosis)
Safety Set

System Organ Class Preferred Term Subgroup	P-value[1]
Cough	
Sex (Male vs. Female)	0.7849
Region (North America vs. Rest of the World)	0.4402
$LCI_{2.5}$ at baseline (<7.5 vs. ≥7.5)	-
Infections and infestations	
Sex (Male vs. Female)	0.2679
Region (North America vs. Rest of the World)	0.6953
$LCI_{2.5}$ at baseline (<7.5 vs. ≥7.5)	-

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.
- [1] P-value based on Chi-square test. If the overall rate or any SOC/PT level rate is 100%, display "NA" because Chi-square statistics are undefined in this case.

Table 3.1.2.1
Study VX21-121-105: Summary of Patients with Ongoing Antibiotic Medications at Baseline or at Week 24
Safety Set

	VNZ/TEZ/D-IVA N = 78 n (%)
Baseline, N1	78
Subjects with 0 ongoing AB	63 (80.77)
Subjects with 1 ongoing AB	12 (15.38)
Subjects with ≥ 2 ongoing AB	3 (3.85)
Subjects with ≥ 1 ongoing IV AB	0
Week 24, N1	78
Subjects with 0 ongoing AB	66 (84.62)
Subjects with 1 ongoing AB	10 (12.82)
Subjects with ≥ 2 ongoing AB	2 (2.56)
Subjects with ≥ 1 ongoing IV AB	0

- AB: Antibiotic medications are defined as those medications with the ATC level 2 names of "ANTIBACTERIALS FOR SYSTEMIC USE" and "ANTIMYCOBACTERIALS".
- Antibiotic medications included in this summary refer to those with route being "INTRAMUSCULAR", "INTRAVENOUS", "INTRAVENOUS BOLUS", "NASAL", "ORAL", or "RESPIRATORY (INHALATION)".
- IV antibiotic medications refer to those with route being "INTRAVENOUS" or "INTRAVENOUS BOLUS".
- The ongoing antibiotic medications at baseline refer to those with start date < first dose date of study drug in the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing antibiotic medications at Week 24 refer to those with start date < Week 24 visit date and the end date ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

Table 3.1.2.2
Study VX21-121-105: Summary of Patients with Antibiotic Medications during the Study Treatment Period
Safety Set

	VNZ/TEZ/D-IVA N = 78 n (%)
All subjects	78
Subjects with 0 AB	27 (34.62)
Subjects with 1-3 AB	44 (56.41)
Subjects with ≥ 4 AB	7 (8.97)
Subjects with 0 IV AB	73 (93.59)
Subjects with 1 IV AB	3 (3.85)
Subjects with ≥ 2 IV AB	2 (2.56)
Subjects with 0 ongoing antibiotic medication at baseline	63
Subjects with 0 AB	27 (42.86)
Subjects with 1-3 AB	34 (53.97)
Subjects with ≥ 4 AB	2 (3.17)
Subjects with 0 IV AB	59 (93.65)
Subjects with 1 IV AB	3 (4.76)
Subjects with ≥ 2 IV AB	1 (1.59)

- AB: Antibiotic medications are defined as those medications with the ATC level 2 names of "ANTIBACTERIALS FOR SYSTEMIC USE" and "ANTIMYCOBACTERIALS".
- Antibiotic medications included in this summary refer to those with route being "INTRAMUSCULAR", "INTRAVENOUS", "INTRAVENOUS BOLUS", "NASAL", "ORAL", or "RESPIRATORY (INHALATION)".
- IV antibiotic medications refer to those with route being "INTRAVENOUS" or "INTRAVENOUS BOLUS".
- Antibiotic medications during study refer to those with start date ≤ end date of treatment-emergent period of the Treatment Period, and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The percentages in this table are calculated based on the number of subjects under each category.

	VNZ/TEZ/D-IVA N = 78 n (%)
Baseline, N1	78
Subjects with 0 ongoing PT	21 (26.92)
Subjects with 1 ongoing PT	50 (64.10)
Subjects with ≥ 2 ongoing PT	7 (8.97)
Week 24, N1	78
Subjects with 0 ongoing PT	21 (26.92)
Subjects with 1 ongoing PT	49 (62.82)
Subjects with ≥ 2 ongoing PT	8 (10.26)

- PT: Physiotherapies refer to the non-pharmacological treatments with preferred names of "Positive expiratory pressure therapy", "Airway secretion clearance therapy", "Positive end-expiratory pressure", or "Physiotherapy chest".
- The ongoing physiotherapy at baseline is defined as a physiotherapy whose start date is prior to first dose date of study drug in the Treatment Period and the end date is ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing physiotherapy at Week 24 is defined as a physiotherapy whose start date is prior to Week 24 visit date and the end date is ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

Table 3.1.3.2
Study VX21-121-105: Summary of Patients with Physiotherapies during the Study Treatment Period
Safety Set

	VNZ/TEZ/D-IVA N = 78 n (%)
All subjects	78
Subjects with 0 PT	21 (26.92)
Subjects with 1 PT	49 (62.82)

Subjects with 0 ongoing physiotherapies at baseline	21
Subjects with 0 PT	21 (100.00)
Subjects with 1 PT	0
Subjects with ≥ 2 PT	0

- PT: Physiotherapies refer to the non-pharmacological treatments with preferred names of "Positive expiratory pressure therapy", "Airway secretion clearance therapy", "Positive end-expiratory pressure", or "Physiotherapy chest".
- Physiotherapies during study refer to those with start date ≤ end date of treatment-emergent period of the Treatment Period, and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The percentages in this table are calculated based on the number of subjects under each category.

Table 3.1.4.1
Study VX21-121-105: Summary of Patients with Ongoing Inhaled Medications at Baseline or at Week 24
Safety Set

	VNZ/TEZ/D-IVA N = 78 n (%)
Baseline, N1	78
Subjects with 0 ongoing IM	6 (7.69)
Subjects with 1 ongoing IM	6 (7.69)
Subjects with ≥ 2 ongoing IM	66 (84.62)
Week 24, N1	78
Subjects with 0 ongoing IM	6 (7.69)
Subjects with 1 ongoing IM	6 (7.69)
Subjects with ≥ 2 ongoing IM	66 (84.62)

- IM: Inhaled medications refer to those medications for mucolytics (defined as the ATC codes of R05CB or B05CB) and for obstructive airway disease (defined as the ATC code of R03xx). It also requires the route of administration to be "RESPIRATORY (INHALATION)".
- The ongoing IMs at baseline refer to those IMs with start date < first dose date of study drug in the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing IMs at Week 24 refer to those IMs with start date < Week 24 visit date and the end date ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

Subjects with 0 ongoing inhaled medication at baseline	18
Subjects with 0 IM	17 (94.44)
Subjects with 1 IM	0
Subjects with ≥ 2 IM	1 (5.56)

- IM: Inhaled medications refer to those medications for obstructive airway disease (defined as the ATC code of R03xx). It also requires the route of administration to be "RESPIRATORY (INHALATION)".
- IMs during study refer to those with start date ≤ end date of treatment-emergent period of the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing..
- The percentages in this table are calculated based on the number of subjects under each category.

Table 3.1.5.1
Study VX21-121-105: Summary of Patients with Ongoing CF-related Medications at Baseline or at Week 24
Safety Set

	VNZ/TEZ/D-IVA N = 78 n (%)
Baseline, N1	78
Subjects with 0 ongoing CF-related medications	1 (1.28)
Subjects with 1 ongoing CF-related medications	4 (5.13)
Subjects with 2 ongoing CF-related medications	2 (2.56)
Subjects with 3 ongoing CF-related medications	13 (16.67)
Subjects with 4 ongoing CF-related medications	16 (20.51)
Subjects with ≥5 ongoing CF-related medications	42 (53.85)
Week 24, N1	78
Subjects with 0 ongoing CF-related medications	1 (1.28)
Subjects with 1 ongoing CF-related medications	4 (5.13)
Subjects with 2 ongoing CF-related medications	4 (5.13)
Subjects with 3 ongoing CF-related medications	14 (17.95)
Subjects with 4 ongoing CF-related medications	15 (19.23)
Subjects with ≥5 ongoing CF-related medications	40 (51.28)

- CF-related medications: CF co-medications are defined as those medications with
o ATC level 2 names of "DRUGS FOR OBSTRUCTIVE AIRWAY DISEASES", "DIGESTIVES, INCL. ENZYMES", "ANTIBACTERIALS FOR SYSTEMIC USE", "DRUGS USED IN DIABETES", "BILE AND LIVER THERAPY", "GENERAL NUTRIENTS";
o or ATC level 3 names of "DRUGS FOR CONSTIPATION", "PROPULSIVES";
o or ATC level 4 names of "MUCOLYTICS".
In addition, the route of administration for "DRUGS FOR OBSTRUCTIVE AIRWAY DISEASES" and "MUCOLYTICS" requires to be "RESPIRATORY (INHALATION)" and the route for "ANTIBACTERIALS FOR SYSTEMIC USE" requires to be "INTRAMUSCULAR", "INTRAVENOUS", "INTRAVENOUS BOLUS", "NASAL", "ORAL", or "RESPIRATORY (INHALATION)".
- The ongoing CF-related medications at baseline refer to those CF-related medications with start date < first dose date of study drug in the Treatment Period and end date ≥ first dose date of study drug in the Treatment Period or end date is missing.
- The ongoing CF-related medications at Week 24 refer to those CF-related medications with start date < Week 24 visit date and the end date ≥ Week 24 visit date or end date is missing.
- N1 refers to the number of subjects with a Day 1 visit and the number of subjects with a Week 24 visit, respectively. The percentages in this table are calculated based on N1.

Table 3.2.1.1
Study VX21-121-105: MMRM Analysis of Absolute Change from Baseline in ppFEV$_1$ (percentage points) through Week 24
Full Analysis Set

	VNZ/TEZ/D-IVA N = 78
Baseline	
n	77

n	74
LS mean (SE)	-0.07 (0.99)
95% CI of LS mean	(-2.05, 1.90)
P-value	0.9421

- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value. For subjects who are on stable ELX/TEZ/IVA, if the pre-dose Day 1 value is missing, the most recent available pre-dose value, including the screening assessment, is used as baseline.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline ppFEV$_1$ as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R Respiratory Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

Table 3.2.1.13
Study VX21-121-105: Summary of Pulmonary Exacerbations through Week 24
Full Analysis Set

	VNZ/TEZ/D-IVA N = 78
Total number of days (years) of the PEx analysis period	13188 (39.3)
Pulmonary exacerbations	
Number of subjects with events, n (%)	6 (7.69)
Total number of events	6
Observed event rate per year	0.15
Pulmonary exacerbations requiring hospitalization	
Number of subjects with events, n (%)	1 (1.28)
Total number of events	1
Observed event rate per year	0.03
Pulmonary exacerbations requiring IV antibiotic therapy	
Number of subjects with events, n (%)	1 (1.28)
Total number of events	1
Observed event rate per year	0.03
Pulmonary exacerbations requiring hospitalization or IV antibiotic therapy	
Number of subjects with events, n (%)	1 (1.28)
Total number of events	1
Observed event rate per year	0.03

- Pulmonary exacerbation (PEx): new or change in antibiotic therapy (intravenous (IV), inhaled, or oral) for ≥4 sinopulmonary signs/symptoms.
- Total number of days = sum of the individual duration (actual number of days) of the PEx analysis period across all subjects. Total number of years = total number of days / 336; for analysis purposes, 1 year is defined as 48 weeks or 336 days.
- Observed event rate per year = total number of events * 336 / total number of days of the PEx analysis period.

MMRM Analysis of Absolute Change from Baseline in BMI (kg/m^2) at Week 24
Full Analysis Set

Subgroup	P-value for Subgroup Factor[1]
Sex (Male vs. Female)	0.0273
Region (North America vs. Rest of the World)	0.5376
$LCI_{2.5}$ at baseline (<7.5 vs. ≥7.5)	0.3926

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- P-values are reported for each subgroup factor only when Subgroup Criteria are fulfilled. If not, display '-'.
- [1] P-values are obtained from MMRM with visit and genotype group (F/MF vs rest) and subgroup as fixed effect and baseline BMI as covariate.
- N/C: model does not converge.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value. For subjects who are on stable ELX/TEZ/IVA, if the pre-dose Day 1 value is missing, the most recent available pre-dose value, including the screening assessment, is used as baseline.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effects for genotype group (F/MF vs rest) and visit, with baseline sweat chloride as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- Baseline is defined as the pre-dose Day 1 value. For subjects who are on stable ELX/TEZ/IVA, if the pre-dose Day 1 value is missing, the most recent available pre-dose value, including the screening assessment, is used as baseline.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline height z-score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- N/C: model does not converge.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R Respiratory Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

Subgroup	P-value for Subgroup Factor[1]
Sex (Male vs. Female)	0.2115
Region (North America vs. Rest of the World)	0.2904
$LCI_{2.5}$ at baseline (<7.5 vs. ≥7.5)	0.9535

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- P-values are reported for each subgroup factor only when Subgroup Criteria are fulfilled. If not, display '-'.
- [1] P-values are obtained from MMRM with visit and genotype group (F/MF vs rest) as fixed effect and baseline CFQ-R Eat domain score as covariate.
- N/C: model does not converge.

- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R Digestion Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

95% CI of LS mean	(-2.71, 6.68)
Week 24	
n	31
Mean (SD)	89.61 (16.96)

- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R Eat Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R Treatment Burden Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R Emotion (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

LS mean (SE)	2.02 (1.29)
95% CI of LS mean	(-0.57, 4.61)

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R Emotion (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R Physical (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R Physical (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R School (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R Treatment Burden (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R Vitality (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- CI: Confidence interval; LS Mean: Least Squares Mean; SD: Standard deviation; SE: Standard error.
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R Weight (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger.
- Treatment effect through Week 24 is estimated by averaging Weeks 16 and 24.
- N/C: model does not converge.

Table 3.3.2.1.1
Study VX21-121-105: Subgroup Factor Test for TEAEs by SOC and PT
(Excluding Infective Pulmonary Exacerbation of Cystic Fibrosis)
Safety Set

System Organ Class Preferred Term Subgroup	P-value[1]
Subjects with any TEAEs	
Sex (Male vs. Female)	0.7417
Region (North America vs. Rest of the World)	0.0384
$LCI_{2.5}$ at baseline (<7.5 vs. ≥7.5)	0.3519
Respiratory, thoracic and mediastinal disorders	
Sex (Male vs. Female)	0.5547
Region (North America vs. Rest of the World)	0.3999
$LCI_{2.5}$ at baseline (<7.5 vs. ≥7.5)	0.3351

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.
- [1] P-value based on Chi-square test. If the overall rate or any SOC/PT level rate is 100%, display "NA" because Chi-square statistics are undefined in this case.
- P-values are reported at SOC/PT level only if 1) Respective analysis on the study level is done; 2) there are at least 10 subjects in each subgroup (per factor); and 3) there are at least 10 subjects with events in at least one of the subgroups (per factor). For the overall rate, p-value will be reported if conditions (2) and (3) are met.
- Table is sorted in descending order of frequency of the VNZ/TEZ/D-IVA column by System Organ Class, and by Preferred Term within each System Organ Class.

- MedDRA version 26.1.
- A subject with multiple events within a category is counted only once in that category.
- Subgroup analyses are performed at SOC/PT level only if 1) Respective analysis on the study level is done; 2) there are at least 10 subjects in each subgroup (per factor); and 3) there are at least 10 subjects with events in at least one of the subgroups (per factor). For the overall rate, it is performed if conditions (2) and (3) are met.
- Table is sorted in descending order of frequency of the VNZ/TEZ/D-IVA column by System Organ Class, and by Preferred Term within each System Organ Class.

Full Analysis Set
Domain: Physical (Parents/Caregivers Form)
$LCI_{2.5}$ at baseline <7.5

- Subgroup Criteria: subgroup analyses are performed only when the following conditions are fulfilled 1)at least 10 subjects in each subgroup (per factor), and 2)for dichotomous endpoints, at least 10 subjects with events occurred in at least one of subgroups (per factor).
- Baseline is defined as the pre-dose Day 1 value.
- MMRM includes data from all available visits up to Week 24. The model includes fixed categorical effect visit and genotype group (F/MF vs rest), with baseline CFQ-R Physical (Parents/Caregivers Form) Domain score as a continuous covariate. Covariance structure=UN, DF=Kenward-Roger
