Abbreviations: SF-12 = Twelve-item Short Form Health Survey, CFB = Change From Baseline, LS Mean = Least Squares Mean, CI = Confidence Interval, NA = Not Available, NE = Not Estimable.
Note: Baseline score refers to the last assessment value prior to C1D1 dosing in part 2 of the study.
[1] Two-sided p-values for treatment-by-subgroup interaction are from ANCOVA model with randomization stratification factor (Serum tryptase <20 ng/mL vs. >=20 ng/mL), Baseline ISM status (moderate vs. severe), treatment, subgroup, treatment*subgroup in the model.
[2] Change from baseline summary and difference of mean change from baseline between Avapritinib 25mg and Placebo are from least squares mean estimation of the ANCOVA model that controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).
[3] Two-sided p-value from ANCOVA model controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).

Note: Baseline score refers to the last assessment value prior to C1D1 dosing in part 2 of the study.
[1] Two-sided p-values for treatment-by-subgroup interaction are from ANCOVA model with randomization stratification factor (Serum tryptase <20 ng/mL vs. >=20 ng/mL), Baseline ISM status (moderate vs. severe), treatment, subgroup, treatment*subgroup in the model.
[2] Change from baseline summary and difference of mean change from baseline between Avapritinib 25mg and Placebo are from least squares mean estimation of the ANCOVA model that controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).
[3] Two-sided p-value from ANCOVA model controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).

Time to improvement is defined as time from first dose date to first time patient reached improvement (as defined in the table). Patients without improvement will be censored at the date of last available data.
[1] Median time to improvement is calculated based on Kaplan-Meier method.
[2] Hazard Ratio (HR) is calculated based on Cox proportional hazards model. HR > 1 correspond to a benefit for Avapritinib.
[3] Two-sided p-values for treatment-by-subgroup interaction are from Cox proportional hazards model with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Risk Difference (95% CIs) [2], P-Value		-0.113 (-0.338, 0.112), 0.324		0.046 (-0.049, 0.140), 0.341	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Odds Ratio (95% CIs) [1], P-Value		NE (NE, NE), 0.372		1.815 (0.481, 6.846), 0.373	
Relative Risk (95% CIs) [2], P-Value		NE (NE, NE), NE		1.749 (0.499, 6.129), 0.383	
Risk Difference (95% CIs) [2], P-Value		0.105 (-0.033, 0.243), 0.135		0.035 (-0.036, 0.106), 0.333	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Memory impairment, n (%)	1 (3.0)	2 (3.3)	0	0	>0.999
Odds Ratio (95% CIs) [1], P-Value		1.103 (0.096, 12.647), 0.937		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		1.100 (0.104, 11.680), 0.937		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		0.003 (-0.071, 0.077), 0.936		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

by Baseline Serum Tryptase Level
Safety Population, Part 2 (Part 2 Baseline)

AESI Category Preferred Term	<20 ng/mL Placebo (N=15)	<20 ng/mL Avapritinib 25 mg (N=28)	>=20 ng/mL Placebo (N=56)	>=20 ng/mL Avapritinib 25 mg (N=113)	P-Value [3]
Cognitive Effects (cont.)					
Mental status changes, n (%)	0	0	1 (1.8)	0	0.971
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NE (NE, NE), 0.154	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NE (NE, NE), NE	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		-0.018 (-0.053, 0.017), 0.313	
Agitation, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Cognitive disorder, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.

Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.

by Baseline Serum Tryptase Level
Safety Population, Part 2 (Part 2 Baseline)

AESI Category Preferred Term	<20 ng/mL Placebo (N=15)	<20 ng/mL Avapritinib 25 mg (N=28)	>=20 ng/mL Placebo (N=56)	>=20 ng/mL Avapritinib 25 mg (N=113)	P-Value [3]
Cognitive Effects (cont.)					
Personality change, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Psychotic disorder, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Somnolence, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Summary of Grade 3 and Higher Adverse Events of Special Interest by Category and Preferred Term
by Baseline Serum Tryptase Level
Safety Population, Part 2 (Part 2 Baseline)

AESI Category Preferred Term	<20 ng/mL Placebo (N=15)	<20 ng/mL Avapritinib 25 mg (N=28)	>=20 ng/mL Placebo (N=56)	>=20 ng/mL Avapritinib 25 mg (N=113)	P-Value [3]
Cognitive Effects (cont.)					
Agitation, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Amnesia, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Cognitive disorder, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Safety Population, Part 2 (Part 2 Baseline)

	North America		Europe		
Preferred Term	Placebo (N=33)	Avapritinib 25 mg (N=60)	Placebo (N=38)	Avapritinib 25 mg (N=81)	P-Value [3]
Hypervolaemia, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Localised oedema, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Non-pitting oedema, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Oedema blister, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

	Number of Baseline BSC <4		Number of Baseline BSC >=4		
Preferred Term	Placebo (N=35)	Avapritinib 25 mg (N=72)	Placebo (N=36)	Avapritinib 25 mg (N=69)	P-Value [3]
Patients with at least one Oedema CMQ, n (%)	2 (5.7)	17 (23.6)	6 (16.7)	19 (27.5)	0.293
Odds Ratio (95% CIs) [1], P-Value		5.100 (1.107, 23.492), 0.023		1.900 (0.683, 5.287), 0.215	
Relative Risk (95% CIs) [2], P-Value		4.132 (1.010, 16.897), 0.048		1.652 (0.724, 3.769), 0.233	
Risk Difference (95% CIs) [2], P-Value		0.179 (0.054, 0.304), 0.005		0.109 (-0.052, 0.270), 0.186	
Oedema peripheral, n (%)	1 (2.9)	5 (6.9)	2 (5.6)	7 (10.1)	0.841
Odds Ratio (95% CIs) [1], P-Value		2.537 (0.285, 22.589), 0.389		1.919 (0.377, 9.759), 0.425	
Relative Risk (95% CIs) [2], P-Value		2.431 (0.295, 20.022), 0.409		1.826 (0.400, 8.340), 0.437	
Risk Difference (95% CIs) [2], P-Value		0.041 (-0.040, 0.121), 0.320		0.046 (-0.057, 0.149), 0.384	
Face oedema, n (%)	0	5 (6.9)	1 (2.8)	5 (7.2)	0.955
Odds Ratio (95% CIs) [1], P-Value		NE (NE, NE), 0.110		2.734 (0.307, 24.340), 0.349	
Relative Risk (95% CIs) [2], P-Value		NE (NE, NE), NE		2.609 (0.317, 21.493), 0.373	
Risk Difference (95% CIs) [2], P-Value		0.069 (0.011, 0.128), 0.020		0.045 (-0.037, 0.126), 0.282	
Periorbital oedema, n (%)	0	2 (2.8)	2 (5.6)	7 (10.1)	0.958
Odds Ratio (95% CIs) [1], P-Value		NE (NE, NE), 0.320		1.919 (0.377, 9.759), 0.425	
Relative Risk (95% CIs) [2], P-Value		NE (NE, NE), NE		1.826 (0.400, 8.340), 0.437	
Risk Difference (95% CIs) [2], P-Value		0.028 (-0.010, 0.066), 0.151		0.046 (-0.057, 0.149), 0.384	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		0.525 (0.033, 8.249), 0.646	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		-0.007 (-0.042, 0.027), 0.672	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Patients with at least one Grade 1 and 2 Oedema CMQ, n (%)	0	2 (18.2)	0	7 (50.0)
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Oedema peripheral, n (%)	0	0	0	2 (14.3)
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Face oedema, n (%)	0	1 (9.1)	0	2 (14.3)
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Periorbital oedema, n (%)	0	0	0	0
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Hazard Ratio (95% CI) [1]		- (-, -)		2.995 (0.333, 26.974)
p-value		NA		0.3279

Abbreviations: CMQ = Customized MedDRA Queries.
Note: * = censored observation.
Notes: Time to first onset of Oedema CMQ is defined as from day 1 of avapritinib/placebo to the first Oedema CMQ start date. For patients without Oedema CMQ, time to first onset will be censored at the minimum of date of last study drug dose + 30 days, cutoff date, death date, or end of study date.
[1] Hazard Ratio is calculated based on Cox proportional hazards model. HR < 1 suggests that Avapritinib experiences a lower event probability during a unit of time than placebo.
[2] Two-sided p-values for treatment-by-subgroup interaction are from Cox proportional hazards model with treatment, subgroup, treatment*subgroup in the model.

Abbreviations: CMQ = Customized MedDRA Queries.
Note: * = censored observation.
Notes: Time to first onset of Oedema CMQ is defined as from day 1 of avapritinib/placebo to the first Oedema CMQ start date. For patients without Oedema CMQ, time to first onset will be censored at the minimum of date of last study drug dose + 30 days, cutoff date, death date, or end of study date.
[1] Hazard Ratio is calculated based on Cox proportional hazards model. HR < 1 suggests that Avapritinib experiences a lower event probability during a unit of time than placebo.
[2] Two-sided p-values for treatment-by-subgroup interaction are from Cox proportional hazards model with treatment, subgroup, treatment*subgroup in the model.
