Modul 4 B – Anhang 4-G

Dossier zur Nutzenbewertung gemäß § 35a SGB V

Belantamab-Mafodotin (BLENREP)

GlaxoSmithKline GmbH & Co. KG

Modul 4 B – Anhang 4-G

Ergänzende Analysen

Stand: 20.03.2026

1 Ergebnisse Interimsanalyse 3 – Lenalidomid- und Anti-CD38-refraktäre Patienten

1.1 Charakterisierung der Studienteilpopulation

1.1.1 Tabellen – Ergebnisse zur Charakterisierung der Studienteilpopulation

1.2 Endpunkte zur Wirksamkeit

1.2.1 Tabellen – Ergebnisse für Endpunkte zur Wirksamkeit

1.2.1.1 PFS

1.2.1.2 OS

1.2.1.3 DoR

1.2.1.4 PFS2

1.2.1.5 Ansprechraten

1.2.1.6 MRD-Negativität

1.2.1.7 Beobachtungsdauern

1.2.2 Graphische Darstellungen – Ergebnisse für Endpunkte zur Wirksamkeit

1.2.2.1 PFS

1.2.2.2 OS

1.2.2.3 DoR

1.2.2.4 PFS2

1.3 Patient Reported Outcomes

1.3.1 Tabellen – Ergebnisse für Patient Reported Outcomes

1.3.1.1 OSDI

1.3.1.2 EORTC QLQ-C30

1.3.1.3 EORTC-IL52

1.3.1.4 EQ-5D VAS

1.3.1.5 FACT-GP5

1.3.1.6 PGIC

1.3.1.7 PGIS

1.3.1.8 PRO-CTCAE

1.3.1.9 Beobachtungsdauern

1.3.1.10 Rücklaufquoten

1.3.2 Graphische Darstellungen – Ergebnisse für Patient Reported Outcomes

1.3.2.1 OSDI

1.3.2.2 EORTC QLQ-C30

1.3.2.3 EORTC-IL52

1.3.2.4 EQ-5D VAS

1.3.2.5 FACT-GP5

1.3.2.6 PGIC

1.3.2.7 PGIS

1.3.2.8 PRO-CTCAE

1.4 Endpunkte zur Sicherheit

1.4.1 Tabellen – Ergebnisse für Endpunkte zur Sicherheit

1.4.1.1 UE jeglichen Schweregrades – Gesamtraten

1.4.1.2 UE jeglichen Schweregrades nach SOC und PT

1.4.1.3 Schwere UE (CTCAE-Grad ≥ 3) – Gesamtraten

1.4.1.4 Schwere UE (CTCAE-Grad ≥ 3) nach SOC und PT

1.4.1.5 SUE – Gesamtraten

1.4.1.6 SUE nach SOC und PT

1.4.1.7 UE, die zum Therapieabbruch führen – Gesamtraten

1.4.1.8 UE, die zum Therapieabbruch führen, nach SOC und PT

1.4.1.9 Beobachtungsdauer

1.4.1.10 Behandlungsdauer

1.4.1.11 Dosisanpassungen

1.4.2 Graphische Darstellungen – Ergebnisse für Endpunkte zur Sicherheit

1.4.2.1 UE jeglichen Schweregrades – Gesamtraten

1.4.2.2 UE jeglichen Schweregrades nach SOC und PT

1.4.2.3 Schwere UE (CTCAE-Grad ≥3) – Gesamtraten

1.4.2.4 Schwere UE (CTCAE-Grad ≥3) nach SOC und PT

1.4.2.5 SUE – Gesamtraten

1.4.2.6 SUE nach SOC und PT

1.4.2.7 UE, die zum Therapieabbruch führen – Gesamtraten

1 Ergebnisse Interimsanalyse 3 – Lenalidomid- und Anti-CD38-refraktäre Patienten

1.1 Charakterisierung der Studienteilpopulation

1.1.1 Tabellen – Ergebnisse zur Charakterisierung der Studienteilpopulation

Interaction Test [3]		
ORR	0.85406	
VGPR+	0.45738	
CBR	0.76660	

Note: The percentage for n* is calculated by taking N as denominator. For all subsequent rows, n* is used for percentage calculation. [1] Inverse OR (95% CI) and associated p-value are from a logistic regression model without adjustment for randomization factor. [2] Inverse RR (95% CI), associated p-value and ARD (95% CI) are from a modified Poisson regression model without adjustment for randomization factor. [3] Interaction test p-value is from a modified Poisson regression model with treatment, subgroup and treatment by subgroup interaction included as independent variables. All p-values are two-sided.
Note: Randomization factor is prior bortezomib (no, yes).
Subgroup analysis was not performed when the subgroup analysis rules were not met.
Randomization factor was not adjusted for due to convergence issues.

Table 2.0015075
Summary of MRD Negativity by Prior Lines of Therapy 2 -
Lenalidomide and Anti-CD38 Refractory Subpopulation

Prior Lines of Therapy 2: >=4
Response: Investigator-Assessed

		Belamaf 2.5/1.9 mg/kg + POM/DEX (N=30)	POM + BOR/DEX (N=33)
Number of Subjects, n*(%)		9 (30%)	13 (39%)
Best Response			
sCR/CR	MRD Negativity Rate	0	0
sCR/CR/VGPR	MRD Negativity Rate	1 (11.1%)	0
	95% Confidence Interval	(0.3%,48.2%)	(0.0%,24.7%)
Difference in sCR/CR/VGPR	Difference	11.1%	
	95% CI for Difference	(-30.6%,50.5%)	

Note: The percentage for n* is calculated by taking N as denominator. For all subsequent rows, n is used for percentage calculation.
Note: Minimal Residual Disease (MRD) negativity rate is defined as: the percentage of subjects who are MRD negative by Next Generation Sequencing (NGS) based on sensitivity of 10^-5.
Subjects without MRD assessment are assumed to be Non-Negative.
Note: Subgroup analysis was not performed because the subgroup analysis rules were not met.

Population: Safety - Global Cohort (Len. & anti-CD38 ref.) Data as of 07JUL2025

Table 4.0000575
Summary of OSDI Time to First Improvement (Up to and Including Last Follow-Up)
by Prior Lines of Therapy 2 -
Lenalidomide and Anti-CD38 Refractory Subpopulation

Item Score: Vision-related Function

Subgroup		Belamaf 2.5/1.9 mg/kg + POM/DEX (N=28)	POM + BOR/DEX (N=33)
1/2/3	Number of subjects in subgroup, n*(%)	20 (71%)	20 (61%)
	Number of Subjects		
	Improved (event)	6 (30%)	3 (15%)
	Censored, follow-up ended	11 (55%)	11 (55%)
	Censored, follow-up ongoing	3 (15%)	6 (30%)

Note: The percentage for n* is calculated by taking N as denominator. For all subsequent rows, n* is used as denominator for percentage calculation. Subjects are censored at the latest post-baseline assessment or at treatment initiation if no post-baseline assessments. Patients without treatment initiation are censored at 0 months.
Note: Subgroup analysis was not performed because the subgroup analysis rules were not met.

[1] Number of subjects with analyzable data for one or more time points.
[2] Number of subjects with analyzable data at the current time point.
Note: Analysis performed using a repeated measures model with covariates of treatment group, visit, baseline value, treatment by visit interactions and baseline value by visit interactions as fixed effects and subject as a random effect.
Note: Visits are only included in the model if the number of subjects with analyzable data at the current time point is >= 10 across treatments. An Autoregressive (AR(1)) covariance structure was used to estimate the within subject covariance.

[1] Number of subjects with analyzable data for one or more time points.
[2] Number of subjects with analyzable data at the current time point.
Note: Analysis performed using a repeated measures model with covariates of treatment group, visit, baseline value, treatment by visit interactions and baseline value by visit interactions as fixed effects and subject as a random effect.
Note: Visits are only included in the model if the number of subjects with analyzable data at the current time point is >= 10 across treatments. An Autoregressive (AR(1)) covariance structure was used to estimate the within subject covariance.

[1] Number of subjects with analyzable data for one or more time points.
[2] Number of subjects with analyzable data at the current time point.
Note: Analysis performed using a repeated measures model with covariates of treatment group, visit, baseline value, treatment by visit interactions and baseline value by visit interactions as fixed effects and subject as a random effect.
Note: Visits are only included in the model if the number of subjects with analyzable data at the current time point is >= 10 across treatments. An Autoregressive (AR(1)) covariance structure was used to estimate the within subject covariance.

Note: The percentage for n* is calculated by taking N as denominator. For all subsequent rows, n* is used as denominator for percentage calculation. Subjects are censored at the latest post-baseline assessment or at treatment initiation if no post-baseline assessments. Patients without treatment initiation are censored at 0 months. [1] CIs for time variables are estimated using the Brookmeyer-Crowley method. [2] Two-sided p-value obtained from unstratified log-rank test. [3] HR and associated p-value are estimated using the unstratified Cox PH model (Firth correction as applicable) with treatment arm as the only covariate. [4] p-value of the interaction test based on a Cox PH model (Firth correction as applicable) with treatment, subgroup, and treatment x subgroup interaction included as covariates in the model. Subgroup analysis was not performed when the subgroup analysis rules were not met.
